## 146. KALMIA LATIFOLIA.

KALM. LAT.—Laurel; mountain-laurel; broad-leaved laurel; lambkill; ivy bush; spoonwood; calico bush.—See TRANSACTIONS OF THE AMERICAN INST. OF HOM., Vol. I.

### CLINICAL OBSERVATIONS.

Dr. Hering, under whose direction this drug has been proved, offers among other interesting remarks the following, which we transfer to our pages :

“As *Ledum* inhabits the marshy meadows among the mountains of Europe, and as *Rhododendron* beautifies the mountain plains of Asia with its golden blossoms, so *Kalmia* frequently extends itself along both banks of the narrow stony valleys of the brooks and small streams of North America, and enlivens them with its broad evergreen leaves; and in May it suddenly spreads a rose coloured carpet over the face of nature, which excites the admiration even of those who are accustomed to the magnificence of tropical plants. *Rhododendron* thrives in the region of storms and mountains, and *Ledum* draws its nourishment from the ponds of elevated regions, while *Kalmia* flourishes in the mists arising from the valleys. All three inhabit northern climates. They correspond to the great family of diseases, which we comprise under the collective names of rheumatism and gout; particularly to that class, which belongs to the north, and which is decidedly distinct from that of the south, and of the tropics. They also correspond to the intermittent and remittent fevers, and especially those of a long protracted gastric-nervous character.”

“No medicine in the whole *materia medica* has such control over the pulse as *Kalm.*, except *Digitalis*. *Acon.* and *Tartar emetic* approximate to it; but a remedy can only diminish the activity of the heart *favourably*, when it corresponds to the totality of the symptoms. In diseases of the heart, which alternate with rheumatism or have originated in rheumatic attacks, *Kalmia* must become most important. It will be of great service to the veterinarian. The other characteristics of this medicine are seen by the pathogenesis.”

\*A diarrhoea which returned every eight weeks, was cured by a decoction of one ounce of the leaves with eight ounces of water, and boiled down one-half.

\**Kalmia* has been used with much benefit in the cure of syphilis.

Dr. Hering mentions two cases of poisoning, which resulted from eating a pheasant, in the craw of which laurel leaves were found.

1. Half an hour after eating, nausea with entire loss of sight; continual retching and violent pain in the crown of the head, which extends down in the direction of the cervical vertebræ; coldness of the extremities, and imperceptible pulse; when the pulse re-appeared it beat only forty strokes in a minute.

2. A peculiar noise while breathing, like that caused by spasmodic affections of the glottis. Paleness of the face. Excessive nausea, with dimness before the eyes. Violent pain down the back. Coldness of the extremities, with a very feeble pulse, of forty strokes in a minute. (*Shoemaker*).

### SYMPTOMS.

**Mind and Disposition.**—Irritable disposition of the mind towards evening, which continues next morning. Indisposition to move, with aversion to exercise.

**Head.**—*Vertigo* and headache. *Vertigo*, (from 30 drops of the infusion, six times a day). *Vertigo*, with some nausea, attended with pains in the head and limbs. Nausea in the evening, followed by some dulness and aching in the

head. Vertigo while stooping and looking downwards. (From 8 until 9 o'clock in the morning, and from 3 until 6 o'clock in the evening.—*Dulness in the head.* Dulness in the head until evening, which continues slightly early the next morning.—*Heaviness* in the head for a short time on the right side, but towards evening the same sensation, very severe on the left side.—*Heat* in the head, on the morning of the fifth day.—*A shock* towards the occiput from the back of the neck with heat.—A momentary shivering without coldness, about 10 o'clock in the evening in bed, which seems to pass from the top of the head to the neck under the scalp, attended with a cracking noise, and at the same time alarm without palpitation of the heart; a sensation as if the body were surcharged with electricity. This sensation was repeated four times in the course of half an hour, and the whole ended with the sound of a horn before the ears.—*Headache* internally, with the sensation, when turning, of something loose in the head, diagonally across the top of it. Dull pain around the back part of the head, with frequent sharp, darting pains in the right side of the head. Pain in the head when awaking in the morning, and in the evening. Pain in the top of the head as if bound closely with a cord. Strong pain in the temples and forehead.—*Pain in the forehead* every morning on awaking. Pain in the forehead on rising, which increases afterwards. Pain across the forehead over the eyes.—*Rending pain* across the forehead.—*Pressing pain* in the forehead, especially in the right side. Pain in the forehead and over the eyes in the evening; it seems to move backwards and down the neck outwardly on both sides, then disappears, and is followed by pain in the left shoulder. The pain in the forehead is sometimes followed by rending in the bones of the right or left side of the face, or on the top of the head.—*Slight aching* in the forehead, which sometimes shoots downwards to the eye-teeth, and at one time is easier in the forehead, at another in the teeth. Pains in the forehead every day, which extends to the roots of one of the upper molar teeth of the right side. Severe pressing in the temples, and on both sides of the neck. Acute pain in the left temple, which is very much increased by going up stairs. Rending in the forehead and in the head, on rising from bed, succeeded by rending in the bones of the hips and lower extremities, down to the feet. Rending in the head and neck. Rending in the head. Rending in the left side of the forehead, which extends into the temple. Strong pressure in the right temple. Rending in the right temple, passing downwards. Severe headache at noon of the second day; it is most severe in the right side.—*Pulsating pain* in the forehead. Pain and throbbing in the whole of the left side of the head, with stitches in the left ear, and behind the right. The drawing in the head and eyes is worse towards evening, and in the open air.

**Eyes.**—*Glimmering* before the eyes, exactly in the point of vision, so that it is almost impossible to distinguish the words while reading; it seems as if small points were continually moving before the eyes; this continues half an hour. Glimmering before the eyes while looking downwards, with belching of wind, and some nausea.—*Cloudiness* before the eyes.—*Itching* of the eyes, and stinging when rubbed. Pain in the eyes, which makes it painful to turn them.—*Sensation of stiffness* in the muscles around the eyes, and of the eyelids. Pain in the right eye.—*Strong pressing* in the right eye, in the evening. Pressing in the eyes, attended by pains in the arms and hands, in the lower extremities down to the feet, and sometimes in the right side of the abdomen. A sensation of pressing, above the right eye. Pressing pain about the eyes. Pressing in the eyes in the afternoon.—*Acute stitches* in the eyes, towards evening of the second day. Acute stitches in the right eye, in the morning of the second day. Stitches and violent pressing in the right eye, the eyes feel dim and weak.

Stitches under the left eye.—*Itching* in the eyes. Itching and burning in the left eye.—*Burning* with pressing in the eyes, particularly in the left one.—*Inflammation* of the left eye in the morning, with a burning jerking pain, till near noon, when the pain becomes more tolerable, and scarcely perceptible.

**Ears.**—*Severe stitches* in the right ear, in the night of the second day. Severe stitches in the ears at 4 o'clock, P. M., followed by pain in the arms. Pain in the right ear, on the right side of the head, and in the leg. Excessive tingling in the ears.

**Nose.**—*Continued pressing* in the ridge of the nose, with repeated sneezing.—*Tickling* in the nose.—*Fluent coryza* with frequent sneezing, and perceptibly-increased sense of smell. Tickling in the nose like that which precedes coryza. The nose is sometimes obstructed, particularly in the evening.

**Face.**—Pressing pain in the right side of the face, between the eye and the nose, in the afternoon. *Itching* in the face at night.—*Stinging* in the bones of the jaws.

**Teeth.**—Short pains in the teeth of the right side, in the evening of the third day. Pain in the upper teeth.—*Severe pressing* in the molar teeth after 10 o'clock in the evening, which continues several hours.—*Dull pain* in the incisor and eye-teeth.

**Mouth.**—*Stitches in the tongue.* Tongue white and dry.—Lips swollen, dry and stiff, in the morning.—Tingling in the *salivary glands*, immediately after eating, attended with a sensation of fermentation in the œsophagus, and copious salivation. Dry skin and cracked lips.—*Inflammation of the sublingual glands.* Acid, bitter taste in the mouth.

**Pharynx and Œsophagus.**—Continual rising of a slippery mucus in the throat, with tickling in the larynx.—Difficult deglutition. Dryness of the throat which renders deglutition difficult.—*Scraping* in the throat. Scraping in the throat, which excites a cough day and night. Pressing in the throat and nausea, with stitches in the eyes. Sensation of rawness and scraping in the throat, which is painful while swallowing, and is attended by throbbing in the left tonsil.

**Stomach.**—Pressing in the serobiculus cordis, which is relieved by sitting erect, but is aggravated by sitting in a crooked position. Nausea, with headache.

**Abdomen.**—Pain in the right side of the abdomen followed by a pain in the gluteus muscle. A sensation of weakness in the abdomen, rising into the throat. When violent, it is sometimes relieved by eructations, but returns immediately. Occasional pain across the abdomen. Pressing in the right side. Pain in the right side in the region of the liver.

**Bowels.**—No stool the first day. Seanty stool.—*Looseness* of the bowels at noon, after the stool in the morning. Stools less frequent. A soft stool early in the morning, followed by a diarrhœa, which lasted two hours, and another soft stool the same forenoon. Two soft stools and an evacuation of wind. Momentary nausea, with shifting of flatus in the afternoon while riding, followed by a stool, with cutting pain in the bowels, (the third day after repeated doses). Easily discharged, pappy stool, with pressing in the rectum.

**Urine.**—Strong desire to urinate, (the ninth day). Frequent discharges of yellow urine, in increased quantity.

**Sexual Organs.**—The menses appear eight days too early, (the fourth day). The menses make their appearance fourteen days too late.—*Painful menstruation.* *Suppression of the menses.*—Pain in the loins, back, and anterior part of the thighs during menstruation.—*Yellowish leucorrhœa* in the morning, eight days after the appearance of the menses, (three weeks after the exhibition of Kalmia).—The symptoms are more prominent during the leucorrhœa.

**Larynx.**—Cough excited by scraping in the wind-pipe. Cough, with easy expectoration of a gray, smooth unctuous matter, which has a putrid, saltish taste.

**Chest.**—Oppression and shortness of breath, which obliges him to breathe quickly, involuntarily. Oppression of the chest, (after the fifth dose, every fourth day). Oppression of the chest, difficulty of breathing, dulness of the head, and nausea. Sensation in the chest, as if strained by lifting.—*Stitches* in the lower part of the chest.—Oppression of the chest, with the sensation of swelling in the throat.—*Palpitation* of the heart.

**Back.**—Violent pressure in the right side of the neck, and at the same time in the left foot. Drawing and sticking in the left side of the neck, in the afternoon, which continues eight hours. Acute stitches and itching in the left side of the neck at night. Stitches under the left arm. A sensation as if the spinal column would break with an anterior convexity. Sharp pain in the three superior dorsal vertebræ, extending through the shoulder-blades. Constant pain in the spine, sometimes worse in the lumbar region, with great heat and burning.—*Pressing* below the left shoulder, in the evening. Pain in the shoulder-blades. Sticking pain in the lower part of the left shoulder-blade, the night after the third day. Aching pain across the loins, worse in the evening. Paralytic pain in the small of the back, at ten o'clock at night in bed, with continued dulness and pain in the head. Lameness in the *small of the back*, in the evening in bed.

**Upper Extremities.**—Rending in the right *shoulder* and down the arm. Rending in the shoulder-joint. Drawing pain on the inner side of the left arm, of short duration. Pain in the right arm.—Frequent strong cracking in the *joints of the elbows*, in the afternoon. Rending from the left elbow, down the arm to the index-finger, which is flexed in a jerking manner. Cramp-like pain, from the elbow down to the middle of the forearm. Rending from the knuckle of the little finger of the right *hand*, up to the elbow. Repeated stitches in the hands. Pains in the right hand. Pains in the left hand, particularly in the palm close to the wrist. A *sensation like paralysis* in the right hand. Pain in the left wrist, so that the hand seems palsied. Pain in all the fingers of the left hand at the same time.

**Lower Extremities.**—Stitches suddenly attacking the *hip bones* of the right side, in the evening. Stitches on the lower part of the knee, outside, in the evening.—Itching in the bend of the right *knee*, in the afternoon of the ninth day.—Pains in the left knee and foot, and also in the right *foot*, repeatedly. Numbness in the shins, in the afternoon. A peculiar pain along the outside of the left leg, which is very frequently repeated. Pain in the left foot. Great weariness in the evening, particularly in the extremities, so that it is nearly impossible to go up stairs. Numbness of the limbs, as if asleep. *Violent pain in the left foot*. Aching in the tarsal bones of the right foot.—Sticking in the *soles* of the feet. Stinging in the *toes*. Stinging in the great toe of the left foot.—Pain in the left arm above the elbow, and soon afterwards between the elbow and the hand; frequently alternating between the two places, during one hour, and followed by pain in both legs below the knees, which extends to the feet. Brief pains in the left elbow, arm, and knee, in the morning, and in both arms in the afternoon; while lying down it is not observed.—Pain in the *bend of the left knee*, which is immediately followed by very severe, frequent but brief pain in the left index-finger, and afterwards in the right foot. Pain in the right shoulder and in the left arm, particularly in the elbow, and in both lower extremities, especially in the knees. Pain in the left arm and in both legs, in the evening. Pressing pain in the left shin, and in the muscles of the left arm,

accompanied with the same kind of pain in the right foot. Pressing in the left shin, at eight o'clock in the morning, and in the left shoulder at ten o'clock in the morning. Pressing in the left shin and shoulder, and also in the left arm, followed by pressing in the right shoulder and arm. Pain in the right arm, and rending in the left leg, while at rest, which disappears on rising; it extends through the whole of the left side and arm. Rending in the right shoulder, in the left arm, in the right under jaw-bone, and in the flesh of the whole of the left leg downwards. Slight aching in the left hand and fingers, and in the posterior part of the left leg, towards the heel, with jerking in the heel. Sticking pain in the right index-finger, in the evening, which is soon followed by a severe pain in the hollow of the right knee and in the calf of the leg, attended by difficulty of breathing. Frequent pains here and there in the limbs, continually changing from one place to another, for ten days, during the exhibition of a few globules every second day; they lasted three weeks after the discontinuance of the medicine. Frequent pains in the muscles of the extremities, and also in the head, with dulness, vertigo, and some nausea. Sprain-like pain at times in the feet and hands.

**Sleep.**—Restlessness, frequent turning. Getting up and walking, while asleep. Talking in sleep. Unpleasant dreams. Fantastic dreams.

**Fever.**—Cold and shivering on two successive days.

**Skin and General Symptoms.**—A red spot, about the size of a pea, appeared on the outside of the left leg, a little below the knee, which itched excessively and was followed by a burning pain; this was succeeded by a second on the outside of the leg close to the knee, with excessive itching, (from the afternoon of the 6th and 7th days). On the morning of the seventh day a small spot appeared on the right knee, also with some itching of short duration. Red inflamed spots in different places on the body, which appear like the beginning of blood-boils, and continue for several weeks. Pressing pains in the whole body, in one hour and a half after taking a third dose of six globules, which had been repeated every fourth day. The pains are most severe while moving, and disappear while lying. The symptoms subsided gradually and successively, having all disappeared on the sixth day.

## 147. KREASOTUM.

KREAS.—See ARCHIV, XVI.

COMPARE WITH—*Phosph.*, Mur. and Sulph. ac., *Nitr. ac.*, *Ars.*, Calc. carb., Chin., Chinin. sulph., *Cocc.*, *Ipec.*, *Iod.*, Kali hydr., *Merc.*, Nux v., Petr. *Phosph.*, Puls., *Rhus*, *Sec. corn.*, Sil., Sulph.

ANTIDOTES.—Of small doses: Chin. ? Ars. ? *Ipec.* ? *Cocc.* ?—Nux v. has been found available against the violent pulsations in every part of the organism, Aconite against the vascular irritation (Wahle).

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Kreasotum promises to be very useful in acute diseases characterized by a tendency to decomposition of the animal solids as well as fluids, and in chronic diseases of a scrofulous, tuberculous, herpetic and cancerous character. Kreasotum is therefore particularly suitable to individuals with a torpid, leuco-phlegmatic disposition, a lax and lymphatic constitution, with vitiated humours, impoverished vitality, prostration of the vegetative sphere, disposition to blennorrhœa of every

sort, to suppuration and ulceration, chronic, dry, and humid cutaneous eruptions, venous hemorrhage, fluidification of the blood, with tendency to putrefaction, etc.

Kreasotum will therefore prove useful in diseases with a putrid character—impoverished condition of the animal fluids, acute diseases with great disposition to gangrene, humid gangrene, decubitus in acute and chronic diseases, consumption of the mesentery in children, with ulceration of the mucous membrane of the entire intestinal canal, profuse diarrhœa, having a cadaverous smell and attended with considerable emaciation, (next to Ars.).—Neuralgia.? Tonic spasms.?—Epilepsy.?—*Sea-sickness*, (*Wolf* and *Trinks*).—Diseases of the mucous membrane, with profuse secretion of mucus.—Rheumatic and arthritic affections.—Scurvy.?—Passive hemorrhage from every orifice of the body.—Venous hemorrhage.—Fungus hæmatodes.?—*Morbus maculosus Werlhofii*.?—Dropsical conditions.?—Scrofulosis.?—Anthrax.?—Carbuncle.?—Pityriasis.?—Malignant scarlatina with angina gangrenosa.?—Chronic exanthemata.? Chronic urticaria.—Vesicles.—Pemphigus.?—Pock-shaped pustules.—Humid itch.?—Dry, scaly, also moist, humid herpes penetrating into the skin, on every part of the body, on the dorsum of the hands and feet, in the palms of the hands, on the ears, elbows, malleoli and knuckles, with violent itching.—*Crusta lactea et serpiginosa*.?—Malignant, putrid smallpox.—Tuberculous exanthemata: aene on the forehead and in the face.—*Petechiæ*.?—*Decubitus*.—Scrofulous and varicose ulcers, particularly on the feet of old people, secreting an acrid, fetid ichor, readily bleeding, sinuous, with high edges looking as if corroded by insects.—Gangrenous ulcers, malignant panaritium.—Chilblains.?—*Gangrena senilis*.?—Humid gangrene.?—Sleeplessness.?—Sleep disturbed by dreams.—Predominant chills and a disposition to feel chilly.—Third stage of typhus abdominalis with wide-spread ulceration, putrid character of all the symptoms, particularly of the evacuations, hemorrhage from every orifice of the body, petechiæ, etc.—Melancholy.?—Sad mood, with disposition to weep and ill-humour.—Longing for death.—Imbecility.—Failure of thought with confused and stupid feeling in the head.—Weakness of memory; dulness of the head; vertigo; chronic nervous headache, (periodical?), oppressive, pressing from within outwards, drawing, darting, tearing, beating; throbbing and beating headache.—Falling off of the hair.—*Tinea capitis favosa*.?—Itching and smarting in the eyes; heat in the eyes; chronic, catarrhal and scrofulous ophthalmia; chronic inflammation of the eyelids with swelling; profuse secretion of tears, mucus and gum; lachrymation originating in scrofula and herpes; ectropium.?—Sensation as of a gauze before the eyes.—Pimples and humid herpes in, on, and behind the ears.—Scrofulous otorrhœa.? Hardness of hearing with buzzing and rearing in the ears.—Bleeding of the nose, the blood being thick and black; scrofulous ozæna.?—Tearing pains in the face; prosopalgia.? Dry, scaly herpes in the face, on the eyelids, cheeks, around the mouth; miliary and also lardaceous pimples on the forehead, cheek, chin, with crusts.—*Gutta rosacea*.—Dry, parched lips, peeling off, with pain as from soreness.—Malignant watery tumour.?—Swelling of the cervical glands.—Cancer in the face.? Drawing and tearing pains in sound teeth, and darting pains in those that are decayed; inflammation and bleeding of the gums.—Gastric, gangrenous stomacace.?—Angina maligna, gangrenosa, putrida.?—*Nausea and vomiting* of pregnant females.—*Spasmodic gagging and vomiting*.—Vomiting of drunkards.?—*Gastromalacia infantum et adutorum*.—Organic destructions of the stomach.—*Scirrhus* of the cardia, ventriculus and pylorus.?—*Hæmatemesis*.?—Chronic affections of the liver and spleen.?—Softening and ulceration of the mucous membrane of the intestinal canal.—Watery, papescent, dark-brown undigested stools, having a cadaverous smell, with great thirst, aversion to meat, and great emaciation (in the case of a child).—Chronic, profuse, exhausting

diarrhœa of children and full-grown people, or of consumptive patients.—Gangrenous dysentery. ?—Lienteria. ?—Costiveness and constipation. ?—Diabetes insipidus et mellitus. ?—Frequent urging to urinate, first with scanty then copious flow of urine ; frequent and also nightly micturition ; nightly enuresis of children.—*Secondary gonorrhœa*. ?—Male impotence. ?—Complaints arising from too frequent and too long menstruation.—Too early, too frequent and too profuse menstruation.—Disposition to misearriage.—Metrorrhagia.—Prolapsus, uteri. ?—Putrefaction of the uterus. ?—Mild and acrid leucorrhœa.—Seirrhus et carcinoma uteri.—Frequent sneezing with dry coryza.—Chronic, fluent and dry coryza.—Chronic roughness of the throat and hoarseness.—Malignant influenza.—Chronic catarrhs of old people and drunkards.—Wheezing, dry, spasmodic cough ; scraping cough with slimy and purulent expectoration.—Cough with gagging, concussion of the abdomen, emission of urine and shortness of breath.—Asthma ; oppression of the chest ; heaviness and anxiety on the chest.—Phthisis pituitosa, tuberculosa, eavernosa.—Stitches in the mamma.—A number of stitches in the heart.—Frequent pains in the small of the back and lumbar vertebræ, resembling hard labour.—Pains with hard bearing-down as during the act of parturition.—Nightly pains in the back.—Isehias nervosa. ?—Coxalgia.—Coxarthrocæe. ?—Pains in the soles of the feet.—Stitches in the joints.—Swelling of the feet.

Dr. Kitchen, of Philadelphia, has furnished the following clinical notes on Kreasotum. Many neuralgic affections in which the pain is characterized by burning paroxysms. A case of all the nerves of the left upper part of the body has been cured with it instantly after other remedies had failed: the head, face, jaw, shoulder, arm, tongue, side of neck worst, all were affected, head drawn over to the affected side, heaviness of eyelids, cold surface but no fever following, brought on by talking, moving or sitting up, or lying on side not affected ; the paroxysm was attended with chattering of the teeth and a very excitable, irritable, nervous state.—In asthmatic conditions which appear to be paroxysmal, purely nervous, not catarrhal or humid.—In sore mouths of children or even adults, when the odour is fetid and salivation is present.

#### SYMPTOMS.

**Mind and Disposition.**—Sad mood with constant disposition to weep, or with constantly-increasing longing for death. Depression of spirits, in the evening, desponding of recovery. She cannot help weeping when hearing music or when experiencing any other subduing emotion.—\**Ill-humour*, particularly early in the morning, or with disposition to weep without any certain cause. Constantly excited, vexed and obstinate.

**Sensorium.**—The head feels stupid, she stares without seeing or hearing anything. Frequent failure of thought, the head feeling confused and dull. \**Weakness of memory* ; —after having made a few steps to accomplish any thing, she remains standing, forgetting what she intended to do.—*Dulness of the head*, with beating and throbbing on the vertex. *Painful dulness of the head as after intoxication*, also with weakness of memory and sensation as of a board pressing against the forehead. Painful dulness of the left side of the head, with short beatings extending to the upper molares, with frequent rumbling in these teeth.—*Vertigo*, early in the morning, in the street, with staggering to and fro as from intoxication, obliging him to stand still, the vertigo vanishes in the room. Vertigo, with danger of falling on turning round quickly.

**Headache.**—Headache with drowsiness. Headache with heat on the forehead. Heat from every emotion.—*Heaviness* in the sinciput, as if something would come out. Heaviness in the occiput as if too full, with sensation as if the head would fall backwards. On stooping she feels as if the contents of the

head were falling forwards, and as if she would fall.—*Tensive* pain in the head, aggravated by stooping.—*Pressure* above the right frontal eminence. Pressure above the right brow as from a plug, extending to the occiput. Painful pressing in the head.—*Pressure* or *pressing* from within outwards in the middle of the head; under the left parietal bone; *under the left temporal bone*, particularly in the evening; in the middle of the forehead; *in the sinciput, as if the contents of the head would issue through the forehead*, also with pressure in the eyes from without, extending to the vertex.—*Drawing headache*, with closing of the eyes as if by force; from the right frontal cavity to the right jaw, from morning till noon, and then from two o'clock in the afternoon till evening; in the left temporal bone, affecting the whole head, with dull and dizzy sensation in the head; *tearing drawing* in the left temple as if the parts were pulled out, or extending through the temples to the left side of the face and teeth.—*Jerking pains* in the upper part of the right hemisphere; pulsative jerking above the left mastoid process.—*Tearing headache*, with drawing extending to the eyes. Tearing pain in the whole head, through the left temple as far as the cheek, and on the right side extending to the upper jaw. Tearing pain in the head day and night, for twenty-four hours, with violent heat in the face, intermittent tearing in the teeth, general heat at night and sleeplessness, great languor, ill-humour, whining mood, and vexed about every trifle.—*Stitch* in the right temporal bone. Stitch on the right side of the head, anteriorly, as with a coarse needle, with vacant condition of the mind as if he had lost his senses, commencing in the afternoon and having disappeared in the morning on waking. Drawing sticking through the temple to the upper jaw, with sense of turning in the head. Tearing and darting in the right temple anteriorly, extending to the upper and lower teeth.—*\*Beating, throbbing*, -slight, in the vertex; on the top of the head, with dulness of the head. Slight beatings in the left side of the head with dulness of that side and grumbling in the upper teeth. Tearing in the forehead, particularly early on waking, with heat in the face, languor of the lower extremities, tingling in the legs and feet, and bitter taste in the mouth and of the food. *\*Tearing* in the sinciput, -also constantly, or hammering tearing with frequent stitches in the temples and sensation, on stooping, as if the contents of the head would press out at the forehead. Jerking pulsations above the left mastoid process. Throbbing and bubbling in the left temporal bone as from an ulcer, extending to the vertex and the lower jaw, with twitching and contraction of the eyelids which seem to have grown smaller.—°Whizzing in the head.

**Scalp.**—*Ulcerative pain* in the right side of the sinciput. Sensation under the left occipital bone as of subcutaneous ulceration. The skin of the vertex and sinciput is painful as from subcutaneous ulceration on touching or combing the head, in the interval the pain is drawing, worst on the vertex. Pain above the sinciput as if the hair were pulled. Pressure on the right side of the sinciput, as if proceeding from the cervical muscles.—*\*Falling off of the hair*, -particularly on combing the head (during which process the scalp is very sensitive).

**Eyes.**—*\*Itching and biting in the eyes*, -of the lids, (and around the mouth), with aggravation of the symptom and redness after rubbing, and subsequent desquamation. Itching of the eyes, obliging one to rub and succeeded by biting, inflamed appearance of the whites of the eyes, and pressure in the eyes as from sand.—*Warmth* or *\*heat* in the eyes, with lachrymation, particularly on looking at bright light. Burning and heat as from fire in the eyes, with lachrymation, pressure as if something had got into the eyes, and agglutination of the lids on waking.—*Redness* of the lids, with some swelling. °Swelling of the margins of the lids. °Chronic swelling of the margins of the lids. °Suppuration of the eyes.—

\**Lachrymation* -on looking at bright light; on looking at an object for some time. *Discharge of hot, acrid, smarting tears, like salt-water*, particularly after rubbing the eyes or early in the morning on waking. Lachrymation of the right eye, with gnawing in the right eye, twitching and jerking of the left eyelids. The eyes are constantly moist or bathed in tears, or they look as if the prover had been crying. After rubbing the running eyes, they look dry and inflamed, with smarting and burning.—*Twitching of the lids*, which she is unable to control.—\**Dim-sightedness as through gauze*, °with dim, faint eyes. Sensation as if little particles of a feather were floating before her eyes, constantly obliging her to wipe them.

**Ears.**—Crampy pain in the right ear. *Bubbling pain* in the right ear, also with dragging sensation, or with sensation as of pressing asunder.—*Stitches in the ears*: in the right ear, in the interior of the left ear as with a needle. Stitch in the lower ear proceeding from the top of the right shoulder. Drawing sticking in the left ear, within and without. Darting in the right helix, with swelling and stiffness of the same, and stinging when touched.—*Itching in the ears* (and at the same time in the soles of the feet). Pimples in the left concha, with inflammation of the outer ear. °*Humid herpes* on the ears, with swelling of the cervical glands and livid, gray complexion.—Heat and burning of the ears, with coldness of the feet. *Inflammation of the left outer ear, with glowing heat, bright redness, considerable swelling and tensive burning pains*, sometimes proceeding from a pimple on the concha, attended with tensive pain and stiffness of the side of the neck extending to the shoulder and arm, not allowing one to turn the head to the left side, with internal shiverings through the limbs, and heat in the forehead with pressure over the eyes, as if they would be closed.—Hardness of hearing with buzzing in the ears, (particularly the left), which sometimes alternates with singing and hissing in the head.

**Nose.**—*Bad smell before the nose*, with loss of appetite. Fetid smell in the nose early in the morning on waking.—*Bleeding of the nose*; with thick, black blood; with thin, light-red blood, early in the morning.—The nose is constantly moist, obliging one to blow constantly.—\**Frequent sneezing*, -particularly early in the morning, or with sensation as if an insufficient quantity of air passed through the nose, or with constant moisture in the nose.—Catarrhal sensation in the nose, as if the Schneiderian membrane would swell. \**Dry coryza*, °also with a good deal of sneezing, -or becoming fluent after the lapse of twelve hours, with a scraping roughness under the sternum. Fluent coryza with sensitiveness of the posterior nares to the atmospheric air.

**Face.**—°Livid complexion, with swelling of a cervical gland and herpes on the ears.—Increased *warmth* in the face, with sensation as if sweat would break out. Great *heat* and brown redness of the face during the siesta, with throbbing in the cheeks and forehead, and frequent desire to urinate. Constant heat in the face, with shortness of breath in a warm room obliging one to walk out into the open air lest one should faint.—*Tearing in the right side of the face*, proceeding from the border of the lower jaw, extending to the temple in the evening, or waking him from sleep at night and extending to the ear, with stitches in that part.—*Eruption*: \**pimples on the forehead*, °also as on the forehead of drunkards, -or miliary pimples, sometimes stinging and always remaining dry. Greasy sort of pimples on the right cheek and on the chin, covered with yellow, honey-like crusts. °*Aene rosacea*. °*Scaly herpes* on the eyelids, cheeks and around the mouth.—*Dry lips*, with peeling off of the upper lip which is always hot and affected with a tensive pain. Pain as from soreness and chapped condition of the upper lip. Contractive tension and burning around

the right corner of the mouth, as if the right half of the lower lip would be drawn towards the corner of the mouth.—Crawling in the skin, under the chin, obliging one to rub without obtaining relief.

**Teeth.**—\**Drawing pains in the teeth*: \**extending to the temples* ° and affecting the interior of the ear. Drawing pains in the left molares, first the lower, then the upper, then the upper front-teeth. Drawing pains in the upper and lower front-teeth. Tearing drawing in the left upper teeth, (at five o'clock in the morning, on waking), afterwards extending to the left facial muscles and temple, with sensation as if the teeth were elongated.—Darting pain in the left hollow molar, lower jaw, with frequent yawning.—The gums of the left upper jaw look inflamed, with drawing pain.

**Mouth, Pharynx, etc.**—Slimy mouth with a good deal of spitting in the evening.—Scraping in the throat, also with roughness, as after having drunk brandy, or with a feeling of dryness.—Painful choking in the cesophagus, extending through the chest to the dorsal vertebræ. Pressure on the right side during deglutition. Pain as from soreness, on the left side during deglutition, as if something were suspended there, rendering deglutition difficult.

**Appetite and Taste.**—No taste in the mouth. Flat taste, every thing tastes like straw. Bitter taste in the mouth, early in the morning, in the evening the bad taste is in the throat and prevents one from relishing the food. Every thing she takes, tastes bitter on swallowing it. The appetite is gone. She has an appetite but does not relish any thing, with a feeling of fullness as if she had eaten too much. Actually-existing hunger disappeared immediately after taking the drug.—On taking her breakfast later than usual, she is attacked with gnawing in the stomach, succeeded by a choking sensation which passes off after eating.

**Gastric Symptoms.**—*Sour* eructations. Rising of mere air after a meal, with subsequent spitting of a frothy saliva and scraping roughness in the throat. \**Nausea* ° of pregnant females; —with spitting and chilliness through the whole body as if he would vomit, with burning in the mouth.—Choking early before breakfast, as during pregnancy.—*Vomiting*, before breakfast, of sweetish water. Gaggling up of water and mucus on rising in the morning, with dryness of the nose, heat in the sinciput, with pressing in the forehead as if the contents of the head would issue through it, with coldness of the hands and feet, and thirst.

**Stomach.**—Tightness across the stomach and pit of the stomach, he cannot bear tight clothes.—Drawing tearing in the pit of the stomach as if a thread were being drawn through it, or as if a muscular fibre were being torn out, it affects sympathetically every part of the organism; at three o'clock in the afternoon, during rest.—Movement and throbbing in every artery, extending from the pit of the stomach through the entire trunk, worse during motion than rest.—Frequent *stitches* in the region of the heart (pit of the stomach?) causing one to cry out, at night and in the day-time.—°*Painful, hard place*, on the left side of and near the stomach, or also in the region of the stomach (in the case of a female of fifty years).—°*Scirrhus* or cancer of the stomach.

**Hypochondria.**—Continuous stinging in the region of the liver. Pressure in the region of the liver, with gnawing as of a worm in the left hypochondrium. Pain as if bruised in the superior and anterior lobe of the liver, with feeling of fullness, obliging one to open one's clothes.—Pressure in the region of the spleen which exists simultaneously with other pains in the body, but is felt only when she sits down immediately after rising, accompanied with painfulness of the part to the least pressure.

**Abdomen.**—*Subdued pain* about the umbilicus, as from eating acids, with

ill-humour.—*Contractive sensation in the abdomen*, as if a hard twisted ball were lying in the umbilical region, waking him at two or three o'clock in the night. *Gripping* tearing around the umbilicus, with ulcerative pain of the whole abdomen. Digging and gripping in the umbilical region, extending to the throat and occasioning nausea and inclination to vomit.—*Labour-like colic*, with drawing in the epigastrium in the direction of the small of the back, and pressing towards the lumbar vertebrae, as during the act of parturition, with flushes of heat in the face, palpitation of the heart, frequent pulse, and ineffectual urging to pass urine which is finally emitted in a small quantity and hot, all these symptoms alternating with the eye-symptoms and setting in in paroxysms every quarter or half hour, with chilliness after the paroxysms and milky leucorrhœa.—*Spasmodic pains in the abdomen*: pain as from a boil deep in the abdomen, with electric stitches in the interior sexual organs causing one to start and gripping-tearing spasmodic pains in the labia pudendi, attended with periodical pressing from the small of the back towards the anterior parts, frequent urging to urinate, the urine being scanty and clear; frequent urging to stool, uneasiness and anxiety through the whole body, with sweat as from anguish, out of humour, disposition to scold and beat every body, remission of the pains on rising from one's seat and walking about.—*Cutting* around the umbilicus as if diarrhœa would set in, obliging one to bend double.—*Drawing pain* in the abdomen, during the menses.—*Darting* around the umbilicus, in zig-zag, or with colic as from drinking water after having eaten fruit. Stitch in the right side of the abdomen, between the umbilicus and the brim of the pelvis, arresting the breathing and causing one to cry out. Stitches darting like electric shocks from the abdomen to the vagina.—*Ulcerative pain in the abdomen* during a deep inspiration. Ulcerative pain in the whole abdomen, also with gripping-tearing around the umbilicus or only during motion and going off during rest, obliging one to turn frequently from side to side in the night.—*Painful feeling of coldness* in the abdomen, with scanty secretion of urine. Pain as from a cold in the region of the umbilicus, as if diarrhœa would set in.—*Distention of the abdomen* as after a copious meal. The abdomen is puffed up but soft, with shortness of breathing. Distention of the abdomen after the menses. Distention of the abdomen as in females in the last stage of pregnancy after the sudden cessation of the pains in the extremities, with languor, going off during the night.—*Tensive pain in the inguinal regions*, when walking. Frequent lancinations in the left groin, extending down the thigh. Frequent pain in the right groin, extending upwards and downwards, and reaching the right testicle.

**Stool and Anus.**—Intermittent stool, every three or four days, *hard, dry*, with a good deal of pressing. °*Constipation*, with cancer of the uterus.—*Two or three stools* every day, even in persons of a costive habit. Two stools early in the morning.—When pressing at stool, spasmodic pains pass from the region of the lumbar vertebrae to the right inguinal region and thence to the hip-joint, after which walking becomes very difficult.—Lancinations in the rectum, towards the left groin, obliging one to stand still, during the menses. Drawing, tearing and darting in the rectum, with frequent ineffectual urging to stool, hard stool after a good deal of pressing and remission of the pains. Spasmodic pains in the rectum extending into the groin, obliging one to walk bent and to sit down very cautiously.

**Urinary Organs.**—*Diminished secretion of urine*. Passes only half as much urine as usual although she takes a good deal of liquid. *Frequent desire to urinate, even at night, with scanty emissions*, sometimes a tablespoonful only. Feeble stream. \**Frequent desire to urinate with copious emissions*. \**Frequent micturition, also at night*, -sometimes with pressing on the bladder (as in

pregnancy) and with copious emissions of hot, clear urine. *Passes copious quantities of clear urine every hour* (also at night). Sudden urging to urinate, six or seven times a day, with copious discharge. Passes a good deal of urine every half hour from four o'clock in the morning until noon. Violent sudden urging to urinate in bed, with contractive pain in the vagina.—*Urine hot, also with frequent discharge*, or with burning in the labia pudendi, or with offensive smell of semen. The urine is hot and smoking with acrid smell and reddish sediment. *Clear urine, with copious discharge*. The urine has a bad smell, but no colour. Urine of the colour of chesnuts. Turbid urine, after standing it looks like the sediment of small beer in a brewer's tub. Reddish urine, with red sediment. Urine depositing a reddish sediment. Urine depositing a good deal of white sediment.—Burning in the pudendum during micturition. Mild leucorrhœa, tinging the linen yellow, previous to every micturition, with frequent desire to urinate.

**Male Sexual Organs.**—Burning in the parts, and impotence during an embrace, with swelling of the penis the next day.—He dreams about erections and urging to urinate, and that the glans is breaking off on attempting to urinate.

**Female Sexual Organs.**—Spasmodic pains in the external pudendum. Stitches in the vagina proceeding from the abdomen like electric shocks, causing her to start.—*Itching inducing rubbing* in the vagina, in the evening, succeeded by smarting, swelling and heat of the external parts, with soreness of the vagina when passing urine. Corrosive itching between the labia and the vagina, succeeded by burning and swelling of the labia, violent itching, with biting, in the fold between the pudendum and the thigh, with soreness and burning after rubbing. Voluptuous itching deep in the vagina.—Hard tubercle in the neck of the uterus, with ulcerative pain during an embrace, and more pain in the morning than evening. *Prolapsus* of the uterus.—*Desire for an embrace*, early in the morning, when only half awake. Wakes in the morning with desire for an embrace. Burning in the parts during an embrace, next day the menses make their appearance, with profuse discharge of a dark blood, leucorrhœa on the fourth day tinging the linen gray, and swelling of the outer parts with corrosive itching and burning.—*\*Menses too early by four or ten days*, with profuse discharge (—of dark blood), *\*continuing even eight days*, also with pains in the small of the back. Menses every three weeks, profuse, continuing from four to five days, succeeded by the discharge of an acridly-smelling, bloody ichor, with corrosive itching and biting of the parts. Profuse menses, sometimes coming away in pieces. The menses are much more scanty than usual (curative effect?). The menses intermit for sixty hours on the sixth day, and re-appear on the eighth without any pains in the small of the back or abdomen. The menses intermit for forty-eight hours, then return for twenty-four, with violent pains in the abdomen and discharge of thin, bright-red blood.—*The menses are preceded by*: hardness of hearing for three days; rising of an insipid white froth, or vomiting of mucus; considerable distention of the abdomen; clawing and digging around the umbilicus, relieved by bending forward, succeeded by discharge of white leucorrhœa; great nervousness and uneasiness.—*The menses are accompanied with*: *\*buzzing and humming in the head*, (sometimes felt also before and after the menses), —or with pressing in the head from within outwards, worse on stooping; *\*hardness of hearing*; —emission of flatulence, smelling like rotten eggs; interruption of stool and flatulence, with pressure on emitting flatulence, and subsequent profuse discharge of the menstrual blood, frequently in pieces, a good deal of chilliness; darting in left lower breast, with cutting above the umbilicus at the appearance of the menses; profuse sweat in the back and on the chest, in the fifth night; thumping and reports in the abdomen, succeeded by sudden urging to stool and seven diarrhœic

discharges (evacuating action?).—*After the menses*: violent abdominal spasms, particularly in the groin; pressing from above downwards as if the menses would re-appear; contractive pain in the vagina causing her to start, succeeded by leucorrhœa; °*frequent and acute pains remaining after too frequent and too copious menstruation*.—°*Metrorrhagia*.—*Leucorrhœa*: white, painless, preceded by pains in the small of the back, with flushes of heat in the face, and flowing like the menses; white and smelling like fresh corn-ears; acrid, leaving yellowish-white spots on the linen of the size of a dime, with itching and gnawing of the pudendum; yellowish, tinging the linen yellow, with great weakness of the lower extremities; leaving spots like serum, and having a putrid smell. Discharge of mucus and blood by the vagina, in the morning on rising. \**Mild as well as corrosive leucorrhœa*. \**Leucorrhœa with great debility*. Great debility after a leucorrhœal discharge of twenty-four hours.—*In pregnant females*: °nausea; °appearance of the menses in the third month of pregnancy, with black blood which flows like a stream. °Disposition to miscarriage.—*In the mamma*: frequent drawing from the sides to the nipples, sensation as if milk would flow into the breasts with increased flabbiness; stitches as with a dull needle under the left mamma, darting upwards, with stitches above the right mamma and under the right scapula which arrest the breathing. °Stitches in the mamma.

**Larynx and Trachea.**—\**Scraping and roughness in the throat*, -also with rough, hoarse tone of voice. Hoarseness early in the morning, ceasing after sneezing. Sensation of scraping roughness under the sternum, inducing cough and ceasing after expectorating a gray, insipid mucus.—°*Grippe*. °*Chronic catarrh*, particularly in old people.—\**Cough*: °in the evening, in bed. *Cough excited by a crawling below the larynx*, or as if in the upper bronchial tubes (in the evening). Cough as from mucus on the chest, which cannot be detached. Cough with difficult expectoration. Dry cough with scraping in the throat and pain in the chest. °Cough with asthma. \**Cough with emissions of urine* °and concussion of the abdomen. Constant cough with a good deal of drowsiness, chilliness for one hour and succeeded by dry heat, during which the child continues sleeping. Whooping-cough. \**Whooping, dry cough*.—Dry and spasmodic cough early in the morning, unto retching, occasioned by constant crawling and tickling in the throat. \**Cough with retching*, -only saliva being thrown off.—*Cough with expectoration*: white loose expectoration and scraping in the throat. Scraping in the throat when coughing, in the evening, with expectoration of a thick lump. Constant hacking, occasioned by a sensation as if mucus were in the throat, succeeded by expectoration of white, sweet-tasting mucus. Cough with feeling of scraping roughness under the sternum, and expectoration of gray, insipid mucus.—Continual hollow rough cough, occasioned by continual loose mucus in the throat. °*Scraping cough* with copious expectoration of thick, yellowish or whitish mucus.

**Chest.**—\**Difficult and sometimes anxious breathing*, -or as if the chest were compressed, obliging one to take deep breath constantly. Difficult expirations, on account of a feeling of heaviness in the lower chest.—*Frequent desire to take deep breath, particularly on account of a feeling of heaviness on the chest*.—*Shortness of breath*, as if the breath in the lower part of the chest were arrested. Shortness of breath, with feeling of heaviness on the chest and frequent desire to take deep breath. Shortness of breath, *with pain as if bruised in the chest on taking an inspiration*. On going up stairs the shortness of breath, in the case of a person affected with it, changes to an easy expectoration, early in the morning.—\**Oppression of the chest*, coming on suddenly, with stitches in the left side of the chest.—\**Heaviness on the chest* °also with anxiety.—*Pain*

*in the chest as if pressed upon, particularly in the sternum and especially when pressing upon the part or during an inspiration, sometimes extending to the clavicles and affecting the cervical muscles. Pain as if the chest or the sternum would be crushed in.* Sticking with pressure through the whole chest, extending to the inner border of the scapula.—*Pain as if bruised in the chest, on taking an inspiration*, with shortness of breath or with inability to take deep breath.—*Painful feeling of rawness in the lower part of the chest.* Contractive pain in the chest on taking deep breath. *Burning* from the middle of the chest to the throat, as after drinking brandy, with pain of the tongue as if burnt, with heat, redness and tension of the face.—*Stitch in the chest*, directly above the heart, impeding respiration, relieved by pressure. Acute stitch in the middle of the chest, worse during an inspiration, attended with a feeling of lameness, and extending to the elbow-joint across the right shoulder, where the pains are most violent on lifting the arm. Sticking across the middle of the chest, from morning till noon. Stitches in the left side, on taking an inspiration, after which the turning becomes seated in the right chest. Stitch in the left chest, worst on turning in bed. *Stitch in the right side, arresting the breathing*, sometimes extending as far as under the scapula, and so violent that she imagines she will fall. °Frequent lancinations in the right side of the chest, in the day-time, and at night, with sleeplessness and loud lamentations, relieved by hard pressure with the hand.—°Considerable diminution of a pain in the left side of five years' standing.—°*Stitches in the heart.*—Stinging in the left side of the chest (externally) also here and there between the ribs. Drawing pain in the region of the right upper ribs, from behind forwards, with stitches above the mamma. *Drawing sticking* on the right side of and near the sternum, or also (towards evening) below the left short ribs. Stitch below the left mamma, proceeding thence as with a sharp knife and like an electric shock across the pit of the stomach, the chest, the right side of the abdomen, thighs, down to the tarsal joints.

**Back.**—*Pains in the small of the back* proceeding from above downwards, with heat in the palms of the hands and soles of the feet. Digging in the small of the back as if something would come out. Pains as after long stooping, made worse by stooping and motion. Pains almost occasioning sickness at the stomach (fainting?); worse during rest, relieved by motion. Pains as if the small of the back would *break*, extending to between the shoulders (as if there were a band in this latter region) with difficulty of stooping and pain when moving the arm. *Drawing pains* along the os coccygis, down to the rectum and vagina, (where a spasmodic contractive pain and sticking is experienced), with diminution of the pain by rising from her seat, and subsequent milky leucorrhœa. *Labour-like pains in the small of the back*, with ineffectual urging to stool and distention of the abdomen, or attended, early in the morning on waking (and still worse after rising) with pressing in the abdomen, going through the pudendum down into the thighs, with anxiety and trembling in the whole body, internal chilliness, stitches in the pudendum, aggravation of the symptoms when sitting and walking, amelioration in lying.—Pain in *lumbar vertebræ* as before the menses. *Ulcerative pains in the lumbar vertebræ, or as if the flesh were beaten off the bones*, also with sensation (in one of the upper vertebræ, on rising) as if something would fall out, or (during the menses) with pressing on the rectum as if flatulence would be passed. *Spasmodic drawing* in the lumbar vertebræ, towards the anterior parts, also extending to the pudendum, or down the thighs (*like true labour-pains*) with great uneasiness through the whole body.—°*Frequent pains in the small of the back and lumbar vertebræ, resembling acute labour-pains*, °with strong urging to urinate.—°*Pains in the back,*

at night, -worse during rest, scarcely allowing one to lie down, spreading over the left hip into the inguinal region and scarcely allowing one to raise one's self.—Drawing tension *between the scapulæ*. Frequent stitches between the scapulæ. Pain in the region of the scapulæ, as from blows.—°Swelling of the cervical glands, with humid herpes on the ears, and gray, livid complexion.

**Superior Extremities.**—Pain in the shoulders as if they had been bare all night. Pressure in the shoulder as if pressed against sharp edges. Drawing pain in the posterior portion of the shoulders. Stitches in the right shoulder (at four o'clock in the afternoon), afterwards in the right side of the chest, and (at six o'clock in the evening) drawing pain in the right foot.—*Stitches* in the arm from the shoulder-joint through the fingers which feel as if gone to sleep, powerless and insensible, so that she is unable to hold any thing with her hands, with twitching, tingling and heat of the hands whenever the stitches are not felt.—Pain as from a bruise, in the inner and lower side of the upper arm, only when touched. *Pinching* on the inner side of the left upper arm.—Frequent pain of the elbow-joints, as if the ligaments were contracted and too short. Bubbling cramp-pain in the region of the left elbow-joint, going and coming. Crampy sensation in the tip of the right elbow, when writing, scarcely allowing one to continue writing. *Pain in the ulnar muscles extending to the fingers*, also spasmodic (in the left arm), or *drawing pain* (particularly in the right lower arm with a feeling of lameness and inability to grasp any thing with the hand firmly, returning every half or whole hour).—Laming pain in the left hand which darts into the hand with the rapidity of lightning, and does not allow one to hold any thing firmly with the hand, so that every thing drops out of it immediately. Stinging in the back of the left hand. Agreeable warmth in the palms of the hands with warm sweat on these parts early in the morning, in bed, and frequently in the day-time. Frequent and pleasant itching in the palm of the right hand, for hours, relieved by rubbing. Pimples over the whole hand, which are more felt than seen, with itching which obliges one to rub, and is most violent towards evening, or in the evening in bed. *Cracking* of the skin on the hands, which become quite rigid.—*Drawing pains* in the fingers, particularly in the tips of the fingers of the left hand, with sensation as if swollen. Pain in the left *index-finger* as if lame (during rest and going off during motion), ulcerative pain as from a splinter. *Deadness of the fingers which grow pale and insensible*, particularly early in the morning after rising (with tingling and going to sleep). *Pain in the left thumb as if sprained or stiff*.

**Lower Extremities.**—Pain of the left hip-joint, as if the parts would be disjointed, with sensation, while standing on the other foot, as if the limb were too long. Pain of the crests of the ilia as if some hard or heavy substance had been lying on them. Stitches in the region of the crests of the ilia striking through the abdomen. Pain of both crests and of the lumbar vertebræ *as if bruised*, or as if *tired after walking*, extending to the thighs and calves where the pain terminates suddenly, leaving stiffness or want of mobility.—*Humming* and *buzzing* sensation in the lower limbs. Languor and weariness in the lower limbs as after a long journey. Weakness and instability of the left lower limb. Painless jerk through the left lower limb, so that the foot is jerked up. Laming drawing in the left lower limb. Pain in the left lower limb, during motion, as if the part were yet stiff on account of a tearing in the limbs. Drawing pain with stitches from the thighs to the soles of the feet, worst in the right thigh and much more violent during motion. Drawing tearing and sticking, at times in the right hip-joint, at others in the calf, at times above the knee, causing one to start, with itching and gnawing in the eyes which obliges one to rub, after which a burning is experienced and a good deal of gum is perceived in the can-

thi.—Drawing pain in the thigh from the head of the femur to the knee-joint, worse during motion than during rest, and scarcely permitting one to go up stairs. Pain in the left thigh as from a shock or blow, most violent when sitting. *Tensive pain* in the *fascia lata* of the left thigh, or in the posterior side of either thigh (as after being fatigued, most in walking and when stooping. Piercing darting pain in the left thigh, during rest. Pain in the left thigh, above the bend of the knee, as if too short, most violent when stooping and walking.—*Darting pain* above the left knee, during rest. Lancinating tearing in the right knee, during rest. Tensive pain above the knee, with pain on pressure as if the flesh had been detached from the bones by blows, worse in the right limb, not felt at all during rest. Pain as if sprained in the left knee-joint, with sensation as if it would give way, not allowing one to stand upon the limb. Sharp pressure below the right patella. Tearing boring and sticking in the left patella, commencing in the evening (with chilliness) and lasting all night until morning. Weakness of the joints, during motion, as if they would give way. Red, scaly skin, like herpes, in the bends of the knees.—Throbbing as from a boil in the *legs*, from the knees through the toes, worst in the soles of the feet. Tearing from the malleoli to the knees, with tension in the calf. Tensive pain from the knees to the tarsal joints, particularly in the calves. Heaviness from the knees to the tarsal joints, early in the morning, during motion. Chilliness from the dorsum of the foot to the other side of the knee.—Pain in the region of the external malleolus, with sensation as if the affected part would be turned and come away in turning it. Pain as if sprained in the left tendo Achillis. *Darting in the right tarsal joint*, also through the toes, or worse during motion. Stitch in the left heel during motion, causing one to start and obliging one to stand still. Tearing drawing, and lacerations from the heels through the soles and toes, during rest and motion, in the evening, until one goes to sleep, with swelling of the soles in the morning on waking. Burning, drawing and stinging around the malleoli, as far as the toes, worst in the soles of the feet, from forenoon till afternoon. Pain of the soles, as from subcutaneous suppuration. Burning of the soles for four days, from two o'clock in the afternoon until two o'clock in the morning. *Swelling* of the left foot. Edematous white swelling of both feet, from the calves to the toes, larger on the right foot, with coldness and heaviness of the feet, only in walking. Coldness of the feet. Occasional sweatiness of the feet. Uneasiness in the soles, as after a long journey, with great languor particularly in the right sole. Burning itching of the soles.

**Sleep.**—*Frequent yawning*, with pressure in the forehead and weariness. Yawning with lachrymation, the whole day. Yawning with chilliness. Yawning early in the morning, as if he had not slept enough. Yawning with stretching, as previous to an attack of fever and ague.—\**Great drowsiness with frequent yawning*, -accompanied with putrid taste in the mouth and little appetite. Frequent drowsiness, he would like to sleep all the time. Weariness as if he had not slept enough, with a feeling of warmth in his eyes. Sleeps the whole night without once coming to his senses, contrary to his habit. °A good deal of sleep.—*Sleeplessness*: is rarely able to fall asleep before midnight, as if weary, with pains in every part of the body. For three nights past he has not fallen asleep before one or two o'clock, after which he falls into a sleep full of dreams until seven o'clock, on waking the elbows had gone to sleep. *Tosses about in her bed the whole night without any apparent cause, without sleep*, although very weary (until her menses make their appearance at 4 o'clock, after which she sleeps one hour) or with languor throughout the whole body early in the morning on rising, giving way of the knees when standing, and frequent desire to rest by sitting or lying, and sweat over the whole

body on making the least exertion.—*Restless sleep*, no matter in what position of the body, with agglutination of the eyelids early in the morning. °*Restless sleep* with many dreams. Tosses about from three o'clock in the morning. Wakes three or four times at night, tosses about and goes to sleep again.—*Starting during sleep*. Loud laughing in a dream, without knowing why, on waking she was uncovered and cold without feeling chilly. Sensation of stagnation in the throat (during a dream).—*Symptoms at night, in bed*: uneasiness through the whole body after lying down, not allowing one to go to sleep; waking after mid night, with sensation of excessive warmth in bed; she takes cold, however, on stretching her feet from under the cover; pains in the small of the back from nine o'clock in the evening, until two o'clock in the morning, with internal feeling of chilliness, violent pulsations in the head, inability to go to sleep and tossing about; at the appearance of the menses she wakes at two o'clock as if called, and is then wide awake; pressure and burning in the eyes, which are agglutinated early in the morning, with sleeplessness until early in the morning.—\**A number of dreams*, °also with restless sleep. *Anxious dreams*, the whole night, or as soon as she falls asleep. She dreams that her children have met with some accident, cries about it, and is dripping with sweat on waking. She dreams that she is falling from a height.—She dreams that it snows while in the open air with her infant, this makes her anxious. She dreams that she is pursued by men who mean to violate her person, without any sexual desire. She dreams that she has taken poison and that she has lost flesh in consequence. She dreams that she is beholding a small object which becomes larger and larger. She dreams about a brightly-burning fire, with anxiety, she is waked by the dream. He dreams about erections, urging to urinate and breaking off of the glans on attempting to urinate. Dreams about dirty, disgusting linen.—*In the morning on waking*: sensation as if he had not slept enough, and as if lame in every limb (during the whole time of proving). Fainting spell when she is obliged to rise half an hour earlier than usual. Frequent waking at night, in spite of which he feels as if he had slept enough in the morning, and is very cheerful and bright, with amelioration of all the head-symptoms (towards the latter days of the proving?).

**Fever.**—*Slight chilliness and disposition to feel chilly*, particularly during the menses. Slight chills through every part of the body, and uneasiness when sitting or walking, with frequent ineffectual desire to take deep breath. Shivering all over the skin. °*Predominant chilliness*—*Chilliness* over the whole body, as soon as she remains quiet. Chilliness, the skin feels dead, with sensation in the body as if he had been revelling the whole night. Chilliness three nights in succession (without thirst or heat). Internal chilliness in the warm room, with redness of the cheeks.—*Partial chilliness*: between the scapulae, down the back, even near the warm stove (during the menses); at nine o'clock in the evening, first on the feet, then in the back, about the head and arms, down to the fingers, with sensation as if these parts were cold, which is not the case, from the shoulders to the middle of the small of the back, succeeded by pains in the small of the back which allow him neither to sit nor to lie down, and oblige him to walk about, after which the pains in the small of the back disappear and pains in the hip make their appearance, extending to the thighs, not allowing him to lie still in bed, increased by the access of air and diminishing by external warmth (speedily removed by Nux v.).—*Shaking chilliness*: early on rising, with bleeding at the nose, the blood being of a bright-red colour; with flushes of heat, drawing and sticking in the temporal bones, pressure in the eyes with dim-sightedness as from a gauze before the eyes, obliging him frequently to rub, and succeeded by the secretion of hot tears, with

inflamed appearance of the whites of the eyes; *with great heat in the face*, bright-red cheeks, icy-cold feet, painful heaviness of the upper arms during motion, only, and great ill-humour.—*Fever*: shaking chills for five hours, *then* heat in the face with heat of the hands and coldness of the feet, mingled with chills, from two o'clock in the afternoon until 11 o'clock at night; alternation of chilliness and heat, with a good deal of thirst, languor in every part of the body, constant, painful, fatiguing cough occasioned by an irritation in the lower part of the chest, attended with creeping from the middle of the chest to the throat, painful concussion of the region of the stomach from coughing, and pressure on the vertex which is increased by contact; feverish feeling through the whole body, with good appetite; thirst after the chilliness; dry *heat* at first, over the whole body, the cheeks looking as if rouge had been put on, afterwards warm sweat followed by violent drawing and sticking in the small of the back, which does not allow one to sleep at night and renders it difficult to turn to the other side.—Frequent attacks of flushes of heat, with bright sharply-circumscribed redness of the cheeks.—*Pulse* small and subdued; pulse natural but perceptible in every part of the body as soon as she remains quiet; strong pulse through the whole body, with sensation as if the body were vacillating, but only during rest.

**Skin.**—*Itching*, so violent towards evening that it came nearly driving her mad. Itching with irresistible desire to scratch, followed by a violent burning on the arms and lower limbs, whereas on the abdomen the itching disappears after scratching. Itching with burning and heat over the whole body, at night, not allowing one to sleep.—Blotches like nettle-rash. Blisters like bug-bites, over the whole body, exception the calves, chest and face, with itching which is most violent from five to seven o'clock at night. Large, greasy-looking, pock-shaped pustules over the whole body. Pustules resembling scabies sarcoptica, over the whole body, with swelling and stiffness of the feet.—*Herpes*, furfuraceous and pustulous, dry and humid, on almost every part of the body, on the backs of the hands and fingers, in the palms of the hands, on the ears, elbows, knuckles and malleoli.

**General Symptoms.**—Jerking and pinching in every joint. Pinching, here and there. *Pains as if sore and ulcerated*. Laming pains. Drawing and tearing. Sticking in the joints. *\*Nightly prins*. *Pains as if bruised and contused*.—Great irritation throughout the whole body. *\*Uneasiness of the whole body*, during rest, -also as if every part of the body were in motion. Painful shocks through the body, at night during sleep.—*\*Pains as if bruised in every part (limb) of the body*, -as after running a good deal. Weariness in all the limbs, as previous to violent catarrh, with drowsiness and weariness. All her limbs are affected as previous to a violent catarrh.—Fainting spell, early in the morning, when getting up half an hour before her usual hour.

**Characteristic Peculiarities.**—The pains appear to be aggravated by rest.

## 148. LACHESIS.

**LACH.**—Trigonocephalus lachesis.—See HERING, On the Poison of Serpents—*Duration of Action*: from four to five weeks.

COMPARE WITH—*Alum.*, *Ars.*, *Bell.*, *Bry.*, *Caps.*, *Carb. v.*, *Caust.*, *Cham.*, *Chin.*, *Cocc.*, *Con.*, *Dulc.*, *Hep.*, *Hyos.*, *Lye.*, *Merc.*, *Natr. mur.*, *Nitr. ac.*, *Nux mos.*, *Nux v.*, *Phosph. ac.*, *Puls.*, *Rhus*, *Samb.*, *Selen.*, *Sulph.*, *Verat.*

—Is frequently suitable after: Ars., Con., Hep., Lye., Merc., Nitr. ac., Nux v.  
 —Afterwards are frequently suitable: Alum., Ars., Bell., Carb. v., Caust.,  
 Con., Dule., Merc., Nux v., Phosph. ae.

ANTIDOTES.—Alum., Ars., Bell., Cham., Caps., Chin., Cocc., Hep., Merc.,  
 Natr. mur., Nux mos., Nux v., *Phosph. ac.*, Rhus, Samb., Verat.—For the  
 bite of the serpent: Ars., Bell., Caps., Natr. mur., Samb.

## CLINICAL OBSERVATIONS.

*Jahr* mentions that Lach. is particularly suitable to persons with a *melancholy temperament*, also to those with a choleric temperament, and with a phlegmatic, bloated (spongy) constitution, with dark eyes and disposition to lowness of spirits and indolence. Lach. is also suitable to females with a choleric temperament, freckles and red hair. It is very rarely suitable to persons of a sanguine disposition, with a blooming complexion, soft, fine skin, unless the illness with which they are afflicted, should have changed their temperament to the choleric and melancholy. It is more frequently adapted to thin and emaciated than to fat people. Lach. is frequently of service to females at the critical age, particularly after the menses have ceased to flow.—Lach. has been employed with success for affections occasioned by spring-weather, by a cold, or by a long abuse of Merc., for affections occurring in damp or warm weather, in changing or windy weather, and in general for the following conditions: affections of drunkards.—Pains in the limbs, recurring every year, with burning and subsequent swelling of the face. Acute and chronic rheumatisms, with pain as from swelling and stiffness of the joints, aggravation of the symptoms night and evening, during motion or contact, sweat which does not afford any relief, and sometimes with danger of the rheumatism affecting the heart.—Bad consequences of long grief.—Tearing in the joints, either in all of them, or only here and there, also with contraction or stiffness of the affected joints, with aggravation early in the morning, difficulty of going upstairs, severe stitches on rising from a seat, renewal of the attack after taking cold, and amelioration of the pains by cold air or cold applications.—Bone-pains, after abuse of Merc., which was given for syphilis, most violent in the evening, going off during sleep, worse when sitting than walking, less in the warm than cold air, relieved by the appearance of red spots on the glans, which took place every fortnight. Hemiplegia, particularly paralysis of one arm, the right or left, or of the whole left side (also in alternation with *Rhus*).—Emaciation during illness. Emaciation and exhaustion after abuse of Chin. for fever and ague.—*Sudden paroxysms of vertigo as if one would die*, every part of the body seeming to tremble and to palpitate, preceded by palpitation of the heart with heat, anguish and shuddering, attended with trembling of the lower limbs.—*Violent convulsions* of the lower limbs and face, with rigid stretching of the body. Convulsions and other spasms with violent cries, particularly about midnight, waking him.—*Threatening tetanus*.—*Spasms of children* with vanishing of sight and loss of sense, distortion of the eyes as when one struggles against sleep, closing of the lids, hanging down of the head, inability to stand, staggering, constant moaning.—*Epileptic fits*: in an old woman, with loud cries, falling without loss of consciousness, with the eyes turned upwards, clenching of the hands, jactitation of the upper and lower limbs, and foam at the mouth. Epileptic fits with striking the head backwards, foam at the mouth, clenching of the thumbs, striking about with the hands and feet. *The epileptic paroxysms are preceded* by a sort of confusion and absence of thought in the manners and actions of the patient, or by a *strange sensation in the throat*, or by vertigo with headache and paleness of face, coldness of the feet, palpitation of the heart, bloatedness of the abdomen, eructations and heaviness of the head.—Deep sleep at the termination of the paroxysm.—*After the nightly*

*paroxysms* : a quantity of mucus in the throat and mouth, waking with desire to urinate, or involuntary emission of urine during sleep.—Swelling of the bitten part (bite of a viper), with nausea, vomiting, great thirst and swelling of the tongue.—*Suppurations*, particularly of deep-seated parts (frequently in alternation with *Hep.* or *Merc.*).—*Ulceration of a wound* in consequence of a shock, with swelling and malignant suppuration.—Spreading, badly-coloured, painful ulcer (on the calf), occasioned by scratching.—*Ulcers on the legs*, with fetidly-smelling ichor, elevated, pad-shaped edges, *foul, uneven base*, great pain and intolerance of the least motion or contact.—*Foul, ichorous, flat ulcers* from the size of a pea to that of the cornea of a horse, here and there on the body, and particularly on the legs.—*Malignant ulcer* (on the upper arm) with green-yellow, fetid ichor and elevated edges.—*Old foul ulcers* (on the leg), surrounded with vesicles.—*Suppression of ulcers* (in the case of a woman, who, after sudden desiccation of an old ulcer on the foot, was attacked with a violent febrile heat and great pain in the abdomen).—*Aneurisms*.

Numerous other cases of clinical experience which are recorded in the books as illustrative of the curative virtues of Lach., will be found in their respective chapters marked with the cypher.

Dr. Hering, who has introduced this heroic agent into our materia medica, has reported some cases of cure with Lach. in the 15th volume of the *Archiv*, which illustrate some of the principal curative powers of that agent in a remarkable manner, and which we therefore transfer to our pages. The leading symptoms in these cases will be, moreover, found scattered through Jahr's text marked with a cypher. The following translation of these cases has been taken from the British Journal.

1.—A woman of 76 years of age, who had long suffered from a suffocating cough, which prevented her lying down at night, and who had besides oedematous feet, etc., was for some time treated homœopathically with alleviation of the swelling of the feet and distention of the abdomen. She afterwards got *Ars.*, *Nux v.*, and *Ipec.* with temporary benefit. Lach. proved of the greatest efficacy in this case, and although from not being able to watch the case for a length of time, I cannot say whether that benefit was permanent, yet I shall detail the particulars of it.

The chest was, as it were, stuffed. She cannot lie down, from a sense of suffocation, and must open the doors and windows to obtain air; a suffocating, *short cough with scanty and difficult expectoration* (characteristic of Lach.). She is frequently better, and is then able to lie down, but the head must always be high, and she generally rests it on her hand.

Fever every night at ten o'clock, with urgent and unquenchable thirst, dryness in the throat and mouth, she can scarcely breathe for thirst, she must continually moisten the mouth; drinking does no good and she dreads it; apples alleviate it somewhat. The fever begins with rigor on going to bed, and the heat continues till about four in the morning, *with intervals of shivering*; there is sweat towards morning. Teasing pain in the temples during the hot stage, with burning heat in the epigastrium. So sleepy, day and night, that she cannot resist the inclination, but yet she cannot sleep, except a little towards morning. Frequent micturition, the urine is scanty, dark-brown, and turbid.

Abdomen distended, much annoyance from flatulence; cannot bear anything on the abdomen.

Little appetite, stool daily, frequent coryza.

Some weeks ago, another most annoying symptom appeared, which was very characteristic of Lach., and induced me to give this medicine, particularly as all the other symptoms were suited to Lach. It was this: the feeling of *a ball in the throat*, as if a button was stuck fast in the pit of the throat, not

perceptible on swallowing food but perceptible on attempting deglutition, during which it seems to rise and sink, as if it were turned round. It always feels as if she could bring it up, but it will not come (characteristic of Lach.). She must have the whole neck bare, cannot even endure the bed-clothes on it, nor even tie her cap-strings on her throat. A short time before the appearance of these symptoms, she had a swelling between the collar-bone and first rib.

After taking Lach., the ball was much more perceptible, and seemed to threaten suffocation. On the morning of the third day, 48 hours after the dose, some red blood was *hawked up* with much effort, a thing that had never happened to her before in her life. After this the ball in the throat disappeared, and she felt in every respect so much better as to consider herself quite cured; and I have never heard more about her.

2.—A young, robust, sea-captain, who had previously suffered from abscess of the throat, suddenly felt as if a fish-bone had stuck there, and some days after felt, with increasing discomfort, as if a sponge were hanging in the throat; it seemed to impede his breathing, and he felt as if he could hawk it up, but the attempt gave him pain, and did no good. He also felt as if there was a small dry spot, from which pain extended to the ear. There is continual inclination to swallow; there is no pain felt at the spot on swallowing food, but there is during deglutition, and on applying external pressure. When he presses the throat, he feels as if the eyes would spring out of the head, and externally as if he had got a blow on the neck. Between the sternum and glottis he has a throbbing, *choking* sensation. The throat is better in the morning; it begins two or three hours after rising, and continues until the evening. It is little felt during the night.

After the first dose of Lach., the chief symptoms were all better; after four days he was again worse, and he took the second dose on the fifth day. This produced new indications, and after another dose, with a similar interval between, he started on his journey in perfect health.

3.—A lady, of a weak frame of body and a quiet, sensitive mind, had suffered much distress from the death of her husband and the loss of her fortune. During the suffering from grief on account of her unaccustomed poverty, an affection of the throat became developed, along with shivering and fever; the affection went and came, and seemed to depend much on the state of the weather. When the catamenia were not present (she was in the climacteric period), the affection of the throat was more severe, and it became less when the catamenia returned five weeks afterwards; but on the following week it became so troublesome as to oblige her to seek medical assistance. She had hitherto undergone no regular medical treatment, and had never been ill before.

Pain, especially to the right of the throat, increased by pressure, as if a thick substance were there, and it feels very dry. She feels no difficulty in swallowing solid food, or in deglutition, but she cannot easily swallow fluids, and must be very cautious while doing so not to have the drink forced back by the nose. The pains are worse when she washes in the morning, and after sleeping in the day-time; they generally disappear in the afternoon; at this time the affection of the throat becomes so prominent, without being painful, as to prevent speech altogether. There is so much swelling of the throat that the speech becomes quite unintelligible and through the nose, many words she is quite unable to pronounce; the more and the longer she speaks, the worse it becomes; the voice is quite nasal, and at length altogether lost. In the morning, the speech is attended with pain in the throat, but is more distinct. The sufferings are aggravated in damp weather, when there is also pain in the back.

No medicine suits these symptoms so well, not even *Bell.*, as *Lach.* After the first dose the symptoms were all worse; during the improvement which fol-

lowed, fire broke out at a neighbour's house, and the patient suffered from the alarm. She got another dose, which produced aggravation also and new symptoms. Soon after this, during her improvement, the catamenia appeared, and after this was past, she got a third dose. After this, new symptoms set in, yet there was permanent improvement, and in the course of a few weeks she was completely restored to health. During the damp weather she became again affected with pain in the throat and hoarseness, for which she took *Carb. v.*, which was followed by complete and permanent cure.

4.—A lady was affected with syphilis from her husband, and not knowing what the primary symptoms indicated, she did not seek advice nor do anything to arrest the disease until it appeared in the throat. Then the most distinguished physicians in New York and Philadelphia were consulted, and sometimes the disease was better and sometimes worse. Thus in ten years she had consulted eleven physicians, and had used the various methods of the day, each of which seemed to do temporary good, but the return of the attack was always aggravated with some new and worse complication.

For two years, with short intervals of relief, she had suffered from severe sore throat and cough. The soft palate and pharynx are full of cicatrices, between which may be seen small ulcers of a greenish yellow colour, seated deep in the pharynx. There is severe pain on swallowing food; she cannot swallow anything either sweet or pungent, nor anything hard, not even a morsel of bread; she is obliged to feed entirely on soft food; the pain is sometimes so severe that she cannot swallow anything at all; and at all times when she drinks, some of the fluid returns by the nose.

The ulcers produce a continual titillation of the throat, which induces cough; there is a constant hawking, going on to empty retching without nausea; there is seldom any expectoration, and when there is, it is brought up with extreme difficulty, and at the risk of suffocation.

There is constant salivation, so that she is often disabled from speaking by the salivation, cough, and expectoration; if the expectoration occurs after dinner, she frequently vomits her food.

The throat is painful externally to pressure, and here and there are to be felt painful lumps. The pain of the throat extends as far as the ears, which feel as if stuffed.

There is urgent desire of micturition, and much urine is passed, often there is burning pain when the water is passing.

Formerly there was much leucorrhœa, which however diminished under homœopathic treatment.

The catamenia are regular, but always attended with pain, like labour-pains, in the loins, but only much more severe; some days before and after, violent diarrhœa, with intolerable tormina. In general there is great costiveness, on one occasion she was 20 days without a stool.

She is frequently feverish, shiverings alternating with flushes of heat.

She is besides haggard, and her face is of an unnatural colour, the cheeks are yellow with traces of red vessels visible, and spots of circumscribed red; the nose is pointed and red, as if raw from a sore, and there is always stuffing of the nose.

She is very sleepy during the day, and yet sleeps very well at night when she is not kept awake by the cough, nor by the pains in the head and limbs.

The attacks last frequently for half a day, the headache is frightfully severe, the brain feels as if it would burst the skull, especially at the temples; this generally begins on rising in the morning, seldom in the afternoon. Lying down relieves the pain, but as soon as she raises the head, whether she sit or walk, the pain is equally severe. She has also frequently attacks of pain in the limbs,

in the back, loins, right hip and knee, less frequently, also in the left; these attacks occur at night, awaken her, and oblige her to rise; they drive her nearly frantic for the time; the pains are piercing, griping, and squeezing, and frequently recur.

The characteristic symptoms of this group are peculiar to Lach. alone, hence it cured this syphilitic perennial disease, which had been mistreated for ten years, in a few weeks. After the very first dose, the pain in the throat and the cough were lessened. As after six days the pain in micturition and in the head increased, she got a second dose; when afterwards the rheumatic pains returned with much severity, she got a third dose; these doses relieved the costiveness. After fourteen days, the cough and headache returned, she then got a fourth dose. Then there appeared what seemed a crisis, for suddenly there was a copious discharge of blood and pus from the nose, as if a large abscess had opened. It felt as if it came from above the eyebrows. The second day after the fourth dose, the catamenial discharge appeared, it might be a day or two premature, but unattended with pain or diarrhœa. The leucorrhœa was entirely gone.

Her face was now of a natural colour, she felt strong and healthy, and as if metamorphosed; had no pain or suffering of any kind, and could swallow perfectly.

Some weeks later, a chill brought the hoarseness back, but this was removed by Dule.

5.—A young man, weakened by disease and by medicine, had suffered much from pains in the bones (probably mercurial syphilitic) of the right arm, which had been still further weakened by the fracture of the clavicle. After he had been cured of this pain as well as of caries of the upper jaw, and had remained perfectly well during four months of the coldest weather, that is from December to March, he was without any assignable cause, except that he had taken a piece of ice in his hand, suddenly attacked one morning with the following affection.

Swelling of the back of the right hand, extending down the fingers; the whole after a few minutes became quite livid. After being wetted with hot brandy it went off; but after some days it returned as suddenly as before, and much more severe, and then it appeared every day, each day earlier than the foregoing, and continued three or four hours.

It begins with severe itching and "creeping," the hand becomes blue and gradually darker, and has the appearance of a contusion on the worst part, but more transparent; it is at parts mottled; the hand looks as if it were stuffed, it is so hard.

The affection now goes from the middle of the back of the hand, over all the fingers, the hand is ice-cold, but seems to him burning hot, it is very sensitive to pressure, and he can bear nothing to lie on it; burning and pricking in the finger-ends; the heat of the stove relieves the pain, but increases the creeping sensation.

Throbbing pain at the outside of the wrist, the whole day; sharp pain extending up the arm as far as the elbow; spasmodic (?) pain in elbow-joint when he carries his arm in a sling, not when he allows it to hang; at every attack there is pain at one small spot under the shoulder, (affection of a vein?). There is pricking and burning in the hand as it goes slowly away.

Lach. given after an attack, made the succeeding one slighter, and there was one more. It was observed at the last attack, that the cold finger-points when rubbed became white, and by repeated stroking of the finger upwards, the blood was forced into the upper veins, thus the blue colour left the fingers; but it was more difficult to recover the back of the hand.

6.—A woman had to take charge of a child affected with the itch. After some months she became affected with the itch; *psorin* only increased, and

after various medicines, she got, on account of the dark blue vesicles, the swelling, and the burning pain, *Ars.*, which however did no good except at first, and on its repetition increased the disease, and brought on bilious vomiting.

She had itching on the whole body, on the hands and feet; *after burning pains* there appeared itch vesicles; attended with much itching, throbbing heat, there formed a large diffused red swelling; here and there among the small vesicles a larger vesicle the size of a nut was seen, at first full of water, but afterwards containing pus, and there was great inflammation at the time as far as the elbow and knee; some of the pustules instead of being yellow, were dark blue, with burning throbbing pain in the whole swelling, as if the flesh were being torn from the bones; the attacks made her almost desperate; the pains attack the head, teeth, breast and back, and dreadfully severe burning pain is felt in the head, which causes a sense of sickness and nausea; throbbing and beating is felt in the head at every movement.

After the attack she lies in a stupified sleep; the pains are worst at night; she has constant thirst, but drinking makes her sick. Sometimes the itching goes off, and then she is very short of breath and full of anxiety.

After the first dose of *Lach.* she was better, and the headache was gone. After some days a second dose was necessary. In a week she was quite cured, except the remains of stiffness in the joints of the fingers.

7.—A strong young man became affected with pain in the second toe of the right foot without any known cause. By the evening, from thence as far as the knee a livid swelling had extended, which was more painful when he walked. Salt and vinegar removed the swelling, but still he could not walk. There is much pain in both knees, he cannot stretch out the foot, and can scarcely move from the spot. The toe is still painful on pressure, in stretching out the foot on walking, and he cannot put on a shoe.

Four days after the first dose of *Lach.* he could walk without any annoyance for half an hour, and he has now some sensibility in the ball of the foot to pressure. After a week a painless tumour appeared in the cheek, but he did not wish to take any medicine, and I have not seen him since.

*Lach.* I have found very useful in many cases of so-called shortening of the tendons, sensation as of threads stretched along the arms, legs, or from the back of the neck to the eyes, and in various other sensations of tension.

8.—A young man suffered from what was considered to be dyspepsia, and was quite exhausted by the disease and the remedies. Ever since the first accession of the disease, he had had no passage in his bowels except from laxative medicine. Several Homœopathic medicines only brought out the symptoms of the complaint in a clearer light; on the whole he found himself better, although he had still the same symptoms as before and some new ones in addition. These new ones afforded the best indications for the remedy.

His appetite was occasionally very good, occasionally absent; sometimes he is so tormented by hunger that he cannot wait for a meal at the proper time. After eating he is giddy, heavy, and indolent, with a suffocating sense of dyspnoea. The stomach is painful from flatulence, he must often eructate, which gives him relief. Sometimes he vomits his food; when he gets no relief from eructation he becomes very ill.

At a small spot between the navel and the epigastrium a sense of unpleasant pressure, which takes away the breath, and it also is relieved by eructation. Throughout the whole day he has frequent attacks of nausea and dyspnoea, weakness even to syncope, and palpitation of the heart attended with cold sweat.

When lying in bed at night the slightest covering over the nose or mouth produces suffocating dyspnoea.

He sleeps ill on account of continual dreams and frequent awakening, and in the morning he is heavy and out of sorts. Costiveness as before.

He is very pale and emaciated, and the colour of the face is a dim whitish yellow. He has pain in the legs and stiffness of the knees after sitting.

After the first dose of Lach., the only medicine which has all these symptoms, and in the same order, first the sleep improved, then the colour of the face, and then the eructation and the other symptoms therewith connected. The fits of dyspnoea become less severe and less frequent, but the painful sensation on pressing a particular spot of the body remained. After the second dose, all the symptoms were alleviated, even the costiveness. After the third dose some new symptoms appeared, but the aggravation of former ones which had followed the second dose subsided, and the improvement went on fast. After some weeks his colour was fresh and healthy, and he was in strong vigour.

Great exertion and errors in diet, made some other medicines necessary, but the symptoms cured by Lach. never returned.

9.—A young man of phthisical habit of body, had suffered from pneumonia in autumn, and as happens in half the number of cases after severe depletion, he pined away, and came to me in spring quite emaciated, and suffering from a constant cough. Sep. seemed to correspond with the symptoms, and it had so good an effect as to change the man's appearance altogether.

But the improvement went on only for three weeks after the first dose, and after the second dose, the complaint increased. This I always consider as an indication that a medicine does not answer, but that it is necessary to give some other medicine related to this one. Several other medicines, among the number, *St'an.* relieved the accessory symptoms, but only brought the essential ones out in clearer relief—for example, *cough always after sleep.* This forced me on Lach. The symptoms were:

Short superficial tickling cough, which is very exhausting, sometimes causing vomiting. Expectoration attended with much difficulty, and what is expectorated is of two kinds, thin tough mucus and thick roundish lumps. He often coughs, hawks and spits without bringing up anything. He coughs only during the day, (this day-cough is very characteristic of Lach., but also a night cough of which the patient is ignorant. They often appear together without the latter being observed.) More cough in the open air, and after speaking, which seems to make every thing dry. It is always worse in damp weather, and after eating fish. The cough often seems to originate in the epigastrium, where it produces a tickling sensation, and also severe pain. There is a pain as if from suppuration under the ribs, also in the trachea, and much water-brash. He is also always short of breath, especially after working with the arms. He has, especially after rising from the sitting posture, such a stiffness and weakness in the knees, that he can scarcely move from the place; he is always much bent as if from weakness. He has nausea and want of appetite in the forenoon.

After Lach. the cough was very bad for an hour, then he expectorated some yellow matter for the first and only time. After this the cough became looser, gentler, and less frequent. After three or four days the symptoms re-appeared, the colour of the countenance alone remaining improved.

After the second dose, improvement again occurred, and went on progressing for some time. After a few more doses, all his suffering almost entirely disappeared, the hoarse phthisical voice was better, he walked upright and quick, and felt so strong and well, that he went on a journey of business.

## SYMPTOMS.

**Mind and Disposition.**—\*Despondency, -also with shortness of breath, or with indolence and chilliness, °or also with discouragement, in gastric affections. Very sad early in the morning, also with languor. °Melancholy of pregnant females, relieved after sighing. °Brooding and melancholy mood. °Taciturn and indolent, also in children. Avoids company and does not want to talk. °*Great disposition to feel sad, and to look at the dark side of every thing*, saddening events overwhelm him. °*Discouragement and loathing of life*, the future looks dark to him and he despairs. °Hopeless and despairing in a person affected with rheumatic pains.—\*Restlessness, °driving him from one place to another, or into the open air. Anxiety and apprehension after a meal. \**Anguish*, also with trembling. Oppressive apprehension during a ride in the open air, a sort of foreboding of some evil accident. °Dread of death, is afraid to lie down, lest a paroxysm (fit) should take place and destroy her life. °*Anxiety on account of her illness*. °*A number of those who had been despairing of their recovery, now believe in its possibility*. °Attacks of nightly fear, for instance: of the cholera, or of robbers who might break into his house and oblige him to jump out of the window, etc.; with an impression that all these fancies are real, and that he would rather die (accompanied with a good deal of vertigo, constipation and interruption of the sleep by every little noise).—\**Mistrust and suspicion*, -imagines that those around him, are all the time endeavouring to hurt his feelings intentionally, even the most innocent remarks appear odious to him. Foolish, almost frantic jealousy towards evening. \**Doubts every thing*, even those things which he had been firmly convinced of heretofore.—*Ennui*, with trembling. Great, continued indifference, also with forgetfulness.—*Indolence, want of disposition to do any thing, also with lowness of spirits*, °particularly in persons with a phlegmatic spongy constitution, -or with indifferent mood, attended with weariness and languor. °Indolent, taciturn, brooding and melancholy, he considers himself too feeble to do any thing, *with aggravation of the symptoms every other day*. Aversion to exercise. Indolence of the mind, with bodily weakness and languor. Disposition to fritter away one's time, not disposed to accomplish any mental business, or to do any thing properly.—°*Weakness of will*: several young men who could not make up their minds to marry, soon did so after having been under the influence of Lach. for a time.—*Vexed mood*. Is frequently unable to conceive any thing but imaginary untoward events. °*Peevish, fault-finding, discontented mood, with disposition to hunt up other people's faults and to animadvert upon them*. *Excessive desire to quarrel and dispute*, also from mere desire for contradiction. Desires impetuously more than one answer even when there is no occasion for it. Vehemence and anger, also without feeling vexed. Excessive orgasm of the blood after unpleasant news. °*Malice*, attacks others suddenly, wounds them, thinks of nothing but mischief. *Hurriedness and uneasiness*. Is obliged to do every thing very quickly, is unable to remain seated, and swallows his food without chewing it. Disposition to undertake many things, without persevering with any.—*Great nervous irritability*, he is moved to tears in reading some touching poem, with pain above the eyes after weeping. Becomes enraged when touched by others ever so slightly. °*Excessive moaning and complaining of one's pains*. Great tendency to start, particularly in the evening. *Exalted mood*, with increase of well feeling smoking, however, affects him unpleasantly. *Cheerful mood without any particular cause*, laughing to himself, and desirous of amusement. The more he has cause to feel vexed, the greater his disposition to jest, ridicule, and to conceive ludicrous ideas. Sort of ecstasies, as after great joy, with disposition to talk and do a good deal, and increased facility of accomplishing a thing. Heavenly ecstasies.—

*Sympathizing and communicative*, and sometimes very impatient, while attending to a dry and tiresome business. *Excited and talkative*, in the evening, also with bodily languor, and jumping from one idea to another. °*Morbid talkativeness* after excessive study, discoursing about things in chosen language and *jumping from one subject to another*, with pride and mistrust of those around him.

**Sensorium.**—Mental languor preceded by excitement. *Great absence of mind*, particularly in reading. Is frequently unwilling to read long, even interesting articles.—°*Absence of thought*, °with weakness of memory, and a kind of anxiety if he is to speak in public. °*Absence of thought*, in paroxysms of half an hour, with incoherence of speech, complete forgetfulness of every thing which had taken place previously, and difficulty of setting himself in motion when sitting or lying (after vexation). °*Vanishing of thought*, with blackness before the eyes, in paroxysms. Complete *loss of sense*, with cold feet, and disappearing as soon as the feet get warm.—°*Inability* to think intently and without perseverance. °Does not succeed in his mental exertions, with painful dulness of the head. °Mental exertions affect him unpleasantly.—°*Great weakness of memory*, finds it difficult to listen, and *forgets entirely what he had been hearing a moment before*. He is without memory, neither hears nor understands what other people tell him, although his power of thinking is unimpaired. *Has to think how the words are spelled*. \**Makes frequent mistakes in writing*. Makes a number of *orthographical mistakes* in writing a letter, even the simplest words are spelled wrong. Is mistaken about the date of the month and the day week: on the 6th he dates from the 26th, and mistakes Wednesday for Saturday.—°*Ideas crowd upon him*: in attempting to write down an idea, a multitude of ideas crowd upon him so fast that he is scarcely able to follow them. Increased activity of his fancy, which is crowded with an unusual variety of scenes and events. His mind is so active in the evening and at night that he is obliged to sit up *for the purpose of composing*, which he does with increased facility, variety and richness of thought.—°*Delirium at night*. °Talks a good deal while in a febrile condition, in the evening.—°*Mental derangement*: after vexation; °after excessive study; °in drunkards?. °*Religious craziness*, she thinks she is predestined to eternal punishment.—°*Dulness of the head*: —with heat and violent congestions; early in the morning, *also every morning*, or with inability to think correctly and with languor of all his limbs, or with heaviness and discharge of blood from his nose, with headache in the forenoon, and congestions in the afternoon, or with pain in the right side of the head in the afternoon.—°*Vertigo*, after stooping. Vertigo with staggering and incipient loss of sense, as if threatened with apoplexy, in the evening. Vertigo with staggering to the left side, early in the morning, after rising. *Frequent, momentary vertigo, particularly on closing the eyes*. °Giddiness in the incipit, with dulness of vision as if a mist were before the eyes, or as if the eyes were too dry, obliging one to wipe them, worse early in the morning. Giddiness on walking out. °Giddiness on reaching high. Giddiness after rising, or when standing, going off on lying down, early in the morning. Giddiness on sitting down. Giddiness on sitting after walking. Giddiness after lying down, or when stooping or sitting still, in the evening. \**Giddiness with headache*, °particularly before the menses.—°*Apoplectic fits*: °with distortion of the head, facial muscles and mouth to the *left side*, dark redness of the face and violent *convulsions of the muscles*, violent jactitation of the upper and lower limbs (*particularly on the left side*), the patient extends the body with a jerk, the face grows pale and blue-red, with foam at the mouth, succeeded by blowing and bubbling expirations, with a small and intermittent pulse, and staring and immovable pupils. °*Apoplectic fit* in hydrothorax, with paralysis of one arm and of the tongue, imperfect conscious-

ness and unintelligible muttering. °*Apoplectic fit with paralysis of the left side, coldness of the hand as if dead*, moaning, complaining about pain and debility, dread of death, delirium (he does not know what he is saying), tearing in the head with heat and redness of the face, weakness and tightness of the chest, with some stitches (on the right side), difficulty of urinating with frequent desire and with moaning previous to every micturition, *constant motion of the left eye and lid* after the third paroxysm, *with constant rising and falling of the lower jaw*, inability to talk and swallow, with danger of suffocation.—°Cerebral affections of children.? °*Acute dropsy of the brain (?)* accompanying chronic helminthiasis.?

**Head.**—*Headache generally*: in the forehead; in the *left frontal protuberance*, as if sore, or deep-seated (early in the morning), as if connected with the ear, the outer parts feel painful as if bruised on pressing upon them; in the vertex, internally, worse on pressing upon the part; *many of the pains are deep-seated*; pain above the eyes, extending to the root of the nose, continuing almost the whole day; pain near the right eye. Pain extending down to the root of the nose. Pain in both temples. Sudden pain in the left side, continuing the whole forenoon. °Pain in the occiput, every morning. °General, very troublesome pain, every afternoon. °*Pain every day* (after recovering from the influenza), with a languid feeling in all the limbs as if proceeding from the chest, disposition to sleep and loss of appetite. °*Headache from the heat of the sun*, °Stroke of the sun.?—\*Dull aching: —in the sinciput; in the head, with nausea, in the afternoon; °in the vertex, in drunkards.—\**Heaviness of the head*: °early in the morning, with subsequent pain above the right eye; °with weakness and dulness of the head, worse in the occiput and when walking. Excessive heaviness in the occiput early in the morning on waking, with vertigo. Oppressive heaviness in the forehead with nausea and giddiness, after drinking wine. Heavy spot in the middle of the head, moving to and fro when moving the head.—°*Headache after a cold*, first a pressure in the forehead, which increases to a violent beating in the evening, with nausea and inclination to vomit, also with vomiting of green substances, bad taste in the mouth, and loss of appetite, attended with occasional dartings through the head from the forehead to the occiput, tearing dartings in the upper and lower limbs, *nightly empty eructations, succeeded by aggravation of the symptoms*, redness of the face with expression of anguish, uneasiness, discontent and tossing about in the bed, the patient is at times lying on the back, at others on the belly, *and talks hastily without frequently knowing what he is talking about.*—\**Aching pains in the head*: —for two days, on the third day the headache is succeeded by congestion of the head. \*Headache with nausea. Headache with drowsiness. \*Aching in the forehead, °also with stitches, —or towards the inner parts (going off in the evening, in the open air or during motion, but returning in a room when sitting still). Aching on the right side of the eye or in the forehead, and soon after in the left temple, with a similar pain in the right side of the face (apparently in one of the upper teeth), and afterwards also in the left lower limb and foot, in the evening. Aching in the left temple, the whole forenoon. *Aching under the skull all over*, also as after having taken cold (after a walk in the open air), or accompanied with nausea and alternating with heat and very much aggravated by stooping.—*Pressing headache*, early in the morning, violent, with congestions of the head. *Pressing pain* deep in the forehead and left temple. Violent pressing, in the evening, about the sinciput, most violent in the temples, which are painfully affected by every step in walking. Pressing in the right side of the head, about the eyes and towards the occiput, with heaviness, dulness and congestions, particularly on stooping.—°*Pressing in the forehead from without inwards*, on

stooping. Feeling of fulness the whole day, with some headache on the day following. °Severe pain, *as if the head would burst*, particularly in the temples, after rising, frequently also in the region of the eyebrows, and the glabella, the pain is felt whenever the head is raised, and is silent only in a recumbent posture. Constriction of the head above the ears, with pressure below either temple in the direction of the ears.—*Tensive pain* in the whole head, relieved in the open air and by pressing on the head, with sluggish, hard stool. Tensive pain in the head, relieved by pressing on the head, with whizzing in the head, feeling of heat, a good deal of sneezing and fluent coryza, with hard stool. Tensive pain in the right half of the occiput, extending to the orbits and the nasal bones. Tensive pain as if one side of the head were put upon the stretch, extending from the nape of the neck, across the ear, to the eyes, when coughing.—*Drawing pain* extending from a spot above the right ear to the vertex, an hour after dinner. Drawing pain in the nose and frontal cavities, and under the whole skull. Jerking, stretching, drawing in the skull, malar bones, and lower jaw. Drawing pain in the right side of the head, with stinging, after smelling of coffee.—*\*Tearing in the head.* Tearing in the forehead above the eyebrows, also as if in the bone, early in the morning. Tearing from the side of the forehead to the nose. Tearing from the ears to the temple.—*Cutting*, as if a piece were cut off the right parietal bone.—*\*Dartings in the head.* *Lancinations in the vertex*, also proceeding from the eyes, or at the same time in the temple and through the whole head, accompanied with coryza and stiffness of the nape of the neck. *Stitches* in the left side of the head, also at the same time in the temple, or proceeding from an old cicatrix. *Deep stinging* throughout the whole head. Tearing lacerations in the forehead above the eyebrows. Sticking with pressure in the right side of the head.—*\*Beating headache.* °*Violent beating in the whole head*, particularly during the menses. (Beating above the right eye, with nausea, bad taste in the mouth, and heartburn). Sudden beating in the forehead, proceeding from without inwards. (°Beating, with vertigo, nausea and vomiting, in arthritic individuals.)? *Beating in both temples*, also constant hammering (before the menses). °Beating above the eyes, which are so painful that she is unable to use them (during the menstrual flow which is very scanty, the pain in the head alternates with toothache). Hammering on every motion, occasioning nausea and inclination to vomit, with painful boring in the vertex. Pulsative throbbing in the right temple, extending into the orbit. °*Undulating pulsative beating*, most violent above the eyes, or particularly above the left eye, in which a shooting is experienced, the pain thence proceeds over the head to the occiput, resembling a sensation as if the dura mater were pulled at, with intermittent hard stool and improvement by eructations. \**Congestion of blood to the head*, °attending other complaints. Congestion of blood to the head with dulness of the head and giddiness. Determination of blood to the head with drumming and roaring in the ear. Determination of blood to the head, particularly on stooping and walking, preceded or accompanied by headache, or accompanied with discharge of blood from the nose in the morning, on blowing it. Congestion of blood to the head with painful pressure under the whole skull, sensitiveness of every decayed tooth, discharge of bright-red blood from the nose on blowing it, and drawing in the nose and frontal cavity as if water had been poured under the skull.—*\*Heat in the head, accompanying other affections.*—*\*Whizzing in the head, accompanying other affections.* Sense as of turning (whirling) above the right eye, in the forehead. °Violent headache with congestions, violent pulsations, palpitation of the heart and vomiting, at two o'clock every night. \**Violent headache with twinkling before the eyes*, —as if coryza would make its appearance, °or with inclination to vomit.

Headache with vertigo, particularly in the evening. \**Headache with nausea*, also violent, particularly in the forehead, with chilliness and palpitation of the heart, almost depriving her of her senses, with frequent pains in the chest and general languor (after gastric fever). °Headache with toothache, with chilliness which does not allow one to get warm, and with unquenchable thirst, or with chilliness and heat and heaviness of the feet.

**Scalp.**—*Painful sensitiveness of the whole left side of the head*, also as if the skin had been burnt by the heat of the sun, in the left temple, from the vertex to the face, on touching the parts or on moving the muscles for the purpose of laughing, chewing, etc. The skin of the forehead is painful to the touch. Round painful spot on the middle of the head. Tearing in an old cicatrix on the head, or also nightly tension and drawing, as when the weather is about to change. Drawing from the left temple to the forehead.—Tingling and numbness in the left side of the scalp (and whole body), in the evening and on the day following.—*Itching of the hairy scalp*. Violent *burning* after scratching, accompanied with congestion of the head and headache. Peeling off of the skin of the head and face. *Swelling of the head and face*, with closing of the eyes from swelling.—°The hair which was falling off, grows firmer, thicker and longer (in alternation with Mere., during pregnancy).

**Eyes.**—Pain in the eyes, particularly the left. *Pains near or above the eyes*. Violent pain in the right eye. Sensation as if something were starting from the brows through the eyelashes. Pain in the eyes as if dust had got in. Pain in the inner canthi. \**Pain in the eyes from reading*, °particularly from reading at candle-light.—*Pressure in the eyes* as if the orbits were too narrow, worse during movement. Pain in the right orbit, on moving the lids. Pain in the left eye and the right shoulder, early in the morning. Pain in and above the eyes, with pain of the frontal integuments when touched. °*Pressure in the eyes as if the eyes would start from their sockets*. Stinging pressure in the right upper lid.—*Stinging in the eyes*, which are sometimes hot and burning. Hot stitches darting from the brows through the eyelashes. Drawing sticking from the right eye to the vertex, in the afternoon.—*Itching in the eyes, particularly in the left*, sometimes succeeded by pressure in both eyes and attended with dizziness (going off after taking coffee). *Itching near the left eye*, in and around the eyes, with heat in the eyes, obliging one to rub a good deal, in the afternoon and evening. Itching pains in the lids. °Biting and burning in the eyes, particularly in the upper lids, with constipation.—°Redness of the eyes.—\**Inflammation of the eyes*, —as if a sty would form on the right upper lid in the evening, or on the left lid with swelling. *Inflammation of the lids*, with pain in the eyes, particularly when reading, and with burning pressure, or burning pressure and itching. °Inflammation characterized by a large bundle of injected vessels, proceeding from the inner canthus towards the cornea, resembling a pterygium (giving first Puls.). °*Ulcers of the cornea*.—Sensation as if the eyes were larger, they look as if a person had been weeping a good deal, in the evening. The eyes feel stiff.—*Faintness and dimness of the eyes*, attending some other complaints, or \*distortion of the eyes. °Dimness of the left eye after making the least effort, with lachrymation (in a horse).—*The pupil* is fixed and immovable, during an apoplectic fit.—Sensitiveness of the eyes to the light.—*Dimness of the eyes*, particularly of the right eye, as from dust on the eyeball, obliging one to wipe constantly, sometimes accompanied with pressure in the orbit. *The eyes become weak*, he discerns distant objects well, but not those near by, particularly in the evening, with flickering before the eyes when reading and blurred appearance of the letters. *Misiness before the eyes*, obliging him to wipe, or with a blue-red ring around the light in the parlour. *Flickering*

*before the eyes*, particularly before the right eye, with twitching in this eye, attended with congestion of blood to the head, and relieved by exercise in the open air. Sensation as if threads or sunbeams were moving before the eyes in confusion. A good deal of black flickering before the eyes, particularly after reading a good deal, and rendering reading difficult. Bright blue ring around the light, or fiery ring, *with fiery rays*.

**Ears.**—Pain at a small spot *behind the ear* when touched. Sensation of swelling between the ear and the mastoid process, worse when pressing on the part. Stiffness in the region where the sterno-cleido-mastoideus muscle is inserted in the mastoid process, with pain on pressure. Throbbing in the bones. Dartings under the ears and in the sterno-cleido-mastoideus muscle, as in erysipelas, in the evening.—Numb (pithy) feeling of the coneæ, and of the inner parts (when pressing on them), succeeded by an aching pain and heat. Smarting as from excoriation at the upper part of the left ear, only when touching it, particularly painful at night. Biting in the lobule, with blotches making their appearance afterwards. °*Soreness and scurfs* on the ears. °*Coldness* of the ear and of the whole side of the head (during toothache), with relief from the application of warmth.—Itching and stinging itching *in the ears*. Contractive pain deep in the left ear, with pain as if swollen, on inserting the spatula. Stinging and pressure in the right ear. °Indescribably-disagreeable sensation from the ear to the throat.—°*Dryness of the ears*. \*White cerumen. °The white cerumen turns yellow, or becomes like pap. The ears feel obstructed.—\**Diminution of hearing, hardness of hearing*, -also with dryness, and a feeling of stoppage in the ears, with whitish pellicles on the ears, or with too light, yellowish and too hard, or too scanty cerumen. \**Very sensitive to noise*, °imagines that he hears every thing more distinctly, with a rushing noise in the head. Crackling in the ears. Chirping in the ears, sometimes attended with singing and tearing, or as if the noise were heard deep in the occiput. (Occasional crackling, with difficulty of hearing). *Roaring in the left ear*. *Drumming roaring* with congestion of blood to the head, or particularly in the right ear, early in the morning in bed or frequently in the day-time, and particularly in the evening, ceasing after shaking the inner ear with the finger. *Roaring*, with coldness of the feet. *Thundering*.

**Nose.**—Pains *in the nose proceeding from the head*. Prickings in the nose (in a leprous patient). Drawing in the bone. Painful spot close above the left wing. (Tensive digging in the right nostril, followed by biting at the lower part of the nose).—*Itching of the nose when eating*, or when sitting down to dinner, or in the evening. Tingling in the tip of the nose with catarrh. °*Redness* of the nose in drunkards and in syphilitic patients who have been poisoned with Mere. °A red pimple on the right side of the nose, high up, and of long standing, becomes a good deal larger at first, then smaller. Vesicular eruption in the right nostril. (Inflamed mucous plugs on the external portion of the Schneiderian membrane).—*Soreness* of the corners of the nose, after catarrh. Red *sore borders*, with running from the nose and eyes, without catarrh. *Swelling* and painfulness of the left nostril. °*Scurfs in the nose*. *Bleeding of the nose*, °three or four days before every menstrual period. *Discharge of a few drops of blood from the nose*, particularly after boring in the nose with the finger, or in the evening on blowing the nose. *Discharge of blood from the nose on blowing it, early in the morning, during or after headache*, near the eyes, or succeeded or accompanied with congestions of the head. Streaks of blood in the nasal mucus. *Dropping of blood from the nose on blowing it, in very many cases*. Thick, dark-red blood flows out of the nose.—\**Discharge of pus and blood from the nose*, °also with violent headache (in syphilitic patients,

who have been poisoned with Mere.), -or attended with a sensation as of a plug in the trachea. Discharge of blood and pus on blowing the nose, in the afternoon. (Discharge of watery coagula, and sometimes of scurfs from the nose which is painful.) (Discharge of dried mucus and watery pus from the obstructed nose, at night, with violent drawing pains in the nasal bones and stinging on pressure.) °*Ozæna* in the case of an otherwise healthy young girl (giving first *Natr. carb.*, which had benefitted her on a former occasion).—*Dryness* of the nose, sometimes commencing in the throat. *Obstructions of the nose*, early in the morning (with discharge of membranous pieces on blowing it), relieved in the evening.—Strong sneezing, sometimes late in the evening, with discharge of mucus from the throat.—*Discharge of thin water from the nose*, early in the morning, or of cold water (with swelling). Increased secretion of mucus in nose and fauces, with diminished secretion in the larynx. *Yellow mucus* from the nose and throat, preceded by dry coryza and hoarseness of long standing.—Frequent indication of catarrh without any actual outbreak of the catarrhal symptoms. °*Frequent, imperfect catarrh*, lasting one day every week, particularly when he attempts to speak in public, with a feeling of illness, dulness of the head, etc. °Sneezing and running of the nose after the catarrh had been long in coming. °Catarrh which commences in the afternoon is fully developed in the evening.—Profuse coryza, with sneezing, with alternate obstruction (partial or entire) and running of the nose. *Interminable coryza*. *Coryza with soreness of the nose*, which remains a long time after the coryza. °Complaints from retrocession of catarrh.—*Dry coryza in the evening*, or at night, with burning of the upper lip, and seeming to have disappeared on waking, with violent stoppage of the nose.—\**Fluent coryza* °every day. Fluent coryza in the evening, sometimes breaking out suddenly, with a good deal of tingling in the tip of the nose, and running and pressure in the inner canthi of the eyes. °Fluent coryza with profuse secretion of mucus, running of the eyes, and cough. °*Short-lasting fluent coryza quickly removing a headache of long standing with lachrymation and stoppage of the ears*. Recent coryza increases suddenly, with sneezing, discharge of water from the nose, and erysipelatous inflammation of the border and tip of the nose (with fever, and pains in the head, ears and teeth during a paroxysm which occurred afterwards). Dry coryza of both nostrils becomes fluent.

**Face.**—°Sunken face, with dropping of the lower jaw, during sopor. Expression of pain, with sopor. °Expression of pain (with ulcers). \**Distortion of the face*, °also during an apoplectic fit, -or with jerks in the small of the back. *Sunken face with expression of suffering and as if he had been sitting up all night*, for four weeks. \**Pale face*, accompanying the other complaints, °particularly the ulcers, -or attended with attacks of languor or fainting. Sickly complexion and malaise. \**Livid, gray complexion, attending the abdominal complaints, or fever and ague after abuse of Chin.* °*Yellow complexion with vermilion redness of the cheeks*, in chronic affections, or with reddish yellowness of the cheeks and nose. °Sickly complexion early in the morning, with injection of the capillary vessels, circumscribed yellow redness of the cheeks and red swelling of the nose, in syphilitic patients who have been poisoned with Mere. Blue rings around the eyes, early in the morning.—\**Heat in the face*, in paroxysms, in drunkards. °Heat in the face with redness after an apoplectic fit, also dark redness, which changes to blue during the convulsions. °Redness of the face with headache, tearing pains in the limbs, or pains in the stomach and chest.—*Prosopalgia*: tearing above the orbit, with vomiting of the ingesta (in girls at the period of pubescence). Drawing in the malar and jaw-bones. Tearing in the malar bone extending into the ear. *Pressure*

in the side of the face and the upper jaw, or in the region of the right malar bone, in the direction of the eye. Digging and screwing round in the right malar bone, also in the flesh. Feeling of stiffness in the malar bone, proceeding from the cervical glands. Burning pains in the face.—*\*Swelling of the face* with a good deal of heat and redness. *Swelling of the whole face* (and of the head) *commencing in the region of the eyes, with closing of the eyes and paleness*, a good deal of itching, violent pains (in the forenoon) in the temples, jaws and eyes, lancements from the head to the eyes, nose and temples, discharge of cold water from the left nostril and eye, which turns red, afternoon and evening exacerbation, and amelioration at night. °Swelling of the left side of the face and of the lower jaw, with sensitiveness to contact. Swelling of the cheeks with redness of the whole face. °Bursting of a blue-red stinging-throbbing swelling of the cheeks (with toothache), discharging pus.—*\*Erysipelas of the face*, particularly under the left eye, preceded by itching at night, which wakes her as in affright, redness of the part early in the morning, followed by swelling and aggravation after the siesta, next morning the part is very large and red, and likewise the lower eyelid, with violent itching, the inflammation being preceded and succeeded by a hammering headache. °Arrest of erysipelas when on the point of breaking out. °Disappearance of considerably-developed erysipelas within three days. °Sudden nightly swelling of the face with violent itching, occurring every year, or frequently after a cold, and preceded by burning pains in the limbs, attended with pains in the eyes as if they would start out of their sockets, thirst, fever, a multitude of dreams, final bursting of the swelling and discharge of water.—*Itching of the face*, particularly around the eyes and on the cheeks from morning till evening, with relief from scratching. (°Prickling in the face and around the eyes.) *Eruption about the eye. Small pimples* in the face, on the forehead and cheeks, also resembling itch-vesicles. *Blotches, filling with pus, in the face, on the brows*, upper lip, under the nose (also on the chest and arms). *Rash* over the whole face, going and coming. °Considerable diminution of the redness and pimples remaining after erysipelas. °Reddish herpes in the face. °Old herpes with thick scurf in the region of the whiskers. °Re-appearance in large quantity of suppressed herpes in the face (and on other parts).—Peeling off of the skin of the face and hairy scalp, or particularly of the forehead (with biting itching).—Heat of the lips. Dryness of the lips. \*Swelling of the lips. °Swelling of the lower lip not allowing one to open the mouth. °Distortion of the mouth to the left side during an apoplectic fit. *Eruption* on the upper lip, also of small pimples containing white pus.

**Teeth and Jaws.**—°Stiffness of the articulations of the jaws. \*Lockjaw—with chilliness. °Lockjaw in a patient affected with chronic catalepsy. °*Dropping of the lower jaw* during sopor. °*Constant rising and falling of the lower jaw during an apoplectic fit*. Chattering of the teeth during the chilliness. °Tearing in the jaw. Tearing in the articulation of the jaw. °Pimples under the jaw. \*Toothache—with headache, chilliness, heat, thirst and heaviness of the feet. Toothache with swelling of the cheeks. Toothache of the right upper teeth with pains in the left limbs, succeeded by toothache of the left lower teeth, with pain in the right limbs.—Sensitiveness of every decayed tooth during the congestions of the head. Tingling in one of the right upper teeth.—*Drawing in the teeth*, also itching drawing (on the left side). \**Tearing in the teeth*,—also with furious darting and stinging in the roots of the lower teeth, sometimes extending through the upper jaw to the ear, every time he wakes from the siesta, and whenever the teeth are touched by cold or warm drinks.—*Stinging* in the front teeth. °Throbbing stinging, followed by discharge of blood, with frequent, readily-excited bleeding of the gums, sometimes accompanied with pain in the

forehead and beating over the eyes which are extremely painful, and alternate stinging in one or the other ear, with increase of the pain proportionate to the scantiness of the menses.—*A decayed molar tooth, which is broken off half, feels elongated*, preventing one from pressing the teeth together, with boring extending to the jaw, particularly after eating, swelling of the surrounding gums which are painful down to the throat, terminating in *discharge of pus*, after which the pain passes off.—*Exfoliation* of the inner side of the teeth and disposition to touch the teeth with the tongue. *Remarkable brittleness of the decayed teeth, they crumble away*, even when eating. A decayed tooth can easily be compressed. The destruction of a decayed tooth takes place more rapidly, but *without pain*.—The gums of two of the left molar teeth are painful. Pain of the gums from the contact of warm substances. °The gums are raw and sore, not allowing one to eat. *Readily-bleeding gums*.—*Sac'ling of the gums*, with blue redness and great sensitiveness. Swelling of the gums of the upper front teeth, with throbbing and burning. *Swelling of the gums on the lower incisors* with violent pain, bleeding on cleaning the teeth, and with sensation as if the gums would become detached (also on the right molar teeth where a portion of the gums has become elevated as if a foreign body had been inserted behind the gums).—°Scurvy.?

**Mouth.**—*Violent burning in the mouth*, also with throbbing, or with swelling of the lips and gums. Sensation in the mouth as after abuse of Mere. Rawness of the mouth and throat. \**Soreness*, -also here and there (on the lips and tongue), °or with soreness of the palate, painful when touched by warm drinks, burning in the fauces and some pyalism. *Gangrenous parts* in the mouth, skin and flesh becoming detached, preceded by burning pain and rawness. °*Stomacace.*?—\**Dryness of the mouth* °with sore feeling. Dryness of the mouth, thirst or °constant inclination to drink. Dryness of the mouth with astringent sensation or with soreness, metallic taste, and slimy, clear and frothy saliva.—\**Accumulation of water in the mouth*, also as if proceeding from the stomach, °particularly when the fauces and pit of the stomach are affected.—\**Pyalism*, °also when other complaints, such as mercurial-syphilitic ulcers in the throat, are present. °A good deal of mucus in the mouth and throat, after an epileptic fit. Spitting of blood.—Sensation as of pepper-dust on the tongue, with pyalism. Tickling and prickling on the tongue. Contractive sensation on the left side of the root. Darting and tearing (also in the palate) with ulcers in the fauces. \**Burning* as if from pepper, -or when the tongue is touched by ordinary water. °Lining with yellowish redness, smoothness, white edges and cracked lip (in typhus). °Thick, yellowish coating of the tongue. °White tongue, with aversion to food, during fever. °Black tongue. °Tongue as if stiff, with difficulty of moving the tongue when swallowing. °*Paralysis* of the tongue after apoplexy. Difficulty of protruding the tongue, in typhus. °Disposition to bite the tongue, during an epileptic fit. \*Swelling of the tongue, from the bite of a viper. Swelling of the left side of the tongue as from abuse of Mere., after rheumatic pains. (Sensation as if the forepart of the tongue were enlarged, with bad taste in the mouth.) °*Soreness of the tongue*, particularly while the abdominal affection lasts. °Red, sore parts, rhagades and large round papillæ of the tongue. °Gangrene of the tongue, on both edges, a small black spot increasing to a considerable extent, first on one, then on the other edge of the tongue (by Dr. Loomis, of Syracuse, cured with the 900th potency of Lach., after Ars. and the lower potencies of Lach. had been tried without any avail).† Speech is stronger and more distinct than formerly.—*Difficulty* of

† The case is as follows:—Was called December 5th, 1846, to see a young lady, æt. 19, who had been ten days in this country. Three days previous to my visit, she was at-

speech, also in typhus, as if the tongue were too heavy. °Is unable to articulate several words, with loss of voice, nasal, unintelligible speech, sensation of enlargement in the throat, aggravation from continued speaking, aggravation of the symptoms every afternoon and evening, after which the soreness of the throat diminishes. °Unintelligible muttering after an apoplectic fit. °*Hurried talking*, with headache and redness of the face, or with mental derangement and constrictive sensation in the throat.—Pressure about the palate as if proceeding from the stomach. Transitory pains (in the *velum pendulum palati*), when yawning. Scraping burning in the back part of the throat. Burning and dryness with thirst, after tasting acids. Soreness. °*Inflammation of the tongue*, with titillation inducing cough, disposition to empty swallowing and evening exacerbation with dryness and thirst. °*Inflammatory swelling of the velum pendulum palati*, so violent that the uvula felt as if wedged in.

**Pharynx and Oesophagus.**—Feeling of hollowness in the throat, as if the pharynx had disappeared. °Strange feeling in the pharynx preceding the epileptic fit.—°Tickling in the throat as if proceeding from or occasioned by a dry little spot. \**Tingling*, particularly early in the morning, with nausea and subsequent prickling, stinging and vomiting, or at night accompanied with continual dry cough, °or on the left side of the throat with stinging. Feeling of roughness in the throat, also as if *from having exerted it*.—\**Sore throat*, °the soreness being felt at small spots in the throat. Soreness of the throat every other day. °Soreness of the throat, worse after sleeping (in the morning and after the siesta) —or from morning, after rising, until noon °(or every cold day). °The soreness of the throat is less at night and in the morning. \**Soreness of the throat extending to the ears*. Soreness of the throat commencing on the right side of the throat. \**Soreness of the throat with danger of suffocation*. Soreness on the left side of the pharynx, affecting the tongue, jaws and ear, becoming excessively violent after breakfast. Soreness extending from the throat-pit to the root of the tongue, the os hyoides and the helix, behind which the soreness seems to pass through to the outer side of the neck, with pain on touching the parts. Pain in the right side of the throat. *Constant pain during empty deglutition*, for months. *Sore throat in children*, in the evening, with fever, spitting, brown margins around the eyes, tossing about at night, and moaning.—*Stinging* during deglutition, with scraping sensation in the throat after eating wheat-bread. *Crampy sensation* deep in the throat, at a small spot on the right side, worse on pressure, also in the evening when the larynx is touched by any thing.—°*Pressure in the throat*. \**Pressing* in the throat, with frequent

tacked with severe pain of a burning nature in the right side and near the point of the tongue. Salivation and sloughing soon followed. From her history and the appearance of the case, I was led to prescribe *Ars. 12* in solution, to be taken in tablespoonful doses, at intervals of from three to four hours. Dec. 6, patient same as yesterday, gave *Ars. 6* in solution. Dec. 7, disease had extended along the side of the tongue to the distance of fifteen lines. Surface black and sloughing, accompanied with profuse salivation and pricking pain as from needles in the whole body of the tongue and throat, with inability to swallow; fauces dark-red; gave *Lach. 12* in solution. Dec. 8, no improvement; gave *Lach. 400* in solution, repeating the dose once in four hours. Twenty minutes after the first dose was taken, the patient became comparatively free from pain, and continued to improve rapidly for thirty-six hours, when an extreme aggravation followed, the pain returning with redoubled violence, with dread of drinks, especially water, one dose of *Samb. n. 12*, gave immediate relief from the aggravation and the case went on (without repetition of *Lach.*), until the tongue seemed entirely restored, which occurred in five or six days. Some ten days after, the opposite side of the tongue was attacked in the same manner, spreading more rapidly, and affecting the salivary glands and throat more extensively, producing extreme suffering and excessive nervous excitement. The case clearly indicated *Lach.*, a low attenuation was administered, but with no better result, than during the first attacks. *Lach. 900* was then administered in solution, with the most prompt and happy success.

discharge of saliva Pressure in the throat as from something astringent. Slight painless pressure. °Pressure in the throat accompanied with pressure in the pit of the stomach, relieved after an eructation. °Pressure in the throat on lifting anything. °Pressure in the throat with rising into the throat and inclination to vomit. Pressure in the throat as *from a plug or lump*, particularly during deglutition, or after swallowing anything acid.—\**Sensation of swelling in the throat*—during deglutition. Sensation of narrowness in the throat, only during empty deglutition, *as if a lump of the size of a fist* were attached on either side, relieved when swallowing saliva. °Sensation of enlargement in the throat, particularly on the right side, worse when pressing on the throat, also with difficulty of swallowing *liquids*, which incline to return by the nose (the patient is not inconvenienced by swallowing either spittle or food), worst on waking in the morning and after the siesta, less in the afternoon, when a difficulty of speech sets in, with aggravation of the symptoms in damp weather, and pain in the back. Narrow swelling *like a string or cord* on the posterior wall of the fauces, with sensation as if something were adhering in that region, and with constant disposition to swallow saliva, which, however, does not go down.—*Sensation as of a plug, lump, tubercle*, etc., in the throat. °Sensation on the left side of the throat as of a small sponge, with constant disposition to swallow, and pain during empty deglutition. Sensation in the left side of the tongue *as if a button were adhering there*, with tearing proceeding from that region, pain when eating and sensation as if *the button were the cause of all the other pains*. Sensation in the throat-pit as if some enlarged substance had settled there, which threatens to suffocate the patient and cannot be swallowed, with soreness of the throat. °Sensation in the throat, as of a tubercle of the *size of a walnut*, obliging one to hawk constantly without relief, very troublesome during empty deglutition, with sensation as if the swelling were pushed down and turned round, disappearing after hawking up blood. °Sensation as of a round lump in the œsophagus, rising from the stomach to the region of the throat-pit, with sensation as if the lump remained seated in that region and would suffocate the patient, with frequent flow of water from the mouth, sour taste, vermilion redness of the fauces, sore feeling in the œsophagus when swallowing food, *pain in the œsophagus after eating, pain from the ear to the throat* or from the throat to the ear, swelling of the lower lip, and red sore places in the mouth, on the lips and tongue, the latter exhibiting a number of rhagades and large papillæ.—\**Sensation after eating as if something had remained adhering to the œsophagus*,—or as if a crumb of bread had lodged in it, obliging one to swallow. Sensation as if a morsel of food had lodged in the œsophagus \**Burning in the throat*,—also with hoarseness, or particularly on the left side and in the throat-pit. \**Soreness in the throat*,—as after a cold, with pain on the left side, and worse in the evening or early in the morning, on both sides of the throat. °Chronic sore pain in the œsophagus during deglutition. *Sensation as if the whole throat were raw*, particularly during deglutition, with stinging, dryness of the throat, and pain on touching the parts which extends even to the nape of the neck, or also with swelling, and with pain on swallowing drinks.—\**Inflammation of the throat*. °*Inflammation of the tonsils, with swelling, redness and disposition to suppurate* (giving first Bell.). °*Phlegmonous inflammation of the throat with violent fever*. ? °*Syphilitic-mercurial ulcers in the throat*, on the palate and in the fauces, with tingling in the ulcers, desire to cough and *violent pain on swallowing food*, particularly hard, sweet and sour food. °The fetid odor and the purulent secretion from ulcers in the throat become less. °Small ulcerated places in the throat.—\**Difficulty of swallowing*, with sensation as if something had lodged in the throat, obliging one to swallow constantly. Difficulty of swal-

lowing food or drinks, as if the passage of those things were opposed in the region of the cardia. Difficulty of *swallowing saliva*, or solid food. \**Entire inability to swallow*, °sometimes accompanied with a perpetual circular motion of the throat *which is constricted like an hour-glass*, with ineffectual urging to empty deglutition, dryness of the lips and tongue, stiffness of the articulations of the jaws, dilatation of the pupils, which are, moreover, so distorted, that it is scarcely possible to discover the least trace of them, hurried speech, hoarse and feeble voice, hot, red and bloated face, cold extremities. \**Constant urging to swallowing*. \**Drinks return by the nose*.—°Hydrophobia. ?—\**Dryness of the pharynx and œsophagus* -preventing deglutition. Dryness of the fauces at night on waking, with pricking as from a thousand needles and danger of suffocation. °Dryness of the pharynx with urging to drink, which does not afford any relief. Sensation in the evening and night as if the pharynx and œsophagus were parched, with thirst. °The dryness is worse during an inspiration. °*Dryness of small spots in the throat*. °Dryness above the region of the larynx, extending to the ears, where it is particularly felt during deglutition (with constant urging to swallow) worse in the open air, relieved after eating, alternating with dry coryza. Dryness of the throat on the left side only, extending from the nose down into the chest. °*Dryness of the right side of the throat*, particularly between the root of the tongue and the tonsils, with sensation as if pressure were made *on a dry piece of skin* in that region, *with urging to swallow*, and sore and astringent sensation in the mouth as after swallowing strong acids, which is relieved after drinking or moistening the mouth.—\**A quantity of mucus in the throat*, -also with sweetish taste, °or after an epileptic fit. Tenacious mucus in the throat which it is scarcely possible to detach. \**Hawking up of mucus*, -particularly in the evening, as if an ulcer had burst, or with roughness of the throat after the siesta, or with spitting and coughing when accompanied by ulcers in the throat. Taste of saltpetre when hawking up mucus. °Viscid, salt, changes to yellowish loose mucus.

**Appetite and Taste.**—Disagreeable taste in the mouth, as of old grease.—*Offensive, bad taste* in the mouth. *Horrid taste*, as of copper, or as of some acrid poison, (according to her expression,) rather on the forepart of the tongue, setting the teeth on edge and occasioning nausea, with sensation as if the tongue were enlarged, and worse after eructation (in a hysteric female). °Bad taste in the mouth remaining after eating, with vomiting in the morning and pressure in the pit of the throat. Pappy taste, as of flour or glue. *Sweetish* taste succeeding the habitual sour taste. \*Salt taste, °also about the lips only, -or when hawking up mucus. °Saltish-sour taste of the mucus and saliva in the mouth and throat, going off after a meal or accompanying other complaints. °Metallic taste with dryness of the mouth. \**Bitter* taste, °also only early in the morning and at night, °or at the same time, of the food. He does not relish his drink, with soreness of the mouth. \**Loss of appetite*, °also as an accompanying symptom of many other complaints. *No appetite* at breakfast or supper. *Loss of appetite*, particularly for bread, with nausea after taking milk although the aliments have their natural taste. Little appetite, although he relishes his food very much. °Extreme aversion to food. Aversion to food even when feeling hungry. *No desire for food, during several weeks, nor for wine and tobacco, which he was in the habit of using daily*.—*Increased appetite*. \**Strong appetite*, °also with derangement of the stomach, -or with urging to lie down after a meal. \**Hunger*, also *gnawing hunger*. While waiting for his dinner he has an attack of spasmodic yawning, with paleness of face, faint feeling and desire to sit down and eat, which affords relief. Sensation in the stomach as after waiting for one's dinner a long time. Disagreeable feeling in the abdo-

men at the time of dinner, without appetite. He relishes his food and eats hastily, without any real hunger. His appetite is at times good, at times entirely gone.—He has a desire for something without knowing what, finally he drinks a little water. Desire for *oysters*, which agree with him. °Great desire for acids (during rheumatism). *Increased desire for wine*, which has less effect than usual (in a person accustomed to it).—*Before a meal*: eructations, or gulping up of sour things; languor, he is scarcely able to move; irresistible drowsiness.—*During a meal*: *itching in the nose*; fainting during breakfast.—*After a meal*: bad taste in the mouth; nausea after dinner. *Eruetations*, also sour eruectations, or *with regurgitation of the ingesta*. °Vomiting of food by coughing. °Malaise with rising of air, nausea, anxiety, inability to think intensely, and apprehensive feeling until eruectations take place, after every meal. \**Pressure in the stomach*, -also with *weakness of the knees*, as from an *excessive load*, with relief after eruectations or emission of flatulence. Pressure in the pit of the stomach. °Heaviness in the stomach. °Gnawing and pressure in the stomach, a few hours after a meal, the more violent the emptier the stomach, with relief immediately after eating. °Pressure around the umbilicus. \**Repletion*. Rumbling in the abdomen with eolic and emission of flatulence, in the evening. Oppression of breathing. °Shortness of breathing. °*Vertigo*. \**Sore throat*, °also early in the morning, -or in the evening. \**Drowsiness*, -also after breakfast or supper, \*or after dinner, °with repletion, -or languor. \**Indolence* and °heaviness; °desire to lie down; weariness, feeling of illness and as if bruised. °*Heaviness*, after every copious meal. *A number of the pains make their appearance a few hours after a meal*.—\**Weakness of digestion of the stomach, dyspepsia*. Sour and bitter eruectations after eating meat fried in butter.—Nausea after taking milk. *Smoking* occasions nausea, hiccough, or eough. Wine and strong beer disagree with him during the reaction of the organism. *The pains reappear or are aggravated after drinking wine*, or new pains make their appearance, such as: headache with nausea and vertigo, difficulty of urinating, pain in the thighs. *Acids* occasion diarrhœa or febrile symptoms, or they arrest the curative action (salt things likewise). *After taking coffee* he feels better, or else the mere smell of coffee gives him a headache. °*Chronic complaints of drunkards*.

**Gastric Symptoms.**—*Eruetations* after a meal. *Empty eruectations*, also before breakfast or after dinner, *when they are sometimes so frequent that they threaten to suffocate him*, followed by great relief. Violent eruectations as if he vomited up air, after drinking tea, with hiccough and gulping up of air, for half an hour, increasing to an excessive degree. °Empty eruectations at night, with aggravation of the pains. \**Eruetations which afford relief*, particularly when tormented by flatulence °distending the stomach, -or pressing against the chest as if incarcerated in the chest, or \**when accompanying a number of other affections*. °Feels very ill when no eruectations take place. °Sour eruectations before a meal. Burning eruectations, with mere rising of air.—\**Regurgitation of the ingesta after eating*. \**Gulping up of sour water* -after a meal, °or particularly early in the morning, sometimes accompanied with vomiting of food, frequent sour taste in the mouth, and feeling of rawness in the stomach and epigastrium. Bitter-sour eruectations after eating meat which had been fried in butter. °Disposition to regurgitate, with white-coated tongue.—Sensation as if heartburn would come on.—Singultus in the evening after smoking.—*Loathing* of a peculiar kind, as if at a single spot in the stomach, extremely disagreeable, and excited by the mere sight or even thought of the sugar of milk and of the pellets. A kind of loathing with nausea almost unto vomiting.—\**Nausea*, -in paroxysms of from five to ten minutes, in the fore and afternoon. Nausea after

dinner, particularly an hour after dinner and in the afternoon. Nausea after drinking water, taking milk or smoking. *\*Nausea as an accompanying symptom of many other complaints.* Nausea in the stomach and abdomen, with sick feeling unto fainting, obliging one to unbutton one's clothes, which affords relief.—*Inclination to vomit, with sensation of great illness, rousing him from a sound sleep.* °Inclination to vomit early in the morning while in bed. Inclination to vomit when any thing hard touches the throat. *\*Inclination to vomit, accompanying other complaints.* Inclination to vomit, with want of breath and rising from the œsophagus, resulting in the expectoration of mucus. *\*Vomiting,* °with nausea after the bite of a viper. *\*Vomiting of the ingesta.* Violent vomiting of the ingesta with pain in the head and abdomen. *Spasmodic vomiting,* with bile or nightly diarrhœa. *\*Bilious vomiting,* °also early in the morning, with mucus, preceded by inclination to vomit while lying in bed, and with increase of thirst (in a pregnant female). °Green vomiting. Vomiting of mucus. *\*Vomiting with diarrhœa.* °Sudden inclination to vomit and urging to diarrhœa, but ineffectual, afterwards abundant vomiting with feeling of entire ease (in a case of vomiting and diarrhœa with headache). *\*Vomiting as an accompanying symptom of other complaints.* *\*Vomiting of pregnant females.*—°*Affections of drunkards,* the majority of which occur early in the morning, such as: dull pain in the vertex, vertigo, particularly after stooping, attacks of heat in the face, prickling in the face, particularly in the eye, afterwards uneasiness in the stomach, with trembling of the hands and inability to write in the morning before taking liquor, *nausea, cructations with colic, expectoration of lumps of mucus from the fauces, finally vomiting of mucus, after which the patient feels relieved,* (accompanied with redness of the cheeks and nose, scanty red urine and pain in the loins, sweetish taste in the mouth, and want of breath after making an effort).

**Stomach.**—*Painfulness* on the left side of and near the pit of the stomach, in spring.—°Violent pains in the stomach. *Pain in the pit of the stomach when pressing on it,* also with diminution of the appetite. A good deal of pain in the pit of the stomach, with constant inclination to vomit, nausea and diarrhœa. °Pain as from soreness in the pit of the stomach. *Feeling of emptiness* at night or also in the afternoon, *although he has taken a good meal at the regular hour.* *Gnawing in the stomach,* and then below the ribs deep in the abdomen, or also before a meal. Digging in the stomach as of a worm.—*Pressure in the stomach*—at night and early in the morning, obliging one to rise, relieved after copious emission of flatulence. Pressure from the stomach towards the heart. *Pressure in the pit of the stomach,* early in the morning, or when lying down, and still more during motion, or accompanied with drawing pressure in the direction of the umbilicus, warm feeling in the chest and increased sensitiveness to contact. Tensive pressure below the pit of the stomach, in the direction of the umbilicus. Periodical pressure in the left side of the pit of the stomach. °*Pressure* as from a heavy load, after a meal, in the pit of the stomach or in the stomach, with pains arising from incarceration of flatulence, relief of the pains by eructations or emission of flatulence, *aggravation of the symptoms after the siesta,* and costiveness. °Gnawing pressure, relieved after eating, but coming on again in a few hours, and the more violent the emptier the stomach. Colicky pressure as from incarceration of flatulence, extending from the pit of the stomach to the chest. *Pressing* from the chest to the stomach. Painful pressure in the stomach, preceded by a griping tearing at the anus.—Sense of weight in the stomach, after a meal. Painful feeling of repletion, occasioning lowness of spirits and weakness, (particularly in the knees,) with a feeling of ease immediately after a meal, but a number of pains making their appearance some time after, in patients with a phlegmatic spongy constitution. Violent spasms and pains in

the stomach, every evening at 6 o'clock, with violent eructations, gagging and vomiting of mucus, with nausea between the paroxysms, coated tongue and pain in the stomach. *Sensation in the stomach and bowels, every day, as if a lump were accumulating.*—°Sudden stitch in the pit of the stomach, occasioning debility, frequently.—°Burning in the pit of the stomach. Burning in the stomach and the region of the liver, with hard distention of the stomach and abdomen, itching in the region of the stomach, feeling as if a stone were descending in the pit of the stomach and the epigastrium, with sensation as if the parts would break off, obliging one to stand still and to step cautiously, accompanied with putrid odour from the mouth, which is not perceptible to himself, and cold, burning feet, which swell when sitting.—Alternate coldness and heat in the pit of the stomach, with want of breath.

**Hypochondria.**—Pain in the region of the hypochondria, first on the right, then on the left side. Intense pain, worse on inspiration. *Pain when coughing, sometimes as if ulcerated.* °Cutting on taking a deep inspiration. Gnawing on both sides, deep in the abdomen, or tearings from the sides towards the middle. Dartings, also from the right to the left side. °Tension as if the tendons were too short. *Cannot bear tight clothes around the hypochondria and stomach,* has even to loosen the night-jacket to relieve the oppression which is occasioned even by laying her arm on her body.—*Pains in the region of the liver.* °Burning also around the umbilicus, preceded by tearing in the body. Cutting proceeding from the groin. Drawing from below upwards into the chest, during fever. Tearing. Contractive tightness, worse when standing. °Pain as if something had lodged in the right side, with stinging and sensation *as if forming into a lump,* moving towards the stomach. °*Hepatitis?* particularly in drunkards? °*Ramollissement of the liver?* °*Abscesses of the liver?*—*Violent pain in the region of the spleen,* also particularly when riding in a carriage, obliging him to stretch himself, which affords some relief. Sensation as of violent tension. *Dartings,* also from within outwards (in the evening).

**Abdomen.**—*Colic* in the afternoon. Colic after the vomiting, during a paroxysm in the night. °*Severe pain* in the hypogastrium, after retrocession of an ulcer on the foot. \**Pain across the abdomen,* °after walking, °or across the umbilical region, early in the morning after rising. °Colic with constipation. Intolerable pains in the abdomen, with burning and bloatedness. °Pains in the lumbar region, particularly on the left side, with constipation. *Feeling in the abdomen as if empty and fasting.* *Pain as if diarrhœa would set in,* particularly in the umbilical region. °Heaviness in the abdomen, at night.—°*Pressure* which arrests the breathing, above the umbilicus, particularly an hour after dinner and supper, relieved by eructations. Drawing pressure from the umbilicus to the pit of the stomach. °Labour-like pressing downwards proceeding from the loins, during the menses. *Violent spasmodic colic,* not allowing one to stretch one's-self, with diarrhœa. Spasms in the abdomen, during the menses. *Contractive sensation* in the abdomen, as if a lump were forming. Return of the colicky attacks after delivery.—*Cutting in the abdomen,* particularly before the menses or with burning and urging to urinate. °Frequent attacks of tearing lacerations, with pains in the rectum.—\**Tearing in the abdomen* °during the menses, particularly after lifting a heavy load, with contractive sensation. Tearing in the abdomen, during chilliness, with bloatedness. Tearing in the right side of the hypogastrium.—*Stitches* deep in the abdomen, in front, after recovering from an affection of the eyes, with congestion of the head. Stitches from the right os ilium, through the abdomen and chest, as far as the shoulder, after which the stitches strike from the left lower to the right upper side. Stabbing pain as if a knife were plunged through the abdomen, during the menses.—

°Sensation as of something alive in the abdomen, with an indescribable, insufferable pain mounting upwards, with setting in of great heat, and profuse sweat trickling down the face in drops, after which the patient is attacked with creeping chills. Twisting and pulling sensation in an abdominal tumour. Sensation as if something were quivering or palpitating, a hand's breadth above the umbilicus.—*Beating* in the abdomen and chest. °Throbbing in a hard abdominal tumour, with humming.—\**Burning in the abdomen*, °mounting towards the chest and descending to the thighs. Burning in the abdomen, with bloatedness and insufferable colic. Burning in the abdomen, with cutting, and pressure on the bladder. °Burning with sensitiveness in the abdomen. Burning with pressure in the abdomen, extending to the throat, with scanty menses. °*Burning around the umbilicus*, °also preceded by tearing in the body, -or by pressure in the stomach and shoulder.—°*Enteritis.*?—The abdomen feels swollen at night. Diminution of the pot-belliedness of young girls. °*Ascites.*??—\*Distention of the abdomen °accompanying other affections. Distention with stretching sensation in the abdomen, preventing long walking, or with sensation as if the inner parts, from the stomach down, were considerably distended, with sensitiveness to pressure. *Hard distention of the abdomen.* °Sensation as if the abdomen were crammed full, with troublesome flatulence, which becomes incarcerated in the hernia. *Repletion* before a meal, or early in the morning, on waking.—*Rumbling* in the abdomen. Rumbling previous to the diarrhoeic stool. Rumbling after supper, with colic. Rumbling around the umbilicus.—*Quantity of flatulence.* A good deal of loud flatulence early in the morning. Short flatus having a fetid smell, after eating venison. \*Incarceration of flatulence. *Difficult emission of flatulence.* Sensation as if he would pass flatulence all the time, but he is only able to pass small, short flatus. A quantity of loud flatulence, which has to be pressed through the rectum with considerable force, as if the rectum were closed. *Trouble from flatulence*, the flatulence reaching down to the anus with tenesmus, and being finally passed with a discharge from the bowels, consisting of mucus and fæces.—*On the abdominal integuments*: *Red spots* like the bites of bed-bugs, early in the morning, on the sides and short ribs, with itching, increasing in the evening during a walk, and still more in bed, with white blotches on the back and left scapula, which afterwards become red. The abdomen feels hot.—Stinging in the groins when coughing. Gnawing in the left groin near the bone. Sensation as if hernia would protrude. °Great sensitiveness of the hernial protrusion. Incarceration of flatulence in the hernial sac. °*Violent pains of long standing in the right groin*, cutting, extending towards the uterus and the genital organs, or upwards to the region of the liver, chest and throat, not allowing one to lie on one side, worse early in the morning and after a walk, accompanied with cutting under the ribs during a deep inspiration, sensitiveness of the abdomen to pressure, alvine evacuations with pus and blood, difficulty of urinating, scanty and dark menses. °*Pain in the left groin* after stooping and lifting anything heavy, increasing gradually to such an extent that she is scarcely able to walk after sitting and lying, with painful pressing and sudden frequent stitches, at the same time she is only able to lie on the left, not on the right side, on account of a sensation as if something were falling over to that side. °*Painful swelling and induration* in the right side of the abdomen, between the crest of the ilium and the umbilicus, with burning, pulsative throbbing and humming, which is felt on laying the hand on the parts, with scanty catamenia and aggravation of the pains after a moral emotion, rapid movement and after an exertion.

**Stool and Anus.**—\*Constipation for several days, -with good appetite and hard distention of the abdomen. In many cases the first dose occasions costive-

ness, the second procures an evacuation. No evacuation either from the bladder or the bowels (after a bite). \**Chronic constipation* °without any other ailments (in robust men). °Constipation for a fortnight, with insensibility of the rectum. °Constipation for eight days, after using sokkolherli for secondary gonorrhœa. °Has had no stool for six or eight years, without using cathartic medicine. —°*Hard stool*, costiveness in a number of cases, also when accompanying other affections, such as: affections of the stomach, hemorrhoidal affections and trouble from flatulence. °*Costiveness of years' standing*. °*Hard stool, resembling sheep-dung*, with difficult, scanty discharge, or with tenesmus, and tearing from below upwards, occasioning eructations. —°*Unsuccessful urging to stool*, —even after a constipation of three days, with final scanty discharge after hard pressing, with pain as if the sphincter were violently distended. *The anus feels closed, the feces press against it all the time without passing*, only single flatus are passed. —°*Frequent stools*, also in persons who are of a costive habit. Two stools early in the morning, with subsequent languor and constant disposition to another evacuation. *Soft stools, of a light-yellow appearance*. *Papescent stool*, every forenoon, sometimes succeeded by congestion and vertigo. *Scanty papescent stool* after smoking (preceded by intermission of stool for one day), or early in the morning, and then intermitting, or *taking place a little later every day*. Scanty, difficult stool, like clay. Three watery stools in the evening, with burning at the anus. Stool consisting of thin water. —°*Thin stools*, °sometimes mixed with slippery balls. —°*Alternation of soft and knotty stools*, °*alternate looseness and constipation* of the bowels. —°Natural stool one day, next day thin stool. —°Tenacious, pitch-like stool. *Burning stool*, preceded by colic and urging. °Undigested stools improve. —°Cadaverous odour of the feces which are rather hard (as usual). —°*Diarrhœa*, diarrhœic evacuations, from five to six a day. Diarrhœic stool every evening, for a whole week, preceded by pain in the rectum, and succeeded by hammering in the anus. Sudden thin papescent stool about midnight, with hard urging and strong ammoniacal odour. °Chronic diarrhœa, exhausting, generally evening and night, with rumbling before and pressing after stool. Diarrhœa with violent spasmodic colic. Diarrhœa with or after vomiting. °Diarrhœic stools which look as if hashed, with soreness of the anus, coldness and headache. °Diarrhœa after eating. °Disposition to diarrhœa in warm weather. Disposition to diarrhœa after eating acids or fruit. —°Painful discharge of acrid mucus, with voluntary pressing. Discharge of feces, followed by discharge of blood, with pressing. °*Discharge of blood and pus* by the anus, with gnawing, stinging, cutting pains in a hard abdominal tumour, or also with discharge of mucus during the menses, which were scanty. —°*Spasmodic pains before and after stool* in the anus (also in the rectum). *Constriction of the anus*, also painful, or after protrusion of the anus. \**Urging towards the anus as if to stool* (after taking vinegar), °towards the rectum, worse when sitting, when the patient feels lame and is unable to rise again alone. Tearing-gripping in the anus, alternating with oppression of the chest. Pain in the anus, when coughing, as if it would tear. Pressure in the anus, also from without inwards. *Drawing in the anus*, also painful as if from hæmorrhoids, or extending up into the chest. *Pains in the rectum before stool*. °Tearing in the rectum from below upwards, with tearing in the body. *Beating* in the anus, also as if with little hammers, or at the same time in the small of the back. Quick jerking in the anus. *Burning in the anus during or after stool* (also with biting). Violent itching at the anus, early in the morning. Discharge of blood from the anus. *Protrusion of the rectum after stool*, sometimes accompanied with swelling of the rectum and spasmodic pains in the anus on pushing the rectum back. —°*Hemorrhoidal sufferings*.

Congestion of blood to the anus (in a person affected with varices), with urging to stool and increased itching. °*Varices of the anus and rectum*, with pain and urging to stool. °*Hemorrhoidal tumours* attending the scantiness of the menstrual flow at the critical age, with violent burning and smarting at the rectum, from morning till afternoon, and worse when standing, and after stool, the patient obtains greater relief from a sitting than a recumbent posture. °Lach. was found very useful in the case of a hypochondriac individual affected with hemorrhoids.

**Urinary Organs.**—*Stitches in the region of the kidneys*, darting from the small of the back to the liver, and then *through the urethra*. Feeling of warmth, with a sense of movement across the parts.—°*Dull pain in the bladder*, during constipation. \**Pressure*, as from hemorrhoids of the bladder (in a man addicted to the use of drinks and to sexual excesses), -or with burning and cutting in the abdomen, or else with desire to urinate (the pressure being at the same time felt in the penis).—Pressure and burning *in the urethra*, during micturition, *with lacerations in the forepart*. *Pain, as from soreness, in the forepart of the urethra*.—°*Difficulty of urinating*, returning while riding in a carriage after drinking wine, and relieved by *Nux v.*).—*Urging to urinate*: at night, with smarting in the urethra and pressure on the testicles, as if hernia would protrude. Urging to urinate at noon or in the evening, also with discharge of prostatic juice (or semen?). Frequent urging to urinate, with scanty discharge, and with drawing pains from the small of the back to the hip.—°*Frequent micturition with copious emission of foaming urine*, -of a dark or also light colour. °Nocturnal micturition, after an epileptic attack. Flow of urine occasioned by a renewed desire immediately after micturition.—The urine has a strong smell. \**Yellow urine*, °like sulphur, -or saffron. Red-yellow urine like new copper coin, tinging the linen yellow, and depositing a flocculent sediment. °Dark, and turbid urine, with sediment, in patients affected with *rheumatism*. °Copious brown-red urine, as in typhus. Dark-red urine in epileptic patients. °Turbid, brown and thick urine, with scanty, but frequent discharge of urine. °Turbid and dark urine, with a sediment of brown sand, and severe cutting during micturition. Urine with red or brick-dust sediment. \**Burning during micturition*, °or with violent urging to urinate, with copious discharge.—Discharge of badly-looking mucus during micturition, before and after the menses, the mucus looks clear when first discharged, after standing awhile it looks like the beaten white of an egg, attended with disagreeable sensation in the bladder, and urging to urinate.

**Male Sexual Organs.**—Pimples in the hairy region of the sexual organs. Jerking in the *penis*. °*Hard prepuce*, like cartilage, or attended with phymosis, in a case of mercurial syphilis. Profuse secretion of smegma between the prepuce and glans. \**Red spots on the glans*, °sometimes accompanied with syphilitic mercurial bone-pains. Red spots on the prepuce. Red pimple with itching, under the border of the glans. Re-appearance of a milky (gonorrhœal?) discharge after urinating.—Pressing *in the testicles* in the evening. Pressure in the testes as if hernia would protrude. °Contusive pain in the testes, worse when sitting. *Increased sexual instinct*, with or without sexual desire, and great desire for mental labour after the sexual excitement is subdued. *A multitude of lascivious thoughts*, without any physical excitement. Lascivious desires after sleeping, in the morning or after dinner. Lascivious desires in the morning, without erection.—Constant absence of sexual desire (alternate effect?). *Inability to perform the act of coition*, on account of the erections being either entirely wanting or too weak, or on account of the seminal discharge taking place too slowly. Difficulty of discharging the semen during an embrace. °The semen is not discharged during an embrace, and the erec-

tion ceases.—Violent *erections*, in the evening, in the daytime, at night, or early in the morning, particularly after sleeping (early in the morning or at noon), or in the morning while half awake. °Absence of morning erections.—*Nocturnal emissions* without being conscious of them. Nocturnal emissions three evenings in succession, succeeded by a perceptible debility and headache. Emissions with profuse night-sweat. Emissions with or without unpleasant dreams. Emissions with cheerful disposition and a feeling of ease on waking. Emissions succeeded by an increased mental concentration.—The *semen* has a pungent smell.

**Female Sexual Organs.**—Pain in the parts as if swollen, they do not bear contact, and have to be relieved of all pressure. Sensation as if labour-pain were ascending to the chest (relieved by Caust.). Tickling jerking, extending from the thighs to the sexual organs, which swell up, with sexual excitement and delight, succeeded by a *spasmodic contraction in the uterus*, which afterwards passes to the right side of the abdomen and to the chest (with sensation as if it moved along in a circle), accompanied with heat, oppressive anxiety and tickling under the skin, from the anus to the region of the kidneys and between the shoulders.—The menses appear too early by seven days. °*Too scanty* menses, particularly when Sep. seemed to be indicated without helping, or when the patient suffered with the piles. °*Scanty, delaying, intermittent menses*, also accompanied with toothache, the violence of which increases in proportion to the scantiness of the menstrual flow, or with discharge of mucus, blood and pus by the anus, with tenesmus, costiveness attended with burning and pressure over the abdomen up to the throat, with bleeding at the nose and many other complaints. °*The menses are too short, too scanty, or they do not appear at the critical age, accompanied with a number of complaints.* °*Delaying menses* (every nine to twelve weeks, when they appear very profusely). °*Scanty menses*, with increased leucorrhœa. °*Re-appearance of the suppressed menses with diminution of the pains, at the critical age.* °*Lach. is frequently indispensable at the critical age, even when the menses are too profuse or with metrorrhagia* (particularly when *Puls.* and *Bell.* had been given without success).—*Before the menses*: °vertigo with headache; °discharge of a few drops of blood from the nose, a few days before the menses, °attack of cardialgia, with oppression of the chest and eructation; °(so-called nervous attacks); °leucorrhœa; urine depositing mucus, feeling of great illness for ten days, with cutting in the abdomen as if the menses would appear.—*During the menses*: °tearing in the abdomen; °beating in the head; °violent pains every first day, at times in the small of the back, at times in the abdomen, or bruised feeling in the hips; °violent labour-like pressing from the loins downward; violent spasms in the abdomen, as if a knife were thrust through it; °disappearance of the usual spasms and pains during the menses, —the blood, however, is tenacious and acrid.—°Leucorrhœa before the menses, particularly eight or three days previous, copious, smarting, slimy, stiffening the linen, and leaving greenish stains behind, the menses are moreover too short and feeble, but they appear at the regular period.—The former complaints, following upon parturition, re-appear, such as: pains in the left side, tearing in the right foot, violent headache with colicky symptoms.—°*Thin, blue milk*, rejected by the infant.—°*Pains attendant on cancer of the breast.* The cancer bleeds more profusely, and the base of the ulcer is more bluish. Dark-red, almost black streaks of coagulated blood on the bottom of the ulcer. Scarlet-red spots, of the size of a hand, on the chest, shoulders and arm, on the side where the ulcer is situated, with great thirst, quick pulse, shortness of breath and coated tongue.

**Larynx and Cough.**—Pain of the larynx when touching it and when laying the head down. *Suffocative* sensation when anything touches the larynx, he feels hot and has to untie his cravat on account of that suffocative feeling, as if the circulation would be arrested. °Suffocative throbbing between the larynx and chest. *Sensation as if the trachea had become narrower*, after the siesta, he is unable to detach the mucus as before. Sensation as if the larynx were stopped up by a foreign body. Strange spasmodic feeling in the trachea, proceeding from the larynx. *Tensive feeling of swelling* about the larynx, with difficulty of swallowing. *Swelling of the larynx*, with rawness, scraping and urging to swallow. Disagreeable dry scraping in the region of the epiglottis, and the surrounding parts. °Pain as from soreness in the larynx, early in the morning. Roughness of the throat, as if sore, with sensation as if an *inflamed, painful tubercle* were seated in the trachea, disappearing after hawking. Sensation as of a *plug* in the trachea which moves up and down, with short cough, inability to lie down, and discharge of blood and purulent matter from the nose on blowing it. Pressure in the larynx. °The noisy, troublesome, croupy breathing in laryngeal phthisis, is improved. °Aggravation of the symptoms in laryngeal and tracheal phthisis, when the symptoms are worse at night, and particularly after midnight, and when they are less at noon and in the afternoon (or during rest), accompanied with disposition to diarrhoea, fine, white skin, red lips and cheeks.—\**Hoarseness* °with feeble voice, and constriction of the throat. °Hoarseness in the evening. Hoarseness with roughness or burning in the throat. Constant hoarseness for a fortnight, with roughness of the throat, sweetish mucus in the throat, and profuse secretion of mucus from the nose afterwards. Hoarseness in speaking, with failure of the voice, occasioned by some difficulty in the larynx, which cannot be removed by hawking. *Hoarseness, constantly accompanied with a sensation as if she ought to hawk up something which she is unable to detach.*—\**Cough, occasioned by ulcers in the throat.* °Cough as if something were seated in the throat which cannot be detached, with hawking and frequent swallowing. Cough as if occasioned by an *increase of moisture in the larynx*. °Cough with flow of saliva which can be drawn into threads. °Cough accompanied with hawking and flow of saliva, the cough scarcely allowing one to speak. °Short and hacking cough, occasioned by talking constantly. \**Cough excited by pressure on the larynx.* Cough during or after drinking. °*Cough from smoking tobacco.* °Cough only in the daytime, more after eating and when walking, after smoking and laughing, less during rest, with pain below the hypochondria when coughing, which is made worse by pressure. °Cough after rising from a recumbent posture. Cough worse every time he wakes. Cough during sleep without being conscious of it. *Cough in the evening* (after lying down, in the case of a child, sometimes waking the patient, and occasioning vomiting). \**Titillating cough*, violent in the evening, in bed, with hoarseness, headache from time to time, pain in the limbs, or in other parts of the body, here and there. Cough whenever he comes in contact with the open air. \**Cough occasioned by titillation in the larynx*, °sometimes accompanied with a suffocative fluttering sensation in the region of the palate, aggravation of the symptoms in the evening, and still more at night. Cough occasioned by a titillation which is at times felt in the larynx, at others, in the chest, apparently in the region of the cardiac orifice. °*Cough excited by a titillating dryness in the throat* (with frequent drinking, which does not afford any relief, worse in the open air), or in the pit of the stomach. °Short, titillating cough, accompanying a number of nervous affections.—\**Short and hacking cough*, \**occasioned by a tingling in the throat*, also constant, at night. °Suffocative cough the whole night. Constant short hacking cough, with dis-

treassing feeling of dryness in the trachea and oppression of the chest.—Hard and *fatiguing cough*, even unto vomiting, with difficult expectoration, pain in the pit of the stomach, obliging one to press the hand upon it, the cough exists only during the day, with aggravation after sleeping, or after eating fish, and in damp weather, still more after waking, and particularly after talking, as if the throat became dry. Violent *concussive cough*, with congestion of blood to the head and face, violent irritation in the throat, with cough which continues uninterruptedly for minutes, excited by tobacco-smoke or by any other irritation of the lungs. °The suspicious cough with which he had been affected for a long time, becomes much less in the daytime, —in the place of which he is attacked with a violent, concussive cough early in the morning on rising, with pain in the bowels and vomiting.—\**Dry cough*. Short and hacking cough on touching the throat, or in the morning after waking, at night, and after smoking, accompanied with dry coryza, blowing and sneezing. Dry cough in the evening, with stitches through the trachea whenever the irritation which excites the cough commences. °*Crampy cough*, in an epidemic affection of the larynx. °A *fatiguing tight cough*, (sounding like an old earthenware pot, at night and in the morning, continuing for a quarter of an hour, occasioning vomiting), becomes loose and ceases, or it becomes milder and the urging to vomit disappears.—*Cough with expectoration*, gray mucus being discharged from the throat and nose. Severe evening cough with pain in the larynx, and expectoration as after eating salt fish. *Slimy expectoration*, at times globular and gray, at others viscid and yellow, at other times watery, and scarcely ever in the night. *Difficult, yellow expectoration*, with rough, hollow voice, pain as from soreness in the chest and sternum, with cough as if proceeding from the pit of the stomach (which is painful when pressed upon or coughing), aggravation of the cough in hot weather and in the morning until breakfast, little cough during the day, none at night. Loose cough with coryza. Violent titillating cough with expectoration of mucus, occasioned by every contact of the open air. Hard, short cough with difficult expectoration of rather hard little lumps. °*Has proved useful in several cases of mucous phthisis*.—*Spitting of blood*. \*Bloody expectoration with frothy mucus, occasioned by a dry, hacking cough with titillation in the throat, in patients affected with rheumatism.—The expectoration attending a doubtful *phthisical cough*, following upon suppression of herpes, is much diminished in the daytime, and the herpes re-appears in great quantity. °*Is frequently very useful in purulent pulmonary phthisis*.—*Symptoms accompanying the cough*: discharge of water from the mouth; tension in the head as if one side of it were put upon the stretch, from the nape of the neck across the ears as far as the eyes; pain in the pit of the stomach as if it would tear, accompanied with sensitiveness of the trachea, burning deep in the left breast and pain over the ribs as if ulcerated; pain in the abdomen; \*vomiting; —darting in the groin; pain in the anus.—Noise in the trachea, after the cough.—°Light cough which affords relief, with intermittent pulse.

**Chest.**—°Whizzing breathing, with nightly asthma. Occasional loud rattling during sleep, at night. Frequent urging to take deep breath, particularly when sitting. °The boy takes deep breath, preceded by anguish, uneasiness and hurriedness, attended with headache. \**Shortness of breath* °*accompanying* other affections. °Shortness of breath after eating. Shortness of breath with lowness of spirits. °Shortness of breath during a walk, with huskiness of the chest and a short and hacking cough. Shortness of breath after walking and taking exercise. °Shortness of breath *after every exertion*, particularly manual, with great weariness. °Shortness of breath, during the itch, as soon as the itching abates or disappears. The *difficulty of breathing in hydrothorax* with

cough and swelling of the feet, is considerably diminished. °Difficulty of breathing with cough. °Difficulty of breathing with unsuccessful yawning, worse when sitting still. °Difficulty of breathing with affection of the throat. °Difficulty of breathing with weakness as if the patient would faint. °Difficulty of breathing after retrocession of catarrh which had been occasioned by taking cold in wet and chilly weather, with cough and difficult expectoration, or rousing the patient from sleep at night, and obliging him to gasp for air. *Difficult breathing, almost the whole day.*—\**Tightness of breathing, asthma.* Tightness of breathing with anguish in the chest, and great inclination to vomit. Tightness of breathing even after a moderate meal. Tightness of breathing preceded by pressing pains in the chest. °Tightness of breathing in the evening on lying down, almost unto suffocation. °Tightness of breathing preventing sleep. °Tightness of breathing, with weakness of the chest, after an apoplectic fit. °*Asthma* with or without cough, in the morning on rising, with relief after detaching a tenacious mucus.—\**Oppression of the chest*—sudden; in the evening; during sleep; during the nightly paroxysms of vomiting; with suffusion of heat; after the feet becoming cold; alternating with a griping-tearing in the anus; °accompanied with cough and a feeling of soreness; °with violent pains in the back and side, violent palpitation of the heart, inability to move or talk, with swelling of the feet—°*Suffocative fit* of a boy affected with cyanosis. \**Suffocative fits accompanying other affections.* °Suffocative fit in the evening when lying in bed, or holding any thing before the nose and mouth. Inability to lie down, on account of a suffocative feeling of fulness in the chest, obliging one to open doors and windows to get breath, with occasional amelioration at night, in which case she has to lie on the left side and with the head high, or at any rate with her hand under the head. Has to sit up on account of want of breath, with subsequent mucous rattling, alternation of coldness and heat in the pit of the stomach, and of general chilliness and suffusion of heat, with rising in the oesophagus, inclination to vomit, and expectoration of mucus which accumulates in the mouth in great quantity. °Contraction of the chest, waking him after midnight, with slow, heavy, wheezing breathing, compelling him to get up and sit with his chest bent forward.—°Frequent *pains in the chest*, with languor, palpitation of the heart and headache, after gastric fever. Pains in the left side of the chest. Violent pains in the chest, at night, to such an extent that the chest cannot bear to be touched. °*Pain in the chest* in typhus. °The chest feels fatigued when coughing—(or with tightness and shortness of breath, in patients affected with disease of the heart). °Weakness of the chest, accompanying an affection of the throat. Dull, oppressive heaviness on the chest. °Heaviness in the chest with great anguish, in a case of rheumatism. His chest felt heavy in the night.—°*Oppressive pain* under the chest, with drawing from below upwards. Oppressive pain in the sternum. Oppressive pain in the chest, during the fever, with sighing. \**Oppressive pain in the chest, as if full of wind*, °relieved by eructations. °Oppressive pain in the chest, °*with pressure in the throat, when lifting anything*, accompanied with curving of the back from behind forwards, preceded by going to sleep of the joints of the fingers, and succeeded by palpitation of the heart, which is felt even in the back, and alternates with pressure in the head. °Pressing pains in the chest the whole afternoon, with similar pains in the direction of the stomach, frequency of pulse in the evening and nightly pains in the chest.—Drawing in the chest during fever, proceeding from the right side or from the anus. Digging in the right side of the chest, towards the left side, and at the same time as if in the stomach, succeeded by a stith striking from the stomach through the chest.—\**Stitch in the chest: in the left side, with difficult breathing*, or worse when coughing or taking an inspiration,

with stitches and drawing in other parts of the body. °Stitch in the right breast after an apoplectic fit. °Stitch in the right side and back, when stooping. Stitch in the lower part of the breast, in front, from without inwards. Stitch through the chest, from the abdomen to the shoulder. Pleuritic stitches set in in a prover suffering with a dry cough.—Gurgling in the chest. Jerks in the chest. Beating in the chest.—\**Pain as from soreness in the chest*, -as in violent catarrh, particularly after eating, and extending to the back. °Pain over the whole chest, extending to the pit of the stomach and throat, with sensitiveness to the inspired air. *Burning* in the chest, at night, with pains in the sternum, or deep in the chest (during cough).—°*Pneumonia*, ? particularly neglected. ?—°Inexpressible anguish about the heart, with heaviness on the chest, in rheumatism. Spasmodic pain about the heart, occasioning anguish and palpitation of the heart. Constrictive sensation in the region of the heart. *Pressure* in the region of the heart, also as if proceeding from the stomach, or during fever. °Irregularity of the beats of the heart, every intermission being accompanied with a strange sensation in the region of the heart, with sensation as if the circulation were restored by coughing a little.—\**Palpitation of the heart*, -with anxiety. Perceptible palpitation of the heart with weakness unto falling. °*Chronic* palpitation of the heart, particularly in girls, probably accompanied with aneurism. °Debilitating palpitation of the heart, with nausea and weakness of the stomach (giving *Aur.* after Lach.). °Palpitation of the heart which is felt even in the back, accompanied with pressure in the chest. °Palpitation of the heart when accompanying a number of other affections.—°Threatening rheumatism of the heart.—°Aneurism of the right carotid, with disagreeable throbbing in the ear, which sometimes intermits with a sort of painful spasm, during which time the heart alone continues to palpitate spasmodically.—Cyanosis, particularly cyanosis cardiaca ? Lach. proved of great service for the spasmodic suffocative fits in the case of a boy affected with cyanosis. *Symptoms on the outer parts of the chest* : feeling of warmth low down, on the right side, as if near the warm stove, with pressure in the pit of the stomach. Sensation as if a glow were coming out of the thoracic integuments, particularly in the afternoon. Stitch in the left nipple. Insufferable pains emanating from the bitten arm. *Pimples* on the chest. Itching rash on the chest. Scarlet spots on the chest. Sensation on the chest as if swollen, at night, with pains in the chest which do not admit of contact.

**Back, etc.**—\**Pain in the small of the back*, °with great uneasiness, -or with yawning and stretching of the arms and lower limbs (after swallowing acids). Continual pain in the os sacrum and os coccygis. °Small painful spot in the lowest part of the small of the back. Periodical pains in the small of the back and shoulders. *Pains as if sprained in the small of the back*, or as from excessive exertion, hindering motion, with awkward stumbling gait, or occasional paroxysms of pain in the small of the back, arresting the breathing or extending to the bowels. Laming pain and weakness in the small of the back. *Stiffness* on bending the small of the back, on rising from a seat, and on moving after standing still, frequently extending to the hips and thighs, *with tension as if too short*. °Violent pains as if bruised, at times in the small of the back, at times in the abdomen or hips, during the menses. \**Rheumatic pains*, afterwards extending to the limbs. °Tearing. Intolerable *drawing pain* (in the evening) extending into the lower limbs, and especially intense in the ischiatic bones, or proceeding from the small of the back along the back, or towards the hip (with desire to urinate). Pressure in the small of the back, early in the morning on waking. °*Stitches*, °sometimes extending to the liver or kidneys. *Burning*, sometimes with stinging from below upwards. Beating in the small of the back

and anus, with drawing in all the limbs. \**Pains in the back*, °with constipation, or palpitation of the heart and oppression of the chest. °Rheumatic pains. °Tearing, during typhus fever. *Stitches* in the upper part of the back, or along the back from below upwards, or in the whole back and in the nape of the neck, with stinging in the right arm and sensation as if it had gone to sleep, with itching on the arms, hips and lower limbs. Continual sticking with pressure deep in the back, near the right scapula, as if something had lodged in the part, obliging one to bend backwards and take a deep breath, and generally returning after having been seated for some time. °Drawing in the back and lower limbs from below upwards, during the chilliness in intermittent fever. Creeping from the anus to the head, in fever. °*Sinking sensation in the back*, with weakness in the knees and bending of the trunk forward in walking, with cough and emaciation. Finds it difficult to raise himself after stooping. Chilliness in the back, proceeding from the small of the back. *Blotches* on the back. *Tumour* near the spinal column of the size of a hazel nut, with burning-throbbing.—Pressure between the scapulae and on the chest. Tearing between and in the scapulae. °Painful spot between the scapulae, *as if something were becoming contracted*. °Stitches during every deep inspiration, in asthmatic complaints. Soreness, proceeding from the chest. Painfulness of the left scapula, as from pressure. Blotches on the shoulders. *Red spot* on the left scapula of the size of a hand, with moisture and small vesicles, which burst and ulcerate.—Sensitiveness of the nape of the neck to pressure. Heat in the nape of the neck. \**Stiffness* of the nape of the neck, -with coryza, °or during rheumatism. Tearing in the vertebrae and between the scapulae.—Continual circular movement of the neck. Bubbling sensation in the neck. \**Great painfulness of the neck, and sensitiveness to contact and pressure, even of the linen, etc.* *Is threatened with suffocation when the least thing touches the neck or larynx*, in the evening when lying down. °Sensation, on making the least pressure on the throat, as if the eyes would start from their sockets. Desire to vomit when any thing hard presses on the throat. Pain of the neck and larynx on bending the head backwards (or on turning it). *Pressure about the neck*, or on either side, or as if something were pressing on the *right side* of the neck, or in the *left sterno-cleido-mastoides muscle*, and proceeding thence around the neck and head. Sensation as if tendons were stretched from the neck to the palate, with pressure in the fauces as from some astringent substance. Burning in the *throat-pit*, or pain as from a blow. Frequent short attacks of swelling of the neck. Swelling of the left cervical muscles, with pain on touching them. °Several *tubercles* in the neck, both the neck and the tubercles being painful to pressure. °Red, suppurating blotches under the jaw.—Sudden motions or pullings in the cervical glands. Beating, extending to the malar bones, which feel stiff. °*Swelling of the cervical glands*, particularly on the right side, or during scarlet-fever. *Bursting swellings* on the right side of the neck, ulcerated, as if gnawed hollow, or fistulous, with serofulous, pale appearance. °*Ulcers on the neck*, in many cases.—*Strong-smelling sweat in the axilla*, or smelling like garlic. Tearing in the axilla. Painful motions along the edges of the muscles, as in erysipelas.

**Upper Extremities.**—Stitches in the shoulder, proceeding from the abdomen. Tearing in the shoulder. Drawing pains in the shoulder-joint, in the evening. Tension in the shoulder-joint, (also about the head,) with headache. Rheumatic pains in the right shoulder and wrist-joint. *Lameness* in the left shoulder, early in the morning on rising, as if the part had been in a wrong position, every morning on dressing and bending the arm backwards. °Pain in the right shoulder-joint, almost depriving one of the use of the arm, with violent headache.—\**Pains, apparently in the bones of the arms*, -also in paroxysms,

pressing pains, or after eating acid things. Creeping and pulling in the muscles. \**Tearing*, °also proceeding from the jaw and ear, -or rather in the right arm, or also in the left arm from the shoulder to the tips of the fingers. Sudden tearing through the arms. °Jerking and tearing, with headache. Stinging in the right arm, with sensation as if it had gone to sleep. °Burning beating as if the flesh would be torn off the bones, with eruption on the hand. *Weakness of the arms*, they drop on making the least exertion, or with inability to raise them. Violent *itching* of the left arm. Small pimples on the arms. Scarlet spots on the arms, in a patient who had cancer of the breast.—Tearing in the *humeri* and flesh (after acids). Pain in the right upper arm, apparently in the bone. Creeping in the right upper arm, also in and under the shoulder. Itching and pimples on the arm. °Scrofulous ulcer on the left arm, malignant ulcer after vaccination.—Pain in the elbow, as if the olecranon were pressed upon. Pain on touching the elbow, as if a piece of glass had lodged in it. °Tearing in the elbow with pain on contact. Tension in the whole left arm, as if too short, as far as the middle-finger. Pain as if contused, with pain in the small of the back. °Itch, with swelling.—Rheumatic pain in the left forearm, from the hand to the elbow. Tearing in the forearm. Swelling of the muscles, painful when touched, going off in the night. Pimples on the right forearm, afterwards over the whole body. *Pain of the wrist-joints as if sprained, or as after excessive exertions*. Pain of the carpal bones, the pain extends to the elbow. *Rheumatic pain* particularly in the left hand, or in both joints (in the evening). Drawing pain in the right metacarpus. *Tearing in the right hand*, particularly in the joints and carpal bones, or in the left hand where the pain extends into the upper arm, or through the bones of the lower side into the fingers. *Stinging* in both hands, or particularly in the left hand, or as if in the bones and cartilages of the carpus and metacarpus, (with sensation as if something were creeping about in the parts, and pain on attempting to sew). °The hands go to sleep. Deadness of the hands on rubbing (washing) them after dinner. °Inability to write early in the morning, owing to numbness (in the extremities). °The hands are cold, as if dead, after an apoplectic fit. Tingling and prickling in the left hand. Cramp between the metacarpal bones. °The hand is drawn obliquely to the side of the little finger, in rheumatism. °Trembling of the hands, in drunkards. Jerking or twitching of the hands. Feeling of dryness in the hands. °Burning of the cold hands. Heat in the hands, during a catarrh. °Feeling of determination of blood to the hand, which swells and becomes blue-red, worse during hard work. °*Frequent swelling of the hands*, also rheumatic swelling of the joints. °*Sudden swelling*, with itching and tingling, as if stuffed, on the dorsum of the right hand and across the fingers, which turn violet and black-blue, with intolerance of contact, going off amid stinging and burning, which is particularly felt in the tips of the fingers, with burning sensation in the icy-cold hand, diminution of the pains by warmth, and rapid alteration of the color of the hand by stroking the veins from the fingers upwards. Itching of the hands. *Vesicles* on the outer border of the right hand, with voluptuous itching and burning after scratching. Cluster of deep, hard *itch-vesicles* on the right hand. *Vesicles*, with itching and burning, on the hands and fingers. °Chapped skin of the hands, worse in cold weather, (giving first Hep.). Sudden appearance of a number of *small flat warts* on the hands, without disappearance of the existing large warts.—°Tearing and drawing through the tips of the fingers. Pain in the ball of the right thumb. Gnawing and creeping in the bone and flesh of the third and fourth fingers of the right hand. \**Stinging in the tips of the fingers*, °also with burning. White appearance of the fingers. *Numbness of the tips*, particularly early in the morning. °The joints go to

sleep, previous to palpitation of the heart. Tingling in the fingers. Jactitation of the muscles in the ball of the left thumb, afterwards with twitching of the whole thumb. °Rheumatic swelling of the index-finger and wrist-joint. *Itching on or between the fingers*, also with shining, hardish blotches after scratching, with tension, burning, and small vesicles on the part. Small, red, itching dots on the fingers. Clear vesicles on the fingers. Small *itch-vesicles*. Large, hard blisters on the thumb, after previous redness and burning of the part. Small blotches, like bites of insects, on the left thumb and index-finger, preceded by itching as from nettles, and with violent burning after scratching. Cluster of *flat warts* on the left thumb, or wart-shaped elevations on the left middle finger, arising from vesicles. Red, hard *tubercle* on the middle-finger, after violent itching, afterwards suppurating slightly, with stinging in the tubercle on letting the arm hang down, and profuse bleeding of the tubercle after knocking it against any thing. °Gangrenous ulcer on the finger, arising from a small vesicle, with dark-brown swelling of the size of a walnut, stinging burning pains, as if in the bone, worst at night, depriving one of sleep, somewhat relieved in the day-time during motion. °*Glanders*. °*Malignant carbuncle*. °*Panaritium*. °Disappearance of the proud flesh in the panaritium.

**Lower Extremities.**—°*Tearing in the hip*. °Bruised feelings during the catamenia. °Tension as if too short, proceeding from the small of the back. °Numb pain with stitches, proceeding from the knee, where a tension is experienced as if too short. Pain in the hip and thigh, in the evening, with oppressive heaviness in the forehead, which does not allow him to open his eyes. °Rheumatic pain in the right hip, extending to the back, small of the back and knee, only at night, almost driving one mad, waking one from sleep, and driving one out of bed, with darting, griping and clawing as with the hand (after abuse of Merc.).—Prickling in small spots of the lower limbs. Stinging during windy and changeable weather. Pressure in the left lower limb, after headache. °*Tearing* in the lower limbs from below upwards, with uneasiness in the knees, °or also from above down to the foot, in typhus. °*Drawing in the lower limbs*, particularly in the left, as if in the bone, °or in the limbs from below upwards (in fever and ague), -towards the feet from the small of the back. *Uneasiness in the lower limbs*, also with drawing or tearing from below upwards, and constant motion of the limbs, *lest they should twitch*. °Heaviness and pressing from above downwards in the limb which had gone to sleep, proceeding from a hard tumour in the abdomen. Sensation in the right limb, as if gone to sleep, proceeding from the calf. *Weakness* or weariness in the lower limbs. Lame feeling in both recti femoris, which look swollen, going off during the night. Twitching of the left lower limb, in the afternoon, when sitting. °*Trembling* of the lower limbs previous to the attack in the head. Itching on the lower limbs.—Sticking with pressure in the left thigh, less in walking, worst during rest and in bed. °Stinging in the right thigh, during a scanty menstrual flow. *Tearing* in the bones, down to the knees. Tension as if too short, from the small of the back. Rheumatic pains in the posterior surface. Pain in the right thigh, *as after a shock or blow*, after every glass of wine he drinks. Twitching in the left thigh, with drawing pain in the leg. *Itching* on the thighs. Pimples on the inner surface (in syphilis). *Pustules* of the size of a pin's head, with red areole of the size of the cornea.—°*Stinging in the knees*, -also particularly in walking, or stinging in the left knee, accompanied with stitches in the chest. °Rheumatic pains in the knees. Drawing pain in both knees, with stinging and sensation of swelling, or arthritic drawing pain in the left knee, when sitting. °*Tearing* in the knees, preventing one from going up stairs. Vibratory sensation, like groaning, in the left knee. *Pain as if sprained*, par-

ticularly in the *left knee*. \**Pain and tension, as if too short*, -also proceeding from the heel, previous to a snow-storm, °or particularly in the left knee, as if a thin cord were put upon the stretch, from the knee to the foot, and only at the commencement of a walk in the street. °*Shortening of the hamstrings*, in consequence of convulsions, from infancy. Bruised feeling in the knees, in the evening. \**Weakness in the knees, with pressure at the stomach*, -particularly after a meal. °Stiffness and weakness of the knees, particularly on rising from a seat. *Swelling of the knees*, also with pain on rising from a seat, and difficulty in walking, or with insufferable pain in the bend of the knee, (particularly when touching it), with tension, difficulty in stretching the limb and pain of the thigh (posteriorly) as if swollen. Itching of the knees.—Pain below the left knee and in the tarsal joint. *Pains in the calves*, or renewal of the former pains. *Drawing pains in the legs*, from the knees to the tarsal joints. Cramp in the calves, at night and early in the morning, waking him. *Tingling in the right tibia* (from the knee to the dorsum of the foot and into the toes), or in the left calf, with cold feet and icy-cold malleoli. Coldness of the calves and knees, frequently on the left side only. °Sudden sensation of warmth in the cold numb limb, -followed by violent tearing in the leg, with painful tingling in the foot, as if in the blood-vessels, and sensation as if the hamstrings were shortened. \**Swelling of the legs* °during the day and evening, -or only of the *left leg and foot*. °Blue-red large swelling of the leg and foot, with short-lasting white spot on pressing with the finger, deep ulcers in the enlarged tibia, prickings around the malleoli and calf, and aggravation of the swelling in the warmth. °*Elephantiasis* in leprous patients? *Itching of the legs*, inducing one to scratch them, followed by red blotches. Itching blotches. Itching places on the tibia, with pain as if burnt, changing to painful spots after rubbing, with blue-red dark border and dry scurfs. °*Old herpes* on the legs improves considerably. °Re-appearance of suppressed herpes. °*Ulcers on the legs*, also *black, gangrenous*, in many cases. °Re-appearance of suppressed ulcers on the legs, and disappearance of the ulcers consequent on such suppression. °Both legs are covered with impure, ichorous ulcers, and are almost without any skin. °Deep holes in the enlarged tibia, with impure whitish edges. °Lachesis is one of the best remedies for *caries of the tibia*.—Violent pains on the dorsa of the feet, preventing sleep, worst when stepping on the feet, with fever and trembling from pain. Pains in the tarsal bones and joints. The anterior portion of the right foot feels as if pressed in. (Sensitiveness of the balls of the feet on stepping.) \**Tearing in the feet*, -also particularly in the evening, with heat in the feet, °or with drawing extending to the toes, °or in the heel, with inability to stand on them. Drawing, extending to the malleoli, or from the toes upwards. Burning and stinging in the sole of the right foot, with heaviness of the foot as if made of lead. Stinging in the right malleolus. Cramp in the anterior portion of the feet, with frequent tearing in the arms and lower limbs. Bubbling sensation in the right foot. \**Coldness of the feet, also as from ice*, \**particularly when accompanying other complaints*, -or succeeded by heat. *Icy-coldness of the malleoli*, °or of the soles (with constipation). Profuse sweat of the feet, particularly of the toes, which are quite wet early in the morning, in bed. °Diminution of the sweat of the feet, after some days, with warmth of the feet. \**Swelling of the feet*, -particularly of the right foot, worse after walking, or preceded by redness of the feet, as in elephantiasis. °*Swelling of the feet*, accompanying other complaints, °also in pregnant women, so violent that they were unable to put on boots. *Itching of small spots on the instep*, as from an insect which had penetrated. Itching *itch-vesicles* on the dorsum of either foot. *Small hard white, deep vesicles*, preceded by violent

itching and with burning after scratching, on the feet, toes, heels, (right hand and fingers). Abscess on the heel occasioned by the rubbing of the shoes, with formation of pus accompanied by violent chills (removed by Hep. s.).—Pain on the toes as after too long a walk, with heat in the toes, preceded by coldness of the feet. Digging in the tips of the toes, as if under the nails, and as if the tips were drawn up. Stitches in toes from the tips upwards, or in the left big toe. Spasmodic *drawing up* of the toes. *Tingling in the toes*, also with heat or numbness (in the right toes) or with prickling (in the left toes). Inflamed *spot of the size of a pea* on a pressed (pinched) toe, with stinging and burning. (Bursting of a blister on a toe of the left foot, with moisture.) \**Cracked skin between and on the toes*, °also *deep rhagades*, or like cuts across the toes. °*Exfoliation of the hoof* (in horses). Inflammation and suppuration of an old chilblain, after which tertian fever sets in.—Rapid growth of the corns, without being painful. Pain of a corn on the right foot.

**Sleep.**—*Frequent yawning* towards evening. Yawning with stretching. Yawning with nausea and dryness in the throat, as if thirsty. Spasmodic yawning. Suppressed yawning. *Drowsiness morning and forenoon*, particularly after breakfast, with languor, stretching and spitting, or after a walk in the open air, succeeded by sleep, which lasts sufficiently long, but is disturbed with dreams. \**Drowsiness with lassitude in all the limbs*, -particularly morning and forenoon. Drowsiness before dinner, sometimes irresistible, for the first three weeks. Drowsiness after dinner, with languor, or *irresistible drowsiness* with subsequent aggravation of the abdominal pains. Drowsiness in the afternoon. Drowsiness *early in the evening*, also irresistible, or directly after supper, and accompanied with a good deal of weariness. No sleep one evening, and irresistible sleep the next. Could go to sleep standing or walking. *Sleeps longer than usual in the morning*. Constant sopor, after cessation of the pains. —\**Difficulty of falling asleep*, -for weeks, \*also *with great drowsiness in the evening*. \**No sleep before midnight*, -too wakeful. *Long wakefulness and excitement in the evening*. *Sits up until late at night, performing his mental labour with great ease*. Is unable to sleep on account of internal uneasiness, with sensation as if the chest and abdomen were swollen, and violent pains in the chest, which do not allow the parts to be touched. *No sleep*, in spite of previous lassitude, no position seems to suit, and every thing seems to press on neck and nape of the neck. Constant exhausting sleeplessness.—*Light sleep*, he hears every noise. °*Disturbed by every little noise*. *Restless*, with heavy morning-sleep and want of disposition to rise, in children. Sound, refreshing sleep, even when waking with pains. *Symptoms during sleep*: \**tossing about* -particularly children, with moaning. Single turns of loud rattling from time to time. °*Moaning on account of pains*. °*Starting when on the point of falling asleep*.—*Symptoms at night, in bed*: aggravation of many pains (from the bite) about midnight. Pains in an old cicatrix on the head. °*Swelling of the face*, -or itching and erysipelas. Pains in the nasal bone. °*Constant coryza*. Stinging in the throat or sensation as if closed. °*Amelioration of the sore throat*. °*Bitterness of the mouth*. Eructations and aggravation of the pains. *Nausea which wakes him*, also at two o'clock at night, with oppression of the chest, pressure in the stomach, *violent spasmodic vomiting* (also of bile, and preceded by colic or vertigo with profuse sweat, succeeded by diarrhoea early in the morning). Feeling of emptiness in the stomach or also pressure. °*Weakness in the pit of the stomach*. Diarrhoea. Urging to urinate. Emissions. Erections. *Cough*. Suppression of the expectoration. Huskiness of the chest. Difficulty of breathing. *Pains in the chest*, particularly also burning. °*Aggravation of the rheumatic and mercurial pains in the limbs*. Violent

cramp in the calves, so violent towards morning that he wakes. Increased itching of the eruption, with burning. Burning of the uleers, palms of the hands or soles of the feet. °Heat in the head, arms, etc. Every part of the body feels too hot, with restless sleep.—*A number of dreams while half awake. \*Constant dreams the whole night, with frequent waking.* Vivid dreams, with sound sleep. °A number of strange dreams. Lascivious dreams for a number of nights, with lascivious thoughts in the day-time. *Dreams about the business and events of the day.* Imagines in the day-time, that he had been dreaming about every thing which is taking place, besides other things which he had forgotten. Dreams full of reflection and exertion, the first weeks. Dreams about travels through every part of the world. Poetic dreams, full of ingenuity, or cheerful, humorous dreams *during the siesta.* Dreams full of unpleasant little difficulties, with emissions. Dreams about home, with anxiety as if he had done wrong, and restless sleep. He dreams that he has been accused of theft, and determines to avenge himself on his accuser, for which purpose he is preparing knives. He dreams that a person who is dear to him, is dying, with waking as if he had been weeping and as if he perceived the ghost of the defunct on looking round. He intrigues in a dream. *Symptoms on waking in the morning:* dulness of the head. \**Headache.* Horrid toothache. °Inclination to vomit, -cramp in the knees, etc. Painful weariness in all the limbs, proceeding from the knees and elbows. General illness, with vertigo, heaviness in the occiput, sensation as if sprained in all the joints, pressure in the small of the back and fulness in the abdomen. Roaring in the ear. Pressure on the eyes. Feeling as if bruised and scarcely able to rise. Languor, particularly in the arms and feet. Sexual excitement, with pain in the loins and bruised feeling. Erections. °Disappearance of the existing catarrh. Feeling of ease (on waking early), less languid after a poor night's rest than after a good one.—*Symptoms after sleeping, generally:* \**increase of the number and intensity of the pains.* Stiff and as if bruised, both in the day-time and early in the morning, so much so that he is scarcely able to stir, deriving comfort from the stroking and rubbing of others.—*After the siesta:* feeling of illness during the abdominal pains. Erections and sexual excitement. Roughness of the throat and hawking of mucus. Feeling of tightness of the wind-pipe. Bruised feeling, with pain in the loins and pain between the shoulder and spinal column.

**Fever.**—Rigor previous to fainting (after the bite). Coldness of the knees and calves, or of the feet and malleoli. °Icy-coldness of the hand, with burning sensation. Feverish coldness the whole day, obliging one to lie down. *General coldness, with desire to be near the warm stove.* Feeling of coldness of the left ear and side of the head, which parts are warm to the hand.—*Single shiverings,* or particularly over the back.—*Chilliness,* with laziness, lowness of spirits, and amelioration when lying near the fire. Chilliness on the back, proceeding from the small of the back. °Chilliness, unless the room is very warm. *Severe chilliness, with chattering of teeth and a kind of lock-jaw,* in the evening. General chilliness, with tearing and puffiness of the abdomen. Severe chilliness in the evening, with thirst and pain in the forehead. °Chilliness every other day.—Fever after eating any article of salt food. *Continual fever, with dry skin and mouth,* dry, coated tongue, constant thirst, small, quick pulse and faint eyes. *Fever of an infant at the breast,* commencing with fretfulness, crying, indisposition to lie down, then heat with eruptions, vomiting of the milk, frequent stools which are likewise attended with fretfulness and screams, with hot-feeling skin. °Fever of a child, with heat of the head, cold feet, moaning, throwing off the cover, short breath, and want of disposition to talk or answer. Fever early in the morning, after exerting one's-self in the warm

spring-weather, with great debility, aversion to food, white tongue, disposition to regurgitate, headache, heat and tightness of the throat from the least pressure. Fever every time he swallows vinegar, commencing with drawing in the body here and there, feeling of warmth, moaning, pressure in the chest and about the heart, *afterwards* chilliness with stretching, thirst, shaking in the open air, creeping from the anus to the head, stupid feeling, roaring in the ears, flickering before the eyes, languor, creeping and bounding sensation in the arms and lower limbs, with yellow complexion throughout. Frequent paroxysms every day, particularly morning and evening, *first* a good deal of thirst, *then* shuddering, afterwards slow heat without thirst and dread of being uncovered (relieved by China). °Shuddering at ten o'clock in the evening, on going to bed, *afterwards* alternation of heat and coldness, accompanied with tearing in the temple and burning in the pit of the stomach, some sweat after four o'clock in the morning, with parched feeling of the fauces during the fever, and unquenchable thirst. °At times chilliness, at times icy-coldness, at times heat, (after abuse of mercury in the case of syphilitic patients). °Frequent chills along the back, mingled with heat, blackness before the eyes and failure of thought. \**Heat with shiverings*, °also as if arising from a cold, with dread of every little current of air. °Chilliness and heat, afterwards chilliness, with unquenchable thirst, head and toothache.—Severe attack of fever and ague every evening, with loss of appetite and headache, internal chilliness and external heat, and strong febrile heat the whole night. °Chilliness every afternoon, followed by heat and shivering on lifting the cover of the bed ever so little, afterwards sweat. °Attack of inveterate fever and ague, *every evening*, first chills with drawing in the back and lower limbs from below upwards, *afterwards* dry heat at night, with loss of appetite and exhaustion. °Fever every morning on rising, commencing with restlessness, hurriedness and anxious motions as if from fear, afterwards, towards eleven o'clock, the patient (a child) becomes more quiet, with headache, deep breathing, moaning, and hot sweat all over, towards evening vomiting and hiccough. \**Tertian fevers*, particularly immediately after dinner, *first* chilliness, with burning face and constant shiverings through the body, *afterwards* a good deal of heat towards evening, with violent headache. °Disappearance of the vomiting in tertian fever. °Inveterate quartan fever which had been mismanaged with quinine, with convulsions during the chilly, and thirst during the hot stage.—°Typhus °on the tenth and eleventh days, with vertigo on sitting up in bed, paralysis of the eye-lids with difficulty of opening them, bitterness of mouth, loss of appetite, subdued pain in the chest and dry cough, tearing in the left thigh and in the back. °Typhus on the seventeenth, nineteenth day, with *sopor* (after a restless night, in which he expresses a desire to be home) lying on the back in a state of stupor from which he can only be roused by shaking him and calling to him loudly, answering with a heavy tongue, sunken countenance, dropping of the lower jaw, pulse 70, soft, of irregular volume, some sweat, with coolness of the legs and feet, red, yellowish, smooth, dry tongue (parched in front only), with difficulty of protruding it, (easier after drinking), copious and brown-red urine.—Sort of *catarrhal fever*, with heat, fulness of the head, drawing in the teeth and facial bones, glistening eyes as when in a state of exhaustion, pain as if sprained in the knee, irritability, restlessness, uncomfatableness and as if sprained in the small of the back, some coryza on the third day.—*Agreeable feeling of warmth*, as after a cold bath. Disagreeable warmth over the whole body, in the evening. *Heat of the hands and feet*, particularly *in the evening*, accompanied with heat in the abdomen, drowsiness without sleep, fanciful ravings and great sensitiveness of the throat to contact, even to the contact of the bed-cover or shirt, sometimes with tearing in the feet. \**Burn-*

*ing in the palms of the hands and soles*, particularly at night. Heat of the palms of the hands and nape of the neck every evening, with feeling of pleasantness from the stroking of those parts by others. *Heat as from a rush of blood*, with sensitiveness of the neck. °Intolerable heat at night, with sweat and thirst. Great heat and sweat, with indescribable pains in the abdomen. Burning, dry skin, with dry, coated tongue, constant thirst, small, quick pulse and dull eyes (after the bite).—Small, weak, and irregular pulse. *Small and quick pulse*, with hot skin. °Small, soft pulse, of unequal volume. °Intermittent and small pulse, during an apoplectic fit. *Full and hard pulse*.—\**Disposed to sweat*. Re-appearance of excessive sweat. °*Profuse sweat* accompanying other complaints. Profuse sweat, with increased, full, hard pulse, in the evening, after moderate exercise, with bodily languor on the morning previous and following. Night-sweats. *Cold sweats*, accompanying the most violent symptoms occasioned by a bite. Sweat tinging the parts yellow (on the back). *Sweats which afford relief*. °Profuse sweats without relief, in rheumatisms.

**Skin.**—°The skin becomes fresher than usual. Falling off of the hair (of horses).—Itching of the whole body, as from ants. Itching in different places, in the evening, particularly on the legs, loins and upper arms. °*Violent itching on the back and thighs*, or on the arms, hips and lower limbs. *Prickling* in different parts, also as from ants, or particularly in the *evening and night*. Biting-itching, particularly on the upper arms, with blotches after scratching. *Stitches in different parts of the skin*. Burning, particularly after taking acids, °or hindering sleep at night, stinging burning proceeding from the small of the back upwards. After scratching a place sore, it becomes ulcerated.—*Pimples*, also red, with itching, particularly at night, in bed, preventing sleep, with pain after scratching. Pustules. Small tubercles spreading from the upper arm over the whole body, (except the face, chest and abdomen,) with violent itching, at night in bed, and subsequent increase of the pimples to blotches, as from nettles and mosquito-bites, or (after scratching) like scarlet fever, rubeculae or purple-rash. White blotches, turning red on the day following. *Rash over the whole body*, small, smooth spots of the size of the point of a needle, with uneasy night-sleep, coryza, loose cough, some heat in the head and on the hands, dim eyes, violent palpitation of the heart, and some sweat at night. °Rapid disappearance of a kind of dry itch.—Re-appearance, in large quantities, of herpes on the face and lower limbs, which had been suppressed a long time previous, with simultaneous diminution of an existing expectoration. °Small reddish spots on the face, neck and arms, increase in number, become scurfy, and then disappear.—*Warts* (on the hands). °*Warts of horses*.—\*Gangrenous blisters. Black-blue blisters, vesicles of the size of a hazel-nut, (with itch-eruptions on the hands and feet,) with violent itching and burning, as if the flesh would be torn off the bones, at times worse, with pains which extend to the teeth, head, chest and back.—Red spots, like the bites of bed-bugs, after itching.—°Disappearance of jaundice within three or four days.—\*Erysipelas, particularly in the face. Scarlet-like eruptions. Scarlet-fever, with swelling of the cervical glands, black lips and tongue, and constipation.—*Swelling* and inflammation of the bitten limb, with violent pains, dry mouth, constant fever, dry skin, and constant thirst. °Considerable swelling of the part, (from the bite of a viper,) with nausea, vomiting, great thirst and swelling of the tongue. Swelling over the whole body. Abdomen and chest feel as if swollen and are sensitive, at night.—The base of ulcers becomes clean, with painfulness of the areola to pressure. The lightly brown areola becomes of a bluish black. Tension of the skin around the ulcers (on the legs) as if too short. (Nightly burning of the ulcers, obliging one to

rise and wash them with cold water). The ulcers first bleed, then they become clean. *Small ulcers are scattered about*, (also around issues,) or cartilaginous, soft tubercles in the skin. Sore places on old cicatrices *become spongy, dark-red or brownish, with whitish spots and burning on wiping them*, with easy peeling off of the epidermis. Pain in old cicatrices.—Gangrene of the bitten part, with inflammation and swelling of the bitten part, and gangrenous blisters.—Stream of blood rushing out of the bitten part, the first part being red, then turning black, and of a bad color. Small wounds bleed a good deal. The cicatrices of the bitten part bleed readily. Violent bleeding of the cancers. °*Aneurisms*. (See clinical observations.)

**General Symptoms.**—Stretching of the limbs, particularly after breakfast, or proceeding from the toes and extending into the fingers, also after taking acids, (with constrictive sensation in the region of the heart). Gnawing in all the limbs. Heaviness in the limbs. *Pain in the limbs as if bruised*, particularly during emotion, or in the forenoon, with languor and mental indolence, as after a night's revel. *Painful weariness in the limbs, proceeding from the knees and elbows*. Lameness in almost every bone, with pressure. Pulling sensation in the arms and lower limbs, with creeping from the left shoulder to the head. Aching pains here and there, or sensation in the parts as if pressed from without. *Pains wandering from one part to another, or first felt on the left, then on the right side*. *Drawing in the limbs*, also with beating in the small of the back, or first on the left lower limb, then in the right arm. \**Tearing in the limbs*, also in every limb, or at times in one, at times in another part, °also with contraction and stiffness of the affected joints, with aggravation of the pains early in the morning, difficulty of going upstairs, violent sticking on rising from a seat, renewal of the paroxysm after taking cold, and amelioration of the pains by cold.—\**Paralysis*. Is unable to bend the feet, to close the hands, sometimes on the left side only. *Awkward, stumbling gait*, owing to rigidity of the joints, or to sprained pain in the back, which renders motion very difficult. His motions are at times rapid and easy, at times uncertain and tottering. °*Hemiplegia*, particularly of one arm, right or left, or of the whole left side, (also in alternation with Rhus).—°*Emaciation* during her sickness. °Emaciation and exhaustion after abuse of quinine in intermittent fever.—Great desire to be in the open air.—Great languor of body and mind, particularly early in the morning. Muscular relaxation, with *exhaustion from the least motion and exertion*.—\*Weariness, with bodily languor and mental excitement. Weariness, as is felt in warm spring-weather, with bruised sensation, coryza, cough, sore throat, morning-sickness, rumbling in the epigastrium, etc. \**Great weariness in walking*, °with languor, -or in the evening in walking. Gets easily tired when making an exertion.—Languor every morning, with *inclination to sleep*, disposition to lie down, and relief after lying down, *bruised feeling in the limbs*, want of disposition to work, sad mood, laziness. *Languor with feeling of prostration in the body, constant desire for rest, and a suffering, languishing appearance*. *Languor, with difficulty of walking*, -particularly about dinner-time, while walking in the street.—\*Dread of motion, and laziness, °also with languor and stiffness. *Great desire to lie down, particularly after eating*, or morning and forenoon, or with inability to sit. °Great weakness, with other complaints, particularly with pains in the stomach. °Weakness before breakfast, while suffering with pains in the abdomen, with drowsiness in the day-time, and particularly after dinner, bruised feeling after the siesta, unpleasant sensation from the pressure of the clothes and fulness in the abdomen, (worse after eating,) sore tongue, bad complexion and dread of labour, (in individuals with phlegmatic lymphatic constitutions). Weakness as if one would sink, in the evening or in

the morning after rising, with palpitation of the heart and dropping of the arm after the least exertion. Sudden falling as if struck by lightning, with involuntary discharge of fæces with vomiting. *Frequent fainting fits*, particularly during breakfast, with nausea, vertigo, failure of sight, and frequent recurrence of the fainting turns in the day-time. Fainting turns towards evening, with dying weakness, unquenchable thirst, dry mouth, pale face, and sensation as if fever would set in. *Fainting feeling*, with cramp-like yawning while waiting for the dinner, or as if arising from a feeling of pain in the stomach. °Frequent attacks of fainting every day, with nausea, difficult breathing, palpitation of the heart, and moist skin with cold sweat.—*Trembling* of the whole body, with feeling of *ennui*. Sensation of internal trembling, as from anguish. Trembling of the limbs in the evening, followed by internal trembling, with fever and sensation of fainting. °*Sudden attacks of vertigo*, as if one would die, every part of the body appearing trembling and palpitating, preceded by palpitation of the heart, with heat, anguish and shuddering, and trembling of the lower limbs.—*Convulsions*, particularly of the hands and lower limbs. Sudden convulsive starting of the whole body, proceeding from the lower extremities, when sitting. °Violent convulsions of the limbs and face, with rigid stretching of the body. °*Convulsions* and other spasms with *violent shriek*, particularly about midnight, waking the patient. Rigid stretching of the limbs, with bending the head backwards and distortion of the eyes. °Threatening lockjaw. (See Clinical Observations.)

**Characteristic Peculiarities.**—Lachesis appears to act principally on the left side, particularly in °*apoplectic paralysis*, -sore throat, eruptions and pains in the limbs. \**Aggravation of the symptoms in damp weather*. °Exhaustion and weariness from excessively cold or warm weather. \**Aggravation of the symptoms during rest, amelioration during motion*, -except the intense inflammatory rheumatic pains. Evening-exacerbation. \**Exacerbation after every sleep, in the day or night*. °The curative action is disturbed by acids, wine or beer, particularly, however, by emotions, fright, mortification, listening to tales of murder, etc. \**Typical recurrence of the aggravations*. A number of the pains terminate in *catarrh*.

## 149. LACTUCA VIROSA.

LACT.—Poisonous lettuce.—See JOURNAL FÜR ARZNEIMITTELLEHRE.

ANTIDOTES.—Vegetable acids and coffee.

N. B.—The symptoms marked (s) have been obtained from the *lactucarium* prepared out of the *Lactuca sativa*, (the common garden lettuce).

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, *Lactuca virosa* has been employed with more or less success in the following affections:—Dropsy.—Edematous swelling of the whole body, with asthmatic complaints, dulness of the head, difficulty of lying on the back, chills, loss of appetite, small, low pulse, (Jahr).—Somnolence and sleeplessness, sleep disturbed by difficulty of breathing and frightful dreams.—Hysteria, hypochondria and melancholy.—Inability to perform any mental labour.—Dulness and confusion of the head.—Vertigo.—Nervous headache.—Blennorrhœa palpebrarum.—Chronic conjunctivitis, with profuse secretion of

mucus and plethora abdominalis, in persons advanced in age.—*Musæ volitantes*.—*Amblyopia*.—*Amaurosis*.—*Cardialgia* with aching and burning pains, feeling of fulness and coldness in the stomach, anguish in the præcordial region.—*Induration of the pylorus*.?—*Acute and chronic affections of the liver and spleen*.—*Costiveness, constipation*.—*Gonorrhœa*? *Violent erections*, with too frequent emissions.—*Roughness and hoarseness of voice*.—*Laryngitis and chronic bronchitis*.—*Constant feeling of fulness in the windpipe*, with irritation and hacking cough, difficulty of speech, frequent loose cough, (Jahr).—*Dry, barking, spasmodic cough*, racking the chest. *Dry, suffocating cough*, Jahr.—*Pulmonary phthisis*.—*Whooping-cough in the convulsive stage*.—*Whooping-cough with vomiting of the ingesta*.—*Asthmatic complaints*. *Asthma spasticum*.—*Asthma of old people*.—*Asthma and suffocative paroxysms from organic defects of the organs of circulation, organic defects of the heart, dilatation or hypertrophy of the heart, defects of the valves of the heart and of the large vessels*. *Aneurism of the aorta, etc.*—*Dropsy of the chest with general swelling, anguish of the chest, desire for air and oppression of breath in a recumbent posture, short, dry cough, great weakness, diminished secretion of urine*.—*Palpitation of the heart*? *Spasmodic contractions of the heart*? *Angina pectoris*. *Spinal irritation with paralytic affection of the upper and lower extremities*.?

#### SYMPTOMS.

**Mind and Disposition.**—*Sad mood, and out of humour*. Seems to favour sadness with exaggerated fancies, so that the least event will lead to the worst apprehensions. *Grief, in the evening, is followed by a stupifying pain in the forehead, and violent contraction of the throat during the disposition to weep, which continues all the time*.—*Anguish and internal uneasiness*.—*Excessive ill-humour, after a trivial occurrence*. *Ill-humoured, indisposed to work, and unable to remain in bed*. *Vexed, is easily excited by trifles*.

**Sensorium.**—*Difficulty of thinking (s)*. Unable to perform any intellectual labour, because the ideas become confused and he does not succeed in getting a clear conception of the whole subject. Looks for a thing here and there, before he is able to find it.—*Dulness of the head, early in the morning*, with heaviness. *Dulness of the head as from fulness*. *Dulness in the forehead, with a feeling of heat in it*. *Dulness at times in the right, at times in the left frontal protuberance (externally), with stitches through the left protuberance on stooping*. *Cloudiness and giddiness of the head*. *Dizzy on rising early in the morning*.—*Confused and stupid feelings in the head*. *Sensation as if one had not slept enough, with disposition to fall*. *Confusion of the head, early in the morning, as after a night's revel, or with pressing through the forehead and orbits*.—*Intoxication*.—*Vertigo (s)*. *Vertigo with heaviness of the lower limbs*. *Giddiness, with heaviness of the head, particularly in the occiput*. *Giddiness, with blackness before the eyes and confused appearance of the threads in sewing*. *Giddiness in a warm room, with fulness in the head*. *Giddiness with sensation as if the body were floating in the bed*. *Giddiness with sensation as if the head were too large or expanded*. *Giddiness on moving the trunk quickly*.

**Headache.**—*Pain in the region of the vertex*, also at a small spot like clavus hystericus (in a girl). *Pain in the head, at times in one place, at times in another, particularly in the occiput*. *Headache in the afternoon*.—*Dull pain in the forehead*. *Dull pain in the whole head*. *Dull pain in the head, with great languor and prostration of the whole body*. *Dull pain in the left temporal region, while moving the head vigorously from side to side, (while washing the face,) worse whenever he shakes the head*.—*Heaviness in the occiput*, with dull pain, or with pressure, or in the afternoon. *Heaviness in the forehead, with stitches, particu-*

larly in the left frontal protuberance.—*Aching pain in the forehead*, also with sensation as if the brain were loose, or with aggravation of the pain in a warm room, or stabbing as with a dull knife, or burning (in the evening) with heat of the forehead externally. Acute aching pain in the glabella. Sharp aching in one side of the head as if down to the bone. Tensive aching in the occiput, with heat in the forehead and cold hands. *Pressing in the forehead*, early in the morning on waking, or after a slight mental effort, affecting the eyes. *Pressing through the temples*, particularly through the left, whence the pain sometimes strikes through the whole head.—*Painful compression* in the occiput.—Drawing pain from the temples to the forehead. Tearing in the right temporal region. Dull jerks in both temporal regions.—*Painful concussion* in the head, on coughing ever so little, with buzzing and pressing in the head a long time after.—Trembling and pulsating in the head, during rest. Buzzing in the head and ears, with a feeling of fullness in the head. Whizzing in the right side of the head, in the morning.

**Scalp.**—*Painful spot* near the vertex, with increased pain on touching it. Dull seated pain at a small spot of the left parietal bone. Drawing pain at a small spot of the right parietal bone, with pain when touched.

**Eyes.**—Gripping pain above the eyebrows. Pressure in the right eyeball, with distensive sensation. *Biting in the eyes*, particularly in the external canthi, worse after rubbing, or in the inner canthus only. *Burning of the eyes*, particularly of the lids, (also only in the day-time while writing, or particularly of the right eye, with dim-sightedness and dilatation of the pupil). *Redness* of the conjunctiva, with increased secretion of mucus, (in men advanced in years, with plethora abdominalis).—The lids are covered with mucus.—Dilatation of the pupils (s).—*Dim-sightedness*, with burning in the eyes Dim, obscure vision (s). Sight as through mist or gauze, disappearing on looking steadily at a thing. *Muscae volitantes*, on stooping after dinner.

**Ears.**—Drawing in the ears. Stitches succeeded by tension, in the left ear.—Humming in the ears. Buzzing in the ears, in the evening in bed.

**Nose.**—Distensive pressing in the tip of the nose.—Peculiar smell before the nose, with similar taste in the mouth.—*Frequent sneezing*, with aggravation of the pains in the chest, or with *painfulness of the chest*, (also feeling sore, and afterwards aching). *Coryza*, leaving the nose sore and dry.

**Face.**—Unhealthy appearance (s). Deranged, pale face. Heat of the face, with trembling of the lips and sensation as if they were swollen (s). Tensive creeping in the face. Prickling drawing extending from the right submaxillary gland to the ear and tongue. Stitches in the chin, where the submaxillary nerve passes through the foramen.—Twitching in the lips. Swelling of the lymphatic glands.

**Teeth.**—Sudden pain in the left lower molares, as if a decayed tooth would be turned round.—Pain of the gums in an empty socket, when chewing.

**Mouth.**—Tensive feeling in the back part of the mouth and palate, with constant spitting. *Increased flow of saliva*, sometimes aerid. Dry mouth, without thirst.—*White-coated tongue* (s). The tongue is considerably coated with mucus (s). The tip of the tongue is painful, as if burnt. Astringent sensation under the tongue.

**Pharynx, etc.**—*Slight burning in the throat*, also in the evening. Sensation in the throat as if the parts were exposed to extreme heat from a stove.—*Difficulty of swallowing*, with sensation of rawness and burning about the uvula, or as if the muscles of deglutition refused to perform their office.—*Accumulation of mucus* in the throat. Tenacious mucus in the throat, early in the morning, (also s).

**Appetite and Taste.**—Flat taste in the mouth (s). Bitter taste, also after eating bread and butter. °Bitter taste in the throat as of bile.—*Loss of appetite* (also s). *Aversion to dinner*. No desire for bread and meat.—*Increased appetite* (also s), also particularly at dinner.—*Increased thirst*.—°Sensation of descending fulness in the stomach after dinner.

**Gastric Symptoms.**—*Frequent eructations*. Several eructations, afterwards relieving the oppression of the chest. \*Empty eructations. Eructations tasting of the drug. Repulsive eructations, with cold feeling in the œsophagus and long-tasting bitterness in the mouth. *Acrid*, or sour eructations.—*Loathing* (s). *Nausea* (also s), also with oppression in the pit of the stomach.—*Vomiting and nausea* (s).

**Stomach.**—*Pain in the stomach, with retraction of the pit of the stomach, worse on pressing on the part*. Sensation in the pit of the stomach and sternum as from sitting bent continually. *Tightness in the pit of the stomach, with anguish in the præcordial region*. Qualmish feeling in the stomach. *Pressure in the stomach* (also s). Pressure in the stomach with feeling of repletion, as if it would burst, and subsequent creeping under the left mamma, with sensation as if a blister of the size of the palm of the hand were forming in that region, a sort of distention or boiling up, (as when milk is about to boil over in a vessel), succeeded by ineffectual urging to stool. Pressure in the region of the pyloric orifice. Pressure and fulness in the pit of the stomach. Eructations with gurgling in the stomach, borborygmi in the abdomen and emission of flatulence, which affords relief, during which symptoms the pressure in the pit of the stomach changes to anguish, concentrates itself under the sternum, and alternates with burning and feeling of coldness.—*Feeling of coldness in the stomach* (also s). *Creeping feeling of coldness in the stomach and pit of the stomach, with frequent eructations*. *Icy coldness in the œsophagus and stomach*, after previous feeling of warmth in the stomach, with rising of nausea in the œsophagus and flat taste on the root of the tongue.—*Stitches in the pylorus*.—The pains in the stomach are relieved by sitting bent, or by emission of fetid flatulence.

**Hypochondria.**—Dull jerks, or stitches, in the hypochondria, particularly the right.—Bruised feeling in the region of the liver, early in the morning. Periodical drawing in the liver. Digging pain in the liver. Pressure in the liver, also in the evening. *Stitches in the liver*, also after eating, or towards the back, or with sensation of heaviness. *Swelling of the liver*, also with pressure, or with tightness when pressing upon it.—*Stitches darting through the region of the spleen*. Crampy pain, particularly during rest.

**Abdomen.**—Qualmish feeling in the abdomen.—*Pinching in the abdomen during and after breakfast*. Pinching in the abdomen with urging to stool, only flatulence being passed. *Pinching in the umbilical region*, increased by crossing the legs. Pinching in the epigastrium, early in the morning, in bed, or with eating, and aggravated during and after dinner to such a degree that he is obliged to bend double.—*Cutting in the abdomen in various places, with pinching*. Cutting in the whole abdomen, with painful rumbling and subsequent slimy evacuation from the bowels.—Disagreeable feeling of warmth in the abdomen. Frequent rush of blood from the abdomen into the chest.—Sensation of heaviness in the abdomen, with pressure downwards, after breakfast. Sensation as if a load were lying on the abdomen, particularly on the umbilicus and pit of the stomach, worst when standing.—°*Diseases of the portal system.*?—°*Ascites* (after the removal of fever and ague with constipation) with excessive swelling of the abdomen, feet and face. °Ascites, with induration of the liver and asthma.—Feeling of fulness in the abdomen, also with rumbling and emission of flatulence. Sensation as if too full in the right side, with oppressed breathing

and relief by eructations and emission of flatulence (s). Distention of the abdomen, particularly in the region of the liver, in the evening.—Shifting of flatulence in the abdomen. *Rumbling in the abdomen*, also at dinner, or *after dinner* (with stitches under the præcordial region and pinching in the abdomen), or particularly in the umbilical region. *Emission of a quantity of flatulence*, also of fetid flatulence, (after previous rumbling) or in the evening with previous pinching.

**Stool.**—*Constipation*. °Diminution of the habitual constipation.—Stool preceded by pressing and pinching. Urging to stool with feeling of excessive languor, and difficult, scanty stool. Stool preceded by urging and pressing hard, with contusive pain in the anus. Insufficient stool.—*Costiveness*. *Dry, hard, difficult stool*, with pressing. Hard, knotty stool, with burning at the anus, after a constipation of two days.—*Promotes the alvine evacuations?* (s). Soft or papescent stools, the first days. Frequent papescent evacuations (s). *Diarrhœa* (s). At times diarrhœa, at times costiveness (s).—General languor, weariness with drowsiness, yawning and ptialism during stool. Pressing at the anus after (soft) stool.—Drawing in the anus. Prickling in the anus towards evening. *Hemorrhoidal tumours* around the anus, with tenesmus of the rectum, and discharge of thin stool after every hard evacuation.

**Urinary Organs.**—Urging to urinate, with frequent drawing in the glans, which strikes through the whole body.—*Increased secretion of urine* (also s). *Frequent micturition and increased secretion of urine*. *Has to get up at night for the purpose of urinating*.—The urine is clear as water, and is more copious and more frequently passed. Urine yellowish and clear, smelling like violets. Brown, hot urine, burning in the urethra.—Sensation in the urethra, while sitting still, as if a drop were flowing through it. Burning at the orifice of the urethra.—Dragging pressing in the region of the bladder.—°Gonorrhœa.?

**Male Sexual Organs.**—Swelling of a lymphatic vessel in the penis after a morning erection. Drawing in the root of the penis, or in the right spermatic cord and down the inner side of the thighs.—Diminished inclination for an embrace. Quiets sexual excitement and removes lascivious dreams (s). Painful erections during the morning-slumber. Emissions, during lascivious dreams in the morning-sleep, or two emissions in one night, during sound sleep, without his being conscious of them.

**Female Sexual Organs.**—Menses too early by six days or four (with cramp-pain in the abdomen (s).—Promotes menstruation (s).—Increases the milk in the breasts (s).

**Larynx and Trachea.**—Increased volume of the voice. *Roughness in the throat* after reading aloud. Roughness in the larynx. Roughness in the trachea, obliging one to take deep breath. Roughness with scraping in the throat (s). Dryness and scraping in the larynx and upper part of the chest. *Hoarseness* in the evening, or also early in the morning, with roughness in the throat. Feeling of fulness in the trachea, less on bending the trunk backwards. Frequent irritation with hacking. °Constant feeling of fulness in the trachea, with irritation with hacking, difficulty of speech, and frequent loose cough.—*Cough from tickling in the throat, also with a feeling of tightness in the chest*. Cough with feeling of burning dryness in the throat. *Dry cough* now and then, or *short turns* of cough, *concussing the chest*, abdomen and back part of the occiput. Dry, *barking*, painful cough arising from a former loose cough. *Spasmodic*, hollow and dry cough, or racking cough, as if the chest would fly to pieces, arising from a titillation in the pharynx, which causes a husky and rough feeling. °Complete disappearance of a former dry cough, which used to set in with changes in the weather. Secretion of mucus from coughing (the cough having

been dry before?), the turns of cough become more powerful and longer. Cough with profuse secretion of mucus.—Increased pain in the chest when coughing or hacking.—°*Whooping-cough*.? °*Dry and suffocative cough*, in a hysteric female, with constant sleeplessness and gnawing feeling of coldness in the stomach and pit of the stomach.

**Chest.**—Shortness of breath. Short, heavy breathing (s). *Difficult breathing*, with stitches in the left lobe of the lungs, or with pressure in the pit of the stomach. Hurried breathing, arising from a pressing, and a sensation of effervescence in the chest. *Frequent desire to take deep breath*, particularly when sitting bent. Constant desire for air. Insufficient breath, when standing or walking, owing to a spasmodic constriction of the umbilical and præcordial regions, with frequent desire to take deep breath. Sensation, when taking deep breath, as if the air did not fill the chest.—*Asthma, dyspnœa, with oppression of the chest* (s). Oppression of the heart, in the afternoon. *Sensation as if the lower part of the chest were too tight, with dread of taking deep breath, on which occasion he always gives a start. Great oppression of the chest at night, waking him from sleep, and obliging one to sit up with anxious suddenness* (s). Frequent dyspnœa, with heaviness on the chest. *He is obliged to take deep breath*, with short relief by yawning and stretching. Dyspnœa as after inhaling ærid vapours, in the evening in bed, with huskiness and a hollow hacking cough. Dyspnœa with constant necessity to sit bent, *lest the chest should feel too tight, compressed or constricted*, or else these symptoms may be felt when sitting bent, or with frequent contractive crampy sensations in the lower part of the chest. Dyspnœa, as from spasmodic constriction in the hypochondriac region, particularly on the right side.—*Oppression of the chest and breathing* (also s). *Oppression of the chest, obliging one to take deep breath* (also s), also with disposition to yawn and anxiety, or with relief by raising and stretching the trunk. *Oppression of the chest*, with dull pain under the sternum. Great oppression of the chest, with frequent dragging in single parts of the chest. Slight oppression on both sides of the chest and under the sternum, with subsequent feeling of warmth on the opposite wall of the chest.—*Feeling of fulness in the chest*, with anxiety, also increasing towards evening. Feeling of fulness under the sternum and towards the clavicle, with disposition to take deep breath. Feeling of fulness in the whole chest, with slight trembling in the chest and bruised pain.—*Heaviness on the chest, with tightness of breathing. Sensation as if a hundred weight were oppressing the chest, obliging him to unbutton his coat, which feels tight and oppresses the breathing.* Heaviness on the chest, in the evening, with sensation of fulness in the trachea. Heaviness on the chest, during a walk in the open air, as if a load were in the chest. Heaviness on the chest, increasing and decreasing periodically, with a contractive crampy feeling in the chest, oppression and increased warmth of the chest.—The difficulty of breathing is relieved by sitting up. *Cannot bear any thing to press on the chest*, lest the breathing should become oppressed.—°Spasmodic asthma, also with organic defects of the heart. °Suffocative paroxysms in dropsy of the chest. °Hydrothorax, with general swelling, anxiety, deficiency of breath in a recumbent posture, short, dry cough, great debility, irresistible desire to sleep, in the afternoon, and diminished secretion of urine.—Dull pain in the chest, obliging one to take deep breath, *in the left side of the chest*, and soon after in the right, not constant. The dull pain in the chest increased by deep breathing.—*Aching pain* in the middle of the chest. Aching pain under the sternum, on pressing upon the parts with the hand. Aching pain in both sides of the chest, early in the morning, worse during an inspiration. Aching pain under the upper part of the sternum, during motion, with tension. Aching pain in the upper part of the

chest, after a walk in the open air, with weakness so as to sink down. *Crampy pressure* in different parts of the chest, or particularly in the upper part of the chest, with tightness and desire to gape and stretch the upper part of the body. — *Stitches in the right chest*, with subsequent sensation of spasmodic twitching, or in the lower part of the chest towards the back (s), in the region of the cartilages of the upper false ribs. *Lancinations* under the left short ribs. Pleuritic stitches from the middle of the sternum towards the right side. Crampy sticking in the upper part of the left chest, with tightness of the whole chest. Dull sticking, from the left chest to the scapula. — Dull drawing pain in the chest, early in the morning in bed, worse after rising. — *Rush of blood in the chest*, with pressing, and obliging one to breathe hurriedly. Rush of blood in the chest, with tightness, also after only moderate exercise, or with subsequent cramp-pain on the outer chest. — Burning painful throbbing in the right cavity of the chest, at a small spot. — Qualmish feeling in the chest, from afternoon till evening. *Feeling of coldness* in the chest (s). — *Painful weariness*, as after bodily exertion, in the lower part of the chest and on the walls of the thorax, particularly on the left side, early in the morning after waking. — Sudden pain in the pectoral and deltoid muscles, afterwards shifting to the shoulders, during rest.

**Back.** — Drawing from the small of the back to the groins. — Pain in the spinal marrow, extending to the cauda equina through the os coccygis. Cramp-pain, moving through the back in various directions. Bruised feeling in the lumbar region. — Pain in the *nape of the neck*, when coughing. Drawing and tension (also at the same time in the shoulders and cervical muscles). Prickling under the skin, which becomes gradually seated under the right scapula. — Tension in the cervical muscles, also spasmodic tension on the right side.

**Upper Extremities.** — Sticking in the right axilla, aggravated by raising the arm and pressing with the finger. Pains in the shoulders (s). Feeling of lameness in the left shoulder-joint. — *Drawing in the arms*, particularly from the elbow-joints. Drawing in the arms with jerking. Erratic tearing in the right shoulder and elbow-joint, as if on the bone, afterwards at times on the wrist-joint, at times in other parts. Fine stitch under the right arm. Great weariness of the right arm. — Drawing and feeling of weakness in the upper arm. Cramp-pain at the lower extremity of the upper arm. Pain as if sprained in the left deltoid muscle, only when the forearm is bent. — Dull drawing in the tip of the elbow. — Tearing in the right forearm, with subsequent lameness of the little finger. — Painful twitching in the hands. Drawing in the left hand, also spasmodic drawing in the knuckle. Trembling of the hands (s). — Feeling of heat in the fingers, with subsequent weakness of the fingers. Tearing in the middle fingers of either hand. Tingling itching on the left fingers.

**Lower Extremities.** — Great weariness in the lower limbs. Trembling and languor of the limbs. Heaviness, particularly in walking, with tension in the bends of the knees. Frequent going to sleep of the lower limbs, particularly when sitting. — Bruised feeling in the thighs, with tension in the bends of the knees on rising from a seat. Twitching in the left thigh. — *Sensation in the legs as if the circulation had stopped*, particularly when sitting, with heaviness, or only in the right leg during rest and accompanied with drawing. Drawing pain in the right leg, with rigid feeling, even up to the hip. Trembling of the left leg, in the afternoon. Cramp in the left calf, when walking. — Pain of the left sole, as if he had been jumping on a stone, during rest, going off when stepping. Cold feet. — Tingling itching of the left toes. Pain in the left big toe as if it had become contracted, and would be stretched, on stepping. Pain under the nail of the fourth toe as from subcutaneous ulceration.

**Sleep.**—*A good deal of yawning.* Yawning and stretching (s).—*Great drowsiness in the day-time* (also s). Drowsiness with weariness and languor. Feels sleepy early in the evening, and is obliged to go to bed. Irresistible drowsiness (s). Falls asleep while attending to his business. *Sopor*, also with loathing (s). Disposition to sleep, without any sleep taking place. *Deep sleep for several hours*, also with somewhat frequent pulse.—*Calm, refreshing sleep at night.* *Sound sleep*, full of dreams, also without dreams. Sound sleep, with emissions, of which he is not conscious (s). *Lethargic sleep*, at night, with difficulty of waking early in the morning. *Restless, unrefreshing night-sleep* (also s). Long, restless sleep. Frequent waking, almost every quarter of an hour.—°Is unable to lie on his back owing to difficulty of breathing, with tension in the pit of the stomach. Likes to lie with the head high, and on the right side.—*Symptoms at night in bed : great tightness of the chest*, waking him, and obliging him to sit up in an anxious hurry, with great weariness early in the morning (s). Difficulty of breathing, with griping, oppressive pain in the chest, allowing but little sleep. °Want of breath which does not allow him any sleep, with throbbing in the head and region of the heart, and subsequent tearing in the head, with heaviness and stupid feeling. Headache, spasmodic cough and febrile heat, with dreams which he does not recollect and restless sleep.—Dreams full of fancy, during restless sleep. Vivid, or also *anxious dreams* (about being shot) *during sound sleep.* *Dreams towards morning*, also strange dreams, such as : turning about on his leg. Dreams the whole night, without waking.—*Symptoms on waking early in the morning :* great confusion of the head. Difficulty of rousing one's-self. Great weariness, after a restless night, with dyspnœa (s).

**Fever.**—*Frequent coldness over the back* and head (also s), also with heat in the face (s), or with chilliness in a warm room, and coldness of the hands and feet. Slight chilliness during the day, even in a warm room. Shivering, also over the hairy scalp.—*Fever with violent headache*, pain of the scalp when touched, tearing in the joints (also in the nape of the neck and face) great heaviness in the head, in the evening, obliging one to bend it forward, *dry and troublesome heat of the head and upper part of the body*, with icy coldness of the feet, burning and running of the eyes, paroxysms of dry suffocative and spasmodic cough, racking the chest and head, and spasmodic painful contraction of the abdominal muscles and the hypochondriac region.—*Intolerable feeling of dry heat*, particularly on the legs, which feel painful as after excessive weariness from walking, from three to six o'clock in the morning—*Slow pulse* (also s). Slow and tight pulse. The pulse is less frequent, also, by ten or twelve beats (s).—Copious perspiration (s). *Profuse sweats* (s). Slight night-sweat, all over the body (s).

**Skin.**—Prickling pinching and biting under the skin, here and there, also simple stinging.—Inflammation and eruption (from applying the drug to delicate parts of the skin).—°*Œdematous swelling of the whole body*, with asthmatic complaints, dulness of the head, difficulty of lying on the back, chills, deficiency of breath, short cough and small slow pulse.

**General Symptoms.**—*Drawing* in the limbs and back, or periodical drawing in different parts (s). *Erratic tearing*, first in the right shoulder and elbow-joint, then at times in the wrist-joint, at times in the knees, along the thigh, in the tarsal joint, nape of the neck, temples, etc. Painful buzzing sensation in the limbs, in the afternoon, when sitting still. Sharp, cramp-like twitching in the neighbourhood of the joints (in the nape of the neck, hypochondria, elbow, hips), generally in the evening and during rest, sometimes worse in the morning, and principally on the extensor side. Cramp-pains soon

re-appearing in other parts and limiting the use of the affected parts (particularly the elbows, hands, fingers, legs). Bruised feeling in all the limbs, obliging one to lie down the whole day.—*Unsteady gait* (s). Dangerous convulsions in a female (s). General relaxed feeling, also with languor and immobility. *Great weariness*. *Great languor* (also s), also with drowsiness, or early in the morning after rising, with indisposition to work. Exhausted and tired after a slight exertion as much as after a great one. *Indescribable feeling of lightness in the body* (s). Feeling of invigoration, in a hysteric female (s). Great desire to sit erect.—*Symptoms in the open air*: feels better, particularly the chest feels freer. Uncommon lightness of body (s). Amelioration of the symptoms, particularly when taking exercise.—Desire for the open air.—°Hysterie, nervous, spasmodic affections.?? °Affections with predominance of heat.?

**Characteristic Peculiarities.**—*Laetuea virosa* seems to affect principally the respiratory organs.

## 150. LAMIUM ALBUM.

LAM. ALB.—See ARCHIV, XII.

### CLINICAL OBSERVATIONS.

Noack and Trinks propose this remedy for the following affections: difficulty of falling asleep on account of restlessness and wakefulness.—Sleeplessness.—Sleep disturbed with dreams which return every time he falls asleep again.—Great mental uneasiness, and dread of lunacy owing to certain fixed ideas of which one is unable to free one's-self.—Dropsical symptoms. ?—Anasarca. ?—Hardness of hearing. ?—Quinsy. ?—Flatulent colic. ?—Urging to urinate, the secretion of urine being at first suppressed, and afterwards becoming very abundant.—Congestion of blood to the uterus.—Premature menses.—Metrorrhagia. ?—Smarting leucorrhœa, or leucorrhœa without any sensation, as it frequently takes place when the sexual organs are extremely weak.

### SYMPTOMS.

**Mind and Disposition.**—Sadness, as if he had to endure unmerited troubles. Whining mood, he weeps with sensation as if he were abandoned. *Great restlessness and anguish*, not allowing him to remain at any one place or to continue the same kinds of work, also with trembling of the limbs. One or the other biblical sentence is constantly occurring to her mind, which makes her sad and induces a fear of losing her intellect.

**Head.**—*Dulness* of the head, with difficulty of collecting her senses, she has to make an effort to talk coherently.—Headache on waking and during a walk in the open air. Headache, worse on rising from a chair, relieved by sitting. Indescribable headache, deep in the brain, as previous to severe illness, worst when rising from a stooping posture, (going off at night during sleep). Headache, early in the morning, in bed, as from revelling during the night, with confused feeling and sensation as if the head were constricted with a band, worst when lying and going off when rising.—*Aching pain* in the right temporal region. Aching pain in the whole region, as if the head were *compressed* on all sides, so that the middle of the brain is most affected with pain.—Tearing in the head, from six o'clock in the evening until midnight. Drawing stitches in the left temple. Stitches in the head, followed by beating, accompanied by violent chills, in the evening, in bed. Sore pain in the head, in the temporal

region.—Pain in that side of the occiput which is in contact with the cushion, as if it were lying too hard. The scalp feels as if put upon the stretch, particularly in the region of the coronal suture.—Great mobility of the head, particularly from before backwards.

**Eyes and Ears.**—Itching inducing rubbing, of the lower lid, or (particularly in the evening), of the canthi. The pupils are very much contracted or afterwards dilated. Dim-sightedness, particularly in the evening, with pressure in the eyeball. Stitches behind the ears, in the region of the right lower jaw. Hardness of hearing.

**Nose.**—Bruised pain in the soft parts of the nose. Itching pimple near the right wing, with painful soreness when touched.—Discharge of blood from the nose on blowing it.—Sneezing and discharge of some drops of water from the nose.—Violent coryza.

**Pharynx and Œsophagus.**—Seraping sensation in the throat.—Pain as from a lump in the throat, during deglutition, (after the chilliness), and, on the following morning, with pain of the tonsils on swallowing, also on moving the neck or on pressing on the part.—*Hawking* of a thick, sour-tasting mucus from the throat.—Burning in the Œsophagus, after every swallow of liquid or solid food.

**Gastric Symptoms.**—*Empty eructations.* Sour eructations.—*Waterbrash*, two evenings in succession. Qualmish nausea, while eating, as if waterbrash would set in, with pressure in the pit of the stomach.—*Vomiting of the ingesta*, with nausea, great heat, languor and prostrated feeling, and blackness before the eyes.

**Stomach and Abdomen.**—Creeping in the stomach, with desire to vomit. *Stitches in the pit of the stomach*, or perceptible pulsations in that region.—Painful uneasiness in the region of the liver, which can only be relieved by laying the hand on the part.—*Colic as from incarcerated flatulence*, also *pinching, continuing even after an alvine evacuation with emission of a quantity of flatulence.* Rumbling in the hypochondriac region. Distention of the abdomen for several days.—Pressing in the left groin from above downwards, as if inguinal hernia would protrude. Bruised pain in the region of the hip-joint, as after a fatiguing walk.—Bruised pain of the abdominal muscles under the short ribs.

**Stool and Urine.**—Hard stool, after pressing in the rectum. Scanty hard stool, with discharge of blood. Papescent stool, after sensation in the abdomen, as if diarrhœa would set in.—*Frequent desire to urinate, with scanty emission.* Frequent micturition. Discharge of moisture from the urethra, or sensation as if a drop of urine were flowing along in it from the external orifice. Burning in the urethra. Tickling in the glans.

**Female Sexual Organs.**—Violent excitement in the uterus, as if the menses would make their appearance, with pinching in the abdomen, or with cutting above the hips.—*Menses too early*, sometimes by eleven days and about new-moon, or too early and too scanty.—*Leucorrhœa*, smarting, or else without sensation.

**Larynx, Trachea, Chest, Back.**—Feeble and trembling voice as in one who feels anxious.—Want of breath in speaking, from weakness of the chest.—Aching pain above the left nipple, most severely felt when half waking, and disappearing when waking fully (early in the morning?). Bruised pain from the left chest to the shoulder.—*Bruised pain in the small of the back.*

**Upper Extremities.**—Bruised pain on the inner side of the arms, particularly in the bend of the elbow, and most violent when stretching the arm. Heaviness and languor in the right arm, particularly during rest. Prickling,

gnawing itching of the arms, hands and neck.—The backs of the hands and the balls of the thumbs feel as if they had gone to sleep, with creeping numbness in those parts, stinging smarting of the skin on moving the parts, as if they had been whipped.—*Drawing* tearing in the fingers, also in the joints. Crampy tearing in the right thumb.

**Lower Extremities.**—Drawing tearing with pressure, in the posterior lower muscles of the right thigh, when sitting.—Tension of the calves when walking, as if stiff or unyielding. Cramp-pain and as if bruised, in the region of the right fibula. Feeling of swelling, gnawing pressure and feeling of heat in the tibia (lower part) and in the tarsal joint.—\**Blister on the heel, from slight rubbing, afterwards bursting and changing to a long-lasting ulcer, with smarting and biting.*—Cramp-like pressure on the ball of the left big toe, when sitting.

**Sleep.**—*Sleeplessness* in the evening in bed, from restlessness and wakefulness, with frequent waking in the night. *Vivid, anxious dreams*, waking him again after having fallen asleep with great difficulty, the same dream troubling him again after falling asleep again. She dreams that the menses, which had just ceased, will re-appear.

**Fever.**—*Chilliness over the whole body* (at four o'clock in the afternoon) with internal trembling, uneasiness and anguish which drives him to and fro, disposition to sleep without being able to sleep, and goose-flesh over the whole body, the skin feeling sore and excoriated when touched, particularly on the upper arm and thigh. Chilliness with goose-flesh, early in the morning in bed, with sweaty skin, anxiety and heat, on taking the least exercise or on making the least exertion, even when talking. Chilliness with general weakness, mostly of the hands, or anxiety, which does not allow him any rest, either in sitting, walking or standing. Burning heat of the cheeks, also with cold hands.

**Skin.**—Smarting and stinging in the ulcer (in the evening, worst when lying), also with redness and swelling around, and smarting early in the morning in bed.

**General Symptoms.**—Drawing tearing in the upper and lower extremities, now here then there. General languor.

## 151. LAUROCERASUS.

**LAUROC.**—*Prunus laurocerasus*, Cherry-laurel. See HARTLAUB and TRINKS, I. ARCHIV, XII.

**COMPARE WITH**—Amm., Canth., Chin., Cocc., Coff., *Hydr. ac.*, *Ipec.*, *Kali*, *Lach.*, *Merc.*, *Nux v.*, *Op.*, *Rhus*, *Sec. c.*, *Spig.*, *Verat.*

**ANTIDOTES.**—Of large doses: alkalies, particularly Amm.—Soap water.—*Strong coffee* (Möench, Orfila).—Milk.—Mucilaginous substances.—Oil of turpentine.—Solution of tartar emetic (*Bergonzi*, according to whose observations *Lauroc.* neutralizes the excessive action of tartar emetic).—Chlorine internally and externally.—*Antidotes of small doses*: Camph., Coff., *Ipec.*, *Op.*

### CLINICAL OBSERVATIONS.

*Noack* and *Trinks* offer the following remarks on the clinical character of *Laurocerasus*.

This agent seems to act principally upon the brain, spinal marrow, and the

nervous trunks emanating from the spinal marrow, upon the ganglionic system and the nerves of respiration and circulation.—*The action of that agent results in spasms, alony, torpor, lameness, or even entire exhaustion or annihilation of nervous life, occasioning those results particularly in the nerves of sensation and motion, and in the ganglionic system.*—Laurocerasus is proposed for the following affections, and has been employed with success in some of them :—Asphyxia in consequence of fainting fits, cholera and other severe diseases.—Catalepsy.—Clonic and tonic spasms.—Spasms with subsequent lameness.—Tetanus.—Opisthotonos.—Emprosthotonos.—Trismus.—Epilepsy.—Trembling of the limbs.—Nervous apoplexy.—Paralysis of the extremities in consequence of cerebral apoplexy.—Drowsiness.—Irresistible drowsiness.—Somnolence.—Sopor with snoring breathing.—Sleeplessness arising from excitement and heat.—Typhous conditions.—Typhus cerebri and abdominalis, with threatening paralysis of the brain.—Sopor.—Typhus stupidus, with sopor and rapid prostration of the nervous life, coldness of the skin, cold sweat, sinking pulse, etc.—Melanchely.—Hypochondria.—Hysteria.—Rapid alternation of the most opposite states of the mind.—Delirium tremens potatorum.—Stupor.—Slow train of ideas.—Loss of consciousness, speech and motion.—Intoxication.—Stupor.—Vertigo.—Chronic nervous headache.—Hysterie headache.—Acute and chronic inflammation of the eyes and lids.—Illusions of sight.—Xerophthalmia.—Amblyopia.—Amaurosis.—Otagia. ?—Hardness of hearing, with buzzing and humming.—Tearing, tensive, gnawing, *lancinating* pains in the soft and hard parts of the face.—Convulsions of the facial muscles.—Prosopalgia Fothergilli.—Trismus.—Eruption around the mouth, (*Jahr*).—Lancinating, tearing and boring pains in the teeth.—Spasm of the œsophagus.—Paralytic weakness of the fauces and œsophagus.—Singultus.—Spasmodic vomiting. ?—Cholera, with violent congestion of blood to the head and chest, (*Rummel*).—Pains in the stomach.—Aching, contractive pains in the stomach.—Gastrodynia.—Cardialgia.—Morbus niger Hippocratis. ?—Inflammation and induration of the liver, (*Jahr*).—Induration of the liver for years, (*Jahr*).—Acute and chronic inflammatory conditions of the liver.—Hypertrophy and induration of the liver.—Cholera sicca, asphyctica, (*Quin*, treatment of the cholera, see *Allg. hom. Zeit.* Vol. I., p. 5, etc.—Acute and chronic inflammation of the spleen. ?—Hypertrophy and induration of the spleen. ?—Morbid conditions of the portal system.—Inflammatory conditions of the intestinal canal. ?—Of the peritoneum. ?—Flatulent and spasmodic colic.—Tympantitis. ?—Inguinal and femoral hernia. ?—Costiveness and constipation as from paralysis and great torpor of the intestinal canal, with chronic affection of the portal system, with trouble about the liver and spleen, spasm of the rectum and anus.—Paralysis of the sphincter ani.—Soft stools.—Diarrhœa, consisting of liquid green mucus, preceded by cutting colic, with or without tenesmus.—Suppressed secretion of urine.—Retention of urine.—Paralysis of the bladder.—Spasm of the bladder. ?—Has a specific action in the female sexual organs, (*Hom. Zeit.* Vol. I., p. 162).—Is a valuable palliative in cancer of the uterus, (*Rau's Organon*).—Catarrhal hoarseness and roughness of speech.—Catarrhal and nervous aphonia.—Laryngitis stridula.—Acute and chronic laryngitis and bronchitis.—Laryngeal and bronchial phthisis.—Typhoid pneumonia. ?—Spasmodic constriction of the throat.—Asthma thymicum.—Spasms of the chest, (*Hôm. Zeit.* Vol. XVIII.)—Cough with copious expectoration of jelly-like appearance and mixed with points of blood.—Dry, spasmodic cough, from titillation in the throat and trachea.—Hæmoptoe.—Acute pulmonary phthisis, with purulent expectoration.—Florid phthisis, (*Hom. Zeit.* Vol. I., p. 162).—Incipient tuberculous phthisis.—Ulcerous phthisis.—Asthmatic conditions.—Dyspnoea in walking, (*Jahr*).—Spasmodic asthma.—Inflammation of the lungs in

the last stage, with threatening paralysis of the lungs which is developing itself, extreme dyspnoea, or hurried, raling, rattling, stertorous breathing, hurried, excessively-frequent, wiry, empty, easily-compressible, unequal and intermittent pulse, excessive debility, coldness of the extremities, etc.—Frequent spasms of the heart.—Purely nervous palpitation of the heart.—Asthmatic conditions, from organic diseases of the heart and the larger vessels, from defects of the valves, dilatation and thickening of the auricles and ventricles.—Angina pectoris, (M. Müller, *Hom. Zeit*).—Cyanosis arising from hereditary or other organic defects of the heart.—Inflammatory affections of the spinal marrow. ?—Spinal irritation. ?—Rheumatic and arthritic complaints.—Ischias. ?

#### SYMPTOMS.

**Mind and Disposition.**—Lowness of spirits, with want of disposition to work. *Sadness* with *ill-humour*, or with want of cheerfulness and a prostrate feeling. *Whining mood*, also with discouragement and loathing of life. *Excessive discouragement*. Melancholy oppression of spirits, causing anxiety, preventing him from attending to his business, and driving him into the open air.—*Anxiety*, particularly in the evening in bed, and preventing sleep. Uneasiness in the head, with warmth in and on the forehead, and going off in the open air. Apprehension of imaginary sufferings.—*Laziness, and want of disposition to attend to any kind of work, either mental or physical*.—She feels so weary and exhausted that she is unable to utter a loud word.—Nervous irritability, with want of disposition to do any mental work. *Vexed mood*. *Every little occurrence puts him out of humour*. *Everything is disagreeable to him*, he does not like to commence his usual work.—Hurriedness, precipitate determinations of the will.—Cheerful, merry exuberance of spirits.† Cheerful and sympathizing.† *Disposed to do mental labour*, it gives him pleasure.† Every part of the body appears to him more animated.† Feeling of internal ease and quiet.† *Soft languishing*, with feeling of pleasant languor and contented smiles.

**Sensorium.**—*Dulness of the senses*. *Insensibility and complete loss of sensation*. Disappearance of every kind of pain.—*Inability to collect one's ideas*. Inability to think or work, with laziness. Slow train of ideas.—*Loss of consciousness*, also with weakness, or with *loss of speech and motion*, (in the ease of a child). *Dulness of the head* when meditating or writing. Dulness in the left side of the head. Dulness in the right side, from the occiput towards the forepart, with pressure in the forehead. Sensation in the head as if the whole brain were cloudy. Dulness of the head, with dimness and mistiness before the eyes, feeling in the head as if intoxicated, and tension in the frontal region. Dulness rendering the head obscure and affecting the whole body, making a clear conception of one's own condition and of the surrounding things impossible. Dulness of the head changing to pressure, particularly in the forehead and orbits. *Dull and stupid feeling* in the head, also painful or when raising the head from a stooping position, or with feeling of heat in the head. Dizziness. *Intoxication*, also with dulness of the whole head, or intoxication-like vertigo, with sudden death. *Stupefaction*, also with vertigo.—*Vertigo* with disposition to sleep. Vertigo with tension in the head. Vertigo after raising the head. Vertigo at every motion, with loss of thought, in the evening. Vertigo on rising from a seat, with dull feeling in the head. Vertigo which increases in the open air. *Vertigo so violent that he is scarcely able to keep his feet*. Vertigo with cloudiness of the senses. Vertigo with dulness of the head. Vertigo with oppression of breathing, languor and necessity to remain in bed for eight

† Alternate effects. ?

days. *Vertigo as if the head were turning in a circle*, particularly in the evening. *Vertigo*, as if something were turning around him, *with dilatation of the pupils*, immovable, staring, widely-opened eyes, and pressure in the left side of the head, from the occiput to the forehead. *Vertigo with stupefaction*, also with sensation as if everything around him were in motion and as if a gauze were before the eyes, with difficulty of remaining on one's feet.

**Head.**—*Violent aching* over the whole head. Headache with vertigo. Aching in the right side of the forehead. Aching in the right temporal bone. *Dull headache*, particularly in the forehead and temples. Headache as after a night's revel. Headache, the head feels dull and heavy, in the evening, going off during sleep.—*Stupifying pain* in the whole head, with sensation on stooping as if the brain were striking against the skull. Aching in the sinciput, particularly on stooping, with heaviness. Aching in the front part of the head.—*Heaviness* of the head, with dulness. Heaviness of the head, with sensation as if the brain were obscured, or as if it were pushing towards every part of the skull. Heaviness in the head, particularly when stooping, and relieved by raising the head. *Heaviness in the sinciput*, particularly when stooping, with stupifying pain, or with pressure in the orbits as if the eyeballs were too large. Heaviness in the forehead, particularly on stepping out of the room.—*Fulness* in the forehead. Sensation as of *pushing forward* in the forehead, and as if the head became *larger*, with warmth and sweat on the forehead and hands. Pressing *pushing* against the frontal bone from within. Sensation as if the frontal bone were *pushed out* and raised.—*Aching in the whole head*, worse in the warm room, with prostrate feeling. Aching in the head, now here, then there, with heaviness of the head, in the evening. Aching pain, extending from the vertex to the forehead and orbits, with pressure from the occiput down the nape of the neck. *Oppressive pain* on the top of the head, as from a weight. Aching of the occiput and sinciput, particularly on the right side, also more especially in the inner canthus, with dulness of the head, (which disappears in the open air). Aching at times in the occiput, at times in the forehead. *Aching pain in the right side of the head*, particularly in the region of the parietal bone, where the pain is increased by contact, or it shifts afterwards and appears at times in one temple, at times in the region of the left mastoid process. Aching in the *left side of the head*, particularly in the forehead and vertex, and sometimes shifting to the right side. Aching in the *left temple*, particularly in the afternoon, or on entering the room. Aching in the sinciput, commencing in the open air and worse in the room, with great heat in the face and amelioration by rest. *Aching in the region of the forehead*, also early in the morning, in bed, or with falling of the pulse from 70 to 64, or with dulness of the head, and more frequent and smaller pulse. Aching in the *left region of the forehead*, extending thence over the whole head and making it difficult to think. Aching pain above the orbits. Frequent periodical paroxysms of aching pain under the frontal bone. *Pressure in the forehead from without inwards*, relieved by pressing upon it. *Pressure from within outwards*, under the right temporal bone, or in the forehead, particularly on stooping, or also in the left half of the occiput, with vanishing of thought. Pressing from within outwards in the forehead and the region of the nasal bones. Violent pressing in the region of the left frontal eminence, from without inwards. *Tension* in the forehead and left side of the face, or in the right occiput, (as if a tuft of hair were being pulled). *Dragging pain* in the sinciput, or also in the occiput, *always accompanied with drowsiness*. Constant contractive and hot feeling on the vertex. The brain feels *contracted* and painful.—*Tearing headache*, in the evening, in bed. Tearing pain from the occiput to the neck. Tearing pain in the left side of the head, in the after-

noon. Tearing pain *in the right temple*, or from the left temple to the vertex, and thence along the outer canthus of the eye to the malar bone and one tooth. Tearing pain from the sinciput to the vertex. Tearing in the forehead, which feels hot to the prover, but not to others. *Drawing* from the middle of the forehead, or deep in the right side of the occiput.—*Stitches in the head*, here and there. Stitches in the vertex, frequently in succession, relieved by stooping and increased by raising the head. Stitches in the sinciput, particularly in the right side. Stitches *in the right side of the head, with beating and throbbing*, sometimes aggravated by stooping. Prickings in the left side of the head, or with boring before the ear. Stitches at times in the sinciput, at times in the occiput. Stitches in the left temple, with dulness of the head, and sensation as if the brain were pressed upwards and forwards. Stitches in the forehead, during a walk in the open air. Stitches in the *right frontal protuberance*, particularly after dinner, or first in the left, then in the right.—*Boring* headache, particularly above the eyelids, or in the left side of the head, with subsequent dull feeling.—*Beating in the head*, in the left side of the head, worse on stooping. Beating in the left occiput. *Beating in the right side of the head, with stitches*, sometimes aggravated by stooping. Beating in the right temple, as with a finger. Single beat at a small spot in the left side of the head, which feels bruised after that.—Sensation as if the blood were rushing to the head. Rush of blood and stupefaction in the head. *Heat in the head*, also with laziness and ill-humour, or with sweat on the forehead, (with cold feet, and less in the open air). Warm feeling in the forehead, alternating with coolness, as if a wind were blowing upon the part.—Violent tingling and stinging in the brain. Tingling pain in the forehead, with dull feeling and heaviness in the head, aggravated by stooping.

**Scalp.**—Frequent short attacks of pain on the vertex. Tearing in the left region of the vertex, or from the occiput to the neck. Sensation in the occiput, as if the tendons were too short, like a painful weight, which draws the head backwards.—Feeling of icy-coldness on the vertex, then in the forehead, nape of the neck, etc., extending to the small of the back, after which all the pains in the head disappear. *Itching of the hairy scalp*, here and there. Itching of the hairy scalp, with ereeping as from vermin. Itching of a small spot on the *right side of the head*. Itching *in the frontal region*, also with burning after scratching. Titillation on the occiput, going off by scratching. *Creeping* on the forehead as from fleas and flies, in the evening, going off after long scratching.

**Eyes.**—Pain around the eyes, particularly the left. Sensation as if the eyes would be *pressed* out. Sensation as of a band around the eyeballs, mingled with stitches. Pressure in the eyes, in the evening. The lids press upon the eyes as if too dry, or as if he had not slept enough. Diminution of the pains in cancer of the eyes. Drawing in the upper margins of the eyes, when exerting them. Stitches in the region of the left outer canthus. *Itching in the left eye*, also particularly in the afternoon, and sometimes going off by rubbing. *Itching in the left inner canthus*, particularly in the afternoon, or passing over into a sort of pressure, or with lachrymation, or ease from rubbing. Itching under the right upper lid, or in the left brow, *going off by scratching*. Scraping sensation in the right canthus, constantly. Smarting in the eyes, as from salt.—*Burning of the eyes at candle-light, also with dryness*. Burning of the eyes, with weakness and dim-sightedness. Burning with stinging, particularly in the right eye, and more especially in the inner canthus, for several evenings. *Burning in the lids*. Burning in the left outer canthus. Burning quivering in the right lower lid.—Turgescence of the vessels at a small spot in the left inner canthus.—The congested vessels spread, like the branches of a tree, from the

inner canthus towards the pupils.—*Dryness of the eyes*, also with sensation of warmth in the eyes, or with burning, (particularly at candle-light). *Lachrymation*, particularly early in the morning. Agglutination of the left eye, relieved only for a short time by washing.—*Staring eyes*, sometimes as if protruded. Distorted eyes. Eyes half open. *Eyes open and staring*. Eyes lightly closed, with dilated, immovable pupils.—*Pupils dilated*, the right more than the left. Pupils contracted. Pupils immovable.—*Optical illusion*, every object looks larger until touched, when it assumes its natural appearance. *Darkness before the eyes*, the objects look dim. Amaurosis.

**Ears.**—*Dragging* in the ears, particularly the left. Distensive sensation in the right ear. *Stitches* in the right ear, or through the left, or also before the ear. Pressure in the right ear. Drawing in the muscles behind the right ear. Tearing in the right ear, from without inwards, or through and behind the left ear. Burning in the left ear. *Boring* in the right outer concha. *Itching in the ears*, or in the left lobule. *Tingling* in the ears, particularly the left, or in the right ear as if it had gone to sleep, (soon after dinner).—*Buzzing* in the left ear, or humming and confused noise before the ear. Hardness of hearing.

**Nose.**—Distensive pressing in the *nasal bones*. Cramp-pain in the right nasal bone. Alternate sticking and pressure from without inwards, in the root of the nose. Pushing in the upper region of the nose. Drawing through the nose. Feeling of icy-coldness near both wings. Stinging in the right wing in the afternoon.—*Itching* above the root of the nose. Itching on the right side of the nose, so violent that one would like to scratch until the part bleeds. Itching of the tip of the nose. Itching of the left wing. Itching high up in the nose. *Itching in both nostrils*. *Titillation* in the right nostril, or also on the left wing. Crawling and itching on the left wing, which is painful, as if ulcerated, when touched.—Sensation in the upper nasal cavities, as if mephitic air were rushing through, which causes a prickling on the mucous membrane.—Constant smell before the nose, as of bitter almonds, or as of fetid breath.—*Frequent sneezing*, also with yawning, or particularly in the afternoon. Violent sneezing, early in the morning, with subsequent running of the nose. Incomplete sneezing.—*Obstruction of the nose*, also as previous to coryza, (in the afternoon), or with almost complete loss of breath through the nose. *No air passes through the nose*, with sensation as if the nose were stopped up by something in the upper part. Feeling of fulness in the nose.—*Dryness* (suppressed secretion of mucus) of the nose, without coryza.—Catarrhal sensation in the nose. *Dry coryza*, early in the morning, worse on stooping, with inability to breathe through the nose. The catarrh in the nose becomes loose.

**Face.**—*Sunken countenance*. *Livid, gray-yellow complexion*. Pale appearance. *Yellow spots on the face*. *Transfigured features*. Bloated face. Swollen face. Spasmodic distortion of the features. °Convulsions of the facial muscles.—*Prosopalgia*. Tension in the region of the left malar bone, with itching. *Darting* in the left lower jaw, (during a walk in the open air), or in the right jaw, striking through the head and ear, or also on the left side of the chin. Bruised pain in the whole lower jaw, in the evening. Tearing in the angle of the left lower jaw and in the molares. Gnawing on the side of the chin, as if in the bone. Sensation as if the jaw would become dislocated. *Titillation* in the face, which obliges one to rub all the time, as if a hair were moving over the parts, or as if flies and spiders were crawling over the skin. Burning in the interior of the right cheek.—*Itching* on the right side between the chin and lips, continuing even after scratching. Itching in the middle of the upper lip, going off after scratching. °Eruption around the mouth. Lock-jaw.

**Teeth.**—Disposition to clench the teeth, as in lock-jaw. Pain in the left

molares, which is relieved by pressing them against one another.—*Darting toothache*, particularly in the right lower jaw, or at times in the upper, at others in the lower teeth, at times under the vertex, at others under the temporal bone.—*Darting pain* in the left lower teeth, in the evening. *Tearing* in the left lower teeth and gums, going off by cold water, or also in the left upper cuspidatus, going off by pressing upon it.—*Boring in the right lower teeth*, with gnawing during supper, going off after supper. Boring in the left lower teeth, with digging, during dinner, at times spreading towards the front, at times towards the back part.—Feeling of elongation of one of the left lower molar teeth. Sensation as if the teeth would be raised, with stinging in the teeth and choking sensation in the œsophagus.

**Mouth.**—*Dry mouth*, particularly early in the morning (with accumulation of mucus), or with scraping in the fauces, and aching in the left side of the head.—*Increased flow of saliva*, with frequent spitting, or dryness of the throat. Thin watery saliva in the mouth, constantly, with taste as in fever. *Accumulation of acidulated saliva*. Foam at the mouth.—*Coated tongue*. *Tongue covered with white mucus*, particularly early in the morning, with confused and empty feeling in the stomach, and flat taste in the mouth as after a paroxysm of fever and ague. Viscidity of the posterior portion of the mouth, with constant accumulation of watery saliva in the forepart of the mouth. *White and dry tongue*. *Dry and rough tongue*, particularly after dinner, with accumulation of saliva in the mouth. Astringent sensation at the root of the tongue, extending to the larynx, where a scraping and burning are experienced. Burning in the tip of the tongue. The tongue feels burnt and numb. Cold feeling on the tongue. Soreness of the border of the tongue. Swelling and stiffness of the left side of the tongue, with pain as if the tongue had been pricked.—*\*Loss of speech* also after apoplexy.

**Pharynx and Œsophagus.**—Dull pain in the pharynx (also in the chest, region of the heart and stomach, and in the region of the right scapula). Frequent paroxysms of painful feeling in the throat as if *drawn downwards*, during and between the acts of deglutition, going off after taking soup. *Sticking* in the throat, as from a peg, extending to the left side of the back. *Burning in the throat*, also with roughness, or with pain, or *at the same time with pain in the palate*. *Scraping in the fauces*, particularly during deglutition (with roughness).—Spasm, heat and pain in the pharynx, œsophagus and stomach. Choking pain in the upper part of the pharynx, extending into the chest, with oppression of the chest, after which the pain extends over the whole side of the neck and face, with stinging in the teeth to the touch and sensation as if they would be displaced.—Deglutition is impeded. Was unable to swallow until his senses had returned. *The drink he takes rolls audibly through the œsophagus and intestines*.—Accumulation of tenacious mucus in the throat, every morning. A piece of watery mucus gets into the throat, which is easily hawked up.

**Appetite and Taste.**—Taste in the mouth as in fever. Acid, pungent taste. Slimy, pappy taste. Flat, insipid taste. Sweetish taste on the tongue.—Constant taste as of bitter almonds, with a like smell before the nose. Fetid taste on the tongue, with feeling as if the breath were fetid.—Slight appetite at dinner. Diminished appetite and digestion. Long-continued loss of appetite. Aversion to food.—Increased appetite (afterwards). Great hunger.—Violent thirst with dry mouth.—After dinner: pain in the stomach with nausea. Sensation as if the stomach were deranged, going off by eating bread.

**Gastric Symptoms.**—Hiccough, also the whole day.—Disposition to eructate. Ineffectual eructations. Frequent, empty, tasteless rising of mere air, particularly after breakfast. *Bitter* eructations, particularly during and after

breakfast. *Eruetations tasting as of bitter almonds or prussic acid*, very frequent, or followed by burning in the stomach. *Empyreumatic eruptions. Eruetations tasting of the ingesta. Attacks of nausea*, particularly early in the morning, as if a fainting fit would set in, or with colic. *Loathing*, particularly in the stomach. *Nausea, with accumulation of water in the mouth*.—Disposition to vomit, in the stomach. *Desire to vomit as after an emetic*, particularly early in the morning in bed, or in the afternoon (with anxious warmth, lassitude, and qualmishness about the heart). *Desire to vomit with a feeling of hunger in the stomach, with aversion to food*, early in the morning. *Desire to vomit, with loathing and accumulation of water in the mouth, going off by an eructation*.—*Vomiting and loathing*. *Vomiting of the ingesta, and nausea (in a child)*.

**Stomach.**—*Pain in the stomach with nausea*, particularly after dinner. *Pain in the stomach like fainting. Feeling of weakness in the stomach*. Uncomfortable feeling in the stomach as if fasting. *Empty feeling of the stomach, even after a good meal. Sensation as if the stomach were full of water, with nausea*.—*Pain in the stomach with qualmishness. Violent pain in the stomach with rapid loss of speech, and death in one hour, without vomiting, convulsions or any other secondary symptoms*.—*Pressure in the stomach, also violent, or with nausea. Contractive feeling in the region of the stomach, also particularly in the afternoon. Dartings in the pit of the stomach, also extending to the small of the back, or cramp-like sticking. Spasmodic pulling in the pit of the stomach, in the evening in bed, when lying on one side, with small, feeble, contracted pulse, going off in a quiet recumbent posture*.—*Agreeable warmth in the stomach and abdomen. Rising of heat from the stomach. Burning in the stomach and abdomen, also cooling burning. Burning in the stomach and warmth in the whole abdomen, after breakfast (composed of beer-soup.) Burning in the pit of the stomach*.—*Shifting (of flatulence?) in the stomach. Grumbling in the stomach, also succeeded by acid eruptions*.—*Oppressive anxiety or anguish in the pit of the stomach, also alternating with beating pains*.

**Hypochondria.**—*Pinching, extending from the hypochondria to the umbilicus*.—*Indescribable pain in the right hypochondrium, going to the small of the back. Simple pain in the right hypochondrium. Dartings in the right hypochondrium, sometimes going to the back or the axilla. Stinging and burning in the right hypochondrium, with pain when simply touching the part, or shifting to the scapula after rubbing. Sticking pains in the liver, with pressure. Beating and throbbing in the liver as from an abscess. Lame, bruised pain from the liver to the shoulder, at every inspiration. Distention of the region of the liver, with pain as from subcutaneous ulceration, or as if an abscess would burst*. °*Inflammation with induration of the liver. Induration of the liver, having lasted for many years*.—*Sensation in the spleen as if it would grow and swell. Pinching in the left hypochondrium. Darting in the left hypochondrium, from behind forwards*.

**Abdomen.**—*Malaise as if proceeding from the epigastrium. Colicky pains in the abdomen, from either side toward the middle of the bowels, with subsequent diarrhoeic stools*.—*Pinching in the abdomen, most violent in the middle or in the left side (succeeded by soft stool)*. *Pinching with shifting of flatulence in the abdomen. Pinching all around the epigastrium, succeeded by pinching in the middle of the epigastrium, or in the left hypochondrium. Pinching from both sides of the abdomen, also with contraction, or with subsequent sticking in the right hypochondrium. Pinching in both sides of the abdomen, and thence shifting to the small of the back. Pinching in the umbilical region, also with tearing, or (in the evening), with stinging in the small of the back, or with*

two papescent stools.—*Cutting* in the abdomen, in the afternoon when walking. Violent cutting, without alteration of the pulse. Cutting in the whole abdomen, with contractive pain, waking him at two o'clock in the night, with subsequent diarrhoea and cessation of the pains. Cutting in the *epigastrium*, sometimes from either side (in the evening), or succeeded by a stitch in the left hypochondrium. Cutting in either side, going off after emission of flatulence. Cutting below the umbilicus, as if the *bowels would be cut to pieces*, succeeded by shifting of flatulence in the abdomen, and disappearance of the pain after emission of flatulence.—Continual drawing, with pressure, in the right side of the abdomen. Drawing with sticking on the right side above the umbilicus. *Tearing* (one single tearing) from the umbilical region to the right groin, in the evening. Sensation around the umbilicus as if something would be *torn loose*, in the afternoon.—*Contractive pain* from both sides of the lower abdomen, in the evening, continuing even in bed. Contractive pain from both sides of the abdomen, with pinching. Retraction of the abdomen, on pressing it out he experiences a darting up to the right clavicle. *Stitch* in the middle of the epigastrium, and then in the right hypochondrium. Darting in the right side through the groin. Darting in the *left side*, also early in the morning (after taking beer-soup). Pinching stitch in the left side of the abdomen, extending upwards.—Sensation in the abdomen *as if some heavy body had fallen towards the small of the back*.—*Warmth* from the abdomen to the shoulder, with pain in the back and axillæ. Sensation as if *hot steam* were ascending from the abdomen to the shoulder. Rush of blood from the abdomen and back upwards, with anxiety and uneasiness, after breakfast. *Burning in the abdomen*, also with shifting of flatulence.—Distention of the abdomen, particularly around the *umbilical region*. Almost everything he eats, distends the abdomen, which feels stuffed up. Hard tympanitic distention of the abdomen. Fulness in the abdomen, relieved by emission of flatulence.—*Shifting of flatulence in the abdomen*, when eating soup. Shifting of flatulence in the epigastrium, with stinging in the stomach. Flatulence shifts from the right to the left side, where a stinging is experienced, after which the shifting ceases. *Grumbling* in the right side of the abdomen, or in the whole abdomen, with coldness in the abdomen.—Flatulence presses on the bladder or perinæum, from within outwards. *Frequent* and easy emission of (sometimes loud) flatulence. Emission of flatulence after stool, after dinner.—*Stinging in the groin*, particularly on stooping or bending forward. *Contractive pain* in the right groin (after dinner), or in both groins, obliging one to bend double (in the afternoon). *Stitch* above the right pubic bone, along the spermatic cord. Itching in the right groin, going off by scratching. Pressing and stretching under both Poupart's ligaments, *as if hernia would press forward*. °*Inguinal and femoral hernia.* ?

**Stool and Anus.**—Constipation for eight days. Stool every two or three days, every evacuation being succeeded with fulness of the abdomen and vexed mood. *No stool or urine*. \**Hard, firm, delayed stool*, which has to be pressed out, and is sometimes succeeded by burning at the anus.—*Costiveness and constipation appear to be the primary effect of Lauroc.*—Ineffectual urging to stool, with emission of mere wind.—Stool first hard, then soft, with colic as from a cold and ineffectual tenesmus.—*Soft stools* after dinner, with pressing or with pinching around the epigastrium and burning at the anus. Soft stools in the afternoon, also without relief. Soft stools in the morning, sometimes with tenesmus. Two soft stools in one evening. Papescent stool, with colic as from a cold. Liquid stool.—\**Diarrhæic stools*, \**with tenesmus*, -or without, both in the morning and evening. Diarrhæic stools in the afternoon, preceded by

cutting in the abdomen. Diarrhoeic stools succeeded by burning at the anus. *Discharge of green, liquid mucus*, in the afternoon.—*Discharge of fæces without being conscious of it*.—Complete paralysis of the *sphincter ani*.—Burning at the anus, early in the morning, or very violent burning after stool, in the evening.—Stitch in the rectum as with a dull needle from above downwards, succeeded by papescent stool. Stinging in the rectum, preceded by an urging to stool. Tearing in the rectum. Creeping in the rectum, also with itching (in the morning) as from ascarides, (in the evening in bed). Rumbling and grumbling in the rectum. *Spasms* from the anus upwards. Contractive sensation of the rectum. *Constriction of the rectum*.

**Urinary Organs.**—Retention of urine, also for four days. Passes only a few drops of urine with the stool. No urine or stool for the first days. Inability to emit a single drop of urine, owing to complete paralysis of the bladder, for five days.—Slow flow of urine. The urine does not pass off as soon as the desire to urinate is felt, in the morning, or passes off after painful urging. Pressure on the bladder after dinner, and urging to urinate which takes place very scantily only after painful pressing.—*Diminished secretion of urine*. Passes a small quantity of urine three times in twenty-four hours.—Frequent emission of small quantities of urine, in a few hours.—*Increased secretion of urine*, (subsequently), with increased exhalation from the skin. *Increased secretion of urine in the afternoon* when walking, and in the morning, also in the evening (with burning during micturition). The urine which had been emitted in the afternoon in larger quantity, becomes turbid in the night.—Emission of a quantity of watery urine, with burning during the emission. Urine *yellow, scanty*, also watery. *Pale*, also increased urine. Pale-yellow urine. Acid urine, corroding the labia. Foaming urine. Urine depositing a small cloud shortly after emission, pale or gold yellow. Urine depositing a *thick, reddish sediment*, when standing, also with large, white and jelly-like flocks on the sediment, and with a thin pellicle on the urine like cobweb, the urine being clear when emitted.—Pain about the region of the stomach when urinating. Burning in the urethra and pressing after urinating. Violent burning in the urethra, immediately, with small red pustules around the hip. Itching in the forepart of the urethra.

**Male Sexual Organs.**—*Gangrene* of the penis. Voluptuous itching under the prepuce, with desire for an embrace.—Increased sexual desire.—*Erections* evening and night.

**Female Sexual Organs.**—Menses too early by eight days, also with profuse, painful discharge of liquid blood for eight days, and nightly tearing on the vertex the first four days. *The menses are more profuse than before*, also with toothache (on the second day), and colic in the afternoon (on the third), which is relieved by the application of warm cloths.—*Stinging and burning* in and below the mammæ.

**Larynx and Trachea.**—Darting in the larynx from without inwards, arresting the breathing. Pain in the trachea when coughing. Sensitiveness of the trachea, with sensation as of drawing downwards, worse when swallowing. *Spasmodic constriction* of the larynx, also with hawking.—*Itching* below the larynx inducing a hacking cough. *Crawling* in the superior bronchial tubes, with tickling as from a feather. *Titillation* in the throat, inducing cough, or in the trachea, with roughness. *Scraping in the larynx*, (and in the trachea), also with increased secretion of mucus, hoarseness, and desire to cough, or with increase of thirst and diminution of the pulse, or also with sensation as if the larynx were enlarged and swollen. Troublesome scraping in the throat, or in the trachea, with roughness. *Roughness in the throat and trachea*, also with

*hoarseness*, or with irritation which induces a hacking cough, or with difficulty of speech, or with drawing in the trachea and hacking cough. *Hoarseness*, also with *roughness of the throat*, or with *desire to cough*, or with heat in the throat, or with sensation as if the breath were arrested in the trachea. Deep base voice.—*Frequent hawking* owing to roughness in the throat. *Frequent hawking of mucus*. Hawking up of sweetish mucus. Tenacious mucus in the trachea.—*Hacking cough from roughness in the throat (or trachea)*. *Hacking* induced by titillation in the larynx. Hacking induced by prickling in the larynx and trachea, with subsequent dryness of the mouth and larynx. Hacking, induced by a sensation as if tenacious mucus were hanging down in the throat, which is detached afterwards.—Frequent turns of cough with roughness and hoarse voice.—*Cough* from roughness in the throat. *Cough from titillation in the larynx and trachea*. Frequent single turns of cough. Violent cough (from the vapour). Whizzing cough, *with sensation as if the mucous membranes were too dry*.—°Cough with copious, jelly-like expectoration, mixed with bloody points. °Bloody cough (disappearing immediately after taking large doses).—°Acute suppuration of the lungs. ?—Scraping in the throat before and after coughing.

**Chest.**—*Panting breathing*. *Slow, feeble*, almost imperceptible breathing. *Slow, moaning and rattling breathing*. *Difficult* breathing, also with rattling. Anxious breathing. Short breathing, owing to stitches in the liver and right shoulder. Frequent deep inspirations. On taking an inspiration the breath is arrested in the region of the stomach.—*Dyspnœa*, tightness of the chest during and after stooping. Dyspnœa with sensation as if the lungs could not expand sufficiently. Dyspnœa with pain in the region of the heart, urging to take deep breath and slow inspirations. Tightness of the chest, with pressure in the region of the heart or in the right half of the chest. Dyspnœa with stitches in the chest on taking a deep inspiration. °Diminution of the asthma in walking.—Sudden paralysis of the lungs and death (in phthisical patients).—*Oppression of the chest, also spasmodic*, or with difficulty of breathing. *Constriction of the chest*, also with difficulty of breathing. Anxiety in the chest. Feeling of tightness in the chest and abdomen.—*Pains in the chest*, also *with feeling of oppression*, or intense pains with feeling of oppressive anxiety.—*Feeling of heaviness on the sternum*, on bending forward, going off on raising the trunk. Sensation as if a heavy body were lying on the chest, with pressure on taking a deep inspiration.—*Pressure on the chest* in a room, or when walking in the open air and then going off in a room. Pressure on the chest during an inspiration. Pressure on the chest, *as from a load on the chest*, particularly when sitting. Pressure on the chest with oppression of breathing and cutting in the chest. Pressure and tightness on the chest, with ill-humour. Pressure in the middle of the chest. Pressure on the upper, lower, or middle part of the sternum. Pressure from without inwards at a small spot of the sternum.—*Stitches in the chest* from the back to the sternum. Stitches through both sides of the chest towards the sternum. Stitches in the right chest (in the evening, when standing) so violent that he came near crying out. Stitches in the sternum, also in the middle or in the *lower part* (also extending to the back, in the evening, during an inspiration).—Burning in the chest on taking an inspiration.—Burning on the sternum, after stinging.—Stitches in *the region of the heart*, during an inspiration. Palpitation of the heart, with soft, full pulse. Irregular beating of the heart, with slow, subdued pulse.—Stinging in the region of the ribs, externally, also stabbings in the muscles and bones of the left side. Pain at a small spot under the left ribs. Bruised pain of the ribs when lying on one side. Cramp-pain in the left intercostal muscles. Burning over the *xiphoid cartilage*,

or also in the region of the right clavicle. Burning and stinging under the left mamma. Pulling pain in the left pectoral muscles. *Pain in every part of the external thorax on moving it.* Stinging tension in the left side when lying on it, extending up to the neck, in the morning. Stitches from the right axilla to the chest.

**Back.**—Frequent pain as from weariness in the small of the back, on raising the trunk. *Painful stiffness* in the small of the back and back, when writing, going off on raising the trunk. Stitches in the right side of the small of the back. Itching or burning of the os coccygis.—*Tension in the back* extending between the shoulders and into the neck. *Sticking in the back.* Sensation of warmth on the back from below upwards. Itching near the right scapula.—*Sticking between the scapulae*, particularly on taking off the corset. Digging and boring between the scapulae, worse during rest, very little during motion. Pressure from without inwards between the scapulae. *Itching* between the scapulae, as from fleas, with creeping. Pressure under the right scapula.—*Sticking in the scapulae*, also during an inspiration. Stinging and burning in the right scapula.—Pressure in the *nape of the neck*, particularly in the open air and going off in the room, or in the evening, obliging him to bend the head forward, and with tensive pain on raising it. Tension on the right side on moving the head. Tearing extending to the left shoulder, after dinner. Sticking, particularly on the right side, or towards the left shoulder. *Painful stiffness in the left side of the neck and nape of the neck.* Stiffness of the nape of the neck.—Sensation of spasmodic contraction of the anterior cervical muscles, when drinking. Strong beating, as with a hammer, on the right side, when running.

**Superior Extremities.**—Tearing in the shoulders, particularly the left (also with sticking). Piercing pain in the left shoulder-joint, in the evening, waking him, relieved for only a short time by laying the arm over the head. *Pressure on the right shoulder*, (also as after a blow), or in the joint, (worse on bending the arm backwards or waking one at night every half hour, with tossing about in the bed). *Pressure in the right or left acromion process.* Pressure and tension in the ligaments of the left shoulder. The pressure of the suspender on the right shoulder becomes painful. Laming pain in the *right shoulder*, or violent lacerations in that part. Sticking and tension as if too short, in the region of the left shoulder-joint, on stretching the shoulder forward. Pain of the head of the right humerus, as if swollen, and as if it had not sufficient room in the glenoid cavity.—Sensation in the arms as if drawn in.—Pressure in the tendon of the deltoid muscle. Tearing in the humerus. Sticking in the right upper arm, followed by a bruised feeling in the shoulder. Gnawing in the right upper arm, which is at first relieved and afterwards increased by pressure. Pinching in the anterior side of the right arm. Tension on the inner side of the upper arm as if the skin were raised with a pin. *Itching*, with burning pimples after scratching, or *itching pimples* on the right upper arm.—Pain in the left elbow. Stitch in both elbows. Tearing in the right elbow, through the bend to the tip. *Itching* of the left elbow, also with burning after scratching.—Heaviness of the lower arms, with pain of the olecrana on touching them. Tension in the tendons of the right lower arm. Pressure on the middle of the left lower arm. Cramp-pain in the left lower arm, worse when lying on it. *Itching* of the right lower arm, with burning after scratching, and of the left where it is succeeded by pimples.—Tearing in the wrist-joints. Pain as if sprained in the right wrist-joint, or also stiffness as if the hand were twisted out of joint. Stitch on the right wrist-joint, soon returning after rubbing. Stitch in the left styloid process.—Sudden warmth on the outer border of the left hand, as if brought near a warm stove. *Tear-*

*ing* in the dorsum of the hand, or in the border of the left hand, *going off after rubbing*. Cramp-pain with stitches in the left metacarpus, during rest. *Burning* of the hands, internally. Twitching burning on the dorsum of the left hand. Feeling in the right hand as if swollen, with tension on stretching or closing it. *Distention of the veins on the hands*. *Trembling of the hands*.—*Tearing* in the fourth left, right little and left middle fingers (also particularly in the upper joint and worse during contact). *Tearing in the right thumb*, also succeeded by tearing from the wrist-joint to the forearm, followed by a bruised feeling in the upper arms, or with sensation as if the tendons would become contracted. Tearing and sticking in the left thumb, behind the nail. *Stitches* behind the right thumb, (after dinner). Stitches in the left little and index-fingers. Sticking with pressure on the articulation of the right thumb, early in the morning, in bed. Painful dragging in the second joint of the left middle-finger, as if the joint would be *distended*, in the evening, in bed. *Pain, as from lameness*, in the second joint of the left middle-finger or also (with pressure) in the right thumb and metacarpal bones. *Pain as if sprained in the joint of the right thumb*. Tingling between the thumb and index-finger, going off by rubbing. Burning of the ball and nail of the left thumb. Violently itching *redness* between the fingers, with small vesicles which are perceptible only to the touch, and burning after scratching, in the evening, in bed. Rough, *scaly skin* between the fingers, with burning when touched by water.

**Inferior Extremities.**—*Sticking* in the right hip, only when standing, going off during motion. *Pain as if sprained in the left hip-joint*, during motion. *Stitches in the buttocks*, also at dinner. Itching of the right buttock, after dinner. Pain in the glutei muscles, as from a blow, only when sitting and touching the parts. Painful feeling of weariness in the bend of the right thigh, as after a good deal of walking, also with heaviness.—*Pain as if bruised in the thighs*, as after a good deal of walking, also with heaviness. Aching pain in the posterior side of the left thigh, with pain as if bruised on touching it. Feeling in the middle of the left thigh as if broken in two. *Painful lameness* in the left thigh, extending beyond the knee, or also with pressure and worst during motion. Painful stiffness of the inner muscles of the right thigh. Twitching pain in the left thigh. *Sticking* in the posterior surface of the right thigh, or in the inner side of the left, increased by pressure. *Burning* in the left thigh near the fold between the thigh and pudendum. Itching of the right thigh, externally, with burning after scratching.—Unsteadiness of the *knees*, as if they would *give way*, on going down stairs. Tremor of the knees, during a walk in the open air. Painful weariness around the knees, after rising from a seat. Pinching under the left knee. Twitching in the bend of the right knee. Tension in the bends of the knees after rising from a seat, going off in the open air. *Tearing in the knees*, sometimes succeeded by a twitching tearing in the right shoulder. *Sticking* in the left knee, also in the evening, or on stretching the leg.—Heaviness in the *legs*, particularly the right, when spinning and also when walking, (with increased vertigo). Feeling of heat of the right leg, when spinning. The right leg goes to sleep, during motion. Tickling in the left leg, continuing after scratching. Itching on the right leg, going off by scratching. Tearing in the left calf extending to the inner malleolus, going off by motion. *Tearing in the tibiae*, also as if in the bones themselves, or with tension and sensation as if the skin were drawn up. Gnawing on the right tibia as far as the inner surface of the knee. Tensive pressure or also painful tightness on the left calf. Visible twitching of the right calf, early in the morning, in bed, going off by stretching the leg. Itching on the left calf, soon returning after scratching. Painful beating of the right tendo Achillis, early in the morning, in

bed.—*Pain as if sprained in the tarsal joints*, during rest and motion. Pain as if sprained in the left calcanean process, when walking. Laming pressure in the region of the left inner malleolus. Darting pain in the region of the right outer malleolus, followed by a bruised sensation of the dorsum of the foot. Tearing and burning at a small spot under the right inner malleolus, relieved by rubbing, going off by exercise.—*Stiffness in the feet*, after rising from one's seat, removed by walking. *Going to sleep of the foot, particularly the right* (when sitting or when crossing the legs). Twitching in the border of the right foot, followed by a sensation as if a worm were crawling about the outer malleolus. Ulcerative pain in the lower part of the heels, on rising from bed, removed by walking. Creeping in the sole of the left foot. Tickling under the left heel. Itching of the inner border of the right foot.—*Tearing in the right second toe*, going off by rubbing. *Stinging under the left big toe*. Burning in the ball of the right big toe, going off by rubbing.

**Sleep.**—*A good deal of yawning. Frequent yawning without drowsiness*, also particularly after dinner. Yawning with drowsiness, also in the afternoon, or with stretching. Yawning with chilliness. Yawning with constant shuddering and subsequent goose-flesh.—*Drowsiness even from the smallest doses. Great drowsiness with languor. Irresistible drowsiness*, like sopor, with excessive languor, frequent yawning, and with drowsy gloominess of the head on waking from a sleep of one hour. *Drowsiness after dinner*, also irresistible, or with weariness. Sleeps after dinner from twelve till three, contrary to his habit. *Feels sleepy early in the evening*, is unable to keep awake, or with burning of the eyes. Looks sleepy. *Sopor. Deep, snoring sleep. Falls asleep before supper*, eats his supper, after being waked, then sleeps again without saying a word, starts in his sleep, first from head to foot and then upwards, rises from bed, steps to the middle of the room with staring eyes and red face, finally lies down again without saying a word, and then sleeps soundly until morning. Soporose condition between sleeping and waking, without heeding the persons around him, with sensation, on waking, as if he had not slept at all.—*Sound night's rest and longer than usual. Sleeps soundly until morning, with some sweat. Difficulty of rousing himself in the morning.—Sleeplessness*, owing to excitement and attacks of heat. *Difficulty of falling asleep*, lying awake until one o'clock, with constant tossing about the bed. Wakes after midnight, and is not able to fall asleep again, with constant tossing as if he were lying too hard. Restless night-sleep with frequent waking.—*Confused dreams. Vivid dreams which he is unable to recollect. Cheerful or sad dreams, with sound sleep. Frightful dreams about fire*, also waking him. Heavy dreams with anxiety. Frightful dreams about dead men. He dreams that he is standing on a high tottering ladder, but without anxiety.

**Fever.**—*Cold feeling in the open air*, also particularly in the afternoon. Cold feeling in the warm room, particularly about the nose, which feels like ice. *Coldness of the extremities. Internal coldness through the whole body. Internal and external coldness*, from two to four o'clock in the afternoon, with warm feet. Great coldness from six to eight o'clock in the evening. Coldness with flushes of heat in the face. *Coldness and chills*, even near the warm stove, in the evening, after a walk in the open air. The body feels much colder than naturally. *Deficiency of natural heat. Shuddering with gooseflesh. Shuddering*, particularly on stepping out of the room. Violent shuddering over the face and hands, in the open air. Shuddering in the evening, in the open air, with dim-sightedness as if there were a gauze before the eyes.—*Chilliness and disposition to feel chilly*, constantly, or only on leaving the room. Chilliness with coldness of the skin to the touch. Chilliness with flat taste in the mouth.

Chilliness the whole forenoon, with feverish taste. Chilliness in the afternoon, with shaking through the skin. *Chilliness of the whole body, with pains in the back.* Chilliness in the evening or about midnight, after rising, not yielding to the warmth of the bed. *Chilliness with shaking,* in the room, or at six o'clock in the evening, even near the warm stove and even in bed, somewhat relieved by laying warm clothes on the abdomen.—*Fever,* first a shuddering, afterwards burning heat with stupor, vertigo and subsequent languor of the limbs. *Alternation of violent chilliness and burning heat,* with stupor and vertigo. Fever, lasting twelve hours.—*Warmth in the whole body,* as if proceeding from the shoulders, or with sweat on the nose. Increased warmth of the skin before midnight, without any feeling of heat. Warmth in the upper part of the body, with cold feet. *Frequent attacks of warmth (or heat) and sweat on the head and hands.* Warmth about the forehead, and afterwards through the whole body.—*Heat* in the whole body, in the evening until one o'clock at night, with sleeplessness, and inability to keep the hands under the bed-clothes. *Heat in the face,* also with redness, and with warmth in the body, or with burning redness and warm forehead, afterwards descending along the back, accompanied with a sort of stupifying headache. Flushes of heat in the head, in the afternoon. *Heat with thirst,* also flushes of heat, or in the evening, going off in bed or on falling asleep.—*Heat with sweat* on the whole body, in the afternoon. Heat with sweat on the forehead, also with warmth in the hands. Heat with sweat in the face, also at dinner, or in the afternoon or evening.—*Violent thirst,* with dryness of the mouth, evening or afternoon.—*Pulse* less strong, at times strong, at times feeble and quicker (62–68). Pulse scarcely perceptible (as well as the beating of the heart) and very slow (30). *Pulse small and slow,* also *contracted.* Pulse of unequal strength. Pulse quick and feeble. Pulse slow, full, hard. Pulse feeble and slow. Pulse less frequent, going down to 64, 60, 55, also with gloominess of the head. Pulse increasing from 58 to 77, 78.—*Sweat* over the whole body, from ten o'clock at night, until morning, with languor.

**Skin.**—Itching stitiches in different parts.—Rough, scaly skin between the fingers, with burning of the part when touched by water.—Dry skin. Increased secretion of the skin, glands, (salivary glands), kidneys, serous membranes.

**General Symptoms.**—Pinching burning, at times in one, at times in another part, particularly in the upper and lower limbs. Laming pains in the heads of bones, here and there. Sensation as if the joints were put loosely together.—Great depression of sensibility of the irritable organs. °Deficient vital energy and re-action against remedial agents.—Painlessness when suffering.—Great languor of the whole body, particularly of the lower extremities. The feet feel faint, as if paralyzed or bruised. He feels easy when sitting, as after fatigue. Languor, as if he could not keep himself on his feet. *Excessive weakness and prostration.* Relaxed feeling, early in the morning. *Great prostration,* also (particularly towards evening) with *irresistible drowsiness,* lassitude, and feeling of weakness, sometimes accompanied with ill-humour and dread of work. Loses his strength more and more every day. *Nervous weakness.* Sudden weakness, with excessive nervous prostration, until death.—*Fainting fit,* falls down suddenly.—Cataplexy. Paroxysm as if dead, paralyzed, with scarcely perceptible pulse (30), with flexibility of the joints, which remain in the position in which they are put.—*Convulsions, with subsequent paralysis of the muscles.* Convulsions, with twitchings about the head, and in the dorsal and cervical muscles, which soon became paralyzed. *Convulsions, with staring eyes, lockjaw, foam at the mouth,* (and death). Slight convulsions. Spasms of the back. *Tetanic spasms,* also general. Sudden falling down, with spasms and foam at the mouth, (and death

shortly after). Shocks through the body, resembling electric shocks, in the evening in bed. °Epileptic spasms, with foam at the mouth.—*Trembling of the limbs*, with inability to use them. *Lameness of the limbs*, with loss of sensation. *Paralysis. Apoplexy. Falls down stupified.*—*Death soon after taking the poison* (large doses), *also sudden death.* Falls down immediately without uttering a sound, and is lifeless in five minutes, without pulse or breath, with icy-coldness of the extremities, and paralysis of all the muscles, the eyes continuing to shine as if full of life until evening. Death after previous pains in the stomach, without vomiting, diarrhœa, or convulsions. Death by paralysis, without any symptoms of any kind of irritation.

**Characteristic Peculiarities.**—The pains seem to be less in the open air, except the roughness of the throat, which is worse. The pains appear less after dinner. °Evening exaacerbation. °Amelioration at night.

#### PATHOLOGICAL ANATOMY.

*In Animals :* The vessels on the superior surface of the brain were black and turgid with blood.—The cortical substance of the brain was likewise filled with blood.—The inner vessels of the ventricles of the brain were found injected, the lungs were redder than in their normal condition, rose-coloured, crepitating, and at times either filled with blood to excess or only moderately.—The blood in almost all cavities and vessels was fluid, coagulated in some cases.—No trace of inflammation in the stomach and intestinal canal, which was frequently covered with tenacious mucus. (See Orfila's Toxicology).

*In men :* Face and abdomen are bloated.—The blood is thick, oily, blue-black.—The contractive power of the muscles is less than after natural death.—Slight traces of inflammation of the stomach. (Fodéré's *Medic. Légale*, Vol. IV., p. 27).†

#### AMYGDALÆ AMARÆ.

AMYGD. AMAR.—Bitter almonds. See NOACK and TRINKS.

#### CLINICAL OBSERVATIONS.

See the clinical observations of Hydrocyanic acid and Laurocerasus. In Kessler's chemistry, chapter on fruits, mention is made of the case of an apoplectic individual whose speech was restored by bitter almonds.

#### SYMPTOMS.

**Mind and Disposition.**—Intense emotion, weeping.—Excessive nervous prostration, which does not allow one to speak a loud word.—*Loss of consciousness*, speech and power of motion.

**Head.**—Feeling of intoxication in the brain, affecting the whole body. Complete intoxication.—Vertigo as from intoxication, and sudden death.—Loss of consciousness.—Violent pains over the whole head.—Aching pain in the frontal region, above the orbits.—Feeling of heaviness in the frontal region.—Dulness of the left half of the head.—The eyes are open, staring, turned upwards, as if they would protrude from their sockets.—Contracted pupils.—Immovable pupils.—Spasmodic distortion of the features. Foam at the mouth.—Smell and taste as of bitter almonds, constantly.

**Digestive Apparatus.**—Impeded deglutition.—Inability to swallow.—Eruptions tasting of bitter almonds.—Nausea and vomiting of the ingesta.—Unpleasant sensation, proceeding principally from the epigastrium.—Colic, distending the abdomen in less than two

† Noack and Trinks have placed the article on "bitter almonds" after Laurocerasus, on the ground that bitter almonds are very similar to the latter drug. We will observe the same order. Jahr has mixed up the symptoms of these two agents.

hours like a balloon, accompanied by convulsive motion of the jaw, loss of consciousness, foam at the mouth, and, soon after, death.

**Genital Organs.**—Gangrene of the penis.

**Respiratory Organs.**—*Scraping* in the *larynx* and hoarseness, followed in the evening, or during the whole of the following day, by increased secretion of mucus in the trachea, particularly the *larynx*.—The breath smells strongly of bitter almonds.—Difficulty of breathing, the chest being raised spasmodically, and the motions of the chest being hurried.—The inspirations are snoring, slow, and becoming more and more rare. Several shootings and occasional paroxysms of seated pains under the left nipple in the thoracic cavity, rendering the expirations and inspirations somewhat difficult.

**Sleep.**—Deep, snoring sleep.

**Fever.**—Slow, full and pretty hard pulse. Pulse falling from 70 to 64.—Scarcely perceptible pulse at the wrist-joint, neck, and in the region of the heart.—The beats of the heart take place at intervals of two seconds.

**General Symptoms.**—Feeling of languor, as if he had no control over his muscles.—Falls down without consciousness.—Violent convulsions for three-quarters of an hour, recurring, but less violently, in fifteen minutes.—General tetanic convulsion.—Falling down with a roaring cry, followed by immediate death, (from taking the oleum æther. amygd. amar. *Heck* in *Caspe's Medical Journal*, 1844, No. 44).

#### PATHOLOGICAL ANATOMY.

*In animals*: The œsophagus is somewhat inflamed, very much distended and filled with mucus.—The duodenum contained a viscid chyme.—The blood in the vessels and in the axilla was fluid and bright-red, the cerebellum was filled with blood.—The lungs looked healthy, (in a pigeon, *Wepper*, *Hist. Cicut. Aquat.* p. 239).—The heart no longer contracted, and contained a very small quantity of blood; the lungs looked grayish; every piece of the bitter almonds still remained in the stomach, and this organ smelled very strongly of prussic acid; the duodenum was lined with a substance which, in texture and colour, looked very much like a bilious substance, (in a dog, one hour after death; *Orfila's Toxicology*).

*In men*: Face bloated, bluish; cornea clear and shining, conjunctiva red; the pupils rather contracted than otherwise; teeth and lips are tightly closed, the latter being covered with white foam.—Every time the body was turned, an almost pure blood, which smelled of bitter almonds, flowed out of the nose and mouth, with discharge of a fine, white foam from the nose and mouth, (*Heck*).—*The vapour of the bitter almonds comes abundantly out of every cavity of the body*, (*Heck*).—The fingers of both hands are spasmodically clenched, and it is difficult to open them, (*Heck*); the fingers are bent inwards, the nails blue, as well as the tips of the fingers and ears.—Every unseal is highly movable.—Stomach and bowels are very red, distended with gas, and start immediately out of their cavities.—The orifices of the stomach were redder than the outer surface of this organ.—In the stomach were found clots of a brownish liquid, which smelled strongly of bitter almonds.—The inner surface of the stomach was very red and lined with blue streaks, that of the intestines likewise.—The smell of bitter almonds diminished as one approached the rectum.—Liver, spleen and kidneys contained a fluid, dark-violet blood.—The liver and spleen were found turgid with blood, (*Heck*).—*The bile was dark-blue*, (*Merzdorf*).—The bladder was found contracted, (*Heck*).—The lungs were flaccid, collapsed, contained but little blood and floated in a bloody liquid, which filled up the pleura, (*Merzdorf*).—The flaccid heart was distended with gas and almost empty; the posterior cavities of the heart contained some violet-coloured fluid blood, (*Merzdorf*).—The ventricles contained a moderate quantity of black, fluid blood, (*Heck*).—The large veins were filled with a dark, fluid blood, (*Heck*).—All the vessels of the skull and cerebrum were filled with a fluid and bluish blood, smelling less of bitter almonds than the blood of the abdomen, (*Heck* and *Merzdorf*).—Effusion of a serous liquid between the pia mater and the arachnoid, (*Orfila*).—Bloody serum in the lateral sinuses, and the choroid plexuses were turgid with blood, (*Merzdorf*).—Softening of the cerebral substance, (*Merzdorf*).

## 152. LEDUM PALUSTRE.

**LED. P.**—See *HAHNEMANN'S Mat. Med.*, III. *Duration of Action*: several weeks.

**COMPARE WITH**—*Ars.*, *Bell.*, *Bry.*, *Canth.*, *Cham.*, *Chin.*, *Fer.*, *Jod.*, *Kal. hydr.*, *Lyc.*, *Merc.*, *Nux v.*, *Phosph.*, *Phosph. ac.*, *Puls.*, *Rhod.*, *Rhus*, *Sep.*, *Sulph.*,

Thuj.—Led. p. is frequently indicated after Lye.—After Led. p. are frequently suitable: Chin. and Sep.

ANTIDOTE.—Camph.

#### CLINICAL OBSERVATIONS.

According to Noack and Trinks Led. p. has a powerful action upon the brain, the respiratory organs, the lymphatic vessels, the secretion of urine, the skin, the serous and fibrous tissues, muscles and bones, etc., and may be used in the following affections: acute and chronic rheumatic and arthritic affections of the joints and ligaments, when the pains are stinging, aching and tearing, aggravated by motion and warmth, most violent in the night, with hot swelling and numbness of the limbs, these latter going to sleep, and being affected with arthritic nodosities, or stiffness of the tendons and ligaments. Oedema of the feet.—Itching of the whole body.—Stinging and corrosive itching of several parts of the body.—Rash in the face and on the chest.—Red miliaria over the whole body, on the forehead, back and dorsum of the foot.—Pustules on the upper lip, burning and itching. Tubercles on the forehead, in the face, as in drunkards.—Small, round, red, insensible spots on the arms, abdomen and feet; blue spots on the whole body, like petechiæ.—Purpura hæmorrhagica.—Pustules like variella on the arms and chest.—Dry itching herpes in the face, in the bends of the knees.—Boils on the forehead.—Hot, hard, tensive swelling of the skin and the subjacent cellular tissue.—Intermittent fevers, characterized by violent chilliness and long-lasting coldness.—Great seriousness.—Disposition to vehemence.—Intoxication, vertigo, violent stupifying, tearing, beating headache.—Liability of the scalp to take cold.—Rheumatic and arthritic ophthalmia, with aching and tearing pain.—Chronic inflammation of the lids and profuse secretion of corrosive tears and gum.—Amblyopia.—Hard hearing as if the ear were stopped up, with whizzing and roaring.—Tearing pain in the face. *Tie doloieux.* Acute and chronic inflammation of the throat and tonsils.—Ascites. ? Diarrhœa. ?—Flowing hemorrhoids. ?—Desire to urinate, first with scanty, afterwards with increased secretion of urine.—Diabetes.—Profuse involuntary emissions of bloody and watery mucus.—Too early and profuse menses.—Metrorrhagia.—Hoarseness with roughness and scratching in the trachea.—Whooping-cough in the second stage.—Hæmoptysis.—Hæmoptysis alternating with arthritic pains in the limbs.—Cough with purulent, greenish and fetid expectoration.—Suppuration of the lungs, with purulent, greenish expectoration after neglected pneumonia.—Phthisis pituitosa.—Purulent cavernous phthisis. Asthma. Hydrothorax. ?—Palpitation of the heart.—Smarting itching of the chest, with red spots and eruption of rash.—Pain in the small of the back and back.—Lumbago. ?—Painful stiffness of the back.—Rheumatic affections of the hip-joint.—Arthritic inflammation of the knee.—Hot, inflammatory swelling of the thigh and leg, with stinging and tensive pains.—Podagra with intolerable pains.

#### SYMPTOMS.

**Mind and Disposition.**—Very serious, considering every little occurrence an important and grave event.—Anxiety. Tendency to start.—Inclines to be out of humour and angry.—Calm and quiet mood the whole day, with cheerfulness (curative effect). Cheerful and composed mood, with desire to work (curative effect).—*Dissatisfied with his fellow-beings the whole day, he finally hates them.*—Feverish mood with much restlessness and inconstancy, he was unable to think about any thing calmly or perseveringly.—Out of humour, every thing annoys him.—Out of humour, he withdrew to some solitary place and desired to die, almost with tears in his eyes.—Vehemence.

**Sensorium and Head.**—Vertigo when walking and standing, he was scarcely able to keep himself erect. *Vertigo, the head inclines backward.* Vertigo, the whole day, even when sitting, increasing when stooping, and becoming so violent in walking, that he threatens to fall, as if he were intoxicated, with a feeling of heat in the whole body, especially in the face, without thirst, with pale cheeks and forehead. Stupefaction of the whole head as in vertigo.—When walking in the open air, he feels as if intoxicated. Excessive feeling of intoxication.—Loss of sense.—Violent headache. Dull headache in the morning during sleep. Headache, as if produced by a blow or shock.—Raging headache.—\*Stupifying headache.—Pressure in the left vertex. Pressure in the forehead. Aching pain in the upper part of the forehead, with dulness of the head, especially when covered. Painful pressure over the whole brain as from a flat, pressing weight, changing on the second day to a dull pressure at a small spot in the right temple.—*Tearing pain* in the head and eye; the sclerotica and conjunctiva are swollen and inflamed; the tearing pain in the eye becomes worse when lying down, and is relieved by sitting; the eyelids are not affected, but they are agglutinated in the morning, and a fetid fluid flows from between the lids; accompanied with evening shuddering followed by heat, nightly thirst, rumbling in the abdomen (with good appetite), more internal than external heat of the head, sweat on the back and hairy scalp.—Sticking pain under the left frontal eminence, in the brain. Sensitiveness of the head, with painful shaking of the brain on making a wrong step.—°Violent beating pain in the head.

**Scalp.**—Aching pain in the temple when *feeling it*. Stunning aching pain on the forehead, as if he had been revelling over night, in any position of the body. Creeping itching on the forehead and hairy scalp. Dry pimples on the forehead, especially in the middle, resembling millet-seed, insensible for six days. \**Tubercles on the forehead, as in drunkards.* \*Pimples and boils on the forehead.—°*The least covering is intolerable to the head.* °Liability of the integuments of the head to take cold.

**Eyes.**—Pressure in the external margin of the right orbit, more violent during motion.—Pain in the eyes, without inflammation, a pressure behind the eyeball, as if it would be pressed out of the head. Burning pressure in the eyes, especially in the evening, the eyes are agglutinated in the morning, in the day-time they run, even in the room. *Lachrymation* (without the sclerotica being inflamed); *the tears are acrid* and make the lower eyelid and the cheeks sore. Violent itching of the inner canthi.—*Ophthalmia* with tensive pain. *The eyelids become agglutinated*, but without pain. The eyelids are full of gum, but neither swollen nor inflamed. Contracted pupils. ? *Considerable dilatation of the pupils* (shortly after taking the medicine).—He had luminous vibrations before the eyes, he saw nothing in a steady position. When looking at anything steadily, there was a shine or a vibrating of the light before the eyes, as when one has been running fast, and, (as in vertigo,) he is unable to look at an object steadily. Weakness of sight.

**Ears.**—Short hardness of hearing °from taking cold in the head -or as if something had lodged in front of both tympana. *Hardness of hearing of the right ear*, sensation as if it were obstructed with cotton and as if he heard distant sounds.—Violent, but interrupted whizzing in the ears, the whole day. *Roaring in the ears as of the wind.* Ringing or whizzing in the ears.

**Nose.**—Slight bleeding at the nose, bloody mucus from the nose. Burning pain as of hot coals, in the interior of the nose, the nose feeling sore when pressing on it or blowing the nose.

**Face.**—Paleness of the face, but without chilliness. °Bloated face, at times red, at others pale.—Intolerable *tearing* in the face, extending to the head and neck, the whole night, alternating with stitches in the tooth, and terminating

with shuddering and deep sleep. Hard pressure on the left lower jaw. \**Eruption in the face.* \**Red tubercles*, also on the forehead (as in drunkards), with stinging when touched. °Scaly dry herpes in the face, burning in the open air. \*Pimples and boils on the forehead.—Pustules on the upper lip, with burning itching inducing scratching.—Swelling of a submaxillary gland, with aching pain when touched.—(Toothache, aching in a left upper and lower incisor.) *Hard pressure in the lower jaw from without inwards.*

**Mouth, Pharynx, etc.**—Stinging on the forepart of the tongue. Feeling of dryness in the palate, with desire for water.—°Hemorrhage from the mouth.? —*Sore throat with fine stinging pain.* Stinging in the throat between the acts of deglutition, only in the forenoon; when sneezing the stinging was changed to a pressure in the back part of the throat. Sensation as of a lump being in the throat, when swallowing she feels a stinging.

**Appetite and Gastric Symptoms.**—Bitter taste in the mouth.—Want of appetite.—A sort of sick and qualmish feeling in the stomach, accompanied with a bad and musty taste in the mouth. She does not feel hungry, and when eating anything she feels as if she had eaten too much, she feels a pressure and nausea.—Aversion to the usual tobacco, with proper appetite for food.—Great desire for cold drink, especially water. Constant absence of thirst.—When eating fast he feels a contractive pain in the sternum. Drawing and pressure in the pit of the stomach during a meal. (Bitter eructations after a meal.) Frequent attacks of hiccough.—*Sudden flow of water from the mouth resembling saliva, with colic, waterbrash.*—Colic: digging-up sensation under the umbilicus, with discharge of water from the mouth, like waterbrash. Nausea when walking in the open air, with sweat over the whole body, especially on the forehead. When spitting, he is attacked with nausea.—In the morning after rising he is attacked with retching, eructations and a pressure (choking) upwards in the pit of the stomach.

**Stomach and Abdomen.**—Drawing pain in the abdomen. Colic, as in dysentery. Colic, as if the bowels were contused and weakened, resembling the sensation which is felt after having been purged by drastics. Colic as if diarrhœa would set in, from the umbilicus to the anus, accompanied with loss of appetite and cold feet, the taste being otherwise natural. Colic, every evening. (Sensation in the left side of the abdomen, as if overloading the stomach with food had produced a pressing tumour in this region.) Slow stitch in the side, above the hip, resembling a sharp pressure.—Emission of flatulence the first day. Frequent emission of flatulence.—Colic (cutting?) with hemorrhage from the anus.—Dull sticking in the abdominal muscles, and a pressure between the pelvis and the lowermost left rib.—Pressure in the region of the upper brim of the left side of the pelvis, and in the muscles, extending as far as the last false rib, more violent when walking. °Ascites.?

**Stool.**—Constipation for several days. The stool is mixed with blood.—Diarrhœa, feces with mucus. Papescent stool, resembling diarrhœa, without any pain.—Red, humid spot above the anus, in the region of the os coccygis, affected with a smarting and sore itching, when sitting or walking.

**Urinary Organs.**—Enuresis. He is obliged to urinate frequently and to emit a large quantity each time.—Diminished secretion and emission of urine. Rare and scanty emission of urine, the first 12 hours. Frequent desire to urinate, with scanty emission. Reddish urine. (Yellow urine, with a white, lime-like sediment.) Burning in the urethra after urinating. Gripping, deep in the abdomen, as if the bladder were seized, (immediately). The stream of urine frequently stops during its flow; after she has emitted it, she feels a stinging in the urethra.

**Genital Organs.**—Swelling of the penis, the urethra seems closed up with

swelling, he has to press very hard to emit his urine, the stream being very small, but painless. (Itching of the glans.) Violent and continual erections. Nightly emissions. Nightly emissions of sanguinolent or watery semen. (After a nightly emission he felt so faint that he was scarcely able to drag his limbs along.) The menses appeared a few days too soon. Increased menstruation. °Metrorrhagia. ?

**Larynx.**—Tingling in the trachea, followed by hurried, oppressed breathing. Laryngeal asthma. Hoarseness with scraping in the chest. Cough without expectoration. Suffocative arrest of breath previous to coughing. °Whooping-cough? (for which it is used by the people in some parts of Germany). *Cough with purulent expectoration, night or morning.* °Greenish, fetid expectoration. \*Bloody cough, -with profuse expectoration. *Violent cough, with expectoration of bright-red blood.* °Pulmonary hemorrhage. ?

**Chest.**—Fetid breath. Spasmodic, double inspirations and sobbing, (as in children who have cried much, and have become very angry). Violent tension in the hypochondriac region during an inspiration and retention of breath. *Oppressed painful breathing.* She was unable to take a full breath the whole day. \**Asthmatic constriction of the chest, -aggravated by motion and walking.* Asthma when going up stairs. Asthma with difficult quick breathing, as if the chest were constricted, accompanied with constant soreness of the sternum.—Pain in the chest, during an inspiration, as if something alive in the chest caused an uneasiness in the same.—*Pressure* in the chest when walking. Pressure in the region of the sternum when in bed, more violent during motion. Hard pressure from within outward, one handbreadth below the right nipple, more violent during an expiration, in the morning when in bed.—*Lancination* in the side of the chest over the pit of the stomach, at every movement of the arm and when sitting.—Pain in the outer part of the right chest, as if there were a sore, especially when feeling the part, but also without feeling. Drawing in the outer parts of the chest, especially during an inspiration, accompanied with single stitches. Pain of the sternum, as if the pain were in the cartilage, in occasional attacks, a sort of digging-up, rubbing and scraping in the part, without cough. °Soreness under the sternum.—Palpitation of the heart.—Dull sticking in the region of the last true rib of the right side. Stitches in the chest, early in the morning. A sort of varicella on the chest and upper arms, peeling off in five days. \*Small, red, constantly-itching pimples on the chest, with biting itching.

**Back.**—Pain in the small of the back, on rising from a seat. Drawing in the small of the back and stiffness in the back, or particularly when standing, and going off when pressing on the part. Painful stiffness of the back and loins after sitting. Spasmodic, cramp-like pain under the short ribs and directly above the hips, towards evening, so violent that his breathing was arrested and he was not able to rise from the chair without assistance. *Pain in the loins after sitting.* Tearing from the small of the back to the occiput, the left hemisphere of the brain and the left jaw, especially in the evening, the cheeks being hot and bloated, and the eyes red and inflamed. Pressure and sticking near the vertebræ of the back, worse during an inspiration. *Painful stiffness* in the scapula during motion. Bruised pain below the scapula. Boil on the scapula. Small, red pimples on the back with constant itching. *Painful sticking in the shoulder when lifting the arm.*

**Upper Extremities.**—Pressure in the left axilla from within outward. Tearing in the right shoulder-joint. *Painful sticking in the shoulder-joint, on lifting the arm.* Pressure in the left shoulder-joint, more violent during motion. Tearing, with pressure, in the left shoulder-joint, more violent during motion. Pressure in both shoulder-joints, more violent during motion. Languor of the upper limbs and pressure in several parts of the same, a sort of paralysis. Tear-

ing in the arms. Pressure, and tearing with pressure, with sensation of weight in various parts of the right arm, especially in the joints of the arm, the pain being aggravated by motion.—Pain in the middle of the left upper arm during motion. Fine, stinging-itching gnawing of both *upper arms*, relieved by scratching, but returning soon with greater violence. Pressure on the right upper arm from without inward. Pressure and feeling of heaviness in the outer part of the left upper arm. Intermittent tearing, with pressure, in the outer parts of the left upper arm, posteriorly, more violent during motion.—Pressure in the right *elbow-joint*, more violent during motion.—Feeling of tension and pressure in the muscles of the right forearm, as if sprained, in any position. Painful jerking in the upper part of the forearm.—Pressure between the metacarpal bone of the right thumb and the carpal bones, more violent during motion. *Tremor of the hands when seizing anything, and when moving the hands.* Violent trembling of the hands, as if from old age, especially when moving them. Severe or fine stinging in the hand. Itching rash on the wrist-joint. Tearing pain in the hands. Sweaty palms of the hands in day-time.—The periosteum of the finger-joints is painful when pressing upon it. Tearing pain in the posterior joint of the thumb, going off when moving the thumb. Fine tearing in the fingers of the left hand, especially in the joints, more violent during motion. Drawing pain in the extensor tendons of three fingers of the left hand. A hard tumour on the tendon of the extensor pollicis near the wrist-joint, becoming painful when bending the thumb. Painless tubercle on the middle-joint of the index-finger.

**Lower Extremities.**—Pain in either hip-joint and in the small of the back when rising from the seat. °Laming rheumatic pain in the hip-joints. *Pressure in the region of the right hip-joint, more violent during motion.* Tearing, with pressure, from the hip-joint to the ankles, more violent during motion. Pinching-drawing pain in either hip-joint, in the acetabulum, descending along the posterior surface of the thigh. Fine itching stinging, and itching gnawing in the region of the hip-joints, somewhat relieved by scratching, but returning the more violently.—Sensation as if the posterior muscles of the thighs were paralyzed. Pain of the *periosteum* as if bruised or sore, or as if the flesh were detached, when walking, sitting, or touching the parts. Burning itching of the *thighs* in the night, being changed to a mere burning when scratching the parts, and disappearing afterwards. Fine, stinging-itching gnawing of the thighs, somewhat relieved by scratching, but afterwards re-appearing so much more violently. *Pressure in the posterior region of the left thigh; sensation as if the muscles had not their proper length, with pain as if sprained in every position, but especially violent when touching the parts and when walking.*—*Tremor of the knees (and hands) when sitting or walking.* Great weakness in the knee-joints, obliging him to sit down. *Weakness in the knee-joints, and tearing, with pressure, in these joints when walking.* Dull pricking and pressure in the right knee-joint, more violent during motion. Pressure on the right side and near the left patella, more violent during motion. Pain in the knees, as if bruised or sore. Cracking in the knees. Stiffness in the knees, only when walking. Stiffness of the knee. Tensive pain of the knee and heel, after sitting, when walking. Pain in the front part of either patella, as if bruised, when walking. Sweat of the knees, in the morning. \**Swelling and tensive and pinching pain in the knee, -when walking,* °or also with *tension, stinging hardness* even of the whole leg, and nightly tearing and pressure. Itching eruption in the bend of the knee.—°Hot swelling of the legs, with stinging-drawing pain. Feeling of coldness of the legs, when sitting, without any coldness to the touch. Weakness and pressure in the left lower limb, from the sole to the thigh, a kind

of paralysis or paralytic pain. Weakness and heaviness in the legs. Stretching of the lower limbs. Gripping pain in the calf, along the tibia. Swelling of the leg extending to beyond the calves, with tensive pain, especially in the evening. Tensive pain in the calves, when walking, after sitting. Cramp-pain in the calves. Cramp in the calves at night, when lying down, going off by rising, but returning immediately after lying down.—Pain as if sprained in the tarsal joint, or as if the foot had become twisted. Fine pimples on the dorsum of the foot, itching in the evening. Swelling around the ankles, and intolerable pain in the tarsal joint when stepping. In the morning his feet feel rigid. Stiff feet, with chilliness and confused feeling in the head. When sitting or lying down, she feels a great weariness in the feet as if she had walked many miles, she does not feel this weariness when walking. Heaviness in the feet, frequent drawing in the feet, sometimes extending beyond the knees. Jerking and weary sensation in the feet, when bending them. Pricking in the ankle. \**Obstinate swelling of the foot.* Swelling of the foot for eight days. °Inflammatory or œdematous swelling of the feet and legs. *Pain of the soles of the feet when walking, as if ecchymozed.*—Pressure in the sole of either foot, more violent during a walk. Burning pressure in the anterior part of the sole of the right foot. Bruised pain in the heel when walking. *Pressure above the internal left malleolus, more violent during motion.* Pressure, as with the finger, below the left ankle, in any position of the limb. Pressure in various parts of the feet. Pressure here and there in the left tarsal joint, more violent during motion.—Pressure on the dorsum of the left foot, in bed. Pressure above the right heel. *Pressure in the region of the internal border and the dorsum of the left foot.*—*Excessive gnawing-itching of the dorsum of either foot, increasing after scratching, and not abating till the feet had been scratched sore, much more violent in bed.*—Pressure in the anterior joints of the toes of the left foot. *Fine tearing* in the toes of the left foot, especially on the lower surface of the toes. Pressure in the region where the last three toes join the metatarsal bones, more violent during motion. Sensation as if the blood were rushing to the big toe. Slow and continuous stitch in the big toe. Cutting in the toes of the left foot, in the night when sleeping.—*The ball of the big toe feels soft, thick and painful when stepping.* °Podagra. ?

**Sleep.**—Sleepiness in the day-time like sopor. In the morning he has a great desire to lie down, he feels drowsy, nauseated and anxious.—Deep, but restless sleep; at night he lays himself on the side on which he does not usually rest, in the morning he is unable to get warm.—She is unable to sleep and starts constantly; when closing her eyes, she raves, almost in a waking state. Restless sleep, and extremely-confused dreams. Starting from a dream. He frequently wakes, and only falls asleep again after a while.—*Sleeplessness, with restlessness and tossing about.* Restless sleep at night, tossing to and fro in the bed; early in the morning when in bed, he feels great chilliness and is unable to get warm; afterwards he sleeps late in the morning. Morning sleep full of dreams about murder and violence.—Shameful dream, and sweat the whole night. Dream full of anxiety of conscience, with profuse sweat. *Restless dreams; he dreams that at times he is in one, at times in another place, at times he is busy with this, at times with that object.* Vivid dream about great misfortunes.—Vivid, voluptuous dreams, with erection without emission. Lascivious dreams.

**Fever.**—\**General coldness and chilliness.* In the morning his body feels cold, though not to him.—Shaking chills with trembling, towards evening, without thirst and without any subsequent heat. Chilliness and feverish drawing in the limbs, without any subsequent heat. Chilliness as if cold water were being

poured over this or that part of his body. Shuddering and chilliness, for twenty-four hours, with goose-flesh, without any external coldness. He is very chilly in the forenoon. Violent chilliness in the morning, when in bed, he is unable to get warm. Feverish coldness, increasing and decreasing at intervals, with shuddering all over, for three days, without heat, but with desire for cold water, and heat in the palate. *Chilliness, without any subsequent heat*, the rest of the body was warm, only the extremities were cold. *Chill over the whole back, with somewhat hot cheeks and hot forehead, without redness of face and thirst, with cold hands.* °Evening fever, with pain in the head and eyes. °Feeling of heat alternating with sweat. Heat all over, without thirst. (Much thirst, he is obliged to drink even at night.) Much thirst in the day-time and feverish chilliness in the evening, shortly before going to sleep. When sweating while walking, the sweat on the forehead has a fetid, sourish smell.—When walking, he becomes immediately warm and hot, and sweats on the forehead. Sudden sweat when walking in the open air, mixed with chilliness. Fetid sweat over the whole body, even the hair of the head was wet. He sweats, and cannot bear being covered. Sweat during the whole night, from evening till morning. *Slight sweat all over on waking, with itching of the whole body, obliging one to scratch.*

**Skin.**—Dry, extremely-itching herpes, with anxiety Itching of the skin.—Itching and gnawing of the side of the abdomen, and the arms, with burning after scratching. Itching of the whole body as if an eruption would break out. Superficial, fine-stinging itching of the skin over the whole body. Slight, itching prickings in several parts of the body, especially in the region of the hip-joints, thighs and upper arms, inducing one to scratch; after the scratching the itching is a little less, but returns with the more violence afterwards. Itching of the joints in the region of the calcanean process, the tarsal joint and the loins.—Bluish spots on the body like petechiæ. Small, round, red, insensible spots on the inner side of the arms, on the abdomen and feet. Eruption: small blotches, resembling red millet-seed, over the whole body, (except the face, neck and hands,) with itching in the day-time, and sometimes in the night, not much relieved by scratching. \**Dry, itching herpes, -with anxiety.*—°Boils.—°Hot, tense, hard swellings, with tearing pains. °Painful arthritic nodosities. ?—°Edematous swelling, also of the skin of the whole body.

**General Symptoms.**—*Heat of the hands and feet in the evening.*—*Long-continuing warm sweat on the hands and feet.* Drawing along the long bones during motion. (Tearing pain in the back and knees.) The gout re-appears. Lancinating pain in the joints. (Tearing-darting pain in the joints.) Beating pain in the affected joints, hindering motion.—Painful, *hard tubercles and tophi* in the region of the joints. Paralytic pain of all the joints at night when in bed, when moving the body. Shooting, tearing, rheumatic pains, especially during motion. *The limbs and the whole body are painful, as if bruised and contused.* °Aching or aching-tearing pains in the joints, worst in the evening, in bed. *He cannot bear the warmth of the bed, on account of heat and burning in the limbs.*—Feeling of numbness and heaviness in the limbs, with bone-pains. The limbs are numb and go to sleep. Troublesome languor and weariness when sitting, standing or walking; after having been seated for some time, he feels pains in the os coccygis. Inclination to stretch the upper limbs.—Fainting.—Nervous attack: after a walk in the open air a sensation of pressure and tension is felt moving from the side to the shoulder, thence across the chest, accompanied with a grasping sensation in the sternum; he loses hearing and sight; has to lie down, and remains pale for a quarter of an hour; is anxious, and has cold hands and diarrhœa.

**Characteristic Peculiarities.**—Only the pains in the joints become more violent during motion, not the pains in other parts of the body.

### 153. LOBELIA CARDINALIS.

LOB. CAR.—The scarlet lobelia, or cardinal flower. See TRANSACTIONS OF AMER. INST. OF HOMŒOP., Vol. I.

Dr. Samuel R. Dubs, the prover of this agent, took ten drops of the concentrated tincture, in about the third of a tumbler of water, at ten minutes past ten o'clock, a. m. After the lapse of several minutes, it produced a burning sensation, with stinging in the tongue and fauces, which lasted till 12 o'clock at night. In twenty minutes after taking, felt a sticking, like the pricking of needles in the sole of the left foot, shooting inwards. Passed away in a few minutes. Same sensation, thirty minutes after taking, in the inner part of the right thigh, just above the knee. 11½ o'clock, a. m. Dryness of the nose with fulness, followed by sneezing. 12 o'clock, m. Severe stitch in the left side of the chest, which compelled me to press with the hand to moderate it, as it nearly took my breath; it continued about ten minutes. 12¼ o'clock, p. m. Same sticking pain in the left hypochondrium, which came on suddenly and so violently as to induce me to cry out. I placed the ends of my fingers over the spot, and the pain was at once moderated. Lasted about five minutes. Bowels were opened about this time; stools at first thin, and then more consistent. 3 o'clock, p. m. Tongue raw, and sore, very red, especially at its tip, and a painful blister on that part. Throat sore and dry, with disposition to swallow, as also to hawk up phlegm. Headache dull and distressing, with fulness in the forehead and base of the occiput; the latter part was peculiarly painful. The pain increased by motion, or shaking the head. 5 o'clock, p. m. Severe pricking pain with itching in the heel of the left foot, so great as scarcely to be borne. Headache increased, throbbing and weakness in the lower extremities, so much so, as to cause me to lie down. Hot sweat on the forehead, with throbbing in that part, and at the base of the occiput. Stiffness of the nape of the neck. Dull pains in the upper maxillary bone of each side, with aching in the molar teeth. Whilst lying down, great sleepiness, with difficulty of falling asleep. Constant dreaming with extreme lightness of the head. Starting in sleep, with jerkings of the hands. 7 o'clock, p. m. The soreness of the fauces is diminished, but the burning and pricking sensation remains the same. The soreness has extended lower down to the pharynx, and upper part of the œsophagus. 7½ o'clock, p. m. Unpleasant sticking pain in the epigastrium, which lasted five minutes. 9 o'clock. Very little pain in the forehead, but the pain is still throbbing, and almost insupportable in the occiput and nape of the neck. Soreness in the eyes, with smarting and slight watering. Great repugnance to the light of a lamp. 10 o'clock, p. m. Oppression of the breathing, with dull and distressing pain in the lower part of the sternum, with the same feeling on each side forming a kind of circle. Relieved by beating lightly upon the part with the hand. Dull heavy pain in the epigastrium, with sensation of a weight or load. Dull distressing pain about three inches below, and a little to the left of the epigastrium. Debility, and languor of the whole system, with weakness as from a strain across the kidneys. 11½ o'clock, p. m. Slight shooting pain in the forehead, with an eruption of small vesicular pimples in the centre and upper part of this locality. They feel sore on passing the hand over them. The pain in the occiput is now very slight.

Disposition to sing, which I was continually doing whilst walking up and down the parlour. 12 o'clock at night. Thirst for cold water, of which I drank half a pint. This very much relieved the pain and burning in the tongue and fauces. The pain and oppression at the breast were also alleviated. Next day at 6 o'clock, a. m. Head feels light with dull pain in the forehead and occiput. 8 o'clock, a. m. Eyes burning and watery, with dread of light, and feel sore on closing them. Mouth and fauces dry, with a raw and distressed feeling extending down to the epigastrium. Some nausea, and still much distress at the epigastrium. No appetite for breakfast. Throughout the day great debility of the whole frame, but more especially of the lower extremities. They are so much fatigued by any exertion, that it is with difficulty that I can drag them along. My knees bend under me in walking.

*August 13th.* Sticking pains with sensation of a load at the epigastrium. Dryness and rawness, from the mouth to the epigastrium. Appetite still very indifferent. Oppression of the breathing through the day, with sticking pains on taking a long breath. Prieking pain in the left lung, coming on several times during the day, and lasting for several minutes each time. Great weakness of the lower extremities. Unpleasant taste in the mouth in the morning, and through the day. Prickings like from needles in the calf of the left leg and the heel, worse in the latter part. Most of the above symptoms continued, though with less intensity for two weeks, and it was at least three weeks before my stomach recovered its usual tone, and my usual good appetite returned.

## 154. LOBELIA INFLATA.

LOB. INF.—Emetic herb, Indian tobacco.—See TRANSACTIONS OF AMER. INST. OF HOM., Vol. I.

CLINICAL OBSERVATIONS, BY DR. JEANES, OF PHILADELPHIA.

The *Lobelia inflata* has been found both in large and in small doses a very valuable remedy in certain forms of asthmatic disease. Of its curative powers in these disorders, we have the testimony of Barton, Stewart, Randall, Bradstreet, Reece, Andrew, John Forbes, Elliotston, Cutler, Bidault de Villiers, Behrend, Neumann, Sigmond, and others. That the relief afforded in some of the cases has been permanent, amounting to what may be properly termed cures, we also have satisfactory evidence.

That it has relieved, in doses of a few drops of the tincture, we have the testimony of Noack; but whether this mode of application has much to recommend it, time, observation and experience must determine.

That it has effected cures in the infinitesimal, minute doses of the homœopathist, I have the evidence of numerous cases in my own practice; that these cures would not have taken place had the remedy been administered in emetic doses, or in Noack's drop doses, I cannot assert. I can only be certain that they did take place after the administration of the minute doses, and according to my judgment in consequence of such administration. But it must be allowed, that if the minute dose answers only as well as the larger, it is much to be preferred, on the grounds of pleasantness and convenience.

Noack has arrived at the conclusion that its operation is peculiarly directed on the pneumo-gastric nerve, an opinion which is strongly supported both by its pathogenesis, and its curative effects.

There are other operations of *Lobelia inflata* than those on the lungs and sto-

mach which are worthy of attention. Eberle succeeded readily in the reduction of an incarcerated hernia, after an enema of the infusion of this plant. This might depend upon mere relaxation, as from blood-letting, the tobacco enema, etc., etc. But an experience of my own has made me suspect that it possesses some properties which render it peculiarly suitable as a remedy in hernia. A patient labouring under all the symptoms of incarcerated hernia which remained in all their violence, after the apparent reduction of the hernia, (most probably from a constriction of the sac,) received, when in an almost hopeless condition, a minute dose of *Lobelia inflata*. In the course of two hours the bowels, which had not been moved for several days, became open, and the symptoms of incarceration speedily disappeared. This may have been a spontaneous change, such as has occurred in other cases of hernia, but it is certainly calculated to call attention to the investigation of the *Lobelia inflata* as a remedy for incarcerated hernia.

Doctor Gosewisch, of Wilmington, Delaware, remarks, in a letter to me: "Among the symptoms of lobelia which I have seen until now, I do not find any thing said about hemorrhages. At first Dr. Edward Caspari told me he gave lobelia to an elderly lady, (who had not menstruated for four years,) for a pain in the right shoulder; it relieved the pain and brought on menstruation. I gave the same medicine to a lady in the last stage of consumption, who had not menstruated for six months; it palliated the cough and brought the menses, which continued for some days, though of course in small quantity; she died about three weeks afterwards. A lady over fifty years of age, who had long ceased to menstruate, had, after taking lobelia for a cough, bleeding at the nose. I have now under my care a boy who, after taking a Thomsonian emetic, had every evening, after an hour's sleep, a violent raving, with flushing of the face and palpitation of the heart. This has yielded rapidly to homœopathic treatment."

In some forms of gastric disorder the *Lobelia inflata* has been found a valuable remedy. Noack gives the two following cases of *cardialgia*.

*Cardialgia simplex*.—A young man had suffered for many years from attacks of pressing in the stomach, which extended itself upwards into the breast, causing a feeling of oppression and accompanied by nausea, flowing of water into the mouth and disposition to vomit, but no vomiting. The attacks occurred at no certain intervals, and sometimes continued for a long time. He had already tried a variety of remedies, among others the Carlsbad waters, which at first afforded a little relief, but after a time ceased to do so. At a time when there was considerable fever, he took two drops of the saturated tincture of *Lobelia inflata*, once a day for five days in succession; many green diarrhœal stools occurred, but the pressing in the stomach gradually diminished, and by the sixth day was entirely removed. Nineteen months afterwards the patient still remained free from the disease.

*Cardialgia biliosa*.—A servant maid, aged twenty-six years, of bilious habit, had suffered for a long time from cramp of the stomach, which showed itself by a severe pressing feeling in the epigastrium, and which was excited by certain kinds of food, or mental emotion, especially in the evening, and continued into the night. In October, 1839, after fright and vexation during the menstrual period, which caused a suppression, she complained of alternating heat and cold, nausea, bitter taste, thirst, vomiting of bile, severe pressing in the epigastrium after eating, and also whilst fasting, exacerbating in the evening; oppression and a feeling of anxiety in the breast, and pain in the sacral region; her tongue had a yellow coating, and her pulse was small, weak and slow. A drop of the tincture of lobelia was given morning and evening, and by the second day pro-

duced marked effects. Severe pain in the forehead and frequent diarrhœal stools (seven in the day) took place, the vomiting ceased, the nausea diminished, and the breast was no longer oppressed. A drop of the tincture on the third and fourth days removed the remaining bitter taste and the sacral pain. The patient was perfectly well by the fifth day.

To the above I add the following cases from my work on homœopathic practice, remarking that they have since been confirmed by many similar cures.

Case in a married lady, æt. 38 ann. Accompanying chronic dyspnœa. Sensation of weakness and oppression at the epigastrium, and extending from thence into the chest. Burning in the stomach, and a sensation as if there was a burning lump in the pit of the throat, which appeared to impede swallowing and respiration. In swallowing, it seemed as if at this point something rose up to meet the food and obstruct its descent into the stomach. Frequent eructation of acid fluid with sensation of burning. Frequent vomiting of the food after meals, especially after eating warm food. She "had not known what it was to be without heartburn for one hour for the last year." Her urine was high-coloured, and deposited a copious red sediment. She had for a long time been subject to pain in the left lumbar region of the abdomen. Lobelia 4/6 effected a gradual but perfect removal of the whole train of her dyspeptic symptoms.

In numerous cases besides the above, I have succeeded in removing the dyspeptic symptoms by the employment of the same remedy. The chief indications for its use are—the sense of weakness and oppression at the epigastrium, and at the same time some oppression at the breast. But the nearer the approach of the symptoms has been to those of the above case, the less have I been disappointed in my expectations of a strikingly-beneficial operation of the lobelia. There are, however, some cases where, although the symptoms of pectoral oppression are very trifling, yet this remedy operates satisfactorily. In a case of this kind, which I have but recently treated, and which occurred in a fat and robust man about 45 years of age, who complained chiefly of a copious hemorrhoidal discharge and consequent debility, and a sensation of tightness in the epigastrium and some acidity of stomach. I at first gave him *Nux v.* without any apparent abatement of his disease, and subsequently some other remedies, with the same want of success. At length he complained of some oppression at the breast, for which I administered lobelia 5/6. The following day he informed me that he felt new life and vigour, and that the pectoral, gastric and hæmorrhoidal disorders had all disappeared. Since that time, now about two weeks, he has remained free from them, and also from a feeling of want of power in the anus and rectum which was exceedingly uncomfortable to him while at stool, and to which he had been subject for many years.

In bleeding from the hæmorrhoidal vessels the *Lobelia inflata* has proved useful in the case just mentioned, and also in my own person.

The following cases show that, as a remedy for some forms of intermittent fever, it is deserving of attention.

*Febris intermittens quotidiana*.—Attack at 10½ o'clock, a. m. In a man æt. 48 ann. Severe coldness, alternating with flashes of heat till 12 m., when the heat, which was moderate, became more constant, but alternating with slight chilliness, continuing till evening. Profuse sweat at night, slept during the sweat as usual. Thirst great from the first chill and during the whole of the hot stage, but worse in the chill. Respiration short, anxious, laborious and wheezing, with sensation of tightness of the chest. Sensation of oppression and weakness, principally at the epigastrium, but extending thence through the whole breast. Tickling in the pit of the throat, with frequent hacking cough. Severe headache, extending round the forehead from one temple to the other.

Loss of appetite, both in the paroxysm and apyrexia. Tongue white, scaly, coated on the right side, but clean on the left. Great debility. *Lobelia inflata* 15/15, given at 3½ o'clock, p. m., during the paroxysm, produced considerable relief of the oppression of the respiratory organs, and the next day there was a very slight paroxysm, of short duration; the third day and afterwards, no more.

*Febris intermittens*.—Chill (shaking chill) with thirst, then heat with thirst and sweat. The thirst is sometimes observed before the chill and through the whole fever; often only before the chill, and not in it, and then again in the heat. The coldness is increased after drinking. The sweat begins with the heat, or after the heat has continued for some time.

The *Lobelia inflata* has by some been considered a valuable remedy in whooping cough. Noack remarks, that in some cases of whooping cough the *lobelia* appears to him to be even in the third stage (*stadium adynamicum*) of essential service.

It will be proper to add, to what has already been said, some cases of cures effected by the use of the *Lobelia inflata*.

*Asthma*.—Dr. M. Cutler narrates his own case as follows: "It has been my misfortune to be an asthmatic for about ten years. I have made trial of a great variety of the usual remedies with very little benefit. In several paroxysms I had found immediate relief, more frequently than from anything else, from the skunk-cabbage, (*Dracontium fatidum*, Lin., *Arum Americanum*, Catesby). The last summer I had the severest attack I ever experienced. It commenced early in August, and continued about eight weeks. Dr. Drury, of Marblehead, also an asthmatic, had made use of the Indian tobacco, by the advice of a friend, in a severe paroxysm early in the spring. It gave him immediate relief, and he has been entirely free from the complaint from that time. I had a tincture made of the fresh plant, and took care to have the spirit fully saturated, which I think is important. In a paroxysm, which perhaps was as severe as I ever experienced, the difficulty of breathing extreme, and after it had continued for a considerable time, I took a table-spoonful. In three or four minutes my breathing was as free as it ever was, but I felt no nausea at the stomach. In ten minutes I took another spoonful, which occasioned sickness. After ten minutes I took the third, which produced sensible effects upon the coats of the stomach, and a very little moderate puking, and a kind of prickly sensation through the whole system, even to the extremities of the fingers and toes. The urinary passage was perceptibly affected by producing a smarting sensation on passing urine, which was probably provoked by stimulus upon the bladder. But all these sensations very soon subsided, and vigour seemed to be restored to the constitution which I had not experienced for years. I have not since had a paroxysm, and only a few times some small symptoms of asthma. Besides the violent attacks, I had scarcely passed a night without more or less of it, and often so as not to be able to lie in bed. Since that time I have enjoyed as good health as, perhaps, before the first attack." He afterwards further remarks that "in all instances of which I have had information, it has produced immediate relief, but the effects have been different in different kinds of asthma, some patients have been severely puked with only a tea-spoonful, but in all cases some nausea seems to be necessary. The asthma with which I have been afflicted, I conceive to be of that kind which Dr. Brce, in his practical inquiries on disordered respiration, etc., calls the first species, 'a convulsive asthma from pulmonic irritation of effused serum.' My constitution has been free, I believe, from any other disorder, than what has been occasioned by an affection of the lungs, anxiety of the præcordia, and straitness of the breast, and other symptoms produced by that affection."

Dr. William P. C. Barton states, that he administered it to a domestic in his family, "who was distressingly affected with spasmodic asthma. She is a female of narrow and depressed thorax, and for years past has been subject to this complaint. During one of the paroxysms I directed her to take a tea-spoonful of the brandy tincture every two hours. After taking the second spoonful, she was immediately relieved. In a subsequent attack, the experiment was repeated, increasing the dose to a tea-spoonful every hour, with the same effect; the patient declaring that she never found such immediate, and entire relief, from any of the numerous medicines she had previously taken for this complaint. She complained of dizziness, nausea, and some debility after taking the second spoonful."

Dr. Alphons Neack, of Leipzig, narrates the following case.

*Asthma.* A lady in climacteric years, of bilious constitution, choleric temperament and great excitability, in a high degree hysterical, who had been married young, and since then been attacked from time to time by severe constrictive pains of the chest, uninterrupted hicough, a jerking out of sounds which resembled a disagreeable laughter, and distortion of the muscles of the face. The paroxysms, when less severe, consisted only of loud sighing, moaning, with hurried expiration; the abdominal muscles worked strongly, the hands were firmly pressed upon the breast, the countenance presented the expression of a painful smile, and the pulse, with the skin at the ordinary temperature, was small, oppressed and slow. After some five minutes, longer and less noisy expiration, and long drawn sighs occurred, the patient became able to speak, opened her eyes, complained of great thirst, severe pain in the breast, epigastrium, hypochondria and loins, and of great debility. After short pauses, new attacks supervened on each other for many hours. The paroxysms were awaited in a lying posture, with the head drawn back. Strong mental emotion and frequent social dissipation, especially through the whole night, brought on these paroxysms, which mostly appeared in the early morning hours, and then were not repeated for twenty-four hours. The habitual disorders of the patient consisted, moreover, in day-sleepiness, nightly sleeplessness, twitching during sleep, before going to sleep restlessness, heat in the hands and feet, which were at other times cold; shortness of breath from somewhat severe exertion of the body, pressing pain in the forehead, and frequent vomiting of water, with otherwise good digestion. In the earlier periods of her disease numerous medicines, from the so-called class of the volatile remedies, as musk, etc., also many mineral waters, were prescribed, but without success. I also had no cause to congratulate myself on my success with the many remedies I had employed, until I resolved to administer the lobelia. For a length of time I allowed her to take, evening and morning, a drop of the tincture on sugar, and during the attacks the same dose every quarter of an hour. The result was tolerably satisfactory, inasmuch as at times, the disease only gave intimations of approach, without coming to an outbreak, and also, when this happened they were both far less severe and of shorter duration, instead of the moaning, presenting only sighing. But this modification was all that the lobelia could effect, the disorder not yet being removed."

I proceed now to mention one of the many cases of asthmatic disease in which lobelia has been useful in my hands.

Case of a married lady, æt. 38 ann., the mother of several children. She had suffered since her childhood from dyspnoea, increased by any active exertion, by going up or down stairs, by exposure to cold, and eating very warm food. Pain in the left lumbar region of the abdomen (also from childhood). Within the last year, constant burning in the stomach and throat, with a sensation of dry-

ness in the latter, as also of a lump in the pit of the throat which impeded respiration and deglutition. Weakness and oppression in the epigastrium with other symptoms of gastric derangement. Urine of a deep red, depositing a copious red sediment. Lobelia inflata, 4|6 was given in the evening, and by next morning the sensation of a lump and burning in the throat, together with the dyspnoea, had greatly diminished, and in a few days entirely disappeared. The urine also became perfectly normal in appearance. She has continued well, without perceiving a trace of the asthmatic symptoms and pain in her left side, which she had experienced from childhood.

The symptoms which I have found most strongly to indicate the lobelia, are constant dyspnoea, which is increased by slight exertion, and aggravated so much by slight exposures to cold, as to form a kind of asthmatic paroxysm. A sensation of oppression and weakness at the epigastrium, extending upwards from thence into the breast, with or without pyrosis and cardialgia. A sensation of a lump or quantity of mucus, or of pressure, in the pit of the throat. A pain extending around the forehead from one temple to the other. Pain in the back about the lowest dorsal vertebra. Pain in the left side of the abdomen, immediately below the short ribs. High-coloured urine depositing a copious red sediment.

Since the preceding remarks were written, I have been induced, by the pathogenesis of the Lobelia inflata, to employ it in the following severe case of a disease, which, though generally termed bilious colic, might much more properly be called

*Gastralgia biliosa.* A robust man of 35 years of age, who had an intermittent fever suppressed about a week before by the employment of the sulphate of quinine, in grain doses frequently repeated, was attacked during the night with uneasiness of the stomach, which continuing to increase, he took, about 10 o'clock in the forenoon, a large dose of anti-bilious pills. In the evening the pain became excessively violent. It occurred in frequent paroxysms of most excruciating pain, chiefly in the region of the stomach, accompanied with the feeling of a heavy load, great nausea and a disposition to vomit. By pushing his finger down his throat, he was enabled to produce vomiting, and succeeded in bringing up some thick yellow bile. About 10 o'clock, I was called to see him; I found him bathed in a cold sweat, with great prostration of strength and very feeble pulse, I gave him a drop of the first centesimal dilution of the tincture of the Lobelia inflata in a little sugar. It was succeeded by a paroxysm even more violent than any of the preceding. In his agony he made the same efforts to accomplish vomiting as before, but succeeded in bringing up but little. As the pain in the stomach began to abate, he complained of violent pain in the top of the right shoulder, and shortly afterwards of pain in the back, from about the first to the fourth dorsal vertebra. This pain lasted for some minutes. He then lay down and appeared to fall into a light sleep, during which the hands became warmer, the skin dryer, and the pulse stronger. In about half an hour he had another paroxysm; the pain which was not half so severe as it had been before, was felt lower in the abdomen, and was accompanied by rumbling of flatus. Soon after this I left him, feeling very confident that the disease was subdued. As he was very anxious about the pills not having operated, I allowed him, after he had rested a short time, an enema of molasses and water, which was followed by a couple of stools in the course of the night. The next day I found him sitting up, but quite weak, though entirely free from pain, of which he had but little after the second paroxysm, which followed the administration of the lobelia. In this case, the pathogenetic operation of the lobelia in the production of the pain in the shoulder and back, (which he had not felt previously

to its employment,) led me to anticipate the result of its action, and all happened afterwards as I expected. The power of this remedy to produce those identical symptoms I knew, and when the patient complained of them, it was plain to me that the remedy was strongly operating upon the system, and that on this ground I must view the increased violence of the paroxysm as a homœopathic aggravation, which must be followed by cure. The improvement of the condition after this paroxysm, so different from that in which I found him, confirmed these views, which were still further corroborated by the mildness of the next paroxysm which also proved to be the last. Some persons will no doubt attribute the cure to the enema, which would aid in the operation of the purgative pills taken in the morning. But I object to this view of the case, that the cure was almost complete before the bowels were open; in fact, that the bowels were opened in consequence of the cure, instead of the cure being a consequence of such opening.

## SYMPTOMS.

**Mind and Disposition.**—Sobbing like a child.—Mind uneasy. Desponding and exhausting.—Apprehension of death and difficulty of breathing.

**Head.**—*Vertigo*, with nausea. Vertigo, with pain in the head, and trembling agitation of the whole body. Dull feeling in the head after dinner, increased in the evening to violent pressive pain, with considerable heat of the face.—Pain in the head. Headache, with slight giddiness, occasionally transient shooting in the temples. *Dull feeling in the occiput* and forehead. Pressive pain in the occiput, one while accompanied by heat, at another relieved by removing the covering from the head. Pain in the occiput. Dull heavy pain, passing round the forehead from one temple to the other, on a line immediately above the eye-brows. (In numerous cases, both of pathogenesis and cure; the latter often preceded by homœopathic aggravation, of several days' continuance.) Pains through the head in sudden shocks.—*Outward pressing* in both temples, at the same time a dull pressing in the flesh just above the left elbow, and the hand feels as if paralyzed.—Pain in the parietal protuberance on the left side of the head.—Heaviness in the head, and uneasiness in the back.—*Chilliness* of the left side of the head, with a feeling as if the hair would rise on end.

**Eyes.**—Pain and soreness in the right eye.—Pressing pain in the eyeballs, most in the upper parts.—Severe and frequent *itching* in the angles of the eyelids. Itching in the angles of the lids of the left eye. Smarting of the inside of the eyelids.

**Ear.**—Aching in the left ear.—*Shooting pain*, extending into the left ear from a painful spot in the throat, situated about an inch to the left of the larynx, and on a line with its lowest cartilage.

**Face.**—Heat of the face.—*Perspiration* of the face, accompanying the nausea.—A peculiar *drawing feeling* extending from the right side of the mouth to the right eye.—A *chilly feeling* in the left cheek, extending to the ear. Slight drawing feelings, at one time in the left, at another in the right side of the lower jaw.

**Teeth.**—Dull *pressing pain* in the left molar teeth and temple.

**Mouth.**—Disagreeable taste in the mouth, somewhat similar to that of a solution of corrosive sublimate. *Pungent taste* in the mouth.—*Flow* of clammy saliva. Flow of saliva in the mouth.—Soreness of the throat. Dryness of the mouth.

**Throat.**—*Burning in the throat*.—*Dryness of the fauces*, frequent spitting. Dryness of the throat.—Tough mucus in the fauces, causing frequent hawking.

Prickling in the throat. Burning prickling in the throat, increased secretion of viscid saliva, nausea and eructations. *Prickling in the throat*, eructation and burning sensation rising from the stomach. Dryness and prickling in the throat, not diminished by drinking, after dinner. Unpleasant sensation in the upper and back part of the pharynx, as from swallowing saliva during smoking.—Sensation as if the œsophagus contracted itself from below upwards.—Feeling of pressure, as from a foreign body in the whole course of the œsophagus, down which it proceeds with a vermicular motion, but most strongly felt in a spot just below the larynx and in the epigastrium.—Drawing pain in the right side of the throat, which extends upwards to the ear. \**Sensation of a lump in the pit of the throat* impeding deglutition. °Sensation in the œsophagus as if something were rising in it which prevents the descent of the food.

**Appetite and Gastric Symptoms.**—\**Loss of appetite.*—Acrid, burning taste in the mouth. °Bitter taste, with coated tongue and thirst.—Hiccough. Slight, *frequent flatulent eructation, with flow of water in the mouth.* °Frequent gulping up of a burning, sour fluid. °Acidity in the stomach, with contractive feeling in the pit of the stomach. Flatulent eructation, with sensation of acidity and heat of stomach. Frequent violent hiccoughs, following each other quickly from twenty-four to thirty times, with abundant flow of saliva in the mouth. Eructation of an acid fluid with burning sensation. \**Incessant violent nausea*, —with shivering and shaking of the upper part of the body. An indescribable feeling about the stomach, compounded of nausea, pain, heat, oppression and excessive uneasiness, accompanying the affection of the respiratory organs. Nausea, great uneasiness and vomiting. Nausea with great inclination to vomit. Extreme nausea, with profuse perspiration, copious vomiting, great prostration of strength, but good appetite shortly afterwards. Vomiting with cold perspiration of the face. °Vomiting of food, particularly after eating warm.—°*Dyspepsia.*—Heartburn and running of water from the mouth. \*Heartburn of long duration.

**Stomach.**—\**Feeling of weakness of the stomach* °or in the pit of the stomach, extending through the whole chest. \*Sensation of excessive weakness at the præcordium extending upwards into the chest, and downwards as far as the umbilicus. Feeling of pressure in the stomach, and extending to the back, as from a plug, in frequent paroxysms. Feeling of weight in the stomach. Sensation of oppression at the epigastrium, as if the stomach were too full, worse on pressure. Burning pain in the stomach towards the back, as if the part of the stomach nearest the spine were inflamed.—°Pressure in the pit of the stomach, before breakfast and after eating, worse in the evening, with bilious vomiting, oppression and anguish of the chest, and pain in the small of the back. Violent painful constriction in the region of the cardia.—°Spasm of the stomach, during the catamenia,? in arthritic patients,? in drunkards,? or with bilious complaints. Warmth in the stomach. Burning in the stomach.

**Abdomen.**—Pain in the right hypochondrium. Distention of the abdomen, with shortness of breath. Flatulent rumbling in the abdomen, with pain. Slight pain, sensation of motion in the abdomen, and escape of offensive flatus. Pain in the abdomen, always worse after eating. Dull pain in the abdomen. Some pain in the lower part of the abdomen. Sensation in the abdomen, as if diarrhœa were about to occur.

**Stool.**—Pappy stools. Whitish, soft stools. Scraping sensation as from the passage of a rough, hard body, during stool. Discharge of black blood, after stool. \*Copious hemorrhage from the hemorrhoidal vessels.

**Urine.**—Desire to urinate and increased secretion of urine. Increased secretion of urine. Diminished secretion of urine. Urine with a loose cloudy sedi-

ment. Urine easily decomposed, and depositing a pink sediment, with a small brown crystal. \*Urine of a deep red colour, depositing a copious red sediment. Sticking pain in the region of the right kidney. Pain in the loins.

**Sexual Organs.**—Uterine hemorrhage.? Pains in the sacrum. \*Violent pain in the sacrum, with fever, etc., supervening suppression of the menses during their flow. Aching pain in the urethra. Smarting of the prepuce. Troublesome feeling of weight in the genitals.

**Larynx and Cough.**—Sneezing, accompanying gaping and flatulent eructation.—Titillation in the larynx, with frequent, short, dry cough.—°*Sensation of a foreign body in the throat, impeding the breathing and swallowing.*

**Chest.**—A general tightness of the chest, with short and somewhat laborious breathing; discovered that he had a disposition involuntarily to keep his mouth open to breathe. Oppression of the chest. A tightness of the breast, with heat in the forehead. Sensation of fulness in the chest, breathing somewhat short and superficial, twenty-four respirations in a minute. Oppression causing a deep breath to be taken. Deep inspiration causes a feeling of comfort, from relieving the pressive pain in the epigastrium. Oppression of breathing, acceleration of breathing, with the feeling as if it were insufficient, and therefore required from time to time a deeper inspiration. Abdominal respiration less than usual. Inclination to sigh, deep inspiration. Short inspiration, slow expiration. Great difficulty of holding the breath. A peculiar feeling, between tickling and smarting in the larynx, like irritation to cough, which, however, occurred but seldom, and then was accompanied by a feeling of oppression. Slight tickling, on taking a deep breath, under the lower part of the sternum. \*Chronic dyspnoea, with the sensation of a lump in the pit of the throat, immediately above the sternum, impeding respiration and deglutition. \**Paroxysmal asthma.*—Pains in the chest, increased by deep inspiration. Pain in the breast. Pains in the chest after walking after dinner.—Burning feeling in the breast, passing upwards.—Slight deep-seated pain in the region of the heart.—Pain under the middle of the sternum.—Burning pain in a small spot under the right breast, near the epigastrium; on a quick movement of the body, deep breathing, sneezing, and feeling as if something had fallen out of its place, which went back again with great pain; the same pain in the epigastrium and left side.—*Violent boring pain* through the back, under the right shoulder, extending from the painful place through the body, becoming more violent by motion; the painful place as if palsied. Pressing pain at the left side of the lower part of the sternum. Feeling of drawing in the left breast, from the nipple to the axilla.

**Back.**—°Burning and cutting in the lower part of the spine.—Pain about the third, fourth, and fifth dorsal vertebræ. Rheumatic pains between the scapulæ. Slight drawing pain between the scapulæ; previously slight muscular twitches over the ribs of the left side near the spine.

**Upper Extremities.**—Slight *rheumatic feeling* in the right shoulder-joint.—Pain, only when touched, in the muscles of the right arm, in a space of the width of the hand, the pain in the shoulder gone.—*Fine crawling stitches* on the inside of the right deltoid muscle.—Paralytic feeling in the left arm. Pain in the right elbow-joint. Severe rheumatic pain in the right elbow-joint.

**Lower Extremities.**—Pressing pain on the exterior, middle part of the thigh, and at the same time constrictive feeling in the head. \*Inflammatory rheumatism of the right knee, with swelling and extreme pain.—Violent spasmodic pain in the left posterior iliac region, scarcely allowing touch or motion.—Violent tearing pain in the fibula, from below up to the knee-joint. Pain in the left leg, whilst sitting. A feeling about the knees of pain and stiffness, as from fatigue.—Weariness in the limbs.—*Cramp-like feelings* in the left gas-

trocnemius. Cramp in the calf of the leg, on awaking from a restless sleep. Cramp-like feeling in the hollow of the left foot.—*Prickling sensation* through the whole body, extending even to the fingers and toes. The action of Lobelia is felt in the fingers and toes. Frequent yawning and stretching.

**General Symptoms.**—*Shivering* through the whole body.—Feeling of *weariness*. Unusual weariness.

**Fever.**—Heat, and *inclination to perspiration*, particularly in the face.—*Chills* down the back, with heat in the stomach.—\*Intermittent fever. (See Clinical Observations.)—*Pulse* more frequent, and weaker than usual, in the evening. Pulse slower than usual. Pulse of the usual frequency, but smaller and weaker.—Prostration of strength.

**Sleep.**—Restless sleep, with many dreams, also anxious dreams.—*Sad dreams*. Sleep disturbed at night by numerous dreams and frequent wakings.

## 155. LUPULUS.

LUP.—Common hop.—See ALL. HOM. ZEIT., X.

ANTIDOTE.—Coffec.?

### CLINICAL OBSERVATIONS.

*Noack* and *Trinks* propose hop in the following diseases, which are apt to be induced by the excessive use of beer containing a large quantity of hop. Imbecility, delirium tremens, paralysis of the brain, nervous apoplexy, vertigo, intoxication followed by violent headache, as if the brain would be torn and dashed to pieces, chronic headache, organic diseases of the liver, obesity, etc.—Ascites and hydrothorax. Chronic and organic affections of the heart, emaciation of the extremities.

### SYMPTOMS.

**Head.**—Vertigo.—Stupefaction.—Heat in the head and face, with stupid and confused feeling in the head, and soon after pinching in the abdomen.—Dizzy dull headache.—Increased determination of blood to the head and eyes. Dull pressure in the forehead, as after intoxication.—Drawing pain in the head.

**Eyes.**—Illusion of sight (a dish of fish is mistaken for a plateful of mushrooms).

**Digestive Apparatus.**—Eructations tasting of hop. Eructations increasing to nausea, accompanied with a dizzy and confused feeling in the head, after which a colic is experienced, with turning in the stomach, and sensation as of strong hunger without appetite.—Eructations tasting of hop, and increased sensation of warmth in the stomach, for one hour.—Eructations with nausea and slight colic for one hour, which is shortly after succeeded by turning in the stomach, heat in the head, *dizziness* and dull headache, without diminution of appetite.—Weakness of digestion.—Turning in the stomach, in paroxysms of one minute, and at intervals of a quarter of an hour, with sensation of *great hunger*, but without appetite, and with greater sensation of warmth in the stomach than usual.—Dull pinching in the abdomen, with nausea after the turning in the stomach had diminished. Fermentation and dull sensation in the abdomen for some time.—Violent urging to stool, with softer stools than usual.

**Urine.**—Increased secretion of urine (from eating the sprouts).—Determination of blood to the uterus.—Burning in the urethra on urinating.

**Sleep.**—Great *drowsiness*.—Falls asleep in the evening and continues to sleep next day, with occasional interruptions, during which he complains of

pains in the forehead.—*Sopor*.—The pulse becomes slower (falls from 96 to 60 in twenty-four hours).

**Skin.**—Itching painful sensation as from nettles, in the chapped hands, and also in the face when rubbed with the hands frequently.†—Swollen face which is covered with an eruption, and swelling of the eyes.—Vesicles on the face and hands, increasing in size, and bursting, first on the hands, then in the face, after which all the symptoms (see "*Sleep and Eyes*," ) particularly the swelling of the face, abate, and desquamation takes place.

**General Symptoms.**—*Drawing and twitching in almost every muscle, now here, then there*, mostly between the shoulders and in the muscles of the arms and hands, in short paroxysms, as in rheumatism.—After taking coffee all the symptoms disappear, except an unusual burning in the urethra on urinating.

## 156. LYCOPODII POLLEN.

LYC.—*Lycopodium clavatum*.—See HAHNEMANN'S Chronic Diseases, IV.—

*Duration of Action*: from 40 to 50 days.

COMPARE WITH—Ambr., Am., Am. mur., Ars., Bar., Bry., Calc., Canth., Caps., Carb. v., Caust., Cham., Chin., Cic., Con. m., Graph., Ipec., Led. p., Mag., Magnet. p. arct., Mag. mur., Mang., Merc., Mur. ac., Natr., Natr. mur., Nitr. ac., Nux v., Petrol., Plat., Phosph., Phosph. ac., Puls., Rhod., Rhus, Sep., Sil., Spig., Staph., Sulph., Thuj., Verat.—Lyc. is frequently suitable after Calc., Sil.; after Lyc. are frequently suitable: Graph., Led. p., Phosph., Puls., Sil.

**ANTIDOTES.**—*Camph.* generally moderates the violent effects of Lyc.; *Puls.* subdues the violent feverish feelings from Lyc.; the ill-humour, readiness to find fault, diffidence, tendency to reproach, etc., are subdued by *Caust.* A cup of coffee prevents and completely neutralizes the action of Lyc.

### CLINICAL OBSERVATIONS.

This drug has an especial action upon the sensorium, the splanchnic nerves and the organs over which they are distributed, the intestinal canal, the liver, the uropoetic and sexual organs of both sexes, the lungs, nervous and fibrous tissues, the skin, and perhaps also the periosteum and the bones.

*Lycopodium* is especially adapted to individuals of a soft, mild, melancholy disposition, to lymphatic and leuco-phlegmatic constitutions, and when they are moreover subject to mucous discharges, coryza, catarrh, etc.—Diseases with aggravation of the symptoms in the afternoon and in a room, amelioration and mitigation of the same in the open air.—Great sensitiveness to open and cold air.—Typical, periodical diseases.—Diseases with paroxysms of pain, causing great uneasiness, walking about and weeping.—Diseases with deficiency of animal heat as a prevailing symptom.—Diseases based upon obstructions, stases, and plethora of the portal system.—Diseases with inclination to dropsy and affections of the urinary organs.—Bad consequences from vexation: great weakness unto falling, palpitation of the heart, trembling, heaviness in the limbs, as if they were made of lead.—Diseases from dyscrasia.—Scrophulosis. Scrofula of the bones.—Rickets.—Secondary syphilis.—Condylomata.—Liability to infection after being cured of syphilis.—Periostitis and osteitis with nightly pains,

† From applying the hop externally, in the case of a girl of 14 years, who plunged her chapped hands into the hop-box for the purpose of warming them. See Lond. Med. Gaz., Vol. XV.

even when brought on by mercury. Spina ventosa. Scrofulous caries. Mercurial caries.—Fistulous ulcers in the bones.—Gout.—Arthritic affections, even nodosities.—Rheumatic fevers.—Drawing and tearing in the limbs, in periodical attacks, when the weather is rainy and stormy.—*Great liability to cold.*—Parts are easily strained.—Stiffness in the joints and limbs, with numbness and insensibility.—Paralysis.—Uneasiness in the body.—Orgasm of the blood.—Spasmodic conditions: convulsions in alternate parts; involuntary turning and twisting of the whole body.—*Spasms of the muscles.*—Attacks of spasmodic extension and contraction of the limbs and of single muscles, without pain and with entire consciousness.—Contraction of the fingers and toes.—Cramp in the fingers and calves.—Epilepsy.—Rhagades.—Itching and painful little nodosities on the occiput, os sacrum, and nates.—Scabies vesicularis humida.—Large, red spots on the epigastrium, pit of the stomach and joint of the thumb, itching and burning. Hepatic spots.—Impetigo figurata.—Lichen agrius.—Freckles.—Urticaria febrilis chronica.—Psoriasis.—Psoriasis simplex.—Psoriasis palmaris.—Lupus vorax.—Herpes; small, herpetic, itching spots, itching spots on both sides of the neck and on the back.—Violently itching herpes. Insensible, yellow-brown, shrivelled herpes.—*Humid suppurating herpes, full of rhagades and covered with thick crusts.*—Herpes squamosus.—Herpes ecthyma.—The herpes becomes worse when Lycop. has been given improperly; it becomes ichorous and spreading; in this case Sepia affords relief.—Periodically-recurring boils on the nates, scapulæ, arms, etc. Boils in and around the axilla.—Furuncles after typhus.—Intertrigo of infants and full-grown persons. Warts.—Chilblains.—Old, malignant ulcers on the feet, with hard, shining, elevated edges, copious, watery, ichorous, extremely fetid pus, blue-red, hard, hot, painful areola, big-swollen, shining, red leg and foot, and tearing, lancinating pains, increased at night and by bad weather.—Phagedenic ulcers.—Salt rheum.—Dropsical conditions.—Dropsical conditions with œdema of the feet and diminished secretion of urine.—Chlorosis.—Chlorotic colour of the skin.—Intermittent fevers.—Intermittent fevers with constipation.—Quotidian and tertian fevers.—Consumptive fever with viscid night-sweats.—*Nervous fevers*, characterized by ill-humour, when waking, by coryza, screaming, improper manners and constipation.—*Exhausting night-sweats.*—Hysteria and hypochondria.—Melancholy.—*Absence of mind.*—Vertigo, with the loss of thoughts, confused talking, rheumatic pains in the face, teeth, back, small of the back, and limbs. Headache from vexation, with great uneasiness and faintishness.—*Nervous, chronic headache.*—Migrim. Hemicrania neuralgia.—Rheumatic headache. The hair turns white.—Falling off of the hair, after a heavy illness during confinement.—Pityriasis; scald-head.—Tinea capitis favosa.—Eruptions on the head, with violent suppuration, covered with coherent, thick crusts, forming one mass with the hair, violently itching, with swelling of the glands in the neck and nape of the neck, humid tinea behind the ears and pustules in the nape of the neck. Plica polonica.—Spasmodic twitchings and jerkings of the eyelids.—Herdeoli.—Inflammation of the eyelids, with swelling and redness of the same; profuse secretion of acrid tears and mucus; nightly agglutination of the eyelids and canthi.—Inflammations of the eyelids. Ophthalmia neonatorum.—Catarrhal rheumatic, and scrofulous ophthalmia.—Arthritic ophthalmia, with formation of pannus. Fungus medullaris corneæ.—Synecchia anterior. Weakness of sight. Obscuration of the crystalline lens with amenorrhœa. Cataract?—Musæ volitantes. Amaurosis.—Purulent otorrhœa, with hardness of hearing and humid eruption on the head.—Caries of the ossicula aurium, and of the internal ear, after scarlatina.—*Chronic wheezing in both ears, with diminution of hearing, in the case of a woman, who had suffered with it for 5 years past.* Scrofulous, mercurial ozæna. Inflammation and suppuration of the frontal cavities and the antrum

Highmori.—Catarrhal inflammations of the Schneiderian membrane, of the mucous membrane of the frontal cavities, with tearing pains in the head and secretion of lemon-yellow mucus.—Chronic bleorrhœa of the Schneiderian membrane. Polypi in the nose.—Wretched, sunken, small, pale countenance.—Blue margins around the eyes, with clay-coloured countenance, deep wrinkles, and blue lips. Circumscribed redness of the cheeks. Contractive and tearing pains in the face, cheek and bones of the face.—Spasmodic distortion of the muscles of the face. Corrosive, biting, and stinging pains in the right half of the face. Nervous prosopalgia.—Rheumatic swelling of the cheek and face.—Itching of the face.—*Itching, suppurating eruptions in the face, covered with elevated crusts.* Pimples in the face.—Unclean skin of the face. Itching herpes near the nose.—Scaly herpes in the face and corners of the mouth.—Herpes farinosus in the face.—Herpes furfuraceus, with a yellow base.—Crusta lactea.—Crusta serpigiosa.—Pale, bluish lips.—Spasmodic movements of the lips and corners of the mouth, first distensive, then contractive.—Swelling of the lips.—Sore and ulcerative pain of the corners of the mouth.—Eruption around the mouth.—Ulcers in the vermillion border of the lower lip. Cancer of the lips.—Itching pimples on the chin. Syecosis menti.—Lockjaw.—Spasmodic movement of the lower jaw.—Swelling of the submaxillary glands, with a boring pain.—Toothache, with swelling of the cheeks.—Drawing, stinging, *grumbling*, boring, *burrowing*, beating, throbbing pains in sound and hollow teeth.—Pains in the teeth, as if there were subcutaneous ulceration, or as if they were dashed to pieces, with or without swelling of the cheek and gums.—Looseness and elongation of the teeth.—The teeth become yellow.—Swelling of the gums.—Fistula dentalis.—Bleeding of the gums.—Fetid odour from the mouth.—Ptyalism.—Spasmodic movements of the tongue.—Heaviness of the tongue.—Soreness and rawness of the tongue. Vesicles on the tongue.—Aphthæ.—Coated tongue.—Exudations of the mouth and fauces.—Chronic inflammation, and induration of the amygdalæ.—Ulceration of the tonsils.—Angina gangrenosa with stupor, in scarlatina.—Chancre-like ulcers on the tonsils and in the pharynx, also from abuse of mercury.—Syphilitic and non-syphilitic ulcers of the palate and the tonsils.—Troublesome feeling of dryness, and actual dryness of the throat.—Syphilitic herpes in mouth and fauces.—Syphilitic affections of the throat—Bitter, sour, slimy taste.—Loss of taste.—Want of appetite.—Desire to eat.—Canine hunger.—Gastric affections.—Difficult, slow digestion.—Violent, empty, and sour eructations.—Heartburn.—Waterbrash.—Vomiting of food and bile.—Chronic vomiting.—Chronic gastritis.—Gastrodynia; enterodynia.—Chronic affections of the stomach and abdomen.—Pressure of the stomach. Contractive spasm of the stomach. Spasm of the stomach and abdomen.—Cancer of the stomach.—Chronic inflammation of the liver and spleen.—Chronic irritation of the mucous membrane of the intestines.—Peritonitis.—Cutting, pinching, drawing, constrictive pains in the abdomen; also after a cold.—Atrophia mesenterica infantum.—Spasms in the abdomen.—Flatulence.—Flatulent colic, with cold feet.—Ascites.—Inguinal hernia.—Incarcerated hernia.—Swelling of the inguinal glands.—Constipation.—Dysentery.—Prolapsus recti.—Hemorrhage from the rectum. Protrusion of the varices of the rectum, with itching, aching and burning pains in the rectum and anus.—Hemorrhoidal affections.—Herpes at the anus.—Hemorrhage from the kidneys.—*Diseases of the urinary organs.*—It effects the discharge of gravel and stone, and appears to remove the disposition to their formation.—Colica renalis from gravel.—Ischury, dysury, and strangury.—Retention of urine in children.—Polypus of the bladder.—White fig-warts, fissured at the top and on stems.—Suppuration of the kidneys.—Gravel.—Hematuria, with obstinate constipation.—Itching, cutting, and burning in the urethra.—Blennorrhœa from the urethra.—Second-

ary gonorrhœa.—Suppurating ulcers on the glans and prepuce, not syphilitic, in conjunction with hemorrhoidal herpes.—Soreness between the scrotum and thigh.—Impotence, with pollutions brought on by onanism.—Impotence caused by the vapour of chlorine.—*Exhausting and excessive pollutions*.—Chronic dryness of the vagina.—Suppressed pollutions.—Promotes fecundity. Prolapsus uteri.—Inclination to miscarriage, with varices of the pudendum.—Nodosities and indurations in the mammaræ.—*Soreness of the nipples*, or corrosive scurf on the nipples.—*Intertrigo neonatorum*.—Constipation of new-born children.—Weak, hollow voice.—Hoarseness in croup.—Rattling and raling in the chest. Pneumonia.—Neglected pneumonia, threatening to become fatal. Chronic catarrh.—Influenza.—Chronic, dry cough.—Cough, with bloody expectoration.—Cough, with discharge of salt mucus, or green purulent substances.—Incipient phthisis tuberculosa.—Hæmoptysis.—Cough, with yellow purulent discharge.—Cough, with expectoration of mucus. Pituitous phthisis.—Phthisis purulenta, cavernosa.—Spasm of the chest. Asthmatic affections. Palpitation of the heart.—Aneurism.—Aneurism of the external iliac artery.—Painful eruption on the chest.—Hepatic spots on the chest. Spasmodic movements of the head: involuntary nodding and shaking, stretching it forwards and backwards; extension and contraction of the muscles of the neck.—Painful eruption on the neck.—Large nodosities, formed of red pimples, around the neck, itching violently.—Swelling of the cervical glands.—*Struma*.—Caput obstipum.—Neck spasmodically drawn to one side, with spasmodic distortion of the facial muscles.—Drawing and stiffness of the neck.—Rheumatic, *tearing* pains in the upper limbs.—Spasmodic jerking upwards, at times of one, at times of the other shoulder, and of the arms, during the siesta.—Spasmodic shaking of the hands.—Cramp of the fingers.—The arms go to sleep and feel paralytic.—Chiragra.—Dryness of the skin of the hands.—Sweaty palms of the hands.—Rheumatic, *tearing*, drawing, and darting pains in the lower limbs.—Ischias?—Phlegmasia alba dolens?—Gonagra?—Stiffness of the knee.—White swelling of the knee.—The lower limbs are involuntarily spread asunder, and then pressed against one another.—Cramp of the calves and toes.—Spasmodic contraction of the fingers and toes.—Podagra.—Varices.—Oedema of the feet.—*Icy coldness of the feet*.—Sweaty feet until they become sore.—Restores a suppressed sweat of the feet.—Corns.

#### SYMPTOMS.

**Mind and Disposition.**—Hypochondriac, tormenting mood; he feels unhappy. Desponding, grieving mood. The child loses its cheerfulness, becomes silent and discouraged. Desires to be alone. *Dread of men*. When men approach her, she feels a sort of anguish in the pit of the stomach. She avoids the society of her own children. \*Melancholy, in the evening. Want of cheerfulness, sad thoughts. Sad mood: she had to weep the whole day, and found it impossible to calm herself, without any particular cause. Sad, desponding, finally weeping mood. Extremely sad and low-spirited. *Weeping mood*, with chilliness. He weeps first on account of the past, and then on account of future evils. *Great oppressive anxiety in the pit of the stomach, from vexation*. *Great anxiousness, apparently in the pit of the stomach*, without any particular thoughts. Internal anguish, in the forenoon, and internal chilliness, resembling an internal trembling. *Anxiousness, in the evening*, her sight is half confused. Anxious, *fearful*, timid. She is very much afraid of phantoms, crowding upon her fancy in the evening, with weeping mood during the day. In the evening, when attempting to open a door which is rather tight, in the dark, he is seized by fear. In the evening, when entering the room, he imagines he sees somebody, which alarms him; also in the day-time, he sometimes imagines he hears

somebody in the room. \**She is afraid of being alone.* Internal uneasiness. Impatience. Discouraged and faint. Want of confidence in his strength. *Pusillanimous, sad, fanciful. Distrustful, suspicious,* inclining to find fault. Despairing and disconsolate. °Internal uneasiness. °Nervousness.—\**Extremely sensitive,* -she weeps when people thank her for a kindness. Extremely irritable, inclining to start, and out of humour. *Great tendency to start.* Every noise hurts her. *Dissatisfied.* Very irritable, and inclining to be melancholy. *Ill humour.* Out of humour and desponding. A number of past disagreeable occurrences crowd upon the mind, even at night, when waking, they put her out of humour. He finds it difficult to conceal his internal obstinacy and vexed mood. Excessive irritability, with apprehensiveness. He smiles without being cheerful, it is mere caprice. The child becomes less docile, although not ill-humoured. Insolent, self-willed, \**headstrong,* vehement, angry.—*Vehement mood,* without ill-humour, (in a few hours). She cannot bear the slightest contradiction, and is immediately beside herself with ill-humour. *Vehement rage,* partly against herself, partly against others. He disputes with absent persons. *Frenzy and madness,* breaking forth in envy, reproaches, pretensions, and commanding spirit. She seeks disputes as if she were mad, scolds one in the most vehement manner, and strikes the person whom she scolds.—*Ennui.*—The mind is insensible to external impressions. Irritated mood, but indifferent to external impressions. *Extremely indifferent.*—Want of desire to talk.—Inclines at the same time to weep and laugh. Anxiousness, followed by great desire to laugh at trifles, for some hours, after which she weeps for half an hour without knowing why.—*Excessively merry,* with vertigo. Wantonly merry. She laughs when one looks at her, while telling anything serious.—Involuntary whistling and humming with the lips.—Excessive mirth, as if he were obliged to distort the muscles of the face, succeeded by want of cheerfulness and by impatience.

**Sensorium.**—Weakness of memory. Acting as if he were absent. Living as if beside one's-self, as at the commencement of a fever. When thinking, his head feels empty, he is unable to fix one idea. He is unable to do anything, or to think, he spends his time in doing insignificant things, without being able to do that which he has to do. \**He is unable to retain his ideas,* it is difficult for him to express himself and to find suitable words, especially in the evening. She is unable to conceive an idea, owing to dulness of the head with internal tension. His thoughts feel as if they were arrested, the mind feels clumsy and rigid, there is dulness without gloominess. He is capable of talking logically about higher, abstract things, but he becomes confused when talking about common-place things: for instance, he says plums instead of pears. *Using wrong words and syllables.* He is unable to read, because he mistakes and confounds the letters; when seeing them, he is able to copy them, but he does not recollect their meaning; he knows, for instance, that Z is the last letter in the alphabet, but he has forgotten its name; he is able to write anything he chooses; he writes the proper letters, but he is unable to read that which he has written.—°Complaints arising from mental labour. Dulness of the head, as if he could not collect his senses. Dulness of the head, as if from deranged stomach. Dulness of the head, with pressure over and in the eyes, in the evening. Gloominess of the head, with dull pressure in the fore part of the head, as if a cold had been repelled, with dryness of the lips and mouth, and with thirst.—*Dizzy,* early in the morning, as if one were intoxicated. Dizziness, she could not tell where she was. Dizziness, indolence and relaxation of her limbs, the whole of the second day. Stupefaction towards evening, with heat of the temples and ears. She felt as if everything before her would pass away. Reeling sensation, early in the morning, and sensation of heaviness in the eyes. As

soon as she sees anything turn about, she feels as if the contents of her body were likewise turning, for one hour. Vertigo like dulness of the head, in the forenoon, with sensation as if her eyes were deep in the orbits; thinking and comprehending are likewise very difficult. Vertigo, in the forenoon, everything turned with her, accompanied by violent nausea. Vertigo when rising from a seat. Vertigo when drinking. Vertigo when stooping. Vertigo in a hot room. Vertigo, early in the morning, while getting out of bed and afterwards, so that he staggered to and fro. °Incipient paralysis of the brain.

**Head.**—Simple headache, for several days, more violent when at rest, less when walking in the open air. Headache, especially when shaking and turning the head. Violent headache, at night, as if caused by a wrong position. Headache on the left side, apparently on the outside, reaching also to the ear and teeth, especially violent in the evening, and becoming insupportable from writing and reading, or by the least pressure on the temples. \*Headache from chagrin. °Headache with faintishness and great uneasiness. *Headache over the eyes, immediately after breakfast*, (the first two days). Headache between both eyes. Pain in both temples, at every step, not when at rest. She feels every step which she makes, in her head, at every motion she feels a sort of concussion in her brain. Dull pain in the forehead, as if the head were being compressed from both sides. °*Rheumatic headache. Pressure as from a nail*, in the middle over the hairy part of the forehead. Pressure in the forehead and down the nose, early in the morning. Pressure, at times in the right, at times in the left temple. Pressure in the right half of the occiput, towards the ear. *Pressure in the nape of the neck, at a small spot*, also for many days. Paralytic aching in the temple. Aching in the top of the head, as if a cold would come on. Aching in the whole head, in the afternoon, especially when stooping. Aching, with contractive sensation in the head, the former prevailing early in the morning, when rising. °Tensive-aching pain in the head. The headache increases when lying down.—Headache, as if the bones of the skull were being driven asunder, and as if the brain were vacillating to and fro, especially when walking, going up stairs, and raising one's-self after stooping. Sense as of being pressed asunder, in the top of the head, with nausea, as if she would throw up everything, with trembling of the limbs. *Heaviness in the head. Heaviness of the occiput. Dull feeling of heaviness in the occiput, with confused pain in the forehead, increased by motion. Pain in the head, at night, shifting about and making the head feel heavy; it felt so painful that she did not know where to place it, in order to obtain some rest, the whole night. Pinching pain about the head, behind the ear.*—\**Tearing in the occiput. Tearing in (about) the head, for 48 hours, ceasing after the appearance of a painless swelling of the cheeks. Tearing headache, in the evening, on the top and on both sides of the head. Tearing, in various places, in (about) the head, afterwards in other parts of the body. Tearing in the head. Tearings through the left side of the head as far as the ear. °Tearing in the forehead to and fro, every afternoon. Sharp radiating tearing in and above the left frontal eminence, towards the left side. Radiating tearing in the right half of the head, commencing at the temple. Tearing with pressure in the right half of the forehead, extending to the root of the nose, and the right eyebrow, apparently in the bone. Tearing with pressure in (about) the left side of the occiput, at a small place near the nape of the neck. Aching, with tearing close over the eyes and into them, early in the morning. Tearing and lancinating headache, at night, over the right eye, in the temple, and about the occiput. °Tearing on the top of the head, in the forehead, temples, eyes and nose, down to a tooth, obliging him to lie down. Sticking headache in the region of the eye. Sticking pain in the occiput.*

Stitches in the forehead, from within outwards, coming with a jerk, frequently during the day. Violent sticking pain in the left side of the forehead. Tearing headache from afternoon till evening, toothache in the subsequent night. Single stitches in the head, worst at night, causing one to start. Stitches and pressure in the head (in a few hours). Stitches and pressure in the top of the head, at night. Sticking headache with pressing and pushing in the eyes, with violent fluent coryza.—*Sore pain* in the forehead, almost every day, aggravated by stooping.—*Violent shock* from the back to the top of the head, which obliged him to hold his head, when sitting, (after a copious meal). Jerking sensation in the head, with sensation as if something were balancing to and fro in the head. Darting headache, apparently in the bones of the skull.—*Throbbing pain* near the orbits, from within outwards. *Throbbing in the head*, in the evening, after lying down. Throbbing headache, after every attack of cough. Throbbing in the brain, when leaning the head backwards, in the day. Violent beating in the head, resembling a hacking (with sour eructations). Violent throbbing in the forepart of the head, in the evening, afterwards extending over the occiput, down to the nape of the neck, with a feeling of tension. Throbbing in the top of the head. Continual, throbbing headache, in the centre of the forehead, in the morning until evening. Beating and pressure in the occiput. Pulsations and pressure in the head, when reading, while sitting. Beating in the brain, with heat about the head.—*\*Rush of blood to the head, early in the morning, on waking*, also particularly on raising the head in bed, with subsequent headache. *Fulness of blood in the occiput*, after stooping.—Headache, like a sound through the head, as from the breaking of a musical string.—*Groaning sensation in the head, when setting the foot down with force*. Whizzing in the head, with a feeling of heat.

**Scalp.**—Excessive sensitiveness of the head externally. Painfulness of the forehead of the head, on the outside, when touching it. Superficial pain above the forehead, on the top of the head, in the region of the malar bones, the ear, the jaw-bones; intermitting in the afternoon, returning in the evening.—Quickly-passing *tearing* in the integuments of the head, when walking in the open air.—*Tearing* in the hairy scalp, above the right half of the forehead. Fine, burning, stinging tearing in the skin of the right temple, after itching and rubbing, afterwards crampy headache. °Nightly tearing, boring and scraping about the head.—*Drawing pain* in the right side of the head, down the nape of the neck. Sensation on the left side of the hairy scalp, as if a single hair were being pulled.—*Contractive sensation* in the hairy scalp, with sensation as if the hair were being pulled. Spasmodic contraction of the scalp. Drawing up of the skin of the forehead, with consequent reeving of the eyelids one from the other, and subsequent drawing downwards of the same skin, with closing of the eyes. Involuntary turning of the head to the left side.—Cutting pain across the hairy scalp, between forehead and vertex.—The bones of the head are painful. Burning pain in both occipital protuberances.—\**Excessive falling off of the hair*. Falling off of the hair, whereas the hair on other parts of the body grows more abundantly. °Baldness.—*She has a number of gray hairs*—Great liability of the head to take cold; a cold little breeze causes a cutting sensation in the hairy scalp.—*Itching of the hairy scalp*. C. rding sensation of the hairy scalp, he is obliged to scratch himself. \**Eruption on the head*, with swelling of the cervical glands; large pustule on the occiput, and a scurf over the hairy scalp, which is scratched open by the child, and the bleeds. Broad tubercle under the skin of the forehead, without the colour of the skin being changed at that place. Tumour on the occiput, of the size of a walnut. \*Eruptions on the head, suppurating profusely, °also fetid.

**Eyes.**—Pain in the eyes, in the evening, she finds it difficult to open them. The eyelids are painful when touched.—*Pressure* in the internal canthi.—\*Painful pressure in the eyes, as if dust had got in. Pressure in the eyes, with drowsiness, in the forenoon. Pressure on the right upper eyelid. Pressure in the right eye, as if something had got into it.—Pain in the eyes as if they had been bruised, and as if they would fall out; the pain was so violent that he was unable to look at anything fixedly, in the afternoon, but mostly in the evening. *Heaviness of the eyelids*, also in day-time, especially when the light is very dazzling. The eyes feel tired and heavy, they look sleepy.—*Tensive pain* in the left eye.—*Pressing together* of the eyes, the skin over the malar bones feeling tense.—*Tearing* around the eyes, extending into the forehead and the cheeks. Tearing in the right eyeball.—*Stitches* in the left eye. \**Stitches in the eyes*—without any redness, the whole day, but especially early in the morning, °or especially at candle-light. Prickling, at times in one, at times in another eyeball.—*Itching* in the eyes. *Itching in the canthi*. *Biting* in the right eye, as if caused by smoke, with closing of the eyelids. Biting sensation in the external canthi, with lachrymation, as if caused by smoke, in the evening at twilight. Itching around the eye.—°Smarting of the eyes.—*Cold feeling* in the eyes, in the evening.—\**Burning in the eyes*, °also smarting. Burning in the eyes, when he was about to close them. Violent burning and itching in the eye, °also of the upper lid.—*Redness of the eyes*, with pressure in the same. Redness of the white of the eye, with pain. Red, inflamed eyes, with sticking pain, in the evening. Inflammation of the white of the eye. \*Inflammation of the eyelids, with aching, and nightly agglutination in the outer canthi. \**Inflammation of the eyes*,—with redness and dimness of the white, redness and swelling of the lids, burning, pressure, and secretion of mucus in the eye. Inflammation of the eyes, with redness of the white and swelling of the lids, stitches, photophobia, \**profuse lachrymation and nightly agglutination*. Inflammation of the eyes, with itching in both canthi, redness and swelling of the lids of the right eye, tensive pain when they had become dry, and nightly agglutination. Swelling and painfulness of the eyelids, with nightly agglutination in the canthi.—A number of pustules on the eyelids. *Styes on the eyelids*, near the internal canthus. Ulceration and redness of the eyelids, the water which oozes out causes a corroding and smarting sensation on the cheeks. Suppurating styne on the eyelid. *Red pimples* on the upper lid of the right eye, combining into a sort of seurf. \**Agglutination of the eyes* especially at night, and more particularly in the outer canthi. *A quantity of purulent gum in the eyes*, with smarting pain. A corrosive humour flows out of the eye, the white being very red. *Mucus in the eyes, he has to wipe them, in order to see more brightly*. Lachrymation and a quantity of gum in the eyes, with pressure and pale face. Profuse lachrymation of the right eye, when exposed to a rough wind. \**Dryness of the eyes*, in the evening. Dryness of the eyes, he has to close the lids. Dryness under the eyelids, as if from dust there, early in the morning, on waking. \**Dim, hot eyes*. Faint eyes, in the evening, by candle-light, painful when turning them.—*Spasmodic twitching of the lower eyelid*, also towards the inner canthus. Slight twitching of the left eyelids.—*Weakness of sight*, she is unable to see or to sew long, she is obliged to close her eyes from pain, in the morning they become somewhat agglutinated. The letters become blurred when writing or reading. Uncertain sight and frequent twinkling before the eyes.—*His eyes become dim*, even at a very short distance, sensation as if he looked through a fine wire-gauze. Dim-sightedness, as if there were a viscid humour in the eye, which cannot be wiped away, and which increases and decreases in paroxysms. —Short-sightedness. Far-sightedness, when reading or writing, every thing seems indistinct to

her, as if it were covered with a gauze, things at a distance appear bright and distinct. He only sees the left half of the objects, the right is either wanting, or else obscured, more so when using the right eye alone. Dimness of sight, he is obliged to hold the writing at times near to, at times far from, his eye, in order to be able to read.—*Black spots hover before his eyes at a short distance.* Gauze and twinkling before the eyes, after the siesta. \**Twinkling before the eyes*, when going to bed. Sensation of vibrations before the eyes, resembling those of the hot air of summer. Tremor of the objects at which she looks attentively, in the evening, by candle-light, the light trembling most when looking at it. *Sparks before the eyes*, in the dark. His eyes are very much dazzled by the candle-light, he is then unable to see anything on the table.—°Blackness before the eyes.

**Ears.**—*Otalgia* in the open air. Sensation as of pressing towards the ears. Sensation as if something had been forced into the internal ear. Pressure on the posterior surface of the right concha. *Tearing in both the right and left meatus auditorius.* Tearing behind the left ear. Tearing in the left concha. Tearing about the right ear.—*Darting* in the internal ear. Stitches in the ear, when blowing the nose, the speech being more difficult. Continuous, tearing, pinching stitches in the ear, which feels as if too narrow and as if it would burst. Throbbing and tension in the ears, with spasmodic tension of the skin behind the ears, in an oblique direction towards the muscles of the nape of the neck.—*Rush of blood to the ears.* Sensation as if hot blood rushed into the ears.—*Itching* in the ear. Biting sensation and sore feeling behind the right ear and by the side of it. °Humid seurf on and behind the ears. Ulceration and running of the ears. Pain behind both ears, which obliged him to walk bent. \**Sensitiveness to noise* in walking. °Music and sounds affect the hearing painfully.—°Diminution of hearing. The sound of speech seems hollow, although as strong as usual. His ears become closed, with whizzing and hardness of hearing. Her ears become closed, with a fluttering sensation. In the evening she hears the music in her ears, which had been played to her during the day. Sounds in the ears. \**Roaring, humming, and whizzing in the ears.* \**Violent whizzing in the ears.* Singing in the ears, as of boiling water. Whistling in the ear, when blowing the nose. Chirping in the ears for several evenings. Beating in the ears, morning and evening. Gurgling as of bubbles of air in the ears.

**Nose.**—Spasm of the muscles of the nose, which feels distended, then again contracted and shortened, forming a thick bundle. Corrosive pain in the right nostril. Corrosive pain in the left nostril, when moving the nose or inserting the finger into it. Itching of the nostrils. Itching of the nose. Pressure on the nasal bone, near the right eye. Drawing, with pressure, on the right side of the nose. Tearing from the right side of the nose through the corner of the eye. Cutting, sore feeling of the upper part of the septum, in the right nasal fossa; in the evening, in bed.—Swelling of the tip of the nose, with pain to the touch.—Heat in the nose, and burning of the eyes.—°Seurf in the nose. °Nightly closing of the nostril by pus. °Ulcerated nostrils.—*The smell is excessively sensitive*, even the smell of hyacinths makes him feel nauseated. Increased sense of smell. Total absence of smell.—Smell of lobster when spitting.—Discharge of a bloody mucus or of coagulated blood from the nose. Considerable bleeding from a little wound in the nose, in the evening, when walking. Bleeding at the nose, three days in succession, in the afternoon. Bleeding from the nose, twice in one day. Considerable bleeding from the nose, frequently followed by discharge of blood from the nose, when blowing it.—Sneezing without coryza. Sneezing, every morning, for half an hour. Sneezing, fifteen times a day, without coryza. She is

unable to sneeze on account of a prickling pain in the throat. Violent tickling in the nose, without being able to sneeze.—*Obstruction of the nose*, high up. Obstruction of the nose, towards morning. Obstruction of the nose, he can only breathe with his mouth open. Entire obstruction of the nose, the child's breath was frequently arrested for fifteen seconds during sleep, even when the mouth was open.—*Dry coryza*, he cannot breathe at night. Dry coryza, with burning in the forehead and dulness of the head, her eyes becoming entirely closed, with much thirst and nightly heat, which hindered sleeping.—*Dryness of the nose*, and obstruction about the root of the nose. Dry feeling in the region of the posterior nares.—*Coryza*, in a person who never suffered with it. *Violent coryza*, with swelling of the nose. Violent coryza, with catarrhal headache. Coryza, with acrid discharge, making the upper lip sore. Frequent coryza, with fetid discharge from the left nostril, which is ulcerated within. *\*Fluent coryza* in a few hours. Profuse fluent coryza. Profuse fluent coryza, with pressure on the chest. Indurated mucus in the nose.

**Face.**—*Paleness of face*, with drowsiness in day-time, and ill-humour, the paleness increasing towards evening. Very pale, sunken face, early in the morning. *\*Pale, wretched complexion*. The face is paler and narrower. The countenance is changed, with sunken eyes. *\*Blue margins around the eyes, °with livid face, deep wrinkles and blue lips.* *\*Yellow face. Yellow-gray complexion*. The whole face first extended in length, afterwards in breadth.—Heat in the face, eyes, and palms of the hands. Heat in the face, with hypochondriac mood. Flushes of heat in the face, early in the morning, shortly after rising. *\*Frequent flushes of heat*, (the first days). Violent heat in the face, without redness. Striking redness in the face, early in the morning. *°Circumscribed redness of the face. Burning in the face. Red, bloated face*, full of dark-red spots covered with pustules. *\*Swelling of the cheeks. Sensation as if the forehead were swollen. \*Eruption on the face. Single pimples on the face. Itching of the face, head, and nose. Itching all over the face, and pimples with pus in the tips, on the cheeks, forehead, and especially on the temples. A number of pimples and freckles over the whole face, more on the left side and on the nose. The face looks as if covered with a fine eruption. Itching herpes on the side of the nose, near the eye. \*Itching, scaly herpes in the face and the corners of the mouth, with bleeding. Simple pain in the left side of the face, when touching it. Contracting pain in the muscles of the face and the occipito-frontalis muscle. Tearing in the cheek. Tearing in the malar bone, below the left eye.—°Painful feeling of coldness in the face, with stinging. Spasmodic twitchings in the muscles of the cheeks. The muscles of the lips and cheeks contracted, and made the mouth look pointed, this was followed by extension of the mouth. The left corner of the mouth was drawn up, afterwards the right corner became distorted.—Paleness of the lips. Swelling of the right half of the lower lip. Swelling of the lips, early in the morning. Swelling of the upper lip, increasing for several days, lastly accompanied with evening-fever—first, chilliness, afterwards heat in the face, in the hands and feet, restless sleep and night-sweat. A sore place on the lower lip. Soreness of the corners of the mouth. Ulcerative pain of the corners of the mouth. Eruption around the mouth. Fine eruption around the mouth. Itching pimple on the upper lip. Eruption on the margin of the vermilion border of the lip, with cutting pain when moving the lips, or when touching them. A white blister on the inner side of the upper lip, with burning pain when at rest, not when eating. A large ulcer on the vermilion border of the lower lip. Itching pimples around the chin.*

**Jaws and Teeth.**—*Tearing in the upper jaw. Pressure on the right lower*

jaw, towards the back part. Drawing pain in the right lower jaw, the submaxillary glands feel heavy, as if swollen, with throbbing in the glands, increasing after walking or eating. Swelling of the submaxillary glands. \**Drawing* in the jaws. *Darting pain* in the lower jaw, in the evening. *Jerking tearing*, at times in the right, at times in the left lower jaw. The lower jaw is involuntarily pushed backwards and forwards. Hard swelling in the corner of the lower jaw, with a feeling of heat in the head. *Boring pain* in the swollen submaxillary glands. Disagreeable toothache, she would like to press her teeth together continually. Involuntary *clashing* and *grinding* of the teeth. *Dull ache* of the upper and lower teeth, with swelling of the gums, (neither throbbing, nor stinging, nor drawing). Toothache, with swelling of the cheeks. The teeth only ache when chewing. *The teeth are excessively painful when touching them, or when chewing, as if from sub-cutaneous ulceration.* *Toothache only at night; when it ceased early in the morning, she felt nervous and agitated, and was not able to fall asleep again.* Toothache when touching the tooth ever so little, or when coughing. *Spasmodic pain* in the teeth. Drawing, cramp-pain in the teeth, relieved by warm drinks. \**Drawing pain* in the right lower molares. Tearing-drawing pain in the left lower molares. Tearing in a hollow tooth.—*Stinging and drawing* in teeth which cannot be distinctly indicated, alternately in the upper and lower row, preventing sleep in the evening. Single, violent stitches in a hollow tooth, slowly succeeding one another, and ceasing after she got warm in bed. Frequent stitches in an upper molar tooth of the right side. Stitches, gurgling and boring in a hollow tooth. *Boring pain* in the crown of a tooth. Single jerks in the right upper molares. Digging pain, with stitches, in an upper molar tooth, after a meal.—Throbbing and squeezing toothache. Throbbing toothache (after a meal). Beating in a tooth, with swelling of the gums.—Pain in a hollow tooth, as if crushed, extending as far as the temples. Pain in a lower molar tooth, as if crushed, very painful when eating. A sound tooth is painful when eating, as if too long. All the teeth ache, as if they were too dull.—*Looseness* of some of the incisores. Great looseness of the teeth.—The teeth become yellow.—Heat and pain in the gums. *Tearing* in the gums, and in the region of the roots of the left lower incisores. *Darting pain* in the lower gums, in the afternoon. Prickling and stinging pains in the left side of the gums and cheek. Swelling of the gums over the front teeth, with swelling of the upper lip. Swelling of the gums hinders the opening of the mouth. Swelling between the upper gums and the malar bone, with some swelling of the cheeks and prickling pains.—*Fistula dentalis* in an old socket, in which one of the roots yet remains, with swelling of the gums. *Gum-boil*.—The gums bleed violently when touched.

**Mouth.**—Small tumours in the mouth, in various places. Coated tongue. Scraping sensation in the mouth. Fetid smell from the mouth, early in the morning, he perceives it himself. Numbness of the inner mouth and tongue. Involuntary movement of the tongue, causing the sound A to be changed to O. The tongue feels swollen. The tongue is painful and swollen in different places, hindering talking. The tongue, at times, gets involuntarily between the upper lip and upper teeth, at times between the lower lip and lower teeth. The tongue darts involuntarily out of the mouth, and moves between the lips to and fro. Nasal twang. Relaxed condition of the mouth, and heaviness of the tongue. Soreness of the tongue. A number of vesicles on the tip of the tongue, which feels painful, as if raw and burnt. Tubercles on the tongue. Ulcer under the tongue, being very troublesome when talking or eating. Dryness in the mouth and throat, early in the morning, with tension, difficulty of moving the tongue, and indistinct speech. Feeling of dryness in the mouth, with much saliva.

The saliva becomes dry on the palate and lips, and is converted into tough mucus. Feeling of dryness in the throat and mouth, without thirst, only in the evening, immediately after lying down, and during the night. *Dry* and bitter mouth. Mouth dry and sourish. Desire to throw up a sourish, watery, sometimes bloody fluid. Continual accumulation of water in the mouth, and spitting. Flow of saliva, tasting salt. The posterior part of the mouth is covered with tough mucus.

**Pharynx and Oesophagus.**—Swelling and elongation of the uvula. Pain in the throat during deglutition, frequently, she feels as if she swallowed too much at once. *Sore throat*, when swallowing or coughing. Sore throat, as if the throat were swollen, only during empty deglutition. Want of action of the pharynx when swallowing, the food does not go down. *\*The pharynx feels contracted*, nothing will go down. The throat, feels too narrow, during deglutition, the food and drink come out again at the nose. When taking the soup very warm, he is unable to swallow it. The throat feels sore and swollen, not when talking or swallowing. Glandular swellings inside and outside of the throat, with stinging pain in the glands when swallowing, and in the ear. Sensation as if a ball were rising into the pharynx from below. Sensation in the throat, as if a stone were pressing into it from without, closing the throat, rather painful during deglutition, without hindering breathing.—*°Chronic sore throat.*—*Tearing pains* in the pharynx from below upwards. *Tearing* in the left side of the pharynx and in the throat. Tingling tearing, with pressure, in the posterior and upper part of the palate. Stinging and dryness in the throat. *Continual stinging or pricking in the throat.* *Inflammation of the throat*, with hoarseness and stitches, which make it difficult to swallow either solids or liquids, for nine days. Inflammation of the whole fauces, with aching and stinging pain. Suppuration of the tonsils, with stinging pain when swallowing. *\*Ulcers of the tonsils*, resembling chancre, also after abuse of Merc.—*Ulceration of the tonsils.* Roughness of the pharynx, with sensation of swelling when swallowing. *°Burning* in the fauces, with thirst at night.—Continual and troublesome dryness in the throat, she would like to drink, but is unable to swallow anything on account of the pain. In the morning the throat always feels very dry. Dryness of the throat, with much thirst. Hawking up of bloody mucus, when taking his usual ride.

**Taste and Appetite.**—*Bitter taste* in the mouth, particularly early in the morning, *°also* with nausea. A bitter substance rises into her mouth, early in the morning, as if from acidity in the stomach. *Very bitter taste in the mouth*, at night; she is obliged to rise and rinse her mouth. Continual bitter taste in the mouth, but not of the nourishment she takes. Bitter taste of food. Bitter sour taste in the mouth, before and after breakfast. *Sour taste* in the mouth, especially on waking. Sour taste of everything she eats, even sweet things. Sour taste in the mouth while drinking cocoa. *°Slimy taste* in the morning. *Mouldy taste*, from morning till noon. Cheesy taste. Very sweetish taste. Water tastes sweet as sugar, early in the morning. Loss of taste.—*Absence of thirst.* Continual thirst, with dry lips and dry mouth; but, when trying to swallow some liquid, it became repulsive to her, and she was unable to get it down; at the same time she felt sick, faint and tired. Violent thirst, with saliva in the mouth, resembling a fine foam. *\*A good deal of thirst*, she would like to drink all the time.—Great desire to eat and eating in a hurry. Hunger, immediately after a meal, although the stomach and abdomen feel replete and distended. *\*Excessive hunger*, the more he eats, the more the stomach craves, and as long as he eats, he is well; but after eating he constantly has a sourish taste on the tongue, and even the saliva appears sour; he does not perceive this, however, when eating. *\*Canine hunger*, at noon, when eating.

with sensation as if she could not satiate herself. \**Constant canine hunger*, in the afternoon, with sensation as if heavy substances were lying in the stomach. If she does not eat while she is attacked with the canine hunger, she has headache, which goes off after a meal. \**Extreme desire for sweet things*.—Desire to eat, without any real hunger. \**Want of appetite*. He does not relish what he eats, he has no appetite. Want of appetite, but much thirst. \**Aversion to solid food*, especially meat, with thirst. She is unable to eat, is continually replete, has no appetite, and what she eats is repulsive to her, even to nausea. Cannot eat anything. Sometimes he loathes the best nourishment for moments, before having tasted it, but afterwards he cannot eat enough of it. °Loses her appetite after swallowing a single mouthful. Aversion to coffee and smoking, °and to boiled warm food. \**Bread is repulsive to him*, he is so much more fond of warm food. Sour taste, after taking milk. Bad taste in the mouth, shortly after dinner. After supper the forepart of the mouth feels watery, the back-part dry. Sour taste in the mouth after eating or drinking, with inclination to sour eructations. Acidity in the mouth after a meal. Oppressive bitter taste in the mouth after a meal.

**Gastric Symptoms.**—At dinner, excessive nausea unto fainting, sweat on the forehead and complete loss of appetite. *Nausea in the pharynx* and stomach after a meal, unto vomiting, with accumulation of water in the mouth. A good deal of *thirst*, after a meal. *Hiccough* after supper, for half an hour. Frequent eructations after a meal. *Retching* after a meal, rising of water, and discharge of water from the mouth (waterbrash). Sensation as if the stomach had been *deranged*. Digestion appears to be very slow. She dares not eat to satiety, because this makes her feel uneasy and bloated in the region of the liver. When eating to satiety, one feels uncomfortable and distended. *Immediately after a meal*, the abdomen is full, bloated, distended, until evening, when sitting, walking or lying down, with aversion to walking. *Distention* of the abdomen, and tension of the head after dinner. *Fulness and heaviness* after a meal. After a meal, *sensation in the stomach as of fasting*, but without any hunger. *Colic*, after a meal. *Pressure in the stomach*, after every meal. *Pinching in the abdomen* after a meal. Pinching in the abdomen after breakfast, as if one had taken a cathartic. *Pressure in the forehead*, when eating. *Continued pricking* in the forehead, when eating, followed by violent single stitches during motion. *Heat in the head after a meal*, and a red spot on the left cheek. *Black spots* before the eyes after a meal, with pain, especially of the left eye, increased by shaking the head. *Distortion of the features*, especially after supper. *High, burning redness* over the whole face after dinner. Redness of the cheeks, followed by frightful pallor, after a meal. Urgent but almost unsuccessful desire to urinate after dinner. *Tremor* through the whole body, after a meal. *Throbbing* through the whole body, after a meal. After a meal, she feels more nervous and weary, her pulse beating faster. Unconquerable sleep after a meal. Unconquerable sleep after dinner, followed by exhaustion. *Shuddering* during a meal, shaking the whole body, but without chilliness. *Hot hands* after a meal. After a meal, she feels as if the food touched a sore place, this sensation is followed by pressure in that part. °Palpitation of the heart during digestion.—°Diarrhoea from milk. °Heavy food is not digested. A number of eructations, alternating with yawning. Frequent empty eructations (the first days). °Violent eructations in the afternoon. Eructations tasting of the ingesta. Continual bilious eructations, in the afternoon. \*Sour eructations immediately, with colic. Sour eructations not leaving any taste in the mouth, but the acidity corroding the stomach. Rising of a sour fluid, with sour taste in the mouth. Sour eructations after every meal, with regurgitation of digested

food, leaving a sort of fetid taste in the mouth for one hour, with dulness of the head. *Gulping up* of the milk which had been taken early in the morning, with scraping, raw taste in the throat. Imperfect, burning eructations, reaching only to the pharynx, where they cause a burning sensation for several hours. Burning eructations, like a sort of heartburn.—\**Heartburn* from the stomach, acidity rising into the mouth. \*Heartburn, half an hour after every meal, with sour eructations and burning in the pit of the stomach for many hours; it almost takes away his breath, and makes him feel very weak. \*Heartburn after eating cold mutton, with pressure on the chest as if a stone were lying on it. \*Heartburn three hours after a meal, increased by smoking.—*Hiccough*. Frequent hiccough, three days in succession. Hiccough after every meal. *Nausea, every morning, before breakfast*. °Constant nausea. °Nausea when riding in a carriage. \*Nausea in the afternoon, with sour eructations. Nausea, with oppression of the chest and pit of the stomach, with nausea in the afternoon, and some risings. Nausea, with oppression of the chest and pit of the stomach, and weakness in the lower limbs, relieved for a short while by eructations, returning afterwards, with tingling in the pharynx, and pit of the stomach. Nausea rises into his head, it feels oppressed and dull, the pain extending to the nape of the neck, accompanied by trembling of the hands, better in the open air. *Nausea in a room*, going off in the open air; and then again nausea in the open air going off in a room. Nausea, with heat in the abdomen, and icy coldness in the face.—Loathing at the sight of food, with conflux of saliva, and flat, insipid taste in the mouth.—\**Waterbrash* every other day, griping in the pit of the stomach, nausea, she is obliged to keep her mouth open, and to discharge a quantity of salt water which seems to come out of the stomach. Accumulation of water in the mouth, as takes place in canine hunger, in the forenoon, when writing. Accumulation of water in the mouth with nausea, she had to spit a good deal (the first two mornings). A sort of bitter water rises every morning into her mouth from the stomach. Qualms of sickness in the region of the stomach, early in the morning after rising, and especially when walking out of the room, as if sweat would break out. °Qualmishness in the stomach, early in the morning. Inclination to vomit, with hawking up of phlegm—*Nightly vomiting of food and bile*, preceded by nausea and anguish about the heart. The child vomited mucus, after the siesta. Vomiting of coagulated blood, and acrid acidity.

**Stomach.**—Pain in the stomach, increased by stooping. \**Intense pain* of the pit of the stomach, when pressing on it, °also with swelling. Emptiness of the stomach previous to dinner, obliging him to gape all the time.—Violent pain in the stomach after a meal, and after taking a slight cold, with chilliness so that she cannot get warm, and deadness of the hands. Violent pain across the stomach; she cannot bear lacing, nor tying anything firmly over the part. Cramp in the pit of the stomach, early in the morning on waking, for three-quarters of an hour.—Weight in the stomach, two hours after breakfast.—°Fulness in the stomach and abdomen. \**Pressure over the stomach*, in the region of the cardiac orifice, in the evening. \*Violent pressure in the stomach and abdomen, the whole forenoon, with pain to the touch and when breathing. Continued pressure in the stomach with tension in the abdomen. *Pressure in the pit of the stomach* and the lower part of the chest, especially in the afternoon, and after lifting too heavy a weight, with pain to the touch. Arising from the pit of the stomach to the umbilicus, with gurgling in the epigastrium. *Constusive pain* in the stomach, going off by eructations; the stomach is also very painful to the touch.—*Spasm of the stomach* previous to a meal, with unsuccessful eructations. *Contraction and spasm of the stomach, as far as the chest,*

from morning till evening. The spasm in the stomach is brought on again by wine. Whirling sensation in the pit of the stomach, with flushes of dry heat in the face.—*Tearing and drawing pain* in the stomach, with nausea and colic, resembling the prick of a pin in the intestines. *Gnawing and griping sensation* in the region of the stomach, it feels replete. Sticking tension around the pit of the stomach, when breathing. Throbbing in the pit of the stomach, when raising the upper part of the body.—Anxious feeling about the pit of the stomach, as one feels when swinging.—°Cancer of the stomach.?

**Hypochondria.**—°Tension around the hypochondria as from a hoop. Pain of the liver to the touch. Violent pain in the liver, with regular stools. °Pain in the liver after eating a good meal.—Pressure in the region of the liver. Aching in that region when taking an inspiration. Pressure in the right side of the abdomen. Pressure in the region of the liver, from within outwards. Dull pressure in the region of the liver. Sharp pressure below the last right rib, during a deep inspiration and when bending to one side, also when pressing on the right iliac region. *Sore aching* in the right hypochondrium, as if caused by a shock, increased by contact. *Tension in the lower part of the region of the liver*, with pressure. *Grasping, as if with the hand*, in the region of the liver. Violent cramp-pain in the region of the liver, when stooping, and brought on by other slight causes, as if the liver were sprained. *Pinching* in the region of the liver. *Stitches* in that region. Pinching stitch in that region. Stitches in the liver, in the evening, for an hour. Painless twitchings in the surface of the liver, when coughing. Pain as from rawness in the liver. Itching in the interior of the liver. °*Chronic hepatitis*.—Painful tension in the left hypochondrium.

**Abdomen.**—Colic, early in the morning, after rising. °Pain above the umbilicus when touching the part. Pressure in the middle of the left side of the abdomen. Pressure in the abdomen, near the hips, at times on the right, at times on the left side. Oppressive colic early in the morning. Pressure in the right iliac region, the whole day; he was obliged to walk bent from pain, and had short breath. \*Aching in the epigastrium, as if caused by flatulence, increased when drawing the abdomen in, relieved by eructations. Pressure in the abdomen, with drawing pain. \*Pressure and cutting in the abdomen, before dinner. Sharp pressure at a small spot in the middle of the epigastrium. \*Frequent pinching pressing, from within outwards, on the right side of the umbilicus, towards the hip, and somewhat below it.—*Weight* in the abdomen, as from a load, also in the left side of the abdomen, when walking, sitting, or lying. Fulness in the abdomen, with pressing towards the rectum. \**Full, distended abdomen*, and cold feet. Distention of the abdomen, and colic every day. Distention of the abdomen, especially immediately before the menses. Distention of the abdomen from flatulence. Distention of the abdomen towards evening, with incarceration of flatulence. Distention of the abdomen for several afternoons, beginning at four o'clock.—*Tension in the hypogastrium*. Tension in the abdomen, with accumulation or incarceration of flatulence. Tension and grumbling in the abdomen. Distended abdomen, with desire for stool, mostly in the evening.—*Spasms in the abdomen*, which is very much distended. *Spasmodic contraction* in the abdomen. Intermittent oppressive crampy squeezing in the left iliac region. *Griping and pinching* around the umbilicus, beginning early in the morning, in bed. Pinching in the abdomen, relieved by emission of flatulence. °Griping tearing in the hypogastrium, with arrest of breath. Pinching in the abdomen in the afternoon (after a natural stool), with inclination to vomit. °Pinching in the right side of the abdomen. °Sticking pinching from the bladder to the urethra, in the evening, in bed. \*Cutting colic, previous

to stool. Cutting in the abdomen, about midnight, with vomiting and diarrhœa. Cutting in the hypogastrium, after dinner, followed by a stitch extending to the tip of the glans, twice in succession. \*Cutting in the epigastrium, every forenoon, and even early in the morning when in bed, without diarrhœa, until afternoon, going off by walking. Quickly-passing cutting in the intestines into the sides and hips, towards evening.—Intermittent *tearing*, with sensation as of gurgling, at a small spot in the middle of the epigastrium, towards the left side. °Tearing in both sides of the abdomen and in the groins, extending into the thighs.—\**Drawing pain in the abdomen*, also with pressure, and down into the calves. Drawing colic. Crampy drawing, deep in the hypogastrium.—*Stitches*, in the right iliac region, extending into the pelvis, at every breath and every turning of the body; worse in the evening and at night. Burning stitches, on the right side, near the umbilicus.—Jerks in the abdomen. Pulsations in the abdomen, with anxious feeling, as of cramp. °Indurations in the abdomen. Burning in the abdomen.—*Intense sensitiveness to pain of the skin of the abdomen*. Stinging sore pain of the skin of the abdomen, even when merely touched by the clothes.—Pain in the groins when walking, and pain in the back. Pains in the region of the hernial sac. Pressure and frequent dull stitches in the right inguinal region. *Pressing from within outwards, in the right inguinal region*. Pressing from within outwards, in the left inguinal region, followed by a gurgling sensation in the abdominal ring. *Pulsative tearing pressing from within outwards in the right groin, near the thigh*. Pulsations, deep in the right abdominal ring. *Stitches* in both groins, late in the evening. Painful, boring stitches on the left side, above the groin, when walking or when at rest. \**Tearing stitches in the hernial region*. Red swelling in the right groin, painful during motion, and when touching it, as from subcutaneous ulceration. °Inguinal hernia. Small glandular swellings in the groins. The hernial sac, in the groin, protrudes immediately after the menses, and is affected with a tearing pain. Accumulation of flatulence, in the evening, going off only in part, with pressure in the region of the umbilicus. He is tormented by flatulence, even early in the morning before breakfast. Incarceration of flatulence, after having been seated for two hours. *Incarceration of flatulence*, causing a decline of health. A quantity of flatulence in the abdomen, the hypochondria, back, region of the ribs and chest, causing tension and gurgling, relieved by empty eructations. *A chief symptom of Lyc. is to bring on flatulence, which seems to be the cause of a large portion of the pains with which the patient is affected*. Violent colic, in the evening, as if from incarceration of flatulence, followed by rumbling in the abdomen, and discharge of flatus. A quantity of flatulence moving about towards evening, causing some colic, with noiseless emission of inodorous flatulence, and distended abdomen. Grumbling and tension of the abdomen. *Grumbling and gurgling in the abdomen*. \**Audible and tangible gurgling in the left hypochondrium*. Violent rumbling in the abdomen. Emission of flatulence, preceded by colic.

**Stool.**—\**Stool, not daily*, sluggish, and no desire. Stool every other day. No stool for the first two or three days; at the end of this period he has a copious, natural evacuation of the bowels. \**Ineffectual urging*, °with hard stool. Desire for stool, followed by cramp-pain in the rectum, which prevents the expulsion of fæces. Desire for stool, extending only as far as the rectum, (in a few hours). Troublesome stool, owing to contraction of the rectum. Little stool with great exertions, although the desire is very strong. \*Desire for stool only in the evening, with distended abdomen. \*Little stool, with sensation as if much remained behind, followed by excessive and painful accumulation of flatulence. Urgent desire during stool, as if he would have a copious

evacuation, but it amounts to very little. Inaction of the rectum at stool. \**He had to make great efforts in passing stool*; he had, however, a daily evacuation, although slight, and with burning at the rectum.—For many days in succession the *first part of the stools is knotty, the second soft*. Stool comes in small pieces. Thin stool mixed with hard pieces. *Papescent stool*, once or twice a day, from the fifth day, for several weeks. Soft stool, several times a day, he has to press it out with much force. Tenesmus in the morning; diarrhœa in the afternoon. Diarrhœa, with colic, generally early in the morning. Pale stool. Fetid stool. Copious expulsion of thin mucus, but little stool, at noon.—Blood with stool. *Hæmorrhage from the rectum*, even with soft stool. Biting in the anus, with thin stool. Stinging in the rectum, with good stool. Fine stinging in the rectum, with knotty stool. Burning at the rectum during stool. *Burning at the anus during the frequent stools*. Hard stool, with pain in the small of the back as if it would break, with colic as if the intestines would burst. Pain in the upper part of the head and buzzing in the ears, during stool. Shock in the temples, during hard stool. Desire continues after a good operation, but it is unsuccessful. *Burning itching of the rectum after soft stool*. *Burning at the rectum during stool which is not hard*.—*Feeling of fulness in the rectum continues after a copious stool*. Violent contractive pain in the perinæum for many hours, after scanty, hard stool. Stool is followed by abdominal and uterine spasms across the abdomen, mostly after soft stool. *Distention of the whole abdomen from flatulence*, after stool. A good deal of rumbling in the abdomen, after stool. After stool, heat and pressing sensation in the head, and lassitude of the thighs. Great fatigue after stool.—*Distention of the varices of the rectum*. *Protrusion of the varices*. When sitting, the varices of the rectum are painful. The rectum is frequently so narrow, that it protrudes during hard stool: Pressure in the rectum, at night. Aching, with pressure on the rectum, with cramp-pain in the abdomen, which induced her to believe that her confinement would take place immediately, (was to take place in 16 days). Spasms, bearing down upon the rectum and the small of the back, like labour-pains. °Cutting in the rectum and bladder. *Crampy cutting in the anus and perinæum*, early in the morning. *Piuching and stinging in the margin of the anus*. *Stitches in the rectum*. Stitch in the rectum, from the small of the back. Stitches and sore pain in the rectum. Tearing in the rectum, arresting breath. Itching of the rectum and anus. °Pain in the anus after eating and stool. °Tension in the anus.—Itching of the anus and mons veneris. \**Itching eruption of the anus, painful to the touch*. Painful closing of the anus.—°Ascarides.

**Urinary Organs.**—*Diminution of urine* the first 8 days, so much more abundant in 14. During emission, the flow of urine is suddenly interrupted; only a few drops of turbid and slimy urine come out, with pains in the urethra, followed by aching in the groins.—*Frequent, copious micturition*. Frequent micturition, at night. °Urging to urinate.—Frequent, foamy urine. Urine white-turbid, immediately after emission. Urine with yellow sediment. Dark urine, with burning. Urine red-brown. Dark urine, with sediment. Dark urine, with red sediment. *Red sand in the urine*, which remains pretty clear. Red-yellow sand in the urine. Red or bright-red sediment in the urine.—Strong smell of the urine, (the first days).—Hæmorrhage from the urethra, without pain, also with lameness of the lower limbs and constipation. *Burning in the female urethra during micturition*. *Smarting sensation in the female urethra*, in the evening, *during micturition*. Crampy sensation in the perinæum, close to the anus, during micturition, continuing and sometimes recurring between the acts of micturition. Tingling burning in the urethra, in the evening

when going to bed, after micturition. °Itching in the urethra during and after micturition.—*Violent, but short drawing pain* in the forepart of the urethra. *Jerking drawing* in the posterior part of the urethra. *Tearing* in the orifice of the urethra, some time after urinating. *Quickly-passing cutting* in the forepart of the urethra. *Sharp cutting* from the posterior termination of the urethra obliquely into the abdomen. *Violent cutting stitch* obliquely through the penis close to the abdomen, at night, after emission of a quantity of flatulence. *Stitches in the bladder*. Stitches in the neck of the bladder and in the anus at the same time. °Cutting in the bladder and rectum.

**Male Genital Organs.**—*Quickly-passing cutting* in the genital organs, from the abdomen. *Violent darting pain* in the penis. Titillation through the genital organs. Dropsical swelling of the genital organs.—*Titillating drawing* in the tip of the *glans*. Stitches in the tip of the glans. Drawing and cutting in the glans. *Tearing*, with pressure, in the region of the corona glandis. A quantity of yellowish humour behind the corona glandis, with dark-red, soft elevations, smarting and itching for several days.—*Itching* of the internal surface of the *prepuce*. Itching of the *frænulum*, under the prepuce.—*Itching* of the *scrotum*. Prickling itching, especially of the scrotum. Stitches in the scrotum. Lancing tearing in the side of the scrotum, in the evening when in bed. Darting sensation in the left testicle. °Chronic orchitis. Soreness between the scrotum and thigh.—Great weakness in the genital organs and the neighbouring parts, with pain in the perinæum when sitting. \**Diminution of the sexual instinct* for 10 days. Extinction of the sexual desire, (secondary effect?). Diminished sexual instinct, even voluptuous fancies do not bring on an erection, although the desire for an embrace is not wanting. Scanty erections (the first days). *Aversion to an embrace*. °Male impotence for several years. \**The penis is small, cold, and remains relaxed*. °Feeble erections, or \*entire absence of erections.—\**Excessive sexual desire*. °The sexual desire is too easily excited, irresistible, every night. Erections with relaxed scrotum. Several erections during the day. Pollution (the first night). Exhausting pollution. Excessive or deficient pollution. Discharge of prostatic juice, without any cause. Discharge of prostatic juice, without erection, with great lewdness.—Even during an embrace the scrotum is relaxed, and the emission of semen is very slow. He falls asleep during an embrace, without emission of semen. An embrace is succeeded by weakness the whole next day. °Too rapid discharge of semen during an embrace. Weakness with trembling, early in the morning, after a pollution.

**Female Sexual Organs.**—*Tearing stitches* in the organs of generation. Violent burning in the vagina, during and after an embrace. Drawing in the groin, as if the menses would come on, in an aged female. °Chronic dryness of the vagina. °Itching, burning and gnawing of the vagina. °Pressing through the vagina on stooping. °Darting pain in the labia on lying down. °Discharge of wind from the vagina. Re-appearance of the menses, which had ceased two days previous or in a fortnight. Menses too early, and too scanty. *Menses too early*, four or seven days. Brought back the menses, at the period of new moon, in a girl of 17 years, which she had lost for five months past, without the usual pain. Delays the appearance of the menses by four days (secondary effect?); by three days; by five days. The menses continue until the sixth day; they generally lasted four days. °*Menses too long and too profuse*. °*Chronic suppression of the menses, also by fright*.—Previous to the menses: bloatedness of the abdomen; great heaviness of the lower limbs; cold feet; violent chilliness; *uncomfortableness and chilliness*. Chilliness, about midnight, afterwards heat, especially in the face, with restlessness; low-spirited,

desponding and melancholy; delirium, with weeping, as if she would become crazy, also on the first day of the menses. Dilatation of the pupils, some days previous and during the menses.—During the menses, violent itching in the pudendum, which appeared to be swollen; pain in the temples, as if they were being screwed towards one another, as if the forehead would burst; dull headache, almost like tearing; acidity in the mouth, with coated tongue; nausea; violent pain in the back early in the morning, when rising, she was unable to move; swelling of the feet; sort of swoon, during which, while standing in the church, she heard and saw nothing, with feeling of great heat in the interior, especially in the head, and great paleness of face, she had to sit down immediately, remained the whole evening in a sort of stupor, and complained of dullness of the head the next day.—Stitches in the head, after the menses, recurring at short intervals. \*Profuse leucorrhœa, at intervals. Milky leucorrhœa. Discharge of blood-red leucorrhœa, several times, before full moon. °Cutting in the hypogastrium, previous to the leucorrhœa.—°Disposition to miscarriage, with varices on the pudendum.??—°Varices, diarrhœa or constipation of pregnant females.??—°Hard, burning nodosity in the mamma. °Soreness of the nipples, or spreading scurf on them.—°Stinging in the nipples. Discharge of blood and glutinous water from one nipple, particularly when touching it.—°Chafing or constipation of new-born infants.

**Larynx.**—Frequent aching in the larynx, when swallowing. A violent, titillating scraping in the trachea, below the larynx, rouses him from a deep sleep, at two o'clock at night. Dry feeling in the larynx. Sensation as if a quantity of air were ascending in the trachea with a water-like motion, and were rushing out of the mouth. *Hoarseness*, the chest becomes rough and sore from talking, especially in the afternoon. °The voice is feeble and husky. The chest feels oppressed. *Sensation as if there were too much mucus* in the chest, with whizzing breathing, in the day-time. \**Rattling in the chest*. Desire to clear the throat, with rough feeling in the throat, as if mucus were adhering to it, with titillation in the throat inducing cough.—°Chronic catarrh. °Grippe.??—Irritation in the throat, inducing dry cough. Short and hacking cough, from titillation in the throat. Titillation in the larynx, followed by a few turns of cough terminating in sneezing. Intolerably-itching titillation in the larynx, obliging one to cough violently. Exhausting cough, in the evening before going to bed, as if the larynx were tickled with a feather, with little discharge. Titillation with cough, unto retching. *Titillation with cough*, as if caused by the fumes of sulphur in the throat, *with gray, salt expectoration*. \**Irritation with cough, caused by deep breathing*, extending the neck, and sometimes by empty deglutition. Short and hacking cough, with sore pain along the larynx.—In the evening, from four to eight, she has to cough, and to drink a good deal. In the evening, when in bed, he has to clear his throat, and suffers with a short and hacking cough.—Night-cough and hoarseness, with sore pain in the chest in those places where the expectoration is detached. Nightly cough, affecting the stomach and the diaphragm, mostly previous to the rising of the sun. Nightly cough, almost without any intermission, bringing on a pain in the head, and in both sides of the abdomen. Nightly cough, with some expectoration.—\*Dry cough, with wheezing, and sense as of snapping in the throat as of an electric spark. Dry, short cough, every morning, with sensation as if the throat were hoarse, although there is no hoarseness. Dry, wheezing cough, as in drunkards. Dry, rough cough, incommoding one especially at night. °Dry cough, day and night. Dry cough for years. \*Expectoration of salt mucus, early in the morning, evening and night. \*Cough, *with gray, salt expectoration*. °Cough with expectoration and great weakness of the

stomach. Cough, with expectoration of blackish mucus, day and night. \*Morning-cough, with green expectoration, -after violent pain in the chest. Expectoration of white mucus. Expectoration of pus, first thin, then thick, with troublesome cough and titillation. \*Thick, white, yellowish expectoration, with violent cough.—\*Expectoration of yellowish pus, with raw and sore feeling in the chest, after long dry cough. Cough, with discharge of pus, for eight days, almost uninterrupted, with fever and violent night-sweats, as if in the last stage of tubercular phthisis. °Ulcerous phthisis.—\*Cough, with bloody expectoration. Hemorrhage, in a female affected with pulmonary phthisis.—The breathing becomes too short previous to the cough.—Smarting, as from excoriation, in the chest, with yellow-gray expectoration. °Difficulty of coughing from the inmost parts of the chest. *The breath* is very short when coughing, not otherwise. \**Concussion, as from a shock*, in the temples, and at the same time in the chest. When coughing, she feels a violent beating in her head. Pain in the head, and in both sides of the abdomen, when coughing. A stitch-like jerk in the head, with a feeling of pressure, when coughing. Stitches in the throat, when coughing, not otherwise, nor during deglutition. Oppression of the chest, and stitches in the throat, occasioning a cough with sensation as of scraping. *The region of the stomach has become painful from the coughing.*

**Chest.**—Shortness of breath in children. Arrest of breathing when going up stairs. The chest feels oppressed and full, when staying in the open air. Tightness of the chest, especially during motion, for several days, with aching in the pit of the stomach. \*Oppression of the chest °with shortness of breath when doing any thing. Asthma, as if the chest had been spasmodically constricted. Asthma and shortness of breath, with congestion of blood to the chest.—*Pain in the chest*, with cough, during a deep inspiration. Pain in the chest, the first 6 days, so violent, that it was impossible for him to lie on the left side; afterwards morning-cough with green expectoration. From time to time he experiences paroxysms of pain in the chest.—Tension of the chest. Sensation of tension on the left side of the chest. Tension in the chest, especially the right side, when taking an inspiration. Violent tension and pressure in the right half of the chest. Tension and pressure on the chest, oppressing the breathing, alternating with distention of the abdomen, in the evening.—*Pressure in the chest.* Pressure in the left side of the chest. Pressure at a small spot of the true ribs, below the left axilla. Pressure as from a button, on the right true ribs. Feeling of pressure and sore pain in the chest. Dull pressure in the left side of the chest. Oppressive, rheumatic feeling in the chest, relieved by empty eructations. Pressure and anguish in the sub-præcordial region, passing over into a tendency to be sad, when extending the trunk after violent exercise. Pressure in the chest; it feels full and oppressed.—*Fulness* in the chest (and stomach,) after a meal. Fulness in the chest, at noon, as if it were oppressed. Oppression of the chest, as if it were too full. *The chest feels oppressed and raw internally.* Weight on the chest.—*Slight anguish* in the chest.—Cutting pain in the right side of the chest. A stitch in the chest, here and there, when breathing. *Stitches* in and below the chest, when breathing, for two hours, (after supper). Stitches in the sternum, when taking a deep inspiration. When breathing, dartings and stitches in the left side. \**Stitches in the left side of the chest, also during an inspiration*, and extending to the back, they almost hinder breathing. A number of stitches in the left side of the chest, from time to time. *Tearing stitch* in the lower part of the sternum, when at rest. *Pulsative stitches* in the left side of the chest.—*Pulsative tearing* below the right axilla. Pulsative tearing in the præcordial region. Tearing in the

region of the left clavicle: Pain, as from a sprain, in the left side, in paroxysms. Pain of the chest as if bruised.—Burning rising in the chest, like heartburn.—Pulsative or gurgling sensation in the præcordial region, beside the beats of the heart. Violent *palpitation of the heart*, early in the morning, from 4 to 5 o'clock. \*Sudden, violent palpitation of the heart, after having become wearied, with yawning. Tremulous palpitation of the heart. Anxious palpitation of the heart.—*Itching on the chest*. °Constant pressure on the left lower rib. Painful eruption on the chest. Hepatic spots.

**Back.**—*Pain in the small of the back*, so violent that it contracted his chest, with pressure of the stomach and constriction of the abdomen. Pain in the small of the back, when lying on the back, with great weakness. Pain in the small of the back, extending down to the feet. Violent pain in the small of the back, he dares not sit erect. \**Stiffness* in the small of the back. *Aching* in the small of the back. \**Drawing pain* in the small of the back, for 17 days. *Tearing* across the small of the back, when sitting erect.—*Stitches* in the small of the back, particularly when rising from a stooping posture.—*Gurgling sensation*, a little on the left side of the small of the back. Pain in the small of the back, *as if the flesh were loose*. *Chilliness* in the small of the back. *Large swelling* in the psoas-muscle, very painful when moving the body (*Sil.* cured it). Back and small of the back become *stiff and inflexible* from riding on horse-back, walking and stooping. Stiffness, from the scapulæ towards the back. The spinal column became curved in a child of two years, for several weeks. At times the scapulæ, at times the pectoral muscles are violently and involuntarily drawn to one another. *Pain in the back*, extending to the shoulders and the small of the back. *Pressure* in the back, below the scapulæ. *Pressure in the region of the kidneys*. Pressure in the back, above both hips.—*Tension*, with pressure, in the left scapula, as if caused by a vesicatory. *Rheumatic tension* in the back, and the right side of the chest, more violent during an inspiration. *Pinching* in the back. Pinching and aching pains in the right side of the back.—\**Drawing pain in the back*, for several hours. Drawing pain in the back, when sitting. Drawing in the back, between the scapulæ. Drawing in and near the right scapula, in the evening. Rheumatic pain in the left scapula, which made him unable to raise his arm to his head. Tearing near the dorsal spine, below the scapulæ. \*Tearing on the right side of the dorsal spine. Tearing in the region of the right kidney.—*Stitches in the back*, towards the small of the back, when sitting. Stitches in the region of the left kidney. Sticking pain in the back, extending to the right scapula. Stitches between the scapulæ. Fine stitches in the middle of the back. Repeated stitches in the back, over the region of the right kidney. Stitches in the left side of the back, when taking an inspiration. Spasmodic stitches, in paroxysms, in the middle of the back, making motion impossible for a few minutes.—*Pain, as from a sprain*, in the left side of the back, extending to the left hypochondrium.—*Gurgling* below the left scapula.—*Continual beating* in the back.—*Chilliness* in the back, for several days.—*Burning* as of red-hot coal between the scapulæ. Burning in the skin, below the left shoulder. Pressure, afterwards burning in the upper region of the right scapula. Burning in the back.—*Itching* of the back. Violent itching of the back, towards the neck. Violent itching of the back in the evening. Itching in the upper part of the back, with eruption.—\*Large pimples between the scapulæ and on the nape of the neck, with a burning sensation. Pain in the nape of the neck, when bending the head backwards. When stooping, the nape of the neck feels too short. The posterior cervical muscles feel stretched. Stiffness of the neck, with gloominess of the head. Stiffness of the nape of the neck. Drawing and sense as of grasping from the nape of the neck to the occiput, day and night. *Painful*

*stiffness* of the left side of the neck. Pressure with tension, posteriorly and on both sides of the neck. *Drawing pain* in the left cervical muscles. Drawing pain in the external cervical muscles, extending to the shoulder and the elbow. *Drawing-crampy pinching* along both sides of the neck from below upwards. *Darting pain* in the right cervical muscles from below upwards. *Tearing* through the right side of the neck, from the face, down the arm, as far as the fingers.—A sort of *paralysis* of the cervical muscles, the head fell forwards as if it would fall off, with sensation of vertigo for six hours, but without any disposition to lie down.—*Involuntary nodding* of the head, alternately to the right and left side, or first slow, then quicker. *Involuntary stretching* of the head, now forwards, then backwards. Involuntary and alternate stretching and contraction of the cervical muscles. Swelling of the external and internal cervical muscles. Hard swelling on one side of the neck.—Hard *swelling of the glands* on both sides of the neck. *Stitches* in the cervical glands, during deglutition, extending to the ears. The glands increase in size and hardness, from the cold feet. \**Swelling of the cervical glands*.—Goitre.—Throbbing and darting in the goitre, (in a few hours).—Large clusters of red pimples round the neck, with violent itching. Painful eruption on the neck.

**Superior Extremities.**—*Swelling of the axillary glands*. Large boil in the left axilla. Herpes in the axilla and on the nape of the neck.—*Sharp pressure* at a small spot of the left shoulder, posteriorly, close to the neck. *Rheumatic tension* in the right shoulder-joint. \**Tearing in the shoulder and elbow-joints*, when at rest, not during motion. *Violent tearing in the shoulder-joint, beginning at the neck, when in perfect rest day or night*, relieved by lying on the affected side, worse in day-time when that part of her becomes cold, and going off by motion, even when merely knitting or sewing. *Stitches* in the shoulder and tearing in the arm. Stitches in the shoulders and the left lower arm. *Paralytic pain* in the shoulder-joint, which prevented him from lifting the arm. *Pain, as from bruises*, of the right shoulder-joint, scapula, and upper arm. *Involuntary starting upwards* alternately of one or the other shoulder. Nightly bone-pain in the arm. Painless jerks in the weak arm, at night. \**Spasmodic starting* of the arms, particularly during the siesta. Drawing in the left arm, apparently in the nerve. Drawing pain in the bones of the arm, as far as the fingers. The elbows of the child become bent, they can neither be stretched nor touched, on account of the pain. The arm, where the axillary glands are swollen, goes to sleep. The arms go to sleep on lifting them, or in the night, or with crampy sensation. *Weakness* of the arms when at work. The arms feel paralyzed, he has to let them hang down, they feel strong when at work or during motion. *Sudden paralysis* of the right arm, in the evening, as if caused by apoplexy.—Twitchings in the left upper arm. Twitchings of the muscles of the upper arms. Drawing in the left upper arm. *Tearing* in the right upper arm. *Itching* of the upper arms.—*Tearing in the elbow-joint*, only during motion. Tearing in the region of the right olecranon process. Tearing in the left elbow, down to the wrist-joint. Tearing with pressure, in and about the right elbow. Nightly bone-pain in the elbow. Arthritic stiffness.—Rheumatic drawing in the right lower arm, early in the morning. Tearing in the forearms, down to the hands, from washing. Tearing in the left lower arm near the bend of the elbow. Tearing in the ulnar nerve, down to the hand. Hot feeling in the lower part of the forearm. *Large, inflamed swelling, like erysipelas*, on the forearm below the elbow, passing into suppuration like a boil. *Biting-itching pimples* on the lower arms, filled with pus.—Cramp in the hand, the whole day. *Tearing* in the right hand and the two middle fingers, only at night, when holding them under the feather-bed cover; the pain ceases when laying those parts upon the cover. Tearing between the right wrist and

the knuckle of the thumb. Tearing in the right hand, between thumb and index. Tearing in the hands, towards the fingers. Tearing in the outer side of the left hand and in the knuckle of the little finger, towards the wrist. Tearing in the right palm, below the middle finger. Tearing in the palm of the right hand, with burning and itching in the skin, close below the fingers. Dull tearing in the wrist-joints. *Stitches* in the dorsum of the hand. Violent dartings in the right hand. *Involuntary shaking* of the hands. *Pain, as from a sprain*, in the right wrist-joint. Arthritic stiffness of the wrist-joint. Continually cold hands. *The hands go to sleep*, early in the morning, when in bed. \*The hands go to sleep after long talking. °Numbness of the hands. Her hands are disagreeably hot all the time. *Swelling* and heat of the right hand, in the evening. Feeling of heat in the left hand with anxiousness. Red swelling of the right hand, extending to the finger-joints, without pain, for several days. Sweaty palms of the hands. \**Great dryness* of the skin of the hands. *Itching pimples on the hands*. *Small boils* on the hands, with stinging pains when touching them. *Warts* are forming on the hands.—At times the fingers set themselves apart one from the other involuntarily, at times they become involuntarily clenched. The middle finger becomes contracted and is drawn to one side, without pain. *Involuntary twitching* of the fingers, while asleep. Involuntary twitching of the left index-finger. The knuckles are painful when pressed upon, without either redness or swelling. *Tearing* in the joint of the thumb, he cannot bend it. Tearing in the left thumb. Tearing in the tip of the right thumb. Tearing in the ball of the left thumb. Tearing in the middle fingers of the right hand. Tearing in the joint of the right middle finger towards the tip. Tearing in the tip of the right middle finger. Violent lancinating tearing in the tip and under the nail of the left middle finger. Arthritic tearing in the joints with redness and swelling. Pain as from a sprain in the posterior joint of the fourth finger, when clenching the hand. The last two fingers °or the little finger, go to sleep early in the morning on waking. *Deadness*, coldness, and numbness of the last two fingers, early in the morning on waking, also with blue nails. °The fingers become rigid during work. Stiffness of the fingers, from arthritic nodosities. Hot feeling in the fingers which appear cold, externally. \**Redness, inflammation and swelling of all the joints of the fingers*. Redness, inflammation and swelling of the middle joints of the fingers, with some swelling of the hands. *Inflammation* of a scratched spot on the finger. Inflammation and pain of the right middle finger, owing to a small hang-nail. *Itching* of the fingers. Violent, almost painful itching of both the anterior joints of the right index-finger, as is felt in an ulcerated wound, with some redness, and not going off by friction. *Itching and stinging* in some frozen fingers. *Burning* in hands and fingers, with redness of the fingers, as if they were frozen. *Chilblain* on the little finger, with redness and violent itching. *An ulcer* on the left index-finger, becoming larger, with violent pains which prevent him from sleeping in the evening. *Pimple* on the right thumb. Itching pimples between the fingers. *Wart-shaped tubercles* on the index-finger.

**Inferior Extremities.**—*Boil* on the nates. Itching, with violent stitches in the right buttock. In the left buttock, burning as in a wound. Tearing in the left buttock, with slight pressure. Tearing in the upper part of the right buttock, under the hip.—Pressure on the hip, proceeding from the small of the back. Pain in the muscles round the hip-joint, when pressing on them, when sitting or lying, not hindering walking. Pressing in the region of the left hip. Tearing in the left hip-joint. Rheumatic tension in the left hip. Tension and tearing in the left hip. Paralytic pain in the hip-joint, posteriorly, when stooping and when rising from a chair after having been seated for a time. Pain, as

from a sprain, in the hip, towards the small of the back, when rising, so that he had to limp, for two days.—In the right limb he felt a pain every four days, from the hip-joint down to the foot, which obliged him to limp. *Drawing* in the limbs from top to bottom, when at rest, less when taking exercise. The limbs go to sleep in the day-time, when sitting. *Uneasiness* in the thighs and legs, when lying, or in the evening, he had to move them frequently. °Nightly tearing in the lower limbs. Jerking, and jerking sort of trembling in the lower limbs. *Involuntary, violent shaking*, first of the right, afterwards of the left limb. *Cold and heavy limbs*. While walking, the lower limbs appeared to become insensible, (although they were warm,) with sensation as if the upper part of the body would fall. The lower limbs felt *tired and powerless*, as if they had been bruised. *Soreness* between the limbs, high up, she is scarcely able to walk. The inner side of the left thigh feels *sore, with biting itching*, extending as far as the genital organs. °Phlegmasia alba dolens.?—Pain of the left side of the thigh, as if it had been wounded, burning afterwards. Continual *jactitation of the muscles* on the posterior surface of the right thigh. *Cramp* in the right thigh, extending to the knee, he is scarcely able to go up stairs. *Involuntary spreading* of the thighs, followed by pressing them together, with an erection afterwards. *Tension* in the femora and calves, mostly when sitting. *Drawing pain* in the posterior surface of the thigh. *Drawing and burning* in the thigh. *Drawing and aching pain* in the fore part of the left thigh. *Tearing* in the upper part of the left thigh. *Tearing*, downwards, in the left thigh, mostly when sitting, especially when bending the knee. *Tearing in the middle of the right thigh*. *Tearing* in the thigh, in the evening, accompanied with a sensation as if the parts were excoriated. *Pulsative tearing*, with a paralytic feeling, in the outer muscles of the left thigh, when walking. *Stitches* in the left thigh, when setting the foot down. *Pain, as from a bruise*, in the right thigh, just above the knee-joint, increased by contact and motion. Pain in the left hip-joint, during motion, as if he had made a false step. *Cold thrills* along the left thigh, in the day-time.—After walking, the skin of the thighs is painful, as if excoriated, causing the limb to twitch for one hour. A large boil on the thigh, above the knee.—Early in the morning, when rising from the bed, the knees feel painful, as if they would break; also during motion. \**Stiffness of the knee-joint*, -early in the morning when rising, -as after a long journey on foot. The left knee is *curved*, the child is unable to stretch it, from pain. *Tension* around the knees, as if the parts around were too short, she was unable to set her foot down. *Fine dartings* in the knee, several evenings. *Drawing* in the bend of the left knee. *Great uneasiness* in both knees, at night, when lying in bed. °*Tearing* in the bend of the knee, particularly in the evening, or down the tibia, beyond the dorsum of the foot. \**Tearing* in the knees and ankles, with pain, even when touching them. Unusual *lassitude* in the knees. *Sore pain* in the knees and other parts of the limbs. *Pain, as from a sprain*, in the knee-joint. *Swelling* of the knees, also with sweat. \**Itching* in the bend of the right knee, °also burning and biting. Bone-pain in the side of the tibia, when touching the part. Sensation in the leg, as if something were firmly tied around it. °*Cramp* in the calf, when walking. \**Cramp in the calf*, at night, also in day-time, extorting cries, when sitting with his knees bent. °*Contractive pain* in the calves when walking. Frequent attacks of a *darting pain* in the leg, below the knee. *Drawing* in the legs, at night. *Drawing* in the leg from the ankle to the knee, in the afternoon, for two hours. *Drawing* in the right leg, in the evening, and occasional starting. *Drawing and tearing* in the left leg. *Violent tearing*, before midnight, extending from the knee, through the calf down to the feet; she had to sit up, and was unable to go to sleep.

Tearing in the legs and toes. *Rheumatic drawing* in the left leg, at night, when waking up. *Sharp, darting tearing*, in lower part of the left tibia, in the evening when in bed. *Lancinating tearing* in the leg below the knee, at the same time felt in the thigh. Sensation as if the legs were *swollen and heavy*. Great heaviness of the legs, with uneasiness in the same. °Burning on the legs. *Swelling* of the legs extending beyond the knees, with large red, hot patches, painful and burning, especially on the knee and ankle; she is unable to set her foot down, from pain and stitches; in the afternoon these symptoms are accompanied by shuddering and constipation. *Red spots* on the legs, resembling mosquito-bites, going and coming. *Violent itching* of the calves, down to the ankles. °Old ulcers on the legs, with nightly tearing itching and burning.—The *ankles* are painful at night.—Pain the *ball of the right foot*, when beginning to walk. Pain in the *heel*, when setting the foot down, as if a little stone were underneath it. Tight sensation around the ankles. °Cramp in the feet. *Burning tension* in the dorsum of the *foot*, near the big toe. *Drawing* in the foot, below the ankle, with heat in the parts. *Pressing* in the foot, which had been affected formerly, as if it would break out again. *Tearing* in the heels and the ball. *Pricking* in the ball of the foot, when stepping or pressing on it. *Stitches* in the dorsum of the foot. *Prickings* in both heels. Prickings in the feet, when walking in the open air. *Violent cutting stitches* in the left side of the heel. Pain, as from a sprain in the right tarsal joint, also in the outer malleolus, during rest. Sensation of *stiffness* in the left tarsal joint. Pain as from *subcutaneous ulceration*, in the ball of the right foot. Pain as from subcutaneous ulceration, in the soles of the feet, when setting the foot down or when sitting, with a burning sensation. *Burning* in the feet. Nightly burning in the soles of the feet. °Pain of the soles when walking. Great weight of the feet. *Swelling* around the ankles, °and of the ankles. *Swelling of the feet*, also during the menses. *Considerable swelling of the right foot*, (the first days). Swelling of the left foot, with stitches in the toes, when stepping on it. Swelling of the feet, with stitches in the ankles, mostly when walking. Swelling of the dorsa of the feet. °Swelling of the soles. *The swelling of the feet increases to ascites*, with swelling of the genital organs, oppressed breathing, and scanty micturition with pressing. Both feet are numb and go to sleep, as far as the calves, at night. The left heel feels as if gone to sleep. His feet feel cold easily. \*Cold feet constantly. Coldness, first of the right, afterwards of the left foot, in the evening, when in bed, for one hour. Coldness of the right foot, and heat of the left. \*Cold, sweaty feet. \*Profuse sweat on the feet, until they become sore. Itching around the tarsal joint. Tumours on the borders of the foot, painful when walking. Callosities in the heel, with soreness. Rhagades in the heel.—The toes are involuntarily extended and contracted again. °Cramp in the toes. °The toes bend involuntarily in walking. Pressure on the ball of the big toe. *Tearing* in the first three toes of the right foot. Tearing and drawing in a corn on the little toe, painful when touched. *Stitches in the big toe* of the right foot, in the evening. Stitches in the big toe, and afterwards in the sole. Stitches, mostly early in the morning in the little toe of the right foot, looking red and frozen. Sore pain in the ball of the big toe when walking, it feels excoriated. Sore pain between the toes, as from excoriation. Burning sore feeling of the toes, as if sand were on them. Burning-stinging sore feeling of the toes. Inflammatory pain around the nail of the big toe. \*Corns come on in a fortnight. °Pain in the corns. Stitches in the corns, with sore feeling.

**Sleep.**—A good deal of yawning. The child wants to yawn, but cannot; the yawning is broken; this causes the child to weep. Unsuccessful yawning;

she has to open her mouth widely, and nevertheless is not able to complete the yawning. \**Drowsiness in day-time*; he falls asleep when sitting. Even while walking, she is unable to resist sleep. Sleepiness, in the forenoon, with pressure on the eyes, frequent yawning, and internal chilliness. Irresistible drowsiness, at noon; after the siesta, laziness and dulness of the head. \**Drowsiness, in the afternoon*. \**Early drowsiness, in the evening*. Irresistible drowsiness in the evening; nevertheless, he falls asleep late. °Is unable to sleep, owing to thoughts crowding upon him. He is a little tired in the evening, when in bed, he wakes early in the morning. He wakes every morning, at day-break, and afterwards falls asleep again. \*He lies a long time in bed, in the evening, *without being able to fall asleep*. \**Bad sleep, for several nights, on account of being too much irritated*, °or on account of dreams. She was unable to fall asleep at night, and her sleep was very restless. Restless sleep, waking several times, and being wide awake at four o'clock. Restless sleep, when lying on the left side. At night, when asleep, he always finds himself on his back. \**Nightly sleep, full of dreams*. \**Sleep full of confused dreams*. Restless sleep, with confused dreams; he imagines he is at times in one, at times in another place; he wakes very often, and feels more tired in the morning than he had been in the evening. *Restless sleep, full of dreams*, but he does not wake. *Light sleep*, at night; he tosses from side to side, wakes, and imagines he is now in one, then in another place. \**Sleep full of fancies*. *Ugly fancies*, during the siesta. She was unable to sleep in the night, because, when closing her eyes, she saw vividly everything which had taken place the day before, she had to rise. °Was unable to lie on the left side, owing to palpitation of the heart and stitches.—Heavy dreams, at night.—*Vivid dreams*, at night, and talking while asleep. Loud talking while asleep, without any anxious dreams. *She frequently laughs aloud when asleep*. At night and towards morning she had such agreeable dreams, that she was sorry to wake. *Lewd dreams*, at night. *Voluptuous dreams*, at night. She dreams, at night, that she feels a titillation in her genital organs as during an embrace. He dreams he has an embrace, but there is no emission of semen. He wakes after midnight, with sensation as if he had enjoyed an embrace, but without any emission of semen. She is roused from a vivid dream about her daily business; she thinks she ought to perform that business, even after having become awake. *He frequently wakes at night from frightful or anxious dreams*. \**Anxious dreams*, at night. \**Frightful, confused dreams*, and restless sleep. Frightful dreams; the fright continues even after having become awake. Fearful dreams, —sad dreams. He dreams he is to be murdered. He dreams he is present at a row, and hides himself to escape the danger. Vivid, agreeable dreams; he finds it difficult to arouse himself early in the morning; he continues dreaming, as soon as he closes his eyes. —He frequently wakes at night, tosses about from side to side, and only sleeps soundly early in the morning. She frequently wakes at night, remains awake for hours, and looks in the morning as if she had not slept enough. After many vivid dreams, she has a very anxious dream, early in the morning, as if a number of curs were clinging to several parts of her body, and as if the number were constantly increasing. *Starting, when falling asleep*. Starting, when falling asleep, apparently beginning at the feet. \**Startings and jerkings of the limbs*, with restless sleep. Anxious waking, at night. *Screaming*, while asleep, delirium. Several anxious screams, when asleep. Restless nights, with meaning while asleep. Weeping at night, while asleep. The child sleeps very restlessly, and moans while asleep. Anxiety, when falling asleep. She frequently wakes at night, as if roused by anxiety. In the evening, she is afraid of going to bed. She wakes for several mornings in succession, with anxiety and rest-

lessness. She starts up from her sleep, wants to scream, but cannot, as in night-mare. Night-mare. After midnight, she wakes, and is attacked with anguish, so that she is unable to take breath, for two hours, two nights in succession. She wakes early in the morning, after a deep sleep, with anxious thoughts, as if she would die; she even prepared herself for death, by thinking of farewell letters to her friends. Anxious palpitation of the heart, at night, when turning to the other side. *Palpitation of the heart almost every evening, when in bed.* Orgasm of the blood, early in the morning when waking. At night, he finds a recumbent position intolerable, he is obliged to sit up. *At night, he was unable to find ease in any position*, this vexed him so that he cried. At night he feels his pain while asleep, he dreams of it. Stitches and throbbing in the occiput, at night. Waking with a gloomy mind, at night. Dry eyes at night. Saliva flows out of his mouth, at night, while asleep. Sour eructations at night. She wakes at night with vertigo and nausea. Hunger at night, when waking. Thirst at night, she is frequently obliged to drink, and can only drink little at a time. *Troublesome pressure in the stomach*, in the evening when in bed, relieved by friction. Cutting in the region of the stomach, at night, she had to sit up. Cutting pain in the hypogastrium at night. Pinching below the umbilicus, after midnight, she had to bend herself. Drawing pain in the left side of the abdomen, at night. At night, continual, almost unsuccessful desire for stool. Nightly cramp of the abdominal muscles, they are quite hard, and are so painful that one would like to scream. Cough and pain in the chest, at night; he does not fall asleep till late after midnight. A sort of spasm of the chest, at night, during confinement, extending from the small of the back, along the back, into the region of the stomach, then into the chest, aggravating the breathing, and giving her a good deal of anxiety. At night, pain in the small of the back, and stitches in both hips and the left side of the chest. At night, the hands go to sleep. Tearing in the left lower limb, at night. Violent drawing pain in the heel, in the evening when in bed. Cramp in the feet, for several nights. At night the limbs feel as if they had gone to sleep. °Uneasiness and twitching of the feet during sleep. Early in the morning she wakes from a heavy sleep, disturbed by a number of fancies; the whole right side of the body feels as if it had gone to sleep, for half an hour. At night, drawing in the gums and in the whole left side of the body, the pain rouses her from sleep. Sleepless night, owing to trembling and a sensation as if all the inward parts of the body were balancing to and fro. Single twitchings, while asleep, the lower limbs are pushed forwards. Orgasm of the blood, early in the morning, when waking. Early in the morning, when waking, relaxation and weakness of the limbs, disappearing after rising. *Unrefreshing sleep.* Unrefreshing and gloomy sleep. Early in the morning, when rising, he feels weary, heavy, and tired of life.

**Fever.**—Chilliness, in the evening, when falling asleep. Shuddering after drinking. *Spasmodic shaking from chilliness*, as if caused by a mental commotion, with throbbing in the forepart of the head, in the evening. *Internal chilliness*, early in the morning. Early in the morning, continual concealed chilliness. Continual chilliness, with coldness all over, more violent towards evening. For many days, *chilliness on the left side of the body*. Hands and feet are so cold that they feel dead. During the chilliness, she feels as if the movement in the internal parts would be arrested. Violent chilliness in the evening, hindering sleep, with nausea.—Fever, every other evening, the chills commencing at seven o'clock; they caused him to start high up in his bed, without any consecutive heat or sweat. Chilliness in the back, at three o'clock in the afternoon, worse towards evening, after lying down, lasting a quarter of an hour, with cold feet, without being followed by heat or sweat.—*Fever every af-*

*ternoon*, from three o'clock until evening, the chilliness increasing progressively, without any subsequent heat or sweat.—*Fever at seven o'clock in the evening*, chills and great coldness, even when in bed, as if she were lying in ice, for two hours, with drawing in all her limbs, in the back and the whole body; on waking from her sleep, which was full of dreams, she is covered all over with sweat, two evenings in succession, with violent thirst after the sweat.—*Coldness of the body*, in the evening, with heat in the forehead. At eight o'clock in the morning, violent chilliness of half an hour, followed by but little heat. Early in the morning she wakes with chilliness, soon afterwards she has much heat and pain in the occiput, she feels quite sick. *Chilliness every day*.—*Evening-fever*, every day, chilliness followed by heat. Evening-fever, a little chilliness, followed shortly by violent, continued heat, weariness and pain in the limbs. *Chilliness, every evening*, when in bed, until midnight; after midnight he feels warm and hot; early in the morning, sour-smelling sweat. In the evening, *alternate chilliness and heat*, with aching of the whole head, and eoryza. *Alternate chilliness and heat, and great redness and heat of the cheeks*. Fright causes alternate attacks of chilliness and heat and sweat, for twenty-four hours.—*Fever*; she goes to bed, feels nauseated, vomits four times; chilliness, followed by sweat, without any previous heat; all her limbs were affected, she had stitches in the head, chilliness in the day following, preceded by redness of the face. Fever, with great weakness, heat predominant, afterwards chilliness. <sup>¶</sup>*Fever*, every evening, burning heat; she drinks very often, but little, has frequent desire for stool, without any evacuation; at night she frequently emits a small quantity of very brown urine. <sup>°</sup>*Tertian fever*, with sour vomiting after the chilliness, and bloated face and hands.—*Hectic fever*, with clammy night-sweats. Typhoid fever, with constipation, waking with a peevish mood, seolding, screaming, ugly demeanour, nervous irritation, without heat of the head or red face, circumscribed redness of the cheeks, great weakness, sweat without relief, red, dry tongue.—Sweat in the day-time, after little exercise. <sup>°</sup>*Feverish day-sweats*. A good deal of *heat over the whole body*, with violent burning and stitches in the eyes. <sup>\*</sup>*Flushes of heat*. *Burning heat*, with short breath, slight thirst, pale face, and starting while asleep. He constantly perceives a *smell as of strong sweat* around him. The exhalations of the body *smell like onions*. *Sourish, acrid sweat* of the whole body, except the legs. *Night sweat*, only on the trunk, not the lower limbs. Sweat, every night, after midnight, especially on the chest. Profuse sweat at night, with coldness of the forehead and neck. Morning-sweats, only in the joints. Morning-sweat, in bed, for seven mornings in succession. Morning-sweat over the whole body, *smelling of blood*. Morning-sweat, after a restless night.

**Skin.**—<sup>\*</sup>The skin of the whole body is hot and dry, hot hands. <sup>°</sup>Tendency of the skin to crack. Early in the morning, itching of the head and back. <sup>\*</sup>Itching, as if caused by fleas, in different parts of the skin and of the herpetic eruptions. Prickling itching of different parts of the skin. <sup>°</sup>Itching of the skin, when heated, and before going to bed. Stitches in different parts of the body. Insufferable tingling stitches in the small of the back, and in other places. Darting stitches from the neck to the right foot. Smarting and burning itching over the whole body. Burning sensation in different parts of the skin, on the back, arms, etc. Violent itching of the lower limbs, the back, the nates, in the evening, when in bed, with blotches after scratching, going off again very speedily. <sup>°</sup>Corrosive itching of the arms and lower limbs.—*Pimples*, partly itching, partly painful, on the occiput, small of the back and nates. <sup>°</sup>Painful eruption on the neck and chest. Large, red spots on the legs, neither painful nor itching. Large, bright-red spots on the epigastrium, around the pit of the

stomach, and on the joint of the thumb, with itching and burning. *Itching herpetic spots.* Small, herpetic, itching spots on both sides of the neck, and on the back. \*Violent itching of a herpetic eruption on the tibia. \*Freckles. °Insensible, yellow-brown, shrivelled herpes. °Humid, suppurating herpes, full of deep rhagades, and covered with thick crusts. °If not suited to the symptoms, it causes the tetter to become ichorous and to spread, (cured by Sep.). Large boil on the left lower arm, making the whole arm stiff, and another boil on the left buttock, (in a few days). °Boils, returning periodically. The painless ulcers bleed °or burn when bandaging them, and are then affected with painful stitches, or with nightly tearing and itching. °Fistulous ulcers, with hard, red-shining, everted edges, and inflammatory swelling of the affected part. °Mercurial ulcers. °Carious ulcers, (caries of bones). Large boil appears on the left scapula, with inflammation all around, and burning stitches, with alternate chilliness and heat of the body. °Chafing of children. Warts.—°Chilblains. °Varices of pregnant females.—\*Glandular swellings. °Arthritic nodes. \*Dropsical swellings. Chlorosis. Aneurisms.?

**General Symptoms.**—*All the limbs* and all the soft parts of the body are painful, when touched or pressed. Everything on which she is sitting or lying, feels too hard for her. Pain, in various parts of the trunk, as if some muscles were spasmodically contracted, and then extended again. *Intermitting, cramp-like drawing* in the knees, forearms, hands and fingers. °Tearing in the arms and lower limbs, or in the feet and fingers. *Drawing, with pressure*, in all the joints, especially the knees. Drawing in the left hand and tarsus, early in the morning. Drawing and tension in the carpal and tarsal joints, early in the morning, when in bed. Drawing in the limbs, every other afternoon, and also across the face. °Drawing and tearing in the limbs in windy, rainy weather, relieved by external warmth. Drawing at times between the scapulæ, at times in the chest. Quickly-passing tearing in various parts of the body. *Pinching pains* in different parts of the body. *Violent stitches* in the thoracic cavity and the umbilical region, arresting the breath.—*Stiffness of all the joints.* Stiffness of the limbs and the small of the back, with audible cracking in the joints when bending them. Stiffness of the arms and lower limbs with insensibility and numbness, he is unable to walk without falling, or to eat alone, since he is no longer able to use his hands. Stiffness of all the muscles of the upper part of the body and the whole trunk, so great that he is unable to stir.—°Paralysis.—*Desire to go into the open air.* Aversion to stay in the room.—She is extremely sensitive to the cold, open air. Feverish sensitiveness to cold air, especially after a meal.—°Deficiency of animal heat. Sort of anguish and attack of giddiness, when walking in the open air. Severe dulness of the head, after having been long in the open air. Heaviness of the lower limbs when walking in the open air. Constrictive pressure in the middle of the chest, from walking in the open air.—The oppression of the chest is very much increased by walking in the open air, and accompanied by loud palpitation of the heart. Heat in the eyes and palms of the hands after walking in the open air. When walking in the open air but a little, he perspires excessively and becomes quite weak. °Weariness of the feet and burning of the soles after walking in the open air. \*Disposed to take cold. Appears to favour the ramollissement and curvature of the bones. Sensation in the bones, as if they contained no marrow. She feels a heaviness in all her limbs. \*The whole body feels bruised, especially in the evening. He feels a heaviness in all his limbs, is not disposed to work, is out of humour, a good deal of heat rises to his face from time to time. \**Drawing and stretching* in all his limbs. Uncomfortableness in the whole body. He feels, early in the morning, as if he had spent a sleepless night. Desire to move about.

Disagreeable sensation of uneasiness in the body, when sitting, which does not permit him to continue writing; he has to jump up and to breathe deeply; his chest feels oppressed.—*Great agitation of the blood*, in the evening, increasing until it becomes a sensation of trembling. *Considerable orgasm of the blood*, towards evening. Orgasm of the blood, agitation in the whole circulatory apparatus.—Disagreeable *feeling of heat* over the whole body, everything he wears is too heavy and hot; he has frequently to breathe deeply, he feels oppressed; his hair stands on end, and feels as if drawn together into one cluster. Internal restlessness, she feels as if she must throw her hands and feet about, accompanied by a feeling of faintish weakness, (during her headache).—*Sensation as if the circulation of the blood were arrested*. Frequent attacks of a very painful sensation, as if he became quite cold internally, as if the blood gradually ceased to be warm.—Paroxysms: pain in the chest, with nausea, as if she would vomit, she then lost her voice, was only able to speak in a low tone; all this disappeared again after an eructation.—Several daily attacks of half an hour each, first, of griping and grasping in the back, after which the side becomes affected with a sort of stitches; this is accompanied with obscuration of sight, and she has to lie down wherever she may be.—After a vexation he becomes quite weak, as if he would fall, with palpitation of the heart and trembling, the whole forenoon. He has a vexation, after which the pit of the stomach becomes suddenly affected, and his limbs feel heavy as if they were made of lead.—Involuntary twitchings in various places, which affected her a good deal. Involuntary turning and twisting of the whole body, this makes him pant, and makes his face hot and red. *Involuntary alternate extension and contraction of the muscles in different parts of the body*, without pain, and with full consciousness, in paroxysms, one every seven days, for the period of eight weeks. Spasmodic contraction and extension of the limbs, almost without any pain. °Contraction of the fingers and toes. °Cramp in the fingers and calves. °Jerking and twitching of single limbs, or of the whole body, sleeping or waking. *Epileptic fit, screaming, foam at the mouth, loss of consciousness, he throws his arms and limbs about*, he then imagined he would have to die, and complained of great anguish about the heart. *Epileptic fit*, his left arm was bent upwards, his fingers clenched for a couple of minutes, he then was without his senses, tore things, threw his arms and legs about, screamed, had foam at the mouth for a quarter of an hour; he then lay like a dead being, motionless; then he began to mutter. *Epileptic fit*, visible twitching of the muscles of the whole of the right lower limb; the pit of the stomach became affected, he began to scream, without consciousness, threw his arms and legs about, had foam at the mouth; then he was motionless for half an hour; on cold water being introduced into his mouth, he blew it out again, and his senses returned. °The limbs (arms, hands, lower limbs,) go to sleep, day and night. °Insensibility of the arm and foot. Fainting fits when lying down, with vanishing of the senses and obscuration of sight, without any desire to move. Total relaxation of the nervous system; dropping of the lower jaw, slow breathing through the mouth, the eyes are half open, as if covered with a gauze. *Faintishness at certain hours*, every day, mostly in the evening. She fell down suddenly, without vertigo. *Sudden failing of strength*, like a swoon; she had to hold on to something; accompanied by dimness of sight, for half an hour.—*Tremor of the limbs*. Attacks of trembling, in the evening, when in bed. Drawing trembling in all the limbs. Trembling, without sensation of cold, in the afternoon. He becomes thin and pale. \**Great thinness*, (this is relieved by Graph.). \**Great emaciation*, °also of children. She feels quite wretched (with a sore throat) and has a yellow-gray complexion.—Walking, and continual sitting while writing, are very trouble-

some to her, and bring on profuse sweat.—*Sudden weakness* when sitting. Feels very tired from a little exertion, and cannot recruit his strength in any position. Desire for rest, without feeling tired. *He would like to lie down all the time*, and when he lies down, he falls asleep immediately. \**Weariness*, especially early in the morning. Relaxation of the body, with nervous irritation. Weakness, in the afternoon, with tremor of the hands. Sudden lassitude in all the limbs, occasionally, with ill-humour. Frequent attacks of weakness, she is obliged to let her hands hang down. Weakness of the body, he would like to rest himself all the time, his spirits being bright. Although accustomed to work, she is now obliged to lie down several times during the day. Exhaustion, after a long walk. Great weakness, especially of the limbs. Weariness of the limbs, with dryness of the throat. Weariness of the limbs, especially when ascending an elevation. *Extreme weakness* when going up stairs, the bones of the lower limbs being painful. The weakness increases during rest. In the evening, when in bed, he feels as if he would die from weakness. °Internal weakness.

**Characteristic Peculiarities.**—During the paroxysm of the pains she is obliged to walk about and to weep; she is unable to remain quiet. Her ailments increase in the afternoon at four o'clock; but at eight o'clock in the evening she feels better, with the exception of her weakness. He feels better in the open air than in a room, which he is frequently unable to endure from heat and uneasiness.

## 157. MAGNESIA CARBONICA.

MAG. CAR.—Carbonate of Magnesia.—See HAHNEMANN'S Chronic Diseases, Vol. IV.—*Duration of Action*: 40 to 50 days.

COMPARE WITH—Acon., Ars., Bar., Bell., Bry., Calc., Carb. a., Carb. v., Caust., Cham., Con., Croc., Cycl., Fer., Graph., Hyos., Jod., Kali, Lyc., Mag. mur., Nitr. ac., Nux v., Nux mos., Petrol., Phosph., Plat., Plumb., Rhus, Sil., Spig., Spong., Squil., Staph., Sulph., Sulph. ac., Verat.

ANTIDOTES.—Cham.,? Puls.,? Merc. sol., Nux v.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Magn. is suitable to morbid conditions of the female organism, especially to menstrual irregularities and hysteria. Morbid conditions of children.—Scrophulosis.—Atrophia infantum.—Epilepsy. Scrofulous ophthalmia, with obscuration of the cornea.—Cataract. Drawing, tearing and boring in decayed teeth and in the whole side of the face, with swelling of the cheek, stiffness of the nape of the neck and neck.—Throbbing pain with single stitches in the teeth. Pyrosis.—Gastrodynia, aching pain in the stomach.—Cardialgia, contractive and aching pain in the stomach with sour eructations.—Hernia scrotalis.—Costiveness.—Cholera sporadica infantum.—Green, and sour-smelling diarrhœa of children.—Chronic looseness of the bowels.—Chronic diarrhœa.—Incontinentia urinæ.—Copious pollutions.—Profuse menses.—Metrorrhagia.—Menses delayed, scanty and too short.—Leucorrhœa.—Old, malignant ulcers on the feet.

### SYMPTOMS.

**Mind and Disposition.**—Trembling anguish and fear, as if some accident would happen, going off in the evening, when in bed.—Anxious and *warm through the whole body*, especially in the head, while eating warm food. Anxious, with

sweat, the whole day, especially during motion. Anxious and worn out, with stitches through the whole body, after rising from bed. Sort of fear, fullness, with indisposition to attend to anything, in the afternoon, with headache, as if the head were screwed in; cheerful in the evening.—Internal *uneasiness*, with trembling of the hands, and so much absence of mind, that he has to begin a letter three times on account of having omitted something.—Peevish, she knows not what she wants, with sweat. Vexed. Indisposed to attend to anything, more so after some time. Ill-humour; every thing she looks at, is disagreeable to her, less in the evening. Ill-humour; nevertheless she hums a song (going off shortly).—*Sad mood*, with indisposition to talk, and a sort of fearfulness.—Physical, mental and moral *depression*.—Forgetful and ill-humoured. Very talkative, she does everything very handily. In better spirits in the afternoon than forenoon.

**Sensorium.**—Dulness of the head from mental exertions.—*Reeling* sensation in the head, frequent sensation as of loss of consciousness. *Vertigo* when kneeling, as if she would fall to pieces. *Vertigo* when standing, as if objects were moving around her, with intoxication and heaviness of the head. *Vertigo*, early in the morning, after rising, as if everything were turning with her, with inclination to vomit and accumulation of water in the mouth. *Vertigo as if everything were turning with her*, and as if she would fall. Fainting vertigo, in the evening, after lying down, with coldness followed by inclination to vomit, for half an hour; afterwards sleep, interrupted by frequent waking and violent nausea on moving ever so little; this was worst in the morning after rising, accompanied by eructations, which tasted of rotten eggs, with pale face and coldness. *Vertigo* unto falling, in the evening when sitting, (and sewing,) with nausea; afterwards lying down without being conscious of it.

**Head.**—*Headache*, as if brought on by stiffness of the neck. *Violent* headache, early in the morning, when in bed, lasting until noon. Violent nightly headache, while asleep, but more violent after waking, going off when raising the head. Headache in the afternoon, becoming worse towards evening, with ulcerative pain of the head, when pressed upon from without. Heaviness of the head, while lying, after waking from the siesta, the saliva being tinged with blood. Weight in the forehead when standing. Heaviness and dizziness of the head, early in the morning, when rising, going off after having been walking about for an hour. Heaviness and gloominess of the head, early in the morning when rising, as if he had not slept enough, going off after washing himself and moving about. Heaviness of the head with yawning and nausea. Great heaviness and painfulness of the head. Heaviness in the forehead and ulcerative pain on the left side of the occiput.—*Pressure* over the head, during mental exertions. Pressure over the whole head, in a room, among a number of men. Pressure in the forehead, every day. Great pressure in the forepart of the head, with pain in the eyes. Aching about the forehead, early in the morning on waking, until afternoon. Pressure in the forehead from morning till noon. Stupifying ache in the left side of the forehead, and sometimes in the eyes. Sticking with pressure in the forehead, intermitting. Sensation in the head as if both sides of it were being screwed towards one another, afterwards this sensation is also felt in the occiput.—*Tension and drawing* in the occiput during and after the act of swallowing, as if the head were drawn backwards, worse when standing, going off when sitting. *Drawing pain* in the head. Drawing pain in the forehead, with nausea.—*Violent darting headache*, with a sensation of heaviness, brought on by vexation, increasing from one o'clock in the afternoon, and going off in the evening when in bed. *Tearing and heaviness* in the forehead and top of the head, after dinner. Tearing and throbbing, deep

in the forehead. Tearing in the nape of the neck, and as if it were drawn backwards, from afternoon till evening, when it passes off in bed. Tearing in the forehead, with stupefaction and heaviness in the brain. Painful tearing in the forehead, deep in the brain, and in front of the left ear. Tearing in the left temple, going off by pressing on it, felt also in the evening when lying in bed. Violent tearing in the left temporal region from below upwards, with toothache in a posterior molar tooth. Painful tearing in the right temple, which closed her eyes. Violent, darting tearings, alternately in the vertex, the occiput, upper arms and thighs. Violent tearing and cuttings in the whole head, in the evening, before going to bed. Tearings and dartings in the right side of the head, from without inwards, after dinner, when sitting.—*Stitches* in the right side of the head; afterwards, when moving the head towards the left side, a tearing sensation in the right side of the occiput. *Lancinating headache*, early in the morning after rising, with pressure over the eye. Stitches in the right side of the forehead, from within outwards, rather externally with previous itching. Frequent stitches about the *forehead*, in the evening. Stitches in the *vertex*. Painful stitches in the *right temple*, after dinner. Stitches in the *left temple*. Dull stitch in the left temple, and afterwards above the right ear. Violent stitches in the *right side of the head*, from within outwards, passing off when turning to the other side at night in bed. Dull, painful stitches in the anterior corner of the *right parietal bone*, in the evening. Stitches and throbbing in the right side of the head, after dinner. Dull stitches in the right side of the head from without inwards, when standing. Deep, dull stitch *through the brain*, from the vertex to the right side of the occiput. Stitches in the *left side of the head*, when standing, also in the evening. Stitches, darting *from both parietal bones* towards one another. Violent stitches in the occiput, in the evening. Stitching pain in the *whole head*, making her ill-humoured, from 8 o'clock in the evening until she goes to sleep. Stitches in *different parts* of the head. Stitches in the head, followed by contusive pain in the sides of the head, when standing; the pain is not aggravated by motion. Boring stitches, extending from the upper part of the right side of the head through the occiput, early in the morning.—*Painful boring* in the left side of the head.—Groaning vibratory sensation in the whole head, during slight motion. A sort of groaning jerk over the left eye, through the head, during motion and walking.—*Pulsative sensation* in the region of the forehead. *Congestion of blood to the head*, especially when smoking (which was his habit), or in the forenoon.—*Warmth* in the head and sweat in the face. Frequent flushes of heat, without any subsequent sweat. Frequent feeling of heat in the head, also in the evening. Feeling of heat in the head, alternating with paleness of the face and external heat and redness of the same. Heat in the head and hands, with redness of the face and increase of external warmth.

**Scalp.**—Fine *incisive pain* in the hairy scalp, from the middle of the forehead towards the left eye, as if the skin would be cut. Intensely-painful *prickings* about the head, after dinner.—When pressing on the vertex, it feels bruised, this sensation had been preceded by a darting tearing.—Headache on the top of the head, as if the hair were pulled from afternoon till evening.—*Itching* of the hairy scalp, in different places. Violent itching of the scales of the hairy scalp, especially during rainy weather.—*Scurfy formation* on the left side of the forehead. *Increased falling off of the hair*.

**Eyes.**—Pain in the left eye, as if it would fly to pieces, or as if it pressed from within outwards, with profuse lachrymation, flow of tears from the left nostril, with increase of the drawing-sticking headache over the left eye when blowing the nose.—*Pressure* around the eyes, towards evening.—*Tearing* in the

upper border of the orbit. *Tearing* in the eyes, followed by lachrymation, going off after washing, early in the morning, when in bed. *Darting tearing* in both the lower eyelids. *Darting* in the lids of the left eye, with lachrymation, for three days.—*Itching* of the whole of the right eye, going off by rubbing. *Itching* and smarting in the left eye, going off by rubbing. *Smarting itching* in the internal canthus of the right eye, removed by rubbing. *Itching* and burning of the eyes, especially the canthi, in the evening.—*Burning and stinging* in the eyes, which look injected. Continual *burning and dryness* of the eyes. *Burning and inflammation* of the internal canthus of the right eye. *Inflammation* and swelling of the lower eyelid, with redness of one of the canthi.—Swelling of the eyeball, as if dropsy of the eye would set in.—*Dryness* of the eyes, early in the morning. *Dryness* and burning of the eyes. *Lachrymation* and burning of the right eye, with congestion of the internal canthus. Watery eyes, every morning, as after long crying. *Lachrymation, the whole day*. *Lachrymation* and smarting of the left eye. *\*Agglutination of the eyelids, early in the morning*, going off after washing. Gum in the eyes, early in the morning on waking, with burning and dim-sightedness of the eyes. *Agglutination* of the lids, early in the morning, with burning of the eyes when looking at the light of day, for many days. Early in the morning, on waking, her eyes looked swelled, with dizziness of the head; she was for a long time unable to open them. °Obscuration of the cornea. °Obscuration of the crystalline lens.—*Failure of sight* in the right eye, when looking at the letters attentively, while reading.—*Dim-sightedness* particularly of the inflamed eye, as if feathers were before it. *Mist before the eyes*, especially the right.—*Photophobia*, with burning in the eyes. °Black motes before the eyes.

**Ears.**—*Tearing in the ears*, with tearing in the left molar teeth, and in other places, changing every moment. Painful tearing in the whole of the left concha, in the evening; in the forenoon the tearing is felt in the right.—*Dull boring* in the right ear. Painful boring and stitches in the left ear from without inwards. Continued tickling in the right ear, in the evening. Burning in the right ear, for a short while only.—Violent stitches in front of the left ear. Painful, dull stitch behind the right ear, terminating in tension, going off for a short while by pressing on the part. *Sore pain* behind the right lobule, when pressing on the part.—*Redness and inflammation* of the right meatus auditorius externus, for three days, with ulcerative pain and sensitiveness to pressure, which remained a long time after.—Great *sensitiveness to noise*, causing one to start.—*Tingling* of the ears. Tingling in the right ear, after dinner. Tingling and ringing in the left ear. Ringing in the left ear, early in the morning, when in bed, followed by painfulness of the whole ear to the touch. Violent ringing in the right ear, after dinner. *Whizzing* before the ear, with alternate whistling. Whizzing in the right ear. Whizzing and ringing in the left ear, *\*with diminution of hearing*. *Roaring* in the ears, so violent, that she was unable to remain in bed, she had to sit up and rise. Whizzing, *fluttering and buzzing* in the right ear, with hardness of hearing. Fluttering, as of a bird, in the right ear. Rushing, as of water, in the right ear, in the evening. Whizzing in the right ear, with diminution of hearing, and a sort of intoxication in the open air, so that she did not understand what she was asked, worse in the room.

**Nose.**—Redness of the nose, and swelling, for several evenings. Scurfy formation in the nose, (a. 3 d.). *Bleeding of the nose*, early in the morning. Bleeding from nose and mouth. Violent bleeding from the nose, early in the morning, on waking, with violent sneezing and tickling in the right nasal fossa. Discharge of blood from the nose, when blowing it. *Painful itching* of the upper part of the left side of the nose, near the eye. *Violent tearing* from

the left side of the nose, over the margin of the orbit, as far as the temple. —Violent *tickling in the nose*, followed by sneezing, in the evening or morning. Frequent *itching* in the left nasal cavity. Violent itching in the nostrils, going off after stratching. *Prickling, sore feeling* in the right nasal fossa, as in a cold, during and between the acts of micturition. Frequent sneezing, early in the morning, with obstruction of the nose. Feeling of coryza, early in the morning, with obstruction of the nose, interrupted by the sudden secretion of a few drops. Desire to blow the nose, with sensation, as if the nose were full of mucus; but nothing is expelled, and the nose remains obstructed. —*Dryness* of the nose, early in the morning, and obstruction of the left nostril. Dryness of the nose, every morning on waking. \**Dry coryza*, —and obstruction of the nose, waking her at night. \**Obstruction of the nose*, —frequently alternating with fluent coryza. Obstruction of the nose, in the afternoon. Coryza, fluent early in the morning, dry in the afternoon. Violent coryza, with obstruction of the right nostril. Coryza, for several days, especially morning and evening. Dry coryza, the whole day; she has to open the mouth in order to get breath; nevertheless, there is mucus in the nose. Water drops out of her nose unawares, without any coryza being present. Fluent coryza, early in the morning, when rising, followed by obstruction of the nose, the whole day. Fluent coryza, until next morning. Coryza, with discharge of thick mucus, and sensation as if the nose were swollen from the frequent blowing, for three days.

**Face.**—Pale face with sickly complexion, accompanied with general uncomfartableness. Wretched, pale, earthy complexion, for a long time. Appearance of ill-humour, in the forenoon. —*Tension* in the whole face, as if albumen were drying upon it. —*Tearing* in the left side of the face. Nightly tearing, *digging and boring* in the malar bone, as if with a red-hot iron, somewhat alleviated by sitting up in bed, or else, driving one out of bed with a horrid anguish. She has to run from one room into another *the whole night* on account of the pain in the face, she has to hold the painful side and shake her head constantly, as soon as she is quiet, the pains return. *Throbbing pain* in the antrum Highmori, and swelling of the right malar bone. Redness and burning of the face, with external heat, in the evening. Great redness of the face, with general heat. Continual burning and tension between the lips and chin, in the evening. Heat in the face and hands, with redness, burning and thirst, at noon. Redness and swelling of the right cheek and lower jaw, with violent ulcerative pain, especially painful when pressing on the parts, and accompanied with darting while talking, sneezing or yawning, for 6 days. *A number of vesicles* on the sides of the forehead, and in the right corner of the mouth. Vesicles on the nose, some of them filled with pus. *A number of vesicles* around the chin. Pustule under the right nostril, which becomes finally covered with scurf. Pustule in front of the right ear, without sensation. —*Hard nodosity* on the right temple, painful when touched. —°Diminution of the nodous tumours in leprous patients. —The right submaxillary gland is painful when pressing on it, or when moving the lower jaw. Dryness of *the lips*, early in the morning, without thirst, until noon. *Burning and tension* of the upper lip. *Fine, painful tearings* in the lower lip. Itching burning above the upper lip, towards the left corner of the mouth. Itching of the upper lip, as if an eruption would come out. *Soreness* of the upper lip. *Fine eruption* about the mouth. Herpetie eruption around the lower part of the mouth. *Pustule* on the upper lip. Pustules on the lower lip. *Vesicle* on the lower lip, near the right corner of the mouth, for three days. Clear vesicles near the left corner of the upper lip, with tensive pain. *Hard, little nodosities* in both corners of the mouth. Pain

on the inner part of the upper lip, and in the gums, as if cut; contact with the tongue causes a burning sensation.

**Jaws and Teeth.**—Toothache, with swelling of the cheeks. Toothache, when riding in a carriage, aggravated by cold. Toothache every morning after waking or rising, on the right side, going off by walking about for some time. Pain of the posterior and inferior molares of both sides, evening and morning. Great pain in one of the right hollow molares, which it is impossible to relieve. Toothache every day, especially at night. As soon as he gets into bed, the toothache increases, and there is a good deal of water accumulating in the mouth.—°Nightly toothache with ulcerative pain in the teeth when touched. \*Toothache, with drawing (tearing) in the direction of the temples, °and in the whole side of the face which is swollen, with stiffness of the nape of the neck and neck, and boring in the teeth, commencing in the evening, when going to bed, and driving him out of bed at night, several nights in succession.—*Drawing* in all the teeth, with swelling and redness of the gums.—*Darting* toothache, almost every day, early in the morning after rising, and at night, with dartings in the fingers and feet, waking or sleeping.—Tearing and drawing in the posterior and inferior molares, also in the evening, sometimes relieved by salt. Violent tearing, drawing and gnawing in a hollow tooth, relieved for a short time by cold, and by turning to the affected side, continuing until 4 o'clock in the morning, worse in the warm room, with restlessness, discontent, and tensive pain over the whole of the right cheek, (after the menses). Tearing in the inferior molares of the right side, with sensation in a posterior superior molar tooth, as if screwed . . . out of its socket. Violent tearing in the lower teeth of the right side, extending as far as the temple, after dinner. Tearing in the roots of both rows of teeth. Tearing in the last left upper or lower molar tooth, in the evening when in bed, until he falls asleep, and in the morning when waking, going off after rising. *Sticking* toothache after a meal. Stitches and tearing in the roots of the left upper teeth, with sensation as if the teeth were elongated, and a tickling in the teeth in the open air. °Throbbing toothache with single stitches.—Burning, slight jerking, and tearing, with sensation as if this or that tooth were elongated, in the upper or lower row, relieved by motion, and worst at night when in bed, also brought on in the day-time, by eating and masticating. Burning toothache, in the evening when in bed, with pain as if the teeth were loose.—The teeth feel *elongated* and very sensitive. One of the molares feels elongated; early in the morning, when applying cold water to the tooth, it feels as if it would be pulled out, also when chewing.—Two wisdom-teeth made their appearance.—*Looseness* of the teeth, with swelling of the gums. Looseness of the teeth; they feel elongated; the gums feel sensitive and burning, at dinner, passing off in the evening, but renewed by eating. Continual and almost painless swelling of the gums, even in the empty sockets. *Burning vesicles* frequently make their appearance on the gums, on the inside of the cheeks, lips, and palate.

**Mouth.**—*Violent itching* of the inner side of the right cheek. A small, red-blue place on the inner side of the right cheek, without any sensation, and bleeding when rubbed. A number of miliary eruptions in the mouth, on the tongue and cheeks, bleeding when touched ever so little, and burning when eating anything sour. *Numbness* of the whole inner mouth, the palate, and the anterior half of the tongue, early in the morning, when waking, until noon. *Burning, painful vesicles* on the left border of the tongue and on the lower lip, suppurating after the lapse of three days. Vesicles, with tensive pain, on the anterior border of the tongue and in the right corner of the mouth. Vesicles on the palate, early in the morning, with sensation as if the parts were sore, and as if

the skin were off; going off at the appearance of the menses.—Burning sensation of the palate, as if the skin were off. *Roughness* of the palate, early in the morning, as if the skin were coming off. Heat in the mouth the whole day. *Dryness of mouth*, without thirst, at night. The mouth is slimy, and as if one had eaten flour, in the forenoon.—She spits up mucus and little clots of blood, with sweetish taste. *Bloody saliva*. Continual spitting, early in the morning, with nausea. Accumulation of water in the mouth, with frequent gulping up, vertigo, and desire to vomit, after eating plums.

**Pharynx and Œsophagus.**—*Sore throat*, as if caused by a hard body, with burning and retching, and a rough feeling, accompanied by a desire, between the acts of deglutition, to hawk up mucus. Pain in the throat, when swallowing, as if she would swallow a large foreign body. Sensation as if the throat were stopped up and did not admit of the passage of air, early in the morning after rising.—*Spasmodic strangling* in the throat, at 8 o'clock in the evening, as if it would be distended, she had to open her mouth, but without being relieved by it.—*Stinging pain* in the right side of the throat, during deglutition in the evening. Stitches deep down in the throat, when talking.—*Sore pain* on the right side of the throat, with stinging and burning on the left side, when talking, sneezing, or yawning; the pain is greater during than between the acts of deglutition.—*Burning and roughness* in the throat. Roughness and burning acidity in the throat, shortly. Roughness in the throat, with desire to vomit. *Stinging roughness* in the throat, and sense as of scraping from the beard of a corn-ear. Frequently-recurring roughness of the throat. Roughness and scraping of the throat, as if caused by old smoked meat. Roughness and scraping sensation of the throat, with tasteless eructations after every new dose of medicine.—*Dry throat*, with sensation, when swallowing, as if the throat would be pulled to pieces. Dry throat, early in the morning, with stinging in the left side, during and between the acts of deglutition.—Frequent *rising of mucus* in the throat, with roughness and dryness of the fauces. Frequent, unsuccessful desire to hawk.—*Soft, fe'rid tubercles* of the colour of peas, which he has to hawk up, frequently get into the larynx from the fauces, and produce a momentary suffocative irritation.—Discharge of tenacious mucus, streaked with blood; it had caused a pressure in the throat for a long time past, and he had not been able to hawk it up. Rising of water in the mouth.

**Taste and Appetite.**—*No taste* for several days; the nourishment she takes tastes like straw, although her appetite is good. The nourishment she takes is tasteless, her tongue is coated white, and the mouth is slimy. *Bitter-sweet taste* in the mouth, the mouth being full of mucus, going off after eating bread. *Bitter taste in the mouth*, the tongue being coated white and the mouth full of white mucus, going off after rinsing the mouth. Bitter taste in the mouth, early in the morning, pappy condition of the mouth, the teeth and tongue being covered with mucus.—*Sour taste* in the throat, suddenly followed by roughness. *Sour taste in the mouth*.—*The appetite disappears*, ever since then the stomach feels full. *Little or no appetite or hunger*. No appetite for dinner, the appetite comes while eating. After having eaten one mouthful, he feels satiated. Sometimes little appetite and immediate repletion, sometimes the appetite is good.—*Hunger, but no appetite for bread*. She does not relish warm food, she desires nothing but bread and butter.—Aversion to vegetables, she prefers meat. Great appetite for vegetables; aversion to meat. Eating meat causes dryness of the skin and heat. Desire for fruit and acid things.—*Thirst*, with appetite for acid things, at noon. A good deal of thirst, with little appetite. Violent thirst, afternoon or evening. *Thirst for water*, she drinks a good deal in the afternoon. Thirst for water in the forenoon, in the afternoon the

mouth feels dry, without thirst. Thirst, towards evening, he drinks a good deal, with emission of urine during the night. Violent thirst, waking her in the night, (previous to the appearance of the menses). Thirst for cold drinks, (succeeding a looseness of the bowels,) causing her to *drink a good deal*.

**Gastric Symptoms.**—She feels weak while eating. After a meal, weakness, pale face, nausea and dark-coloured vomiting of the ingesta. Colic and distention of the abdomen, after a meal.—Unsuccessful *eructations*. *Empty* eructations, even after breakfast. Frequent eructations, without taste or smell. Belching, in the afternoon. Eructations, tasting of the ingesta, early in the morning. Empty eructations, accompanied by a cutting-tearing above the umbilicus, from the left to the right side. Eructations, with sneezing, towards evening. Frequent eructations, with pain in the stomach. Rising of cold air. Sour eructations.—Frequent *hiccough*, followed by eructations, early in the morning, after rising. Continual hiccough, in the evening. Suppressed hiccough, causing a spasmodic pain in the stomach.—*Loathing*, without any desire to vomit, (shortly). Loathing and inclination to vomit, in the evening. Loathing, with pain and coldness of the stomach, (shortly). Loathing and nausea, (as if from a deranged stomach). Loathing, with shuddering, followed by eructations, (shortly).—*Nausea* and desire to vomit, with constipation, for three days. Nausea and general sick feeling in the forenoon, going off after dinner. Nausea, with eructations tasting of rotten eggs, the whole night until early in the morning.—*Inclination to vomit*, and accumulation of water in the mouth. *Vomiting* of bitter water, but no food, at dinner, after which the bitter taste in the mouth continued for a long time. Vomiting at dinner, after nausea; violent vertigo and retching; first, he vomited a saltish water, afterwards soup, then again water, for a quarter of an hour, accompanied by anguish as if he must die, sweat on the forehead for one hour, followed by discharge of white liquid stools, which were succeeded by cutting in the abdomen and distention of the same.

**Stomach.**—*Sickness* at the stomach, as if he would vomit, with empty eructations.—*Pain* in the stomach with nausea, heaviness of the head and ill-humour, without aversion to food. Pain in the stomach, with nausea, early in the morning, relieved by eating. The stomach feels sick and as if full of water, with a desire for eructations. Pain in the stomach, like qualms of sickness, (shortly). Sensation as if the stomach had been deranged, after dinner.—Pain in the stomach, in the forenoon, resembling a *feeling of emptiness* and qualmishness, better after dinner. *Empty* feeling in the stomach, early in the morning, with empty eructations.—*Pressure* in the stomach. Pressure in the stomach, extending into the chest, going off by empty eructations. Distention and fulness of the stomach, going off only by frequent eructations. \**Contractive pain in the stomach*, also after dinner, or hindering sleep at night. °*Contractive-oppressive pain* in the stomach, also with sour eructations. *Sore pain* in the stomach and in both hypochondriac regions, when touching the parts, even at night, when in bed. *Ulcerative pain* in the stomach, with great sensitiveness to pressure, and feeling as if the stomach would fall out of the body, accompanied by coldness and inclination to fall; she was so weak that she was unable to walk across her room; relieved by drinking some coffee. Audible grumbling in the stomach, towards noon. Audible grumbling in the stomach and afterwards in the abdomen, with yawning, in the evening.—*Sudden stitches*, as with a knife, on the right side of the pit of the stomach, they can scarcely be endured. Violent stitch in the pit of the stomach, causing one to start.—Dull stitch from the right side of the pit of the stomach to the right chest.—*Burning sensation* on the inner side of the left half of the chest, with sweet taste in the throat;

afterwards cough with discharge of a piece of tenacious, brown mucus; when sitting.

**Hypochondria.**—Pinching and contractive sensation extending from both hypochondria towards the umbilicus, frequently going and coming.—*Stitch* in the right hypochondrium. Dull stitches in the right hypochondrium, after dinner. Violent stitch as with a knife, in the right lower rib, from without inwards in the evening, when stooping, going off when raising the head. Sensation as of something hard in the *region of the liver*, with frequent pinching in the abdomen. Fine pinching, externally, under the last right rib, extending a little higher up, followed by a burning sensation in that same place. Fine stinging in the left hypochondrium.—Stitches in the *region of the left ribs*, resembling splenic stitches, when standing. Paralytic pain in the left hypochondrium, which prevented her resting on this side, in the evening.

**Abdomen.**—*Colic*, followed by watery leucorrhœa, occasionally. Violent colic, early in the morning, especially around the umbilicus, in and out of bed, relieved after eating some warm soup.—*Great heaviness* in the abdomen.—Feeling of *repletion* in the abdomen, relieved by walking, in the afternoon.—*Distention* of the abdomen, after a meal, and immediate feeling of repletion, at noon. Great bloatedness of the abdomen, from afternoon till evening. Excessive distention of the abdomen, followed by excessive emission of flatulence affording relief. Great distention of the abdomen, in spite of three diarrhœic stools.—*Pressure* in the hypogastrium, every morning, when in bed, ceasing after a meal.—*Spasmodic contractive pain* in the abdomen, afterwards diarrhœa, affording relief, in the evening.—*Constriction and pinching* in the right iliac region, very painful. Gripping, and digging in the abdomen, as if the menses would set in, with emission of a quantity of fetid flatulence, at noon; in the evening, the colicky pains increase, preceded by grumbling in the abdomen. Painful gripping in the abdomen, below the umbilicus, frequently intermitting, and afterwards reaching to the stomach.—*Colicky pains* in the whole abdomen, with pressing towards the genital organs, accompanied by discharge of blood from the vagina. Colicky pains and movement of flatulence in the abdomen, with regular stool, frequently intermitting, and occurring likewise early in the morning, when in bed; after turning from side to side, she finally discovers a position which makes her feel more easy. Colicky pains in the abdomen, more violent in the evening, with distention of the abdomen relieved by emission of flatulence.—*Frequent pinching*, in the right hypochondriac region. Violent pinching around the umbilicus, with distention of the abdomen; afterwards stool, which was at first hard, then soft. Violent pinching around the umbilicus, followed by liquid stool causing a burning sensation in the anus. Pinching and digging around the umbilicus, early in the morning. Pinching in front of the abdomen, early in the morning, without stool. Violent painful pinching in the side of the abdomen. Pinching and rumbling in the whole abdomen, followed by green diarrhœa; three times. Violent pinching in the middle of the abdomen, relieved by emission of flatulence; afterwards stool, first hard, scanty, and coming out with bearing down; then soft and easy, with burning at the anus. *Pinching in the abdomen*, three days in succession.—*Cutting* in the left side of the abdomen. Painful cutting and pressing in the abdomen and both groins, rousing him from sleep at night. Cutting in the hypogastrium, below the umbilicus, with bearing-down, as if the menses would set in. Cutting in the bowels, in the evening, until he falls asleep. Violent colic, extending from the small of the back towards the pubic bones.—*Tearing* in the left side of the abdomen, especially when walking. Violent colic, as if her bowels would be *torn out*, for three days (removed by smelling of Hepar

sulph.).—Sensation as if everything in the abdomen were *turning about*, with stitches below the umbilicus.—Pain in the abdomen, early in the morning after rising, as if the intestines were *empty, contracted*, and would be *torn out*.—A small spot on the left side of the umbilicus is painful when pressing on it, *as if ulcerated*.—Cramp-pain in the right *groin*, going off by friction, when walking.—Violent *itching* in the right groin, with internal burning, both symptoms going off after scratching, accompanied by chilliness.—*Rumbling* and moving of flatulence in the abdomen. Flatulence in the epigastrium, with pinching. Flatulence and pinching in the abdomen, followed by emission of flatulence and soft stool, affording relief. *Audible rumbling*, grumbling and moving of flatulence in the abdomen, with fine cutting, the whole day. Rumbling and gurgling in the abdomen, when taking an inspiration, as in spasms, evening and morning; going off by eating. Frequent emission of loud flatus, afternoon and night, also having a strong smell, or when walking, with stool soon after. Pressing as if diarrhoea would set in, but nothing but flatulence is emitted. Desire for stool and emission of flatulence, with cutting and pinching in the anus, afterwards hard stool with pressing as if diarrhoea would set in.—*Inguinal hernia*.

**Stool.**—Frequent, unsuccessful desire for stool, also after breakfast. Continual desire for stool, only little stool being passed; it is more like a sort of fermenting. *Stool every two days*. Desire for stool, with scanty stool, followed by unsuccessful desire for stool, with emission of flatulence and burning at the anus. Hard stool only in the evening, with pain and pressing.—*\*Inclines to be constipated*. *\*Retention of stool* appears to be the primary effect of Magnesia.—*Stool hard as stone*, with pain in the anus. Very hard stool, early in the morning, also *with pressing*. Hard stool in the afternoon, followed by burning at the anus. Even when the stool is not hard, she has to employ force to expel it, for several days. Soft stool in sufficient quantity, the latter part being expelled with pressing, twice a day. Stool, the first part of which is hard, the second liquid with burning at the rectum after stool. Stool only in 4 days, little of it, but soft and without any pain.—*Soft stool*, preceded by pinching in the abdomen, with emission of loud flatulence, which affords relief, afternoon and evening.—*Yellow stool*, in the forenoon, with bearing-down, more frequently in the afternoon. Natural stool, morning and afternoon.—*Diarrhoea* for several days. *Diarrhoea* with violent cutting in the abdomen and pressing, from seven to eight times a day, for eight days. Soft diarrhoeic stools, three a day. Liquid diarrhoeic stools, three a day, without trouble. Half-liquid stool without pain, early in the morning. Liquid stool, followed by burning at the anus. Discharge of a liver-coloured fluid, followed by tenesmus and burning. Diarrhoea with great weakness. Discharge of a green, foamy substance. Diarrhoea of green mucus, early in the morning. *Green diarrhoeic stools*, three times a day. Urging to diarrhoea, night and morning, rousing one from sleep; next afternoon, discharge of green mucus. Discharge of a green liquid, preceded by pinching, especially in the right side of the abdomen. Discharge of green water, with great distention of the abdomen, eight times in one forenoon. Discharge of green mucus, forenoon and afternoon, with a number of ascarides, and followed by burning at the anus.—*A quantity of ascarides* with stool. *Discharge of ascarides* between the stools.—A good deal of motion in the abdomen previous to stool; he feels hot previous to the expulsion of stool.—*Cutting and pinching in the abdomen previous to stool*.—Tearing in the rectum, *during stool*, extending into the abdomen.—Faintness *after stool*.—Desire for stool with violent prickings in the rectum; he only passes some flatus, which affords relief. Pressure in the rectum, *between the*

*stools.* Prickings in the rectum after walking, relieved by emission of flatulence. Violent pain in the rectum, as if pins were stuck into it, rousing her from sleep at 4 o'clock in the morning, somewhat relieved by emission of flatulence, which is likewise very painful. *Sore pain* in the anus, or as if ulcerated, when sitting or walking.—*Painful varices* of the rectum.

**Urinary Organs.**—Desire to urinate, rousing her from sleep at 9 in the evening. Increased secretion of urine, at night. Nightly micturition contrary to habit. *Frequent micturition*, emitting a good deal of urine first, afterwards less. In the evening, and also at night, he emits more urine than usual, the urine being pale.—*Apparent diminution of urine*, an emission of urine being followed by burning, in the evening.—*Inability to retain the urine*, when rising from the seat, or when walking. Involuntary emission of urine when walking (in a female).—*Pale urine.* *Green urine*, in the afternoon. *White sediment* in the urine.—The urine burns while emitted, like salt water, sometimes stinging. Pain as from excoriation in the urethra, when urinating. Pinching below the umbilicus after micturition, extending into the small of the back, with sensation as if flatulence would be emitted, in the open air.

**Male Genital Organs.**—\**Diminution of the sexual instinct* (immediately). Stitch in the urethra, in the region of the glans. Pollution (the first night). Frequent pollutions, almost every night. Slow erection, the embrace being nevertheless satisfactory. Emission of flatulence with discharge of prostatic juice.

**Female Sexual Organs.**—Frequent itching of the pudendum.—Menses delaying seven days, preceded by sore throat. Menses three days too late, scanty and short. Menses delaying three days, first only a little flow in the evening, increasing in the night, and still more next day, with discharge of whole lumps of coagulated blood, for 3 days. Menses delaying 4 days, and more profuse than usual. Return of the menses in the case of an old lady, that had stopped for years, they flow profusely for 4 days. The menses which are habitually scanty, appear immediately a few days previous to their regular period, with tearing toothache and a distention of the abdomen lasting 4 weeks. The menses appear at night, first a little, more profusely in the forenoon; sudden cessation in the afternoon. The menses appear at the proper period, and are painless; this was not the case usually; they are accompanied in the forenoon by ill-humour, improving in the afternoon. Re-appearance of the menses on the third day, with colic, they continue for several days. The menses are more profuse than usual and last one day too long. The menses flow profusely on the 4th and 5th days, with headache, which is worst in the evening. The menses appear six days too soon, in the afternoon when walking; on the third day the flow is very profuse, they last 6 days. At night, the menstrual flow is stronger than in day-time; the bearing-down pains which accompany it, are relieved by compressing the abdomen or by stooping. No discharge of blood during the pain; the blood only flows after the pain, also at night when asleep.—The flow is most profuse when walking or standing.—The menstrual blood is *dark and acrid*. The menstrual blood is dark, viscid, almost like pitch and can only be washed out with difficulty. The menstrual blood is *thick and black*, and appears 6 days before the time. The menses appear 3 days too soon, are more scanty than usual, and last three days longer than usual. The menses appear 7 days too soon. The menses re-appear after 20 days. Discharge of blood 7 days before the time of the menses, they then appear regularly on the 28th day. The menses appear 14 days too soon, first scanty, then more profuse, dark and flowing 3 days. The menses appear a fortnight too soon, with pain which is especially violent in the small of the

back, worst when sitting and easier when walking. The menses appear 9 days too soon, are very scanty and only flow 2 days. The menses appear 8 days too soon, at night, after bathing the feet, first scanty, then more profuse and dark, with bearing-down in the groins, during which no blood is discharged; blood is discharged with every emission of flatulence, especially at noon and in the afternoon.—Canine hunger in the evening *previous to the menses*, followed by pain in the stomach. Previous to the menses, bearing-down, cutting and pain in the small of the back, as if it were contracted and bruised, especially when sitting, less so when walking; on the second day of the menses a profuse flow of brown blood with diminution of the pain; at night, the blood flows more profusely. Menses appear 6 days too soon, preceded by colic and pressing towards the genital organs.—Coryza, with obstruction of the nose, for 4 days. *During the menses*: a quantity of liquid stool, followed by tremor of the limbs. Out of humour, but not on the first day. Headache, with feeling of heaviness and heat. Continued tearing, now in the sides of the head, now in the vertex, now in nape of the neck, relieved only at night. Drawing pain from the forehead to the occiput, with heaviness in the brain, the whole day. The top of the head feels bruised in the evening; it is painful to the touch. Morning-agglutination of the inner canthi of both eyes, with heaviness of the head. Dim, dry, burning eyes. Burning rhagades in the lobule of the ear. Pale complexion. Flat taste and little appetite. A quantity of water accumulates in the mouth, which she is continually obliged to spit up; nausea from morning till noon; violent colic; cutting around the umbilicus, relieved by emission of flatulence; violent bearing-down in the abdomen, at night, and early in the morning, frequently rousing her from sleep; frequent sneezing, early in the morning; frequent, but intermitting headache; drawing pain in the small of the back, relieved by stooping, increased by extending the limbs; pain in the right shoulder, as if it were dislocated, she finds it difficult to raise her arm; the knees are painful when walking as if they were bruised; pain in the feet, also, when in bed; itching around the neck and shoulders; faintness, exhaustion, with sweat without any thirst; so faint that she was scarcely able to walk; sleepy and weary on the second day of the menses; frequent waking at night; chilliness; chilliness when she woke or uncovered herself; violent pain in the small of the back, as if it were bruised, whether stooping or not, afternoon and evening.—*Leucorrhœa* after the menses. Thin, scanty leucorrhœa, with pinching around the navel. Leucorrhœa, several times in the afternoon, when walking or sitting. Leucorrhœa, like water. Smarting leucorrhœa. Discharge of white mucus, preceded by adominal spasms.—Toothache of pregnant females.

**Larynx and Trachea.**—*Contractive sensation* in the trachea, with aching in the pit of the throat.—*Hoarseness* for two days. Hoarseness and roughness in the throat, in the forenoon, going off after dinner. Complete hoarseness, towards evening.—*Irritation* in the region of the thyroid gland, with a good deal of coughing, in the forenoon. *Tickling* in the throat, followed by a short cough. *Frequent cough*, in the afternoon, from tickling in the throat. Cough, with scraping in the throat, also at night. Morning-cough, towards three o'clock, in two turns, with expectoration of mucus. *Hollow, dull cough*. *Fits of spasmodic cough*, the whole night. Cough after the slightest échauffement. Violent cough, with difficult, *thin, salt expectoration*.—*During the cough*, pain in the chest as if it would be cut to pieces; early in the morning, yellowish, purulent discharge, for some days.

**Chest.**—Short breathing when walking. *Tightness* of the chest, in the afternoon, as if it were between screws, with short breathing. Tightness of the chest,

with weary and painful feet when ascending an elevation.—*Contractive sensation* around the chest, the shoulder feeling bruised, with pain in the right middle finger as if sprained; all this passes off by eructation, in the evening.—*Constrictive sensation* around the middle of the chest, with short breath, in the evening. Contractive and crampy sensation in the chest, with heavy, short breathing, when sitting or walking.—*Great oppression of the chest*, with occasional deep breathing. *Pressure* on the chest, with heaviness and a feeling of oppression, in the evening. Sudden aching in the chest, arresting the breathing.—*Intensely-painful cutting and stitches* in the chest, in the evening. Painful cutting and pricking deep in the middle of the chest, until evening. Stitch in the ribs below the right axilla. Stitches below the right side of the chest, towards the umbilicus, or darting through the shoulder, also during an inspiration. Dull stitches in the left half of the chest, during an inspiration, extending into the shoulder. A stitch from the left region of the ribs to the left scapula, when standing. Single, violent stitches in the region of the last left rib, which almost make her scream, mostly when sitting. Stitches below the left half of the chest, when yawning, also after dinner, or in the evening when they are felt in a sitting posture, and sometimes extend into the sternum. Stitches in the left side of the chest, under the shoulder. Stitch from without inwards in the præcordial region. Stitches in the sternum, sometimes in the evening, when walking, with short breathing.—*Palpitation* of the heart.—*Sudden, violent sore pain* in the heart, with distinctly-audible cracking, (after a meal,) accompanied by a tormenting nausea.—A number of small, red, not elevated *spots* on the chest, without itching.—*Pain as from bruises* in the muscles of the chest, during motion, and when touching them.

**Back.**—Sudden, piercing pain in the *os coccygis*. Pain in the *small of the back* and back, at night, so violent that she was unable to sit still.—Violent *pain, as from bruises*, in the small of the back, from afternoon till evening, also from morning till afternoon.—*Two violent, concussive tearings* in the lower part of the vertebral column, which produced a sensation as if the column were being drawn backwards, followed by stitches in the same region, in the evening.—Stitch in the small of the back, on the right side, from without inwards, followed by jerking stitches in the small of the back.—*Burning itching* in the small of the back, above the nates.—Feeling of *tightness* in the small of the back above the hips.—Violent pain in the back, at night, in bed, as if the parts had been crushed, worst during motion, but also when at rest.—Dull stitches in the *back*, from without inwards.—Violent *itching*, especially above the hips. Violent tearing and darting in the *nape of the neck*, gradually descending along the back, and then passing off.—Stiffness of the nape of the neck. Violent *stitch* in the nape of the neck, when sneezing.—*Itching biting* in the nape of the neck and neck, with burning after the scratching.—*Tearing and drawing* in the muscles of the right side of the neck, in the evening. Pressure on the neck, as if the cravat were tied too tight.—The thyroid gland appears to her enlarged.

**Superior Extremities.**—Fine stitches towards the axilla, when raising the arm, not otherwise.—In the right shoulder she feels a *pain as from a sprain*, when raising the arm without thinking of it; she does not feel the pain when raising the arm on purpose. \*Pain, as from a sprain, in the right shoulder, when moving the arm, also when in bed. Pain, as from a sprain, in the right shoulder-blade, with a sensation as if he would let his arm hang down, in the evening. Pain in the right shoulder. *Pressure on the shoulder*. Rigid sensation from the shoulder to the angle of the lower jaw, painful and preventing him from stooping, with inability to close the jaws. Paralytic pain, as from bruises, in the left shoulder, only felt when moving the arm and trunk, and when gaping.

Violent *contractive pain* in both shoulders, and tearing down the back, early in the morning. *Tearing in the right shoulder*, extending to the scapula, early in the morning, also to the clavicle and chest. Tearing in the left shoulder, extending to the middle of the upper arm and elbow. °*Nightly attacks of tearing*, with tingling down to the fingers, and inability to move the arm from pain.—Violent tearing in the arm, from the left shoulder to the wrist-joint, when raising the arm and during rest. Painful tearing from the right shoulder to the wrist-joint, on turning the hand, the tearing would extend to the joints of the fingers.—*Drawing* in the arm, from below upwards.—*Darting* in the arms.—*Weariness* of the arms.—*Pimples* on the left arm, disappearing after scratching, and not itching the last two days.—Single, painful, cramp-like gripings in the upper arms, immediately above the elbows, at intervals, the muscles being hard as stone, day and night; when pressing on the parts with the other hand, the pain is relieved for some time. Tearing in the upper arm, above the right elbow, extending as far as the middle.—*The elbow-joint* is painful when bending the arm. *Sharp drawing* around the right elbow, apparently in the bone, in the evening when in bed. Violent tearing in the elbow-joint, as if it would be pulled out, when knitting. *Stitches* in the right elbow, when moving the arm, early in the morning. *Gnawing* in the left elbow in the evening.—*Drawing* as far as the hand, in the right *lower arm*, also when at rest; the arm feels heavy when raising it. Tearing, from the elbow to the middle of the forearm, apparently in the periosteum. Violent stitches in the anterior muscles of the right lower arm, near the wrist-joint. Itching on the forearm, below the bend of the elbow, scratching leaves a red spot. Itching of the forearm when washing it with cold water and soap, scratching brings on a number of itching pimples, going off again on wiping the arm.—*Drawing pain* in the *hands*. Stitch in the palm of the left hand, followed by violent itching, going off by scratching. Burning in the palms of the hands. The left hand goes to sleep, early in the morning, she had been lying on it during the night. Redness and swelling of the left wrist-joint, with pain of the bones when pressing on them. Itching of the palm of the hands; scratching brings out clear vesicles. Spreading vesicles on the hands, with stinging pain. °The skin of the hands becomes chapped.—Cramp-feeling in the *finger-joints*. Tension in the metacarpal joint of the left middle finger, two mornings in succession, going off in a few hours. Tearing in the dorsum of the posterior joint of the little finger. Tearing from the posterior joint of the right thumb to the nail. Tearing in the posterior joints of the right fingers. Tearing in the tips of all the fingers, towards the back of the hands, early in the morning after rising. Violent boring and gnawing in the posterior joint of the left thumb, apparently in the marrow. Throbbing, as if from an ulcer, in the tip of the left thumb, after dinner, going off by pressing on the part. Pain of the posterior joint of the middle-finger, as if it had been sprained. Ripping-up pain around the left thumb and index, followed by a short-lasting paralysis of both fingers, for two evenings. *Swelling, redness, and heat* of the right middle finger, covered with *itching blotches*, on those days when he has no stool. Inflammatory swelling, with stinging pain, of the posterior joint of the index-finger. Itching between the fourth and fifth fingers of the right hand, scratching brings out clear vesicles which do not itch, and two long, white streaks on the fingers. *Spreading blisters* on the fingers.

**Inferior Extremities.**—Pain in both *hips*, generally when moving the limbs. Violent *pinching* in the left hip and small of the back, after dinner, when walking; soon after desire for stool, accompanied and preceded by violent cutting in the rectum. Painless *dartings* in the posterior part of the hip, afterwards in the right hypochondrium. Painful *tearing* in the left hip-joint, from

afternoon till next morning. *Stitches* in the left hip, in the joint, and in the surface of the bone. Dull stitches above the right hip. Fine, burning-itching *stings*, resembling flea-bites, at times in one, at times in the other hip, the left side of the small of the back, and the left hypochondrium. Stitches, burning, and pain as from bruises above the left hip, extending up to the shoulder, increasing for three days, and worse when stooping towards the painful side, accompanied by dry cough and violent stitches in the side, somewhat relieved by bending double and pressing on the parts with the hand. Itching stitch above the right hip, going off after scratching.—The *lower limbs*, especially the knees, are very painful. Sudden *jerk* in the left lower limb, in the evening, after falling asleep, which caused her to start and kept her awake for a long time. Tingling uneasiness in the lower limbs, in the evening, she had to move them constantly.—Pain in the thighs, until evening. Pain *as from bruises*, in the femur, from above the left knee to the middle of the thigh, when walking. Tearing in the left thigh, in front, from the middle to the knee. Continual, lancinating tearing from the middle of the thigh to the middle of the leg, going off after rising from a seat. Painful drawing darting from the right knee to the middle of the thigh, when standing or bending the limb. Tearing from the left knee to the middle of the thigh, after dinner.—Pain in the *knees*, as after a fatiguing journey on foot, he was scarcely able to walk without a cane. *Heaviness and pain* in the knees when walking, from afternoon till evening. *Weary pain* in the knees when walking, from afternoon till evening. Rigid sensation in the bend of the left knee, as if too short, when setting the foot down, on coming from the open air and entering the room. Tension in the bend of the knee. Tension and drawing in the bend of the left knee, when walking. Drawing pain in the knees, to the soles of the feet, resembling a digging in the marrow. *Tearing* in the right knee, when standing, or towards the surface. Violent *boring and tearing* in the left knee, as if it would be torn out, in the evening. Fine boring in the right knee, frequently intermitting. Painful tearing, from the bend of the left knee to the leg, apparently in the bone, with tension when walking, as if the tendons were too short. *Hard swelling* in the bend of the knee, so painful that he is unable to extend the limb. *Stitches* in the knee-joint.—Painful drawing in the *legs*, from above downwards. Painful tension in the tendo Achillis, extending up to the calf, when walking fast. *Cramp* in the left calf, at night, in bed, when raising himself or turning to the other side. *Cramp* in both calves, in the evening when in bed, painful, nothing can alleviate it. *Violent tearings* in the right calf, in the afternoon. *Cutting pain* in the tibia. *Pain as from bruises*, in both tibiae. *Spots* on the tibia, with burning pain.—Boils on the legs.—Violent pain of the *feet*, as if they were too heavy and weary, especially when going up stairs, in the evening.—Pain as from bruises of the left *tarsal joint*, early in the morning, extending to the middle of the tibia, when walking and setting the foot down, going off by continued walking.—Cramp in the *heel*, early in the morning, when in bed. Piercing stitches in the right heel, in the evening when in bed. Painfully-darting tearing in the left heel, in the evening when in bed. Drawing pain in the soles of the feet. Cold feet, as if she were wading through cold water. Formication in the dorsum of the right foot and the lower surface of the toes. Violent tearing in the fourth and fifth toes of the left foot, when walking. *Tearing* in the big toe of the right foot, when walking, extending to the tip. Piercing stitch in the bend of the big toe of the right foot, through to the dorsum, causing her to start and to draw up the foot, in the evening. Burning stitches in the big toe.

**Sleep.**—Constant, troublesome *gaping*, early in the morning, after rising. Frequent yawning, every day. Yawning, accompanied and followed by hiccough.

Frequent yawning, with sneezing.—*Drowsy and indolent*, in the forenoon, with frequent yawning and stretching. Drowsy, early in the morning, after a sound sleep. Inclines to sleep, starting frequently. She does not wake in the night, which is contrary to her custom. *Sound sleep the first nights, and better than usual*. Falls asleep easily and soon, sleeps well.—\**Sleeplessness* the whole night. No sleep for several nights, and constant tossing about, when in bed. °*Sleeplessness* from oppression of the abdomen. Little sleep, and a number of dreams. She does not fall asleep till late in the night. Restless sleep, with frequent waking. A number of restless nights, with unrefreshing sleep. Wakes at midnight without any particular cause, she was unable to fall asleep again before two o'clock in the morning, and then slept imperfectly until five o'clock. She wakes after one o'clock, and is unable to fall asleep again before five; all her limbs feel sore, and she tosses from side to side. *She wakes at two o'clock in the morning, and is then unable to fall asleep again*.—Agitation of the blood, in the evening, which prevents her from falling asleep; she has a restless sleep, and has to toss about constantly. Anxiety at night, with sleeplessness, and heaviness in the whole body. *She feels anxious for many nights*, with sensation as if she were lying on stones, and has to turn about frequently. For many nights she is unable to fall asleep, owing to anxiety, she has to uncover herself frequently, but she cannot remain uncovered long, on account of feeling too cold. She feels *anxious and too warm* for many nights in succession, she remains awake for a long time. *Restless sleep* from one to four o'clock at night, with heat and sweat, so that she cannot bear being covered, after four o'clock she sleeps without sweating.—*Great internal heat at night, he was scarcely able to endure the covering of the bed, and, nevertheless, dreaded the slightest exposure*.—Toothache, at night, the tooth feels elongated, the pain being more tearing than throbbing. Throbbing and drawing toothache, the whole night. After midnight she is roused from sleep by a violent pain in the stomach, which feels empty. At four o'clock in the morning she has to urinate, followed by pinching in the abdomen, and early in the morning she feels a pain in the stomach and inclination to vomit. Wetting the bed at night. At night she wakes with thirst, which she had felt before in her dream. Great uneasiness in the left lower limb, at night, he has to lay it on some cool place outside the bed clothes. Throbbing in the left side of the chest, in the evening when falling asleep. Horrid itching at night, like biting, over the whole body, causing her to start frequently. For two nights in succession he started high up in his bed, from side to side; when the body lay still again, the upper and lower limbs quivered the whole night, even while awake, but without pain; on waking in the morning, he knew nothing of what had happened in the night. Talking while asleep, after midnight. Loud talking, early in the morning, while asleep, knocking her head against the wall; she knows nothing of it on waking. She attempted to talk in a dream, without being able to do so, this tormented her. Loud shrieks when asleep, waking from a vivid dream, which she was not able to recollect. Starting from her sleep at midnight. He starts when on the point of falling asleep, and then feels uneasy in his limbs. Starting during the siesta, for several days. At night, when lying on his back or on the right side, he starts and utters shrieks, owing to some horrid dream. Nightly starting and shrieking in a dream, he quarrels with a beggar. \**Anxious dreams at night*. Anxious dreams, as if he could not find his way in his own house. Anxious dream about a fight with robbers. He dreams he had an epileptic fit. Dreams of quarrels and vexation. Dreams of money, pleasure, jokes, and historical events. Anxious, sad dreams of dead relatives, misfortunes, etc. Anxious dream with shrieks, weeping and sobbing. Anxious dreams about fire and burning. Dreams about danger of an inundation.

**Fever.**—*Coldness* in the evening, and chills with shaking, continuing for a time even in bed. *Cold feeling*, in the evening, when undressing, passing off when in bed. *Cold feeling*, in the evening before lying down, going off in bed. *Coldness* in the evening when in bed, for a quarter of an hour, as if icy-cold water were poured over one. *Chilliness* from morning till evening, four days. *Chills*, with shaking, in the evening; also when in bed, she was a whole hour without getting warm. *Chilliness*, when in bed, in the evening, for two hours. *Chills*, with shaking, in the evening, without feeling cold to the touch; the chills begin at the feet; they go off in bed; next morning, sweat. *Chilliness*, after a long journey on foot, the whole night, and also early in the morning when near the warm stove. *Chilliness* along the back, every afternoon from four o'clock till night.—*Feverish shuddering* down the back, every forenoon at nine o'clock, with some nausea, without any subsequent heat. *Shuddering*, in the evening when in bed, for a quarter of an hour, without any subsequent heat, sweat or thirst. *Thirst* after dinner, afterwards chilliness, in the evening burning heat in the face, with cold feet and violent mental excitation.—*Warm feeling*, with sweat about the head. A warm feeling flows through her whole body. *Hot feeling* in the body, in the forenoon, frequently going and coming, without either sweat or thirst. Increased feeling of warmth, early in the morning, after rising, lasting until noon. Increased warmth in the body, at night, without sweat. *Profuse night-sweat*. *Morning-sweat*, for five days. The child sweats in the evening, when falling asleep. *Fetid night-sweat*. Sour-smelling, greasy sweat, which it is difficult to wash out, the whole night.

**Skin.**—*Great sensitiveness* of the scalp and skin of the body, especially to cold; every little breeze gives her a cold thrill, and she shivers through and through.—*Dryness* of the skin, towards morning, when in bed.—*Profuse sweat* by day, even when taking but little exercise.—*Formication* in different parts of the body, especially in the shoulders; scratching brings out small, clear vesicles, drying up in from twenty-four to forty-eight hours, in the afternoon, evening, and morning. *Itching* of different parts, forehead, face, head, and almost all over, going off by scratching, sometimes with burning after scratching. *Violent itching* of the whole body, also of single parts; after scratching the parts, the itching appears in some other part. *Itching* in different parts, recurring after scratching the parts. *Violent itching of the whole body*. *Burning prickings* in different parts of the body. *Violent itching* of the nates and forearms, in the evening, when undressing; scratching brings on violently-itching pimples, which itch more the more they are scratched. *Itching* of the shoulders, thighs and neck, in the evening before going to sleep, and early in the morning when dressing, with itching pimples after scratching, lasting twenty-four hours.—*Large pimples* in different parts of the body. *Vesicles and pimples*, sometimes itching violently, on the neck, nape of the neck, below and in front of the ears, on the arms, and between the fingers.—*Large nodosities*, with stinging pain, under the skin, in the axilla, and above the elbow-joint. Hard nodosities in front of the left shoulder, deep in the skin, with stinging pain when pressing upon them, as is felt in a boil, with redness. *Itching tubercle* on the wrist-joint, pouring out clear water when pressing upon it. *Small, red, little elevated, smooth herpes*, sealing off afterwards, without sensation, on the chest and calves.—*Small boils* on the forehead, neck, chest, and especially the thighs.—An old cicatrix remaining from a burn, changed to a spreading blister, with which he suffered for six weeks.

**General Symptoms.**—Pains in every part of the body, at times in one, at times in another place. Pains over the whole body. Stiffness of the whole body, early in the morning, when rising. Dartings in the nates, the thighs, the

shoulders, and frequently the face. Parts become easily *strained and sprained*; when bending the arm backwards, the shoulder was painful, as from a sprain, and felt bruised when touching it; she was unable to turn her head to the left without suffering great pain.—*Uneasiness* in the limbs, in the evening, after long sitting.—*Relaxed condition* of the body. Sudden *depression of strength*, when walking in the open air. *Weak feeling*, early in the morning, when in bed.—Great weakness of the lower limbs. Heaviness and great weariness of the limbs, the whole day. Weariness and languor of the thighs, when sitting, worse when walking. Great weakness of the legs, when sitting and when rising from a seat, going off during motion.—*Weary and drowsy*, at noon, after eating (anything hard to digest); he suddenly drops to sleep while standing or talking, with dulness of the head, completely unfitting him for thinking. Languid and drowsy after supper, with a sort of qualmish feeling in the abdomen. Languid and weary in the whole body, especially the feet.—Hands and feet feel as if they had been broken and crushed, early in the morning, on waking, with tremor and weakness; she has to lie down, then she feels better; when getting out of bed she feels cold immediately.—*Weak*, as if one would fall, after vomiting. Great weakness in the whole body, with wretched appearance, and inclination to vomit. Very languid in the afternoon, when sitting or walking, less when standing. Weakness, in the evening, she had to lie down. Languid, indisposed to business or conversation, uncomfortable, early in the morning. Languid, weary, uncomfortable, with anxious warmth and sweat. Languid and tremulous, early in the morning when in bed, going off after rising. *When waking from a sound sleep, early in the morning, he is nevertheless more fatigued than he was before going to bed.*—A kind of *paralysis* of the left lower limb, with pain in the hip and knee-joint; next day, the right lower and upper limbs became affected; when walking, he suffered with pain constantly, and was obliged to turn his foot entirely outwards.—°*Frequent sudden falling, with consciousness*, when standing or walking. °Epileptic attacks.—°Emaciation of children.

**Characteristic Peculiarities.**—She feels comfortable when in bed; when rising, the darting pains re-commence in different places. After the lapse of three weeks, the symptoms recur with a certain regularity. The symptoms which made their appearance while sitting, diminish while walking. In the open air the symptoms appear to be milder than in the room.

## 158. MAGNESIA MURIATICA.

**MAG. MUR.**—Muriate of magnesia.—See HAHNEMANN'S Chronic Diseases, Vol. IV.—*Duration of Action*: Seven weeks.

**COMPARE WITH**—Acon., Ars., Bar., Bell., Bry., Calc., Carb. a., Carb. v., Caust., Cham., Con. m., Cycl., Fer., Graph., Hyos., Kali, Lyc., Magn., Magn. sulph., Nitr. ac., Nux v., Nux mos., Petrol., Plat., Plumb., Puls., Rhus, Sil., Spig., Staph., Squill., Sulph., Sulph. ac., Verat.

**ANTIDOTES.**—Ars.? Cham.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Magnesia mur. is especially suitable for diseases of the female sex, especially for hysteric and spasmodic conditions.—Scrophulosis.?—Diseases of the bones.?—Contractive, boring, spasmodic neuralgia, here and there.—Nervous headache.?—Diminution of hearing.—Deafness.?—Soreness and sore pain of the

nostrils.—Scurf in the nose, which is painful to the touch.—Ulcerated nostrils.—Discharge of an acrid, corrosive fluid from the nose.—Blennorrhœa of the Schneiderian membrane.—Ozæna serophulosa.—Ozæna benigna; soreness of the inside of the nose, especially of the internal surface of the wings of the nose and the septum, yellow scurf in the nose, discharge of a slimy, acrid fluid from the nose, causing redness and soreness of the upper lip, obstruction of the nose, and inability to breathe through the nose, sore pain and burning, increased by blowing the nose, sneezing, or by touching it, swelling, hardness, redness, heat, especially of the lower part of the nose, worse in the morning, with pale, yellowish face.—Crampy, *tearing* and tensive pains in both the hard and soft parts of the face.—Slow dentition of small children, with bloatedness of the abdomen, and constipation.—Frequent, and even continual nausea, with livid complexion, great nervous irritation, and great disposition to weep.—Want of appetite, with clean tongue, in whooping-cough.—Chronic affections of the stomach and abdomen.—Chronic inflammations of the liver and spleen?—Nausea of pregnant females, the whole day, without resulting in vomiting; in spite of this nausea they eat certain aliments with appetite, their complexion being livid, with weeping mood.—*Induration* of the liver, especially of the left lobe, with constant feeling of heaviness and pressure in the abdomen, bad digestion and hypochondriac mood, from badly-managed hepatitis.—*Painful distention and large size of the liver, especially of the left lobe*, of the præcordial region and the abdomen, with diminution of appetite, bitter taste and eructation, flatulence and jaundiced complexion.—Spasm in the abdomen, with violent bearing-down upon the rectum and the genital organs.—Delaying menses.—Too scanty menses.—Profuse discharge of a watery, thick mucus from the vagina.—Scirrhus induration of the uterus.—Nightly spasmodic cough from tickling in the throat.—Sweaty feet.

#### SYMPTOMS.

**Mind and Disposition.**—*Anxious and fearful*, with ennui, in the evening. Fearful and inclining to weep, after dinner. Fearful and grieving, lonesome; she is home-sick and weeps. *Anxiousness*, in the room, relieved in the open air; early in the morning.—*Want of cheerfulness*.—*Discouragement* with internal uneasiness. Out of humour, early in the morning, after rising, also immediately. Vexed, out of humour. *Peevish and out of humour*, in the evening, cheerful during the day. Out of humour, peevish, *not disposed to work* or to mental labour.—Joyless and like one suffering; whatever she looks at is offensive to her; she is very unwilling to answer, early in the morning.—Feeling as if one had not slept enough. He was loath to talk; he was desirous of indulging his thoughts in solitude.—Irresoluteness.

**Sensorium.**—*Illusions of the faucy*; she imagined while reading in a book, that some one was reading after her and obliged her to read faster, with buzzing and humming around her; when raising her head she imagined she saw large clouds and rocks, disappearing gradually; followed by anguish, fearfulness, restlessness, so that she knew not what to do with herself; all these symptoms disappeared by looking around for a while, but returned again twice by continuing to read.—Dulness of the head, as if the head were too full, early in the morning.—*Reeling* sensation in the head. Stupefaction and dulness of the head, with painful sensitiveness of the left lower limb. Feeling of dulness and intoxication in the head. Dulness and heaviness of the head, the whole forenoon. Dulness of the head, early in the morning, after rising.—*Giddy* and dull head, at dinner; she has to go into the open air, where the symptom passes off; heat in the head, after returning to the room. *Vertigo*, early in the morning, when rising; he inclines to fall. Giddy and reeling sensation, going off after motion,

early in the morning. Vertigo, even when walking in the room, and when lowering the head ever so little.

**Head.**—°Headache every day.—Headache early in the morning, as if she had not slept enough, with languor and weariness of the feet. Dull pain in the head, with sensitiveness of the scalp when touching it, and sore burning pain in the eyes, after dinner. Pain in the forehead, as if too heavy, in the afternoon. Heaviness in the occiput. Heaviness and reeling sensation in the head, he is in danger of falling. Heaviness and dulness of the head.—Pain, as if the brain were *pressing* against the forehead. *Pressure* in the forehead, when stooping, as if the brain would fall out, in the evening. Pressure in the forehead and the forepart of the head, with confused and cloudy state of the head, the whole forenoon, worst on waking. Pressure in the frontal cavities, extending to the forepart of the head, where he feels a burrowing sensation; he got into a perspiration by strong exercise, after which the pain went off. Pressure in the occiput. A good deal of pressure, sharp and crampy, especially on the top of the head and in the occiput, (the whole time of proving).—*Compressive sensation* in the head, from both sides, with a hot feeling, and with beating in the forehead when pressing upon it.—Violent, *tearing pain* in the left temple. Tearing pain in the left side of the head. Tearing from the occiput to the vertex. Painful tearing in the right side of the head, from without inwards, extending to the eye; afterwards the place continued painful for a long time. Tearing and feeling of heaviness in the forehead, in the evening. Tearing in the left side of the forehead, and farther back, stitches. Tearing and stitches in the forehead, during motion, in the evening. *Violent tearing and stitches in the forehead and temples, obliging him to lie down, with great sensitiveness of the vertex, as if the hair were raised by pulling them; accompanied by a feeling of heat in the forehead which feels rather cold than hot.* Tearing, or stitch and tearing in the forehead, when stooping while sitting, frequently accompanied by stitches in the head. Tearing and stitches in both sides of the head, the whole day. Painful darting tearing in the right side of the occiput. *Throbbing* tearing, first in the occiput, then in the whole head, after entering the room; going off when sitting. *Throbbing* tearing from the occiput towards the vertex.—Frequent *stitches* in the middle of the forehead, in the evening. Stitches from behind the right frontal eminence to near the ear, from within outwards. Stitches in the left side of the head and the occiput. Stitches in the right occipital protuberance. A stitch in the right side of the occiput, followed by burning in that part. Violent stitches in the right side of the vertex. A violent stitch in the upper part of the right side of the head, frequently recurring (during the menses). Violent stitch in the upper part of the left side of the head, causing her to start. Stitches and tearing in the right side of the head, extending as far as the eye, which she is obliged to close. *Dull stitches in the right side of the head, with ill-humour.* Dull stitches in the *left side of the head*, from within outwards. A few dull stitches in the region of the left parietal bone, when bending the trunk to the right side, with boring near the left ear. Darting stitches in the right side of the occiput and deep in the forehead.—*Boring* in the left side of the head, in the evening.—*Throbbing and beating* in the left side of the head, with hot feeling and heaviness in the forehead. *Throbbing* and heaviness in the occiput, early in the morning, after rising, (during the menses). *Throbbing* in the occiput and afterwards in the whole head, when raising the head after stooping, and afterwards.—Painful undulating sensation in the head, with pressure in the occiput, going off in the open air and returning in the room. *Whizzing* as of boiling water, in that side of the head on which he was resting, early in the morning, when in bed, not painful. Gripping and

tumult (roaring) in the temples, in the evening after lying down, as if vertigo and loss of consciousness would come on; relieved by pressing the head together.—*Hot feeling* and burning at a small spot behind the right frontal eminence. Increase of warmth in the whole head. Hot feeling in the forehead, over the left eye, with throbbing in the whole head, and dimness of sight. Frequent flushes of heat in the head. Heat and undulating sensation in the head, with heat and sweat of the whole body, afternoon and evening, (during the menses). Heat in the head after dinner, apparently proceeding from the stomach, better in the open air. Heat in the head, with redness of face, without any external warmth, but with internal shuddering and desire for stool. Continual feeling of heat in the head, mouth and throat, with hot breath, during a cold, for 8 days.—The headache is alleviated by wrapping up the head.

**Scalp.**—Numbness of the forehead. Sore pain of the vertex, when touched or not. Great painfulness of the outer parts of the head, when touching them, or when stooping. Drawing in different parts of the outer head, also extending into the ears, teeth and half the face, which makes the head feel confused; the pains diminish after sneezing. Large *nodosity* on the occiput, with tearing all around, especially painful to the touch.

**Eyes.**—*Aching in the eyes* and the canthi. Pressure in the eyes, as if from dust, with dimness of sight. Pressure in the eyes, especially the left, as if from a grain of sand, going off for a short while by friction. Pain *as from bruises* in the lower border of the orbit. *Stitches* in the right internal canthus, pressing out tears. Continual stitches and burning in the eyes. *Itching* of the left upper eyelid. Itching of the eyes. Itching of the internal canthus of the right eye, going off by friction, soon afterwards affecting the left eye.—*Burning in the eyes, and great sensitiveness of the same*, so that she is unable to open them, and has to close them again immediately, cannot bear the light of the sun. Violent burning in the eyes, *especially when looking at the light*. Burning and dryness in the eyes, in the evening, when looking in the fire.—The capillaries of the eyes appear injected.—*Inflammation* of the eyes, with pressure, biting, burning, especially when looking at the light; in the evening there was lachrymation, in the day-time they filled with gum; the lids were swollen and red, with nightly agglutination.—*Agglutination* of the eyes early in the morning, with burning when opening them.—Great *dryness* of the eyelids, especially early in the morning, and after the siesta.—*Twitching* in the upper eyelids, which were swollen, heavy, and half closed.—*Dim-sightedness*, with burning of the eyes. Dim-sightedness, with vanishing of sight, when looking at anything near; she sees better when looking at things at a distance.—In the evening, the light is surrounded with a green halo (while the eyes were inflamed).

**Ear.**—Painless darting in the ear. *Darting tearing* in the left ear. Tearing in and near the left ear. *Stitches* in the ears. Painful stitches at times in one, at times in the other ear. Frequent stitches and tearing in the left ear, when inclining the body to the right side; they cause one to start. *Sticking boring* in the ears. Boring and *\*pulsative throbbing* in the right ear. *Tickling in the ears*, going off by boring into them with the finger. Agreeable warmth and tickling in the right ear.—Violent *roaring* in the ears.—*Fluttering* in the right ear. Sensation as if her ear had become closed, without producing any hard hearing, going off by boring into the ear with the finger, (during the menses). Sensation in the ears *as if something were stretched across*, with *diminution of hearing*, and burning and humming in the head. Almost complete deafness of both ears, particularly of the left, frequently decreasing and increasing.—*Itching of the old herpes* behind the ears, with burning after scratching.

**Nose.**—Violent tearing in the upper part of the nasal cavities, causing lachry-

mation. \**Burning of both nasal cavities as if sore.* °Redness and swelling of the lower portion of the nose, (with hardness, heat and morning aggravation,) redness and swelling of the right wing, painful when touched. \**Sore pain of the inner nose.* \**Scurf in both nostrils,* intensely painful when touched, with loss of smell. \**Ulcerated nostrils.* Soreness of the nostrils. Small vesicles on the nose, feeling tight when touching them.—Bleeding from the nose, when blowing it.—Dull smell. °Troublesome dryness of the nose.—*Tickling* in the nose, with lachrymation. Tickling in the nose, with sneezing and sensation of coryza. *Frequent sneezing* with discharge of water from the nose.—*Oppressive sensation of obstruction* in the nose. Obstruction of the nose, early in the morning and evening. Obstruction of the left nostril. Coryza, with obstruction of the nose, and catarrhal sound of voice. The nose is so obstructed that the air passes through the nose with a wheezing sound. A quantity of mucus is discharged from the nose. Violent coryza, with hoarseness and feeling of obstruction in the nose, which discharges a quantity of water, for several days. *Severe coryza, at times dry, at times fluent, with dulness of the head,* and complete loss of smell and taste, for two days. Discharge of fetid, purulent, yellow nasal mucus. Catarrhal mucus, mixed with little particles of blood. °Discharge of acrid, corrosive water from the nose. In the evening, when in bed, she has to sit up a long time, owing to the coryza; she cannot lie down, nor fall asleep, and has to open her mouth widely, in order to get air.

**Face.**—Pale complexion, especially during the menses, with sadness and irritability. Miserable sickly appearance. Pale face. Pale, bilious complexion. Considerable *yellowness* of the face, especially of the white of the eye, and around the eye. Red face, with increased warmth of the forehead, and palms of the hands, in the evening.—Hot feeling in the face, without any warmth being perceptible to the touch, in the afternoon. Severe cramp-pain in the bones of the face. Tensive feeling in the face. Tensive pain in the region of the right malar bone.—*Tearing*, extending from the right malar bone to the side of the head.—*Tearings* in both sides of the lower jaw and the roots of the teeth, across the face, as far as in front of the ear, where the pain became darting.—*Stitch* in the right cheek. *Pimples* on the forehead, with itching in the evening, becoming worse by friction.—A spot in the region of the malar bone, full of yellowish pimples, with drawing, tingling, throbbing pains, and becoming covered with scurf.—Feeling of *pressure* under the left lower jaw, as if the glands were swollen. Inflammatory *swelling* of the left submaxillary gland.—Chapped lips, especially the upper lip. When touching the inner side of the upper lip with the tongue, it feels rough, during a cold. *Blister* on the margin of the vermilion border of the lower lip, first itching, afterwards burning. Large, clear vesicles on the vermilion border of the upper lip, tensive and burning. White pimples on the inner side of the upper lip. Pimple near the corner of the mouth. *Large blotch* in the skin, between the upper lip and nose, painless.

**Teeth.**—Drawing toothache. Darting in the teeth of the right side, in the evening, with sensation as if the cheek would swell.—Frequent *tearings* in the upper front teeth. Tearing in the right cuspidatus, extending into the malar bone, going off by pressing upon it. Tearing in a sound molar tooth, at dinner. Tearing in a lower molar tooth, going off by pressing on the tooth.—Tearing and boring in a hollow molar tooth, with stitching pain when touching the cheek, relieved in the open air and by cold, aggravated by warm substances.—*Boring* in several molar teeth, relieved only for a short time by pressing upon them. Digging, in the molar tooth, as of a worm, going off by pressing upon it; afterwards tearing in a hollow molar tooth. Digging, frequently intermitting, and sometimes a tearing in the last but one molar tooth, relieved by warmth; ag-

gravated by cold, or when biting upon it and when touched by food, early in the morning and after dinner.—Throbbing in the root of a tooth.—*The upper cuspidati* feel elongated, and are very sensitive to pain.—The upper gums are swollen and painful, especially when eating, with throbbing in the gums. Painful swelling of the lower gums and cheek.—*Bleeding of the gums.*

**Mouth.**—The inner mouth feels burnt and numb, early in the morning, (during the menses).—*Violent pricking* in the tongue, frequently, followed by burning, during a cold. Burning sensation on the tongue, early in the morning and afternoon. Sensation as if the surface of the tongue were burnt, during a cold.—*Rhagades* in the tongue, with violent burning pain.—Tongue coated white, early in the morning.—*Dryness* in the mouth and throat, early in the evening, without thirst. *Great dryness of the mouth*, with sensation as if mouth and tongue were covered with mucus. A quantity of mucus in the mouth and teeth with slimy taste. Mucus in the mouth and on the tongue, almost every morning.—*Accumulation of water in the mouth*, before and during the dryness, or with frequent spitting. Hot air from the mouth.

**Pharynx.**—Sore throat, feeling raw at the entrance of the pharynx, with stitches when coughing and swallowing saliva, which go into the ears; worse in the evening. *Stinging sore throat*, in the upper part of the fauces, when breathing and talking, in the evening and at night.—Prickings in the palate. Stinging in the left side of the throat, worse when swallowing. Sore throat, *worse when swallowing*, (during a cold). Her throat feels so dry, that she is not able to eat any bread. *Dryness and roughness* of the throat, with hoarse voice, so that she was scarcely able to talk, (shortly). *Hawking of tough mucus*, early in the morning, some mornings in succession. Frequent hawking of sour mucus accumulating in the throat. Hawking up of thick, tough mucus, in threads, early in the morning, after rising. Quantity of tough mucus gets into her throat, with difficulty of hawking it up, early in the morning. Mucus in the throat, which appeared bloody when hawking it up.

**Appetite and Taste.**—Watery taste in the mouth, with much spitting of water. Pappy taste early in the morning. Saltish taste, and accumulation of salt saliva. *Bitter taste* in the back-part of the mouth, also early in the morning, when beginning to eat, disappearing by continuing to eat. *Sour taste* in the throat, in the afternoon. Sour or slimy taste, with coated tongue, early in the morning.—*No hunger*, in the evening. No appetite, the whole day, she did not eat with appetite till night.—*Increased appetite.* Canine hunger and violent feeling of hunger in the stomach, followed by great nausea. Appetite, without knowing for what, not for her usual nourishment. Appetite for dinner, but she is satisfied immediately. Disposition to *nibble*; seeing a piece of cake, he breaks something off stealthily, in order to eat it.—*Thirst* at three o'clock in the morning, with dryness in the mouth and throat. Thirst, in the forenoon. Thirst, after dinner. Thirst, in the evening. Thirst, before and after midnight. Violent thirst, day and night, during a cold.

**Gastric Symptoms.**—A good deal of acidity in the stomach, after dinner. Distention of the abdomen, after dinner. Desire to sleep after dinner, the whole body starts on going to sleep.—*Rising of air* after dinner. Frequent, empty risings in the afternoon. Empty risings, followed by a stitch above the xiphoid cartilage. Rising of white foam. Eructation, tasting of onion (after a spasm). Frequent eructations tasting of the ingesta.—Eructations with regurgitation of the ingesta, after a meal, when walking. Sour regurgitation of the ingesta, especially milk, after dinner, mostly when walking. Bitter-sour eructations. Violent *hiccough*, during dinner, causing a pain in the stomach. Violent hiccough, after dinner. Frequent nausea.—*\*Nausea, early in the*

*morning, after rising.* Frequent or constant nausea, with livid complexion, violent nervousness and great inclination to weep. *Fainting nausea*, short but frequent when sitting, lying, standing, or walking, three days and nights. *Fainting nausea*, followed by coldness and weakness of the stomach, with setting up of water, early in the morning. *Frequent nausea, with accumulation of water in the mouth.*—Loathing in the stomach the whole forenoon. Inclination to vomit, with rising of sour water, early in the morning after rising.

**Stomach.**—Painful sensation as of fasting, early in the morning. Great qualmishness in the stomach, with rumbling in the abdomen, going off after breakfast. Pain and tremor in the region of the stomach, when walking and setting down the foot, even when talking, which she had to discontinue.—Frequent pressure in the stomach, extending to the throat and back. Pressure in the stomach, extending to the chest and throat as if caused by flatulence, relieved only for a short while by eructations. Violent pressure in the stomach, with nausea. Pressure in the stomach, going off by eructation.—*Tension* in the region of the stomach, *with ulcerative pain*, especially when touching the parts and in the evening, after lying down. Ulcerative pain in the stomach, which cannot be alleviated in whatever position of the body it be, in the afternoon. At one o'clock in the night, she is roused from sleep by a pain in the stomach as if it were cut to pieces; when extending the body this pain extends over the whole abdomen and hypogastrium, with heat in the head, *rising into the throat of a ball*, with suffocative arrest of breath, and *tossing about in the bed and on the floor*, for two hours; the pain is at last relieved by eructation; during the pain she has to lie crooked and could not endure any covering. *Pain, as from bruises*, in the stomach, with painful sensitiveness of the region of the stomach when touching it. Pain, as from bruises, in the stomach, when bending the body over, with tension when raising it.—Frequent and painful stitches in the left side of the stomach. Stitches across the region of the stomach.—*Cutting pain* in the right side of the stomach, which feels sore when touched. *Heat* in the stomach, shortly.—*Movement of flatulence* in the region of the stomach, afterwards in the hypogastrium, relieved by emission of flatulence.—*Gurgling* in the pit of the stomach, going off by friction and pressure.—*Throbbing* in the pit of the stomach, with dulness in the head.

**Hypochondria.**—*Sharp drawing* in the region of the liver. °Aching of the liver; even when walking or touching the part, worst when lying on that side.—Burning and tensive stitches in the right hypochondrium, relieved by pressing on the part. Dull stitch in the region of the lower right rib, close to the back. Prickings, between the right ribs. °Chronic hepatitis.—Stitches in the left hypochondrium. Violent, painful stitches in the left hypochondrium, resembling splenic stitches, in the afternoon, when walking, worse during an inspiration and going off when sitting (during the menses).

**Abdomen.**—*Colic* at 4 o'clock in the afternoon; two days in succession. Violent colic, early in the morning, with desire for stool, which was hard and came out in pieces, with burning at the anus. Pain in the abdomen, in the afternoon, with bearing down upon the rectum; soon afterwards soft stool surrounded with white mucus.—Feeling of pressure in the abdomen, (during the menses). Pressure in the left side of the abdomen.—*Drawing pain in the abdomen, at night* and in day-time, during every motion, even slight, as if something became detached. Drawing and tearing in the abdomen, at night, on waking. Tearing in the abdomen, in the evening, until one falls asleep. Tearing in the abdomen, the whole forenoon.—Contractive pain in the umbilical region. \**Spasms in the abdomen*, with violent pressing upon the rectum and the geni-

tal organs, accompanied by lowness of spirits and ill-humour. *Spasms* and tearing in the abdomen, several evenings in succession, until one falls asleep. Spasmodic drawing and tearing in the abdomen from below upwards as far as the right side of the chest, where one experiences a spasmodic, constrictive griping, with oppressed breathing, for 5 hours; made worse by eating cherries, alleviated by pressing on the parts with the hand, in the evening.—Fulness of the abdomen, after a meal. \**Distended abdomen*,—relieved by emission of flatulence. °Constant distention of the abdomen, extending high up. Considerable distention of the abdomen, extending even into the throat, with arrest of breath and anguish, from afternoon till night.—\**Hard abdomen* particularly in the right side, —or painful when touched, with disagreeable pressure on the rectum.—*Pinching* in the epigastrium, relieved by the emission of flatulence; afterwards sudden desire for stool, resulting merely in an emission of flatulence. Pinching in the abdomen, as if the menses would come on. Violent pinching around the navel, extending towards the stomach, after a meal; relieved by emission of flatulence. Pinching and cutting below the umbilicus, with shuddering over the back, afterwards heat in the head and desire for stool, at noon. Pinching and tearing in the abdomen, also after stool. Pinching around the umbilicus and bearing down towards the small of the back, afterwards sudden desire for stool, and soft, yellow stool, mingled with a piece of tænia. Pinching in the abdomen, early in the morning, after rising; afterwards diarrhœa accompanied and succeeded by burning at the rectum; afterwards again diarrhœa mixed with blood.—*Cutting* in the epigastrium as after a cathartic, extending into the small of the back, early in the morning. Cutting sensation in a small place of the left hypochondriac region, early in the morning. Cutting and pinching in the epigastrium, with sensation as if something hard were lying over the stomach. Cutting in the abdomen, below the umbilicus, in frequent paroxysms. Frightful cutting in the abdomen, suddenly, she had to sit stooping. Cutting in the abdomen, early in the morning, when in bed, with desire for stool, relieved by emission of flatulence. Cutting in the abdomen, after breakfast, with frequent emission of flatulence, followed by unsuccessful tenesmus, afterwards soft stool, with cessation of the pain. Cutting in the whole abdomen, almost the whole day.—*Digging sensation* in the abdomen, as if diarrhœa would come on. *Weak feeling* in the abdomen. *Feeling of looseness* and digging about in the abdomen, as if the intestines had no support. Accumulation of flatulence in the abdomen, distending it in different places. Continual shifting of flatulence, in the epigastrium and hypogastrium. *Rumbling in the abdomen*, with bearing down towards the small of the back. *Fermentation* in the abdomen. Rumbling and pinching in the whole abdomen, followed by soft stool. *Grumbling* in the abdomen, before a meal. Constant formation of flatulence. Frequent emission of flatulence. Hot feeling in the *abdominal integuments*, with burning at the anus, and sensitiveness of the rectum after stool. Frequent stitches in the left lumbar region. Stitch in the right iliac region, followed by pain as if from bruises, increased by pressing on the part. Sticking pain in the left iliac region, with hardness and distention of the abdomen.

**Stool.**—*Constipation*. No stool for sixty-four hours, after this lapse of time the stool is easily expelled, with prickings in the rectum. Urgent desire for stool; nevertheless she has to press hard, before she succeeds in expelling a small quantity of soft fæces; after this she experienced a shuddering for a short time. Constant pressure on the rectum, without anything being passed, as if the fæces were receding into the rectum; this is followed by a short shuddering. Pressure on the rectum, the whole day, only flatulence, or burning flatulence being passed. Frequent desire for stool; nothing, however, is passed except a

small quantity of thin and slippery fæces. Frequent and severe pressure on the rectum, with colic, almost the whole day. Frequent desire for stool, but little being passed. \**Hard, difficult stool.* Hard stool, with pain as from excoriation in the anus. \**Hard, knotty stool*, with pain in the rectum when passing it. Very hard, knotty stool, followed by softer stool, encircled by yellow mucus. *A small quantity of hard, knotty stool, like sheep's dung.* She went to stool in great haste, it came out in small pieces, and seemed as if burnt, with sticking pain in the rectum, and afterwards burning at the anus. Hard, knotty stool, encircled with thick mucus. Hard stool, surrounded with streaks of blood. Stool is for many days composed of hard pieces, then soft or liquid. Stool first scanty and of a large size, followed by desire for stool which is soft; afterwards she feels unwell, with relaxation of the abdomen, and thence extending over the whole body; she has frequently to lie down. Two stools, harder than usual, the first time he had to strain more. Four stools within an hour, the first being hard, the succeeding ones diarrhoeic, with soreness of the rectum, and cutting pain in the abdomen, which sometimes continues between the stools. Stool, the first part of which is hard, then soft, with burning at the anus and violent stitches, externally, in both hypochondriac regions, with contractive pain in the stomach, extending into the back. Pain, as from excoriation, in the rectum, after a soft stool.—*Soft stool*, followed by burning at the anus and tenesmus. Another soft stool, with shuddering over the whole body, followed by burning at the anus and sensitiveness of the rectum. Soft stool, with colic, early in the morning, after great anxiousness and vertigo. Violent desire for stool, which was liquid, at noon. Diarrhoeic stool, three times in succession, with cutting in the whole abdomen. Violent, irresistible desire for stool; tenesmus, with small pieces of soft, then thin stool, accompanied by shuddering and colic. Liquid stool, jerking out with force, followed by tenesmus and burning at the rectum, and constant desire for stool, resulting in the discharge of a small additional quantity of thin stool. Frequent diarrhoeic stools, every day, with expulsion of a small quantity of liquid, brown stool. *Several greenish, papescient stools.* Several attacks of diarrhoea, with discharge of mucus and blood, and tenesmus of the rectum. Sensation as if flatulence would pass off; in the place of which soft stool is emitted. °Chronic disposition to diarrhoea. °Discharge of tænia. Pinching in the abdomen, *previous* to stool.—*Burning at the anus, and pain, as from excoriation, during and after stool.* Pain of the varices during good, not too hard stool.—Nausea and accumulation of water in the mouth, *after stool.* *Drawing pain* in the loins after stool. *Colic and itching* of the anus, after a good stool. Violent pain in the abdomen, at every motion, after stool. Renewed desire for stool, after an evacuation. Renewed pressure on the rectum, after diarrhoea, as if more would come; only mucus, however, is passed. Burning at the anus, after a natural stool. Stinging in the rectum, (in a few hours). Piercing stitch in the rectum, extending into the abdomen. Burning at the rectum, high up. Prolapsus recti, during stool. Stitches in the perinæum.

**Urinary Organs.**—*The urine can only be emitted by bearing down with the abdominal muscles.* Pressure on the bladder, with scanty emission and burning in the urethra. Frequent micturition, *in day-time*, always scanty. She had to rise five times in the night for the purpose of urinating, and emitted but a small quantity each time.—When urinating, he does not feel that there is any urine passing through the urethra.—Sensation as if he were not able to retain the urine. Unexpected desire to urinate when walking; when stopping for the purpose of urinating, no urine was passed. Rare and scanty emission of urine. The urine is emitted drop by drop, and some remains behind all the time. Frequent micturition, with burning in the urethra, and frequent erection.—

Urine pale-yellow, followed by burning in the urethra. The urine looks as if it had been mixed with yeast, and deposits a cloudy sediment.

**Male Genital Organs.**—Excessive *itching* around the genital organs, and on the serotum, extending as far as the anus; profuse sweat of the serotum in the evening and night, and an emission of semen. Itching of the glands, in the evening, when going to sleep. Itching of the serotum and the lower portion of the penis; he had to rub a good deal, after which the itching subsided. *Erection, early in the morning*, in bed, with burning in the penis. Stitches in the mons veneris, towards evening, or with inclination for an embrace, or also without. After an embrace in the evening, he feels a burning pain in the back early in the morning, which rouses him from sleep, becomes more and more violent when at rest, decreases during motion, and passes off entirely after rising.—Dull, distressing pain, the whole day, in the spermatic cord, the small of the back, and the testicles, when touching them while moving about, after a violent erection which was not relieved by an embrace. Relaxed serotum. Frequent pollutions, even two days in succession.

**Female Genital Organs.**—\*Uterine spasms, °also extending to the thighs and occasioning leucorrhœa. °Scirrhus indurations of the uterus.—Some discharge of blood, five days previous to the menses. Menses two days too soon, two days longer and more profuse than usual. Re-appearance of the menses in a woman of fifty years, who had not had her menses for seven months past, with some pain in the small of the back. Discharge of black clots of menstrual blood, more when sitting than when walking. The menses are more profuse than usual, but painless, and five days before the time. The menses are scanty the first days, but more profuse and constant the fourth and fifth. The menses delay four days, with violent pain in the small of the back, and somewhat shorter than usual. Menses delay eleven days, first watery, then coloured, with pressing downwards in the iliac regions, and frequent yawning.—She is very much excited the day *preceding the appearance of the menses*.—*During the first two days of the menses*, she feels faint even unto swooning, her lower limbs feel weary and she is unable to fall asleep until late. The menses become more and more profuse, with pain in the small of the back and thighs, the pain in the small of the back being more violent when walking, the pain in the thighs when sitting. Constant yawning during the menses.—\**Leucorrhœa*, -early in the morning, after urinating. Profuse leucorrhœa, continuing for eight days, almost without intermission. Leucorrhœa, immediately after stool. \*Abdominal spasms, followed by leucorrhœa. Watery leucorrhœa. Thick leucorrhœa, followed immediately after by discharge of blood, fourteen days previous to the regular period of the menses, and three days previous to full moon.

**Larynx.**—*Hoarseness*, every day in the morning, after rising. Hoarseness, with a sore feeling in the throat and chest. Sudden, violent hoarseness, with dry cough and pressure on the chest, during rough weather. Roughness and dryness of the larynx. Heat and dryness of the larynx.—*Cough, with some expectoration*. Cough, *with tingling in the larynx*, with discharge of mucus.—*Dry cough*, mostly only evening and night. Frequent attacks of dry cough at night, she has to raise herself when coughing. Short fits of cough, followed by dull, aching pain in the chest. Dry cough, with pains in the region of the pharynx. °Nightly spasmodic cough, from titillation in the throat.—Cough, from tingling in the pit of the throat, with discharge of tough mucus, tasting like grease. Deep, rough, fatiguing cough, with rough voice, wheezing in the throat, and slight expectoration of a salt-sweetish mucus; also at night, even unto retching. Cough, with discharge of gray, salt mucus, from scraping in the throat, or itching in the chest. Bloody expectoration, brought on by sea-bath-

ing.—Ulcerative pain in the chest, when coughing, evening and night. Sore pain in the chest, when coughing; she dreads coughing, although coughing relieves her. Violent burning in the chest, when coughing.

**Chest.**—Her chest feels worse in the open air; every inspiration brings on a fit of cough. Want of breath, when going up hill. *Oppressed breathing*, greater after a meal than in the forenoon. Contraction of the chest, with oppressed breathing and dull stitches, from without inwards, in the right side of the chest near the nipple, after supper. Tensive pain in the chest, most acute during a deep inspiration.—*Congestion of blood* to the chest, from bathing in the sea, or when walking in the open air. Sudden *heaviness* on the chest, during dinner, with arrest of breathing, nausea, accumulation of water in the mouth, heat in the face, spasmodic pressure under the tongue, as if it would be pressed upwards, with inclination to eructations; she had to open her dress and walk into the open air; the attack lasted a quarter of an hour, and ended in a chill.—Violent *aching pain* in the chest.—*Constrictive pain* in the chest and scapulæ.—Dull *stitches* under the right chest. Stitches deep in the right chest, as from a pointed body. Stitches, deep in the left side of the chest. Stitches in the left side of the chest, from without inwards, with soreness when touching the parts.—Considerable *burning and throbbing* in the chest, at times in one, at times in another place.—*Stitches in the heart, arresting her breath.* *Palpitation of the heart*, when sitting, for three days, or when rising from a seat, going off during motion. Violent palpitation of the heart, with pulsation in all the arteries. Oppression of the heart, (immediately). Dull, aching pain, externally, in the xiphoid cartilage. Fine stitches, externally, in the upper part of the left side of the chest. Pressure from the left clavicle into one of the lower molares, in the crown of which a tingling sensation was experienced. Tension across the chest proceeding from the pit of the right axilla.

**Back.**—Pain in the *small of the back*. When turning the body rapidly, he suddenly feels a dull pain in the small of the back; during the day this same pain is more felt when sitting or lying. *Pain, as from bruises, above and in the small of the back* and both hips, with sensitiveness of the parts, when touching them, for several days. Pain in the small of the back, as if the parts were broken, when stooping, or stretching the limbs. *Contractive cramp-pain* in the small of the back. *Incisive pressure* in the region of the small of the back. *Tearing and burning* in the small of the back and hips, afternoon and night. Dull *stitches, with tearing*, in the small of the back, going off by pressing on the parts. *Gnawing pain* in the small of the back and the whole back, in the evening, after lying down; the pain appears to be in the marrow and extends to the throat, so that she is unable to sleep from pain, and has to toss from side to side constantly. *Paralytic sensation* in the small of the back, in the evening.—Severe *pain as from bruises, in the back*, (during the menses,) or in the whole vertebral column, at night. Pain as from bruises, and burning, between the shoulders. *Burning, and still more stinging*, in the whole back, apparently in the marrow; afterwards boring stitches between the shoulders, alleviated by motion. Severe *burning pain and constant itching* of the back.—Tension *between the shoulders* and down the back. Tearing between the shoulders. Violent tearing in both scapulæ. Tearing first in the right scapula, afterwards in the hip. Aching pain in the region of the right scapula, across the shoulder, extending to the clavicle; worse when moving the arm or head, relieved by pressing on the parts.—Tearing in the *nape of the neck*, and in the right shoulder along the external surface of the arm. *Tensive, drawing pain*, in the tendons (muscles) of the right side of the neck. Small glandular swellings on the left side of the neck, tensive during motion, and painful when pressing on the part.

**Superior Extremities.**—The *shoulder-joint* is so painful, that she is not able to raise her arm close to the face. Pain in the left shoulder-joint, *as if broken*. Violent pain in the left shoulder-joint, it felt heavy; she dared not move her arm, although this made the pain go off; afterwards the place continued to be sensitive to pain, even when not touched.—Pressure on the left *shoulder*. Feeling as if a wedge had penetrated her left shoulder, she imagined she was not able to move the arm; nevertheless she felt nothing when moving it. Dull *drawing pain* in the left shoulder. Drawing and tearing in the left shoulder-joint, most painful during motion. *Drawing, sticking pains* in the left shoulder-joint, and alternately in the right, most painful when raising the arm. *Tearing* in the shoulder. Tearing in the right shoulder-joint, extending as far as the scapula, when pressing the arm downwards. Tearing, extending from the right shoulder down to the tips of the fingers, so violent that she cannot raise her arm. *Stitches and burning* in the region of the left shoulder, down to the hip. *Throbbing pain* in the right shoulder.—Jactitation of the biceps muscle of both *arms*, as if something alive were jumping about in them. Tearing in the surface of the right arm, with sensation as if gone to sleep, down to the fingers, early in the morning, when lying on the left side, going off by friction. *Tearing*, from the right shoulder to the palm of the hand. *Burning*, from the shoulders to the fingers and scapulæ. \*The arms, particularly the right arm and fingers, *go to sleep*, early in the morning, when in bed, when lying on the left side.—Pain, as from bruises, in the *left upper arm*, and a stitch in the elbow-joint, with sensation as if the arm were dislocated, in the evening, after lying down. *Tearing* in the upper arms, apparently in the marrow. Tearing in the muscles of the right upper arm.—Violent tearing in the right *elbow-joint*.—Painful transitory tearings in the *left lower arm*, meandering between the skin and flesh. Tearing around the right lower arm, in a small circular band near the wrist-joint, going off only for a short while by pressing on the part. Tearing in the inner surface of the right lower arm, extending as far as the thumb. Violent tearing behind the left wrist-joint, and in the direction of the index-finger. Both lower arms *go to sleep*, early in the morning, after rising. Burning pain and continual itching of the lower arms. Burning, painful red spot behind the styloid process of the ulna.—Excreescence on the right *wrist-joint*.—Drawing pain in the right *hand*. Violent tearing in the metacarpal bone of the right ring-finger. Tearing in the right hand. Tearing and sticking pain in the ball of the right thumb, in the evening, when in bed. Tearing in the right thumb. Tearing in the right middle and ring-finger. Tearing in the distal extremity of the first phalangeal bone of the left index-finger, going off by pressing on the part. Darting tearing on the left index and middle finger, extending from the middle joint to the tip and nail. *Prickings in the tips of the fingers*, going off by friction. Burning pricking in the tips of the fingers. *Numbness and insensibility* of the tips of the fingers, going off by friction.

**Inferior Extremities.**—Sensitiveness of the *hips* to contact, for some time. *Tearing pain* in the right hip, extending to the knee. Tearing in the right hip, in the evening, after lying down; the parts are so painful that she cannot lie still; she feels most comfortable by lying on the sound side. Tearing in the right hip-joint; when pressing and rubbing the parts, the pain is felt lower down, in the evening, when in bed. Tearing in the right hip, apparently in the marrow, in the evening, when in bed. Violent, darting tearing, obliging one to scream, in the posterior parts of the hip-joints, frequently intermitting, in the evening, when in bed. Tearing and pain, as from bruises, in the right hip, aggravated by walking, early in the morning. Throbbing in the left hip. Burning on the posterior parts of the right hip. Pain, as from bruises, in the *nates*,

whether touching them or not, day and night. Tearing in the nates, when walking, less when sitting. Violent twitching in the right buttock. Itching or itching burning on the bend of the thigh.—The bones of the *lower limbs* are very painful when walking. Pain, as from bruises, in the left thigh, as if it would break, in the evening. Tension in the lower limbs, as if the muscles were too short, going off by continued walking.—Pain, as after riding on horseback, in the muscles of the *thighs*. Violent pain in the middle of the thighs, early in the morning, when in bed, (immediately before the menses). *Spasmodic cramp-pain* of the inner side of the right thigh, early in the morning. *Tensive tearings* above the bend of the left knee. Sudden and painful stitches in the thigh, from time to time, which oblige him to draw up his leg. Uneasiness and rigid sensation in the thighs, frequently obliging him to move his legs, in order to find relief. Violent pain, as from bruises, in the middle of both thighs, in the evening, after lying down, hindering sleep for a long while. Weakness in the thighs, when standing, going off when walking. Itching of the thighs, scratching brings on small pimples.—Tearing in the *knees*. Itching in the knees, at times in the right, at times in the left knee. Violent tearing, deep in the right knee. *Stitches* under the left knee. *Weakness* of the right knee, with sensation as if something were tied around it.—Drawing along the tibia down to the foot. Tearing in the left *leg* (during the menses). Transitory, very keen pain in the region of a fracture of the tibia, which happened 12 years ago, as if it would break again. Tension and tearing in the right *calf*. Cramp of the calf when walking. *Cramp in the calves*, the whole night, which leaves a pain in the parts that prevents him from walking the next day. Twitchings in both calves, without pain. *Tearing in the calves* from below upwards, when standing. Tearing in the right calf, from above downwards, down to the heel, in the evening. Paralytic pain, as from bruises, in both calves and in the dorsum of the foot, in the evening when in bed, (during the menses).—Heaviness of the legs and *feet*, early in the morning, when in bed. The right leg and foot go to sleep, going off by motion. Uneasiness in the feet, early in the evening, he has to move them constantly. Trembling of the feet, going off by motion. Tension in the dorsum of the foot, when sitting, going off by motion. Tearing across the dorsum of the left foot, and behind the toes, when walking. *Burning*, in the dorsum of the right foot, as if a drop of hot water had fallen upon it. Tearing on the inner side of the dorsum of the right foot, down to the big toe. Dull stitch in the outer border of the right foot. Tearing in the external malleolus of the left foot. Sweaty feet. Cutting in the *heels*. Twitchings and jerkings in the right heel. Pain in the left heel, as if bruised.—Burning of the *soles of the feet*, in the evening. *Violent tearing in the sole of the right foot*, in the evening, after lying down, followed by tearing above the knee, and then in the right hip, almost the whole night. *Tingling* in the soles of the feet, when sitting. Tingling stinging in the soles of the feet.—*Tearing in the big toe*, when walking and afterwards also when sitting, also in the evening, when in bed. Tearing in the small toe of the right foot. Stitch in the ball of the big toe of the left foot. Sensation as if the middle toe of the right foot and the thumb were drawn inwards, with pain in those parts, early in the morning, when rising or walking. Drawing, formication and hot feeling of the toes of the right foot.—Tearing stitches in the *corns*.

**Sleep.**—Frequent *yawning*, with a feeling of exhaustion in the body, and a want of disposition to intellectual labour. Frequent yawning the whole day, most violent after dinner. Yawning, with eructations and water in the mouth. Frequent yawning, with chilliness and goose-flesh, continual desire for stool and cutting in the abdomen, an hour after dinner. *Drowsiness in day-time*.

Drowsy, indolent, and averse to labour.—She feels sleepy early in the evening, and she sleeps well before midnight; after midnight, she is attacked with sweat and thirst. *Sleep does not refresh him, he feels weary early in the morning.*—*She falls asleep late in the evening.*—She was not able to fall asleep till eleven o'clock in the evening, on account of great heat and thirst, she sweats after midnight. *In the evening he falls asleep with great difficulty; he tosses in his bed from side to side; he wakes late in the morning and can scarcely open his eyes,* (the first days). She wakes at 3 o'clock in the morning, and is unable to fall asleep again. He woke at 2 o'clock at night, and remained awake for an hour; he felt restless, and had to get up and walk about his room; he had a sourish taste in his mouth. Anxiousness and heat, before midnight, sweat and thirst after midnight. *Uneasiness in the whole body, as soon as she closes her eyes in the evening, when in bed.* Shaking in the upper part of the body, in the evening, when in bed, almost without chilliness or heat. Restless sleep, interrupted by frequent waking. *Great restlessness at night,* she tosses from side to side, and feels so hot that she is unable to fall asleep. Sleepless night, owing to violent toothache. Restless sleep, owing to a feeling of heaviness in the abdomen. At 2 o'clock in the night, he wakes from a cutting sensation in the lower part of the abdomen, followed by stitches, first in the pit of the stomach, afterwards in the præcordial region, worse when taking an inspiration. Restless, sleepless nights, owing to violent pains in the small of the back, obliging him to move continually from side to side. At night, the hands and feet go to sleep, which is painful. The morning-sleep was disturbed by a pain in the back and small of the back, which returned when he fell asleep again. Frequent waking on account of great heat. Talking while asleep. Snoring when asleep. Starting when asleep, before midnight.—*Anxious dream* with heaviness on the chest, like night-mare; she attempted to scream, but she was not able. A number of *vivid dreams*, which she was not able to recollect. When falling asleep, she fancies a great many things, frightful dreams of falls, etc. Pleasant dreams, of weddings, dances, etc. Dreams about travels. Shameful dreams. Dreams causing a good deal of anguish. Dreams about dead persons. Frightful dreams about danger of death, misfortunes, mutilations, robbers, etc. Dreams about having gone astray in a forest. Dreams about danger of inundation. Dreams of fire. Early in the morning, when wide awake, he experiences a jerk, from the heel through the whole body, as if caused by an electric shock or by fright. In the morning she feels so sleepy that she is *scarcely able to open her eyes.*

**Fever.**—*Chilliness*, with shaking, even when near the stove, in the evening. Chilliness with yawning, in the evening. Chilliness, in the afternoon from 4 to 5 o'clock, two days in succession. Chilliness in the evening, going off after going to bed; heat before midnight; after midnight, sweat with thirst, continuing until morning. *Shaking chills*, in the evening, from 6 to 8 o'clock, going off when in bed. Chilliness at 9 o'clock in the evening, after going to bed, afterwards sleeplessness. Chilliness at 8 o'clock in the evening, with thirst and great dryness of mouth, for half an hour.—*Frequent chills, alternating with heat.*—Frequent chills in the forenoon. Shuddering, through the whole body, early in the morning, with icy-cold feet. *Shuddering*, early in the morning, when rising, which obliged her to get into bed again several times. Shuddering and shaking, at 7 o'clock in the evening, on walking into the open air; one feels hot on entering the room. Shuddering in a warm room and constant desire for stool, shortly after dinner. Shuddering over the whole body, the hair standing on end, several times, in the forenoon. Feeling of shuddering, in the evening, previous to going to bed; after midnight, profuse sweat over the whole body, without

thirst, until early in the morning.—Internal *warmth*, after breakfast, without warmth to the touch. Thrills of *heat*, with vertigo. Heat in the feet, before midnight, relieved by putting them out of the bed; after midnight, sweat and thirst, until early in the morning. General increase of warmth, with thirst, in the afternoon. Internal heat, with thirst, at night.—Heat in the evening, and restlessness in the whole body, even some time after lying down. Heat over the whole body, in the evening, shortly after lying down, increased whenever he wakes. Warm and anxious, when in bed. *Heat before midnight; after midnight, sweat with thirst*, recurring after six days. Heat, after midnight. Great heat, with sweat, at dinner, several days in succession.—*Sweat* about the head, in the evening, with increased warmth of the body. Sweat, after midnight, also with frequent thirst, which is yet felt early in the morning, and is accompanied with dryness of mouth. Sweat with thirst, almost every morning.

**Skin.**—Violent itching of the whole body, shifting from place to place, in the evening before lying down and early in the morning after rising. Itching of various parts of the body, going off by scratching, also in the evening, previous to going to bed. Itching of the chest, back, dorsum of the left foot and small of the back, not going off by scratching. Itching of the right iliac region, the left tibia and the posterior surface of the thighs, here the itching is followed by burning, and returns after scratching. Itching of the whole body, as if from vermin, also in the evening after lying down; after scratching it re-appears in other places. Itching of the external surface of the thigh, aggravated by scratching; likewise of the small of the back and the hips, which parts, when scratched, experience a burning sensation.—*Formication* of the face, the soles of the feet and chest; in the chest the formication is followed by a severe stitch. Formication of the whole body, at night, when in bed, with shuddering over the face, arms and shoulders, down to the ends of the feet.—*Itching pimples*, sometimes burning after scratching, between the shoulders, on the chest and in the back.—*Pustules* on the temple and in the region of the right clavicle.—Small, *itching or red pimples* on the chin, between the shoulders, on the thigh and nates, these latter parts experiencing a burning sensation after being scratched.—*Boils* on the forearm, on the upper part of the head, on the false ribs, and on the nose; the boil on the nose suppurates in 24 hours.—Glandular swellings.

**General Symptoms.**—Burning tension in different parts of the body, for instance, in the region of the right ribs, of the left shoulder, etc. Transitory tearings in different parts of the body, at night. °Laming drawing and tearing in the limbs. *Spasmodic nervous pain* here and there, at times boring, at times contractive, especially in the scapulæ and the chest; accompanied by violent nervous headache, commencing in the fore part of the head, with drawing in the ears; sometimes lancinating tearings in the head. °Liability to take cold.—Great weariness in the limbs, when walking in the open air, she has to sit down frequently. *Great weakness in the lower limbs*, even when sitting, (during the menses). Great weariness of the lower limbs, almost during the whole time of proving. Sudden weakness of the lower limbs, from afternoon till evening. Weary as soon as he begins to walk; when at rest, the hip-joints feel a pain as from dislocation.—Great weakness °as if proceeding from the stomach. Early in the morning he feels weary, bruised, and as if he had not slept enough. Weak feeling, with vertigo, early in the morning. Weakness and tremor of the hands and feet, after dinner. Weak, weary and out of humour, in the forenoon. *The whole body feels painful, as if it were bruised*. Heaviness of single parts, thighs, knees, calves, hips, etc. Heaviness and weariness of the lower limbs, as after a long journey on foot. Sensation in the whole body, as if every part of it

were too heavy. She feels weak and broken down, in the forenoon. Tremor of the hands and feet. Early in the morning, and in the evening, the feet feel unsteady, when beginning to walk. Staggering gait.—*He feels quite sick.*—After bathing for five minutes in the North-sea, she became so weak that she felt as if all her strength would leave her, she was scarcely able to speak.—*Great sensitiveness*, her head aches even from hearing persons talk, or from her own talking, from every step she takes; accompanied by a decrease of appetite, taste, and smell, early in the morning.—*Fainting fit*, at dinner, with anxiousness, nausea and paleness of the face; her eyes see green and red, and she trembles all over the body; afterwards eructations which gave her relief.—*Hysterie complaints and spasmodic turns.*

**Characteristic Peculiarities.**—The generality of the symptoms occur when sitting, and are generally relieved by motion. She thinks she feels better in the open air, except the symptoms of the chest. Three days and three nights she was unable to bear the open air.

## 159. MAGNESIA SULPHURICA.

MAG. SULPH.—Sulphate of magnesia.—See HARTLAUB AND TRINKS' *Annals*, IV.—*Duration of Action*: Days, and even weeks.

COMPARE WITH—Calc. carb., Chiu., Mag. mur., Nux v., Puls., Sulph.

ANTIDOTE.—Camph.

### CLINICAL OBSERVATION.

This drug has been very little used by homœopathic physicians.

### SYMPTOMS.

**Mind and Disposition.**—*Sad and weeping mood*, with foreboding anxiety, as if some accident would happen, particularly early in the morning.—*Anguish*, early in the morning, on waking, as if caused by a bad conscience. Deadly anguish, so that she is almost beside herself, with livid face, languor of the lower extremities, sick feeling in the body, and prostration.—*Ill-humour*, does not want to speak. *Lazy*, languid, drowsy, unable to attend to any serious business.—*Very much irritated*. Sensitive, nothing will satisfy him. Is easily offended, vehement.—*Cheerful mood*, sometimes as if slightly intoxicated.

**Sensorium.**—*Stupid feeling* in the head, as if he would lose his intellect. Sensation as if she were somewhat out of her senses. While spinning she sees strange people around her, although she knows that there are not any.—*Dull* or stupid feeling of the head, as if *bandaged* or *serewed* in, even early in the morning. *Gloominess* of the head, with heaviness, early in the morning on waking, going off after rising.—*Vertigo* as if one would fall forwards, at and after dinner, not allowing one to walk unsupported. Vertigo with dulness of the head, and less in the open air. Vertigo with *heaviness of the head*, immediately after dinner. Vertigo with spontaneous closing of the eyes (without drowsiness), early in the morning.

**Head.**—Bruised pain in the forehead, in the forenoon.—*Feeling of heaviness in the head*, with gloominess, in the morning on waking, going off after rising. Feeling of heaviness *with vertigo*, immediately after dinner. Feeling of heaviness in the forehead, with heat in the head, and sensation, on raising the head after stooping, as if the contents would press through the forehead.—*Pushing in the forehead from behind forward*, with feeling of heaviness, early

in the morning, on raising the head after stooping, *like a violent rush of blood*. Pain in the forehead, as if *full, big, and dull*.—*Pressure in the head*, in the afternoon, until evening. Pressure as from a hard ball above the margin of the orbit. Pressure from *before backwards, on both sides of the head*. Pressure in the occiput, also early in the morning and going off in the open air, or from both sides, and obliging one to lie down, or renewed by carrying a heavy load on the shoulder.—*Pressing together* from both sides of the head, with heat in the head and redness of the face. Sensation as if the head were *screwed in*, when moving it, early in the morning, in bed — *Tearing, particularly in the forehead*, also in the evening, with pressure, relieved in the open air, or particularly in the right frontal bone, with pain to the touch (in the afternoon). Frequent *tearing* in the left temple, or particularly in the afternoon when spinning. Frequent painful tearing in the vertex. Painful tearing from the left lower jaw to the head.—*Stitches in the head*, here and there. *Stitches in the right side of the head*, particularly when turning the head to the right side (early in the morning after rising). Stitches in the temples, or alternately in one and the other. Stitches as with a shoemaker's awl, above the margin of the left orbit. *Stabblings in the whole head*, even at one o'clock at night, worse in the afternoon, *obliging one to lie down*, with pain in the *temples, forehead and nape of the neck*, which continues until midnight with great violence, and diminishes in the morning.—*Boring* in the vertex (forenoon) *succeeded by a stupid feeling*, or above the left eye from without inwards, in the evening, in bed. Boring in the left side of the head, with internal heat, in the afternoon.—*Hammering beating*, first in the forehead, then in the whole head, afternoon and evening. Peeking beating in the right side of the head, when walking in the open air, going off in the room.—*Violent rush of blood to the forehead*, with sensation as if something heavy were pushing forward, early in the morning, on raising the head after stooping.—*Heat in the head*, with boring in the left side of the head, in the afternoon. *Heat in the forehead, with burning*, from afternoon till evening. Heat in the vertex, with pain as if the hair were pulled.—*Shaking of the brain* (at every motion of the head or body). The brain feels loose on moving the head. Painful *rumbling* in the head, at every step, after dinner. Sensation in the forehead, when stooping, *as if something would fall forward*, worse when lying, with concussion of the brain from the least cough, and great sensitiveness of the occiput all the time.

**Eyes.**—Sensation as if a ball were lying in the left eye. Violent pain, particularly in the right eye, *as if it would start out of its socket*, on looking either right or left. *Stinging* in both eyes, the whole day, or frequently in the internal canthus of the right eye. Tearing in the eyes, early in the morning, with dimness of sight. *Burning of the eyes*, the whole day, or particularly at candle-light (evening or morning).—*Lachrymation, with photophobia*, also in day-time.—*Dimness of the eyes*, with frequent drowsiness.—*Dim-sightedness* early in the morning, also with tearing in the eyes.

**Ears.**—Pain in the right eoncha, as if it would be forcibly turned about, early in the morning. Frequent stitches under or in the left ear (also particularly when standing, or in the forenoon).—*Ringin in the left ear*, so violent that the ear becomes sensitive. At times ringing, at times rushing, as of water, in the left ear.

**Nose.**—Pressing from above downwards on both sides of the root of the nose. Pain of the right wing, when touching it. *Ulcerative pain* in the right side of the nose (when pressing upon it), or also on the right outer corner. Pain in the posterior nares as from air pressing through with violence, when coughing or talking. Burning in the left nostril, as from incipient catarrh, with discharge

of a quantity of yellow mucus.—*Bleeding of the nose*, also at night with diminution of the headache next morning. Bleeding of the nose without diminution of the headache.—Frequent *sneezing*, with feeling of catarrh, in the forenoon.—Catarrhal sound of the voice, hollow, deep bass voice. Profuse coryza, with obstruction of the left nostril. Increase of coryza as the cough diminishes. Dry coryza after rising, becoming loose in the afternoon.—*Fluent coryza* in the afternoon. Fluent coryza, with pain in the chest and cough without expectoration. Fluent coryza, with rough voice and frequent flow of water from the nose. Fluent coryza, and soreness of the inner nose on account of the frequent blowing.—Drops of clear water fall out of the nose, without coryza.

**Face.**—*Tearing in the right facial bones, or in the left malar bone* (also particularly at two o'clock at night, or with subsequent sensitiveness of the place).—*Pimples* on the right chin and the right side of the nose, with itching when they first appear. Pustules behind the angle of the left lower jaw, with tensive pain.—Burning of the lips, in the evening, with dryness. Pimples under the right corner of the mouth, burning when touched.

**Teeth.**—Toothache on entering the room from the open air, and in the evening, in bed, aggravated by cold or warm things, or by the contact of food.—Tearing toothache, in the evening, in bed. Darting pain in an upper incisor, in the forenoon, never in bed. *Grumbling* in a left upper hollow tooth, in the evening, before going to bed. Beating in a left molar tooth, with heat in the head.

**Mouth and Pharynx.**—*Mouth* and throat are very dry, as if numb, early in the morning, with bitter-sweet taste.—Tongue rough after dinner, until evening. *Blister* on the left border of the tongue, with cutting pain.—Pain with dryness in the throat, also between the acts of deglutition. *Stinging in the fauces*, more during than between the acts of swallowing, also with burning, and low down in the throat, or coming on at night.—Frequent mucus in the throat, which can neither be swallowed nor hawked up. Frequent hawking up of tasteless saliva, early in the morning. Expectoration of sour mucus, particularly early in the morning.

**Appetite and Taste.**—*Bitter taste in the mouth*, also particularly early in the morning on waking and going off after breakfast, or with complete loss of appetite. Bitter-sweet taste, early in the morning, with a feeling of dryness and numbness in the mouth and throat.—*Loss of appetite*, also with *aversion to meat*, sometimes with feeling of illness without being able to say what ails her. No appetite for anything, except, perhaps, bread, with aversion to warm food. No appetite, or hunger, but without loathing. Complete loss of appetite, with bitter taste in the mouth, pressure in the stomach, tension of the abdomen and itching on the back. *Aversion to any kind of food*, when merely thinking of it, and particularly in the evening.—*Thirst*, early in the morning, on rising, going off after breakfast. Thirst in the evening, for several days, particularly during the menses.

**Gastric Symptoms.**—Frequent *eructations*. Empty eructations, also with loss of appetite. Eructations tasting like rotten eggs, early in the morning. Frequent eructations as if one had been eating hard-boiled eggs. Bitter eructations. Eructations tasting of the food which had been eaten the day previous.—*Rising of water from the stomach*, also with loathing (of any kind of food) and nausea. Continued gulping up of water, after eating potatoes.—*Nausea with inclination to vomit, and loathing, at night*, with restless tossing in bed. Nausea as if one would vomit, forenoon and afternoon.—*Vomiting, in the afternoon*, first of the ingesta, then of mucus.

**Stomach.**—Sensation in the stomach as if it had been deranged by un-

healthy food. *Trembling of the stomach, with subsequent gulping up of water* which sometimes has a putrid taste (with loathing), or also with general weakness while the trembling lasts. Feeling of coldness in the stomach, with inclination to vomit, early in the morning, in bed.—*Pressure in the pit of the stomach*, also with sensitiveness of the outer parts.—Burning stitches in the region of the stomach, externally, early in the morning.

**Abdomen.**—*Sticking in the left hypochondriac region*, particularly when sitting, or during rest and motion, or in the evening (either before or after lying down, and going off in a recumbent posture, or early after lying down, and relieved by pressing on the parts with both hands).—*Colic* with pain in the pit of the stomach and chest. Indescribable pains in the whole abdomen, a sort of darting pains, in the forenoon, after having eaten potatoes the evening previous.—Drawing pain in the abdomen, immediately after taking the medicine. Violent darting around the umbilicus, aggravated by motion. Burning below the umbilicus.—*Pinching in the abdomen* at table, with transitory urging to stool. Pinching in the abdomen, after eating milk at supper, with motions in the abdomen as from a cathartic. Fine pinching with hard stool. Pinching, in the evening after stool, with sticking, finally passing into both hips.—*Bloatedness* in the evening, going off over night, with emission of flatulence early in the morning.—*Distention, fulness and hardness of the abdomen*, even after a moderate meal. Rumbling in the abdomen with emission of flatulence.—Pressing in the *groin*, with pain in the small of the back as from flatulence. Tension in both groins, with sensation, on extending them, as if they would burst. Pinching in the outer parts, downwards towards the groin, afternoon and evening. Itching of the left inguinal region, not removed by scratching.

**Stool and Anus.**—The stool sometimes intermits one day, but is otherwise regular.—Soft stool, sometimes preceded by *hard*. A few hard lumps with violent pressing and preceded by pinching around the umbilicus; soon after, renewed ineffectual urging, with subsequent stool, the first part of which is hard, the latter diarrhœic. *Alternation of hard and soft stools*. *Soft stools the first days*, and generally early after rising. Soft stools with burning at the anus, or with subsequent *tenesmus*. *Liquid stools*, with tenesmus, or morning and evening.—*Diarrhœa, preceded by rumbling in the abdomen*, sometimes accompanied with bloatedness and emission of fetid flatulence. Four diarrhœic stools, with a good deal of thirst.—*Discharge of ascarides at every evacuation*.

**Urinary Organs.**—Increased emission of urine, the first days. *Nocturnal micturition*. Increased, clear, greenish urine.—Diminished secretion of urine.—Interrupted stream, after which the urine flows out drop by drop, with burning at the orifice.—Stitches in the orifice, after micturition.

**Male Genital Organs.**—Frequent stinging about the penis, when sitting or walking.—*Erections*, without amorous fancies or sexual desire.

**Female Sexual Organs.**—*Menses* too late by three days, scanty and only three days. *Menses too short*, only two days, afterwards intermitting two days and then returning again for one day. Menses more profuse than usual, the first days. *Menses too early* (by two, three days), also by seven days, and too short and scanty. Menses re-appear in a fortnight, more profuse than usual, with thick, black blood. Discharge of blood from the vagina, between the menses.—*During the menses*: more heat than chilliness; *great heaviness in the head*; bruised pain in the small of the back, with pain in the groins when sitting or standing, less when walking, and with pain of the thighs when standing.—Burning *leucorrhœa*, particularly during motion. *Thick leucorrhœa*, profuse, like the menses, with bruised pain in the small of the back and thighs.

**Larynx.**—Deep, hollow bass voice, as in catarrh.—*Dry cough* with burning

from the larynx beyond the pit of the stomach. Dry cough in the evening, in bed, during which he falls asleep. Fatiguing dry cough, in the morning, after waking, obliging one to sit up, which affords relief. Cough without expectoration, with pain in the chest and fluent coryza.—*Loose cough*, with soreness in the mouth and throat. Frequent hacking with some expectoration of mucus. Cough early in the morning, with some expectoration, and sore pain in the chest as if cut to pieces.—*Painful burning in the chest when coughing*, as if a piece of the lungs would come out. The coryza increases as the cough diminishes.

**Chest.**—*Oppression of the chest*, with burning in the chest, when walking.—*Pressure on the chest*, with oppression of breath. Pressure on the chest, with tickling in the larynx and feeling as if the lungs were too large, particularly early in the morning, in bed, obliging him to rise frequently. Pressure on the chest, with throbbing in the chest and difficult breathing, when writing. Pressure on the chest at night, ceasing at three o'clock in the morning after expectoration of tenacious mucus. Pressure as from a load on the lower part of the chest, with shortness of breath.—*Stitches* from either side towards one another, in the evening, on entering the room from the open air. Stitch under the right chest, on rising after stooping. Stitches from the left axilla to the chest. Frequent stitches in the chest, here and there.—*Burning on the chest*, in the forenoon. Burning in the middle of the chest. Burning under the upper part of the sternum.

**Back.**—*Pains in the small of the back*, with subsequent pain in the thighs. Nightly pains in the small of the back and thighs. Weariness, at times in the small of the back, at others in the hip.—*Itching* on the back, with small pimples after scratching. Creeping itching as from vermin, afternoon and evening.—*Tearing between the shoulders*, commencing at midnight, obliging one to rise and walk about. *Bruised pain* between the shoulders, or *ulcerative pain*, with sensation of a lump of the size of a fist at that place, also when lying on one side, not allowing one to lie on the back, relieved by rubbing.—*Tension in the nape of the neck and between the shoulders*, also with stitches, or particularly early in the morning, when rising, or also with great sensitiveness to the touch, which does not allow one to rest on that place, relieved by walking.

**Superior Extremities.**—*Frequent twitching in the arms*. The left arm goes to sleep early in the morning, in bed. Tearing in the right arm. Pressure in the humerus. Tearing in the upper arm, posteriorly, early in the morning, in bed; less after rising.—*Violent tearing in the left elbow*, the parts remaining sensitive to the touch a long time after.—*Tearing in the tendons of the left forearm*. Pimples on the inner side of the left forearm, after previous itching.—*Tearing in the left wrist-joint*, from noon till evening, with great sensitiveness of the parts afterwards. Tearing in the right hand, with painful contraction and immobility of the fingers. Drawing in the left hand, with drawing-in of the fingers. Violent *trembling* of the hands. Itching of the palm of the right hand.—*Tingling in the fingers*, going off by rubbing. Tearing in the tips, particularly at night. Tumult and beating in the right index-finger, as if a pararitium would form. Twitching between the index-finger and thumb. Ulcerative pain in the ball of the left thumb, on moving it, with pain, when pressing on it. Sticking in the thumb, when writing, or after dinner.

**Lower Extremities.**—*Tearing in the hip*. Heaviness, at times in the hip, at times in the small of the back. Bruised pain in the left buttock, worse in walking.—*Nightly pains in the lower limbs*, with pains in the small of the back. After the pains in the small of the back cease, the pains in the small of the back increase, also in walking. Tearing in both thighs, down to the feet, in the evening.—*Tearing in the left femur*. Weakness of the right thigh,

when sitting, and worse when walking.—Tension in the bends of the knees, particularly the right, when walking. Tearing in the left knee, with cracking, on stretching it, and relief of the pain after that.—Languid feeling in the legs, scarcely allowing one to walk.—*Cracking of the tarsal joint*, at every step. The left foot goes to sleep, early in the morning, in bed. Tearing in the ball of the left foot, at noon. Ulcerative pain and stinging in the sole of the left foot.—*Tearing in the left toe*, with contraction. Tearing in the right big toe, in the evening before going to bed. Stitch in the left big toe, after dinner. Stitch in the right big toe, with tearing in the left. Itching in the toes of the right foot, returning after scratching.

**Skin.**—*Itching blotches*, either hard, or as from nettles, with burning after scratching.—Small red tetters, one on the right upper arm, the other on the right lower, with violent itching. Itching of an old tetter, behind the right ear.

**Sleep.**—Irresistible *drowsiness* towards evening, in the morning he sleeps longer than usual.—*Falls asleep* late in the evening, wakes frequently, and sleeps soundly towards evening. Restless, scanty sleep, rests well only towards morning. Frequent starting at night.—Violent colic at night, in bed, not allowing any rest, with moaning, has to lie down again soon after rising in the morning, is inconsolable, until he smells of camphor, after which he has three soft stools, and his pain ceases. Violent headache at night, in bed, preventing sleep, with colic, weak and exhausted sensation in the feet, and tearing in the small of the back, which does not allow him to lie on his back. Bruised feeling, (after lying down,) which prevents sleep, towards morning he falls into a light sleep.—*A number of dreams in the night*. Dreams about weddings, farming, etc. She dreams that she has had a visit from her sister, which gives her a good deal of pleasure. Merry dreams. Dreams about dancing and feasting. Voluptuous dreams which he recollects. Dreams that she sees her dead mother. Dreams about being disappointed, on account of a journey which he was to take with his father. Dreams about chagrin, which threatens to increase to rage. Confused dreams, during sound sleep. Dreams about the arrival of her daughter, which is unpleasant to her. *Anxious dreams*, with starting, as if pursued and shot by soldiers, or as if she had fallen into the water. She dreams that her room is haunted, and wakes in affright, and drenched in sweat. She dreams that she sees people jump into the water. He dreams that his father, who is living at a distance, has died. She dreams that she is to go to the theatre, but that she cannot get ready with her toilet, she wakes angry. He dreams that his neighbour's house is on fire, and that the fire cannot be put out. *He dreams about horses that attempt to kick or hurt him*, or that he has gone astray in a forest. He dreams about a row in his father's house. He dreams that he finds a dead child on the church-yard, which makes him shudder. She dreams that she sees yellow mice, and that she loathes them.

**Fever.**—*Shuddering* in the evening, in the back, from below upwards. Shuddering early in the morning, in bed, going off after rising and walking about. Shuddering, with lachrymation, catarrh, and heaviness of the eyes.—*Chilliness with thirst*, early in the morning after waking, or also the whole day. Chilliness in the evening, *going off in bed*, also with sweat towards morning. Chilliness in the open air. *Shaking chills*, particularly during the *violent headache*, or at nine o'clock in the evening, *going off in bed*, succeeded by thirst.—*Fever*, first chilliness in the evening until he lies down, afterwards sweat, with thirst, early in the morning. Chilliness from nine o'clock in the evening until ten in the morning; afterwards, towards noon, he is obliged to lie down; *sweat* at three o'clock in the afternoon. Shaking chills from seven o'clock in the

evening until an hour after going to bed, followed by increase of warmth, sweat towards morning, without any thirst. Alternation of chilliness and heat, at night, only chilliness in the night following. Alternation of heat and shuddering, with alternate redness and paleness of the face. Alternate paroxysms of mounting of heat from the chest to the head, with sweat on the trunk, and of chilliness.—*Heat* in the whole body, for hours, in the afternoon. Heat, with vertigo on raising the head in bed, accompanied with sweat on the forehead, and redness in the face. *Heat in the head, with coldness of the rest of the body*, which decreases in the afternoon. Cold feet the whole day, in spite of a constant feeling of heat.

**General Symptoms.**—*Tearing* pains in the limbs, particularly at night.—*Bruised feeling* in the *whole body*, as if he would fall sick, or on waking in the morning, particularly in the back and arms, which feel sore the whole day.—Great languor with staggering gait. *Languid weakness of the feet, with trembling of the whole body*.

**Characteristic Peculiarities.**—She feels better in the open air. He feels most comfortable when lying, the other positions of the body are unpleasant to him.—The symptoms appear *slowly*, but *strongly*, then disappear for a time, and re-appear with renewed force.

## 160. MANGANUM.

MANG.—Manganese.—See HAHNEMANN'S Chronic Diseases, IV.

COMPARE WITH—Am., Am. mur., Cale., Coff., Con. m., Kali, Lye., Plat., Puls., Sabad., Sassap., Thuj., Verat.

ANTIDOTES.—Coff., Merc. sol.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks, Mang. is useful in *inflammation of the bones and the periosteum*. Intolerable grinding, boring, gnawing, inflammatory pains of the periosteum and the joints (the processes of bones), especially violent at night (like all the pains in the bones).—Rheumatic pains.—Acute and chronic rheumatism of the joints.—*Acute and chronic gout of the joints*, with lancinating, darting and grinding pains in the swollen joints, becoming intolerable at night, and when the weather changes, and attacking one joint after the other, either of the same sides, or alternately of both.—Arthritis vaga.—Arthritic swelling of the joints.—Itching, smarting itching and burning of the skin.—Chronic cutaneous eruptions.—Humid, suppurating, spreading herpes.—Unhealthy skin.—Soreness and rhagades in the bends of the joints.—Absence of mind.—Weakness of memory.—Chronic, scrofulous, and herpetic inflammation and swelling of the eyelids, with copious secretion of mucus.—Dry and hot eyes.—Pains and dazzling of the eyes from looking too closely and steadily at near or distant objects.—Short-sightedness.—Dim-sightedness.—Photopsia.—Amblyopia amaurotica.—Amaurosis.—Acute and chronic inflammation of the internal ear.—Sensation of obstruction of the ears.—Hard hearing.—Tickling in the ears.—Hard hearing, as if caused by obstruction of the ears, which goes off as with a report when blowing the nose, and improves or becomes worse, according to the changes in the weather.—Whizzing rushing, as of water, detonation when blowing the nose, or when swallowing, and, when yawning, noise in the ears as when treading on a swamp.—Whizzing rushing, as of water, roaring, ringing, detona-

tions, and fluttering as of birds, in the ears.—Violent toothache in hollow teeth, quickly spreading to other parts, lancinating, tearing or drawing.—Ulcerative pains in the teeth when touching them.—Cutting sore pain in the throat, between the acts of deglutition.—Chronic inflammations of the mucous membrane of the palate, the fauces, and the tonsils.—Chronic laryngeal cough with constant titillation, from the pit of the throat to the bronchial tubes; talking excites the cough, and a deep inspiration is accompanied by a wheezing sound, (in conjunction with Con. m.). Rough throat.—Hoarseness.—Coxalgia; inflammation of hip-joint in scrofulous children, first and second stages.

#### SYMPTOMS.

**Mind and Disposition.**—Discouragement. Weeping mood.—*Continued* restlessness, as if he apprehended some sad event, or as if something tormented him.—*Out of humour* and low-spirited. Everything she thinks of gives her dissatisfaction. Out of humour, desponding and sad. Out of humour; light music makes him sad, sad music cheers him up. Out of humour, reflective, the whole body feeling uneasy and uncomfortable, four afternoons in succession. Out of humour, dissatisfied with herself, and apprehensive on account of the future; he talks little, imagines he is weak-minded, and uses wrong expressions in every sentence he utters. Peevish and out of humour on account of every trifle, early in the morning, with wrinkled brow, he was even irritated by the mere conversation of others.—Incensed feeling; he is full of bitterness and rancor against those who offend him.

**Sensorium.**—Diminution of the power of the senses. Weak memory. Absence of mind. Dulness of the head and heaviness of the occiput, afterwards of the forehead. Gloominess and dulness of the head, with general feeling of exhaustion, when sitting.—Vertigo, when sitting or standing; he is near falling forward.

**Head.**—Megrin. Dull headache in a room. The headache, which continues in the room, goes off in the open air.—Her head feels heavy and larger. Her head feels so heavy that she is scarcely able to keep it erect, she is at the same time out of humour. Heaviness and painful dulness of the head, with heat in the head, relieved in the open air, and not returning in a room. Her head feels heavy, and the hairy scalp is so painful, that she can scarcely endure combing, early in the morning and evening.—Stupifying, aching pains in the forehead, which finally become boring, with pricking internally. Dull aching of the occiput, with empty feeling of the part, depriving one of one's senses, relieved by laying the hand on the part. Dull ache in the upper part of the os frontis. Sharp ache above the left temple, when rising from one's seat and walking; decreasing when sitting down. Painful pressure over the whole brain, from above downwards, late in the evening, and even at night, on waking. Burning pressure in the sides of the head and in the occiput, diminishing when walking in the open air.—*Painful pressure from behind forwards*, from the occiput across the vertex as far as the forehead, as if all the contents of the skull would issue from the forehead, at noon, worst at one o'clock. Contractive pain in the upper and back part of the head.—*Drawing pain* in the occiput, the orbits and the forehead; the pain in the forehead is worse on stooping, and goes off by pressing on the parts with the hand. Drawing pain in the temples, apparently in the bones. Drawing, tensive pain in various parts of the head. Drawing *tearing* in the left side of the head. Drawing *tearing* over the right eye.—*Tearing* in the left part of the forehead, apparently in the bone, especially when moving the occipito-frontalis muscle. Tearing, when talking, from the left frontal protuberance towards the temple. Tearing in the left temple, when

taking exercise in the open air. Tearing in the right side of the head, and especially deep in the right ear, when raising the head, after stooping. Violent, lancinating tearing, internally, from the left parietal bone towards the vertex, when standing, at eight o'clock in the morning, recurring at the same hour on the day following. Slow-drawing stitches in the fore part of the head, sometimes with pressure, accompanied by shaking chills without goose-flesh over the whole body, only in the open air, relieved in the room. Contractive sticking pain in the whole fore part of the head, here and there, especially in the temple, mostly in the open air.—*Boring* in the frontal bone, from without inwards, between the root of the nose and the eyebrow. A grinding aching in the temples, extending as far as the eyes and the forehead, relieved by stooping, recurring when sitting erect, or bending backwards.—*Throbbing, ulcerative pain* in the right side of the occiput, both when at rest and in motion. Throbbing pain in the whole head, as if the brain would suppurate, going off in the open air, returning in the room.—*Painful concussion of the brain*, from shaking the head. Concussion over the right eye, resembling a violent stich, when walking fast, even in the room. Concussion of the brain, when walking, with aching in the head, and at the same time in the epigastrium.—*Rushing of the blood* from the nape of the neck across the vertex, towards the forehead, during motion; with stupefaction and confusion of the senses, while standing. Congestion of blood to the head, when sitting, standing, walking or lying, with hot feeling in the face, without redness or external heat. *Hot feeling* in the head, in the afternoon. Frequent flushes of heat in the head, with thirst.

**Scalp.**—*Burning sensation* at one point of the right frontal bone. Burning sensation over the right temple. Itching and burning of the right parietal bone, when stooping, going off by scratching. Cold feeling, at a small spot of the vertex, even when the head is covered, the hair standing on end.—*Tearings* and tearing jerks in the occiput, three afternoons in succession; between the attacks the place is painful when touched, a little less when not touched.—*Lancinations* below the right parietal bone, towards every side of the skull.—*Painful prickings* in the right half of the occipital bone, early in the morning, when in bed, down to the fifth cervical vertebra, increased by turning the neck. Transitory stitches above the right temple, alternating with a kind of buzzing. Lancinations, resembling stabbings as with knives, in the left side of the forehead, or prickings, in paroxysms. Violent stitches in the left parietal bone, when stooping.

**Eyes.**—The eyelids are painful when moved ever so little; when looking into the light, they feel too dry.—*Pressure* in the eyes, while reading by candle-light, as if one had read too much, with unconquerable drowsiness. Sharp pressure in the ball of the eye, when moving the eye inwards and upwards.—*Dartings* in the right eye, to and fro, causing an agreeable tickling sensation. Darting stitches in both upper eyelids. Pricking from without inwards, in the right eyebrow. Smarting and corrosive pain in the external canthus. *Throbbing* in the right upper eyelid.—*Bloated eyelids.*—\**Hot feeling and dryness of the eyes*, particularly in the evening.—*Dilatation of the pupils*; he is dazzled by the light; it causes a pain in his eyes. The right pupil is more dilated than the left. Contraction of the pupils. *The pupils are very much contracted* during the whole time of proving; they only dilate a little occasionally, in the evening. Contraction of the pupils is accompanied by obscuration of sight; he is unable to recognize objects at a distance.—*Dim-sightedness*, with burning of the eyes in the day-time. Great *short-sightedness*, for many days. Her sight vanishes, after looking at an object for a long time. When looking intently at objects which are not bright, and which are held near to his eyes, with attention, his eyes ache

and he is obliged to close them; the eyes ache still more when a light is held near them. *Fiery sparks*, resembling wheels, in the evening, when closing the eyes, looking *black*, as soon as he looks at a light.

**Ear.**—Otalgia in the left ear. An excessive pain darts suddenly into the right ear, from the teeth. The ear feels painful when touched. Sharp pressure in the right ear, occasionally, when walking in the open air, as if otalgia would come on. Cramp-like pressure behind the left ear, when walking in the open air, going off by contact. Darting pinching in the external left ear, going off gradually by violent friction. *Darting tearing* in the right ear, early in the morning. Darting tearing in the right concha, in the evening, when lying down, going off in bed. Tearing in the mastoid process. Ulcerative pain in the right concha, in the evening. Grinding pain in the internal cartilage of the ear, at night. *Dull sticking pain in the ear, whenever he talks*. Violent drawing, sticking pain, when laughing, from the stomach to the left ear, as far as the region of the tympanum, or especially in the forenoon, when walking fast, from the forehead to the ear, terminating in the region of the tympanum in the shape of a stitch from within outwards, and continuing while walking, gradually subsiding after standing still. Scraping stinging in the region of the tympanum. Crawling tickling *in the region of the tympanum*, which cannot be removed by boring with the finger into the ear. Itching in the left ear. Cold feeling in the right ear, as if cold air rushed in.—Pressive, contractive feeling in the parotid glands. \**Deafness, as if the ears were closed with the hand*, the ears open on blowing the nose, with aggravation and amelioration according to the changes of weather.—°Whizzing and rushing in the ear. °Report on blowing the nose and swallowing, with croaking as of toads when gaping. Fluttering before the left ear, the ear feeling warm, as if she were standing before a hot stove.—Sense as of ringing in the ears, early in the morning. Sense as of croaking in the right ear, when walking. Roaring in the ears after stooping, and momentary diminution of hearing, as if the ears were closed with the hand.

**Nose.**—Tearing in the left nasal fossa, with creeping as if one would sneeze, without sneezing. Painful crampy tearing between the root of the nose and eyebrow. Pustule near the right corner of the nose.—Coryza. Coryza of the left nostril, with want of air and loss of smell. Coryza and obstruction of the nose, with secretion of thick mucus. Obstruction of the nose, and no passage of air through it. Violent, dry coryza. At times obstruction of the nose, at times fluent coryza. Dry coryza, with red, inflamed, sore nose and upper lip, in the evening. Discharge of a mild, clear mucus from the nose, and frequent sneezing.

**Face.**—Face *wretched, pale and sunken*, as after excesses, during the whole time of proving. Pain in the region of the malar bone, as if a sore would burst. Grinding aching at a small spot of the malar bone, at night, when in bed, in paroxysms.—Bruised pain, in the left upper jaw. Drawing cramp in the muscle, in the region of the left mastoid process, so that he had to incline his head to the right side. Cramp-pain in both upper and lower jaws, after eating.—*Sore pain, and as from excoriation*, in the lower jaw. Stitches in the angle of the lower jaw, towards the parotid gland. Violent dartings, when laughing, from the right side of the lower jaw across the temple.—Pain *about the chin*, as if the part had been scraped with a hacked razor, or as if the parts were sore and ulcerated. Burning externally, about the chin. Pustule on the chin, with tensile pain and leaving a red spot behind.—Ulcerative pain in the corners of the lips, as is caused by sores. Itching below the corners of the mouth, with itching after scratching the parts. Clear vesicles on the upper lip, with violent itching, especially in the evening. Clear vesicles on the right side of both lips,

with tensive pain of the upper lip when touching it, this lip is swollen. *Red pimple* on the lower lip, near the right corner of the mouth, with tensive pain. A pimple in the right corner of the lips, with tensive and gnawing-sticking pain, when touching the parts or when moving the mouth. Dry, parched lips, with shrivelled skin, for many days, without thirst. Corrosive tumour on the upper lip, close below the nose.

**Teeth.**—Violent toothache, commencing in two hollow molar teeth; *thence the pain darts into the arm, the malar bone, the throat, or ear*, and afterwards returns again, with complete exhaustion, so that he is scarcely able to walk and has to lie down, with great internal uneasiness and oppression of the chest; the pain was somewhat relieved by biting upon elastic substances, or by laying the forehead on the table; it was considerably increased by sitting erect; the pupils were at the same time very much dilated. The toothache lasts from 4 to 5 days, and appears especially in the forenoon and evening between 10 and midnight; by pulling on the teeth with the tongue, they experience an intensely painful jerk, after which the pain ceases for some time.—The tooth is painfully sensitive, *as if ulcerated*, when touched ever so slightly.—Pain in the roots of of one the right lower row, *as if it would be turned out of its socket*, frequently returning.—Smarting toothache in a lower and upper molar tooth, made insupportable by bringing the least drop of cool drink to it. *Drawing pain* in a molar tooth of the right side, frequently disappearing suddenly and is succeeded by (drawing) pains in neighbouring parts. Drawing-tearing toothache, early in the morning, when in bed. Tearing in 3 or 4 teeth of the left lower row. Stitch now in one, now in another upper tooth; it is felt every time the teeth are struck against one another.

**Mouth.**—*Smell* from the mouth as of clay or earth, early in the morning after rising, he does not perceive it himself.—*Burning vesicles* on the left side of the tongue. *Two little tubercles* on the right side of the tongue, painful when touched. Tubercle on the back part of the left border of the tongue, sore when touched, from morning till evening. *Soreness* of the posterior part of the palate, and as if a hard body were pressing on it, between the acts of deglutition; going off after eating bread, early in the morning.—*Dryness* of the palate and lips, almost the whole day. Dryness of the mouth, early in the morning, after waking; she is scarcely able to swallow, with white tongue and sourish taste.—*Accumulation of bitter water* in the mouth, with inclination to vomit. Accumulation of saliva in the mouth. Ptyalism.

**Pharynx, etc.**—*Dry throat*, early in the morning, without thirst. Dry, scraping sensation in the throat, frequently obliging him to clear his throat.—*Great roughness* of the throat, in the evening. Roughness of the throat, with sensation, when clearing the throat, as if the wind-pipe were closed with a leaflet.—*Dull stitch*, deep in the throat, *at every empty deglutition*, not when swallowing saliva. Dull stitch, on both sides of the throat, during an empty deglutition, also when swallowing food or drink, extending to the left ear.—Cutting soreness in the throat, between the acts of deglutition.—°Chronic sore throat.

**Appetite and Taste.**—*Oily taste* in the mouth. The taste in the mouth is more flat than bitter, the whole day, even after eating. Bitter taste, early in the morning, when walking, with dry lips without thirst. Bitter taste of everything he tastes, early in the morning, the taste in the mouth being natural.—*Sour taste* early in the morning, after waking. Sour taste on the back part of the tongue, as if caused by salt (?), early in the morning, after waking, going off after a meal.—*Feeling of hunger* in the throat, with a sensation of pressure.—*No appetite at dinner*; food was repulsive to him, though it tasted well. Feeling of satiety and repletion, though food had a good taste and diminished the feeling of

repletion. Neither hunger nor appetite, food was repulsive to him, although it had a good taste.—*Thirst* for beer or sour milk, with dryness of the throat, in the afternoon. Complete *absence of thirst*, for many days.

**Gastric Symptoms.**—*Eruptions* tasting of the ingesta. Frequent eructations, early in the morning, with yawning and great ill-humour.—Warmth, with qualmishness, rising from the stomach into the mouth, with sourish-bitter dryness of the mouth, early in the morning. *Sour burning, like heartburn*, with inclination to vomit, rising from the stomach to the mouth, early in the morning, on rising.—Sensation in the stomach from time to time, as if he would vomit. Repulsive feeling in the stomach, with desire for eructations and frequent attacks of nausea, going off after dinner.

**Stomach.**—Hot feeling in the stomach, as after having long suffered with hunger, rising through the œsophagus into the head, where the prover feels darting or tensive stitches in the temples or forehead.—*Burning* in the stomach, extending into the chest. Burning and sore feeling, ascending from the pit of the stomach behind the sternum, into the region of the palate, with great restlessness.—*Pressure, as from a stone*, on the right side of the stomach. Pressure in the pit of the stomach and on the chest, aggravated by contact. Pressure in the region of the stomach while eating, going off by laying the hands on the part. Pressure below the pit of the stomach, while eating and especially when walking, not when touching the parts.—*Oppressive and contractive pain* in the stomach, early in the morning, after rising, in any position of the body.—*Drawing and nausea* in the region of the stomach, as if the pit of the stomach became distended from within. *Stitches* in the pit of the stomach, in the region of the left lowest rib, when raising or stretching the body.

**Abdomen.**—Aching, sore pain under the last ribs, increased by contact or motion. Bruised pain under the last ribs.—*Stitch* in the region of the right last rib, when stooping.—Indescribable *sick feeling* in the abdomen.—*Ulcerative pain* of the whole abdomen, in the evening, with pressure in the hypochondria.—Uncomfortable feeling from the abdomen to the head, as is felt by a person who smokes without being accustomed to it.—*Rough feeling* from the epigastrium to the sternum.—*Contractive feeling, nausea and warmth, rising from the middle of the abdomen as far as the chest* (the fauces). Contractive pain, now in the right, then in the left side of the abdomen; she can only sit stooping, frequently recurring.—*Distention and bloatedness* of the abdomen, somewhat relieved by the emission of flatulence, but recurring frequently. Distended, enlarged abdomen.—*Drawing aching pain* in the abdomen, when eating, disappearing after the meal.—Aching, or rather tensive pain *around and above the umbilicus*; afterwards pain as if from flatulence, with emission of flatulence. Drawing pressure in the umbilical region, early in the morning. Pressure in the abdomen, very much increased by taking cold nourishment. *Cutting in the umbilical region*, when taking a deep inspiration.—Cutting in the abdomen, in the evening. *Stitch* in the region of the left kidney, followed immediately by a darting and contractive pain.—Sensation in the abdomen, when walking, as if the bowels were loose.—Warmth in the abdomen, especially around the umbilicus and in the lower part of the abdomen, as if caused by hot drinks; sensation as of something moving to and fro in the abdomen, and towards the stomach.—Tensive pain in the *iliac region*, as if caused by the swelling of a tendon, with pain when touched. *Stitch* in the right iliac region.—*Moving of flatulence* and pinching in the whole abdomen, as if stool would come on. Flatulent colic, early in the morning, when in bed, after waking; emission of flatulence, which is inodorous, affords no relief. A good deal of grumbling along the rectum, as far as the anus.

**Stool.**—Intermitting stool. *Constipation*, for 48 hours. \*Rare, dry, *difficult* also knotty stool. Yellow, granular stool, with tenesmus and constriction of the anus, after a constipation of 24 hours.—Pale-yellow, scanty stool, preceded by pinching in the abdomen.—*Two soft stools*, every stool being preceded by stitches in the lower part of the abdomen. Two soft stools, in the evening.—Pinching in the abdomen previous to the usual morning stool; during stool, cutting in the rectum. The loose and tenacious stool is preceded and accompanied by pinching in the abdomen and side, going off only by holding the abdomen with both hands, and disappearing after stool; accompanied by shaking chills.—Painful tearings in the *rectum*, after dinner. Contractive pain in the rectum, when sitting.

**Urinary Organs.**—*Frequent desire to urinate*. Desire to urinate excited even by eating an apple. Frequent desire to urinate, emitting but a small quantity of urine. Frequent desire to urinate, emitting a large quantity of urine.—Frequent emission of *gold-yellow* urine, shortly after taking the medicine.—The urine becomes *turbid*, and deposits an earthy sediment. Violet sediment in the urine.—Cutting in the *region of the bladder*, while sitting, increased when rising and moving about, in the evening; the emission of urine was not painful. A sort of dull darting in the *urethra*, with pain, when emitting a flatus while sitting. Cutting in the middle of the urethra, between the acts of micturition. Fine, painful stitches in the orifice of the urethra, between the acts of micturition.

**Genital Organs.**—*Occasionally a burning darting from the vesiculæ seminales to the glans*.—Voluptuous *itching* of the corona glandis. Stitches in the prepuce.—Itching in the interior of the *scrotum*, which cannot be relieved by pinching or by rubbing the skin of the scrotum between the fingers. Aching and drawing pain, and weakness of the scrotum and spermatic cord, as if the cord would be drawn out, accompanied by a weak feeling in the genital organs.—Menstrual discharge between the periods. Menses appear six days *too early*, they are scanty and only last two days.—Pressure in the genital organs.—*Leucorrhœa*, for two days, but not continuing.

**Larynx and Trachea.**—\**Rough throat*, early in the morning, when rising from the bed, with a hoarse, tubby voice.—\**Roughness of speech*, early in the morning, without feeling anything in the throat; going off when smoking tobacco. In the morning, his chest and breathing feel oppressed. \**Dryness of throat and rough speech*, immediately after taking the medicine, as soon as he goes into the open air, with cutting pressure in the abdomen and nausea in the chest. Itching dryness in the throat, bringing on a short and hacking cough, early in the morning. °Chronic roughness and hoarseness. *Disposition to cough* early in the morning. Two fits of dry cough. Irritation, bringing on cough; he has great difficulty in throwing off even a little mucus, which he accomplishes rather by sharp expirations than by coughing. *Dry cough*, every fit being accompanied by dartings into the parietal bones. Dry cough, brought on by loud reading and talking, with painful dryness, roughness and constriction in the larynx, causing an intensely-painful cough. *Deep cough*, without expectoration, ceasing in a recumbent posture, and returning the next day, accompanied by discharge of tough mucus and concussive pain in the pit of the stomach and chest, and speedily disappearing at noon.—Morning-cough with expectoration.—Discharge of a quantity of pale-green, yellowish mucus in clots, almost without cough, early in the morning.

**Chest.**—Bloody expectoration from the chest. *Dull pain* in the chest, when coughing. *Bruised pain in the chest*. Bruised pain in the upper part of the chest, when stooping, relieved by raising the head, returning

when stooping again.—Sensation in the lower part of the chest, from above downwards, as of the cracking of cartilage, accompanied by a sense as of drawing.—Painful and continued *stitches* in the upper and left side of the chest, near the clavicle, at the same time in the axilla. Fine stitch in the left side of the chest, under the axilla, when moving the trunk. Fine prickings, early in the morning, now in the left, then in the right side of the chest. Transitory stitches in the upper part of the sternum. Violent stitches in the right half of the chest, near the sternum, as if from without inwards; nothing can relieve them. Stitches in the upper and outer part of the chest, during an expiration. A sticking pain in the chest, from below upwards, is sometimes felt during an expiration. Drawing stitch in the left half of the chest, darting continually upwards and downwards. Contractive, sticking pain in the chest, during a deep inspiration, the whole forenoon.—Dull pain in the *sternum*, as after a shock, early in the morning.—Sudden shock in the left side of the chest, when sitting, from above downwards, as far as the last true rib. Cutting with pressure, resembling a digging, in the evening, on both sides of the sternum, somewhat above the pit of the stomach.—Sense as of digging and gnawing in the region of the right clavicle.—*Warmth, with nausea in the chest*, accompanied by coryza, and by warmth of the cheeks which is at first slight, and afterwards succeeded by a burning in the cheeks, the heat not being perceptible to contact in the beginning, but afterwards. Disagreeable warmth in the chest, with hot breath, burning while passing through the windpipe. Disagreeable warmth in the chest, with feverish feeling of weakness in the same, accompanied with coryza and obstruction of the nose. Warmth in the chest, in the evening, with dry coryza and hot breath, the heat of the breath being felt in the fauces both during an inspiration and expiration; preceded by internal chilliness, without any external coldness. Warmth in the chest; the other parts of the body felt warm to him, nor were they cold to the touch.—*Burning* below the sternum, afterwards also in the stomach. Burning in the left and outer part of the chest, near the shoulder, worse when rubbing or pressing the part. Sticking and burning pain under the left second rib, increased by expiration and motion, abating somewhat when at rest, and during an inspiration.—*Throbbing* in the right half of the chest, resembling the palpitation of the heart, in the evening when in bed. *Palpitation of the heart*.—*Itching stitch* in the region of the right nipple. Creeping over the left mamma. Small tubercles on the mamma.

**Back.**—Pain in the *small of the back*, when bending the body backwards.—*Burning pain* at a small spot above the left region of the pelvis, in the direction of the first lumbar vertebra.—*Tearing* along the whole spinal column, from above downwards, during rest and motion.—Tearing in the left *scapula*, when sitting. Stitch between the scapulæ. Itching and sticking pain in the middle of the back, going off by rubbing.—Stiffness of the *nape of the neck*. Drawing-tensive stiffness of the nape of the neck, alternating with toothache. Drawing-tensive pain across the nape of the neck, proceeding from both shoulders, as if a band were closely drawn over the parts. Cramp-pain in the muscles of the nape of the neck, in the evening, when moving them. Sense as of digging (burrowing,) in the interior of the cervical vertebræ. Voluptuous itching in the nape of the neck.—The neck feels *swollen and stiff*, with pain in the muscles, proceeding from the teeth.—*Red, swollen streak* on the left side of the neck, for 20 days.

**Superior Extremities.**—Sensation in front of the axilla, as of the *skin being drawn up*. Pain, as from a sprain, in the *shoulder-joint*. Pain as from a sprain, in the shoulder, and elbow-joint, with much yawning. Gurgling in

the shoulder-joint, with pain when touched, as if there were a boil; he dared not touch the part. Violent tearing, externally, in the right shoulder, succeeded by itching.—Excessive, paralytic pain, darting suddenly into the arm, proceeding from the teeth. Weak arm. *Tensive pain in the arm, and carpal joints*, here and there, which can neither be excited nor diminished by rest or motion. Pain in the arm-joints, in paroxysms. Morbid, distressing sensation in the arm. Drawing and tearing, from the shoulder through the whole arm.—Sudden weak feeling in the *upper arm*, which obliges him to let it hang down, with drawing in the biceps muscle. Drawing-tearing pain on the inner side of the upper arm. Sudden, painful darting on the outer side of the right upper arm. Stitches in the right upper arm, towards the shoulder. Sticking pain in the inner side of the right upper arm, boring from within outwards. Boring in the bone of the right upper arm, apparently in the marrow, more or less severe, and extending as far as the shoulder, relieved by moving the arm, going off when pressing on the part, but recurring frequently. Sense as of digging (burrowing, grinding) in the humerus, in paroxysms, at night, when in bed, when lying on that side. Gnawing pain, at night, in the lower extremity of the humerus. Burning in the surface of the right upper arm, towards the shoulder, with yawning. Itching of the upper arm, close above the elbow.—Pain in the *elbow-joint*, as if sprained, with much yawning. Gurgling in the elbow-joint, with pain when touched, as if there were a boil. Dragging and sticking pain of the left olecranon process, preceded by a similar pain below the left axilla.—Hard pressure in the muscles of the *forearm*, close to the wrist-joint, in any position of the body. Rigid feeling under the elbow, when extending the arm, as if the muscles were too short. Dragging sensation on the inner side of the right *forearm*, as if the skin were being drawn up, removed for a time by pressing on the parts. Tearing in the lower end of the forearm, apparently in the distal extremity of the ulna; nothing relieves it. Drawing-sticking pain of the upper surface of the right forearm. Tearing-sticking pain above the right wrist-joint, in the direction of the forearm. Violently-itching *herpes* on the inner side of the left forearm. Tension of the skin of the *hands* as if they were swollen, whenever she attempts to close or to stretch them. Severe, drawing, tensive pain in the bones and joints of the right hand, the parts feeling as if laced in; the disappearance of this pain is followed by heat in the hand. Tearing cramp-pain in the muscles of the right hand, especially in the thumb and index-finger, when at rest or in motion. Tearing-sticking pinching in the ball of the left thumb; nothing can change it. Tearing and stitches in the outer border of the left thumb, as if the tendons would be torn out. Stitches in the carpal bones of the right hand, afterwards pain as if the capsule were being enlarged and the bones seized and drawn out. Titillating itching in the palms of the hands, worse after scratching, and permanently relieved by licking the parts with the tongue, in the evening.—Tension in the skin of the *ring-finger*, when stretching the fingers apart. Frequent attacks of violent cramp-pain of the posterior joint of the left ring and middle fingers, as if the tendons would become contracted. Darting or drawing pain in the index-finger, in the evening. Drawing tearing in the left middle finger. Tearing in the dorsum of the middle finger of the left hand, as if the tendons would be torn out. Darting tearing behind the right ring-finger, apparently in the marrow, towards the arm. Cutting in the posterior joint of the right index-finger, with a feeling of warmth in the finger. Stitches in the posterior joint of the ring and middle finger, worse when pressing on the parts. Paralytic pain, as after a shock, in the posterior joint of the left index-finger, greater when at rest. Sudden feeling of coldness in the tip

of the left thumb. Burning itching of the outer border of the right thumb; scratching brings on a red spot, and afterwards a blister full of fluid, and smarting when touched. Severe itching of the fingers; friction brings on transparent vesicles. Deep, painful rhagades in both bends of the thumb and in the middle bends of the middle finger. A little scratch in the posterior joint of the little finger brings on a *malignant ulcer* with a blue border and lancinating pains, especially at night.

**Inferior Extremities.**—Continual sticking pain, when sitting, in the *os ischium*. Cramp-like drawing in the left part of the *nares*, towards the anus, increased by extending the thigh, by standing on one limb, and by sitting down, going off almost entirely by drawing up the foot and when sitting; the pain is worst when rising from a seat, so that he is unable to walk, unless he presses on the painful spot with his hand. Burning pain at a spot of the left *buttock*, as if a pustule would form, mostly when sitting. Tensive, painful tubercles on the left *buttock*, feeling sore when pressed, as if ulcerated.—Paralytic weakness in the right *hip-joint*, early in the morning, with stitches when setting the foot upon the floor, which oblige him to limp. Bruised pains of the muscles in the region of the head of the right femur, especially when sitting. Burning soreness in the bend of the right thigh.—Jactitation of all the muscles of the lower extremities, during the least exercise. Languor of the thighs and legs, with drowsiness. Tensive feeling in the right lower limb, as if it were stiff, when walking in the open air.—Pinching, dragging sensation in the anterior surface of the *thigh*, as if the skin were drawn up, in the open air; the place remains painful a long while after. Pinching, sticking pain of the outer side of the thigh, going off when sitting; when walking it increased to such an extent that he had to stand still. *Darting pain above the knee, in the evening*, extending to the upper part of the thigh. Jactitation of the muscles of the inner side of the thighs, after walking, which gives him a sort of anguish and a faint feeling, as if he would sink. Bruised pain across the thighs. Burning itching of the inner side of the left thigh; scratching brings on a sore feeling, and touching the parts causes a pain as from bruises. *Pimples* on the thighs, their tips being covered with scurf; early in the morning and in the evening, they are affected with a burning itching, after rubbing they feel sore and as if ulcerated.—*The knees* are unsteady and tremble, in the evening while walking. Tearing, a hand's breadth above and below the knee, on the outer surface. Stitches in the bend of the knee, when walking or sitting. *Itching* of the knees, in the evening. Itching of the bend of the knee, depriving him of his night's rest.—Hard pressure in the muscles of the left side of the *leg*, near the tarsal joint. Violent gripping and clutching in the left calf, from the bend of the knee down to the malleolus externus. *Tearing* and itching of the outer side of the *left calf*. Tearing in the right calf, with burning, externally. Tearing stitch in the left calf, when sitting. Drawing tearing in the surface of the *right tibia*, when sitting, going off entirely by rising. Drawing and sore pain in the left tibia, as if broken, when standing; going off when sitting. Smarting sensation in the right tibia, as if bruised. The right leg, especially the calf, feels *cold and rigid*, with a smarting feeling, when sitting, going off when rising, in the evening. Languid, weak feeling in the left leg, from the knee to the tarsal joint. Itching of the tibia.—*The feet* are so heavy that she is scarcely able to lift them. The right foot goes to sleep while standing, with a tingling sensation. Drawing in the dorsum of the left foot, near the joint, going off during motion. Continued tickling in the hollow of the sole of the right foot. The feet are constantly cold both to the prover and to others, especially when walking. Inflammation and swelling of the malleoli of the left foot, with lancination in the leg from

below upwards, particularly when walking. Soreness, with itching between the last two toes of the right foot, for ten days.

**Sleep.**—Much disposed to stretch, the whole day. Great weariness, at eight o'clock in the evening, he can scarcely keep awake, two evenings in succession.—*Frequent yawning*, although she had slept enough. At midnight he was half awake and did not fall asleep again till morning, owing to an anxious, painful uneasiness, accompanied by tossing about. He dreams immediately after falling asleep. Vivid dreams, the objects varying rapidly; when waking, which happens frequently, he is fully conscious of what he dreamed, but he has only an indistinct recollection of it in the morning. Waking at four o'clock in the morning, with pinching in the abdomen, and moving of flatulence, followed by soft stool. At one o'clock at night, she wakes with a violent cramp-pain and griping above the mons veneris, with icy coldness over the whole trunk, head and arms, and profuse cold sweat, great internal heat, feeling of dryness on a moist tongue, the lower limbs being warm, great apprehensiveness and restlessness, tossing constantly from side to side; cannot bear being uncovered; in a quarter of an hour she feels an inclination to belch without being able to do so, afterwards empty eructations and emission of small flatus, without obtaining relief, thirst, rising of water in the œsophagus, with nausea and paleness of face, warm sweat on the lower limbs and great weakness of the feet, inclination to stool, hardness and sensitiveness of the abdomen, when rubbing it; the fit, and the pain which she had felt even in her sleep, having been quieted by Ipec., were succeeded by sound sleep; in the morning, when waking, her head felt heavy and the menses made their appearance, the blood being thick and black. Confused, anxious, vivid dreams the whole night. Sound sleep, with anxious dreams about danger of life. Restless sleep, with heavy dreams and faintness on waking. *Anxious dreams*, vivid as if everything happened while awake; he recollects every part of them; he felt very strong on waking. At three o'clock in the morning he imagined he was awake and with his physician; he was fully conscious, and recollected every word of the conversation, as if he had been awake. Vivid, confused dreams all night, the objects varying all the time. Vivid dream about something which really took place next day. Vivid dream about a reconciliation. *Verexing dreams*. When dreaming, at night, he lies on his back, although he usually rested on his right side. Merry dream.

**Fever.**—Cold hands and feet, even in the room, but without chilliness.—Shuddering over the back, with stitches in the head. Shuddering over the whole body. *Chilliness* the whole day, as soon as she gets into the open air. Chilliness with goose-flesh, early in the morning after rising, for half an hour, and in the evening at seven o'clock, for two hours, with thirst at nine o'clock. Chilliness every evening.—*Shaking chills*, early in the morning, with cold hands and feet. Shaking chills and coldness, when walking in the open, not cold air; the chilliness decreased by walking fast; the hands and feet, however, remained cold and became warm only in the room. Shaking chills, late in the evening, with cold feet, the coldness extending as far as the knee, without thirst and without subsequent heat. Shaking chills, in the evening, in the open air and in the room, the feet being colder than the hands, with sticking, aching pains in the fore part of the head, which continued even in the room, although the chilliness abated. Violent heat in the head, with some chilliness over the rest of the body. Sudden *flushes of heat* and redness of countenance and face, especially when standing, without thirst. Sudden *heat* over the whole back, when sitting, soon after perspiration, with contraction of the pupils.—Irregular *pulse*, scarcely perceptible, now quick, then slow.—Anxiousness with shortness of breath, and profuse sweat all over. Sweat on waking from sleep, only on the neck. *Night-*

sweat over the whole body, when waking, obliging him to scratch. Night-sweat on the legs, especially the feet, when waking.

**Skin.**—Itching of various parts, going off by scratching.—Violent itching, with burning and small vesicles or deep-seated, little blotches, brought on by scratching, on the shoulders, arms and calves, sometimes surrounded with a rosy redness of the skin, which disappeared when touched.—Smarting itching of the whole body, only after having become heated and having perspired. Violent burning over the whole skin, in the evening, when rising from the bed, going off after lying down again.—Itching herpes.—Unhealthy skin.—Soreness and *rhagades* in the bend of the joints.—°Chronic inflammatory swelling and supuration of the little finger.

**General Symptoms.**—Pinching pricking in several parts of the body, especially in the interior of the thighs. Most of the stitches, produced by Manganum, are dull. Gurgling and bubbling, as of water, in various muscles. *Drawing*, darting, *tearing stitches*, in various parts. Drawing-tensive pains, as if from a tight bandage, in various parts of the body. *Tensive* or cramp-like *drawing* and tearing in various parts. Nightly digging (grinding) bone-pains. Sudden concussion through the whole body, early in the morning, as when a person starts with fright. All the parts are painful, when touched ever so little, as from subcutaneous ulceration; chest and cheeks experience a feverish warmth. Head, hands and feet feel swollen and enlarged, after walking in the open air. The whole body, especially the stomach, feels uncomfortable, accompanied with ill-humour.—Languor, in every joint; the joints feel extended, with tremor of the limbs and tremulous sensation of the knee and arm-joints; accompanied with a feeling of anxiety, as if he would die.

**Characteristic Peculiarities.**—Most of the symptoms occur in the night. Most of the symptoms become worse when stooping. The symptoms which have come on in the room, improve in the open air. Many of the symptoms come on in the open air, and improve in the room.

#### PATHOLOGICAL ANATOMY.

*In animals*: Death by paralysis of the nervous system and of the heart.—Inflammation of many organs: stomach, intestinal canal, liver, spleen, and even the heart; the stomach, duodenum and ilium contained black mucus, which seemed to be mixed with coagulated blood. Excessive increase of the secretion of bile, tinging the bowels and even the larger vessels yellow. Inflamed streaks on the liver. The spleen is dotted with inflamed spots. Round inflamed spot in the left ventricle of the heart, with diffused redness. Lengthwise inflamed spots on the septum of the ventricles. Black coagulated blood in both ventricles of the heart (*Gmelin's* experiments with baryta, strontiana, and chrome on the animal organism).

### 161. MENYANTHES TRIFOLIATA.

**MENYAN.**—*Trifolium fibrinum*. Buck-bean, Marsh trefoil.—See HAHNEMANN'S *Mat. Med. Pur.*

**COMPARE WITH**—*Aeon.*, *Chin.*, *Nux v.*, *Verat.*

**ANTIDOTE.**—Camphor. ?

#### CLINICAL OBSERVATIONS, FROM NOACK AND TRINKS.

**Arthritis.**—Spasmodic tossing of the thighs.—Intermittent fever with cold-

ness.—Otorrhœa after acute exanthemata.—Aching pains in the head, weakness of the stomach, and hard stool.—Roughness and hoarseness.

#### SYMPTOMS.

**Mind and Disposition.**—Weeping mood. Sad mood; he likes to dwell on sad things. *Anxiety about the heart*, as if he were threatened with some accident, anxiety drove him from place to place.—Out of humour, and dissatisfied with himself and his condition. Gloomy, *not disposed to do anything*. Indifferent to amusements, disposed to jest, half an hour after. He prefers being alone, although not ill-humoured; he prefers silence to talking.—Excessive cheerfulness (alternate effect).—Taciturn and self-reflecting the whole day (curative effect, somewhat).

**Sensorium.**—Dulness of the head in a room, a sort of gloominess; the ideas flow more slowly, although he is able to recollect everything distinctly, he feels more easy and comfortable in the open air.—Vertigo on stooping and raising the head again.

**Head.**—Dull headache when leaning the head on one side.—*Continued heaviness of the head* (immediately). Heaviness, with pressure in the whole head, sometimes violent stitches in the left frontal protuberance; the pain disappears entirely when laying the head on one side. *Pressure in the forehead, from within outward*. Continued pressure in the left temple, mingled with sharp stitches.—Aching pain in the head, more violent in the open air. Aching pain in the right side of the head. *Pressing in the head from above downward*, abating by strongly pressing on the head, but returning afterwards for many hours. *Painful pressure in the head, increasing when going up or down stairs, as from a heavy weight on the brain*, and pressing out at the forehead. Aching pain in the head over the right side of the forehead, going off immediately on laying the hand flat on the part.—Headache in the temples, *as if pressed together from either side*, abating on pressing the parts together with the hand, but returning afterwards. Headache, a sort of pressing together on either side, accompanied with stitches in the occiput.—*Stupifying headache, especially in the forehead, during rest and motion*.—Drawing-aching pain in the forehead, directly over the root of the nose.—Drawing pain in the large right lobe of the brain, terminating in the occiput. Drawing pain in the right side of the forehead. Drawing pain in the forehead. Drawing internal pain along the left parietal bone. Drawing in the occiput when sitting. Darting pain in the vertex, especially after stooping. *Single stitches in the left hemisphere of the brain, in the direction of the vertex*. Single stitches in the forehead.

**Scalp.**—Sore feeling of the skin over the left temple, when touching it. Darting tearing between the frontal and temporal regions. Gnawing pain in the vertex. Tensive pain around the sinciput. Crampy drawing in the side of the occiput. Burning in the scalp, over the right side of the forehead.

**Face and Teeth.**—Redness and heat of the face, during sleep. Heat of the face, with coldness of the extremities.—Visible twitching of the muscles, particularly of the right side, more during rest than when walking. Painful cramp in the muscles of the cheeks, during rest.—Tension in the jaws. Lancinating tearing in the left upper jaw, during rest and motion. Pain and cracking in the articulation of the jaw, when chewing.—*Lips parched and chapped*. Grumbling in the upper teeth.

**Eyes.**—Pressure in the eye, apparently in the crystalline lens, with sensation of vertigo or of vanishing of sight, or of squinting, without obscuration of sight (when sitting). Sensation behind the left lower eyelid, as if a

hard body were lying behind it. Pressure in both eyeballs, with twitchings in the eyelids, disappearing soon after a meal.—Dull *stitches* in the balls of the eyes. Lancinations in the inner canthi, the eyes filling with water. Sensation in the eyes, as if the eyelids were swollen, or as if a styne were on the eyelids, when holding the lids still.—Occasional *rigidity* of one or the other eyelid, like a *tonic spasm*, making it impossible to move them.—Burning over the left eyebrow. Burning tension over the left upper lid, going off during motion.—Occasional lachrymation.—*Dimness* of the eyes, only in the open air. Frequent obscuration of sight, while reflecting when reading. *Flickering* before the eyes, as if everything were jumping, for four minutes.—Contraction of the pupils, then dilatation.

**Nose.**—Tension in the root of the nose.—Disgusting smell, as of rotten eggs, in the nose, in the room and open air, for a quarter of an hour. Discharge of blood from the nose, on blowing it.—*Fluent coryza*, with feeling of obstruction but without want of air. Profuse fluent coryza, the whole day.

**Ears.**—Dragging pain in the ears.—Fine *stitches*, first in the right, then in the left ear. Dull stitches through the ear into the head, and also in the facial muscles of the same side, below the eye. Small stitches in rapid succession, in the left internal ear. Lancinations in the posterior surface of the cartilages of the ear, and in the region of the mastoid processes. *Itching* in the interior of the right ear, for three days.—*Feeling of coldness* in the internal ear, as if water had got in.—Discharge from the ears, particularly after measles, scarlet-fever, etc.—Roaring in the left ear, when blowing the nose, as if air rushed through the ear. Slight humming before the ears, as of crickets.—°Cracking in the ear, when chewing.

**Mouth and Pharynx.**—Increased secretion of saliva (immediately).—Accumulation of saliva in the mouth, with nausea. Accumulation of water in the mouth, with nausea. Fine stitches in the lower surface of the tongue, going off when moving the tongue.—Dryness of the palate, causing a stinging when swallowing, without thirst, and with a sufficient quantity of saliva in the mouth. *Dryness and roughness* of the fauces, making the swallowing of saliva difficult, increasing for two days in succession. *Dry feeling* in the throat. Paralytic feeling on the left side of the palate, when coughing or yawning.—*Continuous stitch* in the region of the larynx, anteriorly, only when swallowing, which is impeded by that stitch.

**Taste and Gastric Symptoms.**—Bitter-sweet *taste* in the mouth.—He does not relish bread and butter; he relishes only meat.—He is not hungry, but he relishes his food as usual, and eats more than usual. *Sudden canine hunger*, going off after eating a little.—*After a meal*, his headache increases; the head feels obtuse. Drawing pain in the region of the heart after a meal. Pressure in the chest, after a meal.—*Frequent, empty eructations* (immediately). Frequent hiccough.—Quickly-passing *nausea*, without eructation. Sensation of coldness in the œsophagus from below upwards, after pressure in the stomach, with violent nausea, for twenty minutes. Great inclination to vomit, accompanied with painful choking and contraction of the stomach, but without eructations.

**Stomach and Abdomen.**—Sudden attack of heat in the stomach, lasting twenty minutes; afterwards violent hunger. Contractive sensation in the stomach. Pinching, with a sort of pressure, in the region of the stomach, gradually descending toward the rectum and disappearing after emission of flatulence, returning shortly afterward, obliging one to go to stool, and finally disappearing. Continual grumbling in the region of the stomach, as when the stomach is empty.—Stitching pain under the short ribs, when sitting, removed for a moment by pressing on the part. Cutting, with pressure, in the hypochondriac region.

*Itching stitch* in the region of one of the left short ribs.—Tension and pressure in the abdomen. *Pinching in the hypogastrium*, also with urging to stool in the rectum. Long-continued pinching in the umbilical region, descending like a weight towards the hypogastrium, and disappearing after emission of flatulence. A cutting pain suddenly darts from the spine through the abdomen. Movement of flatulence in the abdomen, with qualmishness. Audible rumbling in the bowels (after a meal). Distention of the abdomen, the whole day, with repletion as when one eats too much, the appetite being undiminished; accompanied with a sensation of incarceration of flatulence, and frequent desire for emission of flatulence; the repletion was very much increased in the evening by smoking. Distention of the abdomen, two hours afterward frequent emission of flatulence.—Continuous sharp stitch in the left *iliac region* when walking, succeeded by a small, darting stitch when standing still. Sudden stitch in the iliac region, when sitting, disappearing on touching the parts, but returning again immediately. Concussive jerkings, sudden stitches in the left side of the abdomen, when sitting.—Jactitation of the muscles in the right loin (when sitting).—Gurgling movements in the right side of the abdomen, with a feeling of heat in the outer parts of the whole of the abdomen, and an internal sensation as if diarrhoea would come on, in rest and motion. Pressure, apparently in the spermatic cord, which is painful when touched. Pressure in the glands surrounding the abdominal ring, when bending the body forward. Tensive pressure in the region of the *mons veneris* when walking or sitting.—Sore pain in the integuments of the abdomen, when touching them, or when rubbing the clothes against them, as if they were covered with pimples. Sore pain in the integuments of the epigastrium, when lying or moving about, worse when stooping.

**Stool.**—Retention of stool for thirty-two hours; afterwards discharge of hard faeces, also with drawing-pinching pains in the abdomen. Retention of stool on the first day; loose stool on the third day, twice. Pinching in the abdomen, followed by a somewhat loose stool, coming on several hours before the usual time. (Curative effect in a female who was disposed to retention of stool, and generally had an evacuation of the bowels every thirty-two or thirty-six hours.)—Pinching in the abdomen, followed by hard stool.—Intensely-painful itching in the interior of the rectum. Itching of the anus.—<sup>o</sup>Flowing piles.

**Urinary and Genital Organs.**—Frequent desire to urinate, with scanty discharge. Violent sexual desire, without erection or amorous fancies. Painful darting in the right testicle, worse during rest. Both testicles are drawn up, the right one more so.—Drawing-cutting pain, with pressure in the right side of the scrotum, or as if the scrotum were squeezed in on that side. Continued burning stitches in the outer parts of the scrotum, and in the symphysis pubis. Fine stitches in the left side of the scrotum.—The spermatic cord is painful to the touch, with pressure in the groin.

**Larynx.**—Frequent titillation in the larynx. Hoarseness. Rough voice.—When talking the voice is rough, almost hoarse, and the ears feel obstructed as if something had been stretched across.—Stitch in the anterior region of the larynx, impeding deglutition. (See Pharynx.) Spasmodic contraction of the larynx; the effort to inspire air occasioned a cough, lasting ten minutes. Accelerated breathing, even when standing, with increased pulse and heat and redness in the face. Dyspnoea. Compression of the chest all around, a disagreeable, anxious sensation (when sitting, walking or standing).

**Chest.**—Shooting stitch in the right chest. Violent stitches in the chest, only during motion. Dull sticking pain in the chest, in the region of the heart, and in the corresponding region on the right side, increasing when pressing upon or stretching the parts (returning after twenty-six hours for several hours, without

interruption).—Violent continuous stitch in the region of the heart, the stitches multiplied when arresting the breathing. Boring stitching in the left chest, when sitting and during motion, more violent on inspiration and expiration. Long fine stitches near the clavicle, during an inspiration.—Continued pressure in the left chest, mingled with stitches as from flatulence. *Pressure on the sternum, accompanied with sharp stitches.*—*Compressive sensation in both sides of the chest, with sharp stitches, increased by inspiration.* Pain in both sides of the chest, as if they were clutched together, with sharp stitches.—*Beating* in the left chest, continuing during an inspiration and expiration, only when lying.—*Drawing pain* in the right chest, towards the axilla.—*Bruised pain* in the chest, when sitting bent.

**Back.**—*Bruised pain in the small of the back*, generally when sitting quiet. *Drawing-aching pain* in the small of the back, when stooping. Aching pain over the os sacrum, when stooping. Aching pain in the small of the back, moving from below upward, when sitting. Contractive pain in the small of the back, succeeded by pressure as with the thumb (in the evening), and tingling in the small of the back with increase of pain.—Bruised pain in the region of the left kidney, in the evening, when sitting; jactitation of the right dorsal muscles. Pain in the region near the lower dorsal vertebræ when sitting, like a dull drawing, when bending the body forward. Sharp pinching near the dorsal spine, in the region of the scapulæ.—*Dull, boring stitching in the region of the left scapula, extending towards the spine.* Feeling of heaviness between the scapulæ when walking, he has to bend forward and backward all the time, to find relief. *Extremely-painful tearing between the scapulæ, from above downward, especially during a deep inspiration*, disappearing when sitting, returning immediately when walking, a sore feeling remaining when at rest.—Shooting stitch in the right side of the neck. *Feeling of heaviness* in the muscles of the neck; he is obliged to bend his neck backwards. Cramp-like pain in the right muscles of the neck, terminating in a stitch; the pain went off after motion and returned afterwards. Sensation of stiffness in the muscles of the nape of the neck when moving the neck. Pressure with tearing in the nape of the neck. Pain in the posterior cervical muscles when walking in the open air, as if contused by pressure, paralytic and tensive, as after bending the body backward for a long time. Drawing sensation of stiffness in the nape of the neck, with dulness of the occiput.

**Superior Extremities.**—A number of fine prickings in the right axilla, toward the chest. Fine stitches dart through the axilla, on moving the arm. Burning, scraping sensation in the upper part of the *shoulder*.—Painful visible jerking in the left arm, worse when at rest. Stitches in the deltoid muscle, in the region of the joint, when sitting.—*Jactitation of the muscles of the right upper arm.*—Repeated, spasmodic drawing in the interior of the left lower arm; at last the four fingers are clenched involuntarily, the arm itself becomes stiff as by cramp, and cannot be moved even by making the greatest exertion. *Cramp-like pain in the muscles of the left lower arm, extending as far as the palm of the hand, almost like paralysis.* Cramp-like pressure in the lower arm, near the bend of the elbow, disappearing on touching the part, but returning immediately. *Sharp stitches* below the elbow, and in the region of the wrist-joint.—Cramp-like pressure in the region of the right wrist-joint, and in the dorsum of the metacarpus, during rest and motion. Stitching pain in left wrist-joint. Paralytic tearing in the wrist-joints, especially when moving them. Drawing pain when writing, and when moving the *hand*, disappearing when the hand is still. Cramp-like drawing in the back of the thumb. Stitching pinching in the outer side of the posterior joint of the thumb. Cramp-like pressure in the ball of the right thumb. Stitch through the right thumb and index-finger.

Painful darting in the fourth finger of the left hand. Cramp-like pain in the left index-finger, rather externally, going off during motion. Fine stitches in the posterior joints of the fingers, somewhat relieved by motion.

**Lower Extremities.**—Sudden dartings in the right glutei muscles. *Dartings* in the upper border of the left gluteus maximus.—Stitching, contractive pain in the region of the *hip-joint*, around the acetabulum, only when walking. Intensely-painful, fine stitches in the right hip-joint, when walking or standing. When sitting, *\*the right thigh and leg are spasmodically jerked upward four times*; not when standing, nor when drawing the leg up while sitting.—Drawing and bruised pain in the outer side of the *thigh*, small of the back, and left loin (region of the kidney), when sitting quiet in the evening. *Cramp-like drawing* in the anterior portion of the thigh, when sitting. Cramp-like, drawing, bruised pains, in the outer parts of the femora, with a feeling of heat in the back and the whole trunk, mostly when sitting. Numb, tensive-aching, bruised pain in the outer parts of the thighs, when walking or sitting. Twitching in the muscles of the left thigh. Violent, burning stitch in the anterior surface of the left thigh, a little above the knee, when sitting. Intermittent pinching, with bubbling as from something alive in the upper and inner side of the thigh, most violent when sitting. Tension, with stitches, in the posterior surface of the thigh and leg, near the knee.—Dull stitches in the region of the patellæ, from within outward, with a feeling of heat in the *knees*. Pain, as if sprained, in the region of the knee-joint, during rest and motion. Drawing in the bend of the right knee, through the calf, when standing or sitting. Sharp stitches below the knee. Itching boring stitch in the inner side of the right knee-joint, during rest and motion.—Jerking in the left leg which is not very painful, more violent during rest than when walking. Tremulous sensation in both calves for a quarter of an hour, more violent when sitting than when standing. Cramp-like drawing from below upward, in the outer side of the left leg, when sitting still, with sharp pressure on the tibia.—Dull, pulsative stitches below the middle of the tibia during rest, going off during motion, but returning again when at rest. *Cramp-like pain in the muscles of the right leg, moving from below upward, like a paralytic pain*. Sharp stitches in the middle of the tibia, accompanied with a jerking gripping together, as if he had held his foot for a long time in an inconvenient position (when at rest). Pain as if sprained, when walking, now in the left, then in the right leg, near the internal ankle.—Pain as if sprained in the region of the *ankles*, extending from one to the other. Cutting in the region of both outer ankles, during rest, going off during motion.—Burning pricking, above either tarsal joint, when walking.—Continuous corrosive pain at a very small spot between the outer ankle and the tendo Achillis of the right foot, returning several times on moving the foot while sitting.—Stitching pain in the right *heel*.—Long stitches in the soles of the feet when walking.

**Sleep.**—Frequent yawning, as if he had not slept enough.—Lascivious, *vivid dreams, which he was not able to recollect*, without emission. Restless sleep, he tossed from side to side.—Redness and heat of the face during sleep; he wakes and points with his finger, exclaiming: there! there! then falls asleep again.

**Fever.**—*Coldness* in the spine, with shaking. Icy-cold hands and *feet*, the rest of the body being warm. Swelling of the veins of the hands and lower arms, the temperature of the body being normal, and *the feet icy-cold*. Cold feet until late in the night, even in bed. Coldness of the feet up to the knees, as if standing in cold water.—*Shuddering over the whole of the upper part of the body, with yawning* (immediately). Shuddering, as after a long journey on foot.—Thrill of external shuddering without internal chilliness, especially on the

legs in the warm room. *The hairs stand on end* in the warm room, without chilliness, for ten minutes. Shuddering over the back (when sitting) as from horror, without chilliness or subsequent heat. Feverish shuddering, over the whole of the back, as if he had been for a long time walking with the bare back in the open air.—*Chilliness* of the whole body, going off near the warm stove, but returning at some distance from the stove, for half an hour. Chilliness over the whole body, especially the back, not going off near the warm stove. Chilly feeling, especially in the fingers.—*Intermittent fever, with coldness in the abdomen.* Feeling of heat in the trunk, especially the back, sometimes mingled with coldness, without thirst, and without heat or redness of the face. Eight hours after this the cheeks became red. Heat, especially in the face; shortly after, general chilliness, both without thirst.—Heat of the ears. *Flush of heat* over the cheeks, toward evening. Increased temperature of the body in the evening, without thirst, the mind feeling easy. *Heat without thirst*, and slight sweat over the whole body, after walking in the open air in the evening. Disagreeable feeling of heat of the trunk, especially the back, six hours after the chilliness. Great heat over the whole body, without sweat or thirst, with cold feet. (Increase of heat with delirium, small, quick, irritated pulse, in a case of intermittent fever.)—Pulse 52.—*Sweat, in the evening, in bed*, also immediately after lying down, or the whole night until morning.

**General Symptoms.**—*Chronic complaints from abuse of cinehona.* °Arthritic affections.—Jerking motions, in various parts at the same time, visible, but not very painful, more violent when at rest than when walking. Jactitation of small portions of muscles here and there, at different periods. \*Spasmodic tossing of the lower extremities.—Stitching-pineching, here and there.—Languor in all the limbs during rest and motion, for an hour.—Great weakness of the whole body, accompanied with aching pain over the os sacrum, when standing, increased by sitting. Weakness of the body when walking, accompanied with chilliness all over. (Excessive weakness, with heat and violent headache, in a case of intermittent fever.)—Excessive activity of the vital functions, hurried motions.—(Alternate effect.)

**Characteristic Peculiarities.**—The majority of the pains appear to be worse during rest and towards evening, they are relieved by motion and pressure with the hand.

## 162. MEPHITIS PUTORIUS.

MEPHIT.—*Viverra putorius*, North American skunk.—See NORDAMERIC. JOURNAL.—*Duration of Action*: short.

ANTIDOTE.—Camphor relieves the pains for a short time.

### CLINICAL OBSERVATIONS.

Dr. Hering mentions the following affections as having been cured or relieved by the above named agent. Continued drowsiness in the morning.—Inflammation of the conjunctiva.—Dim-sightedness, disposition to eat food very salt.—Morning-cough, with expectoration, remaining after catarrh.—Recent catarrh and chronic remains of catarrh.—Uneasiness in the legs, which feel as if insensible.

### SYMPTOMS.

**Mind and Disposition.**—Is vexed about trifles or even imaginary things.—

Nervous excitement, with warmth of the head. Loquacious, as if intoxicated. The fancy is so lively that it unfits him for mental labour.

**Sensorium and Head.**—Dulness, with sensation as if the head became larger, accompanied with ill-humour and nausea.—Vertigo on stooping. Sudden vertigo when sitting. —Vertigo on making various motions of the head. Vertigo on turning in bed.—Violent headache, like a fulness pressing upwards. *Pain above the eyes.* Heaviness and dull pressure, particularly in the occiput, as if from fingers, here and there.

**Eyes.**—*Pain of the eyes* on turning them. Pain, as if something had lodged in the eyes. Pain of the eyes, as from over-exertion.—*Prickings* in the eyes. *Heat, burning* and burning pressure in the eyes, particularly morning and evening. Pressure on the lids, with burning of the margins, as if a sty would form.—*\*Redness of the conjunctiva*, as if suffused with blood. Inability to read fine print. *Is unable to discern the letters*, they became blurred. The weakness of sight is generally accompanied with pain in the head and eyes.

**Ears and Nose.**—Tearing in the ear, jaw and teeth. Erysipelas of the ear, with itching, heat, redness and blisters.—Dry nose. Bleeding from the nose.

**Teeth.**—*Pain, in hollow molares*, particularly in the lower jaw. Sudden jerks in the roots of teeth. Tearing and drawing in the teeth.

**Appetite and Gastric Symptoms.**—Coppery taste in the mouth.—No appetite in the morning.—After a meal: bruised feeling and drowsiness.—Eruptions.—Nausea, with scraping of the palate. Nausea, with emptiness of the stomach, and sensation as if the head were distended.

**Stomach and Abdomen.**—*Pressure in the stomach and colic.*—Pain in the region of the liver.—Rheumatic pain in the region of the liver.—Pain, as if from flatulence in the left side.—Pressure and writhing sensation in the abdomen, as from a cold, with pressure on the bladder, feeling of coldness and shaking, relieved near the warm stove.

**Stool and Urine.**—Stool rare, but thin.—Frequent micturition, with clear urine. Turbid urine, in the morning, after the evening fever.

**Sexual Organs.**—Warmth of the sexual organs. Itching of the scrotum.—Soreness of the female parts, and swelling of the labia.

**Larynx.**—Is liable to have something get into the larynx, when drinking or talking.—*\*Cough*, —with fluent coryza and soreness in the chest, when reading loud.

**Chest.**—Pain in the chest, in the region of the last true ribs, when touching or pressing the parts, particularly when coughing or sneezing.—Soreness in the region of the last ribs, and in the chest, from below and upwards, on taking a deep inspiration and moving the back.

**Back.**—Weariness in the small of the back, early in the morning.—Pain in the back and all the limbs, with lameness. Stitches in the spinal column, during motion.—Tension of the right cervical muscles. Pain in the right side of the neck.

**Upper Limbs.**—Laming, drawing, *rheumatic pains* in the arms, relieved by motion. Tearing and bruised feeling in the bones. Uneasiness in the left arm, and insensibility. Trembling of the arm on leaning it against anything. Pain in the first joint of the index-finger, obliging one to stretch and crack it.

**Lower Limbs.**—Drawing, rheumatic pains in the lower limbs, from the hip to the foot.—*The knees* feel bruised. Stitches in the foot. Sudden cramp-pain in the left foot, obliging him to limp about. Arthritic pain in the heel.—Sensation in the big toe, as if it would be pinched off. Burning in the little toe.—Continued pains and burning in the corns.

**Skin.**—Itching of the hairy scalp, face and chin.—Pimples on *the thighs*, forehead, lower jaw, back and nates.

**Sleep.**—Frequent *yawning*, with lachrymation.—Drowsiness in the daytime.—Wakes in the night, with *congestion of blood to the legs*. *Nightmare*.—Vivid dreams about water, fire, spitting of blood, losses.—Overwhelmed with sleep, early in the morning, in bed, and stretching of the limbs for hours, as if in a state of stupor, with burning in the eyes and tearing in the limbs, with extreme feeling of ease on turning to the other side.

**Fever.**—*Coldness* in the evening, with desire to urinate and colic. Warmth of the head, genital organs and legs, at night. Washing with icy-cold water is very pleasant to him.

**General Symptoms.**—Rheumatic pains of various kinds. Erratic pains, with desire to urinate, and sometimes accompanied as with an electric shock. Paralytic feeling, particularly during the pains.—Uneasiness in the whole body, with excessively-disagreeable feelings. *Fine, nervous vibrations, reaching to the interior of the bones, and causing a good deal of anxiety*.—Greatest languor and weariness, with pain of the muscles when touched or moved. *Inclination to stretch one's-self*, with indisposition to do anything.

**Characteristic Peculiarities.**—During the first days, the symptoms frequently alternate with their opposites, or with entirely different symptoms, after which they become more permanent, until they disappear entirely in a few weeks.

## 163. MERCURIALIS PERENNIS.

MERCURIAL.—Dog's mercury.—See NEUES ARCHIV, II., translated by Dr. BECKER.

### GENERAL PHYSIOLOGICAL AND CLINICAL OBSERVATIONS.

This drug has not yet excited the attention of physicians as a remedial agent and seems occasionally to have been confounded with another species of the same family, the *Mercurialis annua*, which enjoyed, as far back as the Hippocratic physicians, some reputation, and maintained it up to the last century, but is now pretty generally neglected. The mistake originated in a belief that they acted alike. This was refuted by Sloane, in his Philosoph. Transact., who demonstrated that the *Merc. peren.* possesses poisonous qualities. He thereby brought this plant into bad repute, and since then it has always been emunerated amongst the poisonous plants. Nobody, however, took the trouble to try it, and it thus remained only suspected, but was not proven to be poisonous. Sloane, however, relates several cases of poisoning by this plant. It affects chiefly the inner and outer senses, and produces relaxation of the muscles, weariness, dizziness, frequent giddiness, sleepiness, which may even increase to lethargy, and the numerous other affections of the head which point not only to external sufferings of the head, but also to those of the brain, and manifest themselves by pressure, heaviness, tension, fulness, heat, congestion and its consequences, peevish, surly, fretful, sullen, depressed and excited state of the mind, more frequently, however, by a bright and happy, sprightly, gay and merry disposition, also by the manifold affections of the eyes, and the peripheral nerves, of the skin, muscles, and mucous membranes. The symptoms of the skin are heat, burning, itching, pricking, occasional stitches and smarting; those in the muscular and tendinous parts consist in various kinds of pain, nearly always temporary, seldom lasting, changing, but often widely spread, amongst which that of tearing is the most frequent, and next to this that of stinging. In the mucous membranes

we find chiefly a feeling of dryness, roughness, scraping, burning, biting, smarting, or numbness, and in the parts covered by those membranes, particularly in the tongue and eyelids, a numb-like heaviness of motion, sometimes attended with pain, is experienced.

The secretions in almost every part, especially in the mucous membranes, as also in the uterus are arrested, seldom increased, as is the case with the tears, the accumulation of water in the mouth, pressure on the bladder, and increased secretion of urine and perspiration, the increase of the latter being occasioned by the re-action of the organism. Very common symptoms are, the production and discharge of flatulence upwards and downwards, and a frequently-increased peristaltic motion of the bowels, becoming apparent by griping, rumbling, pressing or working about in the abdomen. At the same time the evacuations are promoted and then follow one or two stools, either natural or soft, rather liquid, seldom like diarrhœa. Large doses are probably likely to cause vomiting and purging.

The affections of the brain, and of the nervous system in general are accompanied with considerable disturbance of the circulation. The former may probably be caused by those affections, or be increased at least, and manifests itself partly by congestive, and partly by positive febrile symptoms. The impression on the vascular system shows itself by palpitation of the heart, undulating, oppressive or throbbing motions of the heart and arteries, particularly in the precordia, accelerated, full pulse, burning heat of the skin of the whole body, chiefly the head, hands and feet, or either of them alone, evident fulness of the superficial veins, general or partial chills, followed by heat, or, if the individual be in bed, by partial or general perspiration. There is seldom any perspiration after heat without chills.

It follows from this, that *Merc. peren.* is endowed with narcotic powers, but in a less degree than *Belladonna*, which it resembles in its effects.

#### SYMPTOMS.

**Mind and Disposition.**—*Excited.* Violently excited. The head feels confused, as if lost in thought. Finds it difficult to remember things. Giddiness, as if from intoxication. Feeling as if somewhat intoxicated.—*Bright mood,* occasionally disposed to fly into a passion. Good, cheerful state of the mind, accomplishes everything rapidly and hastily. Cheerful mood, disposed to laugh, although under strong influence of the medicine, laughing at her condition and particularly at her intoxication. Half an hour after taking the medicine becomes very lively and merry and continues so all day, feeling disposed all the time to do some out-of-the-way thing. Cheerful state of mind, first to third day. Merry and cheerful. Disposed to sing and sport. Mirthfulness.—*Very much out of humour.* Sullen, quarrelsome, and peevish. Morose, languid, indifferent, dejected, cross, keeping to himself; during the first 5 hours, subsequently very cheerful. Out of humour from  $\frac{1}{2}$  to 6 hours after taking the drug, then feels comfortable. She complained of sadness and melancholy, would like to cry.

**Sensorium.**—On descending the stairs she becomes giddy, and feels as if thought and consciousness were departing. After walking some time, *vertigo*. Sensation of dizziness in the head. Dizziness in the forehead. Vertigo succeeding headache, giving her the appearance of being intoxicated and obliging her, when stooping, to hold on to something to prevent falling. She cannot walk erect, and feels dizzy when sitting, but mostly when standing. Vertigo towards the left when sitting, standing, or even lying, feeling as if the body would fall to that side, the first day in the evening, and even the next

morning. Dizziness with heat in the head. Disposition to giddiness when sitting. Turning in the head, pressing ache in the forehead, part of the occiput feels numb.

**Head.**—Violent *pressing pain* in the forehead, in the morning. Pressing pain in the temples.—Pressure on the forehead, in the region of the glabella and root of the nose. When stooping, pressure and tension in the head, as if the latter were too full. Pressure on the head especially in the fore part. Constant pressure and tension in the head and forehead. Pressure on both temples. Pressing pain in the forehead and temples. Pressing headache in the forehead. Pressure in the forehead, chiefly above the eyes and between them, also in the occiput as if somebody tried to press down her head from behind. Aching pain in the forehead and eyes. Pressing headache, commencing in the right temple.—*Painful tension* in the forehead and eyes, subsequently extending to the temples and vertex. Tension and feeling of numbness in the head, at times at isolated spots, chiefly the eyebrows, at others with occasional stitches. Tension in the head, particularly in the forehead and over the eyes, on stooping, which is succeeded by a protruding pain. Tension and heaviness of the head with a feeling of heat. Tension in the head.—Sensation as if the forehead *were too large*. Feeling of *heaviness* in the head, as if the latter were pressed down by a weight on the top.—*The scalp* feels tense, numb, and is moved with difficulty, sometimes slight sensations of pain. Difficulty of moving the temporal muscles.—Confusion and feeling of fulness in the head with painfulness, tension and pressure. The left side of the head feels empty. Experiences something like an uneasiness in the head, on the crown, no pain, but a peculiar whirling. Feeling of fulness and tension in the head. Feeling of bloatedness in the head.—Head as if *inflated, confused*.—Moderate *tearing* in the left temple. Tearing, stabbing and shifting pain in the left temple, with feeling of heat. Tearing in the left side of the head, and in the teeth of the right side, resolving itself into headache. Dull tearing in the right temple. Slight tearing in the forehead. Slight tearing at the back of the head as if in the bone. Aching tearing pains in the right temple toward the crown of the head. Slight tearing over the right ear in the skull. Tearing in the skin (?) in the left temple. Tearing in the left side of the head.—*Stitches* with pressure in the left temple. Slight stitching and tearing pain in the right temple. Transient stitching pains deep in the left temple, drawing downward into the articulation of the lower jaw. A stitch in the left temple. Occasionally stitches pass through the head, so that she screams out or would like to scream out.—*Burning sensation* in the region of the vertex. Burning and digging in the parietes of the head. Heat in the head—with darkly-flushed cheeks.—Sudden pain in the left temple.—The regions of the forehead and temple and the upper half of the face are very painful to the touch. Slight pains in the forehead, with single painful spots. Slight pain in the head. Constant pain in the right side of the forehead.

**Eyes.**—*Difficulty of moving the eyelids*, as if they were drawn together. The eyelids feel somewhat *heavy and dry*. Difficulty of moving the eyelids and eyes on the first day.—Feeling of *weight*, tension and dryness in the eyelids. Feeling of weight in the eyelids. Heaviness of the eyelids, with aching and burning in the eyes. Heaviness and adhesiveness of the eyelids. Weight and dryness of the eyelids; she has scarcely power to move them.—*Weakness* of the upper eyelids, so that she sometimes cannot elevate them properly. Whilst awake in the night she is not able to open the eyelids immediately, they feel as if numb, and do not become pliable and ready to open until they have been rubbed.—Feeling of *drawing together* of the lids of the left eye.—The eye seems to be *closed*.—Adhesive feeling in the eyelids on closing

the eye. The eyelids are *difficult of motion*, sticking on their inner surface and edges. After having closed the lids she cannot easily open them.—*Dryness* of the eyelids and eyes, eyelids as if tense and dry. *Trembling* of the upper eyelids, especially the left. *Burning* of the eyelids with dryness. Burning of the eyelids, watery secretion of the eyes, next morning the eyelids are glued together. Burning of the eyelids, watery secretion in the eyes, followed by dryness, burning heat in the eyes, diffused over the cheeks. *Burning heat* in the eyes with pressure. Burning in the eyes, chiefly in the eyelids and corners. *Itching* of the eyelids, which are red on their inner surface, especially towards the edges. A slight suppuration of the eyelids at the edges, particularly in the morning.—*Vacant* look. Staring of the eyes. Fixedness and aching in the eyes. Opaque appearance of the eyes. *Dull eyes* as after sleep. *Languid look* as if intoxicated, with dryness and stickiness of the eyes, chiefly with burning.—*Burning of the eyes* as if they had been exposed to horseradish. *Smarting* in the eyes as if the wind were blowing on them. The eyes run as if a catarrh were setting in, the nose being at the same time moist. *Watery dull eyes*.—*Itching* in the right eye. *Feeling in the eyes as if pushed out*, with unsteady look.—Eyes as if too large and moved with difficulty, followed by a sensation as if they were smaller.—Difficulty of moving the eyes. Aching pain in the right eye, above, under the edge of the orbit.—*Pressure* in the back part of the eye. Pressure in the eyes, increased by stooping. Pressure with dryness in the eyes. Pressure in the eyes and forehead, there seems to be a veil before the eyes. Sensation in the eyes as if there were an external pressure on them, especially when reading. Pressure in the left eye; when she closes it the eyelids stick together so that she cannot readily open it. Pressure deep in the eyes.—Sensation as if something were closing the eyes.—*Tension* in the eyes and temples. Tension in the eyes as if swollen. Painful tension in the eyes with dryness and heaviness in the eyelids.—*Tearing* in the right eye. Slight, tearing pain in the eyeballs. Tearing or aching pain in the borders of the orbits, particularly the upper.—Painfulness of the eyes.—*Soreness* of the eyes in the evening by candle-light. *Slight pain in both eyes when reading and writing, especially the right*.—Occasional stitches in the eyes. Weakness of the eyes. In the evening, by candle-light, she was unable to continue her sewing on canvass, as the threads looked blurred, nor was she able to read, as the letters likewise looked blurred. She imagines she is looking through a veil; when reading the letters looked blurred, when sewing, she cannot see the stitches. Her eyes feel dull, misty, as if floating in tears. Mistiness of sight. Sensation as if a veil were before the eyes, with blinking of the eyelids. *Mistiness of sight*, also in the open air.—Sensation as if *cobwebs* were before her eyes.—*Blinking* of the eyes in the light of the sun, in the open air, or when going near a candle, when not looking at the light, with burning in the eyes.—*Weakness and sensitiveness* of the eyes to bright and artificial light.—After a walk the pupils *dilate to such a degree* that, on looking in the glass, she became frightened at herself, which lasted eighteen hours. Dilated pupils with great sensitiveness of the eyes to the light. Dilated pupils, which contract but slowly when exposed to stronger light.

**Ears.**—He feels full and confused in the head, *as if there were something in his ears*, particularly the left.—*Aching pain* in the left ear. Tearing, with pressure in the right ear, for a short time. Tearing, sometimes darting, in the left ear, deep-seated.—*Pain* in the ears. Dragging, tearing pain in the left ear. *Flying stitches* deep in the left ear.

**Nose.**—*Dryness* in front of the left nostril. *Constant dryness* in the nose. The nose sometimes becomes moist, as if a catarrh would set in, but it becomes much drier. Moist, catarrhal nose. Nose and eyes moist, as if catarrh were

breaking out. *Dragging sensation* in the nasal bones, and a few drops escape from the nose. *Crawling sensation* in the nose, as if clear water were on the point of gushing from it; the nose becomes moist. *Violent catarrh*. An old chronic, periodical catarrh returns. *Burning pain* inside the totally dry nose; on drawing breath, through the nose, the latter feels sore; very violent, burning sore pain, as from horseradish, when the nose is squeezed, more violent in the left than in the right nostril. The breath appears hot in the nose. Sensation of heat in the nose, appearing to proceed from the stomach. The breath from the nose is cold. *Burning* in the nose, sometimes with pricking, chiefly in the evening. *Burning itching* in the right wing of the nose. *Itching* in the nose, once sneezing. *Crawling and burning* in the nose, inside and outside, as if pepper had been rubbed in; *she feels as if she had two noses*, nostrils feel sore. *Outward itching* of the nose. *Tearing sensation* in the nose.

**Face.**—Feeling of *coldness* in the face.—Sensation of tension and numbness in the skin of the face. Feeling of tension, in the face and head. Feeling as if the left side of the head were swollen. Tension, in the left cheek, with feeling of numbness, also in the forehead. Pressing sensation in the upper jaw, proceeding from the vertex. Pressure in the right cheek, with heat in it and in the whole body. Aching pain in the region of the left infra-orbital foramen. Tearing, with pressure, deep in the left cheek. Violent, distressing, pressing pain in the upper jaw, less in the lower jaw and behind the ears. Pressure and tearing above, and in the region of the eyebrows.—Transient *tearing* in the right malar region. Tearing pain in the left cheek and in the sockets of the teeth. Tearing pain in the left side of the face and left ear. Tearing pain in the left cheek, chiefly in the bones, here and there, also in the teeth and in the ear. Tearing in the left lower jaw, from the ear downwards. Tearing above the left eyebrow. Tearing in the lower border of the left orbit, down to the upper part of the nose. Stitches in the region of the infra-orbital foramen. Fine darting tearing in the region of the lower edge of the left orbit. Great redness and heat of the face.—*Burning* of the cheeks, in the evening. Burning pain at small points on the left cheek, in the region of the infra-orbital foramen, resolving itself into a deep tearing pain. *Great heat* in the face, burning-stinging, running heat in the back. Great heat in the head and face, with redness of the latter. Burning of the flushed cheeks, which are not hot to the touch. *Great redness* of the cheeks. Warmth and heat in the face for many hours.—*Numbness* in the left side of the face, with slight tearing pains.—Very exhausted look, with blue rings round the eyes.—Violent smarting itching on the chin, increased by friction, with redness of the chin and little blisters in the evening. A few red blotches on the chin. On the chin, small, hardly-perceptible, itching and burning blotches, which become more distinct when rubbed.—*Lips* very dry and parched. Dry lips, with increased thirst. Fine pricking, on the upper lip, terminating in slight burning, for an hour. Burning of the lips, sometimes only at the corners of the mouth, sometimes itching, also pricking, as if from a hair.—*Burning stitches* in the upper lip.

**Mouth.**—*Dryness in the mouth*, so violent that a lump of sugar does not dissolve in the mouth. Great dryness in the mouth, when eating. Dryness in the mouth, with heat, without thirst. Dryness in the mouth, so violent that it was with the greatest difficulty she was able to swallow a piece of bread; after swallowing, she feels as if the bread were still in the mouth. Dryness and stickiness in the mouth, with increased thirst for seven hours, and even next morning.—Dry, hot mouth without any great thirst. Panting for drink in the mouth, without thirst.—*Stickiness in the mouth*.—*Cheewing is very difficult*, owing to the dryness of the mouth and difficulty of moving the tongue.—Viscid sticky

*saliva*.—Sensation of starch and pap in the mouth. The saliva returns, but is tenacious.—*Burning* in the mouth.—*Tickling or crawling*, in the mucous membrane of the mouth.—Accumulation of saliva in the mouth.—*Heartburn*, in the back of the throat. Burning pain in the fauces, like heartburn, but more painful, and attended with a pain down the pharynx, which is an aching, astringent and burning pain, and very troublesome.—*Tongue* dry, swollen, and appears to be insensible at the sides. *Dryness of the tongue*, without thirst. The tongue almost sticks to the palate, owing to the dryness of the mucous membrane lining those parts.—White tongue, as if quite insensible, and numb. *Tongue white, coated*, and feels quite dry.—*Burning* on the tongue, immediately behind the tip. Burning sensation on the tongue, as from pepper. Burning on the tongue, the back part of which is coated more than usual. *Burning pricking* on both sides of the tongue. Pricking burning on the tongue, as if from a blister, shifting about. Constant burning and smarting on the tongue.—*Smarting burning* on the tongue, after eating bread and butter. Burning and smarting on the tongue.—Scraping sensation at the root of the tongue. Painful scraping and dry sensation on the tongue.—*Smarting* on the tongue. *Pricking pain* in the tongue.—*Painful tongue*, especially when moved, and in the middle, as if covered with little blisters. The middle of the left side of the tongue is painful when moved. Painfulness of the tongue, on touching the palate, as from a little blister.—The tongue is numb, insensible, as if unable to taste.—Sensation, as if she tasted with the tongue only.—The taste seems *more acute*.—Her tongue *feels so heavy* and dry that she can hardly speak. Speaking becomes exceedingly difficult to her, the tongue feels paralyzed. The tongue is heavy and feels thick. A small burning, stitching blister on the left side of the tongue.

**Taste and Appetite.**—*Soapy taste* of the extract. Soon after the dose, soapy, garlick-like taste of the extract in the mouth. Taste as if he had eaten very sour bread, as if faint at the stomach. *Sour taste*, like vinegar. Unusually sour taste of bread. Disagreeably sour, sickening, detestable taste.—Disagreeable *bitter taste*, with heartburn and sickness. Everything she eats, even bread, tastes bitter to her.—Very strong appetite. Good appetite, or no interruption of it as a general thing.

**Teeth.**—Dull pain in a hollow tooth, the second upper molar tooth, increased during biting. Slight pain in the upper, also in the lower double teeth.—*Shifting tearing* in the back molar teeth of the right upper jaw. *Tearing pain*, in the left cheek, mostly in the upper jaw, as if in the teeth, or in their roots, particularly over the second double tooth, in the bones and in the socket of a tooth, with heat and swollen feeling in the cheek, carache and tearing in the left temple. Tearing in the left under jaw and in the edges of the roots of the teeth, shifting during two hours; in the afternoon, after four hours, the tearing is felt in the same manner in the lower jaw. Frequent tearing in the second upper molar teeth, even to the roots. Sometimes transient, sometimes longer, and frequently painful tearing in the lower jaw, at length in the roots of the teeth. Continuous pain in the sockets of two teeth on both sides of the upper jaw.—The gums are somewhat reddened. Painfulness in the region of the left lower jaw, directly behind the last teeth, for several days. Suddenly-occurring painful feeling of numbness in both upper left incisor teeth.

**Pharynx.**—*Scraping* in the throat, towards the tongue. Scraping in the throat, as if she had eaten something fat.—*Roughness in the throat*, and speaking as if there were catarrh. Raw feeling in the throat, as if proceeding from anger, with pain on swallowing, on touching the throat and on speaking, but not on pressure. *Burning dryness*, above and behind, in the gullet, with difficulty of swallowing, so that she must absolutely gag in swallowing. Great burning,

astrigent pain in the throat. Pressing pain in the back of the throat, in swallowing, as if it were thick there. Pressing in the throat, in the left tonsil. Feeling of heat in the gullet, as if rising from the stomach. Strong stitching pain, particularly in swallowing, in the gullet. Uvula, palate and gullet perceptibly reddened. Some gathering of mucus in the back of the throat. Some gathering of mucus in the throat, in the evening of the first days. She cannot swallow an apple, because in its passage down it gives her too much pain.

**Gastric Symptoms.**—*Nausea*, so that she fears she must vomit. Violent nausea after previous heartburn. She feels constantly as if she must eructate and attempt to vomit, yet neither follows, with burning in the stomach and nasty bitter taste. Nausea, from time to time, as if she must vomit, worse after eating. Sick feeling in the stomach, afternoon, after she had taken a dose early at seven o'clock.—*Occasional eructations* with a taste of the extract. Frequent eructations, in many persons, often not long after the dose, also later, and generally the complaints of the stomach and abdomen are relieved. Eructations, with shocking bitter taste of bile. Violent, tasteless eructations, particularly when she leans down.

**Stomach.**—Uncomfortable feeling in the stomach. Feeling of emptiness in the stomach. Feeling in the stomach as if she were faint, she calls it slabby. Distended and full feeling in the stomach. Feeling of discomfort, sickness and distention in the stomach, soon after the dose.—She has a feeling in the stomach, as if something were increasing in size, for which she has no name.—*Region of the stomach full and distended.*—*Chilly feeling* in the stomach, then feeling of heat and perspiration. *Burning working* in the stomach, now lingering here, now shifting to the abdomen, sometimes ending in eructations, or afterwards disappearing in passage of wind, mostly not long after the dose; and in many persons.—*Pressing* in the stomach, as from a stone, with frequent rumbling in the belly. Pressing in the stomach, with feeling as if it were swollen, which extends over the whole abdomen, and afterwards over the chest, so that she must breathe heavily. *Severe pressure* in the precordia, towards the back, drawing up between the shoulders, for a quarter of an hour, while walking out of doors. Tense pressing distention of the stomach, particularly in the cardiac region, drawing down into the abdomen, sometimes with slight dragging cutting, and even occasionally rumbling, sometimes terminating in eructations and passage of wind, which gives relief. Pressing in the stomach. Pressing pain in the region of the stomach, shifting toward the spleen, soon after slight stitches in the stomach, then rumbling in the belly, over the navel.

**Abdomen.**—Drawing together, or dragging or pressing motion in the abdomen, now not exactly painful, now resolving itself into somewhat painful griping, often shifting, sometimes more deeply seated, evidently lessened by passage of wind or eructations, sometimes with audible rumbling, sometimes with oppression of the pit of the stomach or breast, in many persons.—*Fleeting*, but painful *pinching*, proceeding from the sacrum and both hips forward into the abdomen. Gentle cutting in the umbilical region, next in the left hypochondrium, with discharge of flatus. Jerking, though not violent, *griping* in the belly, at one time burning and chiefly from above downwards. Griping pain in the region of the navel, which extends to the bladder. Frequent *bellyache*. Pains in the middle of the belly.—*Audible rumbling and grumbling* in the abdomen, temporary.—*Tension* in the abdomen. Sensation of warmth in the region of the spleen, resolving itself gradually into an aching pain. Severe pressure in the left hypochondrium, in the region of the arch of the colon. Pain, or rather severe pressure, in the region of the spleen, particularly on lying down, several days. Corroding sensation in the region of the spleen. Aching pain in the region of

the spleen. Aching pain in the left groin and hypochondrium. Pressure in the region of the liver, emanating from the region of the spleen. Aching pain in the liver, next in the spleen, and finally going up into the chest. Slight aching in the region of the liver, showing itself soon after as a darting pain in the left hypochondrium, at first slight, afterwards more sensitive, and gnawing pain just near the præcordia, towards the region of the gall-bladder, relieved by passage of wind.—Painful pressure in the left groin, as if hernia were about to protrude.—In that region slight pressure, sometimes also only painful aching, often resolving itself into stitches, made worse by walking, sometimes down the spermatic cord, now on one side only, now on both.—Emission of loud flatus at night. Frequent rumbling in the bowels and passage of wind. Motion and working in the bowels; griping tenesmus, or cutting and pressing, also audible rattling and rumbling with passage of wind. Frequent passage of wind, with pressure in the sacrum. Passage of peculiarly-smelling wind.

**Stool.**—Soft stool early, with some pressure afterwards. Soft stools in the evening at an unusual hour. Fetid soft stools. Griping in the bowels, and thereupon liquid stools, several times. Twice more liquid, yet not absolutely diarrhœic stool, after six grains of the extract of the root; at another visit, after eight grains of the same, costiveness the same day.—*Diarrhœa*, with constant pain in the bowels. Stool somewhat inclined to diarrhœa.—Costiveness, lasting two days. Pressure or burning in the *anus*. Urgent pressing sensation in the rectum, with pressure and tension in the sacrum. Burning and smarting in the anus, with tension and pressure in the sacrum. Itching burning in the anus. Tickling in the anus.

**Urinary Organs.**—Some burning in the urethra. Burning in the urethra. Prickly burning in the urethra. Somewhat increased urination. Tickling in the urethra and in the prepuce, with tickling in the anus, and tearing and pressing in the sacrum. She urinates oftener than usual. Strikingly-frequent desire to urinate, with burning in the urethra, causing much and frequent urination, for from four to six hours, after and even during the night. Five minutes after the dose, unusual pressure of urine and increased urination.

**Genital Organs.**—Menstruation, which usually lasts three days, now lasts only one day, followed by cramps in the belly and headache; next time it appears a week later and continues four days. Menstruation ceases on the fourth day, though it should have continued a few days longer. Menstruation is three days too late, after she had, on the day it should have come, taken six grains of the extract of the root; two hours after that she experienced a violent agitation of the blood, anxiety, coming near fainting, with oppressed, difficult respiration, heat over the whole body, chiefly in the head and chest, from time to time cold sweat, heaviness in all her limbs, trembling; during the following days, swelling and tenderness of the breasts, the third day violent headache and faintness, obliging her to lie down; towards morning the menses appear, and last only three days very sparingly, whereas they generally continue seven days.

**Chest.**—Pressure and painfulness of the chest. Aching in front of the chest, with pressure on the stomach and oppressed breathing. Pressure in front of the chest. Oppressive pain in the left side of the chest, together with pressure and distention of the left side of the stomach, with gentle stitches in that side of the chest.—Sticking pain in the left side of the chest.—Shifting tearing in the left side of the chest.—Throbbing in the right side of the chest, in the evening, when going to sleep.—Difficult breathing, especially on the right side. An habitual cough frequently returns, and is dry. Hot, almost burning breath, making the lips sore for hours.—Confused, undulating sensation in the region of the heart, with fulness and feeling of anxiety in the left chest. Oppressive con-

*traction* in the region of the heart. Peculiarly undulating and throbbing motion in the region of the heart, the præcordia, and the upper part of the abdomen; or a remarkable rolling and throbbing, with trembling and undulating, in all the blood vessels, without heat; he feels the pulsation of the abdominal arteries when sitting down; confusion and dizziness in the head, as if from congestion of the latter, pulse more rapid and full, constant pressure and slight gripping in the belly, first in the stomach, then lower down in the intestines, owing to flatulence, passing wind once or twice, occasional rumbling; the breath is oppressed, the præcordia tight. Repeated *palpitation of the heart*, with oppression. After having stooped, palpitation of the heart, with oppression on the chest, as if the latter were laced tight.

**Back.**—Pressure in the *sacrum*. Painful pressure in the sacrum, preceded by pressing in the rectum. Dragging pressure in the sacrum, constantly. Pressing and bearing-down pain in the sacrum. On rising from stool, one bearing-down tearing pain in the sacrum. Tearing in the left side of the sacrum, extending down the back. Tearing and pressing in the sacrum, with tickling in the anus. Tearing in the left posterior region of the pelvis.

**Upper Extremities.**—Tearing in almost every limb, at times momentary, at others constant and shifting. Occasional stitches, here and there, in all the limbs. On motion, constant pain in the muscles. Shifting *tearing* in the left upper arm. Burning-smarting tearing in all the limbs, mostly recurring in the skin, hands, fingers, feet and toes. Tearing in the back and lower side of the upper arm near the elbow. Tearing in the fore part of the upper arm. Flying tearing in the left upper arm. Gentle tearing in the left upper arm. Superficial tearing in the inner side of the left forearm below. Superficial tearing in the left upper arm, in front and externally, down to the joint. Slight tearing on the inner side of the upper arm below. Aching tearing pain on the outside of the left upper arm, downwards from the joint deep into the bone, in the evening. Dragging, tearing pain on the inner and anterior side of the left upper arm, downwards. Dragging tearing along the right scapula into the upper arm. Dragging pain in the arms. Contracting tearing in the left upper arm, outwards and backwards. Darting, contracting tearing in the right upper arm from the inside of the joint. Spasmodic tearing in the bend of the right arm, from the upper into the forearm downwards. A stitch under the left deltoid muscle. Tearing on the inner side of the forearm, in front of the elbow-joint. Slight tearing in the extensors of the forearm down to the wrist. Tearing along the lower and front part of the left ulna. Darting tearing on the inner and anterior side of the forearm. Spasmodic tearing in the lower edge of the forearm. Tight tearing on the outer and front side of the forearm in the region of the ulna, chiefly on the left. On the extensor side of the forearm, a little above the middle, in front, an aching pain as if it would work its way through the skin, with a similar, simultaneous pain on the outer side of the left leg for a short time. A painful stitch on the inner side of the right forearm. Flying tearing in the back of the left hand. Transient tearing on the back of the left wrist. Some tearing in the right wrist. Slight tearing on the back of the right hand. Tearing along the middle phalanx of the left thumb. Tearing on the inside of the left wrist, rather dragging. Dragging tearing in the outer process of the wrist. Gentle dragging pain in the wrist. Contracting tearing in the tendons of the extensors of the left hand. Tight tearing in the outer side of the wrist. Violent tearing on the wrist when resting on the hand, making him shrink, subsequent stiffness of the wrist. Tearing in the wrist and right middle finger. On moving the left hand, less during rest, occasional chaps and stitches in the left wrist and the neighbouring parts of the forearm in front.

Violent itching on the back of the right hand for an hour, in the evening. When playing on the piano the left hand is suddenly drawn outward. Tearing in the inner side of the left ring-finger. Tearing in the outer side of the middle finger of the right hand. Flying tearing in the ball of the right thumb. Slight dragging tearing in the extensor tendon of the middle finger of the right hand. Fine tearing in the outer side of the left index-finger. Tearing along the outer side of the right little finger. Tearing in the little or ring-finger of the left hand. Flying sharp tearing in the fingers. Tearing stitches at a small spot of the inner side of the first joint of the right middle finger. Two fine stitches on the first joint of the right index-finger, behind the nail. Light flying stitches in the index and middle fingers of the left hand. Darting tearing in the tip of the middle finger. A fine stitch in the tip of the left little finger. Spasmodic stitches in the fingers, chiefly in the tips, frequently. Spasms in the fingers, particularly in the back of them, occasionally with fine stitches. Lancinating pains in the tips of the fingers.

**Lower Extremities.**—Aching tearing pains in the outer and anterior side and the middle of the left thigh, deep into the bone. Tearing from the left side of the pelvis into the thigh. Burning, tearing pain, partially down the right hip-joint. Superficial tearing in the left thigh. Tearing in the left thigh, down into the right knee. Dragging or pinching-tearing pain in the inner side of the hip, sometimes in the hip-joint, at other times lower down. Sensation in the right hip as if it were scratched with a pin, very sensitive. A constant deep-seated stitch in the middle of the right hip, from without inwards. Tearing or simple pains in the left knee, shifting about, sometimes in the tendons, then in the middle of the knee, then again moving upwards and downwards. Tight tearing in the left knee. A peculiar, burning long stitch on the outer side of the left knee. Tearing on the inner side of the left knee, early in bed, superficially. Tearing in the left patella upwards and downwards. Jerking tearing in the left patella when sitting. When walking, tearing pains in the lateral muscles of the left tibia, externally. Tearing in the inner side of left thigh, in the tendons when walking. Tearing in the back and outer part of the left thigh, caused by motion. Stitches in the middle of the left thigh, as if burning. Darting burning pain in the middle of the thigh, externally, down the side of the tibia. Gentle, transient tearing in the left calf. Jerking tearing and stitches in the left patella, when sitting. Stitches in the middle of the left calf, from within outward, for a minute. Tearing on the outer side of the left shin, in the middle. Tearing in the shins in front, when walking, as if the flesh were loose. Aching tearing pains in the shins. Stitches in front and in the middle of the shin. Painfulness in front of the shins, when walking, up to the knee. Shifting tearing in the left foot. Flying, slight tearing in the left foot. Pressing tearing on the outer and anterior side of the right ankle. Tearing on the inner side of the left inner ankle. A few stitches in the outer ankle of the left foot. Tearing in the left heel outwards. Darting tearing in the left heel. A few darting tearings in the left heel. Dragging, tearing pains in the back of the left foot, which wake him from a sleep produced by the drug. Flying tearing on the back of the right foot, behind the joints of the toes, in the middle. Violent pain on the back of the right foot, as if the tendons would be torn. Sticking pain on the upper, anterior and outer side of the left foot in sitting, as if the foot were nailed fast. Tearing on the inner side of the left sole, afterwards tearing on the inner side of the back part of the left sole and on the inner ankle. Tearing in the left sole in walking, and even more in sitting. Burning in the sole. Tearing on the back of the joint of the right great toe. Darting tearing in the ends of

the toes. Spasmodic stiches in the toes, chiefly the ends. Spasms in the toes, especially in the backs of the toes, occasionally with fine stiches. Occasional stiches in the joints of the toes. Stitch in the great toe. In the evening, on falling asleep, gentle darting pain in the ends of the toes.

**Sleep.**—Not refreshing, full of dreams. *Uneasy sleep.* Uneasy sleep, full of dreams; wakes twenty times, and dreams of little children and a vicious horse.—On the fourth night *frequent waking*, early in the morning profuse sweat. Wakes frequently, has a great deal of heat, and in the morning is drenched with sweat. Uneasy sleep, frequently interrupted by waking. Sleeps well from 10 to 12 at night, then wakes and is not able to sleep again owing to uneasiness of the body. Sleep full of *dreams*, during which she is very busy with snakes. Dreams a great deal of wild boars, and wakes several times. Sleep less interrupted by dreams than usual, towards morning repeated waking, and then she is tormented by an irksome heat, especially in the upper part of the body, obliging her to take off her night-jacket.

**Fever.**—*Chilly* after three and a half hours. Somewhat chilly toward evening the first day. Slight chills and shivering, almost like fever, after three and a quarter hours; then heat three-quarters of an hour after, with darkly-flushed cheeks.—*Cold over the whole body*, with hot flush in the face; she cannot warm herself; must lie down upon the sofa and be warmly covered; then sleeps and becomes warm; disposed to perspire; after from 10 to 14 hours. Cold over the whole body, emanating from the right side, and particularly from the right arm, inducing shuddering and great debility, weakness and pains in the limbs, weariness inclining to constant sleep, with painful pressure in the stomach, which is increased by the touch, and which afterwards retreats into the bowels; pressure upon the chest and heavy breathing.—*Cutis anserina* on the cold right arm, which afterwards extends over the whole body; after midnight, an offensive sweat on both sides, particularly on the arms; second day: *fever*; *in the evening* on going to bed, chills during a short time; during the night and towards morning more heat, with great thirst, particularly in the morning; third and fourth days: good sleep until three o'clock, then perspiration over the whole body until toward morning; from the third to the fifth day; after five hours chills over the whole body, lasting about an hour after dining, then again heat for about an hour. Chills in the afternoon, after eight hours. Chills in the morning, after from three to four hours. Shivering in the evening after three doses, morning, noon and evening. *Feeling of cold* in the stomach a quarter of an hour after the dose, towards a quarter past nine o'clock in the evening, in bed, which spreads itself from the right side of the breast and abdomen to the thigh and right arm for an hour, during which she breathes heavily. Towards morning, at four o'clock, warmth in the parts named above, then violent perspiration on the same side of the trunk with increased thirst; next morning she still feels warm in the region of the stomach and right side of the trunk, as if perspiration were on the point of starting, together with heat in the face and redness of the cheeks.—*Great heat in the head* and on the hands; the veins in the hands are swollen, the face is red, the feet too are very hot. Great burning or buzzing heat in the head, on the hands and feet, and over the whole body, until next morning, with a feeling in the body as if a catarrh were approaching. Considerable heat in the head, with marked redness of the cheeks, with sensation as of turning in the brain, and frequent burning in the hands. Great burning heat in the head, then over the whole body, mainly the hands and feet, with swollen veins on the hands.—Great thirst.

**Skin.**—Some *pimples* on the chin. Some itching on the skin and appearance

of a few blotches on the side of the abdomen. Burning and itching of the skin or actual burning pain, shifting from one spot to another, at times prickling as if by hairs, or as if fleas were creeping about, at others with occasional abrasions.

**General Symptoms.**—Strong feeling of *weariness*. Very tired and as if bruised all over. *Lassitude*. Great fatigue and exhaustion.—Frequent yawning and fatigue. Such a sleepy feeling in the body, that he is not inclined to any occupation. Frequent yawning and sleepiness, after five hours, soon after falls asleep, remains so for two hours, and subsequently remains sleepy for several hours. Remarkable drowsiness, sleeps for three hours after taking the medicine, two hours in succession until dinner, during which he can hardly keep his eyes open. Immediately after sleeps four hours, then goes into the open air, and even there has constantly to struggle with sleepiness. In the evening, at eight o'clock, being thirteen hours after taking the medicine, he is obliged to go to bed, and sleeps the whole night until seven in the morning. (The dose taken was eight grains of the extract of the root.) A feeling of emptiness and weariness in the whole body. Great exhaustion and sleepiness, with dizziness and inability to work, drops asleep on the sofa at eight in the evening. Great exhaustion and sleepiness, particularly morning and evening, and after exercise, on the first to the fourth day. A walk into the country enfeebles her, the knees are painful, and, when walking, feel as if they would give way. Heaviness in the feet for six days. *Lassitude* in the limbs on going out in the morning. Great weariness in the evening, can hardly keep awake even when standing, and is in a state of confusion, aggravated by going into a warm room, the second day. On going out at nine o'clock in the morning, he feels very languid and the limbs are painful in walking. Drowsy and dizzy. Laziness, uneasiness and giddiness. Very sleepy. Sleepiness in the afternoon. Dizziness. Dizzy sleepiness. Confusion in the head as after want of sleep or nightly revelling.

## 164. MERCURIUS.

**MERC.**—*Duration of Action*: In regard to this subject Noack and Trinks offer the following remarks:—The effects of this metal, when given in large and frequently-repeated doses, develop themselves more or less slowly, sometimes re-appear after long intervals, and frequently last days, weeks, months, years, and even through life. The intensity of its action upon the animal organism may be inferred from the fact, that this agent, no matter in what form it is administered, is discovered in the solids and fluids of the organism in the original form of mercury, provided its use is continued long and frequently. It has been found in the blood, (*Shubarth*), in the urine, (*Cantu*), in the bile, (of those animals to which quicksilver was given, *Autenrieth*), in the sweat, (*Brinkmann*, *Cruikshank*), etc., etc., etc. *Small doses* of this drug and its oxydes, (except the sublimate,) act slowly; it is therefore necessary, even according to *Hahnemann's* own opinion, that the doses should be frequently repeated in urgent cases, such as syphilis, combined with scrophulosis and tuberculosis. (In pure inflammatory affections of bones and cartilages, even when of years' standing, I have seen *Mercurius 30*, a few pellets, remove the inflammation in 24 hours entirely. *Hempel*.)

**COMBARE WITH**—*Acon.*, *Am.*, *Am. mur.*, *Ant.*, *Arg.*, *Arn.*, *Ars.*, *Asa f.*, *Arim.*, *Bar.*, *Bell.*, *Bov.*, *Bry.*, *Cale.*, *Calad.*, *Carb. a.*, *Carb. v.*, *Caust.*, *Cham.*, *Chin.*, *Cicut.*, *Clem.*, *Coc.*, *Coff.*, *Colch.*, *Con.*, *Cupr.*, *Dig.*, *Dulc.*, *Euphor.*, *Euphr.*, *Fer.*, *Graph.*, *Guaj.*, *Hep.*, *Jod.*, *Lach.*, *Lauroc.*, *Led.*,

*Lyc.*, *Mez.*, *Magn.*, *Natr.*, *Nitr. ac.*, *Nux v.*, *Op.*, *Phosph.*, *Phosph. ac.*, *Puls.*, *Rhus*, *Sassap.*, *Sep.*, *Sil.*, *Staphys.*, *Spong.*, *Stram.*, *Stron.*, *Sulph.*, *Sab.*, *Selen.*, *Thuja.*, *Valer.*, *Verat.*, *Viol. tr.*—*Merc.* is frequently suitable after *Bell.*, *Hep. s.*, *Lach.*—After *Merc.* are frequently indicated *Bell.*, *Chin.*, *Dule.*, *Hep.*, *Lach.*, *Nitr. ac.*, *Sep.*, *Sulph.*

ANTIDOTES OF ALL THE MERCURIAL PREPARATIONS.—*Ac. nitr.*, against violent pains of the bones, ulcers of the mucous membrane, hydrargyrosis combined with congestive symptoms and inveterate syphilis. *Stomacace mercurialis*; scorbutic hemorrhage, ulcers in the mucous membrane of the mouth and fauces; affections of the periosteum and bones.—*Ac. phosph.*, for periostitis.—*Am. carb.*, has been recommended as an antidote by Hahnemann, without indicating the special symptoms.—*Arn.*, against pulmonary hemorrhage occasioned by the abuse of mercury.—*Ars.?*—*Art.*, for hydrargyrosis combined with rheumatism and gout.—*Asa f.*, for caries mercurialis? *ozæna mercurialis?*—*Aur.*, this antidote was known already to Dioscorides and Paracelsus.—*Aur. mur.*, for hydrargyrosis with cachectic symptoms and scrophulosis; hypochondria and *ozæna mercurialis*; mercurial induration and swelling of the testicles?—*Bell.*, against the congestions to the head brought on by mercury; periostitis and ostitis, phlegmonous inflammation of the glands.—*Camph.*, has been recommended and employed as an antidote by Hahnemann, without indicating the special forms.—*Carb. veg.*, in acute poisoning with the corrosive sublimate, and when gangrene is to be apprehended; ulcers in the mucous membrane of the intestines; *stomacace mercurialis*; gangrene resulting from mercurial pytalism; mercurial ulcers having a scorbutic and gangrenous character, with burning nightly pains, etc.—*Chin.*, against excessive weakness consequent upon the loss of strength, and humours occasioned by mercury; excessive irritation of the nervous system, lentescent fever, excessive sweats, excessive sensitiveness of the skin to changes of temperature, great liability to taking cold, affections of the periosteum and bones, mercurial caries, etc.—*Con.*, for cold glandular swellings, from abuse of mercury.—*Cupr.*, for mercurial ulcers?—*Dule.*, for mercurial rheumatism, great liability to cold, mercurial herpes and impetigo.—*Elec.*, for mercurial trembling of the limbs, mercurial neuralgia and paralysis; hydrargyrosis combined with rheumatic and arthritic affections; affections of the bones; hydrargyrosis with syphilis.—*Ferrum et aquæ martiales*, for mercurial cachexia, mercurial ulcers, periostitis (*ferrum phosphoricum*); hydrargyrosis combined with torpid scrofula (*ferrum iodatum*); mercurial trembling of the limbs and mercurial neuralgia; mercurial ulcers.—*Guaj.*, for mercurial rheumatism and gout; hydrargyrosis combined with rheumatism and gout.—*Jod.* and *Kal. hydr.*; these are the chief antidotes of mercury, especially when the lower tissues are the seat of the mercurial affection, assuming the form of secondary or tertiary syphilis, and consisting in affections of the inner mucous membranes, the outer skin, of the periosteum and bones, hypertrophy and abnormal growths of the aforesaid tissues. *Jodium* ought therefore to be chiefly employed in indurations and hypertrophy of glandular organs, of the testicles, liver, glands, mesenteric glands, parotid, cervical, axillary and inguinal glands, pytalism, gangrene from mercurial pytalism; cutaneous diseases; cutaneous tubercles; cutaneous ulcers; inflammation of the periosteum and bones; caries, tophi, gummata; when the organism has been saturated with mercurial preparations in the treatment of secondary or tertiary syphilis, and has lost its susceptibility to mercurial action; in such a case *Jodium* neutralizes the effects of the mercury and restores the susceptibility of the organism to the action of that drug.—*Kreas.*, for scorbutic symptoms; mercurial *stomacace*;

mercurial ulcers of the mucous membrane of the mouth and fauces; cutaneous ulcers; mercurial ptyalism.—Lach., for mercurial ulcers of the fauces.? Gangrene from mercurial ptyalism.—Laetucarium, for nervous and vascular irritation, especially in persons with a rigid fibre and choleric-sanguine temperament.—Lyc., for mercurial ulcers in the throat and fauces; affections of the bones.?—Mang. acet., for mercurial periostitis and ostitis; mercurial acute rheumatism of the joints, and gout.?—Mez., for mercurial periostitis and ostitis; chronic inflammation and induration of the tonsils and testicles; mercurial impetigo and herpes.?—Natr. chlor., for ptyalism.—Natr. mur., for mercurial scorbutic diathesis.—Nux. v., for mercurial trembling of the limbs; paralysis of the optic nerve and limbs.—Op., for excessive nervous irritability; neuralgia;? painful ptyalism; hydrargyrosis combined with rheumatism; adynamic fever with congestion to the brain; mercurial ulcers, characterized by great pain; mercurial morbid sensibility and hydrargyrosis, with decomposition of the blood, softening and puffiness of the solids and solid tissues, and colliquative phenomena.—Phosph., for mercurial amaurosis; neuralgia;? mercurial periostitis and ostitis; paralysis.?—Plumb. acet., for abdominal ptyalism.—Sars., mercurial cutaneous eruptions.—Sil., mercurial caries;? mercurial ulcers.?—Staph., mercurial hypochondria;? mercurial periostitis and ostitis.?—Sulph., and especially the Hep. sulph. of hot springs, in the lower forms of hydrargyrosis, but no longer applicable in a perfectly-developed scorbutic mercurial cachexia; useful in mercurial iritis, mercurial cutaneous eruptions and ulcers; the steam of sulphur has been recommended against affections of the bones and mercurial asthma.—Sulphate of zinc, for mercurial neuralgia in plethoric individuals suffering with congestions, and sensitive individuals disposed to spasms. Mercurial ptyalism, internal and external, has sometimes been cured by the administration of another mercurial preparation. The poisonous effects of large doses of corrosive sublimate are antidoted by the white of an egg.

## 1. MERCURIUS SOLUBILIS HAHNEMANNI.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

This mercurial preparation has been invented by Hahnemann himself; the proving which he has instituted with it, will be considered a model-proving in all ages. It is complete and thorough, exhibiting in a clear and distinct manner all the primary effects of the metallic mercury, as well as of its chemical compounds. All the symptoms have been obtained from large doses. This drug may be employed for the following affections: *Catarrhal affections*, especially when induced by cool evening-air. Great liability to cold.—Diseases from the abuse of Cinchona, Plumbum and Sulphur.—*Acute rheumatism*. Acute articular rheumatism, with inflammatory erysipelatous redness and swelling of the affected parts, and increase of the pains at nights. Chronic rheumatism.—*Acute gout*, with inflammatory hot swelling of the affected parts, and nightly exacerbation of the stitching, tearing, and boring pains.—*Primary syphilis*: primary syphilitic ulcer on the male or female sexual organs, with or without phymosis and paraphymosis.—Venereal bubo (the soluble mercury brings on suppuration more rapidly than any other remedy,) after which, according to Trinks, the bubo should be opened.—*Secondary syphilis*.—*Syphilitic ulcers* of the mouth, tonsils and fauces.—*Syphilitic iritis*, even with formation of condylomata on the border of the iris.—Nightly bone-pains.—Ramollissement of the bones.—*Syphilitic caries*.—*Syphilitic exanthemata*: small suppurating vesicles, in clusters, on the calves and forearms, with violently-burning itchings, spreading, bursting,

running into one another, and afterwards forming a general crust, behind which an excessively acrid ichor is secreted, which oozes out at the border, causing the ulcer to spread, and at the same time to penetrate more deeply into the flesh.—Inveterate *secondary and tertiary syphilitic conditions* are cured less rarely by the mercurius solubilis than by the complete mercurial oxydes.—*Scrophulosis*.—*Inflammation of the glands*, characterized by phlegmonous redness, swelling and stinging pain, worse in the evening and at night. Inflammation of the parotid glands, tonsils, cervical, axillary and inguinal glands. (Mercury brings on suppuration of the glands more readily than any other drug.)—*Scrophulosis* combined with Syphilis.—*Inflammation of the periosteum* and bones, characterized by stinging, boring, and gnawing pains, becoming intolerable at night, redness and swelling of the soft parts covering the bones, etc.—*Ramollissement and curvature of the bones*, and liability of the bones to break. Caries of the bones. Caries from mechanical injury of the bones.—*Arthrocace*.—*Dropsical conditions*.—*Venous congestions* of the head, chest and abdomen. Congestions of the chest and abdomen at the time of the menses. Congestions of every organ in one of the three great cavities of the body.—*Trembling of the limbs*, also when occasioned by the excessive use of spirituous drinks.—*Neuralgia* of single nervous trunks.—*St. Vitus' dance*, (in alternation with Ignatia, Stramonium, and Hyoscyamus).—*Epilepsy*.—*Scarlatina*, with inflammation of the mouth and fauces, and suppuration of the tonsils.—*After-diseases* of the measles.—*Erysipelas*. *Erysipelas neonatorum*.—*Variola*, especially when there is a profuse flow of saliva during the suppurative stage. Smallpox, in the stage of maturation, affecting the whole mouth and intestinal canal; in confluent smallpox, when the parts where the pocks are located are excessively swollen, with inflammatory fever; in caries occasioned by smallpox.—*Varioloid*.—*Varicella* with inflammation of the throat.—*Zona*, violent burning itching, particularly after scratching and at night.—*Crusta lactea* and *serpiginosa*.—*Chronic urticaria*.—*Chloasma hepaticum*.—*Dry itch*, readily bleeding, like rash. *Itch-like eruption* on the abdomen and thigh, dry, elevated, scaling herpes, with violent itching and burning of the head, back, and limbs, especially at night.—*Herpes* on the dorsum of one, and the ball of the thumb of the other hand, with dark redness of the skin, the outer border of the herpes scaling off constantly, and being somewhat redder, sharply circumscribed and somewhat elevated; in the middle portion of the herpes small vesicles spring up containing a yellow humour.—*Elevated spots* like measles, more or less large, of the colour of dark raspberries, with vesicles in the region of the wrist and ankle-joints filled with a thick, yellowish serum, and burning, which increases by friction, and especially at night.—*Suppurating herpes*, becoming covered with thick crusts spreading and penetrating into the flesh.—*Herpes crustaceus*.—*Herpes* with burning.—*Herpes præputialis*.—*Intertrigo infantum*, spreading sometimes beyond the folds of the skin.—*Peeling off* of the skin of the hands and feet.—*Diseases of the nails*.—*Rapidly-spreading, spongy, bluish, readily-bleeding ulcers*, very painful to the touch, with depressions and elevations: they secrete an acrid, corrosive ichor, and they look at the base as if corroded by insects.—*Scorbutic ulcers*.—*Benign and malignant suppurations*.—*Jaundice*.—*Dropsy of the skin*, when occasioned by scarlatina and affections of the liver.—*Scurry* of every sort.—*Nightly sleeplessness*, brought on by orgasm of the blood, and itching of the skin.—*Fever*, with local inflammations, inclining to exudations and suppurations.—*Fever* with venous local inflammation of parenchymatous and glandular organs.—*Fever* with inflammation of the mucous and serous membranes, and the fibrous tissues.—*Fever* with rheumatic and catarrhal symptoms.—*Gastric, bilious and mucous fevers*.—*Tertiary intermittent fevers*, with anticipating type, chilliness followed by burning heat,

unquenchable thirst which commences soon after the chilliness; afterwards excessive exhausting sweat for many hours; fetid smell from the mouth during the fever; the apyrexia is characterized by debility, vertigo, sensation as of a plug being in the throat hindering deglutition, inflammation and painfulness of the gums, profuse secretion of saliva.—*Typhoid fevers* with gastric symptoms, painful pressure and tension in the region of the liver, flat, putrid taste, want of appetite, nausea, vomiting of bitter mucus, and greenish-yellow, copious, diarrhœa, vertigo, tearing and burning headache, especially in the temples and hindering sleep, wakefulness, excessive irritability, restlessness, anxiety, delirium with thirst, burning heat of the whole body, or livid appearance of one portion of the buccal cavity, spongy and readily-bleeding gums, dark urine having a putrid smell, brown clay-coloured face, stupor, recumbent posture with vacant looks.—*Status biliosus* with and without fever: yellow colour of the skin, yellow tongue, bitter taste, bitter eructations, anorexia, desire for sour things, sensitiveness of the præcordia and region of the liver.—*Mucous fever*: Increasing diminution of appetite, tongue coated white, painful dryness of the throat and fauces during deglutition, putrid taste and smell, nausea, tearing and burning pain in the temples, pressure and tension in the pit of the stomach and in the region of the stomach and liver, gulping up of an acrid humour into the mouth, turbid, flocculent urine with mucous sediment, irregular stools with frequent urging, pale, livid appearance, debility, etc.—*Status pituitosus*, with and without fever, characterized by a thick and dirty coating of the tongue, loss of taste, or else a flat, pappy, soap-like taste, anorexia, violent desire for spicy things, flat eructations, dryness of the mouth and throat, slow or completely suppressed evacuations, or else slimy, diarrhœic, fetid stools, great mental and physical debility.—*Typhoid fevers*, when the following symptoms are present: Vertigo, violent headache, inability to think, humming in the ears, thick, dirty-yellow, slimy coating of the tongue, putrid taste, nausea, bitter vomiting, *great sensitiveness and painfulness of the pit of the stomach and umbilical region*, burning heat of the skin of the abdomen when touching it with the hand, yellow diarrhœic stools, or putrid taste with a clean tongue, great sensitiveness of the pit of the stomach, pain in the region of the liver with distention of the place where the pain is felt, which is aggravated by pressure, retention of stool, or else slight gastric symptoms, retention of stool, intolerable pains in the epigastrium, especially at night, with restlessness, anguish, tossing about, complete sleeplessness, occasional delirium.—*Typhus fever* with bleeding from the gums, dark urine, copious green-yellow stools, livid face.—*Typhus abdominalis* in the first stage, with great debility, nausea, vomiting, violent headache, thick-coated tongue.—*Typhus abdominalis* in the first stage, in venous lymphatic individuals with lax constitutions, pale-yellow face, violent headache, thick-coated tongue, bitter, pappy, putrid taste, little thirst, sensitiveness of the umbilical and hepatic regions to pressure, distention of the abdomen, watery, copious, flocculent, somewhat bloody evacuations, restlessness, anguish, tossing about in the bed, restless sleep, anxious dreams.—*Febres leuæ hectica*, with rapid emaciation, and profuse colliquative night and morning sweats.—*Sweat* after every slight bodily exertion, as frequently appears during the period of convalescence from a heavy and exhausting illness.—Profuse, sour-smelling and fetid morning-sweats.—*Profuse, colliquative and exhausting sweats* in catarrhal, rheumatic, febrile and non-febrile conditions, in influenza and its sequelæ (sudamen or hydra febrilis), such sweats affording no relief of the existing morbid symptoms. Melancholy.—Moria.—Fixed idea that he will lose his intellect, disappearing on ptyalism setting in.—*Chronic vertigo*.—Vertigo caduca.—Inflammatory affections of the head.—Acute hydrocephalus in the inflammatory and exudative

stage.—Chronic hydrocephalus.—Retarded closing of the sutures and fontanelles.—*Catarrhal, rheumatic and arthritic headaches*.—Nightly headaches.—Darting, distensive and tearing headaches.—Tearing and burning headaches, particularly in the temples.—Venous congestions of the head.—Painfulness of the scalp, as from subcutaneous ulceration.—Rheumatic pains in the scalp.—*Bloody tumours of the scalp* in new-born babes.—Burning and biting itching of the scalp.—*Tinea capitis*, siccæ et favosa. Porrigo, with falling off of the hair.—Baldness.—Inflammation, redness and swelling of the eyelids, with a dull, cutting, aching sensation underneath, and difficulty of moving them.—*Catarrhal, serofulous, and herpetic inflammation of the eyelids*, with profuse secretion of mucus, formation of crusts, scurfs and ulcers on the margin.—*Blepharophthalmia glandulosa*.—*Ectropium*.—Spasmodic closing of the eyelids.—Inflammation of the lachrymal bone.—Rheumatic ophthalmia, with ulcers on the cornea.—Inflammation of the sclerotica and conjunctiva scleroticæ of the right eye, the rose-coloured redness of the former shining through the latter, which can be moved to and fro over the scleroticæ; with an ulcer on the cornea of the size of a millet-seed, surrounded with a broad, white-gray, opaque border.—*Catarrhal, rheumatic and arthritic ophthalmia*.—*Serofulous ophthalmia*, with disposition to formation of ulcers on the sclerotica and cornea, profuse secretion of acrid, corrosive tears and mucus, photophobia.—*Rheumatic ophthalmia*, with vivid, bright-red, net-like turgescence of the sclerotica, lachrymation, photophobia, darting pains in the eyeballs, boring-tearing pains in the orbits, frontal cavities, and adjoining parts of the face.—Tearing and boring pains in and around the eyes, with evening and night-exacerbation, running, indistinct sight.—*Iritis arthritica*.—*Ophthalmia gonorrhœica*.—*Photophobia*.—*Chromatopsia*.—*Muscæ volitantes*.—*Hemeralopia*.—*Amblyopia*.—*Otalgia*.—Rheumatic, stitching and tearing pains in the ears.—Inflammation of the external ear and the meatus auditorius.—Soreness, excoriation and ulceration of the concha and the meatus auditorius.—Hemorrhage from the ears. Purulent otorrhœa.—*Otorrhœa purulenta serophulosa*, occasioned by carious destruction of the internal ear, or the mastoid process.—*Acute internal otitis*, inflammation of the petrous portion of the temporal bone and of the whole internal ear, with boring and gnawing pains, which are most violent at night, terminating in suppuration with discharge of pus, either through the ear or into the skull.—Closing of the Eustachian tube, occasioning diminution of hearing.—*Serofulous caries of the inner ear*. Catarrhal and rheumatic hardness of hearing, with sensation as if the ears were obstructed; when swallowing or blowing they open as with a report.—Roaring, fluttering, and ringing in the ears.—Deafness.—*Angina parotideæ*.—Inflammation and suppuration of the parotid glands in scarlatina and typhus abdominalis.—Inflammation and shining redness and swelling of the nose.—Inflammation and hyperostosis of the nasal bones.—Painful blisters on the nose. Blackish nose.—Ulcerated nostrils.—*Ozæna serophulosa*, with discharge of pus and fetid smell from the nose.—Clay-coloured, jaundiced complexion.—Darting and tearing pains in the soft and hard parts of the face.—Rheumatic faceache, with swelling of the cheek.—*Neuralgia inframaxillaris*.—Yellow scurf in the face, with effusion of fetid humour, itching and bleeding when scratched.—Spreading herpes in the face.—Itching, redness and swelling of the skin of the face, covered with papulæ and pustules.—Dryness and rhagades of the lips.—Soft red sores on the lips, emitting a watery, yellow fetid humour, forming crusts, bleeding when touched, with stinging itching, and separation of the lips from the gums.—Deep and spreading ulcers on the lips, becoming covered with thick scurfs, readily bleeding, with stinging burning.—Ulcerated corners of the mouth, covered with crusts.—Trismus.—Caries of the antrum Highmorianum

and the maxillæ.—Inflammation and suppuration of the submaxillary glands, with stinging and throbbing pains when commencing to suppurate.—Rheumatic toothache, tearing, boring, gnawing, stitching, especially in the roots of the teeth; worse by eating and drinking; relieved for a moment by cold water; becoming intolerable in the night, affecting the whole side of the head, temples and ears, with swelling of the cheeks and gums, of the submaxillary glands, and copious secretion of fetid saliva, bad smell from the mouth, thickly-coated tongue, flat taste, febrile motions, excessive sweats, which do not afford relief, the toothache being occasioned by a current of air, or by getting the feet wet.—Tearing toothache, the tongue being painful as if burnt, with fetid odour from the mouth, and scorbutic condition of the gums.—Tearing and boring pain in sound teeth.—Tearing toothache with tight closing of the jaw.—Tearing and stinging toothache with ptyalism.—Painful feeling of dulness and looseness of the teeth, elongation, vacillation and blackening of the teeth.—Suppuration and ulceration of the gums.—Recession of the gums from the teeth, forming indentations and vegetations.—Inflammation and swelling of the gums, with darting, tearing, and burning pains.—The gums look spongy, livid, and bleed readily.—*Scurvy* of the gums.—Dull toothache, with single stitching jerks darting from the roots to the crown.—Pain in the teeth, as if the sockets were ulcerated.—Tearing pains in the teeth, particularly violent at night, with great sensitiveness of the teeth to contact, and a good deal of ptyalism.—Tearing-lancinating pains in the whole upper or lower row.—Toothache, with ulcers on the gums.—Painful looseness of the teeth. Toothache, with swollen, livid gums, which stand off from the teeth.—Aphthæ with ptyalism, diarrhœa and fever.—*Stomacacæ gastrica et scorbutica*, frequently occurring in fall and winter.—*Stomacacæ gastrica*.—*Stomacacæ* with ptyalism, violent pains in the mouth, swelling of the submaxillary glands, and fever.—*Glossitis*: painful swelling, hardness, redness, heat and dryness of the tongue, with unintelligible muttering, difficult deglutition, protrusion of the tongue between the front teeth, the mouth constantly open, thick, mucous coating on the tongue, ptyalism, fever, etc.—Ulcers on the tongue; ulcer at the edge of the tongue of the size of a bean; fetid odour from the mouth.—Inflammation of the mucous membrane of the mouth.—Round, white, burning vesicles in the mouth.—Burning sores in the mouth, like chaneres.—Burning ulcers on the inner cheek, lips and tongue, with fetid odour from the mouth, and flow of tenacious saliva.—*Stomacacæ*.—In the surrounding parenchyma of the tongue several nodous indurations were felt, and an ulcerated fissure of several lines in length was discovered. The base of the ulcer was of a reddish-gray, uneven, discharging a fetid ichorous matter, with hard, elevated, livid edges, burning pains in the ulcer, swollen and white-coated tongue, unintelligible speech, ptyalism, fetid odour from the mouth, putrid taste in the mouth, scorbutic gums, etc.—Excessive ptyalism.—Discharge of a slimy, tenacious, fetid saliva.—Inflammation, swelling and ulceration of the orifice of the Stenonian duct.—Profuse secretion of mucus in the buccal cavity.—White-coated, rough, brown, blackish, dry, parched, chapped, cracked, hard and clattering tongue.—*Glossitis*.—Inflammation of the papillæ.—Rawsness of the tongue and of the whole interior mouth? Inflammatory, hard, painful swelling of the tongue, with ulcerated border, in which the teeth form indentations.—Hard places which feel like nodosities, and ulcers, from which ulcerated rhagades frequently emanate. The ulcers have a dirty-reddish, uneven, lardaceous base, their edges are elevated, in some parts they are shining-red, in others indentated, livid; the pains in the ulcers are generally burning, with fine stitches sometimes darting through the ulcers.—Furrow on the dorsum of the tongue, lengthwise, with fine stitches.—*Ranula*.—Small ulcers, appearing from time to time, in full-grown persons, without

any apparent cause, on the tongue, the inner sides of the lips and cheeks, and resembling aphthæ, with a lardaceous base and a red, inflamed border.—Non-syphilitic ulcers in the mouth, with ptyalism.—Quick, stuttering speech.—Complete loss of speech and voice (removed by Hyosecyamus).—Stuttering speech, from a sort of paralysis of the tongue, after apoplectic symptoms.—Dryness and roughness of the palate.—*Catarrhal angina* of the tonsils and fauces, with great disposition to suppuration, stinging, aching and beating pains between or during the acts of deglutition; sensation as if the food had to pass over a lump in the throat, with constant desire to swallow, profuse secretion of saliva and mucus, metallic, putrid taste in the mouth, closing of the mouth, white-yellow slimy coating of the tongue, thirst, great languor and prostrate feeling in the limbs, synchal fevers and sweats, which do not afford any relief; this kind of angina comes on after a slight cold, in damp and cold weather, and generally attacks young, scrofulous individuals of either sex, most frequently in spring and fall, leaving a great disposition to relapses, and occasioning, after frequent returns, a chronic swelling and induration of the tonsils.—*Angina tonsillaris*, the surface of the tonsils being covered with a large number of suppurating ulcers, as if pus were discharging from the parenchyma of the tonsils through a number of openings.—Gangrenous angina.—Putrid angina in scarlet-rash.—Angina of the uvula and palate.—Dysphagia spastica.—Constant desire to swallow.—Painful dryness of the throat. Profuse secretion of mucus in the throat.—Sweet, saltish, *slimy, bitter*, sour, metallic, putrid taste, or taste as of rotten eggs.—Complete loss of appetite and aversion to food.—Gastric derangement, with or without fever.—Gastric fevers.—Great painfulness of the region of the stomach and pit of the stomach to the touch. Aching, crampy and burning pains in the stomach.—Gastromalacia infantum.—Venous congestion of the stomach.—Mucous derangement, with or without fever.—Bilious symptoms, with and without fever.—*Inflammation of the liver*, particularly of the lower, concave portion, with stinging and burning pains and moderate fever.—Inflammation of the liver, with pressive-sticking pains in the liver, which arrest the breathing and occasion uneasiness and tossing about, with constipation, bitter taste, dark urine, great thirst and moderate fever.—Chronic inflammation of the liver, with periodical paroxysms of pains, which are more of an aching than sticking kind, rather hard swelling of the liver, which is perceptible on the outside, yellow colour of the skin, great languor.—Swelling and induration of the liver.—*Icterus*.—Icterus spasticus, which is excited by transitory causes.—Icteric condition, with asthmatic symptoms, painfulness of the liver, rheumatic pains in the muscles of the chest. Acute and chronic inflammatory condition of the pancreas.—Chronic affections, swelling and induration of the pancreas.—Scirrhus of the pancreas.—Colic as if from cold.—Pinching, cutting, tearing, stinging and burning pains in the bowels, with or without great painfulness of the abdomen to contact and pressure.—Enteritis and peritonitis.—Enteritis mucosa.—Cholera sporadica.—Plethora abdominalis venosa: full, tight abdomen, which is distended up to the pit of the stomach, so that the clothes felt too tight; fulness of the abdomen after a meal; aggravation during motion; painful sensation in the abdomen, as from a limb in the abdomen; on turning at night, or on bending forwards, sensation as of something alive in the abdomen; occasional stitches deep in the abdomen; scanty papæsent stool, little flatulence, retention of stool in spite of desire, and pressing burning in the hypochondria, and dry mouth.—Atrophia mesenterica of children; the glands being hard as stone, and felt through the abdominal walls, with constipation or colliquative diarrhœa and hectic fever.—Ascites with affection of the liver.—Bubo scrophulosus.—Inflammation, suppuration of the inguinal glands.—Hard, difficult stool, which is discharged with violent pains

in the anus.—Tenesmus of the anus and rectum. Diarrhœa, with yellow, chopped-like fœces.—Discharges of greenish, bloody mucus, preceded by colic, and frequently succeeded by tenesmus, or pressing and burning in the anus.—Diarrhœa of infants, occasioned by acidity in the primæ viæ, or by dentition, or from a cold, green, slimy, chopped-like, with colic, distention of the abdomen, emaciation, intertrigo.—Diarrhœa of children, with more or less frequent discharges, grass-green, watery, sometimes slimy, resembling the beaten white of an egg, sometimes mixed with bloody mucus; the children cry a good deal, suffer with colic and distention of the abdomen, they become thin, etc.—Dysenteric diarrhœa and epidemic dysentery in summer and fall, with mucus-sanguineous evacuations, without fœces, torturing tenesmus, and gastric and mucous derangement.—*Epidemic dysentery* with violent cutting, which is almost constant, violent urging, pains, burning tenesmus in the anus, small portions of bloody mucus, which frequently look like pieces of raw flesh, with greater or lesser dryness and coating of the tongue, loss of appetite, tearing in the limbs, etc.; in many cases, particularly in infants and children, the red and slimy discharges were mixed with masses of dark-green mucus, and took place every quarter or half hour; after and between the evacuations, there was constant urging and burning in the anus, (in this disease strong doses of Mere. were evidently more efficacious than the weaker, *Knorre*).—Cholera. Diarrhœa in the suppurative stage of small-pox. Undigested, black, viscid, bloody stools.—Bloody evacuations in typhus. Watery sanguineo-mucous discharges, with tenesmus, occasioned by a cold or indigestion.—Purulent diarrhœa, occasioned by ulcers in the intestines.—Inflammation of the mucous membrane of the rectum and anus.—Stinging, burning and sore pains in the anus before and after the evacuations.—Mucous and fluent hæmorrhoids with burning at the anus.—Corrosive itching of the anus and the genital organs, accompanied with hæmorrhoidal tumours.—Incontinence of urine.—*Frequent and copious emission of urine*.—Urine dark, brown, turbid, flocculent, filamentous, *slimy, purulent, chalky*, mixed with meal or blood, sour-smelling, *fetid, acrid, burning*.—Cutting and contractive pain in the region of the kidneys.—Colica nephritica from the distention of calculi in the kidneys. Catarrh of the bladder.—Dysuria and stranguria.—Acute and chronic inflammation of the urethra.—Cutting and burning pains in the urethra.—Gonorrhœa, inflammatory stage.—Hæmaturia with burning pains in the urethra, and syphilitic ulcers.—Hæmorrhage from the urethra.—Oedema of the prepuce, particularly in children.—Inflammation of the prepuce.—Phymosis and paraphimosis.—Inflammation of the inner surface of the prepuce, with redness and secretion of pus.—Vesicles on the inner side of the prepuce, changing to small round ulcers.—White, humid, spreading vesicles on the glans.—Balanorrhœa.—Eruptions on the inner and outer surfaces of the prepuce.—Orchitis.—Hard swelling of the testicles with shining hardness of the scrotum.—Hydrocele, both as a primary affection and as a secondary affection of scarlatina.—Itching pimples and tubercles of the labia.—Inflammation of the pudendum, commencing with a small induration, followed by an enormous enlargement of the hard, hot, dark-red, shining lip, painful to the touch, with shooting, burning, throbbing pains.—Lymphatic tumours of the labia.—Metrorrhagia.—Inflammation of the mucous membrane of the vagina.—Corrosive, burning fluor albus, caused by contact with syphilitic virus.—Prolapsus of the vagina.—Sterility of the female.—Easy conception.—Ovarian dropsy.—Mastitis, to promote suppuration.—Soreness of the nipples.—*Corrosive watery coryza*.—Dry coryza with obstruction of the nose.—Catarrhal inflammation of the mucous membrane of the larynx, with fluent coryza, catarrhal inflammation of the eyes, hoarseness and roughness of voice, dry, scraping cough, with constant titillation, with or with-

out fever.—Inflammatory catarrhal fever.—Chronic hoarseness and aphonia.—Burning and tickling in the larynx. Phthisis laryngea and trachealis.—Phthisis trachealis from syphilis.—Acute and chronic bronchitis.—Influenza.—Influenza with debility, hoarseness, pain in the head, neck and chest, profuse sweats, paralytic weakness, hoarseness, roughness of voice, dry scraping cough, exciting a feeling of soreness in the larynx, copious sweat affording no relief, and remittent fever.—Short, dry and hacking cough.—Rough dry cough, with feeling of dryness in the chest.—Violent convulsive dry cough.—Spasmodic cough with retching.—Hæmoptysis.—Cough with bloody and purulent expectoration.—Consumption of the lungs in the first stage.—Incipient tuberculous consumption.—Tuberculous phthisis, even when the tubercles commence to soften, with occasional fits of hæmoptysis.—Asthma during motion.—Asthmatic symptoms and spasms of the chest, brought on by inspiring the fumes of copper.—Stinging, aching, burning soreness in the chest.—Pleurisy.—Pneumonia.—Hydrothorax. Palpitation of the heart.—Inflammation of the vertebræ.—Rheumatic stiffness of the nape of the neck and neck.—Induration of the cervical glands.—Rheumatic and arthritic pains in the upper and lower limbs, with sweats which afford no relief.—Rhagades of the hands and fingers.—Panaritium in the inflammatory stage; mercury accelerates the formation of pus, diminishing thereby the raging and maddening pain.—Exfoliation and distortion of the nails.—Ischias, with boring pain along the whole course of the ischiatic nerve, worse at night.—Psoitis, when it is necessary to promote suppuration.—Scrofulous chronic inflammation of the hip-joint in children, to prevent suppuration and caries, (giving first Bell.).—Coxalgia.—Spontaneous limping.—Shining, transparent swelling of the thighs and legs.—Inflammation and swelling of the knee, from wounding the capsule of the joint and the synovial membrane, by a blow with the axe.—Swelling of the knee-joint, from repelled itch.—Gonagra.—Local inflammation of the right tibia.—Podagra.—Hyperostosis of the tarsus.—Painful swelling of the metatarsus.—Fetid profuse sweat of the feet.

#### SYMPTOMS.

**Mind and Disposition.**—*Inexpressible feeling of some internal, insupportable illness*, during which he remains silent and does not wish to leave his bed. He imagines he is enduring the tortures of hell, without being able explain himself.—Involuntary weeping with relief. Disposed to weep while acting foolishly.—*\*Great restlessness, -is unable to remain at one place*, has to go hither and thither. Is so restless that he is neither able to stand nor lie, he is like one mad, or as if he had committed a great crime. *Excessive restlessness* at night, from evening till morning, obliging him at times to rise, at others to lie down, he cannot bear walking.—*\*Anguish* with a feeling of oppressive anxiety in the blood. Anguish with restlessness which drove him to a distant place, as if he had committed some evil deed, or as if he had to fear some accident. Anguish with lowness of spirits and restlessness. *Constant anxiety and apprehensiveness* which does not allow him any rest any where, or with sudden rising to the pit of the stomach, accompanied with sweat of the hands and heat of the face. A good deal of anxiety and rushing of the blood at night, with stitches in the blood-vessels. No desire to do anything serious, accompanied with absence of thoughts as from a consciousness of having committed some evil deed.—*Attack of fear*, he imagines he will lose his understanding or die, accompanied with illusion of the faney, such as seeing water where there is not any.—*Great tendency to start* in the evening. Excessive starting after a little surprise, with trembling of the whole body, lameness, mounting of glowing heat to the right cheek which swells and becomes blue-red, great ner-

vousness which cannot be quieted, bruised feeling in every limb, violent chills, tottering of the knees, and desire to lie down before the usual hour.—*Excessive indifference to everything, even to food*, although he relishes it on commencing to eat, and eats the usual quantity. Is serious and indifferent, and is even vexed when other people laugh. *Has not courage enough to live*. Wants to die, is indifferent even to those things which are dearest to him. Every thing, even music, is disagreeable to him.—*Ill-humour*, with want of confidence for the future, or with dissatisfaction, at variance with himself and want of disposition to talk or jest. *Dissatisfaction with himself and his condition*. Lowness of spirits with anxiety as if threatened by some accident. Peevish, taciturn.—*Peevish, taciturn, suspicious, distrustful*, with great irritability and quarrelsomeness, or with insulting manners to others, all of whom he considers enemies. *Quarrelsome, disputative, irritable, vehement, bold*.—Longing for home. Irresistible desire to travel abroad.—Hurried speech.—Kind of frenzy, during which he tears every thing, with great aversion to liquids and great oppression of breathing.—°Derangement of the affective or emotive sphere in drunkards.?

**Sensorium.**—*Momentary vanishing of thought*. Loss of sense, so that he knows not where he is. Loss of consciousness and speech, with collapse of pulse and cadaverous appearance, natural temperature of the body and soporous condition, with gradual return of speech and sense.—*Absence of mind*, one idea repelling the other, and strange ideas crowding on his mind while attending to his business.—*Craziness, absurd talking or manners* (with disposition to weep, and great lassitude after the attack). Great inclination, when walking, to take people by the nose. *Does foolish things*, heats the stove in the middle of summer, lays swords across one another, places candles in one corner and boots in another, the head feeling gloomy and heavy, with complete indifference to warmth and cold. *Craziness*, she uncovers herself at night, tosses the straw of the mattress about and scolds, jumps up high in the day-time as if beside herself with wanton folly, talks and scolds to herself, *does not recognise those of her own family*, rubs the saliva, which she expectorates frequently, over the floor with her feet, and then licks it with her tongue, frequently laps cow-dung and mud from pools, or puts little stones into her mouth, and, without swallowing them, complains of their cutting her bowels, with frequent discharge of blood with the stools, at the same time she struggles against being touched, does not take any advice, stays away from her meals, takes food and drink irregularly, looks pale and sunken and is very languid.—*Great weakness of memory*, he frequently forgets the first part of a phrase before commencing the remaining portion.—*Weakness of intellect* with dizziness, does not hear the questions he is asked, is unable to remember what he has been reading, and is apt to use wrong expressions in talking. Is unable to read or work, talking is difficult for him, his head feels confused, and he falls asleep when sitting, is unable to calculate anything or to reflect on anything.—Dulness of the head *with heaviness*, also when sitting or lying, or with painful gloominess. *Dull and stupid feeling*, also with dizziness, or on rising from a seat with vertigo and obscuration of sight, worst in a warm room and less in the open air. *Gloominess*, early on waking, or on rising (with dull pain). Muddled feeling in the head, and as if he had been sitting up all night, in the morning after rising. *Dizziness* with fulness in the brain or with drowsiness, or with turning sensation and weakness in the head. *Feeling of intoxication* after eating, with mounting of heat and redness of the face, which swells.—*Vertigo* on raising the head after stooping. Vertigo in a recumbent posture, with qualmishness, relieved by turning to the side. Vertigo on bending the

head forward when standing. Vertigo on entering the room from the open air, with staggering. Vertigo as if one would fall, when walking in a room. Vertigo when *sitting* rather than when standing, with blackness before the eyes, particularly towards evening. Vertigo as if intoxicated, when writing while sitting; afterwards, after rising from a seat, staggering when walking about in a room, and appearance of anxious heat with nausea. Vertigo with feverish shuddering, cold hands and subsequent dulness of the head. Vertigo on turning quickly, as if everything turned with him. *Vertigo when walking in the open air*, also with staggering, or with nausea and sensation as of a worm crawling up in the chest and throat. Vertigo when lying, as if balancing from side to side. Vertigo in the forehead.—°Concussion of the brain.? °*Inflammation of the brain.*? *Acute and chronic hydrocephalus.*? °Serous apoplexy.?

**Head.**—Heat and *pain* in the whole of the head. Uneasy, painful sensation in the head, in the evening, and lasting until he went to bed; loud talking was troublesome to him; relieved by sitting down and leaning the head upon something. Dull and gloomy pain in the forehead and sinciput, in the evening, with ill-humour.—*Constrictive pain.*—Aching pain in the head as if the head were *tied round* very firmly. Headache in the evening as if the brain were encircled with a band. Contractive headache, the head feels as if screwed in, now in the sinciput, then in the occiput, then in the left side, with lachrymation. Tight and heavy feeling under the skull.—Headache, a *pressing from within outwards*.—Headache, a *pressing from within outwards in the parietal bones*. Headache, as if the brain would be *pressed asunder*. Feeling of fulness in the brain, as if the head would burst. Distensive headache, in a space of three fingers' breadth, all around over the eyes and ears.—Headache, pressing into the forehead, and bone-pain below the eyebrows, even when touching the parts. Violent headache, as if the head were falling to pieces at the top, and a pressure as if every thing were descending towards the nose. Aching pain in the occiput. Headache, with pressure through the forehead, also with bone-pains above the eyebrows (particularly from contact), most violent when lying, relieved by *pressing on the forehead with the flat hand*.—Violent *drawing* in the right temple. Jerking, drawing and pinching in the right temple, down the occiput and nape of the neck. Drawing sensation from the palate to the brain, with bruised pain in the brain.—Continuous, violently-tearing pain from the occiput to the sinciput, where a pressure was felt. Tearing in the skull, especially the frontal bones. Tearing in the sinciput, extending as far as the vertex. Tearing pain in the lower part of the occiput. Headache, resembling a slow tearing laceration and a bruised feeling.—\**Stitches through the whole head*. Stitching pain in the forehead (immediately), also when walking in the open air.—°Stitches in one side, extending to the ears, teeth and throat. Intermitting, *boring stitches* in the left side of the forehead when sitting, but very painful. Painful lacerations in the left side of the forehead, when standing. Lacerations in the left region of the forehead when sitting, with chills over the whole body, cold hands and hot cheeks, without thirst.—*Drawing digging-up* and heaviness in the forehead.—Repereussing shocks in the brain, especially when moving or stooping.—Undulations and throbbing in the sinciput. \**Heat and burning in the head*. Aching pain in the right side of the forehead. °*Nightly headache*. °Mcgrim.?? °Catarrhal and rheumatic headache.

**Scalp.**—*The whole of the outer head is painful to the touch*, as if from sub-cutaneous ulceration. °Pain of the skull-bones, particularly of the occipital bone.—Tearing pain in the outer parts of the forehead, in every position of the

head. \**Tearing pain in the outer parts of the head, particularly the bones.* Boring in the region of the occiput. Burning in the region of the left temple. Burning in the skin on the left side of the forehead.—*Itching of the forehead.* Burning itching of the forehead, going off after contact. Itching smarting in the nape of the neck and top of the head. Burning pain in the scalp, above the left forehead. Burning and itching of the hairy scalp. *Itching of the hairy scalp*, day and night. Itching \**eruption of the head.* Dry eruption over the whole head, causing a pain all over when feeling it. \**Small elevated scabs between the hairs of the head*, firmly adhering to the skin. A number of scabs on the hairy scalp, itching and burning after scratching. \**Humid eruption on the hairy scalp*, eating away the hair with painful pressure, especially at the sore places.—\**Falling off of the hair without headache.*—*Shuddering of the hairy scalp*, the hair standing on end, and the scalp feeling as if it trembled, and became contracted.—Sweat on the head and forehead, cold, clammy.—°Swelling of the head.—°*Exostoses on the hairy scalp.*

**Eyes.**—\*Pressure in the eyes as from sand, -or particularly when moving or touching them, °also when looking at a thing sharply.—\**Stitches in the eyes*, -particularly in the left. \**Cutting under the lid* as from a sharp body.—\**Itching in the eyes.* \**Heat in the eyes*, -also with lachrymation.—*Burning in the eyes.* Burning and smarting in the eyes, as from horseradish. Burning in the eyes, as after reading a good deal. \**Burning, particularly in the open air.* Burning of the lids. Burning of the right eyebrow.—\**Inflammation of both eyes*, -with burning, smarting pain, worse in the open air.—\*A number of red vessels become visible in the whites of the eyes.—°*Injected state of the outer canthus.* °Redness of the eyes, sclerotica and conjunctiva. °Rheumatic, °catarrhal, °arthritic, °serofulous ophthalmia. °Syphilitic ophthalmia. Heat in the eyes, with lachrymation. \**Lachrymation of both eyes*, in the morning. Profuse lachrymation of the right eye. Lachrymation in the open air, °in the evening.—The left lower lid is swollen, especially toward the outer canthus, with burning pains for five days, and profuse lachrymation preceded by sneezing for three days. The upper eyelid is thick and red as from a sty.—\**Considerable swelling, redness*, -and constrictive closing of *the eyelids*; they are painful when touched, also with scurfs and ulcers at the margin.—\**Nightly agglutination.* \**Pustules on the conjunctiva.* °*Ulcers on the cornea.* \**Scurfs around the eyes.*—\**Blue-red margins around*, especially below the eyes. \*The eyes are dim and without lustre.—Inflammatory swelling in the region of the lachrymal bones. *Dilatation of the pupil.*—\**Black point before the eyes, moving in front of him*, and low down. Black points before the eyes. *Black notes before the eyes.* His eyes see green and black; the room turns with her; she has to lie down (during a meal).—\**Complete vanishing of sight for five minutes*; -every half hour he is completely deprived of his sight for five minutes.—Fiery points before the eyes, high up toward the clouds, especially in the afternoon. Scintillations before the eyes.—\**Mistiness before one or both eyes.*—Amaurotic dimness before the left eye, increasing gradually, lasting ten minutes; the letters seem to move in the evening when reading. Amaurotic blindness of the left eye for a few minutes, when walking in the open air, without pain. \**Dim-sightedness.*—Illusions of sight; sensation as of a blade of grass hanging before both eyes. Pointed things seem to have a double point.—Twitching of the lids. She is not able to discern a thing distinctly; her eyes constantly close involuntarily; the more she endeavours to prevent this, the less is she able to do so; she has to lie down and close her eyes. He is not well able to open his eyes, as if the eyeballs were agglutinated. When sitting, standing, or walking, his eyes close involuntarily, as when one has been long deprived of sleep. *Fire*

*dazzles the eyes very much in the evening.* Burning in the eyes, as after having read a good deal at night; one of the eyes is red. \**The eyes cannot bear the glare of a fire or the light of day.*

**Ears.**—*Dragging pain* in the ear. Pullings and pinchings in the ear, or behind the ear with jerking, hindering sleep, with pain to the touch. Violent pain, as if *something were pressing through the ear.* \**Tearing in the ears.* Tearing in the left ear when the menses make their appearance. \**Sticking in the ears,* -particularly when stooping. Sticking in the ear, with pressure; the warmer she became in bed, the colder and moister became the ear; at last *she felt as if she had ice in the ear.* Stinging and burning in the ear, worse in the left. Burning in the cartilage of the left ear.—*The ear and meatus,* particularly the left, *are painful, as if inflamed.* The ear feels inflamed externally and internally, the pain being partly cramp-like, partly stinging, and the ear feeling moreover obstructed, as if by swelling. \**Soreness and excoriation of the internal ear,* -particularly the right. °*Ulceration of the concha.* Heat and redness of the lobule, which is excessively painful; two days after a little tubercle forms in the lobule of twelve weeks' duration. Tubercle in the lobule, which is immovable and lasts four weeks. Burning, corrosive, itching and humid pimple on the right lobule, having a scaly appearance like herpes. °*Fungus excrescences in the ear.*—Sensation as if cold water were running out of both ears, several times a day; the sensation comes suddenly and goes off after a few minutes; in the intervals there is a good deal of itching in both ears.—Humour oozes from both ears. Blood comes out of the left ear, early in the morning. Discharge of blood and fetid pus from the right ear, with tearing pain. \**Discharge of pus* from both ears; a bag of pus is seen in the fore part of the right ear, discharging pus on feeling it, with pain in the whole right side of the head and face, preventing her from lying on this side.—Discharge of yellowish pus from the left ear. Discharge of liquid wax from both ears.—\**Hardness of hearing,* -in both ears, °or with stoppage of the ears, which open on swallowing or blowing the nose. Is scarcely able to hear anything, every little noise sounding very loud in the ear. The ears feel obstructed, with roaring.—*Roaring in the ear, as if something had lodged in the ear.* *Buzzing* in the ears, as if he were about to faint. *Pulsative roaring in the ears.* Roaring in both ears, when lying in bed.—\**Buzzing* in the left ear, -as from wasps. *Fluttering* before the left ear. *Fluttering and crawling* in the left ear. *Various kinds of ringing* in both ears, worse in the evening, for many days.—\**Swelling of the parotid glands,* °also inflammatory, or with painful closing of the jaws, or with burning pressure only in warmth, and ceasing in cold, and with irritation and cough on touching the glands with wool.

**Nose.**—Crawling and gnawing sensation in the skin of the root of the nose. Tension across the nose.—Pain of the nasal bone when touching it.—*Swelling of the whole nose,* especially the left side; *it is red and shining, itching,* especially the interior of the nasal wings. Inflammatory swelling of the nose. Swelling, redness, inflammation, itching of the tip of the nose. The septum narium becomes swollen and chapped. Swelling of the left wing of the nose, as in profuse fluent coryza. Interstitial distention of the root of the nose. °*Swelling of the nasal bones.* Painful blister on the nose. Scurfy nostrils, bleeding when cleansed. °Blackish nose. Violent itching of the right side of the nose; he has to rub it. Pressure in the nose from above downward, as if something heavy had been attached to it. Want of air through the nose.—\**Bleeding from the nose, of various degrees of violence.* Bleeding from the left nostril; the blood coagulated while dropping out of the nose, and remained adhering to the nose in the form of flakes. Bleeding of the nose, while sleep-

ing. Profuse bleeding from the nose, while coughing.—Discharge of acrid pus from the nose smelling like old cheese.—Putrid smell from the nose, as in profuse coryza.—Want of air through the nose. °Dryness of the nose. *Frequent sneezing*, particularly early in the morning, or constant sneezing with swelling of the lower eyelid, with burning and lachrymation.—\**Coryza, with much sneezing*. °Violent dry coryza with stoppage of the nose. °*Profuse fluent coryza*, particularly with profuse discharge of watery, corrosive mucus. Moisture dropping out of the nose in abundance without coryza.

**Face.**—*White clay-coloured face*, with attenuated, sunken features, and dim, gloomy eyes. °*Yellow complexion*, even the whites of the eyes are yellow, Blue-red margins around the eyes. \**Feverish heat and redness of the cheeks*.—particularly of the left cheek after midnight. Heat in the face with paleness. *Sweat* in the face, also cold.—*Distortion of the corner of the mouth* to one side, at three o'clock in the morning, with want of breath. Spasmodic drawing to and fro of the muscles between the chin and the lower lip.—\**Tearing in the face*,—particularly in the right masseter muscle, or also on the left side where the tearing is excessively violent in the whole ear. Pressure in the malar bones from within outwards. *Sticking* in the left lower jaw, or in the malar bone, particularly in the forenoon and when walking.—*Swelling* of the right side of the face, particularly below the eye, with heat. Violent swelling of the left cheek. °*Swelling of the cheeks*, with toothache.—Large tubercle under the skin of the left cheek. Red spots in the face. Reddish-white, rough, *herpetic spot* on the left malar bone. °*Yellow scurf in the face*, with discharge of fetid moisture, constant itching day and night, and bleeding after scratching. °*Crusta lactea?* °*Syphilitic spots and pustules in the face and on the forehead*.—Burning pain of the lips, as if burnt by nettles, when touching them with the fingers. \**Dry lips*. Rough and dry lower lip, as from cold and rough air. Yellow crusts on the upper lip, near the margin, with smarting and burning pain. Internal swelling of the upper lip.—Painful ulcers on the internal surface of the lower lip, opposite the incisores. Pimples below the vermilion border of the lower lip, towards the corner of the mouth; they cause a smarting pain when touching them.—*Soft, red swelling of the upper lip*; it recedes from the gums internally and assumes a shaggy appearance; deeply-ulcerated sores form on both surfaces of the lip, with stinging pain, and sometimes itching. Considerable swelling of the upper lip and the lower cheek, soft and very red, marked with inch-deep depressions (as if excavated), looking as if lined with a grayish-yellow matter, with discharge of a watery, yellow fluid; they had a somewhat putrid smell, and bled when touching them, the blood oozing out from the border. \**Ulcerated corner of the mouth*, with sore pain. *White-bluish spots on the internal surface of the lips*. Pain in the corners of the mouth as if they had been cut. \**Cracks and rhagades in the corners of the mouth*. Burning of the skin of the chin. *Red ulcers* of the size of a millet-seed, on the right side of the chin, painless when touched. Pustule on the chin, of the size of a pea. Suppurating, red ulcers on the left side of the chin, painless (third day).

**Jaws and Teeth.**—Tension in the articulation of the jaw, when opening the mouth wide. \**Almost complete immobility of the jaw, scarcely permitting him to open his mouth, with violent pain* °or with inflammatory swelling of the lower jaw. She is unable to open the jaws; with tensive pain on the right side of the os hyoides, bitter taste of every thing he eats, except milk, which has a good taste; tearing and hard hearing in the right ear, emission of a quantity of hard fetid flatulence, and humid eruption on the head.—Pain under the lower jaw.—Tearing in the lower jaw, towards evening. Caries of the jaw.—

°Swelling of the submaxillary glands, also *inflammatory*, with *stinging and throbbing*, or cold, painless. Terrible tearing in the teeth, especially increased by eating. Pain in the teeth, especially after eating, as if corroded. The teeth become black-gray, black. Sensation, when moving the mouth, as if the teeth were loose, especially the lower front teeth. Sensation as if all the teeth were loose. *Looseness* of the teeth, they were painful when touched by the tongue. Weakness in the teeth. The front teeth feel as if they would be wrenched out. Pain in the incisores. \**Pain in the front teeth; the air which is drawn into the mouth affects the teeth painfully.*—\**The anterior incisores ache when cold air gets into the mouth, or when he eats or drinks anything cold, the aching continuing only so long as the teeth are touched by the cold air or food.*—\**Toothache*, as if the teeth were on edge. —\**Violent toothache in the night; —as it passed off, a violent chilliness was experienced through the whole body.* °*Toothache in the evening.* °The toothache becomes intolerable by the warmth of the bed. °The toothache becomes intolerable in the cold air, or by applying anything warm or cold to the tooth. \**Tearing in the roots of the teeth the whole day.* \**Tearing toothache after midnight*, and especially early in the morning. Tearing in the teeth, increased by eating. *Tearing toothache, extending into the ears like a stitch, especially at night*; the pain does not allow him to remain in bed, he has to sit up the whole night. °*Tearing in decayed teeth*, also extending to the cheek of the affected side, with *painful swelling of the cheek* or of the submaxillary glands, accompanied by chilliness and saliva. —Drawing toothache, also in the front teeth, early in the morning. —Darting toothache, especially in the night. —Pulsative jerks extending from the teeth of the lower jaw into the ear, and from the upper jaw into the head, the gums being painful; the jerks commence at nine o'clock in the evening, and abate when lying down and going to sleep. —\**Violent stitches in the teeth.* —\**Horrid stiches in the tooth, in the evening.* Grating of the teeth in the night, while asleep, so violent that the pain woke her. The gums are painful when touched or when chewing, especially hard substances. Itching of the gums. \**The gums recede from the teeth.*—Tearing in various parts of the gums; \**they are sore and swollen.* \**The upper border of the gums looks indented, the indentations being white and ulcerated.* \**Ulcerated gums.* Painful, swollen gums. Swelling of the gums over night; better in day-time. Swelling of the gums every night. Transitory swelling of the gums, only early in the morning. *Burning pain* in the gums, in the night when he is on the point of falling asleep. Burning beating pain in the gums, increasing after noon, abating on lying down and disappearing in the night. —Fine tearing in the spongy and bleeding gums, which had become detached from the teeth, also in the roots of the denuded teeth, almost the whole day and early in the morning when rising; the pain is somewhat relieved in the evening by smoking. \*The gums which had receded from the teeth have a sickly appearance and look white along the upper border. Painless swelling of the gums, for several days. \**Bleeding of the gums* when touching them ever so little, for fifty-six days. °Scorbutic affections.

**Mouth.**—\**Fetid smell from the mouth* —which is perceived by others more than by the patient. Bluish colour of the inner cheeks. Nightly burning in the mouth. Soreness of the mouth. Constant dryness of the mouth. °*Inflammatory swelling* in the mouth. Vesicles or round, elevated white blisters in the mouth, with burning and peeling off of the skin. \**Aphthæ.* \**Ulcers and sores*, —with burning and smarting, particularly in the evening. °*Stomacacæ.* —*Accumulation of saliva* in the mouth, also sour, or *slimy* which can be drawn into thread. *Constant spitting.* *Ptyalism*, the saliva being sometimes

tenacious and fetid, particularly at night or in the evening. The orifice of the salivary duct is swollen, white, ulcerated and very painful. Pain and swelling of the *salivary glands*. °*Accumulation of tenacious saliva in the mouth.*—*The tongue* is very sensitive to the open air. \**The tongue is coated as with fur*—particularly early in the morning, sometimes accompanied with whitish swelling and ready bleeding of the gums. The tongue is insensible, it feels pithy. Rough tongue. °Brown or blackish tongue. Painful tongue as if chapped, with burning. The tongue feels sore and stiff, in the region of the right os hyoides. Dry, hard and clattering tongue. \*Swelling of the tongue—also with white coating. °*Inflammatory, hard swelling of the tongue, -or with ulcerated edges* which become indented by the impression of the teeth. *Hollow ulcerated, tongue*, with swelling. Pricking in the tip of the tongue. Creeping on the tongue. °The tongue feels as if burnt. *Fissure* along the dorsum of the tongue, with prickings. °*Ranula.*—°Quick and stuttering speech. \**Complete loss of speech and voice*, -also with sunken countenance, weeping over her condition, sleeplessness and great debility (relieved by Hyoscyamus).—Dryness of the palate as if from heat. Roughness of the palate, with smarting soreness on touching it with the tongue.

**Pharynx and Œsophagus.**—\**Sore throat ; sensation as if something had lodged in the throat.*—\**Pain in the throat, as if a pipkin had lodged in it.* \*Sensation as if he had something in his throat *which he had to swallow*. Sensation as if a worm were rising in his throat, obliging him to swallow all the time. \*Difficult deglutition. He had to press very hard, to get something down. °*Constant desire to swallow.* Spasmodic difficulty of swallowing with danger of suffocation. Deglutition is painful to him, as if he had burnt his throat or had swallowed boiling oil. When the beverage has reached the region of the larynx, it does not go down any farther, but flows back through the nostrils.—\**Pain in the throat when swallowing*, and -hoarseness. Roughness of the velum pendulum palati; when touching it with the tongue, a smarting pain is experienced in it, as if the palate were sore. Dryness of the palate, as if caused by heat. \**Heat ascends in her throat.* Pain in the throat, like a pressure. Burning in the pharynx from above downward, afterwards in the abdomen. After a moderate dinner, a glowing-hot vapour ascended into her throat from the abdomen, the throat becoming more and more painful, and a violent thirst setting in. \**Pain in the throat, as if too dry.* \*The fore part of the tongue is very slimy, the fauces being very dry.—\*Dryness of the throat, *obliging him to swallow all the time.* \*Constant dryness of the throat; it felt sore as if it were narrower behind than in front; deglutition caused a pressure in the throat, nevertheless he had to swallow all the time because he had his throat constantly full of water. *Stinging sore throat*, as if pricked. \*Stitches in the back part of the throat, when swallowing, which extend even into the ears. \*Stitches in the back part of the palate. \**Stitching pain in the tonsils when swallowing.* \*Elongation and swelling of the uvula. When blowing the nose, a pain is felt in one side of the throat, also in the fauces; an aching as if the parts were swollen. Continuous aching pain in the œsophagus, in the region of the larynx, more violent when eating, as if the food passed over raw flesh, with burning pain in that region.—\*Ulceration of the tonsils with sharp stinging pains in the fauces when swallowing. Inflammatory swelling of the tonsils. °Catarrhal sore throat. °Rheumatic sore throat.? °Phlegmonous sore throat.? °*Syphilitic ulcers in the throat.* Aching pain in the œsophagus, in paroxysms, as if an ulcer would form.—Sensation in the right side of the pharynx *as if sore*, -even between the acts of deglutition. °*The soreness frequently extends to the ears, or the parotid, submaxillary and cervical glands.* °Aggravation during empty

*deglutition, at night in the cool air, and when talking.* °*Ptyalism attending the sore throat.*—Mucus gets from the posterior nares into the throat, and has to be hawked up constantly. Expectoration of tenacious, bitter, or *saltish* mucus.—Blood rises in the throat and mouth, without vomiting or cough.

**Taste and Appetite.**—Metallic taste in the mouth, causing almost vomiting. The tasteless oxyde has at first a perceptible, afterwards a striking, repulsive, metallic, clayish, earthy, soap-like, putrid, sourish taste; at last it becomes intolerable.—*Great bitterness* in the mouth, especially after drinking coffee. \**Bitter taste in the mouth*, especially between meals. Food does not taste bitter, but his mouth is bitter before and after a meal. Bitterness of the lip and tongue between and during meals. \**Putrid taste in the mouth*, especially in the morning.—*Very saltish taste of the lip.* *Saltish taste of the tongue for several days.* Taste as of pus in the throat. \**Saltish taste in the mouth.* Sweet taste on the tip of the tongue. \**Sweet taste in the mouth*—and sensation as if the whole body consisted of sweet things.—Putrid, very disagreeable taste in the throat. *Taste of putrid eggs in the mouth as soon as he moves his tongue, after which he has to swallow involuntarily.* Putrid taste in the mouth as of fæces, and the saliva has a saltish taste. Early in the morning before breakfast, she has a sour taste in the mouth, going off after a meal. \**Slimy taste in the mouth.* \**Sourish taste in the mouth.* Sour taste in the mouth during and between meals, when one has had intermittent fever. Butter has a bad taste to him. Bread has a sweet taste. Rye-bread tastes bitter. Hop-beer tastes sour. No desire for wine or brandy, to which he was used. Slimy and salt taste of food and drink, especially of water. *Excessive appetite and hunger*,—but he is unable to eat any thing, because he does not relish any thing; things have no bad taste, but they are tasteless. Canine hunger; she feels that it is unnatural hunger. Canine hunger for a short time, shortly after a sufficient meal (immediately). *Ravenous canine hunger.* Continuous *greediness* for eating; he becomes weaker and weaker withal. \**He has no appetite for dry food, likes liquid food.* *Want of appetite*, especially early in the morning. Little appetite, but a good deal of hunger.—Aversion to sweets. Aversion to beef. Excessive aversion to meat. Aversion to coffee. Aversion to butter. \**He has lost his appetite for everything.* He does not care for warm food, cares only for cold food, bread and butter, etc. Had no desire for food; but he relished what was set before him. \**Complete loss of appetite.*—More appetite for drinking than for eating. More thirst than hunger, and continued chilliness. \**A good deal of thirst.* °Violent, burning thirst, day and night. Thirst for cold drinks, particularly water. Desire for water, towards evening. Wants to drink all the time.

**Gastric Symptoms.**—°Violent eructations. Eructations shortly after dinner, with putrid vapour in the mouth. \**Constant risings of air.* Eructations which are frequently tasteless, and sometimes sour. Rising of bitter water.—The eructations have a bitter taste and a putrid smell. Bilious eructations, in the afternoon. Eructations tasting of fresh-baked bread. Eructations during a meal, an acrid fluid rising into the mouth. Eructations like hiccough, during a meal. *Regurgitation* of the ingesta.—Heartburn.—Rancid heartburn after a simple supper. Violent hiccough, after a meal. *Frequent hiccough*, especially in the forenoon.—He feels a nausea in the chest, with cutting pressure; he feels as if he would vomit, and is driven from place to place by great anguish. When smoking tobacco he feels an inclination to vomit in the chest, from the pit of the stomach to the pit of the throat, with oppression and cutting in those parts.—Continued inclination to vomit, with pressure and cutting in the chest, and here and there dull stitches in the direction of the sides of the chest, cutting in the abdomen, and cutting with pressure in the pit of the stomach. Sweet taste in the

throat, with inclination to vomit. Sensation as if he had eaten something sweet, causing nausea. Turns of nausea increasing after a meal. Nausea and shuddering the whole day. Headache at every attack of nausea. Nausea, quite in the upper part of the pharynx, but not in the stomach, so that he was not able to vomit (especially after a meal). He feels so nauseated and such an inclination to vomit that he almost loses his senses. Inclination to vomit, accompanied with vertigo obscuring the sight, and with flushes of heat. Inclination to vomit directly after a meal, the appetite and taste being good. He experiences nausea in the pit of the stomach, followed by eructations, which sometimes arrest his breathing. Nausea in the region of the stomach (immediately), followed by a bruised pain in the right side directly above the hips, becoming worse by motion and contact. *At one o'clock in the night a good deal of water accumulates in her mouth, with nausea, waking her from sleep and making her vomit; the substance she vomits is very bitter.* Occasional rising into the throat of something acrid like brandy, not like acid. °Empty retching.—\*Violent vomiting of bitter mucus. Bilious vomiting.—Digestion is impeded on bending forward.

**Stomach.**—When walking moderately fast, he feels a pressure from the left side of the pit of the stomach as far as the xiphoid cartilage, where the pain becomes most violent.—Constrictive tearing in the pit of the stomach; afterwards this pain is felt in the chest. Violent pulsation of an artery near the pit of the stomach and on the same line with the pit; he saw the pulsation through his clothes.—*Burning pain in the pit of the stomach (immediately).* Mounting of heat to the pit of the stomach when stooping, with blackness before the eyes, going off on rising. Ulcerative pain in the stomach and abdomen. Violent pain in the stomach, as if one had vomited a good deal. *Great painfulness of the pit and region of the stomach, particularly to the touch.* Intensely-painful aching in the stomach, especially during a deep inspiration and when touching the parts.—Pain in the pit of the stomach as if cut crosswise. \**When sitting, the food weighs like a stone in the pit of the stomach,* as if it were concentrated in one lump. Repletion and tension in the pit of the stomach, oppressing the breathing, with undiminished appetite. \**Pressure in the pit of the stomach after a meal, accompanied with nausea.*—Bread oppresses the stomach.—When eating little, he feels a sort of *cramp in the stomach* a few hours after eating.—He cannot bear even the lightest kind of food: a little bread oppresses his stomach, draws his stomach down; nevertheless he is hungry; if he eats a little more he becomes ill-humoured, he almost dies with ill-humour.—The stomach feels replete and constricted.

**Hypochondria.**—°The region of the liver is painfully sensitive to contact. \*Stitch in the region of the liver, preventing inspirations and eructations. °Burning in the region of the liver. Pushing and pressing from within outwards in the liver. °Swelling and hardness of the liver. °*Acute hepatitis.* \**Complete jaundice.*

**Abdomen.**—\**Colic as from a cold,* particularly when walking in the open air. \**Colic occasioned by the cool evening air, with diarrhæa.* Colic on touching anything cold. \**Inexpressible colic which only passes off in a lying posture.*—Pain as if the bowels were relaxed and loose, particularly in walking, with sensation as if they were shaking.—He is unable to rest on the right side, for his bowels pain him as if they were pressed. Violent pressure in the right side of the abdomen, as if the bowels were twisted out of the body. Pressure in the abdomen (immediately). Aching pain in the abdomen, ascending to the throat, as if the fauces were scratched by a crust of bread and as if eructations or heartburn were approaching. Pressure in the abdomen as from

a stone. Painful pressure in the right side of the abdomen.—Tensive-aching pain in the hypogastrium, becoming worse when pressing on the part, and disappearing during an expiration; the pain increased while walking; especially when going up stairs, the pain was increased to a sort of cutting pain. Tensive pain over the umbilicus, deep-seated, relieved by eating.—Sensation in the abdomen, close above the genital organs, as if something heavy were pulling downward in the direction of the genital organs, for forty-eight hours; accompanied with a pulling pain in both thighs, as if the muscles and tendons were too short. Painful contraction in the abdomen.—\*Pinching in the abdomen about midnight, waking her. Pinching in the pit of the stomach, followed by soft stool, and afterwards subdued pinching and rumbling in the abdomen, in the evening. Pinching in the abdomen. Redness and heat in the cheeks, followed by burning-pinching pains in the epigastrium. \**During the pinching in the abdomen, he is attacked with chilliness and shuddering.*—Cutting in the abdomen during micturition. Cutting with writhing pain and qualmish feeling. Cutting in the epigastrium. Cutting in the hypogastrium, in the evening, with pressure in the epigastrium, obliging him to loosen his clothes. Tearing cutting in the region of the left kidney. Nightly cutting tearing in the abdomen, which feels cold to the touch.—\**Stabbings* in the abdomen, also deep in the hypogastrium, from right to left, worse when walking, with painful tenesmus, without stool. Boring stitches from the hypogastrium through the anus.—Chilliness in the abdomen. Burning in the abdomen, particularly in the umbilical region.—°*During the pain, the abdomen is painful to contact or pressure.* °Enteritis? °Peritonitis? °Ascites? °Serofulous enlargement of the abdomen, from swelling of the mesenteric glands?—\**Distention of the abdomen.* Distended hard abdomen, °also with painfulness to contact, particularly in the umbilical region.—Pulsative gurgling in the abdomen, or in the abdominal muscles after a meal. Rumbling in the abdomen, after drinking. Every stool is preceded by rumbling and grumbling in the abdomen. In the evening, an hour before going to bed, and every time he emits urine, he is tormented with flatulence, distending the abdomen, and then passing off without smell. *Frequent emission of flatulence.* Stinging itching of the abdomen, in the evening; scratching occasions a burning; there is no eruption visible on the skin. Small buboes in the left groin, and burning during micturition. Aching-boring pain in the right groin, when lying or walking. Aching pain in the left groin. Tension in the region of the left groin. Intensely-painful stitches in the left groin, worse during an inspiration. Pricking pain in the right groin, in the region of the ilium. Violent, long cuttings in the right groin, causing him to start. Pain as if the inguinal glands were swollen. Aching pain in the inguinal glands, from time to time. Stitches in the fold of the hip-joint (and heel) towards evening. Creeping in the inguinal glands. Drawing pain in the groin and testicles. *Swelling of an inguinal gland* (bubo); first there is a redness round the gland, which is painful when walking and when pressing on it; afterwards the elevated portion of the gland becomes itself red and inflamed; he was unable to walk or stand without suffering great pain, and had to lie down. °Ulceration and supuration of the inguinal glands. °Syphilitic and serofulous buboes.

**Stool.**—Frequent tenesmus, after which he passes a small quantity of hard, thick fæces, with great effort and at long intervals. Stool after some cutting pain in the abdomen. Stool, after pinching and writhing in the abdomen. \**Desire for stool every moment, with tenesmus, without being able to accomplish anything.* Constant desire for stool, passing but little every time, with pinching in the abdomen.—Stool, once every three days. \**Constipation*—for several days with catarrhal fever, hypochondriac low-spiritedness, and aversion to all

nourishment, except beer.—Ineffectual desire for stool, in the morning. Ineffectual pressing on the rectum, and protrusion of the varices, feeling sore. Anxious desire for stool, accompanied and preceded by great nausea and pressing in the temples. Cold sweat, as from anguish, in the face, with excessive uncomfortableness for a quarter of an hour, and diarrhœic stool. A good deal of desire, anxiety and trembling of the whole body before the diarrhœic stool; the stool is succeeded by bitter, rancid eructations, and some heartburn. *A good deal of pressing during stool, and little discharge.* Violent urging, sometimes compelling him to go to stool suddenly.—Stool passes off in small pieces, like sheep-dung. Tenacious stool. \*Hard stool, -large, and passed after much pressing and pains at the anus. Seanty hard stool.—Several seanty burning-smarting stools during the day.—\*Every stool is preceded by chilliness or shuddering. \*The diarrhœic stool is preceded by chilliness and urging, and the chilliness is mingled with flushes of heat. \*Chilliness between the diarrhœic stools; -but when going to stool, he was attacked with flushes of heat, especially in the face.—He is very much exhausted after an evacuation which was accompanied with much pinching. \*He feels nauseated during a diarrhœic stool and eructates considerably.—\*Discharges of bloody mucus, accompanied with colic and tenesmus. °Dysenteric stools.—°Fall dysentery.—\*Loose fæces lined with mucus and blood. \*Papescent stools with mucus. \*Stool of the colour of sulphur. \*Yellowish, diarrhœic stool, twice a day, without sensation, for several days. \*White-gray stool. \*Mucus discharge from the rectum, with scanty discharge of fæces, four or five times. \*Stool only at night. Urging desire for stool, which goes off involuntarily, unless he can relieve himself as soon as the desire is felt. \*Diarrhœa in the evening and at night. \*Diarrhœic stool streaked with blood. Discharge of red mucus from the rectum (in a few hours). \*Bloody stools, with painful acrid sensation at the anus. \*Discharges of dark-green mucus, -preceded by pressure in the abdomen as of a ball. \*Dark-green, bilious, frothy stools. \*Green, slimy, acrid stools corroding the anns. \*Discharge of green mucus with burning at the anus and protrusion of the anus. Loose, brownish, easy stool, floating on the water. °Chopped-like stool. \*Sour-smelling stools. °Undigested stools. °Black, °tenacious, °pitch-like stools. Diarrhœa with cutting and pressing in the rectum. Burning diarrhœa. Bloody diarrhœa for several days, followed by hard stool with blood. \*Green diarrhœa with violent pinching and cutting.—\*Burning pain at the anus, with the loose stools.—Burning at the anus after every stool. Protrusion of a varix, with stinging pain during stool and when touching it. Hemorrhage from the rectum during micturition. \*Discharge of blood before, during or after the evacuation of fæces, even when hard. Pinching sensation in the anus, as in diarrhœa, with emission of a quantity of flatulence. Sharp stitches in the anus, causing him to start. Itching of the anus, as from ascarides. Soreness of the anus. \*Ascarides creep out of the rectum. \*Discharge of several large lumbrici. °Falling of the rectum which is black and discharges blood.

**Urinary Organs.**—Frequent desire to urinate, with scanty discharge of urine. Constant desire to urinate, but no urine is passed. Had to urinate every hour, day and night, with violent burning in the urethra at the commencement of micturition. Had to urinate every ten minutes, but passed very little urine each time. Frequent desire to urinate (after a nightly emission).—The urine he emits is more than the quantity of liquid which he had taken. Pressure on the bladder after micturition. Pressing in the genital organs, after which she is obliged to urinate considerably. Has to urinate at four o'clock in the morning. Has to urinate three times in the night, and passes a quantity each time. The stream is extremely feeble. Dark, red and brown urine.

Urine with whitish flocks. \**The urine is extremely turbid even while leaving the urethra, and deposits a sediment.* °Turbid and fetid urine. The urine looks as if stirred with flour, it deposits a thick sediment. The urine is reddish, it becomes thick when standing, and a cutting pain is felt during the emission. Aerid urine. Dark urine for several weeks. The urine is at first clear, then it becomes white as if mixed with chalk; shortly after a burning pain is felt in the urethra after merely touching the penis. *Brown-red urine.* Small pieces of hardened mucus are passed with the urine, resembling little pieces of flesh. \**Whole pieces of white filaments and flocks are emitted after the urine, without pain.* \**The urine smells sour.* Emits but a small quantity of urine which looks as if mixed with blood. \**Scanty, fiery-red urine.* \**Dark-red urine, as if mixed with blood.* °The urine looks as if mixed with pus or mucus, and deposits a thick sediment.—Inability to retain the urine, when he feels the desire to urinate.—Nauseous qualmishness during micturition.—\**Burning in the urethra between the acts of micturition.* Burning in the urethra at the commencement of micturition. Early in the morning, *cutting* during micturition. Cutting at the commencement of micturition. Burning, afterwards smarting pain, during micturition. Cutting smarting, particularly towards the end of micturition, with irresistible desire to urinate —\**Discharge of blood from the urethra.*—Itching of the pubic bone above the penis.—\**Cutting and °contraction in the region of the kidneys at night.*—Gurgling in the urethra resembling stitches. Sticking resembling a beating in the urethra. Stitches in the forepart of the urethra, between the acts of micturition. Stitches in the urethra in the direction of the abdomen, towards evening. Drawing stitching in the urethra, several times. °Cutting in the urethra. \**Greenish gonorrhœa, particularly at night.*

**Male Genital Organs.**—Soreness between the organs and the thighs. Profuse sweat of the parts, when walking.—The glans is cold and shrivelled. Deadness, going to sleep of the *penis*, for a quarter of an hour. Itching of the glans. Itching stinging in the glans, when pressing the part. Itching pricking of the glans, after micturition. Voluptuous titillation in the glans. Lancing pain in the forepart of the glans, extending through the whole penis as far as the anus, sometimes as far as the groins. Swelling of the anterior part of the urethra with suppuration between the glans and prepuce; the prepuce feels red and hot, and is very painful when walking or touching it; accompanied with a painful tumultuous sensation in the forehead, and a rough, itch-like eruption on the hands, especially in the region of the joint of the thumb, rather superiorly, and itching very much at night. \**Inflammation of the prepuce, -with burning pain.* \**Considerable swelling of the prepuce, -as if distended into a blister by water or air.* \**Swelling of the prepuce, and inflammatory redness of its internal surface, with great sensitiveness to pain.*—\**Balanorrhœa.*—Voluptuous itching in the surface and the interior of the prepuce. Swelling of the prepuce, with burning, smarting, and redness, with cracks and rhagades on the internal surface, and a red, fine eruption on the surface.—Vesicles on the forepart and sides of the glans, penetrating into the part and spreading; they discharge a fluid and soon disappear. Burning around the glans in the evening, afterwards vesicles on the inner surface of the foreskin, which soon form little ulcers, healing rapidly. A number of small red vesicles at the termination of the glans behind the prepuce, changing to ulcers, which burst and discharge a yellowish-white, staining, strong-smelling matter; afterwards the larger ulcers bleed, and when touching them, a pain is felt in them which affects the whole body; they are round, their edges, which look like raw flesh, overlap the ulcers, the base of which is covered with a cheesy lining. °Chancre.—Feeling of coldness in the

*testicles*, afternoon and evening, for a fortnight. Previous to emission of flatulence, the swollen testicle is sensitive to pain, but not painful. Violent stitches in the serotum. \**Drawing with pressure in the testicles*, the drawing predominating. \**Drawing pain in the testicles and in the groin*. \**Drawing in the spermatic cord*, at intervals. Spasmodic tearing pain, commencing between the testicles, extending into the penis, and causing considerable itching in the ulcers. Itching in the right testicle.—°Hard swelling of the testicles, with shining redness of the serotum.—Emission of semen without any voluptuous dreams. Imperfect erections with tension in the region of the genital organs, they are apparently occasioned by flatulence. Boring stitch in the perinæum when walking and sitting. Emission during the siesta, followed by burning pain in the orifice of the urethra during micturition. Painful erections. *Nightly emission of semen, mixed with blood*. After having had an emission in the night, he is cold all over early in the morning, but not weak. Burning in the urethra of the male, during an embrace.

**Female Sexual Organs.**—Biting sensation in the female urethra during micturition. Itching of the labia. Long-lasting itching of the labia shortly before the menses. Pimples or tubercles on the labia. Inflammatory swelling of the internal surface of the vagina, as if red and swollen. \**Prolapsus of the vagina*.—°Suppression of the menses. The menses are too profuse and attended with colic. Discharge of blood six days before the menses.—*Before the menses*, °dry heat, with rush of blood and congestion of the head.—During the menses, anxiety, °red tongue, with dark spots and burning, salt taste in the mouth, sickly colour of the gums and the teeth are set on edge. Metrorrhagia of an old female, whose menstruation had ceased eleven years ago. Metrorrhagia lasting three weeks. Leucorrhœa causing an acrid sensation. Purulent leucorrhœa. Corrosive leucorrhœa. Mild leucorrhœa. Leucorrhœa, especially in the evening from eight till ten o'clock, greenish, causing a smarting in the forepart of the genital organs, obliging her to scratch, especially in the evening and at night; the scratching brings on a violent burning. Discharge of floccs, pus, and mucus, from the vagina, of the size of hazel-nuts.—Excessive liability to become pregnant.—Pain in the mammæ, also periodically, as if ulceration would take place. Swelling of the mammæ, particularly of the nipples, which are somewhat harder. °*Hard swelling of the mammæ, with sore pain, or with suppuration and ulceration*. °Soreness of the nipples.

**Larynx.**—\**Catarrh with chilliness*, -hypocondriac mood, aversion to every kind of nourishment, and constipation. °A specific remedy in catarrh with cough, coryza (sore throat), chilliness, dread of the open air. °*Constant hoarseness and aphonia*. °Nasal sound of voice. °Burning and tickling in the larynx. —°Specific in gripe.—\**Dry cough*.—\**Cough with expectoration*.—\**Fatiguing*, short dry cough, excited by a titillation behind the upper part of the anterior wall of the chest, especially when talking, and scarcely permitting one to speak a word. Violent cough for many nights, with irritation as if from the stomach, inducing cough; the cough sets in while waking and sleeping, and does not oblige him to raise himself.—\**Cough which sounds as if the whole inside of the chest were dry, with pain in the chest and small of the back*. \**Violent racking cough every -other -evening*, when he was on the point of going to sleep, as if the chest and head would fly to pieces, for half an hour; -the cough is followed by violent stretching.—°Rough cough with feeling of dryness and stinging in the throat. °Spasmodic cough, with retching.—Short and hacking cough.—Hæmoptysis. *Bloody expectoration* when walking in the open air, or when at work. While lying, he coughed up more than a pound of blood in three hours. Sensation

during cough, as if his breath would be arrested.—*Inclination to vomit during cough.* °Stitches in the occiput during cough.

**Chest.**—Difficult breathing, as if he had not air enough, early in the morning. \**Shortness of breath*, as if one had inspired smoke. \**Shortness of breath when going up stairs.* \**Shortness of breath when walking*, —as if he could not take in sufficient air. Anxiety behind the sternum; he has to take a deep inspiration.—Oppression in the region of the sternum. Pain in the chest as if oppressed. Anxiety about the chest; a sort of asthma. When turning to the left side, in the evening, in bed, he is obliged to breathe very deeply, causing an intolerable pain in the region of the left groin. Dyspnœa after a meal.—Aching pain in the side of the sternum, extending through to the back, and being even felt during rest, but worse when walking in the evening; afterwards the place felt painful, as if bruised.—Pressure in the left chest, hindering deep breathing. Aching in the right chest when arresting the breath, going off during an inspiration and expiration.—*Burning sensation* in the chest, extending to the throat. Burning in the left side, in the region where the ribs terminate. Sore pain in the chest. Bruised pain in the upper part of the chest, in the evening, as from a blow.—Cramp-pain and tension in the left side, directly under the ribs, not painful, but he lacked breath and dared not stir, for on making the least motion, with the arm, etc., or when uttering a single word, he felt as though life would cease.—*Single stitches* in the chest, when stooping. When *sneezing and coughing*, between the acts of respiration, he feels a stitch in the anterior and superior portion of the chest, extending through to the back; the chest feels contracted and squeezed together by the stitch. Single sharp stitches in the chest (every stitch continuing for five minutes), more particularly in the forenoon and when walking (also in the knee, the malar bone, and the olecranon). Five or six severe stitches *in the left chest*, during and between the acts of respiration. Stitches in the left side. Dull stitches in the right chest, for some minutes, only during an expiration, when lying and stooping.—Stabbing pain in the left side, under the short ribs, during every inspiration.—Painful feeling, as if swollen, in the left side under the last ribs.—Twitching in the muscles of the chest on the right side. Stitching in the region of the last true rib, and in the inguinal region during an inspiration, with oppression of breathing. Gripping under the mammae, after a meal, at intervals. Violent tearing in the muscles of the chest, near the left shoulder. Tensive pain in the anterior part, and all around the chest, diminishing the breathing (when sitting; for some days). *Violent bruised pain* across the chest, not relieved by changing his position.—\*Palpitation of the heart.

**Back.**—*Tearing pain* in the region of the *os coccygis*, relieved by pressing the hand against the abdomen.—*Gripping pain* in the small of the back, especially when standing, somewhat relieved by walking. Pain in the *os sacrum*, as if one had been lying on a hard couch. Pain in the small of the back, relieved when sitting. *Bruised pain in the small of the back*, especially when sitting (for several days). Itching of the *os sacrum* when walking. Pricking itching in the *os sacrum* when walking. *Stitching in the small of the back* during an ordinary inspiration. Stitching pain in the small of the back and in the thighs, *with unsteadiness in the small of the back, knees and feet.*—Fine stitches on the right side of the spinous processes of the *os sacrum*. Pock-shaped eruption directly above the anus, with pressure, particularly when sitting.—Sharp prickings in the *dorsal spine* between the scapulæ. Fine and coarse stitches in the dorsal muscles when walking. Smarting pain in the back, especially when sitting. Itching in the back, in the evening when in bed. Titillation in the left

side of the back. (Burning itching and heat of the whole back, especially when walking in the open air.) Burning-hot sensation in the whole back. *Bruised pain* in the back. When walking in the open air he feels a bruised pain in the left side of the back, as if he had stooped too long, for several days.—Burning pain on the right shoulder, extending as far as the nape of the neck (while sitting). Burning between the shoulders and down the back. Violent pain between the shoulders at the commencement of the neck, when turning the head, or when turning the body while lying; when lifting anything the pain became so violent that he had to press his teeth together.—*Twitching* in the region of the right scapula. Itching in the region of the right scapula.—Tearing in the scapulæ. Painless beating in the scapula, terminating in a trembling. Cramp pain under the scapulæ, during motion, after midnight. Bruised pain in the left scapula, with stitching and tension in the part; when turning the head, the pain became so violent that he cried out and wept (in the morning immediately after waking). *Little blotches and ulcers* on the scapulæ and abdomen.—Burning pain in the upper part of the right shoulder, extending as far as the nape of the neck when sitting. Stiffness of the nape of the neck, and stitches in the part, during motion. A sort of rheumatic pressure in the nape of the neck, even during rest, most violent when bending the head backward. *Swollen and stiff neck, with difficulty of turning it*, accompanied with a feeling of heaviness in the neck.—Stinging pain in the cervical glands. \**Swelling of the cervical glands, also with painful closing of the jaws*, °or inflammatory swelling with stinging and pressure.

**Upper Extremities.**—The left shoulder *became raised* above the right, with pain in the shoulder which wakes him from sleep, and is especially felt during motion. The shoulders and the upper part of the arm feel as if *gone to sleep*, early in the morning when in bed. Horrid stitches in the shoulder-joint in the evening. Cracking in the *shoulder and elbow-joints*. Jerking and beating sensation in the shoulder-joint. \**Tearing in the right shoulder-joint, the humeri and wrist-joint* (in the knee and hip-joint and in the region of the femora), °particularly at night and when moving the parts. Pain in the shoulders as if pressed down. Burning in the outer parts of both arms, obliging him to let everything he held in his hands drop, and to let his arms fall. The right arm and hand felt as if *gone to sleep*, less during motion. Tearing in the internal surface of the right arm. When leaving the arm for a long time in the same position, he feels an *intolerable, painful weariness* in it; he has alternately to stretch and bend it, the stretching being the more pleasant. Jaetitation of whole muscles of the right arm. The right arm is *shaken and tossed about* the whole night. When raising the left arm, it feels heavy, and as if sprained.—Crushing pain in the humeri.—Darting, tearing in both upper arms; the flesh feels sore when touched.—Tearing in the right *elbow-joint*. Single, pointed stitches of five minutes each, in the olecranon, in the malar bone, chest, and in the outer condyle of the tibia; more in the forenoon, and when walking. Slow laceration in the elbow-joint. The left arm, especially the elbow, is covered with *small, red, not inflamed elevations*, the tips of which became white, scaly, and itching; they burn when scratched. Red, violent, hot *swelling* of the left elbow, extending as far as the hands, burning and tearing with formication. Burning in the elbow-joints. Itching of the left elbow. Stitching in the region of the elbow.—Painful weariness in the bones of the *forearm* (and in the tibiae), not when touched. Sticking cramp-pain in the muscles or on the periosteum. Itching *rash* on the forearm. \**Herpes* on the right forearm, round, the skin peeling off, with voluptuous itching, and lasting eighteen days. Large, red, round, *scaly spots*, with burning pain, one inch in diameter, on the forearm and

wrist.—Paroxysms of painless beating in the *wrist-joints*. Red tubercle on the dorsum of the hand, burning when first coming out. Blisters full of a watery fluid on the inner side of the wrist-joint. \*Itch-like eruption on the hands, —with violent nightly itching and raging pain in the forehead. *Painful stiffness of the right wrist-joint*. Paralytic weakness in the left wrist-joint, with cracking and sticking in the joint. Pain in the left hand (in the bones) when stretching it, when seizing and pressing anything, as if *rigid and paralytic*. Cracking, sticking, and want of strength in the wrist-joint. The left wrist-joint is swollen, and painful when moving it, and seizing anything hard. Deep rhagades in the hands, looking like incisions (chapped hands). Considerable swelling of the left hand. Tension in the whole hand.—Drawing pain in the hands, with coldness of the fingers. Severe *cramp-pain* in the left hand, especially the fingers (when moving the hands). The hands and fingers are liable to become *rigid when working*, and a cramp-pain is experienced in them. The skin of the dorsum of the hand peels off. Corrosive itching of the dorsa of the hands, in the evening when in bed, going off after scratching, but returning soon. Violent tickling in the palm of the left hand. Fine tickling in the palm of the left hand. \**Contraction of the fingers of both hands*, —especially the thumb, which is clenched, as in epilepsy; without aid he is only able, with great exertions, to stretch the fingers two-thirds; the hands trembling all the while. *Painful cramp* of the fingers and hands; first, the fingers became stretched, making the bending difficult; after bending them, the cramp contracts the fingers.—Deadness of the fingers. *Deep rhagades in the fingers, the base of which looks sore and bleeding*. The fingers, especially the inner sides, became cracked as if cut into. Deep crack, resembling an incision, between the thumb and index-finger, bleeding and painful. Small sores on the finger-joints which are somewhat ulcerated. In the morning the fingers go to sleep, with buzzing in the fingers, afterwards tearing, extending to the middle of the forearm. Painful swelling of the posterior knuckles. Tearing in the finger-joints here and there. Titillating, stinging itching of the inner side of the posterior joint of the right thumb. In the afternoon the thumb is drawn near to the index-finger (of the left hand, which had been held in a horizontal position while sitting); this thumb and index-finger remained pressed against one another for several minutes, as if by a violent cramp; accompanied with fine stinging in the thumb; in a few minutes the thumb receded from the index-finger spontaneously, whereas during the cramp, the fingers could not even be separated by force. Aching pain in the middle joint of the middle finger, when bending it. *Visible twitching in the tendons of the fingers* (also those of the toes and the tendo-Achillis) in the evening, accompanied with violent chills which raised him off his seat. Dull, stitching, cramp-pain in the left index-finger. Digging-up pain along the ball of the right hand, commencing on the outer side under the little finger, worst when at rest.—Burning jerking under the ball of the thumb, when writing. *Exfoliation* of the finger-nails.

**Lower Extremities.**—Sharp stitches in the right *ilium*, posteriorly. Sharp, acute stitches, at regular and short intervals, in the anterior-inferior spinous process of the ilium. Boring pain in the right *glutei muscles* (when sitting). Burning of the nates. Stitching in the right hip-joint. Red pimple, with a white tip, on the nates, painful and stinging. \**Tearing in the hip-joint*, in the knee, and in the femora, (in the right shoulder and wrist-joint, and in the humerus, particularly at night and during motion, sometimes with a feeling of coldness in the affected parts.—Itching of the *lower extremities*, in the evening. The lower extremities frequently go to sleep, as if paralyzed. Tearing drawing from the heel to the buttocks, worse at night, with

contraction and giving way of the knees. Stiff feeling in one limb, when walking. Stitching of the thighs and legs during motion. A good deal of stitching in the lower limb when treading firmly as if it were too short. Drawing and heaviness in the lower limbs. Involuntary *twitching* and *moving forward* of the lower limbs. Trembling when walking, worst about the knees and in the inguinal region. The limbs give way. Drawing pain in the thighs and legs. Shining transparent swelling of the thighs and legs. Itching eruption on the limbs, especially the inner surface of the thighs. Pain of the right thigh as if bruised, especially when feeling it, and aggravated by walking. Itching of the inner sides of the thigh, becoming agreeable by scratching, which occasions the appearance of small blotches. Coldness of both thighs. Cramp-like pain of the left ham-strings, near the knee (when sitting). Stitch-like tearing in the muscles of the right thigh, in every position of the limb. Tensive pain in the right thigh (when sitting). During a nightly slumber (without sleep), he feels a violent tensive pain in the posterior part of the left thigh, in the buttock, (most violent in the bend between the buttock and the thigh), and extending as far as the bend of the knee; the pain is most easily relieved in a recumbent posture by supporting the thigh by means of something laid underneath; she cannot sit on the posterior part of the thigh on account of the pain; the pain becomes periodically worse. Drawing pain in the anterior surface of the left thigh. Painful pressure in the thighs behind the muscles, as if the parts were drawn from above downwards. Eruption on both thighs in the evening (preceded by heat in the head and in the dorsum of the foot), itching, a burning water oozing out after scratching, as when one pours brandy into a wound; about midnight, the abdomen and thighs become covered with sweat, after the itching; no thirst. Stinging and itching in the skin of the thighs, waking him at three o'clock in the night. Small pimples on the inner surface of the thighs. \*Herpes on the posterior surface of the thigh, painful when scratched, and the epidermis coming off when scratching, for thirty days. Tumour on the upper portion of the left thigh, painful when walking and when feeling it. Gnawing, itching ulcers on the outer side of the right thigh. Cramp in the lower part of the thigh, above the bend of the knee.—Both knees feel to him too large and big, and he experiences a jerking in them for thirty-six hours. Crawling from the right knee to the middle of the thigh, anteriorly. The knee-joints are painful, as if broken, when lying. Slow laceration in the right knee when sitting or walking. Great weariness above the knee when walking. Tearing in the knee-joint. Simple pain in the right knee, and as if stiff. Paroxysms of painless beating in the knee-joints.—Weakness in the knees and tarsal joints worst when standing, as if the tendons were without strength and firmness. Sensation as if the bend of the knee were too short. Stitching in the knee-joint when walking in the open air. Single pointed stitches of five minutes' duration each, in the region of the outer condyle of the tibia, not in the knee-joint (also in the malar bone, chest, and olecranon), more in the forenoon and when walking.—Weariness and restlessness in the legs, in the evening. Spasmodic drawing up of the legs, they remained contracted the whole night. Swelling of both legs. Dropsical swelling of the legs and feet. Excessive swelling of one leg. A number of ulcerated sores on the left leg remaining open for eight or ten days; at first they were small, itching pimples; when healing, the skin scaled off all around. Feeling of stiffness in the left leg, extending to the bend of the knee. Itching of the legs. Stitch-like tearing in the muscles of the right leg (when walking in the open air). Drawing pain in the inner side of the left leg above the calf. Hard elevation on the right tibia, red and shining, with a tensive pain—Boring pain in the tibia. Drawing pain in the tibia. Pain in the tibia (and bones of the forearm), as if weary, not when touching the parts.

*Stitching* in the calf when walking in the open air. *Spasmodic contraction* of the calf, occasioning the formation of hard and raised bunches of skin and flesh. One of the calves becomes *excessively long*. *Oblong, deep furrows* in the calves. *Aching pain* in the periosteum of the right tibia, almost like cramp (when standing). *Painful cramp* in the right calf. *Dull, stitching cramp-pain* in the periosteum of the anterior surface of the left tibia, when standing, almost like tearing.—Violent pressure under the ankles and in the tarsal joint superiorly, rendering walking difficult. *Violent swelling* of the right tarsal joint, with stitching pains in the joint, especially when walking, and in the evening. *Pain as if sprained in the right tarsal joint*. *Stitching* extending from the outer ankle to the bend of the knee. *Tearing* from the ankles to the dorsum of the foot, this space being surrounded with swelling. *Painful, slow drawing* in the tarsal joint, below the outer ankle, extending to the hollow of the sole of the foot and commencing with stitching and gripping. *Cold feet* in the evening after lying down, in bed. Toward morning, the feet are covered with cold sweat. Stitches in the heel (and fold of the groin), in the evening. (Burning in the soles of the feet in the evening.) Swelling of the dorsa of the feet. °Painful swelling of the metatarsal bones. Sensation in the soles of the feet as if standing in cold water, accompanied with a burning sensation in the parts. *Digging-up pain* in sole of the right foot (when standing). *Dull, stitching cramp-pain* in the sole of the right foot, near the heel, only when sitting. *Tearing pain* in the left heel (when sitting), as if sprained.—The tendo-Achillis is painful when walking.—*Visible twitching* of the tendo-Achillis and the tendons of the toes, in the evening, with violent chilly shuddering, tossing him off his seat. *Considerable swelling* of the heel, scarcely allowing her to step on the toes; accompanied with violent burning and biting in the whole foot; even when in bed, the pain in the foot was so great that she had to leave the bed. *Cramp-like contraction* of the toes in the night. Paroxysms of *tearing* from the big toe to the other side of the knee. *Swelling of all the toes*. Swelling of three toes, going and coming at short intervals, painful in the night. *Boring pain* in the tip of the third toe, during rest and motion. Burning pain under the left big toe (during rest). *Itching* between the toes, most violent in the afternoon and evening. *Itching stitch* in the root of the two last left toes (during rest).

**Sleep.**—A good deal of yawning before dinner and supper. Drowsiness (when sitting), going off in walking. While standing, she was seized with an irresistible sleep. First, drowsiness, afterwards sleeplessness. Continual slumber, but no sound sleep. Slumbers in the night, and turns from side to side, as if the bed-cover were too heavy. Drowsiness, interrupted by starting, palpitation of the heart, and frightful fancies (for example, as if he would have an epileptic fit). Nightly sleep with open mouth without snoring, but with frequent tossing to and fro in the bed, as if he had no rest. \**Great inclination to sleep, in day-time*. Sleeps twelve hours and this is not enough. He falls asleep every moment, day and night, and wakes again every minute. *Too much sleep and too sound*. Sleeps even in the afternoon.—Cannot sleep soundly after midnight, and feels at night a violent tensive pain in the left lower limb. *Sleeps much in the day-time, and is sleepless at night*. Sleeplessness with excessive restlessness, anxiety and unpleasant feeling. Excessively weak, and constantly drowsy, yet he is unable to sleep. \**Wakeful un'til three o'clock in the morning*; she sweats before falling asleep (from two to three o'clock). Falls asleep late and wakes quite early. \**Falls asleep late in the night*. He wakes every night between two and four o'clock. He is unable to go to sleep, he tosses about without knowing why, and feels very tired in the morning. *He wakes every night at four o'clock with a desire to urinate*. Sleeps.

only towards morning. He wakes in the night with sweat on the legs, from the knee down to the foot, which disappears as soon as he uncovers his feet. After having slept two hours, she wakes at eleven o'clock in the evening, as if started by fright; she weeps aloud for some minutes, before she is able to collect her senses and calm her mind. She wakes early and is then unable to fall asleep again. *Frequent waking as if by fright.* Frequent waking as if by a noise. *Frequent waking as if he had slept enough.* He wakes every quarter of an hour in the night, without dreaming. The pain re-commences as soon as he gets into bed, hindering sleep. *When on the point of falling asleep, the pain becomes worse, and he wakes again.* Stretching in the night, while waking frequently. When on the point of falling asleep, she starts violently, the starting re-percussing in the teeth and occasioning a severe stitch through the face with shuddering. She frequently starts while asleep, throwing up her arms into the air. Frightful fancies in the evening, hindering sleep. Moaning and muttering during sleep, with hurried breathing and coldness of the hands (not of the feet). \**Excessive restlessness, anxiety and malaise, with sleeplessness.* \**A good deal of anxiety and orgasm of the blood,* at night, with pricking in the blood-vessels. Restless nights, full of heat; he imagines, while half awake, he hears thieves breaking in. Is afraid of falling asleep. Sleeps, but, on waking, every part in his head seems to turn; sleep is rather disagreeable to him than otherwise. Anxious shortly after falling asleep, before midnight; he started and remained anxious until he woke.—He wakes and *dreams* the greatest portion of the night. Agreeable dreams, after midnight.† Dreams about events, in great number, at night. Anxious dreams, with palpitation of the heart; nevertheless, she is unable to wake. He dreams that he is falling from a height. Restless nights, he dreams about robbers. Vivid dreams about his business. She dreams that she has swallowed a pin, and such like anxious dreams, which did not wake her entirely. Anxious dreams, as if he had been bitten by a dog, or about a rebellion, after midnight. Vivid, agreeable and also disagreeable dreams. She dreams that people are standing before her window; on waking she will not believe that they are not there. Dream about an inundation, about shooting. He started in a dream; he imagined that he was not in his house, he sat up in bed and spoke of a distant village. Vivid dreams which he is unable to recollect. Amorous dreams and erection in the second night, without emission.

**Fever.**—Yawning. Wants to drink all the time, even icy-cold water. *Violent thirst.* *Continual coldness of the hands and feet.* He feels cold to himself and others, with chilliness, shaking and blueness of the body, the whole day; she had to bend forward. Cold feet in bed, in the evening. Chilly shuddering over the whole body. Shuddering in the evening, in bed, for half an hour. Shuddering, early in the morning on waking. He feels chilly on walking into the open air. He feels more chilly in the open air than in the room, although the temperature was the same. Chilliness over the whole body, morning and evening; he shakes through and through. He feels chilly, and experiences cold thrills, especially over the hands; behind the ears he feels a dry heat. Chilliness in the back, with heat in both lobules. Chilliness in bed, early in the morning, on waking. Internal chilliness, also early in the morning, in bed. *Internal chilliness* of the whole body, in the forenoon. Chilliness in the morning, and heat towards noon. Chilliness after the siesta. Chilliness towards evening, increasing as he sat nearer the warm stove. Chilliness in bed, early in the morning *and in the evening.* Chilliness of the whole body under the skin, for half an hour, in the evening, in bed. Chilliness until midnight, in the evening, in bed, followed by heat with violent thirst.

† This is probably a curative effect.

*Violent shaking chills* in the evening; he is tossed off his seat (accompanied with subsultus of the tendo-Achillis and the tendon of the flexor communis digitorum pedis). Chilliness in the night, followed by alternation of chilliness and heat. Chilliness all over, *with icy-cold hands*. Chilliness, as if cold water were poured over him. Violent chilliness, from the nose and eyes down to the occiput, with tearing pain in the outer parts, before midnight when lying in the bed. Chilliness all over, at nine o'clock in the evening and through the night; accompanied with emission of urine every hour, and involuntary jerking, tossing and twitching of the head and limbs, while lying in a slumber. Violent shaking chills in the evening while in bed; she could not get warm. Chilliness binds all his limbs, like a violent catarrhal fever; he had to lie down. Trembling of all the limbs, after the chilliness.—*\*Paroxysms of fever, \*especially at night*. Shuddering, frequently mingled with flushes of heat. Shuddering from head to foot, when making the slightest motion; mingled with paroxysms of heat. Heat in the face, with chilliness of the rest of the body. Internal chilliness, with heat in the face and a burning sensation in both cheeks. Alternate heat and shuddering in the face. Alternate chilliness and heat in the head and face. *Fever*: first, *heat and redness in the face*, and a feeling of heat in the whole body, especially in the palms of the hands, without any warmth being perceptible to the touch; afterwards internal chilliness, obliging one to lie down, a sort of shaking chill, continuing until late in the night, and accompanied with a feeling of heat in the palms of the hands and icy-coldness of the tips of the fingers. *Frequent febrile paroxysms*, consisting in general flushes of heat and frequently-recurring chills and shuddering (especially over the face, back, chest and arms). *Alternate sensations of heat and chilliness, not perceptible to the touch*. The face feels hot to him and others, with paleness of the face. Heat and redness of the left cheek, after midnight, with sweat of the palms of the hands; afterwards diarrhoea and aversion to food. Paroxysms of heat, with great anguish, as if the chest were compressed, without thirst, alternating with a feeling of coldness over the whole body, and great failing of strength. Heat, redness, and pressure in both eyes. When sitting for a while, heat mounts to his cheeks and head, with redness of the face, without thirst. Feeling of warmth in every part of the body, for four days, the air being cold and raw (immediately). Heat in the face and head from time to time. Constant *mingling of chilliness and heat*; chilliness out of and heat in bed, with excessive desire for milk in the night, (he drank three quarts of milk in one night). For the fevers which have been cured with Mere., see Clin. Observ.—*\*A good deal of thirst, particularly during the hot stage*. Thirst, day and night. Desire for *icy-cold water*. Thirst for water, towards evening. *\*Violent thirst*. Wants to drink all the time.—*Sweat*, occasioning a burning sensation in the skin. Great disposition to sweat, especially in the night. Profuse sweat when walking or moving. *Sweat in the day-time, with nausea and languor*. As soon as she commences to eat she is attacked with great anxiety, and with sweat on the head and forehead, which feels to her icy-cold; she has to walk into the open air, lacks breath and has prickings under the right ribs. Sweat in the face and on the chest. Profuse cold sweat in the face. Sweat on the palms of the hands and soles of the feet.—*Fetid sweat* for many nights. *Profuse night-sweat*, also of an oily and greasy nature, tinging the linen yellowish and imparting to it a feeling of stiffness. Profuse fetid sweats, as if the mattress and the cover of the bed had been soaked in water. Profuse sweat on various parts of the body, during the night. Excessive sweat, having a sour and offensive smell, and making the fingers feel soaked, spongy, and shrivelled, like the fingers of washerwomen. Sour-smelling sweat; when stretching a limb from under the cover, she felt at once the most violent tearing in it. *Sweat every evening*,

an hour and a half after lying down. *Profuse morning-sweat.* During the morning-sweat he feels thirsty and nauseated unto vomiting, with intolerable palpitation of the heart. °*Profuse sweat in rheumatism*, which does not afford any relief. \**Accelerated pulse.* Pulse twice as fast. Quick and violent beating of the pulse. \**Feeble*, slow and trembling pulse.

**Skin.**—\**Itching* -rendered pleasant by scratching. Violent itching on every part of the body, particularly at night, with great desire to scratch, and a bright-red, hot face. Intolerable stinging itching as from flea-bites, in the evening. Itching, as from the itch, day and night, worse in the evening. °*Nightly itching aggravated by the warmth of the bed.*—*Itching eruptions, with burning after scratching.* Small, transparent vesicles full of a watery fluid, appearing on various parts of the body before day-break. Round *stigmata* (on the thighs and legs), gradually changing to round ulcerated spots, and becoming finally covered with a scurf. Small, *itching pimples*, afterwards changing to *ulcers*, during the healing of which the surrounding skin peels off. *Pustules* on the upper and lower limbs, the tips of which are filled with pus, with itching. *Red, raised little spots*, with stinging itching. Nettle-rash, afterwards changing to red spots. °*Herpetic spots and suppurating pustules*, which either run into one another, forming at times dry and scaly spots, at times discharging an acrid humour, or which remain sore, become hollow and afterwards raised and cicatrized, new pustules springing up in the neighbourhood.—\**Itchlike eruptions* -on the abdomen and thighs, with itching. \**Eruption resembling greasy itch* -on the lower limbs, sexual organs, bends of the knees, neck and abdomen, considerably raised, red as if sore, humid and itching. °*Dry, rash-like, readily-bleeding itch.*—Rash-like eruptions, also over the whole body, particularly on the chest, thighs and the lower part of the back. Measle-shaped rash, with burning and itching.—°*Malignant scarlatina*, particularly with violent inflammation of the throat. °*Mercury is a specific remedy in the suppurative stage of smallpox.*—\**Herpes*, \**with burning when touched.* Dry, raised, burning-itching herpes on the lower and upper limbs, wrist-joints, hands and between the fingers. Herpes surrounded with a border of large scales (on the forearm and knee), discharging a good deal of moisture. °*Impetiginous herpes on the abdomen, thighs and knees.* °*Visibly-spreading herpes after several ulcers, discharging a corrosive ichor.*—Swollen spot, on which a gray, flat scurf gradually made its appearance without moisture, after which the swelling and pain disappeared.—\**Erysipelatous inflammations.*—°*Syphilitic ulcers of every kind, particularly primary.* \**Spreading ulcers.* Spongy, bluish, readily-bleeding ulcers. Ulcers which are extremely painful to the least touch, discharge an acrid, corrosive ichor, with unequal elevations and depressions as if corroded by insects, with unequal quick pulse, sleeplessness, dripping night-sweats and great nervousness, during which the least thing irritates one and makes one impatient.—\**Carious ulcers.* \**Caries*, -and abscesses in the joints. Thickening of the periosteum. Swelling of bones. °*Syphilitic exostosis.*—°*Inflammatory catarrhal, rheumatic, arthritic or erysipelatous swellings.* °*Healthy and malignant suppurations.* \**Glandular swellings*, particularly when not inflamed, or *with intense, shining redness and beating and stinging.* °*Suppuration of glands.* °*Syphilitic buboes.*—Peeling off of the epidermis, particularly on the hands and feet.—\**Jaundice*, -also with biting itching on the abdomen. The linen receives a saffron tinge from the imperceptible exhalation.—*Dropsical persons lost their swelling, in the place of which fetid ulcers made their appearance on the legs, which became speedily putrid.*—Corroded nails of the fingers and toes, with itching.

**General Symptoms.**—(Cracking in all the joints). Cramp in several parts during motion. Paroxysms of painless beating in the joints. While lying, the

head, arms and thighs *go to sleep*. As soon as she sits down, every part of her body goes to sleep, upper and lower extremities, hands, even the abdomen, although less, back and chest, so that she is almost insensible; numbness and deadness all over; when moving she feels a creeping in the moved part, as when a part goes to sleep. *Rigidity* of all the limbs, making it impossible for him to move them in the least; they can be easily moved by others.—\**Violent pain, as if bruised*, in the whole body, especially the thighs; he felt as if he had been beaten all over for many days. All the limbs are *painful, as if dislocated*, more when sitting. \**Arthritic pain* in the joints with swelling of the same. \**Rheumatic or arthritic pains* in the joints and limbs, particularly *at night*, or with copious sweats *which do not afford any relief*. \**Tearing* in the limbs, here and there, also aggravated by pressure, or darting. *Tearing* in the hands, back and chest, with headache. \**Drawing and tearing in the limbs*, particularly *at night*. *Darting pain* in the affected parts.—\**All his bones ache*, when sitting, lying, walking, and standing.—\**Constant uneasiness* in all the limbs, in the evening, like a jerking in the limbs, as is felt after too long a fatigue; *he is unable to keep his limbs quiet*. Restlessness towards evening, he is unable to remain quiet anywhere; he was unable to remain seated for even two minutes, nor was he able to lie down, for then he felt a jerking in his lower limbs, and had to get up again; in the night he started constantly, accompanied with jerking even of the head, and when asleep he threw his arms about. Almost uninterrupted pain in the joints as if sprained, compressed and broken at the same time; the pain obliges him to move his limbs constantly in every direction.—\**Heaviness of the limbs*, with paleness, coldness, laziness and drowsiness. Heaviness as if the blood-vessels were filled with lead, worse when sitting. Every kind of covering is too heavy for him, clothes, bed-cover, etc.—\**Weariness*, with tearing-drawing pain in both thighs, after midnight, in bed; after rising from bed, when stepping, he feels a pain extending from the inguinal region to the knee, as if the flesh on the anterior part of the thigh had been *detached by blows*—\**Langour* especially when sitting, as if his limbs would drop off. Paroxysms of internal mental and bodily sinking. He does not feel languid when sitting, but very much so when walking; then the upper and lower parts of his lower limbs ache very much, as if he had taken a long walk. In the morning he does not feel languid, *nevertheless the least walk exhausts him*. He feels very much exhausted after stool accompanied with much pinching. \**Weakness*, less when walking than when standing. *He complains all over* without feeling a pain anywhere; he feels faint, is not disposed to do anything, is out of humour. Talking is troublesome to him, he is unable to read, his head feels confused and muddled; he is unable to do any work, and goes to sleep on sitting down. Great weakness, he is scarcely able to move along. Excessive weakness and sudden giving way of the knees. Qualmishness in the morning, with heaviness of the lower limbs, languor and drowsiness. At five or six o'clock every afternoon he is attacked with great languor. Weary after a short walk. Languor with melancholy. Great languor in the evening.—Short swoon, terminating in a sleep of five minutes; before the swoon she felt something sweet rising in her chest. Swoon for ten minutes, the pulse being pretty good. She rubs her cheeks and forehead with both hands, after which she feels faint. A kind of swoon, his consciousness remaining intact, mostly when lying; he gasps for breath, with laziness and languor in all his limbs. \**Sinking with an indescribable malaise of body and soul, obliging him to lie down*.—\**Trembling*, at first of the hands only and then of the whole body.—\**Jretitation of the limbs*. He has to lie down in the forenoon, on account of twitching and heaviness of the thighs, with sweat on the whole body and in the face. *Paroxysms of spasmodic contraction* of the upper and lower limbs. Contraction of single parts. Local or

*general catalepsy.* General *cataleptic* immobility. *Rigidity and immobility of all the limbs*, although they can be easily moved by others. *Stiffness and stretching* of the upper and lower limbs with clenched thumbs, preceded by yawning and pain in the small of the back, and succeeded by languor. *Epileptic at ark* at night, with a shriek, stiffness of the body, distention of the abdomen, itching of the nose and thirst.—Paralysis.—Apoplexy.—*Excessive emaciation*, also with complete exhaustion of strength.—Desiccation of the whole body.

**Characteristic Peculiarities.**—The symptoms generally become worse in the evening and *at night*. *The pains become intolerable in bed* (at night). The evening air is unpleasant to him. Chilliness when walking in the open air. Palpitation of the heart when walking. Sweat breaks out on the forehead, as soon as he walks in the open air. *Violent sweat when walking.* *Sweat at every motion.* Sweat when drinking anything warm. The ailments appear more frequently on the left side of the body, (as in syphilis?). He feels better when walking, than when lying or sitting.

## 2. MERCURIUS JODATUS.—(HYDRARGYRUM JODATUM.)

MERC. JOD.—Protiodide of Mercury.—By GEO. W. COOK, M.D., of New York.

### CLINICAL OBSERVATIONS, ETC.

The combination of *mercury* and *iodine* in equal atoms, I first prepared according to Hahnemann's directions, and introduced into homœopathic practice in 1840. A favourable opinion of the value of a combination of these two medicines was the result of practical observations, first from an alcoholic solution, and then by trituration. The latter is decidedly the best, and the only one that should be used. The first trituration has generally been used by me, and I am not aware of any very satisfactory results from higher attenuations. An improvement will follow the first few doses, but it should be persevered in until convalescence is established. If the medicine is discontinued too soon or higher potencies substituted, the patient will often relapse. This I have observed in many instances, and it is not uncommon for the patient to be so sensible of the curative action of the medicine, as to be able to detect any change in the dose from the effect which immediately ensues. In infantile diseases, and in highly-susceptible subjects, higher potencies will be found sufficiently active.

The toxicological effects of iodine and mercury in combination, are not noticed by Christison, nor have we any more recent trials upon the healthy with it that may be relied upon as purely pathogenetic of this combination. First using it for jaundice and some other diseases of the liver and stomach, new symptoms were observed to follow, which were properly ascribed to its over action, and although this was not the best way to obtain a true pathogenesis, still it served as a guide to its future use, in which we have not been disappointed. It was first brought into notice as a valuable auxiliary in the treatment of tracheal and bronchial disease in 1842, by some observations which I communicated to the editor of the Homœopathic Examiner, since which time it has been extensively used in the United States, and with the most satisfactory results. Thus while our pathogenesis is limited, our clinical observations are so abundant as to make it a valuable addition to our materia medica.

Both these medicines, in their uncombined state, are acknowledged by long experience to have a more powerful medicinal action or influence over mucous tissues and glandular structures, than any other articles of the materia medica, and yet there are constitutional idiosyncrasies and peculiarities which cannot bear even an infinitesimal dose of either of these medicines separately. In delicate serofu-

lous subjects mercury alone is inadmissible; and iodine not unfrequently disturbs the nervous system too powerfully to be borne. Here this combination will be found to be peculiarly adapted. A modification of the evil properties of both is clearly obtained, while a new energy is given to their curative properties. Hence many diseases which would strongly indicate either of these medicines separately, and yet will not yield to them, will be quickly cured by their combined action. Again, we often meet with cases in which the constitution has been broken down, from the organism being completely saturated with mercury, administered by allopathic practitioners during "fevers, liver complaints, lues venerea," etc., where the usual antidotes have but little influence beyond a mere palliation of the sufferings of the patient; here this combination cures the difficulty radically, with the aid of some other judiciously-selected remedies, and the patient whose case had been considered incurable because of the inadmissibility of mercury, finds prompt relief from the protiodide of mercury. The most important sphere of the action of this combination, is the mucous-glandular and parenchymatous structures.

It is most happily indicated (other conditions coinciding,) in all enlargement or disease of the glands, acute or chronic, "conglobate or conglomerate" swelling of the parotids and tonsils during scarlatina, enlargement, engorgement or torpor of the liver or spleen during fevers, particularly those fevers of a typhoid type, enlargement of the inguinal glands and testicles during "gonorrhœa" or lues, a feeling of soreness of the scalp on combing or brushing the hair. Inflammation of the meibomian glands, with ulceration and adhesions of the lids in the morning, from an accumulation of matter on the edges of the lids. Inflammation and ulceration of the conjunctiva and sclerotica, with elevated, granulated and swollen surface. (Scrofulous ophthalmia,) chronic inflammation of the lachrymal sac and duct. Catarrhal inflammation of the posterior nares. The whole mucous membrane of the nose inflamed, and the wings of the nostrils excoriated from the profuse discharge of corrosive mucus, particularly in children. Nasal bones sore to the touch, and black spots on the skin.

*Mouth.*—Sordes about the teeth and lips. Dry lips, tongue dry, and deeply chapped in the centre, deeply coated whitish, ash-coloured, velvety, deep yellow or brown. Ulcers are scattered along the margin of the tongue, with red edges and an ashy gray centre, the edge of the tongue shows the prints of the teeth where it rests against them. The gums easily bleed and look spongy, or have small ulcers of the same character as those on the tongue. The buccal and submaxillary glands are enlarged, inflamed, painful, throbbing, or hard, painless and hypertrophied; parotids and tonsils are in a similar condition, and there is an abundant flow of tough saliva, with cough and expectoration of yellow mucus, or transparent frothy mucus, with an occasional heavy flake in the centre. The teeth are sore and feel as if elongated, with sharp shooting pains proceeding from them up the side of the face to the temples and head.

*Throat.*—The uvula, tonsils and isthmus-faucium are inflamed. The mucous membrane of the posterior nares, pharynx, etc., is changed from its normal pale red hue to a deep scarlet, or even purple, as the inflammation advances in severity. As it passes to a chronic form the inflammation appears more in patches, of an irregular circumscribed form, growing paler towards their circumference until it is blended in the colour of the surrounding membrane into which it merges. From the surface of these patches a quantity of tough, white, or yellowish mucus is discharged, which keeps the patient constantly coughing, or hawking, to clear the air passages.

In some cases, where the passage of the disease is rapid, and the inflammation is intense, the membrane is smooth, shining, tense, glossy, and dry; the capillary vessels, which in the healthy condition of the parts are not seen, now

become distinctly visible from their enlargement. In some instances the mucous follicles are so much impaired in their function as to cease to throw out any healthy mucus, and the entire entrance to the air-passages, and œsophagus, and palatine arch, is deep red, and dry, except spherical drops of water which stand on the surface like sweat, presenting the appearance of an erythematous inflammation, with exudation very analagous to that which appears on the skin. The epiglottis, particularly at its root, is more abundantly supplied with mucous follicles, and hence is most affected by this condition. The inflammation extends from the lingual surface of the epiglottis to the laryngeal surface, and by continuity to the entire surface of the larynx, trachea, and bronchial ramifications. The voice is changed, or entire aphonia may take place as the inflammation extends to the larynx and involves the chordæ vocales in ulceration. At this stage, in addition to the character of the expectoration, we have the following signs of this extension of disease; external pressure upon the larynx produces pain and sometimes cough, which latter is of a peculiar cracking character, with a rattling in the throat.

In the second stage of some forms of this disease of the throat, particularly when the first stage has passed off slowly, the surface is raw, the epithelium, which in the healthy condition of the mucous membrane covers its surface, being entirely destroyed, the mucous glandulæ will gradually swell and project, showing small pea-like granulations studding the entire surface, in a state of hypertrophy, the transparent and bland mucous secretion of the healthy state by this transformation to diseased action becomes opaque, viscid and tough, causing a constant disposition to cough or hawk, which brings off a large quantity of this diseased mucus.

A feeling of soreness attends upon pressing the larynx, upper end of the sternum and under the clavicles, with weariness and oppression, and a rattling "*râle muqueux*" which the patient notices, in the larynx and trachea, and auscultation discovers this rattling to extend more or less throughout the chest. The respiration is hurried, and the pulse over 100, small and wiry, slight chills and fever followed by perspiration twice in twenty-four hours. Percussion exhibits a dull sound throughout the clavicular region and upper lobes of the lungs, and tuberculation, more or less extensively developed, or hepatization, which often follows inflammation of the lungs. Emaciation, hectic fever, night and morning cough, with mucous or muco-purulent expectoration, leaves but little hope, even from this agent, after all other means have proved abortive. I have been more minute in the details of this portion of the diseases of the mucous and glandular tissues, because this is by far the the most important sphere of the action of the protiodide of Merc. Many of the conditions above described, will indicate other remedies, and will at once be recognised. I mention this as an auxiliary in the treatment of most, if not all, of these phases of morbid action, and a specific for some of them. A number of highly-important cases might be cited to illustrate this practice and prove its value, but this is not the place, and we will pass them over, trusting entirely to the practical skill and discrimination of the reader, to prescribe this remedy when it is best adapted. The causes which tend most to bring about these pathological changes are numerous, and as this is not the place to enter into a full investigation of them, we shall only enumerate a few.

The exceedingly-great changes of the temperature, of the northern portion of this continent, are prominent among the first causes; public speaking has been another source of great evil to the throat. The almost indiscriminate use of Merc in the treatment of all fevers, and in all portions of the world has had a prominent share of these throat diseases justly turned to its credit. A great

many of these cases may be traced back to a period of life when the patient had a fever or some other disease, in which pytalism was at one time considered as the "sheet-anchor," and although fevers were broken up as soon as a certain quantity of saliva could be discharged, yet recovery was only a transfer to to laryngeal phthisis, which quickly terminated the sufferings of the patient, or chronic inflammation and ulceration of the entire mucous membranes was the secondary effect to stick to the patient through many tedious years, if not an entire life.

The last cause of the extensive prevalence of disease of the air-passages which I shall mention here, is the indiscriminate and popular use of the topical application of nitrate of silver to these parts. This like hydropathy, has been resorted to, from time immemorial, as an auxiliary in the treatment of disease, and with due discrimination, salutary results follow. But he who rides a hobby to such an extent, as to thrust a sponge into the throat of every patient that presents himself, whether it be for a recent catarrh, tubercular phthisis, or any other grade of disease, must do immense injury.

Too many cases have come under my treatment, after having been subjected to the caustic practice, not to be able to state most explicitly, the entire failure to afford even temporary relief to many; the relapse of more whose cases had been palliated, and the transfer or the extension of diseased action to the lungs, in others whose lives have paid the penalty within a year, from consumption, or have been snatched from this impending fate by the timely intervention of the proper treatment, after being dismissed by the champion of this practice, with the assurance, in tones of triumph, of a perfect cure.

I am not wanting for an example, (even from among those whose names are mentioned by Dr. Green in his controversy with the "New York Medical and Surgical Society," as having made known, through the public press, their restoration), of mere palliation. Scarcely was this publication fairly before the world, when such a case was before me for my advice, not only in a more aggravated form, *locally*, than before the caustic was applied, but complicated with incipient *tracheal* and *bronchial* disease. That this hobby of Dr. Green's is more justly entitled to the appellation ("fabric of a vision,") which he so sneeringly applies to homœopathy, a very brief period will suffice to prove. The practice of homœopathy has been pretty extensively adopted in this country for a much longer period than his caustic practice, and yet *for every case* of a failure to cure these throat diseases by proper homœopathic practice, I will pledge myself to produce *five cases* of failure by the application of the nitrate of silver.

Nitrate of silver is corrosive, and acts locally only when used in the solid or strong liquid state. In minute doses it is capable of being absorbed, and then has other and more permanent influences upon the animal organization.

*Schöpfer* experimented with it by introducing it into the healthy trachea, and found that it caused inflammation of the wind-pipe and pneumonia, passing rapidly on to hepatization of the lungs. A series of experiments which I have instituted by applying this caustic to mucous membranes in the normal state, proves, that even in the strength of ten grains to the ounce, it causes inflammation, swelling and abundant discharge of thick, deep-yellow mucus in a very few hours; this gradually grows lighter, until it has recovered the bland and transparent aspect which is secreted by the mucous follicles in their normal state, if not too often repeated. When it is often repeated the epithelium is destroyed, the entire membrane presents the attenuated and shining appearance, or from the swelling of mucous glandule, on the raw surface, the granular surface above described.

Thus it is at once manifest, that whenever this throat complaint is cured, it

is strictly cured by the careful observance of the fundamental law of homœopathy, "*similia similibus curantur.*" And that practitioner, and he only, who understands this principle, and is guided by it, and can guide or limit his local medication to the diseased membrane alone, is the only one who is worthy of being entrusted with its application.

The controversy on this subject has been principally, if not entirely confined to the question of the practicability of introducing a foreign substance into the larynx at all without great distress and suffocation. The opponents of this practice contend, that the extreme irritability as evinced by the effect of the least drop of even a bland fluid coming in contact with the air-passages, is sufficient evidence of its impracticability. While on the other hand its advocates show by actual experiment and practice, that the air-passages may be entered even with a sponge containing about a drachm of a solution of nitrate of silver of the strength of 60 grs. or even 120 grs. to the ounce of water, with less spasmodic resistance or strangling, than the accidental imbibition into the cavity of the larynx of a single drop of tea, or even pure water, always produces.

Although this is perfectly true as to the fact, as stated by the advocates of this practice, it is a most dangerous position to lay down as a practical maxim, and if the practice is adopted under this impression without the *physiological rationale* being appended to it, the most fatal consequences must ensue. By parity of reasoning, it can be proved, that the actual cautery should be preferred, because it would paralyze, more effectually, all re-active powers of these organs. We have no doubt of the practicability of introducing a sponge containing about one drachm of the strongest solution of the nitrate of silver below the epiglottis, nor have we any doubt but that this fluid is promptly pressed from the sponge by the spasmodic closure of the glottis, and sent not only to the diseased portion, but broadcast throughout the entire pulmonary mucous membrane. Herein consists the main evil. The facility with which this operation can be performed causes it to be done more frequently than the nature of the case demands and the operator loses sight of the established fact, that every line of healthy membrane upon which this poison is allowed to extend, has morbid action at once instituted. The first sensation after the immediate strangling is a sense of numbness, which is quickly followed by a heat and smarting throughout the entire ramification of the air-cells, this is soon followed by an expectoration of deep yellow, or even reddish yellow mucus, which the patient supposes to be a salutary action of the application, but the physician *ought* to know that it is just as certain to follow the application of it to a perfectly *healthy membrane*, while the introduction of this caustic, out of the sight and control of the operator, is claimed as the great improvement in its use. I cannot help the conviction from repeated observation, and some patients who have come to me from such treatment, know from bitter experience that it is the most fatal poison to them. The skilful surgeon, when he finds it necessary to apply the nitrate of silver to ill-conditioned ulcers, or other cases, is very careful to be guided by certain peculiar conditions which his experienced eye at once detects, and then he is equally careful not to have the application extend beyond the limits of the morbid parts, and thus salutary results follow. This care should be more rigorously adhered to in the application to the mucous membranes, because they are more sensitive to its action, and of course more disposed to put on morbid action. And of how much more importance is the delicate mucous membrane of the lungs to animal life? Canterize its surface so as to prevent the admission or absorption of oxygen, and life must cease, and just in proportion as the extent of its surface is rendered impervious to the admission of

this vital air, does the process of respiration, nutrition and support, become imperfect.

Now, suppose the mucous membrane of the cavity of the larynx to be actually diseased, what means have we. after the caustic is once below the epiglottis, of confining it to this morbid portion? or suppose one lung to be diseased, and the other sound, (which is not unfrequently the case,) what means have we of directing the nitrate of silver to the diseased lung? Indeed, the more free inhalation of air to the sound lung would necessarily carry the largest portion, if not all of the caustic, where it was not only not needed, but where it would be positively injurious, and exert a legitimate effect in bringing about diseased action. In these cases the Protiodide of Mercury is much more safe, pleasant and effectual in bringing about a healthy re-action, and a radical cure is the result instead of the mere palliation which is the most that can be attained by the caustic treatment.

The Protiodide will also be found effectual in removing tenderness, fulness, hardness, and aching of the hypochondria and epigastrium, bloating and tympanitic or hard and doughy feel of the abdomen, particularly of infants, (tabes mesenterica,) with cloudy urine. Diarrhoea of a dysenteric character, green alvine discharges and sanguineo-mucous discharges, with tenesmus, particularly in serofulous children, or when these symptoms follow a severe catarrh.

### 3. MERCURIUS VIVUS.

MERC. VIV.—Mercurius regulinus, Argentum vivum, liquidum. Quick-silver.—NOACK AND TRINKS.

(The following symptoms are the effects of large doses of the metal.)

#### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

Syphilis. Primary syphilitic ulcers.—Zona.—Threatening suppurations.—Lockjaw.—Blepharophthalmia variolosa.—Tearing pain in sound and decayed teeth, aggravated by cold air and cold drinks and at night, with scorbutic affection of the gums.—Darting and tearing toothache with pyalism.—Ulcers of the tongue and inner mouth.—Aphthæ.—Hepatitis.—Icterus.—Dysentery.—Swelling of the testicle.—Inflammation of the labia majora which had commenced with a small induration (furuncle?); the lip was excessively enlarged, hard, hot, dark red, shining, excessively painful when touched or rubbed by the clothes in walking; accompanied with burning, beating, darting stitches and pains, and with fever.—Grippe, with great languor, headache, sore throat and pains in the chest, hoarseness and cough.

#### SYMPTOMS.

**Eyes.**—Staring eyes which are constantly directed to one spot, without anything being seen.—Rolling about of the eyes, with the head pressed backwards. (*Munnecke*, in *Archiv*, XV.)

**Ear.**—Hard hearing, (*Munnecke*, a. l.)

**Face.**—Hippocratic face with cold sweat in the face, (*Munnecke*).—Lead-coloured, bloated face, (*Scheel*, contributions of Mecklenburg physicians, Part 1st, 1830).—Dry, hot, cracked lips, (*Munnecke*, a. l.).—The teeth are set on edge, loose, fall out and frequently become yellow and carious, (*Wibmer*, a. l.).—Swollen gums. (*Munnecke*, a. l.).—Inflammation of the tongue, palate, fauces, gums, lips, and the whole buccal cavity; the swelling was so considerable and

there was such a profuse secretion of a tenacious fluid, that the passage was closed and the patient was unable to eat, drink, talk, or even breathe; his face was blue and swollen, looking like the face of a person who has died by suspension, he was near suffocating, the buccal cavity and tongue were covered with aphthæ, (in the case of a man who employed for the itch a belt of cloth which contained mercury and grease.—*P. Jalon*, Eph. nat. eur. Dec. II., ann. 6. obs. 107).—Ptyalism, (Gazette.—*Zwinger* in Eph. nat. eur. Dec. II. ann. 6).—Ptyalism with ulcers in the mouth and paralysis of the extremities, (in the case of a man who had taken seven ounces of mercury in a fortnight. *Laborde*, Journal de Médecine, tom. 50, p. 3); inflammation of the mouth, afterwards gangrene of the gums, tongue and cheeks, (from mercurial frictions in the case of a man of 66 years, *Wibmer*, a. l.).—Ptyalism, exhaustion, delirium, convulsions and death, (from wearing an amulet of mercury for six years on the body. *Froricps notices*, 1830, March).—Denudation and caries of the jaws, (*Wibmer*, a. l.).—Puckering of the skin of the inner month, (*Munnecke*).—Interstitial distention and separation of the gums from the teeth, (*Wibmer*, a. l.).—Putrid smell from the mouth, (*Munnecke*).—Fetid breath, (*Wibmer*).—Apthous ulcers in the mouth which frequently become gangrenous, (*Wibmer*).—White stigmata on the tongue of the size of a millet-grain, resembling aphthæ, very painful, (*Munnecke*).—Discharge of tenacious saliva from the mouth, (*Munnecke*).—Violent ptyalism occasioning gangrene of the gums, cheeks, tongue, and every part of the mouth; the teeth fell out, parts of the tongue and gums became detached, and death ensued, (*Hildanus*).—Ptyalism which became so virulent that the gums, cheeks, nose and that portion of the face below the eyes were eaten away, (*Hildanus*).—Ptyalism in a woman and child, occasioning swelling of the buccal cavity and fauces; in the child the cheeks were eaten away, the jaw-bones and teeth were exposed, and of the lips nothing remained except the middle of the upper and lower lips; with those symptoms the child died (from inhaling the hot vapours of quicksilver. *Erdmann* in *Pierer*, allgem. med. Ann. 1827, No. 5).—Ptyalism of bloody saliva with looseness of the teeth, interstitial distention, separation and bleeding of the gums, painful swelling of the tongue, the curtain and soft palate are covered with ulcers from which blood oozes as from a sponge; muttering delirium, convulsions and death, (in the case of a man of twenty-five years, from the vapour of quicksilver which he had carried for a long time on his person in a leather purse, (*Scheel* in the Contrib. of Mecklenb. Physicians, 1830, Vol. I.).—Difficulty of deglutition, (*Munnecke*, a. l.).—Loss of appetite, (*Wibmer*, a. l.).—Violent henteria with loss of strength, and finally death, in a young man who had used a gray mercurial ointment for rheumatic pains. *Hildanus*, Cent. 3, obs. 92).—Gagging and vomiting, (*Munnecke*).—Bad digestion, (*Wibmer*).—Violent pains in the abdomen, with writhing and twisting in bed, and anxious in aning, (on the second day. *Munnecke*). Grasping at the somewhat distended abdomen, which, when struck, gave out a hollow sound like a drum, with violent pains in the abdomen causing the lower limbs to be drawn up close to the abdomen (*Munnecke*).—Evacuations, consisting of spiced, fetid substances, (*Wibmer*).—Constant ineffectual urging to stool, followed by discharge of green, slimy, bloody substances, and afterwards great prostration, with weakness and falling of the rectum, (*Munnecke*).

**Skin.**—*Exanthemata*, spreading from the pit of the stomach over the abdomen and chest; it broke out with violent itching, the skin was bright-red, burning and painful; on the second day the red places became covered with small vesicles of the size of a millet-seed, filled with purulent lymph; the exanthema disappeared within from five to seven days, scaling off, and resembling a good deal

the scarlatina miliaris, (from frictions with the gray mercurial ointment, *Knorre* in *Hom. Gaz.*).—*Light-red, flat, small blotches*, with violent itching in the region of the sexual organs and on the inner side of the thighs, also on parts of the abdomen and chest, (from wearing mercury on one's person. *Ascherson*).—Profuse sweat over the whole body, (*Munnecke*).—Great restlessness, (*Munnecke*).—Sadness, (*Wibmer*).

**General Symptoms.**—Pains in the limbs on lifting or grasping anything.—Debility, (*Wibmer*).—Languor.—Emaciation, (*Wibmer*).

#### 4. MERCURIUS ACETICUS.

MERC. ACET.—See *HAHNEMANN's Materia Medica*, III.

##### SYMPTOMS.

**Eyes.**—(Inflammation of the canthi, with burning-itching pain, morning and evening.)

**Pharynx.**—Dryness of the throat, hindering speech, and accompanied with a cough which seizes the throat. Stitching, with pressure, in the posterior part of the throat, more when coughing than when swallowing.

**Urinary and Sexual Organs.**—Frequent micturition. In the morning the urine is passed in abundance, but slowly, with tenesmus. Burning in the urethra, during and between the acts of micturition. Cutting in the urethra while the last drop of urine is flowing out.—Swelling and inflammation of the fore part of the urethra (with burning and stinging pains, waking him in the night); the pains are increased by cold, and diminished by tepid water.—Contractive pain in the testicle. Swelling on the inner side of the labia. (The menses are four days too early, at new moon.)

**Chest.**—Pain in the chest as from subcutaneous ulceration, or as if raw and sore. Pressure and tightness of breathing in the outer region of the sternum, directly above the pit of the stomach, when standing, even when not walking.

**Extremities.**—Tearing in the hands, from which the knuckles become red and big.

**Sleep.**—Heavy dreams after midnight, for instance, of drowning, of robbers who intend to kill him, of inundations, fires.

**Fever.**—Heat without thirst or sweat after midnight, with sensation as if he were sweating. A good deal of sweat during motion.

**Skin.**—The edges of the ulcer become very painful. Itching, bursting pimples, burning like fire when scratched.

**General Symptoms.**—Drawing pain in the limbs in the forenoon, with shuddering, not succeeded by heat.

#### 5. MERCURIUS PRÆCIPITATUS RUBER.

MERC. PRÆCIP. RUB.—Red oxyde of Mercury.—*NOACK* and *TRINKS*.

##### CLINICAL OBSERVATIONS.

This agent, which has an intense and penetrating action on the animal organism, has been successfully employed by *Trinks* in primary and secondary syphilis; in the former, when characterized by readily-spreading chancres; in the

latter, when inveterate syphilitic cutaneous eruptions, ulcers in the throat, cutaneous chancres, affections of the periosteum and bones, (also *Rummel*).

## SYMPTOMS.

Pains, trembling, convulsions (from the external application; *Bartholinus*, *Epist. Med. Cent. III. Obs. 100*).

Ptyalism (from the external application; *Hildanus*; *Observ. Chir. Cent. V. Observ. 90*; *Bangius*, *Op. Omn. I., p. 682*).

Nausea, vomiting, oppression of the chest, pains in the stomach and whole abdomen; afterwards violent vomiting of blood, with subsequent fainting; after this the patient was attacked with a copious diarrhoea and intolerable pains in the abdomen, with burning in the mouth and throat, and unquenchable thirst. On the third day, trembling of the whole body, excessive redness of the whole face and eyes, staring and wild looks, and ptyalism, with a specific and intolerable smell. Vomits a quantity of blackish blood twice; the gums were swollen and inflamed, the tongue was so big that it filled the whole cavity of the mouth and seemed perforated in several places; the buccal cavity itself looked as if covered with the outer crust of decayed cheese. The larynx was as much swollen as the mouth, and was even inflamed externally; the pulse was quick, small and rather hard. The abdomen (which was distended by pregnancy) was swollen unto bursting, and so sensitive that the patient was unable to bear the least touch. The patient has not perceived any movements of the fetus the whole day. Stomachache of the highest degree of intensity; there were two holes in the tongue into which a finger might be inserted. The teeth were scarcely visible on account of the swelling of the gums and the sordes. (In the case of a female in the seventh month of pregnancy, thirty-six years of age, who, by mistake, had taken as much of the red oxyde as would cover the point of a knife; *Schwarz* in *Hufeland's Journal*, Vol. LV., D. 70.)—Horrid colic, violent vomiting, excessive diarrhoea, oppressive anxiety, spasms of the inner parts (from using the drug internally; *T. Hoffmann*, *Med. Rat. Sys. II. 260*).—Vomiting, violent colic, trembling, cold sweats, (*Ploucquet*, *Comment. Med., Argent, 1787*, p. 165, from the internal administration).—Violent vomiting and diarrhoea, (*Girtanner*, *Ven. Diseases, I., p. 450*).—Inflammation of the stomach and intestines, (*Wibmer*, *Wirk. der Arzneien und Gifte*).—Suffocative fits, at night on lying down, while on the point of falling asleep, obliging one to jump up suddenly, and going off by this means regularly; violent palpitation of the heart, which threatens to burst the walls of the chest, (*Hahnemann*, *Mat. Med. Pur., II., p. 426*).

## PATHOLOGICAL ANATOMY.

*In Men*: Traces of inflammation of the stomach and intestinal canal, rectum, and in some cases, the heart.

## 6. MERCURIUS SUBLIMATUS CORROSIVUS.

ANTIDOTE.—Of large doses, white of an egg.—*Noack* and *Trinks*.

## CLINICAL OBSERVATIONS.

*Noack* and *Trinks* mention the following affections as having been cured with the corrosive sublimate:—Primary phagedenic syphilitic ulcers with profuse and bad suppuration.—Lentescient fever.—Hectic conditions, particularly in children, with short, exhausting, but loose cough.—Typhus cerebrales stupidis,

with torpor.?—Neuralgia.?—Paralysis.?—Arachnitis cerebri infantum.?—Iritis arthritica.—Amaurosis.—Tic-Douloureux.?—Aphthæ.—Noma.—Angina gangrenosa.?—Gastritis mucosa.?—Gastromalacia infantum et adultorum.?—Atrophia meseraica infantum.—*Enteritis mucosa*.—Typhus abdominalis, second and third stages, with bloody and slimy, fetid, decayed stools, with tenesmus, cutting in the umbilical region, parched, cracked tongue, etc.—Dysenteric diarrhœa.—Rheumatic diarrhœa.—Epidemic bilious dysentery.—Secondary gonorrhœa.—Tuberculous pulmonary phthisis in the first and second stages.—*Ischias*?

## SYMPTOMS.

**Mind and Disposition.**—Mania, (*Wedel, Hoffmann*).—Weakness of intellect.—Oppressive anxiety, (*Wedel, Stoll*).—Anguish about the heart, (*Dumonceau, Journal de Médecine*, 49, p. 36).—Indescribable anguish.—Restlessness.—Oppressive anxiety, excessive uneasiness, with tossing about, (*Hoffmann, Dumonceau*).—Hypochondria.—Melancholia, (*Heim*).

**Head.**—Disposition to stupor, (*Orfila, Richter*).—Transitory soporous conditions, (*Heim*).—Condition bordering on intoxication, (*Sundelin*).—Staggering gait, (*Heim*).—Vertigo, (*Richter*).—Swelling of the head and face, (*Sundelin*).—Headache, (*Heim*).—Violent rush of blood to the head, and violent headache, (*Sundelin*).

**Eyes.**—Dim eyes surrounded by blue margins, (*Devergie in Orfila*).—Staring look, (*Schwarze*).—Shining, very movable eyes, (*Orfila*).—Inflammation of the eyes, they seem to start from their sockets.—Slight redness of the conjunctiva, (*Orfila, Richter*).—Swollen and glossy eyes, (*Læwenhardt*).—Contraction of the pupils, (*Orfila, Richter*).

**Ears.**—Pulsative buzzing in the ears.

**Face.**—Bluish paleness of the face, (*Heim*).—Pale face, (*Devergie*).—Distortion of the face (*Schwarze*).—Swelling of the face which has a dark-red, bluish look, (*Læwenhardt*).—Puffiness of the face.—Swelling and redness of the face, (*Orfila*).—Distortion of the face, staring look.—Tearing in the upper jaws (in the antrum Highmorianum) in the direction of the eyes, succeeded by swelling.

**Teeth.**—Burning pain of the gums and mouth.—Looseness of the teeth.

**Mouth.**—The tongue has very little moisture and is covered with a yellow layer, (*Orfila*).—Inflammation of the buccal cavity and the salivary glands; the tongue filled the whole buccal cavity; the anterior portion of the cheeks, the glands, gums and lips were inflamed, swollen and protruded, imparting to the patient a peculiar monkeyish appearance, (*Læwenhardt*).—Swelling of the lips, tongue, throat, (*Schwarze*).—The lower lip is very much swollen, and the inner side of the lip is everted to such an extent, that the border of the lip rests upon the chin, (*Schwarze*).—Dry, chapped lips, (*Richter, Orfila*).—Dry mouth.—Ptyalism.—Ptyalism with headache and swelling of the tongue, (*Ward*).—Excessive ptyalism; the patient had to keep his head constantly over the spittoon: accompanied with swelling, soreness and bleeding of the gums; looseness and pain of the teeth; disgusting mercurial odor from the mouth; thick coating of white yellow mucus on the tongue; painful deglutition; inability to chew; fine, red eruption over the whole body, (*Knorre*; from three-quarters of a grain of a solution of corrosive sublimate; this affection of the mouth was cured by Iod.).—Ulcers in the mouth, (*Koep*).—Putrefaction of the mouth, (*Valleriola*).

**Pharynx.**—Roughness of the throat, rendering speech difficult, but not deglutition.—Violent constriction of the fauces, (*Ward*).—Burning in the fauces, (*Salmuth in Dietterich*).

**Appetite.**—Saltish taste in the mouth.—Unquenchable thirst, (*Schwarze*).—Burning thirst (*Richter*).

**Stomach.**—Loathing, (*Richter*)—*Althof*, *Pract. Observ.*, I., p. 67.—(*Van Swieten*, *Girtanner*).—Nausea, (*Richter*).—Vomiting.—Violent attacks of vomiting in frequent succession. (*Richter*).—Continued vomiting, (*Baccius*), *proleg. ad libr. de vener.*—Habitual vomiting, (*Richter*, *Althof*)—Vomiting of pus, (*Girtanner*, *Baccius*).—Vomiting of a bloody fluid after violent retching, (*Richter*).—Continued vomiting of blood, (*Wedel*, *Stoll*).—Vomiting a slimy, bilious and bloody substance, (*Richter*).—Vomiting of thick mucus, having a strong metallic taste, (*Richter*).—Excessive sensitiveness of the epigastrium to contact, (*Richter*).—Disagreeable sensation in the region of the stomach, (*Richter*).—Heat in the stomach reaching up to the fauces, (*Van Swieten*).—Pains in the stomach (*Gatacker*, *Van Swieten*).—Feeling of pressure in the region of the stomach and in the chest, (*Schwarze*).—Violent pains in the epigastrium, increasing very rapidly and becoming intolerable; the pains were principally felt in the stomach and appeared to extend over the diaphragm, (*J. Cloquet*, from dipping the finger into a strong solution of corrosive sublimate, observed on himself).—Darting pains in the stomach, (*Wibmer*).—Gnawing pains in the stomach, (*Valleriola*).—Gnawing and burning pains in the stomach, spreading over the whole abdomen, which is distended and very sensitive to the least touch, (*Richter*).—Violent tearing in the bowels, (*Sundelin*).—Excessively-burning pains in the stomach and abdomen, (*Sundelin*).—Inflammation of the stomach and intestines, with gangrene, (*Sundelin*).—Burning in the stomach, (*Gardanne*, *Baccius*).—Painful burning from the mouth to the region of the stomach, (*Schwarze*).—Deranged digestion, (*Cirillo*, *Observ.* II., 124).—Phthisis intestinalis with ulceration of the mucous membrane of the stomach and intestines, (*Sundelin*).

**Abdomen.**—Violent pain in the bowels and œsophagus (*Richter*, *Orfila*).—Excessive pains in the abdomen, rendering the patient almost frantic, and extorting cries from him day and night, (*Valleriola*).—Bloated abdomen, very painful to the touch, (*Richter*, *Orfila*).—Tearing pains in the stomach and intestinal canal, with anguish, (*Richter*).—Colic around the umbilicus, (*Richter*).—Continued colic, (*Richter*, *Baccius*).—Excessive colic, (*Gardanne*).—Violent pain around the umbilicus and in the lumbar region, (*Edin. Med. Journ.* 1818, Oct.).—Gripping pain in the abdomen, (*Valleriola*).—Burning in the abdomen. (*Paré*).—Excessively-distended, painful abdomen, (*Wepfer*).—The abdomen is somewhat drawn in.—Cutting in the abdomen (immediately) with chilliness in the open, though warm, air.—Chronic weakness and sensitiveness of the intestinal canal.—Ulcerations in the intestinal canal and phthisis intestinalis, (*Richter*).—Weakness of the abdomen, (*Althof*, *Gatacker*).—Intense pains in the region of sigmoid flexure, (*Richter*).

**Stool.**—Diarrhœa, (*Valleriola*).—Evacuation consisting of very thin fœces.—Evacuation of fœces, mixed with mucus and dark, coagulated blood, (*Schwarze*)—Frequent discharge of a small quantity of bloody mucus, day and night, accompanied with almost constant cutting colic, and intolerable painful, ineffectual urging and tenesmus.—Diarrhœa, accompanied with violent pains in the abdomen and tenesmus, (*Richter*).—Frequent attacks of bloody diarrhœa, (*Læwenhardt*).—Frequent bilious stools, (*Richter*).—Liquid stools with tenesmus, (*Richter*).—Frequent diarrhœic stools with tenesmus and bloody evacuations, (*Richter*).—Violent, bloody diarrhœa with tenesmus (*Richter*).—Bloody evacuations, (*Althof*, *Sundelin*).—Tearing in the rectum.—*Tenesmus*, (*Schwarze*).

**Urinary Organs.**—Dysuria, (*Schwarze*).—Retention of urine for three days; upon inserting the catheter, the bladder was found empty, (*Henry*, *Lond. Med. Repos.*, II., 458).—Increased secretion of urine, (*Sundelin*).—Retention

of urine, (*Richter, Valleriola*).—Suppression of the secretion of urine, (*Richter*).—Scanty, red urine, which is passed with difficulty, (*Richter, Orfila*).—Hæmaturia, (*Richter, Sundelin*).—Itching in the fore part of the urethra.

**Male Genital Organs.**—Gonorrhœa, first thin, then thick, lastly with biting pain on urinating, and stitches through the urethra.—Excitation of the sexual desire, (*Sundelin*).

**Female Sexual Organs.**—Leucorrhœa, pale yellow, of a disgustingly-sweetish smell.—Aching pain succeeded by pressing, on touching the os uteri during an embrace.—Painful glandular swelling round the nipples.

**Larynx.**—Constrictive sensation and burning heat in the larynx, (*Richter*).—Hoarseness, (*Wedel; Van Swieten, Stoll*).—Aphonia (*Richter*).—Hollow, fatiguing dry cough.—Dry cough with pains in the chest, (*Richter*).—Cough with bloody expectoration, (*Richter*).

**Chest.**—Fetid breath, (*Richter*).—Hæmoptysis, followed by pulmonary phthisis, attended with hectic fever, (*Richter, Brambilla, Peyne, Quarin*).—Pulmonary tubercles, (*Richter*).—Pulmonary phthisis, (*Jeannot de Longrois*).—Difficult breathing, (*Richter*).—He breathed only with the ribs, the breathing was difficult and unequal, (*Richter*).—Quick and difficult breathing, (*Richter*).—Shortness of breath, (*Richter*).—Oppression on the chest, (*Schwarze*).—Excessive dyspnoea, (*Læwenhardt*).—Nightly darting pain through the whole chest.—Pains in the chest, (*Sundelin*).—Contraction of the diaphragm, (*Hoffmann*).

**Upper Extremities.**—Pithy sensation in the left hand, the whole left arm was weak, (*Heim*).—Coldness in the hands, (*Richter*).

**Lower Extremities.**—Sticking pain in the hip-joint during motion and rest.—Weakness of the lower limbs, inarticulate speech, followed by paralysis of the whole left side, distortion of the facial muscles and speechlessness, (*Heim*, in the case of a girl who had taken 36 grains of corrosive sublimate in *Dzondi's* pills, for leucorrhœa and condylomata).—Pains in the loins and knees and afterwards in the other limbs, which were at first fleeting and afterwards became seated and penetrating, (*Richter*).—Sensation in the legs as if gone to sleep.—Icy-cold feet.

**Sleep.**—Violent starting when on the point of falling asleep, with violent concussion of the whole body.

**Fever.**—Chilliness about the head.—Chilliness and cutting colic even during the least motion, such as rising from a seat.—Chilliness, cutting colic and stool, occasioned by exposure to the open though warm air, which is very unpleasant to him.—Heat on stooping, coolness on raising the head again.—Burning heat as if he were roasted, (*Ward, Lancet, No. 295, p. 120, from frictions with the corrosive sublimate on the abdomen, in the case of two men, for syphilis*).—Feeling of heat and anxiety which does not allow him to rest quietly at night.—Burning-hot skin, particularly on the forehead.—Sweat on the forehead, temples, chest and hands, (*Richter*).—Cold sweats.—Regular, small, tight pulse, 112 beats a minute, (*Richter*).—Pulse quick and hard without being full, (*Schwarze*).—Irregular, small, contracted pulse, (*Richter*).—Frequent, small, quick, feeble, tremulous pulse.—Irregular febrile motions, (*Richter*).—Lentescient, nervous fevers with excessive sweats and great weakness, (*Sundelin, Richter*).—Hectic fever, (*Richter*).

**Skin.**—Cold skin covered with sweat, (*Orfila, Toxicolog, I.*).—Rash, (*Sundelin*).—Purple spots on the skin, (*Sundelin*).—Spots over the whole body looking like scorbutic spots, mingled with an itch-like eruption, herpes and boils, (*Huber*).—Painless blisters on the arms and abdomen.

**General Symptoms.**—Rheumatic pains in the muscles, tendons and joints,

(*Richter*).—Stinging pain in the muscles here and there, in the day-time.—General debility.—Fainting fits, (*Valleriola, Richter*).—Disagreeable feeling in the periosteum of all the bones, as when a paroxysm of fever and ague is about to set in, with a feeling of heat in the head.—Tossing to and fro, (*Richter*).—Trembling of the limbs, (*Richter*).—Spasms in all the limbs, (*Orfila*).—Constant spasms in all the limbs, (*Richter*).—Periodical convulsive movements of the facial muscles, arms and feet, (*Richter*).—Spasms and convulsions which pass into paralysis, (*Richter*).—Tetanic spasms, (*Richter*).—Convulsions, (*Richter*).—Partial paralysis; weakness of sight and hearing, (*Sundelin*).—General insensibility, (*Richter*).—Emaciation, (*Sundelin*).—Feeling of relaxation or excitation, (*Richter*).—Paralysis, (*Richter*).—Incomplete, partial paralysis, (*Sundelin*).

#### PATHOLOGICAL ANATOMY.

*In men* : Pharynx, œsophagus and larynx are slightly red and inflamed; the stomach is generally contracted, filled with a dirty and frequently bloody fluid; the mucous membrane of the stomach, most generally in the neighbourhood of the pylorus, is more or less inflamed, red, blackish, gangrenous, ulcerated, softened, and can be easily detached; in many cases effusions of blood between the coats of the stomach, giving it a black, spotted appearance.—When the poison is taken in large doses, the mucous membrane of the stomach is frequently decomposed into a grayish-brown mass, in which case the corrosive sublimate is found changed to calomel. The duodenum, the rest of the intestines, principally, however, the rectum, are likewise more or less inflamed, sometimes the peritoneum, liver, spleen, kidneys; the cerebral vessels are sometimes considerably injected, the bladder is generally found empty and contracted. The heart is said to lose its contractility sooner than generally after death, after the external application of the sublimate; bright-red, inflamed, or else dark-red, extravasated places were discovered in the interior of the heart, some on the valves, others on the columnæ carneæ, and others again on the whole internal surface of the heart; the lungs are more or less congested and spotted.

The mucous membrane of the tumefied lips and of the mouth was decomposed into a whitish pap which was easily wiped away; in some parts it was entirely wanting; the posterior part of the tongue, larynx and pharynx was blue all over, bloated and friable (gangrenous); the glottis and epiglottis looked as if surrounded with salt. The mucous membrane of the trachea was slightly inflamed and filled with a bloody froth. The muscular coat of the stomach was injected, the mucous membrane of the stomach was inflamed, and parts of it were gangrenous. The ileum contained a dark-red pap adhering all round to the walls of the intestine, which was easily rubbed off with the scalpel, together with the completely destroyed mucous membrane, and was almost entirely found to be dark, decomposed blood; the remaining coat of the ileum, when held towards the light, looked like a membrane which was only traversed by very few vessels. There were no perforations, (*Læwenhardt, Berlin Med. Gaz., 1839, No. 7*).—In another case the following appearances were discovered: the whole inner coat of the stomach, particularly the upper and left portion, was considerably injected, covered with a greenish mucus, but not corroded; the intestines, from the ileum downwards, looked just the same, the redness becoming gradually more intense in descending to the rectum, the lower portion of which was dark-red; the bladder was contracted and likewise dark-red in two places, (very significant, according to Noack and Trink,) (*Watson, in New Monthly Journ., May, 1844.*)

## 7. MERCURIUS DULCIS.

MERC. DULC.—Calomel.—See HAHNEMANN'S *Mat. Med.*, III., HARTMANN, and a number of allopathic authorities.

## CLINICAL OBSERVATIONS.

*Hartmann* has cured with calomel a kind of *ulcerated putrid angina* in a child of eight years, who had become affected with feverish rheumatic pains in consequence of a cold, and who afterwards complained of a scraping-burning sensation during deglutition, and exhaled an offensive smell which became putrid as one approached the mouth of the child. The inner mouth and fauces were covered with a number of small, round, deep, livid ulcers, reaching down to the larynx and occasioning hoarseness; calomel, first trituration, one grain every four hours, proved very useful.—*Inflamed, suppurating herpes on the hand*, with inflammation of the lymphatic vessels of the same arm, intense fever, and strong, full pulse, (*Hartmann*).

## SYMPTOMS.

**Mind and Disposition.**—Oppressive anxiety, (*Vagnitius* in *Dietterich*).—Uneasiness in the whole body, (*Vagnitius*).

**Head.**—Swelling of the head to twice its size, (*Kuhl*).

**Face.**—Chronic paleness of the face, (*Trinks*).—Inflammation of the lips and tongue, (*Hellweg* in *Wibmer*).

**Teeth.**—Breaking off, exfoliation, blackness, looseness and falling out of the teeth.—Interstitial distention and chronic decay of the gums, (*Trinks*).—*Noma*: rapidly spreading, gangrenous destruction of the soft and hard parts of the face, lips, cheeks, gums, teeth, upper jaw, generally in children who had been given large doses of calomel for other diseases, (*Erdmann*, *Karte*, *Thorsten*).

**Mouth.**—Profuse ptyalism, (*Harder*, from 15 grains of calomel, *Apiar. Observ.* 43; *Hoffmann*, *Med. Rat. Syst.* II., p. 263).—Excessive secretion of saliva for weeks; the salivary glands and tongue were very much swollen; adventitious growth and bleeding of the gums; deep, bleeding ulcers reaching to the posterior nares; considerable loss of substance of all the parts forming the buccal cavity, with inflammation deep in the throat. Complete loss of appetite; the patient was unable to swallow even the softest kind of food owing to violent pains in the throat. The patient had dwindled down to a skeleton, was extremely languid, swollen about the ankles, was generally affected with diarrhoea and fever, was unable to leave his bed, and had to be assisted by others in changing his position. The hæmorrhage from the mouth occurred very frequently and deprived him of the rest of his strength. Medicine, even of the mildest kind, excited the most violent pain in his mouth, and deglutition was impossible (in the case of a boy of 13 years, who had repeatedly taken calomel for pains in the left upper arm, sternum and right malar bone. See *Clarus'* and *Radius'* weekly contrib. to *Med. and Surg. Clinique*, 1834, No. 3).—Ulcers in the mouth, (*Erdmann*).

**Gastric Symptoms.**—Vomiting, (*Vagnitius*).—Chronic vomiting, (*Richter*).—Chronic weakness of the stomach, (*Trinks*).—Chronic derangement of the digestive functions, which it is difficult to cure, (*Trinks*).

**Stomach and Abdomen.**—Violent pains in the stomach, (*Richter*).—Inflammation of the liver, (*Chapmann*).—Enlargement and induration of the liver, (*Chapmann*, *Crampton*).—*Enteritis*, (*Goelis*, from the application of calomel in hydrocephalus and crup. The cerebral disease disappeared suddenly, after

which the inflammation of the bowels set in and speedily terminated in gangrene).—Excessive pains in the abdomen, with vomiting and diarrhœa, (*Pierer*, Ann. 1827, April).—Violent colic, (*Richter*).—Ascites, (*Crampton*).—*Adenophyma meseraicum mercuriale*. The patient is at times constipated, at times he is attacked with diarrhœa, which is at times watery, at times bilious. The mesenteric glands were, on examination, found swollen, from the size of a bean to that of a hazel-nut. These swollen glands were hard, unequal in size and might be pushed to and fro between the layers of the mesentery. After the alternate constipation and diarrhœa had lasted for some time, the patient became at times exceedingly voracious, at times lost his appetite, the lower extremities becoming at the same time emaciated and the abdomen distended. As the emaciation of the lower extremities increases, the abdomen and the mesenteric glands increase in proportion. These phenomena are accompanied with symptoms of the mercurial disease in the mouth. The gums recede from the teeth, they look bluish, bleed readily, etc. The patient is apathetic, feels easily chilly, and his skin feels relaxed and cold. The diarrhœic stool sets in with colicky pains in the abdomen. The diarrhœa is accompanied with slight febrile flushes which disappear again as the diarrhœa abates. These febrile flushes, which are characterized by evening-exacerbations, occasion the secretion of a turbid urine, which is dark-coloured, and instead of depositing a sediment, forms flocks which are seen floating through it.—A boy of fifteen months, without the least symptom of scrofulous diathesis, was given nine grains of calomel for a violent attack of croup, within three days. The mercury prevented the formation of a membrane and the inflammation resulted merely in the expectoration of a puriform, tenacious substance. The bilious diarrhœa continued upwards of eight days; in the second week the mesenteric glands were found hard and swollen, so that they would be easily distinguished from one another; the appearances which have been stated above, were likewise gradually perceived. Several weeks after the child died of *tabes meseraica*, (*Dietterich*).

**Stool.**—Abdominal ptalism in the shape of a watery, copious diarrhœa, (*Sundelin*).—Chronic disposition to diarrhœa, with cutting colic, (*Trinks*).—Greenish and blackish evacuations, (*Richter*).—Grass-green evacuations, (*Voigt*).—Green stools resembling capers, (*Wendt*).

**Female Sexual Organs.**—Facilitates conception, (*Spilsburg*, in the *Lancet*, 1836, No. 24).—Women who had taken a good deal of calomel during their pregnancy, gave birth to miserable and weakly infants who scarcely ever lived more than a few days, (*Kluge* in *Richter*).

**Chest.**—Fetid breath, (*Wibmer*).—Asthma, (*Hellweg*).

**Fever.**—Continual fever and heat, with night-sweats, sinking of strength, tearing pains in the limbs and trembling, frequent, round, deep and spreading ulcers in the mouth and fauces, in the face, on the genital organs and the rest of the body, with white base and inflamed, excessively-painful edges.

**Skin.**—Erythema in the region of the genital organs, spreading over the whole body within twenty-four hours. The skin was bright-red as in scarlet-fever, somewhat swollen, but not painful, without any increase of warmth and without fever.—A considerable tumor on the body and neck, having a blue-red appearance. The symptoms disappeared in two days, (*Ascherson*).—*Eczema mercuriale*, (*Kahles* in *Dietterich*. See the last article on *divers mercurial preparations*).—*Hydrosis Mercurialis*. Profuse fetid-sweats broke out over the whole body after every dose of calomel, and continued seven days after the cure was terminated, (*Dietterich*).

**General Symptoms.**—Derangement of the whole nervous system, (*W. Stokes*).—Trembling of the hands and feet, (*Vagnitius* in *Dietterich*).—Trem-

bling of the limbs, (*W. Stokes*).—Hypochondriac and hysteric spasms, (*W. Stokes*).

#### PATHOLOGICAL ANATOMY.

*In animals*, (dogs): Greater afflux of blood to the small arteries and the capillaries of the intestinal mucous membrane, increased discharge of bile into the duodenum, and increased secretion from the follicles of Lieber Kuehn, with increased serous exhalation. Larger doses occasioned: injection of the peritoneum, stomach and intestines, alteration of the quantity and quality of the secretion from the mucous membrane, the alteration consisting principally in the formation of sanguineous, dark, grumous or sero-albuminous layers, particularly in the colon, (*Murray*, *London Gaz.*, Feb., 1843).

### 8. DIVERS MERCURIAL PREPARATIONS.

#### PATHOGENETIC EFFECTS.

**Mind and Disposition.**—Paroxysms of oppressive anxiety, (*Borch*).—Craziness.—Mania attended with affections of the liver, (*Larrey's Memorabilia*).—Mania: great anguish and uneasiness of mind, general confusion of ideas, the words being uttered incoherently and without order; after his restoration, the patient was yet a long while before he was able to return a suitable answer to a question (*Perfect*).—Self-illusion: the patient imagines he is well.—Weakness of mind.—Complains of having lost his intellect and acts indiscreetly.—*Imbecility*, (*Perfect*).—Great want of memory, causing him to forget the latter part of a phrase while he is uttering the first; the memory of names is almost entirely lost, (*Stokes*).

**Head.**—Violent *vertigo*, which seized the patient as soon as he began to walk, and threw him down, (*Trambesarius*).—Violent *vertigo*, (*Borch*, *Warbeck du Chateau*, from the fumes of Merc.).—Heaviness and dulness of the head, (*Warbeck du Chateau*).—Headache in the temples.—Paroxysms of raging headache, relieved by pressing the head together.—*Considerable swelling of the head, cervical glands, and gums*.—FALLING OFF OF THE HAIR. Imbecility, stupefaction, dumbness and deafness, with involuntary stools; six months after, the man was attacked with a fever and was cured, except the mental derangement, which remained, (*Fernelius de lue venerea*, from the fumes of Merc.).—Loss of sense and indolence, (*Ramazzini*, from the fumes of Merc.).

**Eyes.**—*Conjunctivitis mercurialis*: according to *Van Ammon* this kind of inflammation comes on after the internal or external use of mercurial preparations, it is perceptible around the margin of the cornea, and is distinguished by a peculiar lilac appearance. This inflammation is accompanied by no other unpleasant symptom except pressure in the eye, and generally passes off rapidly when ptialism sets in. It is a symptom of the violent congestion which takes place to the head and neck previous to the setting in of ptialism, and which is generally designated by the term "catarrhal phenomena," (*Van Ammon*, *Jäger*, *Dietterich*).—*Ophthalmia*: the conjunctiva of the globe of the eye and of the lids is inflamed, the eyelids are swollen, red, the canthi are round, excoriated, with smarting pain in them. The margins of the lids are burning and itching; they are agglutinated in the morning, after the night's sleep, and secrete a quantity of thick purulent gum. Frequently the patient is not able to open his eyes until the dry and liquid gum has been washed off with tepid water. Pressure and rubbing in the eye. Sensitiveness to light, lachrymation. The Schneiderian membrane is affected as in catarrh, with soreness of the nostrils and upper lip.

and secretion of a quantity of thin white mucus, (*Knorre*).—*Iritis mercurialis*: which manifests itself either as a venous inflammation of the membrane of Descemet, or as a venous inflammation of the parenchyma of the iris, (*Travers, Robertson, Mürcklin, Jäger, Dietterich*, etc., from frictions with the gray mercurial ointment, *Hufeland's Journal*, 1838, Sept.).—*Retinitis mercurialis*: burning-aching pain in the bottom of the eye, great photophobia, constant lachrymation, a variety of bright colours, sparks, fiery rings before the eyes, etc., (*Dietterich*).—*Amaurosis mercurialis*, (*Haffner, Kramer, Willis, Olaus Borrichius, Dietterich*).—Dimness of sight (*Warbeck du Chateau*, from the fumes of Merc.).—Protruded eyes, (*Ramazzini*).

**Ears.**—Excessive sensitiveness of the organ of hearing. Starting on hearing the least noise.—Humming in the ears, (*Warbeck du Chateau*, from the fumes of Merc.).

**Nose.**—Violent bleeding at the nose.

**Face.**—Lead-coloured complexion.—Cadaverous paleness of the face, (*Borch*).—Swelling of the face, neck and inner mouth.—Alteration of the features.—Spasmodic movement of the lips.—Soreness of the tendons of the pterygoidei muscles, rendering the opening of the mouth painful.—Paleness and caries of the jaws.—Caries of the upper jaw.—*Neuralgia of the facial nerve*, (*Dietterich*).—Partial paralysis of one side of the face, (*Bell*).

**Teeth.**—Swelling and bleeding of the gums from the least contact.—*Scurvy of the gums*.—Violent tooth and faecache at night, and pyalism, (*Green*, from inhaling the vapour of the sublimated gray mercurial oxyde).—Disagreeable sensation in the teeth, (*Warbeck du Chateau*, from the fumes of Merc.).—*The teeth become elongated, black, loose, and finally fall out.*—Violent burning pain in the nerves of the teeth.

**Mouth.**—Cadaverous smell from the mouth.—Trembling of the tongue, inducing stammering.—*Stammering*, (*Psellismus mercurialis*; *Sauvages, Stokes*).—Considerable swelling of the tongue, it fills the whole buccal cavity.—The tongue is swollen, extremely sensitive, protruded from the mouth one hand's-breadth and squeezed in between the teeth; the edges of the tongue show the impression of the teeth and look indented.—The tongue is coated whitish, big, almost immovable, and ulcerated at the edges.—Aphthæ on the tongue, in the mouth and fauces.—Fetid ulcers in the mouth, constantly discharging a foul ichor, (*Ramazzini*, from the fumes of Merc.).—A number of painful, spreading ulcers in the mouth.—Bleeding of the ulcers in the mouth, particularly at night.—Caries of the jaw and palate-bones.—*Mercurial pyalism*: the mucous membrane of the mouth exhibits a bluish redness, and is interstitially distended; along the line of contact with the teeth it forms an arch of yellow colour, recedes from the teeth together with the gums, and bleeds very readily on that account. This causes the teeth to become loose and sometimes to fall out. The salivary and lymphatic glands, and the cheeks are swollen, also the tongue. The tongue frequently swells to such a size that it fills the whole buccal cavity, and the patient is even obliged to open his mouth in order to give the tongue more space. The fauces and tonsils are likewise swollen, and, inasmuch as the mucous membrane of the Eustachian tube is involved in this swelling, the hearing is diminished. Violent burning pains are experienced in the affected parts of the mucous membrane, and deglutition is difficult. Cadaverous smell from the mouth on expiration. At first there is but a frequent accumulation of saliva in the mouth, inducing a frequent spitting. In a short time, however, the secretion of saliva increases, and finally runs out of the mouth uninterruptedly, because the patients have to hold their mouths open constantly, being prevented from spitting by the swelling of the parts. The mucous membrane of the tongue and cheeks breaks

down where it touches the teeth; the parts bleed, and flat, painful ulcers make their appearance, which look as if the parts had been cut into. The teeth are covered with a thick putrid-smelling sordes, corroding the enamel, after which the teeth frequently turn black, and often remain so. The other secretions are of course less, in consequence of the increased secretion from the lymphatic and salivary glands, the skin is dry, afterwards becomes flaccid, the alvine evacuations are arrested, and the kidneys secrete a small quantity of red urine. The pulse is accelerated, soft, weak and small. The patient generally complains of dulness and heaviness of the head, the nose is stopped, the languor is excessive, and the patients are frequently seized with apathy and loathing of life. The saliva feels hot, is so tenacious that it can be drawn into threads, sometimes looks glassy, at other times milky, at others again yellowish, rarely greenish and reddish. The reddish appearance is derived from the admixture of blood. To the patient the saliva tastes differently, sour, salt, sweetish, flat, bitter and putrid, metallic, generally acrid, on which account it corrodes the interstitially-distended mucous membrane, occasions ulcers, excites cough, causes the things swallowed to pass into the wind-pipe, induces cardialgia, vomiting, dysenteric stools, (*Schwediaur*). The quantity of the secreted saliva varies likewise; it is from two to three, six and more pounds within twenty-four hours. *Nicolai* says that he has seen as many as sixteen pounds of saliva secreted in that period. If the use of Merc. be continued, a mercurial cachexia supervenes, characterized by an ulcerous, gangrenous destruction of the inner parts, and by hemorrhage from the buccal cavity, which frequently endangers life. In this condition of the system, a slight cold frequently brings on a violent, inflammatory affection of inner organs, apoplectic symptoms, amaurotic affections, (*Marat, Märklin, Salomon*), spasms, convulsions and very frequently sudden death, (*Heim, Choune, Læwenhardt, Dietterich*).—(Dogs, rabbits and cats, on which half a drachm of the mercurial ointment had been rubbed in, died within six or nine days after previous pytalism, ulcers in the mouth and on the gums, debility, emaciation, great restlessness, without any perceptible convulsions or paralysis. The alvine evacuations were not increased, and the ordinary temperature of the animals remained unaltered).—*Ptyalism*, ulcers of the mouth and tongue, accompanied by partial paralysis and derangement of the digestive organs, (in 200 men, who were on board a ship that was loaded with 200 tons of quicksilver, which spread its fumes throughout the ship in consequence of the pouches in which the metal was contained becoming decayed. All the animals on board were similarly affected. *Burnett*, *Arch. génér. de Méd.*, IV., p. 282).—The lips are considerably swollen, red and painful, the inner portion of the vermilion border is excoriated, with small, rather deeply-penetrating ulcers in some parts, and a coating of thick, yellow mucus at the root of the lips. The mouth, which is generally agglutinated in the morning and after sleeping, can only be opened with difficulty, the patient is unable to articulate, the lips bleed frequently, and are sometimes covered with blackish crusts composed of dry blood. Blood sometimes trickles down on moving the lips and tongue, or is discharged from the mouth together with the constantly-accumulating saliva. The saliva looks yellowish, reddish. The gums are swollen. The fauces are swollen, dry, painful, deglutition is difficult. The cheeks are somewhat swollen, the parotid and salivary glands are likewise swollen and painful. *Ptyalism*: blennorrhœa uvularis et pharyngea with horrid smell and burning in the mouth, unquenchable thirst and spitting mania, (*Basedow*, in *Hufeland's Journal*, 1838, Sept.).

**Pharynx and Œsophagus.**—Burning pain in the fauces, as from red-hot coal.—Inflammation of the fauces, rendering deglutition very difficult.—The Eustachian tube is frequently compressed by swelling, which induces deafness.

—Trembling of the pharynx and œsophagus; the swallowing is performed spasmodically or with danger of suffocation.—*Chronic mercurial angina faucium*: sooner or later after a mercurial treatment, generally four or six weeks in summer, and a few days after leaving the sick room, in winter, the convalescent patients experience, towards evening, a dryness in the posterior part of the fauces, obliging them to drink frequently, which, however, affords but little relief. At the same time, the voice becomes somewhat husky, peculiarly rough, and the patients feel as if the rima glottidis were closed with swelling, and as if the epiglottis were too large. After rising, next morning, this disagreeable sensation has entirely disappeared. The patients imagine that a catarrh is approaching, keep themselves warm, drink some sudorific tea, after which the symptoms in the throat disappear in a few days. If the patients should go out, however, and should drink, talk, and smoke, as much as they would in health, the dryness of the throat remains permanent, inconveniences the patients the whole day, and induces the frequent swallowing of saliva, in consequence of which, the affected parts are still more irritated. The patients now begin to complain of a drawing and pressure in the posterior part of the palate and pharynx, and of stoppage of the nose in consequence of the supervening dryness of the Schneiderian membrane, which the patients attempt to relieve by expelling air through the nostrils with closed mouths. The air thus expelled feels rough; in talking the patients complain of a pain which is partly stinging, partly pressive, and increases to a burning by continuing the talking. This irritation of the mucous membrane gradually involves the fauces, nose, the upper part of the larynx, the Eustachian tube as far as the inner ear. In many cases, the mucous membrane of the nostrils looks dry and corroded, the patients are compelled to hawk frequently and often experience a shooting stitch through the Eustachian tube. Towards morning the patients hawk up a tenacious, glassy mucus. The tonsils, curtain, uvula, and particularly the back part of the fauces, exhibit a redness which varies from dark-red to bluish red, exhibiting somewhat darker spots here and there, with yellowish elevations of the size of half a pea in those spots; which are slightly-swollen mucous glands. If this irritation of the mucous membrane should recur frequently, the vessels traversing it become injected, the uvula in particular, being surrounded with a perfect network of vessels. Over the other parts of the mouth, single vessels are seen spreading in different directions, like coarse threads, generally from above downwards, with violet-bluish colour, and surrounded by clusters of other varicose vessels. On the mucous membrane of the cheeks and on the inner side of the lips a vesicle is seen, from the size of a lentil to that of a pea. This vesicle is formed by the delicate epithelium of the mucous membrane, and is of a beautiful pale-yellow colour. When opened, it discharges a clear, tasteless lymph; the wound cicatrizes in twenty-four hours. If the vesicles be not pricked, they are generally pressed open by the motion of the tongue, mouth, etc., and, in this case, heal as fast as if they had been pricked. These vesicles are *characteristic* of a frequently-recurring symphoresis. The above-named symptoms are always present in a case of simple, genuine symphoresis. In case of a mercurial cachexia, or when combined with arthritic, rheumatic, herpetic, hæmorrhoidal and other morbid processes, other symptoms are, of course, present, (*Dietterich*). This angina mercurialis has been previously described by *Lentin, Stoll, Reil, Matthias* and *Oppert*.

**Appetite.**—Loss of appetite.

**Stomach.**—Inclination to vomit.—Vomiting with convulsive motions.

**Abdomen.**—Anxiety in the præcordial region.—*Infarctions and indurations of the liver*, (*Crampton*).—*Jaundice*.—Colicky pains.—Great distention of the abdomen.—Excessive pinching in the abdomen.—Intolerable sticking pain in

the abdomen.—*Mercurial ptyalism of the pancreas.* Blegny states that in individuals of an atrabilious constitution, the long-continued use of Mere. produces diarrhœa with insufferable colicky pains. *Fabri* relates, that the bowels of a young man, who was treated with Mere. for a supposed helminthiasis, were found corroded. *Albertini* was attacked with a frightful diarrhœa, after taking mercurial pills, which could not be arrested; he died of perforation of the rectum. A few days after taking the Mere. the patient experiences a fulness in the left hypochondrium extending towards the pit of the stomach. He experiences a rumbling in the abdomen, which becomes distended. He emits some fetid flatulenee. After this a watery stool, mixed with fœces, is discharged, attended with colicky pains. Such a diarrhœic stool takes place from 10 to 15 times a day. (*Mællenbroek* relates, that a mercurial preparation which had been administered by a quack, had occasioned 60 evacuations and 10 vomitings in one day.) After the third or fourth evacuation the stools become frothy, whitish, tenacious, sometimes greenish, in the beginning at least, which is owing to an admixture of bile. The patient's mouth is very dry, he suffers with violent thirst, his tongue is slightly coated, and he has a flat, not very often metallic taste in the mouth. His eyes are dim, his face pale, the skin cool, the pulse small and quick. These symptoms increase in intensity on the succeeding days. The colicky pains, on the contrary, decrease, and finally cease altogether. The evacuations continue, an inclination to vomit sets in, which increases to actual vomiting. In the region of the pancreas, the patients complain of a dull, burning pain, and they experience a distinct sensation as if something were discharging. Aching pains are experienced in that region, on making pressure with the finger. The face becomes livid, the eyes recede into their sockets and are surrounded with blue rings, the skin is cold and flaccid, the secretion of urine is almost entirely suppressed, the patients feel wretched, remain in bed exhausted, and desire to drink continually. The pancreatic ptyalism is apt to occur in individuals with an atrabilious constitution, in hysteria and hypochondriac persons. It may likewise take place by metastasis in consequence of suppressed ptyalism, (*Blegny, Dietterich*).

**Stool.**—Bilious diarrhœa.—Discharge of a yellow-green substance with coagulated blood.—Painful stools mixed with blood and mucus, (*Læwenhardt*).—Painful dysentery continuing 11 days, (*Basedow*).—Dangerous diarrhœa.—Evacuations with burning and biting at the anus.—Frequent stools, the smell of which is like the smell from the mouth.—Green stools.—Constant tenesmus with frequent discharge of blood by stool.

**Urinary Organs.**—*Uorrhœa mercurialis*: the secretion of urine is considerably increased, and is much more abundant than the drink which the patient swallows, (*Dietterich*).—Profuse secretion of a clear urine, containing a quantity of albumen, (*Læwenhardt*).—Excessive diabetes with extreme emaciation.—Burning acridity in urinating.

**Male Genital Organs.**—Inflammation of the orifice of the urethra.—Gonorrhœa.—The urine is discharged drop by drop, with burning.

**Female Sexual Organs.**—Miscarriage, (*Colson, Arch. gén. de Méd.*).—Miscarriage, even in the latter months of pregnancy.—Women who are given much Mere. during their pregnancy, bear weakly, small children, (*Halcombe, Philad. Jour.*, 1826).—(Several observations induce me to conclude that Mere. destroys the life of the fœtus, and that the dead fœtus is then discharged from the womb. Mere. cannot therefore be, strictly speaking, considered an abortive remedy, but has to be looked upon as an agent which is extremely hostile to the life of the fœtus. This observation seems to be confirmed by the fact that the development of the embryo is arrested in the eggs of birds, amphibious ani-

mals, snails and insects, even by the scarcely-perceptible exhalations from Merc., and that the embryo itself is destroyed by them, (*Trinks*).

**Larynx.**—Constant hoarseness.—*Complete paralysis of the organs of voice*, (*Reumoni in Dietterich*); it was removed by Chin. and the warm baths of Aix-la-Chapelle.—Loss of speech, and afterwards death, (from the fumes of Merc.), *Ponzettus de Ven. C. 21*).—Stuttering, (*Ramazzini*, from the fumes of quick-silver).—Consumption, (*Burnett*).—Cough.—Violent hæmoptysis.—*Hæmoptysis followed by pulmonary consumption*, (*Wibmer*).

**Chest.**—Violent oppression on the chest and about the heart.—Paroxysms of violent asthma, with danger of suffocation in walking or stooping.—Asthma, (from the fumes of Merc., *Korbeck in Dietterich*).—Asthma, with long intermissions at first, but increasing, afterwards; constant rattling; the patient was not able to walk or move without danger of suffocation, (*Ramazzini*).—Suffocation.—(*Aneurisms, Dietterich*).

**Back.**—*Atrophy of the spinal marrow*, (*Dietterich*).

**Upper Extremities.**—Greater or lesser want of strength of the hands, (*Stokes*).—Trembling and weakness of the hands, with convulsions of the hands, (*Camerarius*, from the fumes of Merc.).

**Lower Extremities.**—*Neuralgia of the sciatic nerves*, (*Dietterich*).—Intense inflammation and superficial suppuration of the whole leg and of the feet, with complete desquamation of the epidermis of those parts and even of the soles of the feet, (*Ascherson*).—*Oedema pedum*, (*Basedow*).—Horrid swelling of the legs and thighs, with formation of blisters that were filled with turbid serum; this serum deposited a sediment, which contained distinctly-perceptible globules of Merc., (*Ramazzini*, from the fumes of Merc.).

**Sleep.**—Sleeplessness, (*Forestus*.)

**Fever.**—Fever, and general irritation of the nervous system.—Fever with painful local inflammation terminating in gangrene.—Acute, putrid fevers.—*Febris erythica*: some days after taking large doses of Merc., the patients become restless, feel languid and worn out, complain of dryness of the mouth, tensive and aching pains in the head, particularly the occipital region. They lose their appetite, experience a rumbling in the intestines, disgusting eructations, inclination to vomit, with hot and dry skin. In the evening they are attacked with slight chills, proceeding from the abdomen, increasing gradually and penetrating to the very bones. There is but little increase of thirst, the stool is retained, which causes a pressure in the præcordial region. After this, sleep becomes restless and is disturbed with heavy, fanciful dreams. The urine is fiery-red, the pulse irritated, full and quick. These symptoms increase in intensity on the succeeding days. The dryness in the mouth increases to a burning sensation, the gums become dark-red, and recede somewhat from the teeth, the tongue commences to swell, the tensive aching pain in the occiput extends to the nape of the neck, and even to the region between the scapulæ, inducing stiffness of the neck. The patients smell unpleasantly and complain of a metallic taste in the mouth. They moan continually, and suffer with great oppression and anguish. The chills alternate with flushes of heat. The patients now exhibit phenomena similar to those of catarrhal fever, owing to the rush of blood to the head. The eyes of the patients become red, and assume a watery and glassy appearance. An aching pain commences to rage in the forehead towards the root of the nose, the nose is dry and obstructed, the cheeks are hot, deglutition is impeded by a tensive, burning and stinging pain, the submaxillary and parotid glands are swollen, a drawing and tearing is experienced in the ears, the teeth become very sensitive, the root of the tongue is coated with a whitish mucus, breathing becomes more and more anxious, the oppression increases, the pulse becomes quick, un-

dulating, the patients complain of excessive oppression and tightness. These phenomena characterize the acme of the fever and disappear by violent critical discharges, pyalism, lenteria, urorrhœa, hydrosis (excessive sweats), or by an exanthem, (*Dietterich*).—*Febris adynamica*: several days after taking large doses of Merc., the patients become irritated, and in a few hours fall into the opposite state. They look livid, with blue margins around their dim and glassy eyes. The head feels giddy, nose, face and extremities are cold. Towards evening the patients experience slight chills and flushes of heat. At the same time the patients feel oppressed, moan a good deal, complain of anguish and a pressure in the præcordia. Their sleep is heavy and restless, their pulse quick and small, the urine is clear, yellowish, with slight retention of stool. This condition lasts a few days, increasing in violence; the patients are in a state of perfect apathy, they lie in their beds listless and weak, their faces are pale as death, the whole body feels cool, and the pulse becomes somewhat fuller. At this stage, the condition of things changes suddenly, the patients are seized with an inclination to vomit, they sometimes vomit a greenish, tenacious substance, the oppression of the chest increases, the breathing becomes manifestly more difficult, the eyes wander, and the pulse is frequently intermittent. At night a bland delirium sets in, and even in the day-time the patients are slightly delirious. The skin and tongue are dry, the latter being without a coating. The patients now become quiet for a very short time, they then suddenly start up, jump out of bed, grasp hastily at something, which they afterwards push back again, or utter some incoherent speech, and fall dead. Post-mortem examination, as in cases of apoplexy generally, shows an effusion between the pia mater and the brain. There is no alteration in the thoracic cavity, nor is any change discovered in the abdominal cavity, except the liver, which is turgid with blood. The gall-bladder is filled with a dark bile, (*Dietterich*).—Lentescient fevers with perceptible emaciation.—Hectic fever.—Exhausting sweats.—*Hydrosis mercurialis*: under the influence of Merc. the patient feels irritated, the head feels dull, the eyes are shining and watery, but not dim, the cheeks are suffused with a morbid redness, tongue and pharynx become dry, the temperature of the skin increases, a slight prickling is experienced in single parts, and the patient feels oppressed with anxiety. The pulse is quick, undulating, soft, the urine scanty and red, with some retention of stool. This condition lasts from 10 to 12 hours. After this period, the skin becomes very hot and a profuse sweat breaks out, particularly on the chest. This sweat lasts uninterruptedly for 24 to 30 hours, after which it decreases gradually to a simple exhalation from the skin. Immediately after the appearance of the sweat, the oppression and all similar phenomena decrease, the dryness of the pharynx diminishes likewise, the patient is tormented by violent thirst and is troubled with the fetid-smelling sweat. The sweat is clammy, yellowish, and has a peculiar, indescribably-fetid smell, which is never forgotten by those who have once smelled it. It is neither insipid nor putrid, and is something between. If the Mercurius be continued, the sweat again makes its appearance for a few days, and then disappears again. These sweats are very exhausting and debilitating, and leave a great inclination to sweat; even after taking some warm soup the sweat breaks out again, (*Dietterich*).—The pulse is almost quick, intermittent, strong, afterward trembling and weak.

**Skin.**—Desquamation of the epidermis, particularly the hands and feet.—The skin, particularly on the chest, thighs, lower part of the back, is covered with a burning and itching rash.—*Miliaria mercurialis*: after the usual precursory symptoms with marked irritation of the nervous system and a slow, almost torpid febrile prooxysm, the exanthem makes its appearance on the chest,

after which the anxiety and the restlessness of the patient abate. On the day following, the rash appears on the back and loins, preceded by the same precursory symptoms. In this way the rash breaks out in patches, until the eruption is complete, after the lapse of four or five days. The vesicles are close together and white. After the breaking out of the rash, the fever continues to make its appearance every evening. Nervous symptoms, sleeplessness, slight delirium, even convulsions supervene. The pulse is small, soft, easily compressible, not very fast, the urine is pale, the skin is drenched with sweat, which has a flat, but not sourish smell. Single portions of the eruption disappear again, the others remaining. On the following day the fever brings the exanthem out again, but it again disappears afterwards. Amidst this constant increase and decrease of the cutaneous and febrile symptoms, the typhoid phenomena increase, the urine has the acrid smell of the urine of horses and cattle, the pulse intermits, the rash recedes under the skin, which becomes dry and the patient dies comatose, (*Dietrich*, after the use of calomel and corrosive sublimate, *Peter Frank*).—*Eczema mercuriale symptomaticum*: a few days after rubbing himself with the mercurial ointment, the patient experiences a troublesome itching at the place where the ointment had been applied. Gradually the skin becomes rose-coloured. This redness is traversed by a few red streaks, which, on inspection, prove to be sound skin. The redness arises from an assemblage of larger or smaller spots. The reddened cutaneous surface imparts a sensation of burning heat to the finger. The redness disappears when pressing on it, but returns immediately after the pressure ceases. The patient's general health remains perfect, the secretions are uninterrupted and the pulse is not affected. Ten or twelve hours after, slight elevations are discovered by the finger on the reddened cutaneous surface, and, on looking at it through the microscope, these elevations prove to be vesicles crowded together. On the second day the vesicles become more elevated, and are perceptible to the naked eye on looking at them obliquely. They are filled with a yellowish lymph. The itching abates somewhat immediately after the appearance of the vesicles. On the third day, the vesicles become depressed, on the fourth day they desiccate, on the fifth the skin scales off. If the mercurial friction be continued, or if some other dyscrasia be lurking in the system, the above-mentioned phenomena become more violent. The troublesome itching increases to a burning sensation. The skin assumes a dark-red tinge, the vesicles increase to the size of pustules, and the patient is attacked with feverish chills which he experiences even before the vesicles make their appearance. The eyes are slightly reddened, watery, the nose is stopped, mouth and pharynx are dry, the stool is retained, the urine scanty, red, the pulse rather hard, quick, almost small. The patients are, moreover, tormented by great restlessness and uneasiness. Whilst the vesicles are raising on those parts of the skin where the gray mercurial ointment had been rubbed in, similar red spots make their appearance in the groin, on the inner surface of the thighs, serotum, even on the chest, so that every form of the exanthem can be observed. By means of these repeated outbreaks of the exanthem, the fever is not only kept up, but is even increased, until the pustules finally dry up, which lasts from five to seven days. A few bilious evacuations now occur in the course of a day, the skin, which was burning-hot previously, begins to sweat, and on the parts which were covered by the exanthem, the skin peels off in patches. Ptyalism sometimes makes its appearance. (This species of mercurial exanthem has been described by *Bonet*, afterwards by *Pearson*, under the name of *erythema mercuriale*, then by *Stokes* and *Moriarty* as *lepra mercurialis*, by *Alley* as *hydrargyria*, by *Cullerier* and *Longmann* as *erysipelas mercurialis*, and by *Schmalz* as *spilosis mercurialis*, *B. Bell*, *J. Gregoris*, *Spens*, *Bacot*, *Lawrence*, *Crawford*, *Johnston*, *J. Frank*,

*Rayer, Kahleis, Dietterich*; the exanthema has generally been seen to appear after frictions with the gray mercurial ointment).—**ECZEMA MERCURIALE CRITICUM**: the first stage is characterized by the presence of the mercurial fever, which is sometimes so slight, that the only symptoms by which it is recognized, are a small, weak, quick pulse, some dryness in the nose and fauces and increased thirst; whereas in other cases the catarrhal symptoms are so violent, that *Richter* designates, *though wrongly*, this mercurial fever as an inflammation of the nares, trachea and bronchia. Toward the end of this stage, which lasts from three to four days or less, the patient experiences an itching, tingling in the skin, which spreads over the greatest part of the body, but is most violent in the bends of the joints, on the inner surface of the thighs, in the inguinal region, the region of the sexual organs and in the axillæ.—At the commencement of the second stage the above-mentioned parts become rough and scarlet-red, on the second day, an extremely large number of vesicles, which are close to one another, and pretty regular as to size, is perceived on the parts above-mentioned. On the third day, the uncovered parts of the body become likewise covered with vesicles containing a transparent fluid, whereas the vesicles which had appeared first on the thighs and in the inguinal region, become milky and turbid. On the fourth day, these vesicles burst, discharge a copious tenacious fluid, which has a disagreeable smell, and penetrates and stiffens the linen. On the fifth day, the epidermis peels off in large patches over the whole body. The inner surface of the thighs, the inguinal region, the scrotum and the borders of the axillæ are quite sore and covered with that tenacious fluid. An attempt to change his position is very painful to the patient. The patient feels most comfortable with his knees bent and raised. The pulse is weak and the tongue somewhat coated. The patient complains of weakness, the appetite, the alvine evacuations and the secretion of urine are regular. This condition lasts several days, until the vesicles have spread over every part of the epidermis and the whole skin has become denuded. On those parts where the vesicles appeared first, smaller and thinner vesicles are seen to raise the newly-formed cuticle. These burst a few hours after their first appearance. Places which seemed to be entirely free from the disease, are again affected in this way, exuding the original fluid. In some cases the cuticle is formed and destroyed again several times within twenty-four hours. The fluid decreases as the disease diminishes, though the fluid seems to mix with the badly-formed and very thin cuticle and to dissolve it. At this period scales of considerable thickness and fissures of considerable depth make their appearance, the latter constantly discharging a fluid which keeps up the irritation along the edges. According to *Plumbe* the above description refers to the more frightful forms of the eczema, (*Duncan, Kahleis and Alley* have seen it arise from calomel; *Pearson* from the red precipitate; *Dietterich* al. loc.).—A bright-red somewhat raised eruption broke out over the whole body. The left lower limb was covered with a dark, erysipelatous redness, the skin was swollen and hot; on pressing with the finger, no white spot remained. On several parts, particularly around the knee, *bullæ*, filled with a yellowish serum, made their appearance on the second and third days. They were from the size of a hazel-nut to that of a hen's egg; on some parts, the calf for instance, they had become confluent. On bursting, the smaller formed thin, scaly, yellow scurfs, the larger left an excoriated, bright-red sore surface behind, discharging a quantity of serum. On the rest of the body, face, neck, chest, abdomen, nape of the neck, back, arms and the right lower limb, the eruption partly resembled measles, partly urticaria; it consisted of red, roundish, somewhat raised spots. On these parts, a number of vesicles of the size of a pin's head to that of a pea, likewise made their appearance. This mercurial exanthem did not occasion

any itching, but a *burning* and *great pain*, particularly at night. The pain was increased by touching the inflamed portions of skin. The patient suffered much pain on attempting to change his position or to raise himself in bed. The knees were kept raised and bent.—As the eruption abates the epidermis peels off, in dry, yellowish patches, as in scarlet-fever. The largest patches come off on the hand and the left lower limb. The patient experienced tearing pains in every joint. The symptoms disappeared entirely in the third week, (*Knorre, Hom. Gazette, XIX., p. 236*).—*Erysipelas*: *erysipelatous eruptions*, (*Læwenhardt*).—*Intense inflammation of the skin*, spreading over the larger portion of the body, and terminating in the formation of an immense number of vesicles and blisters filled with pus, (*Ascherson*).—*Herpes præputialis mercurialis*: the internal surface of the prepuce becomes red at one spot and itches a good deal. The redness is not circumscribed, but diffused gradually into the surrounding skin. On the second day, three, four or five vesicles are seen, raising slowly. They are pale-red, bordering on a whitish appearance, of the size of a millet-seed, or somewhat larger; they are transparent, spreading in the first twenty-four hours until they touch one another, after which they become darker and purulent. They burst on the third day, and then exhibit a roundish excoriation, with a slightly-elevated border; the base is white-yellow, secreting a good deal of pus; the continued redness of the mucous membrane and the recently-formed ulcers occasion an itching-burning sensation, which increases by washing or bathing the penis in cold water. The suppuration continues from four to six days, after which the ulcers assume a whitish appearance, which disappears in one or two days. A beautiful, bright-red cuticle makes its appearance in the place of the former ulcers, on a level with the sound mucous membrane, (*Dietterich*).—*Psudracia mercurialis* (mercurial itch): in single parts of the limbs, the patient experiences a violent itching, on the second day a slight elevation of a dark rosy redness is perceived, which increases in size on the day following, becomes pustulous on the fourth, and is fully developed on the fifth. These elevations vary in size from that of a millet-seed to the size of a pea. They are surrounded with a very narrow areola, their colour remains of a dark rosy red; on the fifth day their tips are filled with fine yellow pus; they are never seen in groups, but are scattered, as it were, over the extremities. On the sixth day, their tips commence to fall in, they become paler and the areola narrower. In three days the pustule changes to a light-brown scurf, which is absorbed in two days and then scales off, (*Dietterich*).—*IMPETIGO MERCURIALIS*: dark-red spots of various sizes are first perceived in the region of the genital organs and then on the chest. They are unequal, run into one another, which gives them the appearance of a map. They do not seem to be raised above the skin. They itch a good deal. Some months after their first appearance they become somewhat browner, rash-like vesicles make their appearance on those spots, which cave in on the fifth and scale off on the ninth day, the itching continuing. At first, the vesicles are seen only on the sternum, after which they spread over the whole chest, arms, calves and inner surface of the thighs. The vesicles break out repeatedly; sometimes some of them burst, leaving small, indented ulcers which run into one another, and secrete a brownish-yellow tenacious and viscid pus, which dries up into a crust, under which the process of suppuration continues. The upper parts of this scurf gradually assume a white-gray appearance and scale off. This scaling off and forming anew of the scurf is going on constantly as soon as the ulcers are once formed. After the eruption has lasted two months, the other parts of the skin, which had remained free so far, become affected. The skin becomes dry, rough, parched, depositing uninterruptedly small, bran-like scales. These scales accumulate particularly on

the hairy parts of the skin, on the hairy scalp, in the region of the whiskers, eyebrows, they frequently fall off in patches together with the hair. The complexion changes to a dingy yellow or earthy appearance, if it was formerly white and red, and to an olive-green appearance around the eyes if it was formerly brown-red. The secretions are likewise changed. The urine is frequently turbid, the patients are easily drenched with sweat, the exhalations have an offensive smell and the alvine evacuations are either retained or watery. The mental and animal functions are sometimes disturbed, the vegetative functions always, the patients either suffering with loss of appetite or with voracious appetite and other dyspeptic symptoms. Young subjects remain more or less free from these gastric derangements. The gums are livid, receding from the teeth, the teeth have a dirty-black appearance, the smell from the mouth is bad, the mucous membrane of the fauces is bluish, interstitially distended, and traversed by injected vessels, with tearing pains in the limbs, etc., (*Dietterich*).—Spreading, spongy, bluish, readily-bleeding ulcers.—Completely-cicatrized ulcers burst again without any apparent cause, and become gangrenous, (*Burnett*, Arch. gén. de méd., IV., p. 282, from mercurial vapours on board a ship).—Ulcers which are extremely painful when touched ever so little, discharging an acrid, corrosive ichor, spreading rapidly and forming unequal elevations and depressions as if corroded by insects, with unequal and quick pulse, sleeplessness, restlessness, profuse night-sweat, great nervousness and impatience from the slightest causes.—*Ulcus mercuriale simplex*: the mucous membrane becomes bluish-red in one or more places, and is here interstitially distended. Next day these spots become whitish, and the dissolution of the mucous membrane becomes evident. In a few hours the whitish-gray substance changes to a fetid ichor, flows off, and exhibits an irregular, indented, flat ulcer, with almost spongy base, and sharply-indented edge. The ichor is discharged in profuse quantity, the ulcer spreads rapidly *in extent*, without penetrating into the flesh, is very painful. If the use of the metal be continued and the ulcers left to themselves, they assume a dirty putrid appearance and become rapidly phagedenic. Blood is now discharged from the ulcers, not vigorously, but oozing out as from a sponge, and evincing a state of great debility, (*Dietterich*).—*Ulcus mercuriale mixtum* is a mercurial ulcer which has arisen from an already existing syphilitic one. The parts around the chancre are somewhat reddened. In a few hours this redness changes to a light-violet bluish colour. The border of the chancre swells somewhat, becomes raised and looks like the parts around. The smallest and finest vessels are seen running from the border to the ulcerated surface. The base which was lardaceous previously, and discharged a thickish pus, assumes a dirty, shaggy appearance, and now discharges a thin, acrid fluid. If red, healthy granulations had existed, they change to a dirty yellow-brown. Blood is discharged from the ulcer; this spreads rapidly in breadth and depth and destroys the adjacent soft parts. The chancre becomes very painful from the moment the surrounding parts turn red, (*Dietterich*).

**General Symptoms.**—*Hydrargyrosis of a less degree*: greater or less affection of all the mucous membranes, the respiratory organs, the intestinal canal, the urinary and genital organs; shortly after the whole dermoid system and the glandular tissues are similarly affected. The secretions, particularly those of the intestinal canal, mucous membranes, liver and skin, are increased; the excretions are more abundant, morbidly altered, the mucus is cruder, the urine turbid, the alvine evacuations are darker and thinner, greenish, the exhalations from the skin are clammy, smell disagreeably, the epidermis becomes flaccid. Gastric symptoms are, in the meanwhile, making their appearance; the taste becomes impure, the breath smells disagreeably, the

tongue is more or less coated, the appetite diminishes, the patient complains of a general uncomfortableness, the pulse is irritated, the blood is of a serous fluid consistence, all the secretions become more liquid, even the solids become interstitially distended. The callus of bony fractures is dissolved, the fibrous tissues, particularly the muscles, lose their tonicity, the patient feels weary and languid. The whole body, and more particularly the face, is bloated has a dingy, sallow appearance, the milk in the breasts becomes hurtful to the infant, and sometimes even excites convulsions, (*Richter*). **HYDRARGYROSIS OF A HIGHER DEGREE, MERCURIAL CACHEXIA:** languor and exhaustion, derangement of the digestive organs, trouble from flatulence, alternate constipation and diarrhoea, sour eructations, emaciation, apathy. The hair loses its lustre, becomes dry and falls out; the eyes retreat into their orbits, look dim and watery, the conjunctiva is dingy, has a reddish tinge, with clusters of varicose vessels, which become closely interwoven around the border of the conjunctiva. The iris loses its natural colour, whether blue, brown or blackish, it now looks gray and dingy. The face looks pale, dingy, sallow, the cheeks are sunken or flabby, the nose becomes pointed, the wings of the nose assume a greenish or bluish tinge, the lips are withered and bluish—these symptoms constitute the so-called *quicksilver-physiognomy*—the gums recede from the teeth, become bluish-red, the teeth lose their enamel, are covered with a fibrinous coating, turn black, become loose and fall out. The mucous membrane of the fauces and mouth, which is interstitially distended, looks pale, bluish, dingy, the breath is offensive, the lips are blue-red, the chin becomes pointed and prominent, the skin of the body is flaccid, withered, feels cold to the hand; the veins, which are swollen, shine through it. The saliva is tenacious, the sweat clammy, the urine pale, sometimes turbid, the stools are watery, the exhalations have a fetid smell, mobility is diminished; the activity of the mind is depressed, the patient is indifferent, apathetic and frequently falls into a state of imbecility, preceded by weakness of memory, sight, hearing, and the other senses. —*Inflammatory affections of the glands*, swelling of the parotid, axillary, inguinal and cervical glands.—Striking deficiency and corruption of the blood.—*Hemorrhage from every orifice of the body*, from the gums, mouth, nostrils, lungs; *putrid, rapidly-spreading ulcers* of the mucous membranes and skin; profuse, even bloody sweat; *all the symptoms of fully-developed scurvy*.—*Local and general dropsy*.—The pulse becomes irritated, frequent, small, tight.—*Lentescent, exhausting fevers*, with unquenchable thirst and rapid emaciation.—Fetid, diarrhoeic stools.—Drawing, tearing and boring pains in the muscles, sheaths of muscles, articulations and bones.—*Acute and chronic eruptions*.—Affections of the periosteum and bones.—Swelling of bones, softening of bones.—*Caries*.—Death finally takes place, either by gradual dissolution and hectic fever, or, after a rapid increase of all the symptoms, by the destruction of all the organic tissues, or by paralysis of the brain and heart, (*Dietterich, Richter*). **RHEUMATISMUS MERCURIALIS**, affecting the knee and shoulder-joints, rarely the hip, arm and wrist-joints, sometimes the rheumatism is acute, and, if left to itself, results in dropsy and suppuration of the joints, (*Wilhelm, Handschuh, Dietterich*).—Tearing in the joints with heaviness, (*Warbeck du Chateau*, from the vapours of Merc.).—Dull pain in the joints, (*Idem*).—Excessive pains in the muscles, tendons and joints, resembling rheumatic and arthritic pains.—Pains in the loins and knees and afterwards in the rest of the body, which are at first wandering, then seated, penetrating.—Darting and pricking pains in various parts of the body, (*W. Stokes*). **NEURALGIA MERCURIALIS:** along the track of a motor nerve the patient experiences a drawing-tearing pain. The pain may be seated, but more frequently it wanders here and there along different

parts of the affected nerve. If the affection last some months, the pain frequently passes to other nervous branches, particularly when the weather is very changeable. The pain has distinct but irregular intermissions, and recurs in consequence of an exertion, échauffement, current of cool air. Such patients cannot bear wet weather. They feel comfortable even in the greatest heat and delight in basking in the hottest sun. The nights are generally quiet, (*Dietterich*).—Violent tearing pains in the tibia and face, proceeding from the teeth and extending to the parietal bone and the frontal region, and depriving the patient of sleep, (*Jäger*).—*Trembling*, (*Colson, Stokes*)—*Trembling of the limbs*, (*Paracelsus, Forestus* and *Camemarius*, from the vapours of Merc., *de Haen, Borch, Ramazzini*).—Trembling of the limbs, so violent that the patients are unable to talk, walk or eat; they have to be fed and dressed by others, (*de Haen*, from the vapours of Merc.).—Trembling of the hands, of the muscles of the head and back, (*Warbeck du Chateau*, from mercurial vapours).—Violent trembling, first of the hands, then of the whole body; the patient is unable to take a step; constantly tormented by convulsive motions, the patient was unable to talk, or to raise his hands to his mouth without striking himself; one has to force him to swallow; he swallows convulsively, with paroxysms of suffocation, (*Ramazzini*, in the case of a gilder).—TREMOR MERCURIALIS: the patient feels a slight drawing in the arm, along the track of the nerves; some time after, it is likewise felt in the lower extremities, and occasions a tensile feeling in the muscles in walking. Afterwards he sometimes experiences automatic motion of single muscles. The drawing now changes to a trembling of the affected limbs, which is at first slight, increases gradually, and finally becomes so violent, that the patient is neither able to walk, stand nor sit. At a later period, single vibrations of the muscles of the chest, particularly of the cervical muscles, are perceived, causing the head to totter, and inducing either a stuttering speech, or an occasional interruption of speech by a convulsive contraction of the affected parts. These phenomena sometimes increase to real convulsions, particularly when a thunder-storm is approaching, (*Dietterich*).—Violent trembling of the whole body, so violent, that the patient, who is constantly tortured by convulsive spasms, is not able to raise his hands to his mouth without striking himself, or to walk, talk, or even to swallow, except with a spasmodic movement of the throat, accompanied with danger of suffocation, (*Fourcroy, Dietterich, Chowne, the Lancet*, 1840, July).—Uninterrupted spasmodic motions of the head, arms, fingers and feet; these spasms extend to the diaphragm, thereby inducing constant hiccough, and to the tongue, inducing tremor of the tongue and indistinct speech. On attempting to raise the foot, the trembling re-commences and the foot descends again to the ground. Sometimes the patient is indeed free from trembling and spasms; but any part of the body which he attempts to move, is at once affected by them. The spasms are excited by a current of cold air, the contact of a cold hand, the unexpected entering of some one into the room. The muscles of the left side are more violently affected than those of the right. Consciousness is never disturbed. On pressing on the fourth and fifth dorsal vertebræ the patient experiences some pain; the skin is cold and dry, the pulse rapid, soft and small, the bowels constipated. The spasms were removed by Bell. and other narcotics. (*W. Stokes*, in the case of a man of 46 years, who had worked in a looking-glass manufactory for the period of 38 years).—Paroxysms of spasmodic contraction of the arms and shoulders.—Local or general tetanus.—General immobility, a sort of cataleptic condition.—Epilepsy, (*Zinetti; Fallopi*a has observed this effect among the miners in the quicksilver mines).—Predisposition to apoplexy, (*Hoffmann*).—Apoplexy.—Softening of the brain with consequent apoplexy, (*Dietter-*

*ich*).—General paralysis, (*Reumont*).—Paralysis of the extremities, (*Eitmüller, Kramer, Ramazzini*).—A variety of severe nervous affections, (*Eitmüller de Merc. in Opp. med.*).—Excessive sensitiveness to external impressions, changes of temperature, etc., (*Dietterich*).—Desiccation of the whole body.—Excessive emaciation.—General emaciation and exhaustion.—Excessive sensitiveness to electricity.—Repeated attacks of fainting.—*Periostitis, first stage*: at some spot in bones which are covered only by cellular tissue and integument, in the tibia, ulna, sternum, radius, frontal bone, clavicle, the patient experiences after sunset a slight tension and drawing which does not prevent a quiet sleep. This slight pain recurs two or three evenings. On the fourth or fifth the pain becomes gnawing, at one spot only in the affected periosteum. This symptom increases on the following days, depriving the patient of rest and sleep, until towards morning. On touching the affected region of the periosteum no abnormal appearances are perceived; on making slight pressure, however, the patient utters a slight moan as from pain. This pain is partly sticking, partly aching.—*Second stage*: the periosteum becomes interstitially distended, it exudes an albuminous substance in the region where the gnawing pain is experienced. This exudation increases gradually, produces an adhesion between the periosteum and the cellular tissue, and converts both of them into a grayish-white, homogeneous, somewhat doughy, but rather hard-feeling substance. The swelling thus formed, varies in size from that of a hazel-nut to that of a hen's egg. In some cases the swelling spreads along the whole course of the periosteum. Such swellings have, until now, been termed gummata. The colour of the skin on the outside remains unchanged. As soon as the swelling commences to form, the pains increase in intensity; the intermissions become shorter and finally disappear entirely. The nervous system suffers a good deal, owing to the pains and sleepless nights; the patients lose their appetite, hectic fever frequently supervenes, and symptoms of the mercurial disease are perceived in other tissues and systems, (*Dietterich*).—*Periostitis interna*: the patients complain of a drawing pain wandering about in the *inmost parts* of the long bones. After the lapse of some days, the pain shows a tendency to become seated at one spot, increases in violence, becomes gnawing and boring, and occasions indescribable sufferings. The patients are deprived of sleep. After some weeks have elapsed the bone begins to swell; the swelling does not arise directly from the continuity of the bone, but from the upper and lower borders, following the length of the bone and giving it the appearance as if it were swollen all around. The swelling feels hard and bony, showing that it arises from an interstitial distention or protrusion of the bone. Simultaneously with the appearance or increase of this swelling the pains increase to a frightful degree of violence. *The pains are characterized by intermissions, are aggravated by the warmth of the bed, decrease in a cooler temperature, and are most violent when the weather, and more particularly when the wind, changes.* These intermissions shorten gradually until the pains become permanent, (*Dietterich*).—*Periostitis* recurring whenever the patient took cold, (*Graves*, in men who had never been affected with syphilis, but had taken a good deal of *Merc.*).—*Necrosis ossium*.—*Caries ossium*.—*Exostosis*.—*Osteomalacia*, (*Louvrier*).—*Osteosarcoma*, (*Louvrier*).—*Liability* of the bones to break, after previous consumption of the marrow; the bones were so friable that they might be crushed with the fingers, (*Louvrier, Delpech*).

## 165. MILLEFOLIUM.

**MILLEF.**—Milfoil.—**HARTLAUB** and **TRINKS**, Ann., IV., Archiv, XV., 3, etc. **NOACK** and **TRINKS**.

## CLINICAL OBSERVATIONS.

Millefolium is recommended for congestion of blood to the head and face, lungs, heart, etc.—*For hemorrhages from various organs*; nose, ears(?), stomach(?), rectum and anus, bladder, uterus(?), lungs, skin(?).—According to *Noack* and *Trinks* it has been successfully exhibited in the following affections:—*Excessive bleeding from the hæmorrhoidal tumors. Hæmaturia. Hæmoptoe*.—Pulmonary phthisis after hæmoptoe—Epistaxis.

## SYMPTOMS.

**Head.**—Stupefaction.—Intoxication.—Vertigo, (*Linné*, Flor. Suec., p. 299).—Painful tension in the right parietal bone.—Violent, painful *tearing* in the right parietal bone or in the left frontal protuberance.—Tearing and darting in the whole right side of the head.—Sticking in the left side of the head, and painful stitch in the right side of the occiput.—Fine stitch in the right side of the head.—Stitch in the vertex, of short duration.—Dull stitch in the left parietal bone, accompanied by a blow on the opposite side, followed by a stitch after the lapse of half a minute.—Painful roaring and confusion in the head.—Sensation as if the whole mass of blood would rush to the head.—Rushing of the blood when stooping, relieved by raising the head.—Painful sensation in the right side of the head, as if screwed in.

**Eyes.**—Jerking, with tension in the left upper eyelid.—Tingling in the inner canthus of the left eye, as from a fine feather.—Agglutination of the eyes, early in the morning.—Mistiness before the eyes, only at a distance.

**Ears.**—Tingling in the left ear, going off by boring into it with the finger.—Itching in the right ear, not going off entirely by boring into it with the finger.—Noise in the left ear as from a bat, causing one to start as if in affright, afterwards sensation, when laughing, as if cold air were rushing out.

**Face.**—Redness of the face without feeling hot internally.—Frequent tearing in the left side of the face up to the temple, in the evening. Several fine stitches in front of the left ear.—Painful, fine jerking in the left lower jaw.—Tearing in the right lower jaw, at times going to the ear, at others to the teeth.

**Mouth.**—Fine stinging in the upper lip.—Contractive sensation on the fore part of the tongue, with burning.—Fine stinging in the palate, with sensation as if cut to pieces.

**Pharynx.**—Long-continued roughness in the throat.

**Appetite.**—Increased feeling of hunger.

**Stomach.**—*Empty eructations*, after eating soup.—Hiccough.—Painful gnawing and digging in the stomach, as from hunger.—*Burning in the stomach* and abdomen, up to the chest, worse towards the right hypochondrium on bending the body double. Sensation, as if the stomach were lined with astringent earth.—Long-continued feeling of fulness in the stomach. Pain in the stomach, early in the morning, as if from fasting.—Spasm of the stomach, with sensation as if the stomach contained a liquid which moves through the abdomen to the anus.

**Abdomen.**—Violent pinching, first in the left hypochondrium, then on both sides, as far as the heart, with anxiety, going off after rising from the chair.—

Darting stitch in the region of a false rib of the left side.—Rough stitches in the region of the last right lower ribs.—Bloatedness of the abdomen, with frequent emission of flatulence, in the afternoon.—Violent, dull stitch in the left side of the abdomen, when eating, causing one to start.—Fine stinging in the crest of the left ilium.

**Stool.**—Frequent emission of fetid flatulence.—Rumbling and cutting in the abdomen, followed by two diarrhœic stools succeeded by tenesmus.—Stool rather soft than hard.—Soft stool followed by smarting, as from excoiation.

**Urinary Organs.**—Constant desire to urinate.

**Female Sexual Organs.**—Leucorrhœa.

**Chest.**—Painful rough stitch in the left chest, under the arm, independent of breathing.

**Back.**—Violent, fine stitch in the middle of the left scapula, from without inwards, during an inspiration. Violent stitch in the right scapula, from without inwards, after stretching the body and then bending it forward again.—Frequent, but not very painful drawing in the back.—Itching, and itching pimples on the back.—Stitch in the small of the back.

**Upper Extremities.**—Stitch in the left shoulder.—Stinging and burning of the anterior part of the left shoulder, or of the outer parts of the right elbow.—Two stitches in the inner surface of the right lower arm, followed by itching which goes off by scratching.—Rough feeling on a place of the size of a hand, on the inner surface of the left forearm. Fine stitch in the outer border of the right hand, behind the little finger.—Burning and sensation as of a flea-bite, on the inner surface of the right little finger.

**Lower Extremities.**—Tearing and tension in the left buttock, during rest and motion, in the forenoon.—Tearing in the right knee.—Fine stitch in the bend of the left knee.—Tearing down the right tibia, when walking.—Frequent going to sleep of the right foot when sitting, not going off after rising, after dinner.—Tingling in the right foot as if gone to sleep.

**Sleep.**—Yawning and stretching, with drowsiness, from time to time.

## 166. MOSCHUS.

MOSC.—Musk.—See HAHNEMANN'S Mat. Med., III.

COMPARE WITH—Asa f., Bell., Camph., Chin., Cocœ., Coff., Con., Croc., Hyos., Ign., Lauroc., Nux mos., Nux v., Op., Phosph., Plat., Puls., Stram.

ANTIDOTES.—Camph., Coff.

### CLINICAL OBSERVATIONS, FROM NOACK AND TRINKS.

Moschus is suitable for the following affections: nervous conditions.—Fits of weakness bordering on fainting.—Periodical fits of weakness, with decreased temperature of the skin, even at night, in bed, sinking irritability of the muscular and vascular systems, weak, sluggish, intermittent pulse, failing of strength, increasing to deadly weakness.—Fainting fits.—Fainting fits of hysteric females.—*Convulsions of both sexes and children.*—Clonic spasms.—Eclampsia. ?—*Tetanic spasms.*—*Catalepsy.*—The ailments increase by the body becoming cold.—Great sensitiveness of the body to the open air.—Somnolence.—*Sleeplessness from nervousness.*—Hypochondria with tonic spasms.—Hypochondria and hysteria.—Paralytic conditions of the brain.—Stupefaction.—*Vertigo* with stupefaction, dizziness, congestion of blood to the head, and fits of

tetanus and fainting.—Nervous headache.—Dimness of sight.—*Musæ volitantes*.—Amblyopia amaurotica.—Amaurosis.—Buzzing, fluttering, and detonations in the ears.—*Violent excitement of the sexual instinct in both sexes*.—*Impotence*.—Congestion of blood to the uterus.—Spasmodic constriction of the larynx and lungs.—Asthma thymicum?—Asthma Millari?—Spasms of the lungs?—Asthma pulverulentum, spasticum, hystericum et hypochondriacum?—Spasmodic affection of the pneumo-gastric nerve.—Angina pectoris.—Drawing, paralytic cramp-pains in the upper and lower limbs.—*Spasmodic movements of the upper and lower limbs*.

#### SYMPTOMS.

**Mind and Disposition.**—*Great anxiety*, with *palpitation of the heart* as from anxious expectation. Anxiety with starting, as in affright and trembling, even from hearing a slight noise, such as opening the door. *Great anguish as if he had to die*. Talks of nothing except that he will have to die. She exclaims, It is my death! turns pale and falls down in a swoon, (relieved by Camph.). Ill-humour, excessive, with constant disposition to weep. *Violent scolding* which cannot be appeased by anything, until the mouth is dry, the lip blue, the eye staring and the face pale as a corpse, she falls down in this condition. *Is very much vexed*, jumps up in a sort of rage and is beside himself with rage until he knocks something to pieces, after which he feels better. At times he sits idle, at times he runs about restlessly and quarrels with everybody he sees.—Kind-hearted, unable to make any remarks when offended, although he feels as if he ought to scold.—Appearance as if very busy, and so weak that he drops everything he holds in his hand.

**Sensorium.**—Paroxysms of absence of mind, with stiches in the joints of the fingers on return of consciousness. Sudden *failing of the senses*, with complaints, uttered in a quick and confused manner, as if his fingers and toes would be cut off. *Absorbed in thought*, talks loudly to himself, throws his hands about, and then exclaims: Ah! ah! crosses her hands while thus absorbed, and demeans herself as if she would lose her senses. Exclaims suddenly: I fall! as if she would faint, but remains seated quietly, walks about, then sits down again, presses her hands to her head and complains of violent pains without mentioning where.—Dulness of sense, with diminution of memory. Sudden loss of memory, with pressure on the vertex. So forgetful that he forgets the very place where he happens to be.—*Dulness of the head*, as if from intoxication. Dulness of the head with considerable pressure in the brain. Feeling of lightness in the sciniput. Sort of vertiginous stupefaction, during which he imagines he neither sees nor hears, although both faculties are sound.—*Vertigo*, with dimness of sight, which does not allow him to move. Vertigo, with staggering, making it impossible for him to walk alone. Vertigo, with balancing sensation before his eyes, as if something were quickly moving up and down, on moving the head ever so little. *Sensation as if she were falling from a height*, with stupefaction. *Vertigo with stupefaction*, obliging him to sit down, when he still fears, however, that he might fall. *Dizziness*, with pressure on the vertex. Vertigo, *with violent rush of blood to the head*, relieved in the open air. Vertigo, as if intoxicated, also with danger of falling, or with pressure in the head, and sensation *as if everything before his eyes were in motion*. Sensation, as if he were turned about so rapidly that he perceives the current of air produced by the motion. Sensation, as if everything were turning in a circle more and more rapidly, until he imagines at last that he is floating in the air. Vertigo on moving the eyelids, relieved in the open air. Vertigo on stooping, going off on rising. Vertigo, accompanied with a kind of

loathing. Vertigo, *with nausea*, even unto vomiting, or with desire for black coffee and urging to lie down. Vertigo, *with staring eyes and a sort of spasm in the mouth*, preventing speech, though he sees and hears everything. Vertigo, *with sudden fainting*. Turning sensation in the forehead and before his eyes, worse on stooping.

**Head.**—Pain in the head, deep in the brain. Headache on going up stairs and moving the head strongly. Raging headache, also in a child, so that the head has to be held with both hands. Dull pain in the whole head, particularly in the evening. Headache, with nausea and vomiting. Headache, with drawing in the right ear.—Stupifying headache, drawing the eyelids together. Stupifying pressure in the region of the left eyebrow. General stupifying oppression of the brain, as if compressed, and as if he would lose his senses. Stupifying compressive headache at a small spot, directly above the root of the nose.—Feeling of heaviness in the head.—Aching pain in the head, with coldness, as from cold poultices. Pressure as from a heavy load on the top of the head, worse during motion, or else relieved by movement in the open air. Pressure, deep in the brain. Pressure in the cerebellum. Pressure in the right temple, also with drawing. Pressure above the margin of the orbit, as if a blunt body were pressed into the brain. Pressure between the eyebrows, down to the nose and both malar bones, on the vertex and in the upper part of the forehead. Pressure and boring, at times in the whole head, at times in the ears, forehead, on the vertex, or in the occiput. Tensive pressure, with sensation as if something were moving in the brain.—Drawing pain in the head, from the occiput to the ears, and from the ears to the teeth, particularly on the right side. Drawing pain in the head, here and there, down to the nape of the neck, where a tension is experienced, worse in the room and relieved in the open air. Drawing, as if a string were frequently drawn over the head, and, finally, very tightly. Spasmodic drawing through the whole head.—Tearing in the right half of the head. Pain, as if one-half of the skull were cut through, relieved in the open air. Pain, as if part of the occiput were knocked in, whence the pain emanates and extends to the forehead. Sticking in the forehead. Beating and jerking sensation in the occiput.—Rush of blood to the head, also with heaviness in the head.

**Scalp.**—Painfulness of the whole head, as if sore, worse when touched. Aching pain in the forehead, the parts being marked with a red spot.—Itching of the hairy scalp, going off after scratching. Red spot like a flea-bite over each eyebrow.—Heat of the whole head and sweat on the occiput.

**Eyes.**—Pressure in the eyes, as from sand, or particularly in the left eye with profuse lachrymation.—Itching in the eyes, inducing rubbing. Gripping pain in the canthi, relieved by rubbing. Smarting in the eyes as if from smoke, with lachrymation. Small red pimples on the upper lids, with pus in their tips.—Swelling of the upper lids, with pressure.—The eyes are turned upwards. Staring, glistening eyes, accompanied with a sort of loss of sense so that he does not answer any questions although he hears well. Dim eyes, with pressure in the canthi, or with dilatation of the pupils and lachrymation of the left eye.—Dimness of sight, also sudden, as if she would lose her sight. Black points before her eyes.

**Ears.**—Pressure on the left earilage as if the ear were pressed to the head. Itching of the back part of the ears, inducing rubbing. Eruption on the right earilage, with itching, and burning after scratching.—Discharge of cerumen, particularly from the left ear, or at night from the right ear.—Rushing in the ears, also as from strong wind, or as from the wing of a bird, or in the left ear,

with sensation as if a flea were in the ear. Crackling in the right ear, with disagreeable sensation. Fluttering in the left ear. *Detonations in both ears*, or particularly in the right ear, like the report of a cannon, accompanied with discharge of some drops of blood.—Hardness of hearing, he does not understand people unless they talk loud.

**Nose.**—Frequent *crawling* on the tip of the nose, as from an insect, not removed by rubbing. Tickling in the nose, which changes to burning.—*Bleeding* of the nose, also momentarily.—*Sneezing* with pressure in the nasal bones. *Frequent violent sneezing*, with discharge of a few drops of blood every time he sneezes. Sneezing every day, with tickling succeeded by burning.—<sup>c</sup>Obstruction of the nose with dry coryza is suddenly removed.

**Face.**—*Earthy complexion. Pale face, with sweat.* Red face. Redness of the right cheek without heat, with paleness of the left which feels hot to him.—*Heat in the face*, also violent, without redness, or with dimness of sight.—*Tension in the facial muscles* as if too short. Frequent pressure on the left malar bone. Cooling burning on the right malar bone.—Small *pimples* in the face, with burning.—*The lips* peel off. Swelling of the upper lip, with dry mouth and thirst.—Movement of the *lower jaw* as if he were chewing.

**Mouth and Pharynx.**—*Great dryness of the mouth.* Burning in the fauces as from a hot coal.

**Appetite and Taste.**—Bitter taste in the mouth, early in the morning or in bed. *Putrid* taste of food, except milk which tastes tolerably well. Everything tastes flat and milk is tasteless.—*Aversion to food*; on merely seeing it he feels sick at the stomach as if he would vomit.—*Great thirst* for beer. Desire for brandy.

**Gastric Symptoms.**—Repeated, violent, audible eructations. Rising of air, accompanied with rising of a tasteless fluid into the mouth. Violent eructations tasting of musk. Eructations with hot saliva in the mouth. Eructations tasting of garlic. Eructations with nausea.—Raw sensation in the fauces like heartburn, with some nausea, as in waterbrash.—Nausea as if from the pit of the stomach, with retraction of the umbilicus and cramp-like sensation. She has to remain in her bed for two afternoons, owing to nausea and headache. Fits of nausea, six days in succession.—*Inclination to vomit*, early in the morning and evening, or the whole day, or after every meal, with inability to vomit. *Gagging* in the morning, on rising, without throwing up anything. Vomiting every forenoon, about 11 o'clock. Vomiting after rising and eating a little. *Vomiting of the ingesta, with nausea* and subsequent vomiting. Vomiting of mucus. Vomiting with pressure and distention of the stomach. Vomiting with tensive pain across the chest, or with heaviness on the chest as from a load.

**Stomach.**—After every dinner he feels a tightness in the pit of the stomach, with a smarting, burning sensation of soreness, three days in succession. *Oppression of the stomach.* Feeling of repletion in the region of the stomach, increased even by moderate eating. Soreness in and above the pit of the stomach (in the chest), especially during an inspiration, accompanied with anxiety in the chest. Tightness in the stomach, as from excessive repletion.—*Pressure* in the stomach, followed by eructations having the smell of a he-goat. Pressure in the stomach as from a hard substance in the stomach, aggravated by drinking. Tensive pressure in the stomach, with some painfulness of the abdomen; afterwards the pressure extends through the whole abdomen. Crampy pressure in the pit of the stomach. Pressure below the pit of the stomach, relieved by stooping. Pressure on the left side of the pit of the stomach.

**Hypochondria.**—Swelling tightness and jerking in both hypochondria.

*Sticking in the region of the liver*, aggravated by an inspiration. Itching stitch under the right ribs, obliging one to rub.—Stitches under the left ribs. Crampy sensation on taking a deep inspiration.

**Abdomen.**—Pain in the right side under the umbilicus. Pain about the umbilicus. Sensation as if the abdomen were too tight, without pain but with anxiety, preventing her from undertaking any work, and obliging her to run about.—Tensive pain in the abdomen, as if it would burst. *Pressure* in the umbilicus, with burning in the chest.—Contractive pain in the umbilical region, where a depression is formed. Grasping above the umbilicus, at intervals, arresting the breathing.—*Pinching in the abdomen*, causing him to cry out, relieved by bending double. Pinching in the abdomen, with pressing on the bladder, relieved by pressing the fist in the abdomen.—*Stitches* in the abdomen, with rumbling, and anxiety through the whole body. Stitches deep in the umbilical region, particularly on taking an inspiration.—*Distention* of the abdomen with ineffectual urging to stool. Constant *grumbling*, disappearing after and even during a meal. Rumbling with emission of flatulence which smells like the eructations. *Emission of a quantity of flatulence*, smelling like garlic. Emission of silent flatulence before stool, with urging.

**Stool and Anus.**—*Retention of stool* for several days, with an evacuation every time he takes coffee. *Violent though ineffectual urging to stool in the abdomen*. Rumbling and pressing, succeeded by stool, the first part of which is hard, the latter soft.—*Diarrhœa*, with violent cutting in the abdomen. Three or four liquid stools a day, mixed with fœces. *Nightly diarrhœa*, the evacuations passing off even during sleep, or with violent urging and pressing in the anus. Profuse diarrhœa, with drawing-in of the stomach.—The stools look as if he had swallowed the juice of the cuttle fish.—Stitches in the anus reaching to the bladder. Tingling at the orifice of the rectum, which passes off by rubbing.

**Urinary Organs.**—The urine is clear as water and very copious. *Scanty and thick urine*, like yeast.—Stitches from the anus to the bladder. A good deal of burning in the urethra, particularly during an erection.

**Male Sexual Organs.**—*Violent sexual excitement*. Sexual desire with violent titillation, or with subsequent relaxation of the penis. Sexual desire with tensive pain in the penis. The sexual desire becomes very active in an old man. *Violent sexual desire*, also with nausea and vomiting after the embrace.—*Involuntary emissions*, also painful, without erection. Erections with desire to urinate.—*Impotence*, occasioned by a cold, disappears permanently by smelling the musk while triturating it.

**Female Sexual Organs.**—*Violent sexual desire*, with intolerable titillation, even in a woman of 60 years.—*Drawing and pressing toward the sexual organs, as if the menses would appear*.—*The menses are too early*, even by six days, and too profuse, or with drawing pain in the abdomen. *The menses make their appearance* even when merely smelling of the drug. The menses which had stopped a whole year, appear again for a few hours, in a woman of 48 years. The menses which had stopped 11 days previous, re-appear.—*Violent drawing pains at the appearance of the menses*.

**Chest.**—*Sensation in the larynx as from the vapour of sulphur*. Constriction of the throat from merely smelling of the drug, arresting the breathing. Tightness of breathing, with desire to take deep breath. *Shortness of breath owing to stitches in the chest*, particularly in the right side, or with difficulty of breathing. *Suffocative constriction of the chest*. *Spasm of the lungs*, commencing with desire to cough, increasing gradually, and driving one to despair. °Certain kinds of asthma Millari.?—Fulness in the chest.—The chest is violently affected, with pain throughout the chest, attended with a violent, dry cough.—

*Pressure in the chest*, with arrest of breathing. Pressure in the chest not allowing one to lie down, and threatening suffocation. Painful pressure in the left chest as if the pain would press through the nipple. Pressure at times in the left, at times in the right chest, at other times through to the spine.—*Stitches in the chest, with red, puffed face, dilatation of the pupils, dry, bright-red tongue, and thirst.* Stitches in the right side down to the region of the liver. Intermittent stitches in the right chest.

**Back.**—Pressure in the sacrum as if from a blunt body. Drawing pain in the glutei muscles, extending to the groins.—*Drawing pain in the back, particularly in the spine down to the thighs*, causing one to ery out, and impeding walking. Tight feeling in the back, with drawing as previous to the menses. Stitches on the left side of and near the spinal column.—Pain in the nape of the neck which does not allow of the neck being turned. *Drawing pain*, extending to the right shoulder, or with pressure in a muscular part. Pain as if the cervical muscles would be torn off on either side. Sticking, at times in the neck, at others in the shoulders.

**Upper Limbs.**—Tearing stitches in the left shoulder, with heaviness and impeded motion of the whole arm. Darting pain from the right shoulder-joint to the thumb.—Jerking in the right arm, with cramp-pain and going to sleep of the fingers.—*Pressure in the upper arm*, from the shoulder-joint to the elbow.—*Cutting in the right forearm*, succeeded by burning. Laming drawing in the right forearm. Crampy pressure above the right wrist-joint. Drawing and sticking, from the left wrist to the elbow-joint, in the evening, in bed, hindering sleep, she has to move the arm up and down above the bed-clothes, in order to quiet the pain.—Swelling and stinging of the hands. *Spasmodic throwing about of the hands and feet*, followed by severe pains in those parts. Cramp-like drawing in the hands and fingers, as if cramp would actually set in. Sticking in the left hand.—Involuntary motion of the fingers as if he would grasp something(?). Stiffness of the fingers of the right hand. *Paralytic pain in the left thumb*, darting, or else drawing as if a cramp would set in. Cooling burning in the index-finger, or else pain which causes the finger to tremble.

**Lower Limbs.**—Pressure in the hips, which obliges him to lie down. Pain as if the muscles were crowded together with a pair of tongs.—Languor and uneasiness of the lower limbs, when sitting, as after a long walk, obliging him to move them constantly. Humming sensation in the lower limbs when keeping them still. Indescribable pain in the thigh and leg, which is relieved by motion, but not by walking. *Painful spots* (points) on the lower limbs, here and there, as if he had been beaten.—*Pressure about the thigh*, also with feeling of weakness, or crampy pressure. Paralytic jerking on the inner side of the left thigh. Sharp pinching above the right knee. Pain in the right thigh as if the flesh had been detached by blows. Pain in both thighs *as if sprained*, not allowing one to leave the bed. Itching stinging in the anterior side of the thigh, inducing one to rub.—Pain in the right knee, not allowing one to remain in bed. Compressive sensation in the bends of the knees as if the tendons were too short. Drawing pain from the bend of the knee to the calf.—*Paralytic pain in the leg, like rigidity*, when sitting, and obliging one to move the leg now and then, in order to quiet it. Paralytic feeling of rigidity in the leg, with restlessness of the limb, obliging him to contract and stretch the leg alternately, in order to quiet it. When drawing the feet in while sitting, he experiences a humming and groaning sensation in the legs and partly in the thighs, as if they had been fatigued by a long walk, or were on the point of going to sleep. Pain in the calves which does not admit of their being touched strongly, they feel cold to the hand. Cramp-pain about the tibia, inducing one to ery out, with sweat over the whole body.

Sudden feeling of coldness about the left tibia. Itching of the outer parts of the tibia, going off by rubbing.—Pain in the tarsal joints as if sprained, with stitches in the toes. Stitches in the tarsal joints from within outwards, with dread of walking. Tearing in the tarsal joints, with pain as if the muscles were strongly pressed towards the toes.—Burning in the *toes* as from the pressure of tight shoes. Pain in the big toe as if sprained, aggravated by motion. Darting pain in two *nails*, as if they would become ulcerated.

**Sleep.**—Great *drowsiness* in the day-time, also with frequent deep yawning. Is scarcely able to keep his eyes open, during a walk in the open air. *Falls into a sound sleep* while triturating the drug. *Sopor. Coma.* Sound sleep, so that when awakened, he talked coherently without knowing anything about it in the morning.—°*Sleeplessness*, °from nervous irritation. Sleeplessness, the whole night, with momentary complete loss of consciousness and great exhaustion on waking. *Restless sleep*, he wakes every half hour, with feeling of heat which obliges him to uncover himself. Is unable to lie long on the same side at night, because the part becomes painful as if sprained or broken.—Dreams full of eager activity and motion. Continued dreams during a restless sleep. Vivid dreams insulting to his honour. Dreams that he has failed in everything he undertakes; this makes him very angry.

**Fever.**—*Feeling of coldness, particularly in the spine, with drawing pain.* *External coldness*, with internal burning of the affected parts, or particularly in the arms and lower limbs. Sensation as if a cool breeze were suddenly blowing upon him, especially the uncovered parts, more particularly the hands. The open air felt cold to him, and he seated himself near the stove. Feels cold the whole day. His left hand feels warm, his right one cold; to the face both hands feel cool. Slight shuddering on the hairy scalp, whence it gradually steals over the whole body (immediately). Shuddering when touched by the air, obliging him to go to bed in order to get warm. Alternate shuddering and heat, with languor which obliges one to lie down. Shuddering with mounting of heat, obliging him to go into the open air where he feels better. After the shuddering a pleasant feeling of natural warmth pervades the whole body. The pleasant feeling of natural warmth is again followed by a slight shuddering from the head through the whole body. No thirst during or after the shuddering.—*Increase of warmth* of the whole body, with copious exhalation and increased animation (immediately). Burning heat over the whole body, in the evening when in bed, especially on the right side, with a feeling of dryness and scraping in the throat and mouth, and moderate thirst; she had to uncover herself; accompanied with stitching pain in the forehead, vertigo before the eyes, bruised feeling over the whole body, sleepless, restless, tossing about, occasional grasping above the umbilicus, and a pressing towards the genital organs, with excessive ill-humour; the paroxysm lasted one hour.—*Excessive orgasm of the circulation.* The pulse is more full, but slower than usual by four or five beats. The pulse is less full and much quicker, increasing from seventy-two to eighty-eight beats. *Slight sweat* every morning. Sweat without heat.

**Skin.**—*Itching* here and there, with pinching and stinging, obliging one to rub. Intolerable burning in otherwise painless venereal (mercurial) herpes.—*Pimples with violent griping* in various parts, particularly on the dorsum of the foot, between the toes, shoulders, or on the left upper arm, *obliging one to scratch until the parts bleed, with burning after the scratching.*

**General Symptoms.**—°*Nervous affections and paroxysms.* \**Hysteric paroxysms*—even in males. \**Hypochondriac affections.* Musk is unpleasant to hypochondriac persons.—Prickling in all the muscles. Painful numbness in the articulations of the lower limbs, with extreme absence of mind. *Feeling of*

*pain in the whole body*, with a sort of shuddering, although his skin feels warm. *Complaints of excessive pains, still more when asked about them, without telling where he feels the pains.* Darting pain in every part of the body, particularly at night. *Pain as if bruised in all the joints.* The part on which he is lying feels as if sprained and bruised.—*General feeling of exhaustion*, also excessive, with lachrymation, or painful, with pressure in the whole body, particularly the joints. Great *weariness*, he is scarcely able to stir. Does not feel weak in walking, but feels a lameness in his knees as soon as he sits down, as if exhausted. °Weakness unto fainting, with nightly coldness of the skin all over. °Hysterical paroxysms of weakness.—*Feeling of malaise* without feeling able to say where he feels sick, with frequent fainting turns. \**Fainting turns, -also succeeded by headache*, °or particularly at night, or in the evening, or in the open air.—*Convulsions* of the most violent kind, in men and women. °*Eclampsia?* *Tetanic spasms.* *Stiffness of the hands and feet.* *Spasmodic tossing about of the hands and feet*, with severe pains afterwards. *Catalepsy.*—*Attacks which cease in the open air*: 1. *Determination of blood to the head, with staring eyes and spasm in the mouth*, followed by quick, confused speech, afterwards deadly paleness, face and hairy scalp being drenched with sweat: 2. The eye stares, with paleness of face, heaviness of the head, pressure in the nape of the neck, coldness of the body, nausea, afterwards obscuration of sight, contraction of the pupils, loss of equilibrium, stiffness and stretching of the right hand and fingers: 3. *The eyes are staring and protruded, the muscles of the face are distorted, the mouth is half open*, afterwards delirium with low whispering (psh! psh!), lastly, deep moaning and playing with the buttons of his waistcoat.—*Hemorrhages.*

**Characteristic Peculiarities.**—Aggravation of the pains when the body becomes cold. Great sensitiveness to the open air.

## 167. MUREX PURPUREA.

MUR. PUR.—Purple shell-fish.—See PETROZ's proving in *Revue critique et retrospective de la Matière médicale spécifique.*—*Hygea*, XVI.

### CLINICAL OBSERVATIONS.

*Noack and Trinks* offer the following: *Petroz* instituted his provings with the juice of the purple-fish on three females affected with leucorrhœa, and one of them with a sore and cutting pain as with a cutting instrument. The therapeutic indications which have thus been obtained, are without the least value. *Petroz* thinks the remedy will prove useful in inflammatory and spongy enlargements of the neck of the uterus and in the dangerous affections which occur incidentally to those often suddenly supervening degenerations of the womb.

### SYMPTOMS.

**Head, etc.**—*Diminished memory, with difficulty of connecting words.*—*Dulness* of the head with inability to work, also with drowsiness and heaviness of the head.—Frequent *heaviness* of the head, sometimes alternating with great clearness of thought.—*Headache* on waking in the morning, going off after rising.—Acute pain in the occiput. Pain in the left temple. *Aching* pain in the forehead and right temple. Cramp-pain at the occiput, relieved by pressing the hands on the part or bending the head backward. Cramp-pain behind the ears. Roaring in the ears with increased heaviness of the head.—*Troublesome*

coldness of the nose the whole day.—Burning of the right cheek towards evening, of the left cheek early in the morning.

**Stomach, etc.**—Hunger only in the morning, none at dinner.—*Tensive* pain in the right hypochondrium.—Colic, particularly in the evening. Pain in the hypogastrium as previous to the menses, in the evening. Intense pain, like a sharp stitch, in the left side of the lower abdomen, spreading over various parts, with painfulness of the side the whole evening.—Difficult stool.—Constipation for more than five days. Pressure on the anus, like painful stitches.

**Urinary Organs.**—Frequent desire to urinate, day and night, with colourless urine.—Urine smelling almost like valerian, with white sediment and discharge of mucus after urinating.—Discharge of some blood in urinating.

**Female Sexual Organs.**—*Violent excitement* in the sexual organs and excessive desire for an embrace, almost unto madness, excited by the least contact of the parts.—Feeling of dryness and constriction in the *uterus*. Beating in the uterus. Sore pain as if wounded with a cutting instrument in the uterus. Violent pain in the right side of the uterus, through the abdomen to the chest. Violent stitches in the left side of the uterus, from below upwards, in the evening.—Feeling of heaviness and enlargement in the *labia majora*.—Feeling of heaviness in the vagina during the colic.—*Watery* leucorrhœa, also greenish, thick, bloody. Return of bloody leucorrhœa during stool.—Violent pains in the mamma, acute stitches.

**Larynx, etc.**—*Altered voice*. Hoarseness. Dry, rare cough before breakfast, rare cough with oppression of the chest.—*Wheezing* in the chest *when breathing*, in the evening.—*Pain in the chest* as if bruised.—Stinging and burning under the left short ribs, towards the spine.—*Palpitation of the heart* and throbbing of the carotids.

**Back and Extremities.**—*Pain in the loins*, burning and as if sore. Pain in the hip and loins when lying in bed. Pain in the region of the pelvis.—Pain in the *forearm*, below the elbow. Heat in the hands.—Great weakness and weariness, giving way of the lower limbs, and irresistible desire to sit.—Great pain as if weary and contused *in the thighs*. Intense heat and violent pain in the anterior portion of the thighs, on rising, not bearing contact. Beating sensation anteriorly.

## 168. MURIATIC ACID.

MUR. AC.—Acidum hydrochloricum.—See HAHNEMANN'S Chronic Diseases, IV.—*Duration of Action*: five weeks and upwards.

COMPARE WITH—Ars., Aur., Bell., Bry., Calc., Chin., *Lyc.*, Natr. mur., Nitr. ac., Nux v., Phosph. ac., Rhus, Squilla, Viol. od.

ANTIDOTES.—Of large doses: Magnesia calcinata, sapo medicus. Of small doses: Bry.? Camph.

### CLINICAL OBSERVATIONS.

*Noack* and *Trinks* recommend the muriatic acid for the following affections, in some of which it has been employed with success: Serophulosis.—Acute diseases, with rapid sinking of the vital forces, great prostration, extreme exhaustion and septic character.—Serofulous exanthems.—Humid, suppurating, scurfy eruptions, with itching in the warmth of the bed.—Pimples on the forehead, finally running together into a scurf.—Ulcers, very painful, throbbing and

with a burning pain, secreting a *fetid ichor* and covered with scurf.—*Variolæ malignæ, putridæ*.—Boils with stinging pains.—Sleeplessness and difficulty of falling asleep.—Intermittent fever.?—*Febris nervosa stupida*.—Typhus putridus.?—*Melancholia*.?—Great sadness.—Vertigo.?—Seeing only the upper half of objects.—Beating in the ears.—*Hardness* of hearing and deafness.—Tingling, whizzing in the ears.—Bleeding at the nose.—Dryness and obstruction of the nose.—*Ulcerated, scurfy nose*.—Pimples in the face.—Freckles.—Ulcerated, scurfy upper lip.—*Darting, tearing*, boring pains in the teeth.—Inflammation and swelling of the gums.—Scurvy of the gums.—Ptyalism.?—Diphtheritis.?—Want of appetite.—Status gastricus et pituitosus.—Bulimy.—Vehement desire to drink.—Chronic affections of the liver.?—Cutting and pinching pains in the abdomen.—*Abdominal spasms*.—Distention of the abdomen.—Meteorism.—Stenosis of the rectum.?—*Chronic looseness* of the bowels.—Prolapsus ani.—*Blind and flowing hæmorrhoids with burning soreness*.—Ischuria.—Frequent desire to urinate, with excessive secretion of urine.—Diabetes insipidus et mellitus.—Weakness of the bladder.—Paralysis of the bladder.—Involuntary emission of urine.—Weakness of the male organs of generation.—Impotence.—Premature menses with pain in the abdomen.—Metrorrhagia.?—Leucorrhœa.?—Coryza, with discharge of corrosive, acrid or thick mucus.—Roughness and hoarseness, with sore feeling in the chest.—Dry, violent, fatiguing, and panting cough from titillation in the chest.—Cough with discharge of crude mucus.—Hæmoptœ.?—Aching, drawing, sticking pains in the chest.—Pain in the back and small of the back.—*Tearing and lancinating* pains in the joints of the upper and lower limbs.—Cold feet.

#### SYMPTOMS.

**Mind and Disposition.**—Sad, taciturn, and dissatisfied with his lot. Sad and taciturn, during the menses. Deeply reflecting and taciturn, as if he were threatened by some disagreeable event. Anxious apprehensiveness; he is affected by the slightest trouble. Anxiousness, with cold sweat in the face. Taciturn, peevish. *Out of humour*; he does nothing to his satisfaction, *in the evening*. Everything displeases her; she feels weary, in the afternoon, when in the open air. Peevish mood. Pusillanimous, desponding, vexed about everything. Irritable, disposed to anger and chagrin. Inclines to start.—Want of disposition to intellectual labour. While at his work, ideas of recent events crowd upon his mind, the events presenting themselves very vividly to his mind.

**Sensorium.**—Dulness in the forehead.—*Vertigo in the open air, and unsteady gait*. Vertigo in the head, especially in the room, with dim-sightedness. Sudden vertigo in the open air; the objects turned with her. Vertigo in the head, with tearing in the vertex and sensation as if the hair were pulled.

**Head.**—Headache in the forehead and occiput; the pain in the forehead increases on raising one's-self in bed. Headache from walking in the open air. Pain of the left occipital protuberance from walking in rough wind. Pain in the forehead, afterwards affecting the whole head. Stupifying aching pain about the forehead, in any position of the body, going off by contact. Headache in the whole head, as if the brain were torn and dashed to pieces, as is the case in putrid fevers. Headache, as if coryza would come on, pressing towards the eyes; the pain disappears when lying, after much sneezing.—Heaviness in the forehead, pressing downwards towards the eyes, with obtusion of the head, going off by pressing upon the part. Oppressive heaviness in the head, early in the morning, after rising; by dint of looking at things, they become confused before his eyes, with a reeling sensation and drowsiness. Heaviness in

the occiput, as if the head would fall backwards, apparently from weakness of the cervical muscles. *Feeling* of heaviness in the occiput, with drawing stitches towards the nape of the neck, with swelling of a cervical gland, which is painful to the touch, and heaviness and vertigo of the head, with gloominess of sight.—*Pressure* in the left side of the head. Aching in the left temple. Headache, from within outwards, in the forehead and temple. Pressure from the middle of the brain to the left shoulder. Aching in the fore part of the brain, increased by moving the eyes. Tensive aching from the occipital bone through the brain into the forehead.—*Tensive pain* in the right temple. Tension and stitches in the occiput, in the evening.—*Darting pain* in the vertex, in the evening.—*Tearing* headache, in the forehead. Violent tearing in the vertex, sometimes accompanied with a feeling as if the hairs were pulled. *Tearing in the right parietal bone*, sometimes accompanied by stitches extending to the forehead and even to the margin of the orbit, sometimes accompanied with tickling in the left ear and burning in the concha. Violent tearing and stitches in the occiput. Tearing with paroxysms, pressing in the forehead, towards the right orbit. Tearing in both halves of the occiput, with a sensation as of pushing and jerking, extending to the forehead.—*Violent stitches* in the sinciput and forehead, from noon till bed-time. Stitch in the head, when blowing the nose. Long, frequent stitches in both frontal eminences, towards the centre. Stitches in the forehead, as far as the temple, increased by stooping and by pressing on the part. Stitches in the right parietal bone, followed by violent tearing in the right lobule and around the ear. Stitch in the head, above the left temple. Darting in the head, from without inwards, after stooping and raising the head again, after dinner. Headache, at five o'clock in the morning, rousing her from sleep, followed by violent stitches above the right ear.—*Boring pain* in the vertex, as if from the skull into the brain. *Feeling as if the brain were loose*, when drawing a heavy load. *Burning feeling* in the head, especially in the forehead, early in the morning when stooping. Whizzing in the head.

**Scalp.**—Sensation on the scalp, as if the hair stood on end, as after a fright. Tension of the skin, on the left side of the head. Stitch-like tearing in the right temple (when standing), disappearing when touching the part or when yawning. Ulcerative pain, externally, in both temples, and on the forehead. Burning aching, externally, above the left eye. Burning pain on the hairy scalp, above the temple. Pulsation of the right temporal artery, when lying on it. The forehead feels dead and as if gone to sleep. Violent itching on the hairy scalp, which is not relieved by scratching. *Pustules* on the forehead and temples. Pimples on the forehead, forming a *scurf* within 24 hours. Boil on the right temple.

**Eyes.**—Fine tearings in the margin of the orbits. Drawing from the occipital protuberance into the left eye without pain, but causing slight twitchings in the upper lid. Darting, through the upper eyelid towards the malar bone, as if a thread were drawn through the parts (immediately).—*Itching in the eyes*. Itching smarting in the inner canthus of the right eye, which cannot be removed by friction. Corrosive smarting in the outer canthus of the left eye, in the evening. Itching stitch in the outer canthus of the right eye, when at rest.—*Stitches* in the eyes, from within outwards; the eyes are red. Cutting in the right eyeball, when at rest. *Burning* and pressure in the eyes, early in the morning, when washing them with water. Burning of the eyes, which are agglutinated early in the morning. Burning of the eyes, in the evening, with pressure, as after exerting the eyes.—*Slight inflammation* of the eyes. Swelling and redness of the upper and lower eyelid, without pain. Agglutination of the eyes, early in the morning.—Alternate dilatation and contraction of the

pupils, at intervals of from four to five hours. *Twinkling* before the eyes and half-sightedness; *\*one-half of the objects appears to be cut off from the other half in a perpendicular line.* The eyes are very sensitive to the light.

**Ears.**—Otalgia of the right ear, a sort of pressing from within outwards at regular intervals, the external ear being painful to the touch. Drawing and pressure in the antihelix; when pressing on it, the pain extends into the inner ear. Continued pinching in the right ear, sometimes accompanied with severe stitches extending behind the ear; the parts behind the ear are painful when pressed upon. Darting pinching deep in the left ear, becoming a cramp-like pain after it had returned a few times, like otalgia. *Tearing in the left ear*, like otalgia. Frequent tearing in the left lobule. Tearing in the right outer ear. Drawing tearing behind the ears, extending slowly towards the nape of the neck and causing a painful stiffness of the neck when moving it. °Throbbing in the ear. Dull cutting, with pressure, in the region of the mastoid process, with pain, when touching the part, as from subcutaneous ulceration. *Ulcerative pain* in the left ear, aggravated by boring with the finger. Pain of the lobule when touching it, as if it would ulcerate. Gnawing pain in the right ear, in the evening. Itching stitch in the left ear, going off when thrusting the finger into the ear. Itching in the left ear.—*Heat* in the left, afterwards in the right ear, as if smoke came out; afterwards redness and swelling of the dorsa of the hands, with wrinkles resembling rhagades, with lachrymation and diminution of smell and hearing; afterwards redness and burning of the face, for four hours.—*Pimples* on the concha, forming a scurf within twenty-four hours. Violently-itching pimples, close behind and below the left antihelix; the itching continues in spite of the rubbing, with smarting pain.—°Insensibility in the meatus auditorius.—The *cerumen* becomes dry, the hearing diminishes, in a few days; a report in the ears takes place, after which the hearing is better and finer.—*\*Hard hearing* and deafness. He hears the tick of a watch better than he understands human speech. *The hearing is sharper and finer*, (secondary effect). *Very sensitive to noise.*—Singing in the ear, frequently and long. *Frequent tingling, humming and whizzing in the ear.* Sense as of twittering in the ear, at night.

**Nose.**—Continued bleeding from the nose.—*Stinging pain* in the nostrils, as if they would ulcerate. *Violent itching* of the tip of the nose, returning after scratching the part. Continual inclination to sneeze, with itching and tickling in the nose. *Frequent sneezing.*—*Coryza-feeling* with troublesome dryness of the nose. *Coryza*, with acid, corrosive discharge. *Coryza*, with secretion of thick mucus. Discharge of a quantity of mucus from the nose.—*Feeling of obstruction* and dryness in the upper part of the nose, with secretion of a quantity of mucus, continuing a long while. *\*Obstruction of the nose*, —like dry coryza.

**Face.**—Cramp-pain in the face, near the articulation of the jaw; when pressing on the part, stitches dart into the ear. Tearing in the left upper jaw, apparently in the bone, close below the orbit. Glowing cheeks, when walking in the open air, without thirst.—°*Pimples in the face.*—°*Freckles.*—*Pimples* around the lips, forming a scurf within 24 hours. *Vesicles* on the upper lip, close to the corner of the mouth, with ulcerative pain when touching the parts, and tension when moving the lips. Two *vesicles* on the left side of the lower lip, yellow, burning, of the size of peas. *Vesicle* on the left side of the upper lip. *Pustule* in the vermillion border of the lower lip.—*Burning tension* in the upper lip, on the right side. *Burning* of the lips, for a long time. *Rough borders* of the lips, with dry, cracked skin. Bloating lower lip, it feels heavy to him and burns, especially when touching it.

**Jaws and Teeth.**—Vesicle on the right lower jaw, with pain when touching it. *Sense as of buzzing* in the left lower jaw, passing into a disagreeable tingling (creeping) in the teeth. Toothache, with pain in the malar bones, ears and temples, relieved by warmth and by tying something around the parts. Cold drink excites a pain in the affected tooth.—Pain in one of the cuspidati of the lower jaw, with sensation as of pressing asunder, relieved by compressing the parts. Frequent dartings in the teeth, with burning in the gums. *Tearing in the right upper teeth*, and the malar bone. Tearing in a right upper molar tooth, with soreness of the gums. Boring in the roots of the teeth of the left lower jaw, as if the teeth would be lifted out of their sockets. Throbbing toothache, made worse by cold drink, in the left lower row, two mornings in succession.—*Slight inflammation of the gums. Swelling of the gums*, from morning till noon. °*Scorbutic gums*.

**Mouth.**—Dryness of the mouth, she is scarcely able to talk, early in the morning. Sensation as if the mouth were glued together with insipid mucus. Mucus in the posterior part of the mouth. Mucus in the mouth, early in the morning, going off after breakfast. *Copious saliva* in the mouth, which seems to come out of the throat. Her mouth is constantly full of water.—His *tongue* feels heavy and elongated, he can scarcely raise it, especially when talking, with great dryness of the mouth and fauces. The tongue becomes sore and bluish. Red, burning vesicle on the tip of the tongue. Painful, burning blister on the tongue. Deep ulcer on the tongue, with black base and inverted edges. Wasting away of the tongue.—Painful pimple on both sides of the *palate*. Rawness and soreness of the skin of the palate, at a small spot. Sore burning of the palate, evening and night.

**Pharynx.**—\**Rawness and smarting of the fauces*, -night and morning, even between the acts of deglutition. Acrid scraping in the fauces. Dry throat, with burning in the chest. Roughness and burning of the throat, as in heart-burn, with coughing. Sensation as if a hard body were rising from the chest into the throat, with titillation exciting a dry cough, when sitting. Accumulation of mucus in the throat; he has to swallow it.

**Taste, Appetite and Gastric Symptoms.**—Bad *taste* in the throat, as of rancid grease. *Bitter* taste, early in the morning, after waking, with white-coated tongue. *Acrid and putrid* taste in the mouth, like rotten eggs, with ptyalism.—Everything tastes sweet. Beer tastes to him sweet as honey, and excites nausea. Complete want of appetite, the taste being natural, and no nausea. Aversion to all food; much yawning. No appetite, eructations after a meal. \**Aversion to meat*. The food does not go down easily.—*Bulimy*.—Craving for drink.—Rumbling and dull pain in the abdomen, during and after a meal. *Continual eructations*. Bitter eructations, frequently. Putrid eructations, frequently. Rising of a sour fluid from the stomach.—Considerable *hic-cough before and after dinner*.—Nausea and qualmishness in the region of the stomach. Inclination to vomit. Vomiting of the ingesta.

**Stomach.**—Contractive pain in the stomach. Painful feeling, at a small spot in the stomach, as if it were drawn in, after dinner.—Violent *pressure* at the stomach, several times. Pressure at the stomach, as if it were too full, with unsuccessful desire for eructations. *Feeling of repletion* in the stomach, although he has not eaten anything. *Empty feeling in the region of the stomach, especially the xesophagus*, not going off by eating, with rumbling in the intestines.—Heat and burning in the stomach, for a long time, (shortly). Burning and throbbing at a small spot on the left side near the pit of the stomach.

**Hypochondria.**—Burning tension in the *right hypochondrium*, at a small spot. Sore and tensive pain in the right hypochondrium when sitting. Burn-

ing and bruised pain in the right hypochondrium. Stitch in the right hypochondrium, followed by burning, going off by pressing on the part, but reappearing shortly after, at a place not far distant from the former, in the evening.—Violent stitch in the *left hypochondrium*, when stooping. *Stitches* under the left ribs, in the side. Cramp-pain, with pressure, under the left short ribs, not changed by breathing. Crampy tension under the short ribs, obliging him several times to take a deep inspiration, and going off after the emission of flatulence.

**Abdomen.**—*Colic*, early in the morning when in bed. Disagreeable, anxious feeling in the whole abdomen, relieved by the emission of flatulence, and removed entirely by a discharge from the bowels.—Contractive sensation in the intestines, with dull pain.—*Colicky pinching in the abdomen*, during motion and emission of flatulence. Pinching extending from the umbilical region to both sides, violent pinching accompanied by grumbling. Pinching in the abdomen, here and there, without feeling any flatulence. Pinching below the umbilicus, followed by hard stool. Violent pinching in the umbilical region, with feeling of emptiness, extending into the pit of the stomach and producing a feeling of oppression in that part. Pinching in the abdomen, several times a day, followed by emission of an excessive quantity of fetid flatulence. Violent pinching, at intervals, externally, at a small spot in the left side of the abdomen, more violent during an expiration. Cutting pinching, from the rectum to the epigastrium, followed by urging to stool which was softer than usual.—*Violent cutting, with pinching*, in the abdomen, when standing or walking, going off when sitting.—Cutting pain under the umbilicus, through the abdomen. Violent cutting in the abdomen, when sitting, walking or standing.—Continued pricking pain around the umbilicus.—*Empty feeling* in the abdomen, with grumbling. Painful feeling of emptiness in the abdomen, early in the morning, after the usual stool. °Abdominal spasms.—*\*Distended abdomen*, the whole day. Distention of the abdomen, afterwards emission of flatulence. *\*Feeling of repletion in the abdomen, after a moderate meal*, with distention. Aching pain in a distended abdomen; she feels every step she takes, in her abdomen. Rumbling in the abdomen, as if it were empty, when sitting.—*Rumbling and grumbling* in the abdomen. Continual fermentation in the abdomen, sometimes becoming seated in the hypogastrium, with wheezing sounds.—Fine pinching in the *abdominal muscles*, in and below the umbilical region. Pricking pain in the lower portion of the abdominal integuments. Pricking pain in the abdominal ring.—Dull stitches in the right *iliac region*, at dinner. Burning stitch in the left iliac region. Burning stitch in the right iliac region, in the evening.

**Stool.**—*Stool in small pieces, with straining*. Inactivity of the rectum; he has to press hard to expel the feces. Violent desire for stool, early in the morning, nevertheless difficulty of passing the feces. *Hard, difficult stool*, early in the morning, soft stool in the afternoon. Alternately hard and soft stool. *Soft stool*. Soft stool, with cutting and qualmishness in the abdomen, as if by a cold; after stool he feels better. Soft stool, with emission of flatulence, contraction, burning and stinging of the rectum, with sensation as of stool and flatulence receding. Liquid stool, after a meal.—*Diarrhœa*, with violent burning along the anus, in the evening and next morning. Diarrhœa, with smarting as from excoriation in the rectum. Four diarrhœic stools, (after one hard stool,) with tenesmus, rumbling and grumbling in the abdomen. Fœcal diarrhœa. Thin, watery stool passes off during micturition without his being aware of it, without any previous desire.—Smarting as from excoriation in the rectum and anus, although the stools were not hard. Cutting in the anus, during expulsion of the stools, which are not hard.—Burning at the anus, after good stool.—A

good deal of itching and tickling in the anus. *Itching of the anus*, with sore pain and tingling stinging.—Violent itching of the *rectum*, as from ascarides. Burning stitches in the anus. Sticking pain in the rectum. Pressure at the anus. During micturition the rectum prolapses as if turned over.—\**Swelling of the varices of the rectum, with burning sore pain*. Swollen, blue varices of the rectum, with pain when pressing on them. *Blood with the stool*, for several mornings. Profuse hemorrhage from the rectum, with stool.—Burning, voluptuous itching of the *perinæum*, close to the anus, exciting a desire to scratch, scratching, however, does not relieve the itching.

**Urinary Organs.**—Frequent desire to urinate, and much urine being emitted. *Frequent desire to urinate, with emission of but a small quantity of urine, and tenesmus of the bladder afterwards*. Desire to urinate, nevertheless he has to wait a while before the urine makes its appearance. Frequent desire to urinate, with but scanty emission. Tenesmus of the bladder, scarcely any urine being passed; the little he does pass, comes without any pain. Diminished urine, with burning, (the first days).—*Frequent desire to urinate, a quantity of urine being passed. He passes much more urine than corresponds to the quantity of drink he has taken*. Profuse emission of watery urine. *Profuse and pale-yellow urine*. Frequent micturition at night, emitting but little at a time, no pain.—°Diabetes?—*Slow emission of urine*, as if the bladder had no strength to expel it. Weakness of the bladder. Frequent, involuntary discharge of urine.—The urine looks white and turbid, like milk, when passing it.—Cutting in the posterior portion of the urethra, when emitting the urine during stool. Stinging smarting in the orifice of the urethra, immediately after urinating.

**Male Genital Organs.**—Burning stitch in the posterior part of the penis. Pain in the margin of the prepuce, as if torn. Slight inflammation of the prepuce.—Boring tension from the right testicle to the middle of the penis. *Itching of the scrotum*, not relieved by scratching.—Feeling of weakness in the genital organs, no erection, the penis being quite relaxed. The sexual instinct becomes excited, (primary effect?). Frequent, feeble erections. Erections, early in the morning, when in bed. He is roused from sleep by a sensation as if a pollution would take place; afterwards slight erection with emission of a watery, foamy fluid, without smell, followed by a long, painful erection.

**Female Genital Organs.**—Pressing in the pudendum, as if the menses would make their appearance. Pricking pain in the vagina.—The menses appear ten days before their time, with colic. The menses appear six days too soon, without pain.—Leucorrhœa. Sad and taciturn during the menses, as if she would die.

**Larynx.**—*Hoarseness*, for eight days. Excessive catarrhal hoarseness. Roughness and hoarseness of the throat, with sore feeling in the chest. Scraping and roughness in the throat, soreness in the chest and cough, no hoarseness, evening and morning. Tickling in the throat, or chest, exciting a short, dry, hacking cough with burning in the throat. Dry cough, day and night, fatiguing. Violent cough, as if the sternum would fly to pieces; it feels sore and bruised, especially when talking, laughing or yawning. Violent, panting cough, followed by an audible rumbling in the chest, from above downwards.—*Loose cough*, with expectoration of some mucus, evening and morning. Scraping in the chest, with cough and expectoration of raw mucus.—Hæmoptœ.

**Chest.**—Deep breathing, with moaning. Oppression across the chest, in the evening, when walking or sitting. Asthmatic pressure on the chest, in paroxysms. Painful oppression of the chest, especially on the right side.—Tensive pain on the sternum, hindering breathing, as if the pain came out of the stomach;

the place is painful to the touch.—Aching in the right side of the chest, becoming more and more violent. Violent pressure in the sternum, above the pit of the stomach, from below upwards, in the evening. Aching and bruised pain in the left chest. Crampy pain, with pressure, in the chest, without any oppressed breathing. Cramp-pain, with pressure, in the right chest, increasing in violence during an inspiration. Aching in the left chest, close by the side of the spine, during an inspiration. Stitch with pressure, in the right chest, below the nipple, gradually increasing and decreasing.—Drawing sensation in the right chest, below the nipple, extending towards the neck. Cutting pushes in the middle and inner side of the sternum, with dull pressure in the posterior part of the thoracic cavity, general oppression of the chest and tightness of breathing, the whole day, in paroxysms. Tensive darting, from the left false ribs to the right ribs.—*Sticking pain* in the chest, during violent motion, and during an inspiration. Stitches deep in the *præcordial region*, extending as far as the axilla and back, with stitches in the thigh extending to the knee, when sitting, going off when rising, in the evening. Stitches in the *region of the heart*, she had great trouble in raising herself, with arrest of breathing, going off by friction. Fine stitches below the region of the heart, and afterwards in the region of the left ribs, with tearing behind the left ear. Dull stitch in the left side of the chest, from without inwards, with cough, in the evening. Sharp stitches in the left chest, in the region of the lowermost true ribs. Stitches under the sternum, close above the pit of the stomach. Stitches between two true ribs of the left side of the chest, during an expiration.—Tensive boring in the chest, continuing during an inspiration and expiration. Soreness and cutting in the chest, with desire to cough.—The *beats of the heart*, during the nightly fever, are so violent, that he feels them even in his face.—*Boring stitch in the intercostal muscles of the right side*, when sitting. Prickings in the region of the true ribs of the right side of the chest, during an expiration, when sitting. Slowly-ascending, broad stitches, externally, in the sides of the chest. Fine, burning stitches, externally under the left mamma. Burning of the outer side of the right chest, also of a small spot in the middle of the sternum, with sensation as if something were sticking there internally; afterwards the burning changed to a mere pricking. Violent stitches in the right nipple.

**Back.**—Drawing burning along the back, beginning at the os coccygis, as if under the skin. Aching pain in the *small of the back*, when standing, or sitting, as if caused by long stooping. Fine, drawing tearing from the middle of the sacrum to the lumbar vertebræ. Frequent stitches in the small of the back, when stooping and rising again. Burning stitch in the os sacrum, causing one to start.—Pain as if sprained, in the *back* and scapulæ, after writing for a time with the back curved. Drawing-tensive pain, alternately between the scapulæ and the lowermost short ribs, without difficulty of breathing. Pressure along the spine, when walking in the open air; going off when standing or sitting. Pressure in the middle and left side of the back, as if from long stooping. *Violent stitches in the left side of the back*, so that she dared not move; the pain was however relieved by motion. Small *boils* on the back, with sticking pain during motion.—*Stitches in the scapulæ*. Sharp stitches, with fine drawing and feeling of heat, in the scapulæ. Violent stitches in the lower part of the right *scapula*, below the axilla. Fine stitches, with pressure, in the lower border of the right scapula.—Swelling of the *cervical glands*, with tensive pain when turning the head. Red, tensive blotches on the right side of the neck.

**Superior Extremities.**—Pressure on the *shoulder*. Tearing in the right shoulder, with pain when touching the part. Burning stitches in the left shoul-

der, in the evening. Pain, as if sprained, in the left shoulder-joint, with sensation, on raising the arm, as if the joint would crack. Pain as from fatigue in the right shoulder-joint, more during motion than rest. Throbbing in the right shoulder, with paralytic pain in the part.—The arms are very heavy and feel as if they were full of lead, when raising them.—Cramp in the *upper arm*, when exerting the arm. Pulsative, intermittent, violent spasms of single muscles of the right upper arm. \**Drawing* in the left upper arm. Drawing, tearing in the right upper arm, when writing while sitting; going off during motion and when stretching the upper arm. *Tearings*, simultaneously from the middle part of the upper and forearm, towards one another. Tearing in both upper arms and calves. Paralytic pain in the middle of the right upper arm, down to the elbow. Burning sensation in the posterior muscles of the left upper arm, close to the elbow-joint.—*Drawing tension in the elbow-joint, frequently.* Dull tearing close above the elbow and wrist-joints, more violent during rest. Lancinating tearing in the right olecranon. Cutting in the bend of the elbow-joint, more violent when bending the arm; diminished by extending the arm.—Cramp-like, heavy feeling in the *forearm*, close to the wrist-joint. Cramp-pain in the forearm, when bending the arm. Drawing tearing in the posterior muscles of the left forearm, as far as the fingers. Cutting tearing in the posterior muscles of the right forearm, recurring at intervals. Cutting in the right forearm, in front of the elbow-joint, (immediately). Contusive pains, or as if bruised, on the inner side of the right forearm, worst during rest. *Blotches* of the size of peas, on the forearms and elbows, with violent itching and burning. Burning pain, externally, on the right forearm.—Cramp in the palm of the left *hand*, going off when moving the hand. Drawing pain in the left hand. Arthritic tearing in the outer side of the hand, behind the knuckle of the little finger. Voluptuous itching, and stinging tickling in the palms of the hands, obliging one to scratch. *Eruption* on the hands, itching in bed. Pimples on the dorsa of the hands and fingers, forming a scurf, within 24 hours.—Tingling of the *fingers* of the right hand, as if they had gone to sleep. Numbness, coldness, and deadness of both middle fingers, at night. The last two fingers of the left hand become rigid, at night. Cramp-pain of the ball of the right thumb, when writing, going off when moving the thumb. Drawing tearing, from the middle joint of the left fourth finger to the metacarpal bone, going off by bending the finger, but returning more violently when the finger is stretched and during rest. Cutting tearing in the ball of the left little finger. Prieking pain in the tip of the left index-finger, only when touching it. Swelling and redness of the tips of the fingers, with burning pain.

**Inferior Extremities.**—Continuous itching stich in the *glutei muscles* of the right side, itching still more violently after rubbing. Cutting pinching in the right *hip*, only when sitting.—Pain of the muscles of the *thighs*. Spasms of single muscles, alternately in both thighs. Painful spasm of the muscles of the left thigh, when lying in bed. Cramp-like drawing pain in the left thigh, from above downwards, only when sitting. Cramp-like, contractive tearing in the anterior muscles of the left thigh. *Sticking with pressure in the muscles of the left thigh, only when sitting.* Tearing in the left thigh, and the tibia, when sitting. Lancinating tearing in the right femur, when walking. Violent burning stiches in the outer parts of the right thigh, when walking or sitting. *Weakness of the thighs and wavering gait.* A good deal of itching on the thighs. Round, rough, itching *herpetic spots* on the inner side of the thighs.—The left *knee* feels stiff, when rising from a seat. Tensive pain in the left knee. Twitchings near the right patella. *Tearing* in the bend of the knee and calf, more at night and when sitting than when walking. Tearing in the knee-joints, when sitting; the right knee feels as if it would be torn

out. Tearing in the bend of the knee, extending as far as the hip, when rising from a seat; with occasional stitches in the bend of the knee; worse on bending the knee and walking, relieved when extending it or sitting down. Lancinating tearing in the right knee, when laying the left limb across the right. Burning, sticking pain, externally, in the right knee. Pain, as if bruised, in the right knee, only when walking and going up stairs. Burning itching of the knees, joints of the toes, and toes, when dropping to sleep. *Swelling of the knees.*—Painful tension of the left *calf*, near the bend of the knee, when sitting. Drawing and tension in the tendo Achillis, when walking, the foot becoming, so to say, paralyzed by it, and hindering walking. Aching in the left calf, during rest and motion. Cutting stitches in the right calf, when sitting. *Frequent tearing in both tibiae*, up to the knees, relieved when sitting. Tearing in the lower part of the right tibia, from above downwards, when sitting. Slow long stitches in the tendo Achillis, some from without inwards, some across, disturbing sleep at night, coming at intervals, and hindering walking. A good deal of itching of the calves.—Pain of the left *foot*, as if a handkerchief had been tied firmly around it. Cutting cramp-pain in the hollow of the right sole. Tearing in the right sole, near the heel, when spinning. Drawing stitches in the dorsum of the right foot, when standing, disappearing when walking, returning when sitting. *Sticking with pressure*, in the inner border of the right sole, when sitting, going off when walking or standing. *Continuous itching stitch* in the dorsum of the left foot, worst when at rest. Pain in the left sole, when ascending a height, as if he had wearied the foot by excessive walking, extending from the sole to the thigh. Sore pain below the outer malleolus of the left foot, when at rest, the whole night, aggravated by contact and by resting on the part. Burning of the soles, when sitting, aggravated by setting the foot on the floor. °*Coldness* of the feet. Tickling in the ball of the left heel, going off by friction. Digging twitching in the ball of the right foot, when at rest. Itching of the left sole, when walking and during rest.—Violent tearings in the right big toe, when spinning. Itching stitch in the ball of the right big toe, when at rest. *Swelling and redness* of the tips of the toes, with burning pain. Soreness of the left little toe, and feeling as if swollen. Violent *throbbing* pain in the three middle toes of the left foot, when at rest.

**Sleep.**—*Drowsy*, in the afternoon. While at his work, his eyes close, from sleep.—*Sleeplessness* before and after midnight. *He has difficulty in falling asleep*; his sleep is light, and, nevertheless, *he has some trouble in rousing himself entirely*.—Sleeplessness at night, owing to great agitation of the blood and heat, with sweat. Restless nights. She is prevented from sleeping by a pain in the vertex and left temple. Violent cough at three o'clock at night, with nausea and vomiting of bile. Empty eructations and colic at night. Nausea and eructations, in two nights, on waking. He snores violently before midnight, and tosses about, but is afterwards easily roused. At night he always sleeps on his back. She tosses about before midnight, and frequently talks aloud in her sleep, with a cheerful tone of voice, though she frequently moans at the same time. He slips down in his bed, and moans and groans in his sleep. Feeling of weakness, at night, when in bed, and difficulty of uniting one idea with another. She wakes every 15 minutes, owing to pain which she feels here and there. Starting after falling asleep, owing to restlessness in the body, and especially the lower limbs. *Frequent waking, at night.* Frequent waking, with tossing about. He wakes every morning at four o'clock, and is then unable to fall asleep again. He is wide awake before midnight, and is unable to fall asleep again.—Qualmishness and distention of the abdomen, *early in the morning when in bed*, relieved by emission of flatulence, after rising.—Restless, frequently-disturbed sleep, with vivid, anxious dreams, and profuse sweat all over while

asleep, except the head. Dreams, exciting anxiety, grief, or joy. *Anxious dreams*. Frightful, vivid dreams. Uneasy dreams, full of care and fear, with erection without emission. She is assailed with fancies, as soon as she sleeps a little. Voluptuous dreams. Dreams of her mother's death. Dreams about vermin, exciting shame. Agreeable dreams about home.

**Fever.**—He cannot get warm at night, when in bed; he tosses about. He felt so chilly that he woke before midnight; he was unable to get warm; he felt chilly in those parts on which he was resting; afterwards he felt very warm and perspired. *Chilliness* early in the morning and after rising, the whole forenoon. Coldness to the touch, the whole day. *Chilliness with thirst*, also without subsequent heat. *Chilliness with goose flesh* without shaking or thirst. *Chilliness*, in the evening, with thirst, sweat after lying down, she is obliged to drink at night. *Chilliness*, in the evening, with icy-coldness in the back. *Chilliness of the whole body*, in the evening, with external warmth for three quarters of an hour; no subsequent heat. *Chilliness in the evening, with burning face and dry mouth*. He feels chilly, unless the room is very warm.—Feverish *shuddering* over the whole body, with shaking chills, yawning and stretching of the limbs, but without thirst or subsequent heat. Feverish thrill over the whole body, (with some fluent coryza,) with yawning, blue nails, cold, deadness of the tips of fingers, slow pulse, without thirst or subsequent heat.—Burning *heat* of the head and hands, cold feet, no thirst, after he had just sat down for a nap, having felt very drowsy all day. Feeling of heat, and heat of the body, especially the palms of the hands and soles of the feet, *with some inclination to uncover himself*. Anxiety and restlessness in the upper limbs, apparently in the blood-vessels, with cheerful mood; her arms felt heavy, she had to move them continually; uneasiness in the whole body, except the feet; heat, which obliged her to uncover herself, but no thirst.—°*Typhoid fevers*, with torpid character.—°*Putrid fevers*.?—Every third pulsation is missing.—Violent sweat about the head and back, every second or fourth evening. Sweat, in the evening, when falling asleep, and not afterwards. Sweat before midnight, with dry cough. Sweat before midnight, with dreams full of contrariety; afterwards sound sleep until morning, without sweat. After lying in bed one or two hours in the evening, the feet became covered with a cold sweat, then they became warm. *Night-sweat*. Slight *morning-sweat* over the whole body.

**Skin.**—*Stinging itching* in various parts of the body, going off by scratching, in the evening. Titillating prickling *itching* of the body, going off only for a short time by friction. Itching and smarting of the back, shoulders, the whole body, mostly in the evening, after lying down, cannot be removed by rubbing.—*Stitches* in various places of the skin, sometimes accompanied by burning (on the right scapula).—A number of painful *ulcers* on the skin, hindering sitting and lying. The workmen in the salt-manufactories, are affected with putrid ulcers on the legs; they become dropsical and cachectic, (from inhaling the vapour of the muriate of magnesia). Burning, more around than in the ulcer; after a walk, there is a sort of pulsative bubbling in the ulcer. Fetid odour of the ulcers, although they are covered with scurf. °Black poeks.—°Boils with stinging pain when touched.

**General Symptoms.**—Drawing tearing and cutting in the limbs, during rest, relieved by motion.—Twitching in all the limbs.—Pain as if bruised in every joint.—Pain of the periosteum of every bone, as in fever and ague.—The irritability of the muscular fibre which had been lost by alcohol and opium, can be restored by oxygenated muriatic acid. Laziness, with stretching, in the forenoon. He is not willing nor able to move; he wants to sit all the time. He feels languid and lazy, although he has not walked any. *Vacillating gait*, owing to weakness of

*the thighs.* Great weakness of the legs, she can scarcely sustain herself. *Lassitude*, early in the morning, especially of the lower limbs. Great lassitude, immediately after a meal, going off again towards evening. Feeling of lassitude in the whole body. Great weariness in the evening, after a walk. Great weariness and drowsiness, with dim-sightedness; she fell asleep while sitting at table. Weary when walking or standing; he fell asleep while sitting. When sitting, her eyes closed immediately, as from weariness; she became wide awake immediately after rising.—*Restlessness*.—Fit of anguish in the evening, with repletion of the abdomen as if it would burst; the sweat dripped down from her head, her arms sank, and she became weak as if paralyzed.—Scrofulous affections.

## 169. NATRUM CARBONICUM.

NATR. CARB.—Carbonate of Soda.—HAHNEMANN'S Chronic Diseases, IV.—

*Duration of Action* : 30 or 40 days.

COMPARE WITH—Alum., Arn., Ars., Carb. a., Carb. v., Caust., Chin., Ign., Kali, Lye., Merc., Natr. mur., Nux. v., Plumb., Puls., Rhus, Sep., Sil., Spig., Staph., Sulph.

ANTIDOTES.—Ars.?, Camph., Nitr. spir.?—Is an antidote to Chin.

### CLINICAL OBSERVATIONS.

Noack and Trinks recommend Natrum for the following affections:—rheumatic and arthritic affections, with contraction of tendons, and especially tearing pains in all the joints, and drawing and lancinating pains in all the muscles.—Scrofulous conditions.—Weakness from loss of humour.—*Tabes dorsalis*.?—*Hypochondria*.?—Contraction of tendons.?—*Herpes circinatus*.?—Chronic ophthalmia.—Ophthalmia serophulosa, with small ulcers around the cornea, and photophobia.—Chronic inflammation of the lids, with profuse secretion of tears and mucus.—*Fistula lachrymalis*.?—*Blepharophthalmia*.—*Blepharoplegia*.?—*Myopia*.—*Presbyopia*.—*Photopsia*.—*Amblyopia*.—*Muscae volitantes*.—*Amaurosis*.—*Gastrodynia*.—*Cardialgia*.—Chronic gastritis.—Chronic affections of the liver and spleen.—Spasmodic contractions of the unimpregnated uterus.—Enlargement of the lips of the os tincae.—*Metrorrhagia*.?—*Phthisis laryngea* and trachealis, in the first stage.

### SYMPTOMS.

**Mind and Disposition.**—\**Sad, desponding*. Suffering in mind. His mind is filled with sad thoughts. Sad, tremulous, inclines to weep, with constant moaning and physical depression. Ennui, she feels lonesome.—Great *fearfulness*. His fancy is occupied with the future; he feels an anxiety; he imagines how unfortunate he might be, he seeks solitude for several days. °*Hypochondriac mood*. \**Dread of men* -and shyness.—*Anguish*, with tremor through the whole body. Anxious and restless, he imagines he cannot do anything correctly. He is solicitous about himself. °Anxiety during a thunder-storm. Anxious, in the evening, after bathing his feet for three or four minutes; it took her an hour and a half to fall asleep. Fits of anguish, every day, with sweat in the face several times a day, for a quarter of an hour, without pain. Anxiety and hurried uneasiness, the whole day, he was unable to keep his limbs quiet, especially the upper; he had to stretch them, he felt as if they were extended by force. *Restlessness*. Great restlessness in the evening, while reading, or

performing some other intellectual labour. Restless the whole day; undertaking now this thing, then that, without finishing anything. Internal restlessness. Restlessness of the whole body, and ill humour. Restless; he knew not what he wanted, or what he should do or not do. Early in the morning, on waking, he feels as if he had no will.—*Passive, phlegmatic mood.* Ennui; taciturn, he has no clear perception of what he feels, early in the morning. Not disposed to work; still he works well, when once beginning. Not disposed to talk. Not disposed to do anything; he found it difficult to abide by anything. *Indifferent.* Weary of life, early in the morning, on waking.—She is *exhausted and becomes very nervous* from playing on the piano for a short while, with painful, oppressive anguish of the chest, trembling and weariness of the whole body, so that she was obliged to lie down. She is deeply impressed by every event; it produces a kind of oscillating tremor of the nerves, with faintness. *Great tendency to start.* He starts at the least noise.—Want of cheerfulness. Depressed, desponding mood. °Discouraged, -dissatisfied and almost inconsolable. *Out of humour almost constantly.* Ill-humoured and apprehensive. *Out of humour and peevish.* Irritable. She gets out of humour about trifles. Dissatisfied with everybody, he preferred not living at all, he felt as though he could beat himself; desponding in regard to the future.—*Inclines to be angry.* Cheerful, but inclining to be angry. Irritable in the forenoon, as after vexation. Disposed to be angry, and fight. He feels so irritated by a little occurrence, that he talks most vehemently until he gets tired.—Cheerful and sad mood, alternately.—Cheerful and sociable. Inclines to hum a song to himself. Extremely animated and talkative the whole day. Resolute, courageous.

**Sensorium.**—Entire want of attention. Absence of mind, early in the morning. He easily makes mistakes in writing. Forgetful, he has to think of a thing for a long time before recollecting it. He is *awkward* even in doing the most trifling things.—*Weak mind.* \*He did not well comprehend that which he read or heard, and had difficulty in connecting his thoughts. Inability to think intently and continually, with vertigo. Dull mind, he stares as if he had been stunned by a blow. He is frequently unable to collect his senses.—*Dulness of the head*, heaviness, giddiness, when working in the sun. *Dulness of the head, as if he had slept too long.* °The head is fatigued by mental labour.—*Stupefaction*, early in the morning, when waking, going off gradually. He is almost unconscious of the things around him, and has a wavering gait.—*Vertigo*, after intellectual labour, with a dull pressing in the temples, from without inwards. Frequent vertigo through the day, as if the inside of the head were turning, also when lying. Vertigo, when turning the head. Vertigo, when walking, almost constantly, she has a wavering gait. Violent vertigo, like a swoon, after drinking a spoonful of wine. Vertigo, when walking about in the room, as if one would fall down, afterwards great weakness of the hands and feet. Vertigo, she threatens to fall to the left side. Continual headache, a sense as of *reeling* in the head, and a painful gloomy feeling, with subsequent heat in the head; relieved by exercise in the open air; worse during rest and when sitting.

**Head.**—Dull headache after dinner, a sort of confusion and drawing. Dull headache, a sort of stupifying pressure in the forehead, in any position of the body. *Headache, in the forehead, when turning the head rapidly.* °*Headache in the sun.* Headache, at noon, mostly in the lower part of the occiput. Dull pain in the occiput. Pain from the occiput to the vertex.—*Heaviness* of the head, with burning of the eyes, almost every day after dinner. Heaviness of the head, at night, on waking, with dull, painful pressure and insipid taste in the mouth.—A sort of apprehensive feeling in the head. Feeling of *painful empti-*

ness in the occiput, with weak and hoarse voice.—*Aching* in the left side of the forehead, early in the morning, on rising. Pressure and feeling of heat in the vertex and forehead. Painful pressure in the right temple, from within outwards. Dull pressure from the occiput to the nape of the neck, with drawing pain extending as far as the forehead, with eructation, vertigo, nausea, and dimness of sight. Continual pressure in the right side of the occiput.—*Tensive pain* in the right frontal cavity. Tension and drawing in the right side of the occiput, as if the head would be drawn backwards. Contractive pain in the head.—Pain as if the forehead *would burst*, especially after exercise, with feeling of obstruction in the head, for many days from morning till evening.—*Tearing* in the whole head, the whole afternoon. Violent tearing in the right temple and side of the forehead, going off for a short time by pressing on it, (during the menses). Violent, spasmodic tearing in the forehead, extending into the eyes and tip of the nose. Tearing and stitches from the left frontal eminence to behind the ear.—*\*Stitches in various parts of the head*, -at different times, sometimes accompanied with burning, also in the evening, sometimes with a feeling of heat about the forehead. °Stitches through the eyes. Fine stitches in the left side of the head. Stitch, with pressure, through the head, when exerting the body.—Single, very painful *dartings* through the head.—*Throbbing* headache in the upper part of the head, every day, especially in the morning. Throbbing and tearing in the left side of the head, during the menses. Painful throbbing in the upper part of the head, apparently in the bone. Throbbings, going and coming, through the forehead, from within outwards, close above the margin of the orbit. Throbbing in the vertex, very painful when pressed upon, after dinner.—*Violent congestion of blood to the head*, when stooping, as if the contents of the head would issue from the forehead, with throbbing in the head, when raising or carrying anything, going off on raising the head. Violent congestion of blood to the head, with heat in the head, when sitting in a room, especially in the evening; for several days, even continuing on the twentieth day, not felt in the open air or in bed.—Roaring of the blood in the head—*Warm feeling* in the forehead, with tension. Feeling of warmth in the head and eyes, without any external heat in the face, with thirst; also at night. *Heat in the head*, with feeling of heaviness, and redness of the face, worse after noon.

**Scalp.**—*Pain*, in the lower part of the occiput, externally. Transitory pain in different places, sides of the head, in the ear, etc. The two occipital protuberances are painful to the touch. Pain, as if bruised, inside and outside of the head. Tension about the occiput. °Tearing about the head, every day, at certain hours.—The scalp moves from behind forwards and back again.—Red *pimple* on the forehead, sore, burning, with pus in the tip.—*Tumour at the occiput*, lasting a long while, almost painless, of the size of a hazel-nut.—Great falling off of the *hair*, for many days.

**Eyes.**—Pain in the eyes, early in the morning. Pain in the bones of the orbit. The globes are sensitive to the touch, with sensation as if they were distended. *Heaviness of the upper eyelids*. Tearing in the right lower lid, from the inner towards the outer canthus. *Prickings* in the eyes, after dinner. Dull stitches in the right eye, when sitting down. Fine stitch in the inner canthus, causing the tears to flow.—Burning in the eyes and canthi, with stitches towards the inner canthus, and sensation as of a *hair* being in the eye. Burning in the eyes, also in the evening, until after lying down. Burning of the eyes, especially when writing or reading, with feeling of dryness in the eyes, as after much weeping.—*Itching* of the eyes and lids, also early in the morning, sometimes with lachrymation after rubbing. Itching and smarting in the right

eye, obliging one to rub, removed by moistening the eye with saliva.—*Inflammation of the eyes*, with sticking pain. Violent inflammation of the inner canthus, and purulent swelling of the lachrymal sac, bursting in four days. °Inflammation of the lids, with photophobia. Inflammatory swelling of the right upper lid, without redness of the conjunctiva, with pressure in the swelling, dim sight and some gum in the canthi.—Swelling of the upper eyelids. *Small ulcers* around the cornea, with lancinating pains in the eyes, she had to guard against every ray of light.—The right eye *feels agglutinated*, as if it were full of gum, the whole day. Tendency of the eyes to become agglutinated, in the afternoon. *Agglutination* of the eyes, early in the morning, with subsequent lachrymation, the whole forenoon.—*Lachrymation*.—°*Fistula lachrymalis*.—Dryness, feeling of heat and contractive sensation in the eyes.—*He has difficulty in opening* the lids, they close involuntarily. Frequent *closing* of the lids, a sort of involuntary winking, with a burning sensation in the eyes, especially in the afternoon. *Constant closing* of the lids, followed by drowsiness, even while walking.—*Contraction* of the pupils. *Dim eyes*, he has to wipe them constantly. Dim eyes, when doing fine work, things look blurred, still she is able to read easily. She feels as if something obstructed the passage of the visual ray. Dim sight; her sight vanishes when beginning to read. Distant things look dim, even to a person with long sight.—He is unable to distinguish persons at a distance of twenty steps, or a figure at a few steps' distance. °Long-sighted, is unable to read fine print.—*Black points* hover before his eyes, when writing. Sensation before the eyes as if rain were falling. °Sensation as of feathers before the eyes. Scintillations before the eyes. *Dazzling flashes before the eyes, when waking*.

**Ears.**—Pain in the left ear. Otalgia with drawing pain in the articulation of the right jaw, extending into the mouth and the right side of the tongue, the tongue feeling painful when pushed against the teeth; in the evening, when walking in a cool wind. Pinching and detonations in the right ear, early in the morning. Fine, intermittent *tearing* in the right ear. Pressure and tearing in the ear:—Frequently sharp and piercing *stitches* in the ears, from within outwards. Stitches in the ears from time to time, ceasing on opening the mouth, returning on closing it. Stitches in the left concha from without inwards. Itching stinging in the left lobule, going off by friction and pressure.—Tickling in the left meatus auditorius externus, early in the morning.—Pricking pain in the *parotid gland*, which is painful to the touch.—*Feeling of obstruction* in the right ear, with diminished hearing. Tingling of the ears when turning the head. Sensation as of the distant noise of a bag-pipe in his ears, when lying in bed, on his back; the noise abates on raising the body; it returns after he has been sitting for a while and goes off when lying down; after having lain down for some time, it re-appears; accompanied with some otalgia. Whizzing around the head and beating in the left ear. Considerable roaring in the ears. Increased humming in the ears. °Sensitiveness to noise. °*Hard hearing*.

**Nose.**—Sensation in the left nasal fossa as if a hard body had lodged in the upper part; it does not go off by blowing the nose. Drawing pain in the right outer side of the nose, going off by rubbing.—*Peeling off* of the dorsum and tip of the nose, painful when touched. *Red nose* with white pimples on it. *Pimple* on the left side of the nose. *Vesicle* near the right wing of the nose, with burning pain when touched. *Pustule* with red areola, on the left wing of the nose. Painless *blotch* on the right side of the nose, increasing daily. *Ulcerated nostrils*, inside, high up.—*Blood is blown out* of the nose, early in the morning. *Bleeding at the nose*.—Increased *smell*, (secondary effect?). Constant *tickling* in the nose, not going off by rubbing.—Frequent *sneezing*, without coryza.

Violent sneezing, with rush of blood to the head, and white stars before the eyes.—\**Obstruction of the nose*, -when talking. Obstruction of the nose, hard fetid clots coming out of one nostril. Obstruction of the nose, she has to breathe through the mouth, at night. \**Coryza* -frequently intermitting, with burning of the eyes, from morning till evening. °Coryza every other day. Coryza, now fluent, then dry. Fluent coryza, and sneezing. Excessive fluent coryza. °Constant coryza, with cough, or from the least current of air, going off by sweat. Fluent coryza, with chilliness over the whole body, cold hands and cheeks, hoarseness, no thirst.—Dryness of the nose.

**Face.**—\**Burning heat* -and redness of the face, at different periods. Alternate redness and paleness of the face. *Pale complexion*. Pale complexion, blue margins around the eyes, swollen eyelids. Yellow complexion. *Bloated face*.—*Swelling* of both cheeks, with glowing redness. Swelling of the face below the left eye, with burning of the eyes, early in the morning, when rising. Aching of the facial bones, increased by walking in the open air. Aching in both malar bones. Violent drawing in the left malar bone. Tearing in the malar bones, sometimes very violent in the right; in the left it is sometimes accompanied with lancinating pains extending into the forehead, sometimes going off by friction. Tearing and stitches behind the right ear. Painful pricking in the upper part of the left cheek. Stitch behind the right lobule, going off by pressing on the part, but returning immediately. *Itching of the region of the whiskers*. Itching of the face, going off by rubbing. Burning itching of the lower jaw, going off by much rubbing.—*White spots* on the right cheek and side of the neck, without sensation, early in the morning. °Freckles.—°*Yellow spots* on the forehead and upper lip.—*Pimples* in the face, near the ear, with pricking pain when touching them, like boils. *Eruption near the nose and mouth*. Itching, humid eruption near the nose and mouth. Boil behind the ear. Boil over the chin. *Burning vesicle* on the chin.—*Pimples on the lips*. Pimples on the vermilion border of the lower lip, with smarting and soreness of the corners of the mouth. *Eruption* in the right corner of the mouth. Whitish *blister* of the size of a pea, on the vermilion border of the upper lip, with burning soreness, afterwards with a crust on it. *Vesicles* in the corners of the mouth, also suppurating. *Pustules* around the mouth. Two small tetters around the mouth. *Boil* on the upper lip. Burning *rhagades* in the lower lip. Twitching in the upper lip. Frequent and slight *twitchings* in the upper lip. *Burning* of the upper lip and right corner of the mouth, at a small spot, as from a vesicle. Fine, titillating itching of the upper lip, and a fine stitch when touching it, in the evening. °Swelling of the upper lip.—Small, red, itching *vesicles*, full of water, on the chin.

**Jaws and Teeth.**—Frequent tearing in the left lower jaw. Rheumatic pain in the jaws. Throbbing in the right lower jaw, after breakfast. Pain, as if bruised, in the angle of the left lower jaw, after dinner, going off by pressing on the part. Ulcerative pain, with throbbing, in the left articulation of the jaw, going off by pressing on it. Twitchings in the left lower jaw. *Swelling of the submaxillary glands*.—Toothache, with swelling of the gums, and violent fever, for three days.—Extreme *sensitiveness* of the lower teeth, for two days. The teeth are sensitive, as if from a scorbutic affection, or from sea-water.—\*Toothache, particularly when eating. Toothache (tearing?) the whole night, afterwards swelling of the lower lip and cessation of the pain. Dull *drawing aching pains* in a hollow tooth, after taking cold. Dull *pressure and boring* in a hollow tooth. Drawing boring in hollow teeth.—*Jerks* in the teeth, when eating. Frequent dartings in the right lower teeth, also in the evening and after dinner. Tearings in the teeth, at different periods. Tearing toothache, only at night,

from 9 o'clock in the evening. Toothache, day and night, as if the teeth would be lifted out of their sockets, relieved by warmth, with bleeding of the gums, coldness of the body the whole day, and thirst; for two weeks. Dull *stitches* in a hollow tooth, after dinner, going off by smoking, returning after eating a pear. Sudden stitch in a sound tooth.—*Digging (grinding) toothache*, during an evening walk; after supper it became pulsative and did not cease till he fell asleep. Violent *digging and boring* in a hollow tooth, increased by touching the tooth with the tongue, it rouses him from sleep early in the morning, and returns again after a breakfast with honey, and sweet things at dinner, until evening. Digging toothache, immediately after breakfast, with swelling of the right cheek; the pains became much more violent when touching the cheek. Digging and boring in a hollow tooth, in the evening, *until one falls asleep*.—Fine short boring in the anterior molar teeth of the left lower row.—*Cold creeping* through the upper molares. Sensation in the hollow teeth as if *cold air were rushing out*, after dinner.—*Looseness* of the teeth, also of a left molar tooth.—The inner side of the left gums feels rough when touching it with the tongue. Ulcerative pain of the lower gums of the left side. Loose gums. Bleeding gums.

**Mouth.**—Large *blister* on the inner side of the left cheek, emitting water when pressing on it. Several flat *ulcerated surfaces* in the mouth, burning and painful when touched. Abscess near the frenum. Pimple under the tongue, painful when touched. Painful soreness of the inner side of the cheek when chewing.—*Dry mouth* and tongue, obliging one to drink; constant dryness of the mouth and lips, as if caused by hot breath; she has to lick the lips constantly.—Accumulation of watery saliva in the mouth, sometimes sour. Saltish saliva, with smarting at the tip of the tongue. Glutinous saliva, for many days. Insipid mucus in the mouth.—Musty smell from the mouth.—Smarting, as from salt water, on the tip of the tongue. Small *pimples* on the left side and the tip of the tongue, when touching it with the teeth. Burning about the tip of the tongue, as if it were cracked. Tensive vesicle on the right border of the tongue. Pale tongue.—*Heavy* speech, from want of mobility of the tongue. Lispering for several days. *When talking* she feels a good deal of pain in the pit of the stomach, and spits up a frothy saliva.

**Pharynx and Oesophagus.**—When yawning, she feels a pain in the left side of the throat (neck). Pressing sore throat, after stooping; difficult deglutition owing to the soreness; a few days after, sensation as if something had lodged in the throat. Pressure in the oesophagus. Sensation, when running fast, *as if something were rising into the throat*. When swallowing, the food has to be squeezed through.—*Stitches* in the throat, with much spitting. Stitches in the throat, during and between the acts of deglutition, also in the evening, when yawning. Tickling in the throat, with stitches, afternoon and evening.—*Rough, dry, scraping* and acrid sensation in the throat, at different periods. Rough, raw throat, especially in the evening; sometimes relieved by eating. Scraping and rawness of the pharynx, between and during the acts of deglutition, perceptible even as far as the brain. Scraping and dry feeling in the fauces, near the posterior meatus of the nose, especially in the open air. Dry throat, with much hawking, without throwing off any mucus.—*Redness* of the throat, with violent, dull stitches, only during deglutition, early in the morning, after waking. *Inflammation of the throat*, with swelling of the right tonsil, and stitches and choking on the left side of the throat, as if from a swelling, day and night.—*A clot of mucus adheres in the throat*, causes a scraping sensation, but cannot be hawked up. Frequent hawking up of thick mucus, continually reproduced. Mucus in the throat, at night, waking him early in the morning by titil-

lating his throat; it is easily hawked up; afterwards rawness of the chest, going off only after rising. A good deal of nasal mucus passes through the mouth.

**Taste and Appetite.**—Increased sense of taste (secondary effect?). Disgusting taste in the mouth, at four o'clock in the morning, with violent eructations. Spoiled taste, and as if burnt, on waking, going off after breakfast. Sharp, acrid taste in the mouth, as of tobacco-juice. Flat, slimy taste on waking, with bitterness of mouth, and white-coated tongue. *Taste of pus* in the throat. *Bloody* taste in the mouth, when expiring air. Sweet taste. *Metallic taste*, afternoon. *\*Bitter taste*, afternoon. A bitter taste is frequently felt low down in the throat, like a vapour. *\*All her food has a bitter, scraping taste*, going off after a meal. Bitter, flat taste, early in the morning. Bitter taste, suddenly, followed by gulping up of bitter water. Bitter, slimy taste, early in the morning, going off after eating. °Taste in the mouth as from sitting up all night. *Sour taste* in the mouth.—*Sour taste in the mouth, and tongue very much coated*—*A good deal of thirst*. Great thirst, only when eating. A good deal of thirst in the forenoon. Violent thirst the whole day. Great thirst, every morning after rising, with heat and dryness of the mouth.—*Neither hunger nor appetite*, morning and evening. No appetite, the stomach, however, feels empty. No appetite at dinner, does not relish meat, prefers bread; she does not eat, because she does not relish anything. Speedy repletion.—Aversion to milk. Aversion to meat and greasy things. *More hunger than usual*, also at breakfast. *Great appetite*, morning and evening. Hunger, in the forenoon; after a good breakfast he had to eat for the purpose of relieving the weakness he felt. Great hunger, in the morning, little at dinner. Constant hunger. Canine hunger, in the afternoon.—°Rapid hunger, from a qualmish feeling of emptiness.—Whenever he sees catables he would like to taste of them. Has a great desire for smoking after dinner; he relishes tobacco very much.

**Gastric Symptoms.**—Diarrhœa after drinking milk. °Sticking in the left hypochondrium, and other ailments, after drinking water. Out of humour, discouraged after dinner, both in the room and open air; going off at night. Low-spirited after supper, especially after drinking a good deal, with pressure in the pit of the stomach, liver, and spleen. Pressure in the stomach and ill-humour after a slight breakfast. Violent pressure in the stomach after breakfast and dinner, for several days. Feeling as of a heavy lump lying in the stomach, after dinner. Great desire for cold water, a few hours after dinner. Pressure in the chest, after dinner. A sort of pressing from below upwards, after a meal, as if the digestion could not take place from above downwards, for three or four hours; after that period hands and feet feel relaxed. The stomach is weakly, and is easily deranged. Eructations, tasting of the ingesta, after every meal. A good deal of eructations during a meal, with much saliva. A sort of colic (pinching), immediately after a meal. Pinching in the stomach after taking the usual morning-drink. Sleepy and lazy after dinner, with yawning; but as soon as he sits down to his work, sleep and yawning pass off. Chilliness with internal heat after a meal; heat was repulsive to her; nevertheless she felt chilly on going into the cold air.—°*Great weakness of digestion, with bad, hypochondriac humour*, after eating, and after committing slight errors of diet. *Frequent eructations*, (in a few days). Continual eructations, and a good deal of flatulence downwards. *Frequent, empty eructations*, sometimes with heat in the pharynx. *Sour eructations*. Bitter eructations. Gulping up of sweetish water, rising into the throat.—Scraping (raw) risings after eating fat.—*Hiccough* every afternoon, after a meal. Violent, painful hiccough, sometimes with bitter eructations.—Waterbrash.—°*Nausea* at the stomach, morning or forenoon,

going off after dinner, sometimes accompanied with rising of water into the mouth. °Constant qualmishness. Nausea, with shaking as from loathing, with fullness of the stomach. Nausea in the morning, with creeping in the stomach, water in the mouth and eructation, until noon.—Unsuccessful *empty retching* in the morning. Violent nausea, with inclination to vomit, heat in the face, retching, hawking up of mucus, and finally vomiting of frothy tasteless mucus; relieved after supper. *Vomiting* of a fetid, sour fluid, resembling loam-water (when coughing).—*After vomiting*, dull headache, no appetite, tongue coated white, and nauseous, insipid taste.

**Stomach.**—*The stomach is painful to the touch.* °The region of the stomach is painful to the touch.—*Qualmishness of the stomach*, after eating fruit, with tension in the hypochondria (immediately).—Soreness of the stomach, sensitiveness to the touch, water in the mouth, going off after eating bread.—Sensation as if the stomach *were fasting*. Sensation as if it were deranged, going off by eating warm soup, but returning afterwards. Pain in the stomach after breakfast. *Pressure in the stomach*, as from a stone, sometimes accompanied by rumbling and going off after eructation. Pressure and griping in the stomach, with tremulousness, when walking.—*Repletion of the stomach*, in the evening, no desire to eat. Repletion of the stomach, with rising sensation, at four in the morning. The stomach feels swollen and sensitive.—\**Painful contraction around the stomach*, towards both hypochondria, in the evening, relieved by walking and extending the body, aggravated by stooping or sitting; continuing until next morning, with sensation below the stomach, *as of a worm creeping about there*. Griping and gnawing in the stomach as from a worm, early in the morning.—*Drawing and cutting* in the stomach, °also with pressure, internally and externally. Pinching and cutting in the stomach, towards the small of the back and the left side. Stitches in the region of the stomach, sometimes with retraction of the same, or followed by burning. Disagreeable tension directly above the pit of the stomach. Burning near the pit of the stomach, right or left.

**Hypochondria.**—Occasional dartings in the *right hypochondrium*, evening. Screwing-together and stitches in the right hypochondrium, *with arrest of breathing*. Violent stitches in the right hypochondrium, followed by pinching in the abdomen.—Pain in the *left hypochondrium*, when pressing on it with the hand. Stitches in the left hypochondrium, at different periods, also after the pains in the stomach and when walking. *Single stitches* from the left hypochondrium to the pit of the stomach, frequently during the day, also when sitting; the parts are also painful to the touch.

**Abdomen.**—*Colic*, relieved by vomiting, twice a day. Colic in the forenoon, disappearing after eating soup. Colic in the morning, relieved by stool. Pain in the hypogastrium, left side, when yawning or during a deep inspiration, without pain to the touch.—*Aching* in the hypogastrium, and sides of the abdomen, with pain to the touch, and when walking. *Heaviness* in the abdomen.—*Tensive colic*, at night, with cutting in the abdomen and diarrhoea, for several nights. Tension in the abdomen, below the umbilicus, especially when stooping or walking.—*Colic* towards morning, with retraction of the umbilicus, and hardness of the abdominal integuments, he fell asleep during the pain. *Tumours* on the abdomen, as if the intestines were distended by wind here and there. Jerking contraction of the abdomen, with weakness of the small of the back.—*Pinching* in the abdomen, even after stool. Pinching around the umbilicus and in the hypogastrium, sometimes with cutting and urging to stool. Pinching colic, early in the morning, with inclination to vomit, as if diarrhoea would come on. Cutting pinching in the abdomen, in whatever position it may be.—Cut-

ting colic, in the morning. Cutting in the *epigastrium*, from both sides towards the umbilicus.—*Pain of the intestines as if bruised*, when riding on horseback, with stitches in the right side of the abdomen, from without inwards. Soreness in the abdomen, with pressure downwards, as if the menses would come on, relieved by external warmth. Tearing in the hypogastrium, through the pudendum as far as the urethra. °*Stitches* with digging in the abdomen. *Stitches* in the right lumbar region, when bending the trunk to the left side while sitting, followed by pinching in the epigastrium. Stitches and *drawing* in the right side of the abdomen, above the hip. Stitches and drawing in the left side of the abdomen, as if from incarcerated flatulence. *Tensive burning* at a small spot, in the left side of the umbilicus. *Biting sensation* in the hypogastrium, as from worms.—\*Distention of the abdomen, particularly after a meal. Violent distention of the abdomen, evening, morning, and night, sometimes with ineffectual urging to stool, or relieved by emissions of flatulence or diarrhoea. \**Incarceration of flatulence*, affecting his head, he had convulsions in the face. A good deal of incarcerated flatulence in the rectum. \*Shifting of flatulence, also painful. Audible grumbling in the abdomen, painless, in the evening. Rumbling in the abdomen. Rumbling, with distention of some parts. Rumbling noise in the abdomen. Flatulence smelling like rotten eggs. Sour-smelling flatulence. Disagreeable feeling, as of imperfect stool, with stitches in the rectum.—The abdomen is painful to the touch, and when walking. Considerable itching and gnawing about the abdomen, even in day-time.—Fine, intermittent pinching in the *right groin*, rather externally. Violent sticking pain, with dull pressure, in the right lumbar region, when clearing the throat after rising. Stitches from the right groin to a rib of the right side and extending to the sternum on taking a deep inspiration. Slight twivelings in the right groin, resembling a throbbing, frequently intermitting. *Swelling of the inguinal glands*.

**Stool.**—Has to strain, the first days, to expel the fæces, although they are not hard. Frequent, unsuccessful desire. *Desire for stool, frequently during the day, partly ineffectual*, partly with slight discharge, with constant feeling of repletion. Constant desire for stool, with writhing cutting in the abdomen. Violent desire, with discharge of a few pieces of stool, resembling sheep's dung, with burning.—Stool first hard, then soft, with burning in the anus, and sometimes with bloody mucus. *Hard morning-stool*, he had to press hard; the latter part of the stool was tenacious and adhering to the anus; another slight evacuation after breakfast, with tenesmus of the rectum, after the expulsion. Intermittent, °insufficient stool.—*Stool with tenesmus*, after a meal, followed by burning in the eyes and urethra, with great sexual excitement; afterwards burning around the eyes, with heat of the head and sweat on the forehead, (during the approach of a thunder-storm.) Violent tenesmus of the rectum, with but little stool, with sensation as if a good deal remained behind; after the stool, the existing colic passes off. Stool with tenesmus, afterwards pain in the rectum. Two, three stools a day, the last is accompanied with tenesmus of the rectum and urethra, and only a few broken pieces of slimy stool are passed, sometimes only wind, for some weeks.—*Soft stool*, continually. Small, soft, thinnish stools, after tenesmus. Hurried desire for stool; afterwards rumbling in the abdomen, cutting below the umbilicus and constant urging, passing something only once. Violent, hurried desire, afterwards liquid stool, propelled with force. Stool first soft, afterwards diarrhoeic, with soreness of the anus, preceded by pinching in the abdomen. *Four liquid stools* in half an hour, after cutting in the abdomen. Tenesmus, liquid stool, with burning at the anus. Papescent stool, after emission of silent flatulence, without pressure, with burning-hot cheeks. Diarrhoea, consisting of thick mucus, for four days, the latter

part being always tinged with blood, without pain, preceded by a short colic.—*Stool tinged with blood.*—*Expulsion* of tænia, with stool.—Pinching in the abdomen and clawing in the anus, with chilliness *before stool*. Colic *previous to the soft stool*. Cutting in the abdomen and small of the back, previous to the somewhat hard stool. Pressing towards the genital organs *during stool*. Pain in the rectum, as if hard lumps were in it, during expulsion of stool or flatulence. Cutting in the anus and rectum, during stool.—Burning at the rectum, *after stool*. Burning and smarting at the rectum.—Pressure and itching in the rectum, as if varices would form. Itching of the anus. Smarting-burning itching of the anus. Tingling of the anus. Cramp-pain in the rectum, and below the umbilicus. Tenesmus, with pressure, around the anus. Stitches in the anus. Itching, and stinging of the raphe of the perinæum.

**Urinary Organs.**—Tenesmus of the bladder and rectum, with colic; after pressing for a long time, some urine was emitted, with erection continuing even afterwards, together with the tenesmus.—*Frequent desire to urinate, with little discharge*. Sudden desire to urinate, with stitches in the urethra, from behind forwards. Constant desire to urinate, the last drops being accompanied with cutting in the bladder and discharge of mucus from the urethra.—*Frequent desire to urinate, passing much urine*. Frequent emission of watery urine, without much thirst. *Frequent and copious micturition*, with yellow leucorrhœa. For ten days, in the morning he emits two pounds of lemon-coloured urine. *Nightly micturition*, also *every half-hour*. The child wets the bed, at night.—The urine becomes turbid and deposits yellow mucus. Sour-smelling, bright-yellow urine. Fetid urine.—*\*Burning and stitches in the urethra*, before and after micturition. Tearing in the urethra, during micturition. Smarting in the urethra, during micturition.—A good deal of urine dropping out *after micturition*. Violent pressing in the lumbar region, and *region of the bladder*.—*Dartings in the urethra*. Tearing in the urethra, with tearings in the testes, periodically, for one hour.

**Male Genital Organs.**—*Itching of and near the parts*, also smarting-burning. *Soreness between the scrotum and thighs*.—*Itching of the glans*. Inflammation of the glans and prepuce. Swelling of the glans. *The glans easily become sore*. A quantity of smegma accumulates behind the corona glandis. Retraction of the *prepuce* in the morning, the glans being uncovered. Itching of the prepuce. Inflammation of the prepuce.—*Itching of the scrotum*. *Stinging throbbing* in the scrotum. Pain of the left testicle. Contusive pain of the testicle. Painful stretching in the testicles and abdomen. Heaviness, and drawing with pressure in the testicle and spermatic cord, more in the morning than evening. Feeling of numbness in the testicles.—Great *sexual excitement* in taking a warm bath, with burning of the palms of the hands, on leaving it. Great sexual excitement, when touching a girl's hand. Sexual excitement in the morning, after drinking beer, with flat, sweetish taste in the mouth afterwards. Great desire for an emission of semen, in the evening and after dinner, without any voluptuous excitement; also after a meal, when laying one limb across another, going off in walking.—Violent, continuous erection, in the morning on waking. Incipient erections during the day. Erections, every morning for three weeks, sometimes without any sexual desire. Weak erections. Cessation of the erections, (secondary effect).—Emission of semen, without any sexual desire, with erection causing a cutting and tensive pain, for more than an hour, the pain continues even after leaving the bed. Painful emission of semen during sound sleep. *Frequent pollutions*, in an old man. Pollution without erection. Pollution without any lascivious dream.—Discharge of the prostatic juice when urinating, or during hard stool.—Short erection and quick emission of semen

during an embrace.—Pulsations in the penis *after an embrace*. Pain behind the glans, during erections, after an embrace. Great inclination to sweat, after an embrace.—The day after a painful pollution he is out of humour, discouraged, dissatisfied, not disposed to do anything, and without perseverance.

**Female Sexual Organs.**—Tearing in the pudendum. Motion, as from a fœtus, in the uterus. °The os uteri is out of shape.—\**Pressing in the hypogastrium, towards the genital organs, as if everything would issue from the abdomen*, and as if the menses would appear. Soreness of the pudendum, between the thighs.—The menses delay two or three days. The menses are too early by three, seven days. They are more profuse and lasting than usual.—*The menses are preceded* by headache and drawing in the nape of the neck; cutting in the hypogastrium, at short intervals; during the menses, painful tearing and beating in the head; painful distention of the abdomen, early in the morning, relieved by slight diarrhœa, after getting up; violent pain in the small of the back, only in day-time; pain, as if bruised, and tearing in the right hip; weariness and nausea; tearings and stitches, here and there; chilliness, without subsequent heat.—Leucorrhœa, °*also putrid*. Profuse leucorrhœa, after frequent attacks of colic and writhing about the umbilicus, day and night, for five days, in any position of the body. Yellowish leucorrhœa, going off with the copious urine. °Metrorrhagia.—°Appears to facilitate conception. °Discharge of mucus from the vagina, after an embrace.

**Larynx.**—Acridity in the wind-pipe. Soreness of the throat and wind-pipe. *Dryness of larynx*. Dry throat when talking or breathing, when walking in the open air. Stinging and roughness of the throat, with dry cough. Oppression of the chest with short breathing, after eating pork. *Great roughness in the chest*, after dinner, with pressure in the pit of the stomach causing ill-humour; he felt better after sleeping, and the rawness of the chest was less; it returned after rising, and he threw up a few pieces of green mucus with an effort. Roughness and rawness in the chest, the whole day, most violent in the evening, with pressure under the sternum, oppression and palpitation; the rawness abated while eating, but soon returned with a dry cough, increasing the scraping sensation which was somewhat relieved by throwing off mucus, accompanied by thirst, chilliness, fluent coryza, and hard, tight, quick pulse.—*Hoarseness*, for two days. \**Cough* and \**coryza*, day and night; her chest was very much oppressed for seven days. Frequent cough, with a humming sound from the wind-pipe. Scraping cough, sometimes with hoarseness and heat in the hands. Scraping cough, with soreness in the whole chest and alternate hoarseness, heat and burning of hands and soles, bruised feeling of the limbs, want of appetite, nausea, heat and profuse sweat at night, no thirst, constipation. Tickling in the throat or chest, inducing cough. Dry cough with dry coryza, after taking cold. Violent dry cough, especially afternoon and evening, when entering a warm room, coming out of the cold air.—Dry and hacking cough, with rattling in the chest. Slight expectoration, with rattling in the chest. Cough, generally in the morning, with either \**salt*, fetid, or *purulent discharge*. Cough with discharge of green, purulent mucus and feeling of roughness in the chest. Bloody expectoration when coughing in the evening.

**Chest.**—Oppressed breathing, early in the morning when in bed. °Difficulty of breathing. °Shortness of breath.—When walking she easily loses breath. Tightness of the chest during a deep inspiration.—Asthma, in the forenoon. Asthma, with violent sexual excitement. Asthma, with hoarse, deep tone of voice, and scraping in the pharynx and larynx; afterwards cough, short in day-time, fatiguing in the night, rough and hollow, with soreness of the chest and larynx, and throbbing congestion of blood to the vertex, fermentation and rattling

breathing, relieved by sitting erect; afterwards with purulent, bloody expectoration.—Violent oppression of the chest, shortly after dinner, for an hour.—*Pressure* under the sternum, early in the morning, during a deep inspiration. Aching pain in the left side of the chest, between the acts of inspiration. Pressure in the region of the heart, as from a hard body lying between the heart and the pit of the stomach, with contraction of the stomach after dinner. Cutting, and pain, as if bruised, in the sternum, sometimes going off by motion and inspiration.—*Stitches* in the side of the chest and abdomen. Sticking pain between the last false ribs of the left side, only during an inspiration. Stitches in the chest and sides of the abdomen, sometimes very violent. Stabbings in the chest in every direction, after stooping and rising again, as if with knives, for three days. Burning dartings in the right half of the chest, like electric shocks. Painful throbbing and stinging in the sternum, above the xiphoid cartilage, followed by stitches in both breasts, in bed. °Constant chilliness in the left side.—Painful cracking in the region of the heart, several times a day.—*Palpitation of the heart*, when going up stairs. When lying on the left side, at night, she is waked by palpitation of the heart. Palpitation of the heart, without anguish, easily excited. Palpitation of the heart, in the evening when lying, and in daytime when sitting, when exerting his attention. Anxious palpitation of the heart, when writing, with dull pressure in the forehead and confused feeling in the head.—*Stitches* and burning in the *outer parts of the chest*. Painful dartings in the region of the left clavicle. Drawing pain in the muscles of the chest, (with oppression of the chest,) generally morning and evening. Frequent dartings in the region of one of the left ribs, with sensation as if the breath were arrested, going off by deep breathing.

**Back.**—Momentary pain in the *small of the back*. Violent pain in the small of the back, after a walk. Pain in the small of the back suddenly felt when sitting, going off by motion. Sudden stitch in the small of the back, he was not able to stir for a couple of minutes. Cutting, burning, and scratching sensation in the small of the back. Pain, as if bruised, in the small of the back, equally violent during rest and motion. Pain, as if bruised, at a small spot in the right os ilium, when pressing on it. \**Sore pain in the small of the back*, even when at rest, without touching it. Sore pain in the small of the back, internally, extending towards the abdomen. *Pustules* on the small of the back, very painful to the touch.—Violent pain in the *back*, worse at night, she cannot rest on that part, increased when talking or breathing deeply. Tensive pain in the back, after dinner and at night, sometimes only felt when sitting bent, and afterwards going off when extending the part. Rigidity and drawing between the scapulae, in the open air, or in the back, extending as far as the anus, in paroxysms, and terminating in a stitch, when sitting or lying. Drawing in the lower part of the back, as if from incarcerated flatulence. *Stitches* in the back, sometimes as far as the left side of the chest, evening and night. Pain, as if bruised, in the back, for several days, sometimes in the evening after lying down, extending as far as the nape of the neck or at night, waking him from sleep, so violent that she dares not turn to the other side. Burning and stitches in the back, early in the morning, going off after rising; the back, however, remains sensitive and as if bruised. Creeping and itching *formication* over the whole back. Vesicles on the back, with violent itching, especially in the evening when undressing.—*Tension and drawing between the scapulae*. Tearing between the scapulae.—Violent stitches between the shoulders and in the whole back, worse during an inspiration, with tension in the spine when moving the trunk, also in the evening, relieved by walking. Gnawing pain between the shoulders. Pressure and stitches under the left *scapula*, with sensi-

tiveness when pressing on it. Burning and pressure in the region of the apex of the right scapula, frequently going off by motion. Stitches in the region of the right scapula, after dinner. Boring in the middle of the right scapula, apparently extending to the xiphoid cartilage.—\**Stiffness of the nape of the neck*, —as from a cold. Stiff and paralytic nape of the neck. Tension in the nape of the neck, when sitting or walking, worse on moving the head. Spasmodic drawing in the nape of the neck, with difficulty of moving the head. Drawing pain in the nape of the neck, when reading, with impatience and discouragement. Tearing in the posterior cervical muscles. Sudden drawing tearing in the nape of the neck, making it feel stiff, increased on moving the head. Frequent stitches in the nape of the neck, evening. When swallowing, she feels the motion of the pharynx in the nape of the neck.—Shooting pains in the nape of the neck. Continuous paralytic pain in the nape of the neck and between the shoulders, early in the morning. Cracking of the cervical vertebræ when moving the head. Suppurating *blister* in the nape of the neck, sore when touched.—Continuous lancinating tearing on the right side of the neck. *Tumour* in the nape of a pea on the right side of the neck, increasing, and painful when touched; accompanied by hoarseness, aphonia, rawness and scraping in the throat, down to the chest, increased by cough, and painful pressure on the vertex, so that she dares not touch it, for five days. *Glandular swellings* of the neck. Increase of the *goutre*. Violent pressure in the *goutre*.

**Superior Extremities.**—Violent pain in the shoulder-joint, which prevented her from raising her arm, for two days. \**Feeling of pressure* on the left shoulder, going off by pressing on it, but then returning. Drawing pain in the right shoulder-joint. *Tearing in the shoulders*, excessively violent in the left. Tearing in the left shoulder-joint, down to the tip of the little finger, at first increased by motion, afterwards going off by it. Stitches in the shoulders, sometimes with itching. Pain, as from bruises, in the shoulder-joints.—*The arm* feels stiff, she is unable to raise it. Great heaviness in the right arm, she cannot raise it. *Tearing* in the right arm, especially the shoulder, also down to the wrist-joint, very painful when at rest. Tearing in the right arm, down to the fingers, with weakness, and sweat at night; going off after rising. Frequent, involuntary dartings in the arm, by day. Gripping and digging in the left humerus, reaching to the skin, where it ends with a burning, at noon when taking off his coat. Pain of the right *upper arm*, he cannot raise it. Pinching in the muscles of the upper arm, going off by rubbing. Tearing in the right upper arm and the last two fingers, which go to sleep, early in the morning, going off for a time by rubbing, and entirely after rising. Pain, as from bruises, in the muscles of the left upper arm and pectoral muscles, when touching or moving the arm.—*Drawing pain in the elbow*, two evenings in succession, on lying down. Tearing in the elbow from the olecranon to the bend.—Slight twitchings in the *forearm*. Cramp-pain in the outer side of the right lower arm, not going off by motion. Drawing tension of the inner side of the left lower arm. Drawing in the right lower arm, as if the skin were raised by a blister, going and coming. Tearing in the lower arms, down to the fingers. Stitch in the right forearm. Pain, as if sprained, in the right lower arm.—Dartings in the *hands*, especially when seizing anything. Jerking, or jerking sensation in the right wrist-joint. Painful darting in the dorsum of the right hand, early in the morning.—Drawing, with rigidity in the tendons of the dorsum of the right hand, relieved by pressure. Painful drawing in the ball of the right thumb, when writing, with tension up to the lower arm, when moving the hand, going off when extending the arm and hand. Drawing *tearing* in the metacarpal bone of the right ring-finger, in the open air, going off rapidly.

Lancinating tearing in the hands and feet. *Boring in the metacarpal bones*, in the evening when in bed. Boring in the os pisiforme of the right hand, worst when pressing on it, in the morning when in bed. Stiffness in the left wrist-joint, when holding anything, with pain on moving his hand, and stiffness of the nape of the neck. Heat and painful sensitiveness of the palms of the hands, and especially the tips of the fingers, when rubbing them against anything. Burning of the palms of the hands. *Swelling* of the hands, in the afternoon. The left hand goes to sleep early in the morning, when in bed. Twitchings, now in the hands, then in the feet, before and after midnight, which waked her. *Tremor* of the hands, most violent in the morning. *Sweaty hands*. *The skin of the hands is dry and parched*. Dry, cold hands. Chapped hands. Two *red spots* on the dorsum of the hand. *Herpes* on the left hand. Jerking sensation in the finger-joints. Pain as if a tendon between the ring and middle finger had been torn loose, when lifting a vessel with the hand. Tensive drawing in the thumb. Cramp-like tearing and clenching of the left index-finger. Tearing in several fingers and in their backs, going off by rubbing. *Stitches* in the tip of the index-finger and sometimes in the ring-finger, where it is accompanied with twitching. Stitch above the nail of the left thumb. Creeping in the right thumb as if it would go to sleep, also with twitching. *Burning* as from nettles in the dorsum of the left middle finger, early in the morning. Burning and itching, as if from nettles, in the joint of the right index-finger, with a blotch under the skin, early in the morning after rising. Bloating fingers, several mornings. Inflammation of the left thumb, and afterwards an *ulcerated blister* on it. *White vesicles* on the index-finger, with red areolæ, and burning as from nettles.

**Inferior Extremities.**—In the right *hip*, drawing and pressure. \*Tearing in the left or right hip, in the evening after lying down. Tearing and stitches in the left hip, with cessation of the pain in the small of the back, going off by motion. Pain, as from bruises, in the left hip, when rising from a seat, going off in walking. Violent stitches through the right hip, when walking, in paroxysms; she had to stand still and bend double, to obtain relief. Jerking of the left *glutei muscles*, when sitting. Tearing in the left glutei muscles, when standing, going off when sitting, in the evening. Burning pain in the fold, between the nates and thighs, as if caused by rubbing. Dry eruption on the nates and os coccygis, with violent itching, early in the morning, on rising. *Great heaviness of the lower limbs*. Rigid sensation in the lower limbs, when walking or sitting. Pain as from bruises in the lower limbs. The limbs suddenly gave way. Feeling of coldness of the limbs, even in the day-time. Tearing of the outer part of the limb, from the centre of the thigh to that of the leg, when standing. °*Blotch-like spots* on the lower limbs, in leprous patients. Jerking sensation in the right thigh. Jerking in the muscles of the thighs, suddenly, as if a worm were crawling over them. Cramp-like, intermitting tearing in the outer side of the right thigh, close to the knee. Tearing in the left thigh, as far as the knee. Violent cutting through the thigh, in walking. Painful weariness in both thighs. Pain as from bruises, in the anterior muscles of the thighs, as if the flesh were loose, only when walking or touching the parts.—Pain in the bend of the knee when moving it. Intense pain in the right knee-joint, when setting the foot down. Stitching drawing in the right knee, in the evening. Tearing in the right knee, at night, in bed, relieved by warm clothes. Boring in the right patella. Pain as from bruises, in the knee-joints. Pain in the right knee-joint, as if sprained. Itching of the knee, with burning after scratching. Dull sticking pain in the right knee, tibia and thigh, from morning till afternoon, when sitting or walking.—Drawing in the *leg*, from

the right knee to the foot, with uneasiness in the feet. Drawing pain round the legs, above the malleoli. Drawing in the right leg, in the evening. *Cramp-like drawing*, with pressure down the tibiæ. Drawing, with pressure, in the left calf, especially when walking. Burning drawing on the tibia, apparently in the skin. *Tearing* in the right tibia as far as the big toe, with tingling in the toe. Violent tearing in the calves, and afterwards in the thighs, in the afternoon. Tearing in the lower part of both legs, and in the anterior parts of the feet. Pinching and rigidity in the calf, as if too short, when moving the foot, after walking. *Cramp* in the calves. Boring pain in the tibia, in the evening when sitting. Slight twitchings in the calves, when sitting. *Redness, inflammation and swelling* of the left leg, with violent itching and gnawing, and with many itching and painfully-stinging ulcers.—*The feet* feel heavy. Cramp-pain in the right foot and toes, (in some hours.) Cramp of the inner border of the sole of the foot, when bending the foot inwards. Cramp in the right foot, at night. Crampy jerking feelings in both heels. °Pressure in the tarsal-joints. Tensive drawing in the dorsum of the right foot, going off by friction, in the evening when standing. *Cramp-like tearing* in the dorsum of the right foot, near the toes, in any position. Cramp-like pressure, almost like tearing, in the left sole. *Tearing* in the outer malleolus of the left foot. Tearing and feeling of heat in the right sole. Tearing in the foot, worse when moving the toes. Painful tearing in the extensor tendon of the right big toe, going off by rubbing. \**Stitches* under the left outer malleolus, when walking, for several days. \**Pricking in the sole of the right foot*, °particularly on pressing the foot to the ground. Dull stitch in the right tarsal-joint. Violent twitchings in the left heel, when walking. Throbbing and creeping in the heels, as if from an ulcer, in the evening when in bed. Soreness of the ball of the foot which has corns, when setting the foot down. Tingling in the right foot, as if gone to sleep, when sitting, also in the morning, in bed. The left foot goes to sleep when sitting. \*The tarsal-joint is liable to be sprained. Uneasiness in the feet. Prickling in the soles. *Burning* of the feet, especially the soles, when walking. \**Swelling* of the feet, or of the soles. \**Cold feet*. Icy-cold feet, painful. Sweaty feet, when walking, (in a few hours). *Itching* of the soles, especially the balls. Itching and stinging of the soles and heels. *Black, ulcerated pustule* on the heel. °Chronic ulcers on the heel, arising from spreading blisters. Smarting as from excoriation and soreness between the *toes*. Pain in the left big toe as from subcutaneous ulceration. Tearing in the right big toe. Tearing pains in the right big toe. Tingling in the right middle toe, going off by contact. Burning in the right small toe, when walking. Twitchings and jerkings in the left big toe. *Swelling* of both big toes, with a kind of violent tearing-like soreness, which does not permit him to sleep. Painful, burning itching of both big toes. *Red spot*, as if from a contusion, on the big toe, and tearing, commencing at that spot, and extending, from time to time, backwards, along the border of the sole.—Violent stitches in the *corns*. Drawing pain in the corns.

**Sleep.**—Yawning, lachrymation, and drowsiness; he had to lie down and slumber a quarter of an hour. Frequent yawning, in the evening (the first days). Great weariness, and drowsiness in the day-time. She felt weary, and fell asleep in the day-time, while at her work. \**Drowsiness in the day-time, with yawning*. Great drowsiness in the forenoon; short, light slumber, instead of his usual siesta. Very sleepy, in the morning; he finds it hard to get up (the first days). He can scarcely be roused in the morning. Irresistible sleep, in the afternoon.—\**He falls asleep late in the evening, and with difficulty* (the first days). He fell asleep late in the evening, although he was

sleepy. She cannot fall asleep under a couple of hours, in the evening. After lying down in the evening, his sleep went off, but soon returned again. Heavy, deep sleep, a sort of stupor. Sound sleep, the first days; afterwards restless for several nights. *Sleeplessness, the whole night.* Sleepless, at night, without anxiety, but sometimes without being able to open his eyes. *Restless night; he tosses from side to side twenty or thirty times.* He suddenly wakes at midnight, as if some one were pulling him by the nose. Frequent waking, as if from noise or fright. Waking at night, voluntarily, and falling asleep again soon after. She woke at one o'clock in the night, and was unable to fall asleep again, because she was unable to find a comfortable position.—Pushes, like pressure, in the upper part of the head, in the evening when falling asleep. Flashes before the eyes, in the evening when falling asleep. Toothache, in the evening after lying down, for several evenings.—Toothache *at night*, while half asleep, and on waking. Dryness of the throat and tongue, at night, without any thirst. She is roused from her nightly sleep by colic. After an hour, he wakes, with a sort of stagnation in the region of the spleen, and oppression across the chest and stomach, as if from flatulence. Anxious feeling, at night, previous to his falling asleep, as if his whole body had become very big and heavy, for a long time. She coughs much at night; complains of a scraping sensation in the throat; sleeps very restlessly. Cramp in the calves, for several mornings, when extending the limb, in bed. Sort of nightmare, at full moon; he was unable to move on waking. Nightly attack of vertigo, with slow, strong beats of the heart, humming of the ears, heat, anguish, as if he would die; increased erethism of the vascular system, by talking or making the least motion; the fit terminates with chilliness and trembling. Orgasm of the circulatory apparatus, at night; it gives him such a dread of an apoplectic fit, that he rises from bed several times. She cannot rest on her side, owing to palpitation of the heart. She can only rest on her right side, lying on the left side is painful. Nightly uneasiness in the lower limbs, she was unable to keep them still. Restless, the whole night, she did not fall asleep till morning, and had to urinate a good deal.—*Starting as in affright during sleep, also during the siesta.* Restless night-sleep, with *extension and jerking of the limbs.* Violent starting, in the evening when falling asleep, especially of the left limb. At night, when asleep, she experiences jerkings, now in the finger, then in one arm, then in the facial muscles, then in the whole body. Striking with the hands, and throwing them about at night; she knew nothing of it on awakening.—*Illusion of the fancy*, in the evening, when half asleep; she fancied soldiers are marching before her in the air; she frequently roused herself, but the vision soon returned, and did not go off till she rose and walked about.—*Sleep full of dreams*, at night. A number of dreams and chilliness when asleep. A number of  *vivid dreams.* Uneasy dreams at night, and frequent waking. A number of dreams, generally about things past, or things which had been discussed the night before. \**She is full of fancies in the night.* Confused, *lewd dreams* during a restless sleep, with violent erections and pollutions, also with sexual desire, after having been half roused from sleep by a storm. Pleasant, amorous dreams, the first twenty days, about marriage, amusements, etc. Anxious dreams, during the last period, about going astray, killing a man, etc. Anxious dream about a dead person; she imagined she saw him before her when awake; this caused her to shriek. Vexing dreams; *he is to depart, and cannot get off.* He dreams that some one is keeping him back, a sort of nightmare. Sad, vivid dream of a funeral procession. *Frightful dreams* about danger of inundation, fight, robbers, devils, etc. Anxious, confused dreams, shortly after falling asleep, from which he wakes up in an hour,

with distended abdomen and dry tongue. *Frightful*, vivid dream about thieves, from which he starts with a loud shriek.

**Fever.**—\**Cold hands and feet.* Continual icy-coldness of the feet, especially morning and evening; when going to bed, the coldness is generally accompanied with heat in the face, violent palpitation and anguish. Cold hands and feet, with warm head. Shuddering, early in the morning, after waking, going off after rising. Shuddering over the whole body, the whole day, with cold hands and warm cheeks; icy-cold hands in the evening, red glowing cheeks, and hot forehead, without thirst. Shuddering over the whole body, from morning till evening, with hot hands, cold cheeks, and moderately warm forehead, without thirst.—Constant chilliness, early in the morning, after rising; he was unable to get warm. Frequent and sudden chills, without subsequent heat, in the forenoon. Chilliness, in the evening. Chilliness, with thirst, during the day. Constant chilliness, for several days. Paroxysm of fever, with aching, in the temples; dulness of the head and pressure in the eyes; afterwards inclination to vomit, with chilliness of the whole body, especially of the chest and arms; somewhat relieved in bed, by keeping himself warmly covered; nevertheless, stretching, yawning, stiff neck with alternate chilliness and flashes of heat. *Chilliness*, in the evening, in bed, without thirst, with burning in the abdomen, *afterwards* heat and sleep, waking at three o'clock in the morning, drenched with sweat, with thirst until morning, and not bearing being uncovered. *Chill* in the evening, with heat and thirst after lying down. *Chill* in the evening, previous to going to bed; with heat when in bed, one cannot bear being uncovered.—Flashes of heat, with drawing pain from the nape of the neck, over the back. Frequent flashes of heat, with ill-humour, sadness, anxiety; afterwards weak and weary for half an hour. Short and frequent paroxysms of heat, with weakness. Heat and sweat over the whole body, without thirst, with general exhaustion, in any position of the body.—\**He sweats excessively during motion*, even when the weather is cool. Profuse sweat, when making but light exertions, especially on the back. Slight sweat on the body, especially the hands. Burning sweat, especially on the forehead, where it is touched by the hat. \**Night-sweat*, for several nights, °*alternating with dryness of the skin*. Profuse sweat, the first night. *Morning-sweat*, with thirst for several days.

**Skin.**—\**The skin of the whole body becomes dry, rough, and chapped*, also with profuse sweat after doing the least work. Troublesome dryness of the skin, at night, especially after midnight. *Itching as from fleas*, over the whole body, in the region of the beard, chin, back, chest, dorsa of the hands and the bend of the elbow, inducing scratching. Violent itching of the body, in the evening, on lying down, until he fell asleep. Prickling itching of the abdomen and thighs, especially in the afternoon. Itching of the upper and lower limbs. Violent itching, with blotches after scratching, of the abdomen, genital organs and lower limbs.—*Itching pimples* and blotch on the hairy scalp, chest, and abdomen. Red *vesicles*, filled with fluid, with painful soreness when touched, in the bend of the elbow, and in the fold between the thigh and genital organs. *Vesicular places* on the tips of all the fingers and toes, as if scalded, extending round the nails, as if they would come off.—Stitches in the sick spot.—°*Herpes*. *Purulent fluid oozes out of the herpes*; it spreads larger and grows worse. °Yellow rings, occasioned by herpetic spots. °Blotch-like spots and rosy blotches in leprous patients. The *warts* are painful when merely touching them. °The wart begins to bleed, grows larger, and goes off after three weeks. Incipient warts.

**General Symptoms.**—°Rheumatic complaints, also with contraction of

tendons. °Scrofulous complaints. Weakness from loss of animal fluids. °Tabes dorsalis.? °Hypochondria.—Every movement of the body hurts her. When rising from her seat, *every part of the body hurts her*; this pain disappears again in walking. Cramp-like tearing, especially in the upper and lower limbs. *Tearing in the lower limbs up and down*, mostly in the joints of the knees and feet. Tearing in the shoulder, elbow and wrist-joints. Tearing stitches in the joints of the upper and lower limbs, mostly in the evening, on lying down, and frequently waking him from sleep at night. °Tingling stinging in the muscles. Tearing and bruised feeling in the limbs. Drawing in the joints, and paralytic feeling of the same on waking from sleep. Drawing and stretching in the lower limbs and jaws, and drawing in the teeth, at night.—Jerking in the limbs. Jerking sensation in all the joints. Jerking and grumbling in the whole body, with sensitive mood. Jactitation of the muscles, and twitchings in this or that part of the body, scapulæ, calves, eyelids and arms. After lifting a heavy load, a jerking pain was felt, commencing in the small of the back and spreading over that region, and great weakness afterwards. \*Dread of the open air. \*Liability to take cold, occasioning coryza, colic and diarrhœa. Headache and coryza during a walk in the open air.—°Relaxation of the whole body. Unsteady gait, stumbling, slipping.—Emaciation, pale complexion, dilatation of the pupils and dark-coloured urine. *Bloatedness* of the whole abdomen, early in the morning, better in the afternoon.—Painful *tension of all the nerves*, especially in the head, with nausea. Restlessness in the evening, in upper and lower limbs, with stretching. Sick feeling in the whole body. °Great nervousness, merely playing on the piano makes him tremble.—Paroxysms in the evening; obscuration of sight, with paralytic pressure and tearing in the head, eyes, jaws; weak consciousness and confused, incoherent ideas, for an hour and a half; afterwards tingling pain in the lips, the right arm, and especially the right hand and tips of the fingers, particularly the thumb, with tendency to start. The child complains of colic and nausea, looks pale, and is obliged to lie down; after an hour's sleep the pain has gone.—*Heaviness and weariness of the whole body*. Heavy and lazy, early in the morning, when rising; on waking in bed, she felt very bright. Lazy, with sensation as if every part of her body were put upon the stretch, and as if face and hands were swollen: during rest, relieved by motion. *Dread of exercise*; it increases the sufferings. Inclines to lie down. Walking is difficult for her; she is pale and weary.—\**Great weakness of the lower limbs* and heaviness of the arms (even after twenty days). •Weakness after a short walk, unto falling. Great weakness, for one week, after three days' toothache, with fever. Great weariness, especially of the legs, and the middle of the thighs. *Paralytic feeling* in the limbs, early in the morning, on waking.—Weakness of the upper and lower limbs. Excessive weakness in day-time; the head is very much affected.

**Characteristic Peculiarities.**—The majority of the symptoms come on when sitting, and pass off during motion, or by pressure or rubbing. \**Anguish, tremor and sweat, during the pains*. °Aggravation of the pains during a thunder-storm.

## 170. NATRUM MURIATICUM.

NATR. MUR.—Common table-salt.—See HAHNEMANN'S Chronic Diseases, IV. COMPARE WITH—Agn., Arn., Ars., Bell., Calc., Caps., Carb. a., Carb. v., Caust., Cham., Chin., Ign., Kali, Lyc., Merc., Mur. ac., Natr., Nitr., Nux

v., Par., Plumb., *Puls.*, Sabad., Sep., Spig., Squil., Staph., Sulph., Viol. tric.  
—Natr. mur. is frequently suitable after Lach., Mere.

ANTIDOTES.—Ars., Camph., Nitr. spir.—Camphor is a very weak antidote against the excessive action of Natrum; frequent smelling of Spir. nit. dule. relieves the effects of Nat. much better.

#### CLINICAL OBSERVATIONS.

This drug is recommended by *Rummel* for protracted cases of chlorosis, with deficient nutrition, and dirty, flaccid, torpid skin; by *Hartmann* for urticaria; by *Schmidt* for scorbutic dyscrasia of the blood; by *Thorer* for quotidian, tertian and quartan fever; by *Neumann* for inveterate quotidian fevers; by *Hartlaub* for intermittent fevers; by *Gross* for nervous fevers with great weakness, dryness of the tongue and great thirst; in the *Homœop. Gazette* for vertigo caduca; by *Gross* for headache with nausea; and likewise for a lancinating, boring, throbbing pain in hollow teeth; not bearing the open air or contact, worst at night, arresting the breathing and relieved by sitting up; by *WHAILE* for herpes on the tongue, which came on in a sycoptic individual after using the sea-baths; by *Weigel* for flat ulcers on the tongue and on the inner walls of the lips and corners of the mouth, with copious discharge of limpid saliva; by *Griesselich* for the nausea and vomiting of pregnant females; by *Engelhardt* for scirrhus and carcinoma ventriculi; by *Veith* for obstinate constipation; by *Knorre* for dysentery; by *Veith* for involuntary discharge of urine at every turn of cough in typhus; by *Müller* for incontinence of urine; by *Gross* for balanorrhœa, amenorrhœa, and irregularity of the pulse and beats of the heart; by *Hartlaub* for tumor genu (in conjunction with Sulphur); by *Hering* for shortening of the hamstrings in lepra; by *Des Guidi* for inflammation of the tendo Achillis.

#### SYMPTOMS.

**Mind and Disposition.**—Sad, desponding, (after nettle-rash). Melancholy. \**Dejection of spirits.* Melancholy mood, also in short paroxysms; he was unable to forget offences which had been committed against him, or which he had committed against others. Melancholy depression of spirits, and apprehensive discouragement, with sadness, the whole day, with uninterrupted palpitation of the heart. He torments himself by hunting after disagreeable ideas; this weakens him very much. He thinks for hours what will become of him. *He tries to recollect past disagreeable occurrences, for the purpose of thinking on them and indulging the grief which it causes.*—She takes everything in bad part, and weeps. When alone she feels apprehensive, and cries. When merely thinking of the want which she had suffered, tears came into her eyes. He concluded from everybody's looks, that he was pitied on account of his misfortune, and he cried. He cried when merely looked at. She cries involuntarily. *Desire to weep*, with anxiety. Inclines to weep and is agitated. Inclines to weep, and has no desire to work. He felt agitated the more they tried to console him. —Attacks of complete hopelessness and internal despair, which deprived her of all strength. *Hypochondriac*, tired of life. \**Apprehensive for the future.*—Afraid of becoming mad. Imagines he will die. She frequently looks in the looking-glass and imagines she looks wretched.—Sudden *anxiety* and palpitation of the heart, three forenoons. Sort of anguish, as if she had done something bad, with heat and night-sweat. Anxiety and restlessness, alternating with indifference.—His joy is but transitory. *Joyless.* He is not cheerful and yet he can be easily induced to laugh. *Indifferent* and sad. Dry manners. Taciturn.—*Lazy, no disposition to work.* While engaged in his work, he suddenly loses all

desire to continue it. He fritters away his time, and cannot be induced to do anything serious, in the afternoon. Not disposed to work, although he is disposed to intense reflection.—Scratching his head with impatience. \**Hurriedness*. Anxious hurriedness. *Great excitation*, followed by going to sleep and deadness of the limbs. Great irritation, (immediately). Want of discretion.—Want of independence of character.—His mind is very much affected by a mere conversation.—\**Great tendency to start*. In the evening he started as if in affright and became almost paralyzed in consequence; after this he felt horrified and apprehended misfortune.—\**Very much out of humour*, peevish and taciturn. Quarrelsome, discouraged. Offended at a joke. He does not like to hear any objections, for several evenings. He feels out of humour and avoids company, because he thinks he will give offence.—Vehement without any special cause. *She gets vehemently angry at trifles*. \**Passionate vehemence*. Hates persons who had offended him formerly.—Mood calmer and less solieitous than formerly, (curative effect). Internal satisfaction, hope, mildness, (curative action). Cheerful. *She laughs violently* at things which are not ridiculous, until tears come into her eyes. Striking *alternation* of ill-humour and excessive weakness, with cheerfulness and lightness of the limbs.

**Sensorium.**—Weakness of thought, dulness, discouragement. Imbecility and absence of thought with drowsiness, worst in the afternoon, from 3 to 7 o'clock. Absence of thought; she says what she does not mean. He is unable to keep his thoughts together; they wander. \**Difficulty of thinking*, -she had to think a good deal, previous to finding the right idea.—*Absence of mind*; he knows not what he ought to say. *He is liable to use wrong expressions or write wrong words*. He goes twice to the same place to find something. He went out of the door without intending it, and when he was asked whither? he became conscious of it.—He is slow in coming to a conclusion. Irresolute in doing some intellectual labour; he does not know which way to choose. Awkward; he drops something very small and he knocks against everything.—\**Weak memory*; he remembers everything as in a dream. Loss of memory; he knew nothing of yesterday and imagined he had lost his understanding. Forgetful; he has great difficulty in recollecting a thing. He forgets what he was just going to write. When following an idea, he suddenly forgets it. He imagined his mother, who was present every hour, had died, because he did not recollect having seen her.—\**Dulness of the head*, -after walking a good deal. Dulness of the head, after reflecting. He feels stupid, and as if his head were not his own. Dulness of the head with aching in one temple, and dry heat of the body. Dulness of the head, with dull pressure in the temples, mostly when pressing on the parts.—*Emptiness of the head*, with anguish. *Weakness of the head*, as is felt after turning in a circle for a long while. °Weariness of the head from mental labour.—*Gloominess of the head* after walking in the open air. Dizziness after rising, going off after she has been lying for some time. Dulness of the head, in the afternoon.—*Reeling sensation*, producing obscuration of sight, when stooping and raising the head again. Reeling, as if caused by vertigo, going and coming, especially when moving the head, resembling a push from the vertex to the forehead, depriving him of his senses for moments. Feeling of vertigo, as if thrown down. Vertigo, early in the morning, when rising in bed, like a swoon; she lost her senses, and had to lie down again. Vertigo when rising from bed and walking. Vertigo when turning about. *Vertigo when walking*. \**Everything before her turned in a circle when walking*. Vertigo, the head bending forwards in sitting.

**Head.**—Headache when turning the body. *Headache from sneezing and coughing*, disappearing immediately by compressing the head. Headache

when making a violent bodily exertion. Pain in the forehead during rapid motions. Headache from cold air. Headache disappearing when walking. \**Headache, early in the morning when in bed*, -going off after walking, for several mornings.—\**Heaviness of the head*, in the morning after waking, with giddiness and dulness. Great heaviness of the head, especially when talking or reflecting. *Heaviness and aching in the forehead*, above both eyes. °Heaviness of the head, every day, particularly in the occiput, closing the eyes.—*Dull, stupifying headache, early in the morning after waking, until noon*. The head feels soft, like a mealy apple, without any particular pain. Dull headache, almost constantly, °also with dizziness. Dull pressing in the forehead, with gloominess. Troublesome sensation as if something had got out of place in the brain, in the forenoon, especially when turning the head.—*Headache with nausea*, from morning till evening. Headache with nausea, and pressure in the forehead, increasing from afternoon till bed-time. Violent headache with nausea; she had to lie down, and when raising herself, she came near vomiting and fainting; the slightest step resounded through her head; at 8 o'clock in the evening her pain had gone, but a weakness in the head remained.—\**Oppressive headache*. \**Pressure above the eye* and in the temple, with dulness of the head. Aching above the left eye. Pressure in the occiput. *Aching in the forehead* and on the vertex. Sore pressure in and above the forehead. Hard pressure in the forehead and the temporal bones, when walking in the open air. Dull pressure in the forehead and eyes, as if the head had gone to sleep, when leaning it on the arm. Pressure in the brain, through the eyes, relieved by pressing on the head.—Pressure, and *pushing headache*, in the forehead. Pressing and pushing of the brain through the skull, in the temple, forehead, and ears. Pushing pain, as if the head would burst.—*Compression* from both temples, as if the head were pressed between two hard planes. Compression of the brain *on all sides*, with heaviness of the head. Compression in the temples, *especially when reading or writing*, with pressure on the vertex. Compression of the skull, and pressure in the middle of the head.—*Contractive pain* in the whole brain, early in the morning. Contractive sensation, twice, in the occiput, behind the ears, with stitches in the head.—*Feeling of tension* in the brain, increasing more and more, after an affecting farewell. Tension in the left temple, as if full, more in the evening than morning.—Fulness in the head, pressing the eyes out, as it were. Drawing pain in the outer parts of the head, from one side above the cheek, towards the cuspisatus. Fine drawing pain from the root of the nose upwards, with heaviness of the head. \**Fine drawing and beating in the forehead, to and fro*, early in the morning, when rising.—\**Stitches in the head*. *Stabbings in the occiput, as with knives*. Stitch through the head as with a knife, from behind forwards, when entering the room from the open air. °Stitching pain above the eyes. Stitches from the forehead to the occiput, depriving her of all appetite. Stitches on the vertex, going off when leaning the head on anything. Fine stitches in the vertex, with burning. \**Fine painful stitches in the parietal bone and forehead*. Fine prickings above the forehead. Dull stitch from the vertex through the brain, as far as the palate. \**Dull, stitching pain in the parietal bone*, -evening, when eating. Dull, stitching in pain the left side of the head, *as if from a nail*, at night. Dull, stitching pain, and as if gnawing the bone, in different parts of the head. Stitches about the head, between the right occipital protuberance and the mastoid process. °Tearing stitches in the whole head, obliging one to lie down.—*Boring pain* in the side of the head and occiput.—*Throbbing pain* in the forehead. Violent throbbing headache, with heat in the head and face, nausea and vomiting.—°Hammering and beating in the head, particularly when moving. *Feeling of looseness* in the left side of

the forehead, with dull, stitching pain. The brain feels loose, with stitches in the temples when shaking the head. Concussion in the brain, when running fast, resembling a momentary jerk or pressure. The headache in the fore part of the head is momentarily exacerbated by knitting the brow; the frontal bone is then sore to the touch.—*Congestion of blood* to the head, with sweat of the forehead, at noon. Much heat in the head and face, afternoon. Heat in the head, with inclination to cool it by dipping it into cold water. Heat of the forehead with the oppressive headache.—Sensation as if the head were enlarged, and swollen within.

**Scalp.**—The parietal bone feels *bruised* when touched. Pain on the head, *as if the scalp were sore*. Soreness of the head when touching it, as if the hair were sore. Pain to the touch, at a spot which had been injured formerly.—Drawing together of the scalp. Motion of the scalp from the nape of the neck towards the forehead and back again. Sensation as if a cord were tied round the head. Involuntary nodding of the head forwards.—Short burning on the top of the head. Cold feeling on the vertex, with painful sensitiveness of the scalp and closing of the eyelids. *Sweat* about the head in the morning on rising, or at night on waking.—The head is liable to take cold, he has to wrap it up constantly. When he leaves the head uncovered in the day-time, his nose is stopped at night.—*Itching* of the hairy scalp and nape of the neck. Itching of the hairy scalp and the region of the whiskers. *Itching eruption* on the hairy border of the nape of the neck, and the temples, likewise in the eyebrows. \**Scurf on the head*. °Pimples on the forehead. Small, hard *blotch* in the middle of the forehead and nape of the neck, burning and painful to the touch. *Rash* on the forehead, perceived only by touching it. Rough skin of the temples.—The hairy scalp smells badly, musty; the hairs stick together. \**Falling off of the hair*. The hairs come off when merely touching them, even those of the whiskers. °Falling off of the hair of lying-in women.

**Eyes.**—The margin of the left orbit is painful as if contused, when touching it. *Sensation as if sand were in the eyes* early in the morning. Pain of the eye as if some foreign body had got into it. Tension in the eyes.—A spot in the corner of the eye (the lachrymal sac) becomes distended with air whenever one blows the nose, and then feels sore to the touch. *Pressure* above the right eye, as if there were a swelling, increased by raising the eyebrows, for a day and a half. Pressure in the eye, during twilight. Painful pressure in the eyelids. Pressure in the eye, when looking at a thing intently.—*Itching of the inner canthus*, and lachrymation. *Itching of the eyes*, he has to rub them. Itching of the outer canthus of the left eye. Itching stinging pain under the left eye.—*Stitches* in the right eye. Stitches in the canthi.—Boring pain in the eye.—\**Pain as from excoriation in the eyes*.—*Burning pain* in the eye, at a small point. *Violent burning of the eyes in the evening*. Dry burning of the eyes, in the evening, when writing. Burning in the inner canthus.—Redness of the eyes, with lachrymation. \**Redness and inflammation* of the white of the eye, with sensation as if the eye-balls were too large and pressed. Inflammation of the eyes and lachrymation from every little breeze.—*Soreness* of the right lower eyelid. Continued *ulceration* and great redness of the lower eyelids. Large sty in the inner canthus of the right eye. Pimple on the margin of the lower eyelid, not in the region of the Meibomian glands.—\**Lachrymation—in the open air*. \**Acrid tears in the eyes, early in the morning*, rendering the canthus red and sore. °Viscous matters in the outer canthi. \**Agglutination of the eye in the morning*.—*Dry feeling* in the eyes, as after long weeping, (while riding in a carriage). Feeling of dryness in the inner canthi, with pressure, in the evening.—Twitching in the eyes, frequently during

the day, afterwards violent itching of the same, obliging one to rub them. Twitching in the outer canthus of the left eye, especially in the evening. Tremor of the upper and lower eyelids, for some weeks. Violent sense as of twitching of the eyes. When she is on the point of dropping to sleep, the right eyelid is spasmodically drawn up again, with an aching pain, the lid trembles. \**Spasmodic closing of the eyelids*, -early in the morning, when rising, at twilight and night; she feels the contraction even when leaving the eyes closed. —*Dim-sightedness*, in the morning. Dimness, as if the eyes were covered with mucus. *Dimness and obscuration of sight*. Dimness of sight, as if he looked through a dim glass. In the morning on waking the eyes remain dim for a time.—\**Gauze before the eyes*. All objects seem to him covered with a thin veil. Unsteady look, things become confused when looking at them. \**Letters and sewing stitches become blurred when looking at them*. \*Objects are seen as through feathers, -particularly white objects.—*Vanishing of sight*. His sight vanishes when reading or writing; in the right eye he feels a pressure, extending into the head, disappearing after walking. Obscuration of sight when stooping and walking. °Sudden obscuration of sight on the setting in of a lancing tearing headache.—Only one-half of the objects is visible, the other dark. Short-sightedness. °Diplopia. Sensation as of a rain before her eyes. \**She becomes long-sighted*.—°Incipient amaurosis.—°Black points before her eyes °and streaks of light. *A small fiery point, before her eye, which remains wherever she looks*.—Fiery points before the eyes, when walking in the open air. She sees a fiery zigzag appearance around all things. A number of light and dark points before her eyes.

**Ears.**—*Otalgia* behind and in the right ear. Pressure behind the ear, when drinking fast. \**Stitches* in the ears, -in the forenoon, when sitting quietly, *Drawing stitches* in the right ear. Dull drawing and stitching pain in the ear, and thence down the neck, as far as the shoulder-joint. Digging (grinding) stitching pain in the right ear, during and between the acts of deglutition. °Beating and throbbing in the ears.—Continuous *itching stitch* in the right lobule. *Itching* of the interior of the right ear. Itching of the lobule. Itching behind the ear, and afterwards burning for a long time.—Heat of the ear or lobule for several days. Heat of the left, weak ear, for several evenings. Redness, *heat and swelling* of the left concha, with burning pain.—Swelling of the meatus auditorius and *discharge from the ear*. °Purulent discharge from the ear, for many days.—Itching, *rash-like eruption* behind the ear, for some days.—Small pimples behind the left ear.—Deafness. \**Hard hearing*. A shock in the left ear, followed by tingling for a long time. \**Singing* or tingling in the ears, particularly in the left ear, (immediately). °Ringing. Buzzing in the ears, early, when waking. \**Humming* in the ears, °also with roaring, -early, in bed, and when sitting. Sudden rushing through the ears. Painless cracking in the ear, when chewing. Fluttering in the left ear, at dinner.

**Nose.**—Insensibility and deadness of the inner half of the nose. Twitchings of the muscles on the left side of the root of the nose. \*Boring pain in the nasal bones, especially in the root of the nose towards the malar bone. Burning in the nose (and eyes).—*Redness, heat and swelling of the left wing of the nose, with sore pain*, especially when blowing or touching the nose. *Itching* and sensation as if the left nostril were narrower. *Internal soreness* of the nose. *Soreness and swelling of the interior of the wings of the nose*, and many pimples on them.—*Itching* in the right nostril, as if a worm would bore through it. Itching of the left wing of the nose. White pimples around the nose. A number of smarting vesicles at the root of the nose, forming scurfs. Small, burning pimples under the septum, with sensation

as if an acrid fluid were dropping out of the nose.—*She blows out a quantity of coagulated blood.* *Bleeding* of the nose, frequently. Violent bleeding of the nose, when coughing at night, with bruised pain of all the limbs. Bleeding of the nose, when stooping.—°Deficient smell. *Frequent sneezing*, several days. *Creeping in the right side of the nose*, with pressure in the right eye, as if he would sneeze, not going off by blowing the nose. \*Frequent unsuccessful sneezing. Catarrhal feeling, every morning. \**Dry coryza*, -with obstruction of both nostrils. Excessive dry coryza, he is almost unable to breathe. °Dryness of the nose. Dry feeling in the nose, in the posterior nares. °*Obstruction of the nose.* Water drops out of the nose, unawares. Thick mucus comes out of the nose. \**Fluent coryza*, °with sneezing, only one day. Violent fluent coryza, for three days, afterwards dry coryza. \**Excessive fluent coryza*, with loss of smell and taste. Discharge of water from the nose, without coryza. Secretion of very thick mucus from the nose.

**Face.**—Face shining as from grease. Livid face. Yellowish complexion with much pain in the abdomen. Redness of the left cheek, every day, especially in the afternoon. Much heat in the face. Aching in the malar bones and near the ear. Drawing pain in the right malar bone. \**Bone-pain in the face.* °Pain in the malar bones as from subcutaneous ulceration, when chewing. Bruised pain in the malar bone, especially when touching it.—Visible twitching of the muscles of the face. Swelling of the left side of the face and lips.—Itching of the region of the whiskers or face. \**Pimples* in the face. Pimples on forehead and nose. *Ulcer* on the left cheek.° *Boil* above the eye, discharging much pus —*Falling off of the whiskers.*—Numbness and tingling of the lips, especially in the evening. Lancing pain from the upper lip across the cheek, to the ear. Burning of the vermilion border of the upper lip. Sore feeling of the corners of the mouth when opening it. \**Suelling* of the °upper lip or -of the lower lip and tip of the tongue, with violent burning, waking him from sleep at night. Swelling round the lips, with large vesicles, the vermilion border being sore and ulcerated, and the tongue covered with smarting vesicles. *Eruption on the vermilion border of the lips, smarting as if excoriated.* A number of vesicles on the vermilion border of the lower lip, burning and smarting when the lips become moist. Vesicles forming scurfs, on the vermilion border of the lower lip. Small painful pimple on the upper lip, below the septum. Small pimples around the mouth forming a kind of herpes, which becomes covered with scurf, detaching itself in a few days, but leaving a red spot for two weeks after. Eruption in both corners of the mouth. *Small, ulcerated pimple* in the right corner of the mouth, especially painful when touched. *Ulcerated corner of the mouth.* °Bloody blisters on the inner side of the upper lip, painful when touched. *Peeling off* of the vermilion border of the upper lip. Dry, chapped lips. The lower lip becomes chapped and peels off, in the evening; it becomes very painful and sensitive, and cracks in the middle when sneezing. *Deep, painful fissure in the middle of the upper lip.* Red, itching spot on the chin, becoming ulcerated after friction. Itching, miliary eruption on the chin, for some days.

**Jaws and Teeth.**—The lower jaw is painful to the touch. Compressive pain in the articulation of the jaw, in front of the ear, most violent when opening the mouth very widely. Drawing pain in the lower jaw. Tearing in the lower jaw, extending as far as the temple, likewise in the parotid and submaxillary glands, with occasional boring and pinching in indurated glands, worse at night; she had to bandage her cheek, to alleviate her sufferings. Dull stitches in the articulation of the jaw. The *submaxillary glands* are painful when stooping. Pain of the submaxillary glands, as if squeezed, contused or swol-

len. °Frequent swelling of the submaxillary glands. Toothache, with swelling of the cheeks, for many days. *The teeth are very sensitive to cold.* Intense toothache when drawing in air. Pain of the teeth when touching them with the tongue while chewing. Toothache in an empty socket and the adjoining teeth, the pain being relieved by touching or pressing upon the parts.—Pressure and pushing in the upper teeth, for some hours. Pain of the teeth as if something had lodged in them which wants to get out. Dull pressure in a hollow tooth. Pressure and breaking sensation in the teeth proceeding from the left malar bone, with sensation as if he were unable to press more than a portion of the teeth of the upper and lower row together. Breaking, stretching and drawing in a hollow molar tooth, and thence extending to the throat and fauces, so that she is unable to open her mouth, or to swallow, or to utter a loud word; the pain extends also to the ear, where she experiences an itching and stinging sensation; worst in the evening and before midnight. Dull drawing in the teeth. Drawing toothache after a meal and at night, followed by swelling of the cheeks. Violent drawing in the right row. Drawing toothache, with stitches, extending even into the eye, every other day.—*Stitches*, only in the hollow or carious teeth. Stitching pain, now in one, then in another tooth, one hour every forenoon. Stitches in the teeth and side of the head, with stitches through the ears, from morning till evening. Stitching and throbbing pain in an anterior tooth.—*Throbbing toothache*, afterwards drawing extending into the ear, as if something would get out there, with much heat in the face and swelling of the gums; the teeth being higher and elongated, after midnight.—*Throbbing pain and burning boring* in an anterior tooth. *Throbbing and boring in the teeth*.—Sore pain in the teeth. Numbness of the teeth when pressing on them, they feel elongated, and as if they did not correspond to one another. Loose teeth.—Looseness and pain of the anterior teeth. The teeth are set on edge.—*Increase of the decay* of the teeth.—Gum-boil on the inner side of the right jaw, more painful between than during the acts of eating.—*Extreme sensitiveness* of the gums to cold and warm things; touching them with the tongue, excites a stinging pain.—Drawing pain in the gums, now in the upper, then in the lower jaw, the gums swell and are very painful to the touch. Inflammation and swelling of the gums, with swelling of the cheeks. *Swelling of the gums of a hollow tooth*. Swelling of the gums, for a couple of hours every morning; she was unable to chew on that side. *Swelling and sore pain* of the gums, also of the inner side of the gums of the upper front teeth. Painful swelling of the gums, readily bleeding. °Scorbutic putrid inflammation of the gums.—*Bleeding of the gums*.—*Ulcer on the gums*, painful day and night, for three weeks. °Fistula dentalis.

**Mouth.**—Vesicles and soreness in the mouth, very painful. *Ulcerated places* in the mouth, on the gums, tongue, where both the solid and liquid food cause a smarting sensation.—Accumulation of saliva, in the evening in bed, which gets into the larynx on swallowing, with a violent turn of cough. Watery, tasteless, saliva in the mouth. Constant spitting, owing to continual accumulation of water in the mouth. °Ptyalism. Bloody saliva. \**Vesicles on the tongue*, -burning and smarting when eating. Swelling under the tongue with a stinging pain. Sore feeling of the tongue, also between meals. One side of the tongue feels numb and stiff. Tingling in the tongue, it goes to sleep. °Chronic sensation as of a *hair* on the tongue. Sensation in the tip of the tongue, as if it trembled. Heavy tongue. Difficulty of talking, as if the organs of speech were weak; the weakness proceeds from the hypochondria.

**Pharynx and Oesophagus.**—Sore throat as if the submaxillary glands were swollen. Sore throat, worse morning and evening. \*Sore throat, as if

a plug had lodged in the throat, during and between the acts of deglutition, and as if the parts were raw, with burning pain and an anxious sensation as if the throat would close by swelling, waking one at night. Sensation as of a plug in the region of the xiphoid cartilage, on touching it, with jerks when drinking.—*Spasm* in the pharynx; when swallowing, she found it very difficult to get the food down, or to bring it up again, so that she came near suffocating. *Constriction* of the right side of the throat with frequent yawning, the pain extending to the nape of the neck, which becomes stiff from it. Stinging, sometimes pinching pains in the throat, from the larynx to the ear. When swallowing something, when laughing while drinking, the beverage comes out again at the nose, and she came near suffocating. Stitches in the left side of the throat, during empty deglutition, and deglutition of food. Stitch behind the right tonsil, towards the ear, when yawning. Stitches and burning in the throat, as if it were inflamed, with elongation of the uvula and impeded deglutition.—*Smarting* in the œsophagus, as if it were inflamed and narrow, when swallowing. Ripping-up pain, with sensation of excoriation, in the parotid gland, when drinking. When swallowing tepid drink, it feels cold, owing to heat in the œsophagus.—*Ulcated places* in the œsophagus, with sore throat, putrid inflammation and dark-red swelling of the gums.—*Dryness* in the œsophagus. Dry tongue, no thirst. *Much mucus in the throat*. Continual hawking of mucus, when smoking. \*Hawking of mucus in the morning, -with expectoration of dark-green mucus.

**Taste and Appetite.**—*Loss of taste*, for a long time. *Watery* taste in the mouth, evening, with absence of thirst, and suppressed secretion of urine. *Flat, watery* taste in the mouth, with want of appetite; however, he relishes food. Flat taste in the mouth, early in the morning, with tongue coated white. Pappy, viscid taste, with good appetite and natural taste of food. \**Bitterness of mouth*. Bitter taste of food (immediately). Bitter taste of tobacco when smoking. \**Putrid taste* -and smell in the mouth. \**Sour taste* in the mouth, early in the morning. °Taste in the mouth as if fasting. Want of appetite and aversion to food. Repugnance to coffee. No appetite for meat. Repugnance to brown bread. Aversion to smoking, although used to it. Smoking makes him sweat and tremble. Aversion to fat meat. No appetite for supper. Appetite in the mouth, but no hunger. Little appetite, it increases while eating. Much appetite, but does not relish food (the first days). No appetite, she feels too full, but relishes what she eats. Desire to eat, without much appetite, and afterwards repletion.—°Desire for bitter food and drink.—*Frequent feeling of hunger*. Feeling of hunger in the stomach, in the afternoon, after drinking water, but without appetite. *Feeling of great hunger in the stomach, as if it were empty, but no appetite*. A violent feeling of hunger, as if the stomach were empty, rouses him from sleep early in the morning, with uneasiness. Violent hunger, she had to eat much, during the day. He has to eat frequently; in an hour after eating, he is hungry again. \**Excessive appetite at supper* and °dinner. °Canine hunger, with feeling of repletion after eating but little. Painful feeling of hunger in the stomach, nevertheless he is immediately satiated. Sensation of excessive repletion, in the afternoon. Thirst, but almost no desire for drink. °Constant thirst. Much thirst, in the evening. Beer tastes flat and watery in the evening. Putrid taste of water.

**Gastric Symptoms.**—*Before eating*: great drowsiness—*During a meal*: °sweat in the face.—*After eating*: °heartburn. Nausea after a meal, for half an hour. Nausea and spasm, in the chest, after eating something without appetite. Acidity in the mouth, after a meal, for half an hour. Acidity in

the mouth and dryness in the throat, after every meal. Heartburn after supper. Burning from the stomach and sour eructations, after dinner, two afternoons. Eructation after eating bread, for twenty-four hours. Long after-taste of food, especially when acidulated. Long after-taste of food, or he has the smell of the food in his nose. Hiccough after a meal. Pressure and repletion in the stomach after dinner. Fulness and distention of the region of the stomach after a meal. Distention of abdomen, and feeling of laxity in the abdomen, as if everything were loose in that part, after a meal. Distention of the abdomen, heat of the face, slumber, and afterwards herby taste in the mouth, with stupefaction and intoxication of the head. Compressive griping in the pit of the stomach after a meal. Sensation of pressure, with soreness in the stomach, after a meal. Rumbling in the abdomen, after a meal. Pinching cutting in the abdomen after eating or drinking. Dulness of the head, after a meal. Aching in the forehead after a meal. Compression in the forehead after supper. After drinking warm milk, early in the morning, she becomes immediately hot and trembling in the whole body. Inclination to lie down after dinner, drowsiness and inability to think. After eating a little more than usual for supper, he has a number of confused dreams of crimes, for which he was tried. Quick pulse, and palpitation of the heart after a meal. Quick pulse, with anguish and oppressed breathing after a meal. Intermittent pulse, after dinner. After a meal, he feels quite exhausted for a couple of hours.—*Unsuccessful eructations. Empty eructations* from time to time. Empty eructations after every meal, or in the open air. *Eructations tasting of the ingesta, several hours after the meal.* Gulping up of bile. \**Sour regurgitation of food.* Gulping up of a sour fluid, late in the evening. Sour, scraping regurgitation of food. Acid scraping sensation in the fauces.—Sort of raw heartburn. Heartburn, the whole day, worse in the evening.—*Hiccough* for several days.—*Nausea* and qualmishness in the pit of the stomach, every morning from 7 till noon. Nausea and digging sensation in the pit of the stomach, at 8 o'clock every morning, for two hours. Nausea towards noon, as if from canine hunger. Frequent nausea, at different periods, not hindering eating. Nausea, as soon as she presses on the painful spot. Excessive nausea, after drinking something which was agreeable to her; she was obliged to lie down, and lay on the right side, which diminished the nausea. \**Nausea, immediately after a meal,* -with heaviness of the head, and frequent bitter eructations, for two hours. Nausea, as if vomiting would ensue, for some minutes. Nausea, with inclination to vomit, hawking up a good deal of mucus while smoking. Nausea, with inclination to vomit, accompanied with writhing and turning in the stomach. Inclination to vomit, after breakfast. Retching with nausea and apparent exhaustion of the vital powers, after taking a warm breakfast, which was agreeable to her. °Waterbrash with writhing about the stomach.—Waterbrash, almost every day, after a meal. Waterbrash preceded by pressure on the stomach after a meal, followed by nausea, \**after which the patient vomited up the ingesta,* -and lastly, bile, accompanied by colic. Vomiting of the ingesta with acidity, preceded by waterbrash. °Vomiting and nausea of pregnant females. °Bad effects from eating sour things or bread. °Fat things and milk occasion disagreeable eructations.

**Stomach.**—Dull, disagreeable sensation in the stomach, relieved by stooping. Sensation in the region of the cardiac orifice and behind the sternum, as if a foreign body had lodged there. Weight and tightness across the parts below the pit of the stomach. Sensation as of a hard swelling in the pit of the stomach, in the afternoon, with tightness across the hypochondria. Pressure in the region of the stomach. °Pain in the region of the stomach on

pressure. °Swelling of the region of the stomach, with pain as from subcutaneous ulceration.—\**Pressure in the region of the stomach*, as if he had taken cold. Pressure in the stomach, extending into the chest. °Pressure in the stomach with nausea and sudden sinking of strength. Pressure in the pit of the stomach, as from some hard body, obliging one to take deep breath (immediately). Pressure and dull, stitching pain in the pit of the stomach, from above downwards. Aching pain below the pit of the stomach, above the umbilicus, relieved by pressure.—Oppression in the pit of the stomach, when standing. Feeling of anguish in the pit of the stomach.—°*Cramp in the stomach*, towards evening, through the night, until next morning. *Contractive cramp* in the stomach, in the afternoon, with feeling of coldness in the stomach and back, until evening. Contractive pain in the region of the cardiac orifice in paroxysms. Colicky pain in the stomach, with nausea, early in the morning, on waking °Gripping in the pit of the stomach. °Jerks in the pit of the stomach.—*Throbbing* in the pit of the stomach, resembling palpitation. Pain, as from contusion, on the left side of the pit of the stomach, also when touching the part. Stitches in the pit of the stomach. Short stitches on the right side near the stomach, every afternoon. Very painful prickling in the stomach.—*Burning* in the pit of the stomach, in paroxysms. At times heat, at times coldness in the pit of the stomach.—*Small red spots* in the pit of the stomach, exciting a stinging sensation when touched, and obliging one to rub; afterwards the spots change to elevated itching pustules.

**Hypochondria.**—*Violent aching in the region of the liver*. Feeling of stiffness in the region of the liver, when bending the trunk to the left side. Painful tension in the right side of the abdomen. *Pinching pain in the right side of the abdomen*, making lying on the left side intolerable to him. *Drawing pain* in the region of the liver, also from above downwards; afterwards pinching below the umbilicus. \**Stitches in the region of the liver*, -when sitting, every afternoon. Scraping sensation in the region of the liver.—Tensive sensation in the *left hypochondrium*, as if caused by incarceration of flatulence, in the afternoon Boring, with pressure, in the left hypochondrium, and afterwards dull, gloomy headache. Pressure, with a stitching sensation, in the left hypochondrium, mostly when walking fast. \**Stitches in the left hypochondrium*, -when taking an inspiration. Burning pain in the left hypochondrium, towards evening.

**Abdomen.**—*Tension around the abdomen*, as if from flatulence, relieved by eructations. Tension around the hips, as if the skin were too tight; she had to open her dress. Pain in the abdomen, as from a load, felt in walking. Continual *uncomfortableness* and dull pain in the abdomen, as if from indigestion, characterized by periodical paroxysms of short pressure or pinching, accompanied by a feeling of the formation of flatulence, which passes off with a fetid odour. °Rigidity in the left side of the abdomen.—\*Pressure in the epigastrium. Pressure in the hypogastrium, every morning. °Pressure in the left side of the hypogastrium.—*Colic*, early in the morning, on waking, as if from spasmodically-incarcerated flatulence, causing a tensive, aching pain, with violent itching near the genital organs; all these symptoms disappeared after a short sleep, without emission of flatulence. Crampy sensation in the left side of the abdomen, when walking or lying. *Contractive pain* in the abdomen, towards evening: she had to bend double, relieved by walking. Jerking contractions in the abdomen, early in the morning, in bed.—*Contractive, labour-like pains* in the abdomen, with weakness. *Labour-like colic*, when riding in a carriage. Labour-like drawing in the lower part of the abdomen, extending into the thighs.—*Drawing pain* in the umbilical region, in the direction of the

thighs. Drawing, pinching pain in the left side of the umbilicus, extending into the rectum and anus.—*Pinching in the abdomen*, as if caused by worms, in the evening. Pinching colic, every afternoon. Pinching in the flesh, first below the short ribs, afterwards below the umbilicus. Pinching in the epigastrium, with pain in the stomach. Frequent pinching, every day, in the whole abdomen, the sides of the abdomen, and towards the small of the back. Pinching colic, and as if the parts were sore, early in the morning when in bed; afterwards in the back and the scapulæ, pressing and sore, going off after rising. Stinging pinching above the umbilicus. Pinching, with pressure in the epigastrium.—*Cutting pain in the abdomen every day, early in the morning when in or out of bed*, for some mornings. Cutting pain in the abdomen, in the morning, worse in the afternoon. Cutting in the abdomen, *with rumbling*. Continuous stitches in the left side of the lower part of the abdomen. Pain in the abdomen, as if every part in it would tear. When walking, the intestines feel as if they were loose and too heavy, and as if they would fall out.—*Swelling of the abdomen*.—*Frequent distention of the abdomen*, with feeling of fullness after drinking and sense of fluctuation in the abdomen.—He is very much tormented by flatulence, and the abdomen is distended. *Incarceration of flatulence*. *Flatulent colic*, especially during motion (almost immediately). A quantity of flatulence, inducing tension and stitches in the abdomen. Flatulence moves about in the abdomen and the sides of the abdomen, accompanied by heaviness of the head, humming in the upper part of the head, buzzing in the ears, and obstruction of both nostrils. Fermentation in the abdomen. Rumbling. *Gurgling* in the abdomen, as in diarrhœa. *Borborygmi* for many weeks. *Excessive emission of flatulence*. Sour-smelling flatulence. Flatulence smelling like rotten eggs.—Pinching under the short ribs, afterwards under the umbilicus.—The inguinal region is painful on rising from a seat and during rapid walking. Pain as from a sprain in the left groin. Protrusion of *inguinal hernia*.

**Stool.**—Unsuccessful urging to stool. *Retention of stool* the first days. *Hard stool*, every two or three days, with exertion, or with tearing stitches in the anus and rectum during stool. Hard, dry stool. Irregular, insufficient stool.—*Frequent* small stools a day. Frequent desire for stool, with only a small quantity of fæces. Violent desire for stool; he was scarcely able to retain the stool for a moment; the stools were papaceous. Hard stool the first days, the following days the stool was *soft*. *Chronic looseness*. *Diarrhœa like water*, also with colic.—*Stool mixed with blood*. Coagulated blood with the stool.—Pressure in the hypogastrium, in the region of the bladder, previous to stool. Pressing towards the rectum, *previous to stool*, as if flatulence had become incarcerated. Soreness in the abdomen, previous to stool or to every emission of flatulence. Cutting pain in the abdomen previous to stool.—*During stool* (which was soft), or during emission of flatulence, labour-like pressing in the abdomen, from above downwards; she has to lean her hands against something; the pain goes off with the stool. Scraping sensation in the rectum, during hard stool. *Burning* in the rectum during stool.—*After stool*, violent, unsuccessful urging. Pressing in the rectum, after stool. *Burning in the rectum*, after hard stool. Burning at the anus, after soft stool. Ripping-up sensation at the anus, after stool. Itching at the anus after the somewhat bloody stool. After stool, *pinching as if diarrhœa would come on, without inducing any*, early in the morning.—Tenesmus of the rectum, without stool, after a meal. Pressing pain in the rectum. Spasmodic constriction of the anus. Sensation during stool, as if the rectum were contracted; the expulsion of stool requires great efforts; first, hard fæces are passed, fissuring the anus and causing it to

bleed and making it feel sore; this hard stool is always followed by a liquid one; she is constipated every other day. Frequent pinching in the rectum, with urging, resulting in mere emission of flatulence with mucus. *Frequent stitches* in the rectum, especially after noon. °Smarting and beating in the rectum.—*Stitches* in the anus, along the rectum from below upwards, between the stools. *Stitches* and itching at the anus. Itching stitches in the rectum, in the evening when in bed. Protrusion of the rectum and burning at the anus, with emission of a quantity of bloody ichor, so that he was unable to sleep in the night from pain, (in a few hours). Continuous °*burning at the anus*, -especially after chagrin. Smarting soreness at the anus, especially after thin stool. Sore, hot anus. Soreness around the anus and between the nates. *Herpes* about the anus. \**Varices* of the anus, °painful, -or with stinging pain and humid.

**Urinary Organs.**—*Desire to urinate*, without emission. Pressure on the bladder, between the acts of micturition. Frequent desire to urinate, emitting a quantity of good-coloured urine. Frequent micturition, every half-hour. \*Frequent micturition at night, and also unsuccessful desire to urinate.—Frequent, copious emission of hot urine. Copious micturition, with violent desire, almost every half-hour, however little he may drink; at night it rouses him from sleep.—*Violent desire to urinate, and inability to retain the urine*, which flows copiously. \**Involuntary emission of urine while walking*, °also when coughing and sneezing.—*Light-coloured urine*. White-turbid urine, after pinching in the urethra. *The urine speedily deposits a sediment looking like brick-dust*. Red sediment in the loan-coloured urine. Red sand in the urine.—Pressure on the bladder and in the hypogastrium, *during micturition*. Biting sensation in the urethra, during micturition. Biting sensation in the pudendum, during micturition. Burning in the urethra during micturition.—Contraction in the hypogastrium *after micturition*, like cramp, for five minutes. Drawing in the urethra, after micturition. Cutting in the urethra shortly after urinating. *Burning and cutting in the urethra, after micturition, with emission of a thin mucus*, leaving translucent, stiff spots on the linen. Discharge of a fluid from the urethra, after micturition, first causing an itching, afterwards a burning. Milk-like discharge after urinating, (prostatic fluid?).—Violent stitches in the urethra, between the acts of micturition. Soreness in the urethra on touching it. *Stinging itching* in the orifice of the urethra, which seems to be glued up with a sort of gum, (prostatic fluid?). Itching stitches in the urethra, between the acts of micturition, some days in succession. *Itching of the orifice of the urethra*, followed by desire to urinate. Itching and burning in the orifice of the urethra, in the evening when going to bed. Discharge of yellow pus from the urethra, leaving spots on the linen, like gonorrhœa, but without pain during micturition, with tension in the inguinal glands, which are not visibly swollen. °Discharge of mucus from the urethra. °Gleet?

**Male Genital Organs.**—The genital organs *smell very badly and strongly*. Intolerable, smarting itching near the genital organs, with erosive pain after friction, for many weeks. Twitching and jerking in the penis, between the acts of micturition. Stitches in the penis, during and between the acts of micturition. *Itching and tingling of the glans*, obliging him to scratch. Itching of the tip of the glans, with desire to scratch. Redness of the tip of the glans. Great itching and humidity of the corona glandis. Some red spots on the glans. *Retraction of the prepuce* behind the glans, with feeling of rubbing dryness on the glans, when touched by the clothes.—Pinching in the *testicles*. Drawing-aching in the testicles, commencing at the abdominal ring. Relaxed *scrotum*, for several days. Violent itching of, and under the scrotum, and of the left thigh, at a red, inflamed place. Soreness near the scrotum, on the thigh. Itching, circum-

scribed, humid *herpes* on the scrotum, and on the thigh adjoining.—*Feeling of weakness* in the genital parts. The sexual instinct is dormant or feeble, with retarded emission during an embrace. \**Excessive sexual desire.*—erections and voluptuous feeling during an embrace for the first twelve days, all these symptoms diminishing as much more afterwards. Lewdness in the evening when in bed. Sudden sexual desire while sitting, going off when walking about. °*Excessive excitement of the parts and of the fancy for an embrace.* The sexual desire is more of a physical nature.—*Violent erections.* Erections, early in the morning, without sexual desire. Burning in the urethra, after the morning erection. Deficiency of erections (the first day). No erection or pollution for five weeks. The erections were either wanting or rare, (after a time). No emission of semen, although no embrace, for five weeks. *Pollution*, in a married man. Frequent nocturnal emissions in spite of frequent embraces. Involuntary emission of semen, which was very unusual with him. Pollution with smarting of the glans. Profuse emission of an individual suffering with impotence, followed by a violent erection lasting the whole night, and being almost painful. Weak embrace, the emission of semen being rather sudden with feeble thrill. Weak embrace, nevertheless he has an emission of semen in the morning. °*Impotence.* *Vehement embrace*, with sudden emission of semen afterwards.—He feels very much fatigued by an embrace, which he had not enjoyed for a long time previous; in the subsequent night he had a pollution which exhausted him considerably. Pollution five hours after an embrace. Pollution shortly after an embrace, another three nights after. After an embrace, he feels a sharp sticking in the urethra after micturition.—Pollutions bring on coldness in the joints, and weakness. Cutting in the urethra after a pollution.—When thinking of sexual things, he loses a quantity of prostatic fluid, without his fancy or his genital organs being excited, and without erection.

**Female Sexual Organs.**—Pressing and pushing from the side of the abdomen towards the genital organs, early in the morning; she had to sit down to prevent a prolapsus uteri. Dryness of the vagina and painful embrace (secondary effect?).—Shortly after an embrace she feels easy and light-hearted, but in a little while she becomes irritable and is out of humour.—*Itching of the pudendum.* Pimples on the mons veneris. Falling off of the hair.—\**The menses delay four days, and are scanty.* The menses last only three days, followed by dulness of the head and congestion of blood to the head. The menses are only one-third as profuse as usual, but appear at the proper time. The menses are *scanty* on the first and second days; on the third day, they are very profuse, with pain in the abdomen as if sore.—\**Retention of the otherwise regular menses.* °*Delay of the first appearance of the catamenia in young women.* *Primary effect, shortening of the menses; secondary, extension.* The menses appear in eighteen days, then in seven weeks; after this period they cease to flow. \**The menses appear seven days too soon.* The menses appear at once, and are more profuse than usual, afterwards they delay and decrease. The menses appear three days too early. The menses appear seven days too early; are scanty, with headache when coughing, stooping, or sneezing, as if the head would burst. Re-appearance of the menses which had stopped for the last eighty-five days; immediately after, the lower limbs feel very heavy. The menses re-appear in a woman of fifty years, after having ceased flowing for six months. *Increases* the menses which had already appeared. The menses are more profuse than usual; they appear at the proper time, and there is less colic; she feels chilly on the first day, with much yawning, especially in the afternoon. The menses are very profuse, even at night, the blood being blackish—*Anxiety previous to the menses.* °*Melancholy, vexed, and aching pains in the head before the menses.* Previous

to the appearance of the menses which had delayed, she feels anxious and qualmish for a few hours, early in the morning, with sweet risings in the œsophagus, and spitting of blood with the saliva.—Very \*sad during the menses. She feels anxious and fainting during the menses, with cold cheeks and much internal heat. Heat in the face, during the menses, in the evening. Tearing toothache during the menses, with stitches, on cold air getting into the mouth. Heaviness in the abdomen during the menses. °Spasmodic pain in the hypochondrium, during the menses. Frequent burning and cutting in the hypogastrium, during micturition, and when sitting at table during dinner. Violent fever during the menses, after their appearance at night, with violent thirst and total want of sleep. Hard stool during the menses.—Dulness and heaviness of the head after the menses, as if from congestion of blood to the head. Impotence after the menses, aversion to an embrace, and dry vagina, with pain during an embrace.—\**Leucorrhœa*, -at night. Leucorrhœa after colic, early in the morning, as if the menses would come on, contractive, and pressing downwards. \**Profuse leucorrhœa*, also with transparent, white, thick mucus. Leucorrhœa, causing an itching in the pudendum. Greenish leucorrhœa, especially when walking. \*Acrid pain during leucorrhœa, also with yellowness of the face.—Stitches in a mamma.

**Larynx, Trachea.**—Dryness of the larynx, early in the morning, on rising. *Scraping sensation in the larynx*, rough voice. Continual scraping in the middle of the chest. Rough voice, with obstruction of the nose as in dry coryza and some sneezing.—Violent *hoarseness*, (the first days). Hoarseness, early in the morning after a sound sleep, with a quantity of mucus in the throat, and cough. °Huskiness of the chest with cough. °Hawking. Catarrh and cough with titillation, as if he had taken cold. \**Cough from titillation in the throat-pit*, °particularly when walking and taking deep breath. Cough from titillation in the pit of the stomach, with asthma. Rough, hoarse, dry and hacking cough. Desire to cough brought on by empty deglutition. Talking causes a desire to cough, and oppression of the chest. *Cough, which makes the boy quite breathless day and night*. \**Morning cough*. \**Cough after going to bed*. The cough is worse at night, than in the day-time. Dry cough with titillation and pricking at night, not in the day-time. °Chronic hacking cough. Violent cough, almost unto vomiting, but not continual, for four weeks. *Cough, with vomiting of the ingesta*. °Spasmodic *suffocative cough*, in the evening in bed.—Cough with retching and vomiting, and expectoration of bloody saliva, which appeared to come from a dry spot in the larynx. Short and hacking cough, with some rattling in the chest, and some expectoration of mucus. Cough with expectoration, day and night. Mucus in the chest, oppressing it and becoming loose when walking in the open air. Cough with badly-tasting expectoration, early in the morning, with pain in the chest, as if it would be torn open. *Purulent expectoration*, with one turn of cough. Bloody cough.—Pain in the throat and chest when coughing. During cough: pain in the cervical glands, and deep in the chest. Cutting pain in the left side of the chest. Soreness of the larynx and trachea, frequently. Pain in the abdominal ring extending even to the scrotum, as if the spermatic cord would tear. \**The forehead feels as if it would burst*.

**Chest.**—The breath appears hot. *The breath smells*. °Rattling breathing. °Wheezing in the evening, in bed. Hoarse, deep breathing, with pain in the abdomen. Wheezing sound in the trachea during an expiration. Asthma. Oppression of the chest, in the evening. Oppression when breathing, with pain in the chest. Oppression of the chest in a room, he had to go into the open air, which gave him relief. Painful oppression of the chest, resembling a pressure on it, every day, when raising one's-self, after stooping. Oppression of the chest, with pressure in the middle of the sternum, during

motion. Oppression of the chest, as if constricted, with burning in the hands. Oppression of the chest on going to bed, and also in the afternoon. Dyspnoea and shortness of breath when walking fast. °Dyspnoea while performing manual labour.—*Oppressive anguish in the chest*, with pressure in the pit of the stomach, worst after a deep inspiration.—Her chest is painful under the left arm, when moving the arm or when drawing breath. *Pain in the centre of the sternum*, increased by a deep inspiration. Simple pain in the sternum, in short paroxysms.—*Pressure* in the front part of the chest. Aching pain in the chest after standing or talking considerably. Pressure in the left chest. Aching pain in the region of the heart, early in the morning. Tension in the chest, early in the morning.—\**Tensive pain in the muscles of the right side of the chest*, in the forenoon, he cannot walk erect, nor perform any other motion with the trunk, stretch his limbs, or draw a deep inspiration. Tensive pain in the region of the clavicle, and along the cervical muscles, which is even felt on touching the parts.—*Stitches* in the right chest, with hoarseness. °*Stitches* in the chest during a deep inspiration or when coughing. Stitching pain through the lungs, in frequent paroxysms. Single stitches *along the sternum*. Pricking pain in the middle of the sternum. Stitches with oppressed breathing, first in the sternum, afterwards in the region of the liver. Frequent *pleuritic stitches*. Stitching pain in the right side of the chest, with oppression, only when walking, so violent that he had to press his hand on it to find relief. Stitches in the *left side*, with tensive pain under the arm. Continuous stitching pain in the left chest, in the evening, arresting the breathing, but disappearing in the open air.—*Soreness* in the chest. Pain as from bruises, of the outer parts of the chest. Pain, as from bruises, in the sternum. Pain, as from bruises, in the left half of the chest, when stooping, or taking an inspiration, not when touching the parts. Contusive pain in one spot of the left side of the chest. Pain, as of a blow, in one spot of the sternum. Disagreeable *warmth* in the chest, early in the morning on waking. *Faint feeling* in the chest, from walking in the open air (in the sun); it obliges him to talk softly.—*Continuous pains in the heart*, especially at night. Violent stitches in the heart. Darting pain in the region of the heart. Contusive pain in the region of the heart, early in the morning, in bed. Violent pressure below the heart, as if from the abdomen towards the chest, in the evening when in bed, with palpitation of the heart, increased by lying on the left, diminished by lying on the right side, continuing until he falls asleep.—\**Frequent palpitation of the heart*. \**Palpitation of the heart from the slightest motion*. Palpitation of the heart when standing. \**Palpitation of the heart with anguish*. Palpitation of the heart, without any anxious thoughts, five minutes or even hours. Palpitation of the heart, with pressure in the region of the heart (cardialgia), abating somewhat when pressing the hand on the parts, (immediately). Fluttering motion of the heart. °*Irregularity of the beats of the heart*. \**Intermitting beating of the heart*. *Cold feeling* about the heart, when exerting the mind.—Tensive pain from the region of the clavicle along the cervical muscles, with pain when touched, or in the muscles of the right side, (forenoon,) obliging him to walk bent on account of the pain with great pain on turning or raising the trunk. Tearing stitch from the left chest to the shoulder-joint. *Pain as if bruised* in the outer chest, sternum, or in the left chest on stooping forward or breathing, or also in the region of the left ribs, with aggravation of the pain by pressure or contact, even of the clothes. Violent *itching* in the outer parts of the chest, especially in the open air. The bones of the right chest seem to stand out. Cracking of the sternum, during motion. Dartings under the right arm, down the side.

**Back.**—Pain in the small of the back, *as if bruised, when raising one's-self after long stooping*. Occasional stitch in the small of the back. Sharp stitches

across and through the small of the back, close above the hips. Pain in the small of the back, as if broken. \**Paralytic pain in the small of the back*, —most violent when raising one's-self again. *Paralytic sensation in the small of the back, early in the morning, on rising*. Weakness, in the small of the back, like lumbago; he was unable either to walk or to stand straight; he feels most comfortable when lying the whole day, worst after dinner. °Cutting in the small of the back. °Sharp drawing-down from the small of the back through the hip. *Violent pulsations in the small of the back*. Painful throbbing in the small of the back, also in the evening, after having gone to bed. Violent *itching* of the small of the back in the evening when in bed. —Pain in the left side of the back, as when one presses upon an inflamed part. Continual aching below the right scapula. Pressure above the loins, with sensation in the legs as if stiff and bandaged. Rigid sensation in the left side of the back. \**Tension in the back* —obliging one to stretch. Tension and heat in the region of the kidneys, even when sitting; walking soon tires one out. Pain in the back, *as if broken*. *Bruised pain in the region of the hips and scapulæ*, particularly when sitting, and worst when lying. °Nightly pain. *Drawing pain in the back* from below upwards, °also with pressure. Stitch in the inguinal region, when taking deep breath. Burning smarting of the upper vertebra. °Weariness in the back. *Pimples* with itching in the evening in bed. —°*Tabes dorsalis?* —Drawing and tearing in the right scapula, obliging him to take deep breath. —Tearing and pain as if broken *in the scapulæ*, with stiffness of the back and nape of the neck. Stitch below the left scapula, when drawing-in the scapula, not when taking an inspiration. Burning in the left scapula, as if hot water had been poured over it. —The nape of the neck is painful *when turning the head ever so little*. °Pressure in the nape of the neck. Violent pain in the nape of the neck, so that she is not able to turn. Tension in the nape of the neck, with swelling of the cervical glands. *Stiffness of the nape of the neck* and occiput. *Stiffness and rigidity* in the nape of the neck and across the upper part of the back. Violent drawing pain in the nape of the neck, so that he is unable to turn, for several days. Pain in the nape of the neck, as if strained, contused, or fatigued. —The cervical muscles are painful when touching them, or when turning the head. Painful stiffness of the right side of the neck, she was unable to turn her head. Drawing pain in the neck, in the region of the larynx. *Stitches in the outer parts of the neck, from above downwards, even in the night*. °Goitre. The cervical glands are painful when touched, or when coughing. *Boils* on the neck.

**Superior Extremities.** —Dull stitching and tearing in the pit of the axilla. Biting burning in the axillæ, with swelling after scratching. °*Scurfs* in the axilla. *Swelling of the right axillary glands*. —Pain in the shoulder-joint, she is unable to move her arm. Tension and drawing in the shoulder-joint, early in the morning when in bed, with rheumatic pain when uncovering the parts. Drawing and tearing in the right shoulder, afterwards in the upper arm. Tearing in the posterior side of the shoulder-joint, and axilla, day and night. Digging pain above the right shoulder-joint, early in the morning on waking, which makes the arm feel paralytic. Paralytic pain and tearing in the shoulder. Pain, as if bruised, sprained, or painful weariness in the shoulder-joint. Drawing pain in the left arm, she has to stretch it continually. Deadness, (going to sleep) insensibility and creeping in the left arm, with tingling in the tips of the fingers. \**Languor, heaviness and sinking of the arms*. Bone-pain as if broken. Small, red, *itching vesicles* on the arms, here and there. Itching, *whitish blotches* on the arms and hands, becoming red after friction, with more violent itching. A number of *round, itching herpetic spots* on the arms. —Pain of the *upper arms*, at night, when resting on them. Pain in the deltoid

muscle, when lifting something. *Pain, as from bruises, in the upper arm, most intense in the shoulder-joint, when lifting anything, or bending them forwards and backwards.* Burning in the right upper arm, the heat can be felt externally. The upper arms are very sensitive to cold. °Digging in the right upper arm.—Painful cracking of the *elbow-joint* during motion. Stitches in the tip of the elbow. A jerk in the left elbow, his hand becoming paralyzed with pain, which ceased on stretching the arm. Frequent jerks in the left elbow, everything which he held in his hand fell to the ground. Dull bone-pain in the forearm, increased by letting the hands hang down, diminished by moving the arms.—Drawing in the *forearms*, apparently in the ulna. Paralytic tearing on the inner side of the lower arm. Going to sleep of the forearm, from the hand to the elbow, as if paralyzed, with sudden bending of the wrist-joint on attempting to use her hand. Painful weariness of the forearms. Pain, as if bruised in the left radius, becoming intolerable when pressing on the part. Jactitation of the muscles of the forearm, perceptible on touching the parts. Red *elevations* of the size of small peas on the inner side of the right forearm, with violent itching, for twenty-four hours.—Cramp in the *hand* when seizing a cold stone. Tearing, excessive and sudden pain in the external border of the left hand, and the metacarpal bone of the little finger. Prickling sensation in the hand, as if it were going to sleep. Itching and stitching pain in the dorsum of the hand and finger. °Stitches in the wrist-joint. Pain, as if bruised, in the wrist-joint. The hand goes to sleep, when lying on the arm. Weakness in the hands, especially when clenching them. *Trembling of the hands when writing.* Swelling of the right hand, from morning till evening. Itching and biting sensation in the palm of the left hand, he is obliged to scratch the parts for a long time. Itching burning of the left hand, as from nettles. Itching of the inner border of the wrist-joint, with blisters after scratching. Itching *vesicles* on the left wrist and on both hands, as if *herpes* were forming. A number of *small vesicles* on the hands, drying up gradually, the skin then peels off. Brown, painless *spots* on the dorsa of the hands, as if she had injured the parts. The skin of the hands becomes *dry and cracked*. An excoriated spot on the hand becomes inflamed and changes to a pustule. *Sweaty hands, for many days.*—The joints of the fingers bend with difficulty. Tension in the right index-finger. Tearing in the extensor tendon of the right index-finger, extending along the forearm. Violent tearing in the posterior joint of the left thumb, as if it would tear. Ripping-up pain, in paroxysms, from before backwards in the thumb, and from behind forwards in the index-finger, paralyzing the whole hand. *Stitches in the fingers.* Stitches in the left thumb. Stitch in the phalangeal joint of the right index-finger, as from a pin or fiery spark. Stitches in both little fingers. Itching-tearing stitching in the middle joint of the index-finger. Pain, as from a sprain, in the posterior joints of the thumb (immediately). *Pain, as from a sprain, in the posterior phalangeal joints, when writing.* Pain, as from bruises, in the bones forming the anterior joints of the fingers, intolerable when pressing on them. Prickling in the fingers, especially in the tips. °*The fingers go to sleep, with tingling.* Violent itching of the fingers, in the evening when in bed, hindering sleep. Itching *vesicle* on the little finger. Dark-red *mottled spot* near the nail of the third left finger. Inflammation and pain on the side of the nail of the third and fourth fingers. A number of hang nails; after cutting them, the place becomes red, swollen and sore when pressing on it.

**Inferior Extremities.**—Drawing pain in the *nates*. Lancinations above the nates, towards the hypogastrium and hips. He becomes sore between the nates, by walking.—*Tensive pain of the hip-joint*, and pain to the touch.

Tension in both hip-joints, almost like a sprain, also felt when sitting. Painful cramp in the hip. Rheumatism of the left hip; he was unable to walk for eight or nine days. Stitches in the right hip-joint, more when walking than when sitting. Contusive pain in the outer parts of the left hip. \**Pain, as if sprained, in the hips.* Pain, as if sprained, in the right hip, extending to the small of the back, so that he was unable to rise from a seat without pain, or to stretch himself or walk; especially violent during a deep inspiration. Paralytic feeling in the hips. Unsteadiness of the hips and thighs. Itching of the interior of the hips.—Drawing cramp-pain in the left lower limb and foot. \**Drawing pain along the whole lower limb.* Uneasiness in the lower limbs, late in the evening, as if the joints, for instance the knee-joints, were tied too tight; he is frequently obliged to stretch them. Violent *twitchings* in the lower limbs, when waking or when taking the siesta. Heaviness of the lower limbs, even during rest. Pain in the left limb, as if a tendon had been sprained. The left leg goes to sleep during the siesta. Weakness in the right lower limb. *Paralytic condition* of the lower limbs, early in the morning. Paralytic feeling in both lower limbs, suddenly (after writing); going off by dint of walking. A good deal of itching of the lower limbs.—Tensive pain of the *thighs* when walking. *Drawing pain in the right thigh*, as far as the knee, at intervals, during rest and motion, even at night. *Tearing in the right thigh*, (after riding in a carriage). Jactitation of the muscles of the thighs. Large, itching *pimple*, with a red areola, on the thigh, with sore pain when scratching.—Cracking of the *knees* in the evening when walking. Feeling of stiffness at times in one, at times in the other knee, after rising from a seat. Tension in the bends of both knees, when rising from a seat or when walking, increasing during the day. °*Painful contraction of the hamstrings.* Compressive pain, as from weariness, in the knees and tarsal joints, and afterwards a dull drawing in the whole of the lower limbs. *Drawing pain in the knees, when sitting.* Paralytic drawing in the left knee, in the evening. Tearing drawing in the bends of the knees, most violent when walking. Stitching drawing pain -above and below the knee, when sitting. *Sticking in the left knee.* Pain, as from a sprain in the (left) knee, when walking. \**Weakness of the knees*, as if they would give way. Bubbling sensation under the skin of the left knee. \**Red herpes* in the bend of the knee. Boil on the knee.—Great heaviness of the legs; when going up-stairs the lower limbs feel bruised. *Stretching of the calves when walking*, as if the muscles were too short. Cramp-like contractive pain of the calves, when walking. Cramp of the calves, when turning the foot while sitting. Cramp-like paralytic drawing in the right leg, finally extending into the thigh, with weakness of the limb when standing. Slight beating in the left calf. Contusive pain at one spot on the tibia, not when touching it. Tremulous unsteadiness of the calves, when walking or standing, even when sitting. Miliary eruption on the calves, extending over part of the thighs. *Rash on the legs*, in groups, with corrosive itching when touching it.—The feet are painful when walking, from the toes to the joint. *Cramp-pain in the left foot.* Cramp-like, pricking pain in the left foot, as if the parts had been sprained, when walking and pressing the sole to the ground. Cramp in the sole of the foot, in the evening. Tearing in the right malleolus, increasing from morning till evening to such an extent, that he was unable to close his eyes on account of the pain; accompanied by pain in the back. Fine beating in the whole foot. \**Ulcerative pain in the region of the malleolus*, when setting the foot down or when touching it; when sitting, the pain is merely tensive. \**Disagreeable burning of the feet*, -when walking. Prickling tingling in the right sole. *Very cold feet.* Pain as from a sprain in the tarsal joint, for

several days. Cracking in the metatarsal and phalangeal joints. *Paralytic condition of the tarsal joint, or as if the interior of it had gone to sleep*, when sitting or walking; she was scarcely able to move her foot. *The foot goes to sleep* for a long time. \**Great heaviness of the feet*, -also on the second day, they feel very light on the third. Increased *sweat* of the sole of the foot. °*Restoration of the sweat of the feet*, which had been suppressed. °*Swelling of the feet*. Itching of the dorsum of the foot. °*Herpes on the dorsum of the foot*.—Smarting stinging pain in the *toes*. Drawing pain in the big toe. Itching of the dorsa of the toes. *Redness* and coldness of the posterior joint of the big toe, with ulcerative pain when touching it, with tearing and stinging in the joint when standing or walking, not when sitting.—*Stinging pain of the corns*. Boring pain in the corn.

**Sleep.**—*Frequent yawning*. Yawning and stretching. Excessive, *spasmodic* yawning, after sound sleep. *Frequent yawning*, with constriction of the right side of the throat and pain extending to the nape of the neck, which became stiff in consequence of it. \**Great inclination to sleep, in the day-time*, -and great weariness. She has great trouble in getting out of bed for some weeks. *He falls asleep while reading*. When unoccupied, *he falls asleep as soon as he sits down*; nevertheless he wakes every moment. *Drowsiness early in the evening, and late waking in the morning*. He goes to bed without feeling sleepy; however, he falls asleep immediately. \**He finds it difficult to go to sleep*, although he went to bed later than usual. *He was willing to sleep, but he was unable to fall asleep, it was a sort of struggle between sleep and waking*. *Total sleeplessness at night*, he was wide awake, but did not feel unwell. Sleeplessness from internal restlessness. He spends two nights without sleeping, but without feeling any pain.—She wakes two or three hours every night, feeling some anxiety. He wakes every half-hour.—*Restless sleep*; he tosses about and has vivid dreams. °*After sleeping a little at night, he lies awake for hours*.—*At night*: pain in the outer parts of the head, when lying on the occiput. Heat in the head. Anxious feeling in the head, in the evening after lying down, as if he would lose his understanding. Stitching, aching pain in the fore part of the head. Violent pulsations in the head, with heat of the body. He spits incessantly. Bleeding at the nose. He wakes before midnight, from pain in the left molares and the gums around, two nights in succession at the same time. Stitching pain in the throat, during deglutition. Seraping sensation in the throat, a copious flow of saliva, hawking up blood, and sleeplessness. Contractive sensation in the stomach, in the evening, in bed. Colic before midnight, with restlessness and contractive sensation in the region of the stomach, causing anxiety. *Colic* every night, without diarrhoea. *Incarceration of flatulence*, with heaviness and fulness in the abdomen. Flatulent colic, the flatulence moving about in the abdomen, and becoming incarcerated, with pressure and pinching, with light, frequently-interrupted sleep. Uneasiness in the hypogastrium, *from constant unsuccessful desire to urinate*. Desire to urinate, without emission. \**Micturition* -every night, also every hour. Burning at the rectum. Stitch in the right scapula, during a deep inspiration. Want of breath, in the evening, on lying down. Attack of asthma and palpitation of the heart, but without anxiousness. Dry cough, with titillation, and seraping. Drawing *\*pain in the back*; she had to turn frequently to obtain relief. *Stitches in the nape of the neck*. Violent stitches in the left thigh. Cramp in the leg. Burning in the *corn*. Intensely-painful sticking in the corn. She cannot rest on the right side, owing to a pain as from bruises in the hip, knee, and tarsal joints. °*Tremor of the nerves*. Sort of *nightmare*, as if her body were constricted, with anguish; she attempted in vain to call out; she was even unable to open

her eyes or to stir at all. He wakes *with erethism of the blood* or violent throbbing of the arteries without sensation of heat. A good deal of uneasiness in the lower limbs. Great restlessness at night with much heat and drinking. Heat which hinders sleeping, without thirst, with labour-like pains in the hypogastrium. Anxiety and heat; she had to uncover herself, with a variety of dreams on falling asleep, (accompanied by profuse menstrual flow). Sleep with sweat and anxiety, at night. Great anguish, at night, during a storm, the sweat of anguish drives her out of the bed. *Mourning* while asleep. *Talking while asleep, and restless night.* *He rises at night from anxious dreams,* and walks about in the room. He leaves his bed after having just fallen asleep, wakes up in the middle of the room, lies down again and falls asleep. *Startings* when asleep. While falling asleep, he is so much frightened when some one enters the room, that it causes him a violent palpitation of the heart. About midnight, he wakes from fear, imagines there are thieves in the room, and dares not lie down again, with oppression of the chest and palpitation of the heart, for a quarter of an hour. *Startings* while asleep. A shock, as if proceeding from the heart, during the siesta, causing a starting. *A number of dreams during the siesta, some of them anxious.* Dreams, about a variety of things, during sound sleep. *\*Sleep full of fanciful ravings,* -the first ten nights, frequent waking, tossing about in the bed; in the day-time he feels so tired that he is unable to work. While closing her eyes to sleep, she saw all sorts of fancies, and felt a desire to make verses. Amorous dreams. *Lewd dreams.* Night-sleep disturbed by voluptuous dreams, pollutions and long erections. A number of dreams during the morning-sleep, which he is unable to recollect. *Dreams, the subject of which occupies her mind a long time after waking.* He dreams that he is reproaching himself with faults he had committed, full of restlessness and anguish. Vexing and *\*anxious dreams,* -also with weeping. She dreamed she was beaten; this made her feel so anxious, that she sweated all over and remained anxious the whole day. She dreamed of murder and rows; when walking, she felt hot and was covered with the sweat of anguish. He dreamed he had been poisoned. *Frightful dreams of murder, fire.* Disgusting, horrid dreams. Horrid dream, which she believed to be a reality on waking. *Sad dream;* he dreams the same dream twice over, after waking and falling asleep again.

**Fever.**—Occasional cold thrills over the back, with cold sweat on the forehead, anxiety and shuddering. Coldness of the back, at night, with restlessness. *\*Chilly, the whole day.* Chilliness and cold hands, (immediately). *\*Cold hands and feet -which cannot be got warm.* *\*Constant chilliness, °and want of animal heat.* *Chilliness in the evening* when in bed, also with thirst, two evenings in succession. Chilliness, even in the forenoon, with very cold hands, which feel so chilly, even in the warm room, that he is obliged to put on gloves. °Frequent internal chilliness. Chills, in the evening when in bed, shaking him so much that his hands and feet tremble and his teeth chatter, without either thirst or heat; afterwards he falls asleep before the chills have terminated, two evenings in succession. Violent chilliness, with short, sharp pain in the lower incisors. Chilliness, early in the morning when asleep, and subsequent sweat shortly before waking. Chilliness after a violent dechauffement in bed, with a groaning sensation in the head and great languor.—*Shuddering,* with feeling of goose-flesh. Shuddering, without chilliness, *when sitting.* Shuddering and chilliness *in the back,* without thirst. Shuddering in the back, especially when sitting.—Shuddering, with chills, in the evening, with increase of the pains and subsequent heat, especially about the head, and redness of face. Chills and shuddering, with great inclination to sleep, even in the day-time; he sleeps a good deal, becomes warm afterwards, even when sitting, and sweats a

little. Fever shortly before dinner; first *excessive weakness*, which obliged him to lie down; afterwards violent chilliness in bed, *followed* by moderate heat, and lastly sweat for some hours. Fever, with headache, on waking from a short evening slumber, *first* chilliness, *then* heat, in several paroxysms, but more heat. Violent chilliness, in the evening, followed by profuse sweat over the whole body in the night, accompanied with violent itching. Fever, in the afternoon, chilliness and coldness with much thirst, without subsequent heat. Fever, at 8 o'clock in the morning, first violent chilliness until noon, afterwards heat until evening, without sweat, and without thirst either in the chilly or hot stage; she lay without consciousness, with violent headache.—°Fever and ague, particularly with *bone-pains*, pain in the back, *yellow, livid complexion, headache, great debility*, bitterness in the mouth, ulceration of the corners of the mouth, *loss of appetite*, pressure in the pit of the stomach, with painful sensitiveness to contact, *quotidian* or *tertian* type, *the fever generally setting in towards morning*, with chilliness, followed by heat and thirst. °*Intermittent fevers from abuse of cinchona*.—°*Before the fever* (chilliness) languor or headache. °*During the chilliness*: shortness of breath, yawning and drowsiness, *thirst* or thirstlessness. °*During the heat*: *thirst, and a good deal of violent headache*.—°*Typhoid fevers*, particularly *with debility, dryness of the tongue and great thirst*. Heat after the siesta, followed by shuddering until evening. Heat in the evening, with thrills of coldness and shuddering over the back, without thirst. Flashes of heat, for moments. Flashes of heat and slight sweat. Heat, with sweat in the axillæ and on the soles.—°*Much sweat in the day-time*, °when walking. °*Profuse sweat breaks out easily, during motion*, —although he is very chilly. Constant sweat, even during the siesta, but not in the night. *Profuse night-sweat, for several nights*. Profuse *\*sweat, for several mornings*, also having a sourish smell.

**Skin.**—Painful sensitiveness of the skin, even a slight knock or contusion is very painful. *Itching over the whole body*, (the first three weeks). Fine, *itching pricking* of the skin, in the evening when in bed. Itching stinging of various parts of the skin, with flashes of internal heat, without redness of the face.—Red *spots*, of the size of a pin's head, over the whole body, preceded by a feeling of heat in the face, on the abdomen, arms and lower limbs; the spots itch, and, when rubbing them, the whole body becomes red, for half an hour. Small *pimples* on the abdomen and lower limbs. *Rash* over the whole body, with stinging sensation in the skin. *Miliary eruption* over the whole body, on the neck and throat, on the abdomen, nates and thighs; the eruption was at first felt only, afterwards it became visible in the shape of small millet-seed; scratching made it redder and harder; the itching prevented sleep. Large and red blotches, itching violently, over the whole body and on the neck. Nettle-rash, after violent exercise, itching for an hour. Small blotches and boils on different parts of the body. A number of boils on the body. Warts form in the palm of the hand; they are painful when pressing on them. Smarting pain in the old warts.—Pain and redness of an old *cicatrix*. A wound becomes much more painful, inflamed, swells, suppurates; she is very irritable, sad, weeps on touching the wound. A little prick in the finger bleeds again several days in succession. °Varices.

**General Symptoms.**—°Rheumatic affections, with shortening of tendons. °Paralytic affections. °Scrofulous affections. °Bad effects from loss of animal fluids, also by onanism. °Bad effects from chagrin and anger. °Hysteric affections, weakness and fainting fits.—°Drawing with pressure in the limbs. °*Excessive liability to take cold*, —producing cough and hoarseness. Dread of the open air. Uneasiness in the body, with chilliness. All the muscles, especially

those of the thighs and upper arms are painful during motion, *as if the flesh had been detached by blows*. Cramp-like sensation in the limbs, especially in the hands, *as if the parts had gone to sleep*. The violent nightly pains (for instance, a boil on the back,) cause a suffocative arrest of breathing and a kind of paralysis of one side which deprives him of the use of his limbs on that side. Paroxysms of gnawing pressure, at times in the pit of the stomach, at times around the umbilicus, at times in the chest, in the evening. Violent constriction of the stomach and chest. Stitches in various places. Pain of all the limbs, as if bruised.—*Stiffness* of the scapulae, the hip-joint and small of the back. Violent stiffness of all the joints of the body. Jerking sensation in the back and nape of the neck, towards the head. Jerking of the limbs, both arms are jerked forwards. Starting up of the upper part of the body, in the afternoon, on lying down, while awake. Jactitation of the muscles, here and there. The limbs and head move farther than he intended. *Cracking* in the shoulder and hip-joints, when moving them. °*Liability to strain or sprain joints*.—Violent heat in the blood, lasting for a long while, after drinking wine. He spits blood and discharges it from his nose, when blowing it. Congestion of blood to the chest, stomach and head, with coldness of the limbs. When laying the arm on the table, *the blood ceases to circulate*, also in other parts of the body. *The circulation is excited* by every motion of the body. *Full and undulating pulse in the whole body*, even during rest. Pulsations in the whole body, which cause every part of the body to move. Full, quick pulse, when sitting erect. The pulse and breathing are quicker, especially after drinking. The pulse intermits, a few beats. The beats of the heart intermit during the siesta.—*Depressed condition of the mind and body*, with great appetite. After making a bodily effort, he is unable to think, and feels indifferent. °*Exhaustion and pains from talking*.—Chagrin causes stitches in the upper and left part of the chest, want of appetite and headache; the head is affected by every step she takes; she becomes very weak and her feet are heavy. After a slight vexation she cries the whole night, and coughs a good deal, with ineffectual retching.—*Nervous paroxysms*: 1. Attacks of heaviness in the head, he is obliged to lie down, twice or three times a day, for ten days; after lying down the whole body becomes covered with sweat, after which the heaviness disappears in half an hour. 2. Fit of nausea, early in the morning, with weakness and deadly pallor of the face; he was obliged to lie down. 3. The nape of the neck became stiff, her eyes felt sore, she felt ill, chilly, and lost her senses. 4. Painful sensation in the left shoulder, whence it moved to the head; afterwards pressing in the temples, as if the head would burst; the brain felt sore and bruised; constant drawing pain from the shoulder to the head and constant nausea with inclination to vomit, apparently proceeding from the stomach; she had to lie down, and felt chilly, with heat in the face. 5. Attack of nausea at supper time, (without having eaten anything,) every attack being accompanied with violent chilliness; after lying down in bed, she soon feels warm, without any subsequent heat; she wakes twice during the night, and then feels an intensely painful drawing to and fro in the forehead, mingled with a slight beating (throbbing). 6. Attack of pressure and digging under the right ribs, with drawing in the back, extending towards the head, hindering the night's rest and accompanied with stitches in the head; all these symptoms abate after continued talking and while making a bodily effort, by rumbling in the abdomen or emission of flatulence, or after a meal. 7. Fit of great excitement with anguish, tingling in the tips of the fingers, in the hand and arms; the arm goes to sleep, as if dead, the tingling rises into the throat, lips and tongue, which feels stiff, accompanied with boring in a tooth; afterwards weakness of the head with deficiency of sight;

the limb goes to sleep and the joint feels dead; all these symptoms occur mostly towards evening. 8. Fit of nausea, early in the morning (after drinking milk), with tremor of the limbs, one hour; she felt giddy, with obscuration of sight, and danger of falling. 9. Inclination to vomit, in the forenoon, with vertigo and a digging sensation in the pit of the stomach accompanied with chilliness, as if cold water were poured over her; everything she looked at, turned with her, as if she would fall; her head felt so heavy that she was scarcely able to walk. She felt for some time as if she had an epileptic fit. °*Heaviness*. °*Indolence* after rising in the morning. °*Dread of exercise*. Dread of walking. He merely staggers onward when walking. Fear of falling in walking. *Great bodily weakness*; for several weeks he is too weak to do his business. Weakness in the morning, when rising, as if the back and small of the back were paralyzed, sometimes across the abdomen. Restless night, followed by a feeling of exhaustion during the day, with wretched appearance and sadness. Fainting fit, for half an hour. \**Feeling of weakness*, -when sitting. *Weakness of the whole body*, heaviness of the feet; when standing she feels tired immediately; she feels better when walking, riding in a carriage, sitting or lying. *Standing* was so troublesome to her that she had to sit down immediately. *Riding on horseback fatigues him very much*. Great exhaustion after a short walk. If she exerts her limbs in walking, she feels at once exhausted and sick. When rising from a seat, her limbs tremble with weakness, she feels better after walking a little longer. She feels weakest early in the morning in bed and when sitting; she feels no weakness in walking. The whole body feels weak, for instance, when moving the arms. Painful weariness of the lower limbs, early in the morning on waking. Tickling painful weariness. Unrefreshed after sleep. Tired and trembling, as if he would fall, immediately after the siesta. Great weariness every day, and constant yawning. °*Hysterie languor*. °*Alternate languor and lightness of the limbs*. -\**Emaciation*, -also excessive.

**Characteristic Peculiarities.**—The symptoms come on or are renewed or increased in a recumbent position, even in the day-time; at night she is obliged to sit up in bed, in order to find relief.

## 171. NATRUM NITRICUM.

NATR. NIT.—Nitrate of soda.—See ARCHIV, XIII.

### SYMPTOMS.

**Head.**—Dulness of the head, as after mental exertions.

**Ears.**—Otalgia, apparently in the tympanum, in the evening, accompanied by warmth in the ear and dulness of the right concha, burning heat of the left which extends beyond the temple, where a pressure is felt from without inwards, followed by a feeling of heat on the right side of the head and outer ear, which gradually changes to general heat of the face, with pressure in the left frontal protuberance.

**Face.**—Pressure in the region of the malar bone from without inwards.

**Pharynx, etc.**—Stitches in the back part of the throat, in the evening, in bed, on drawing air through the nose.

**Taste.**—*Sourish* taste, accompanied with sourish eructations, almost like heartburn. Coppery taste on the lips and tongue, in the forenoon.—*The desire for coffee is diminished, he sometimes experiences an aversion to coffee.*

**Gastric Symptoms.**—Sourish eructations.

**Abdomen.**—*Distended abdomen, with a feeling of heaviness in the abdomen,* emission of a quantity of wind and eructations afterwards. *Flatulence*, with pressure in the pit of the stomach and under the sternum, aggravation after exercise, amelioration by emission of flatulence and eructations. Painful retraction of the abdominal muscles towards the spinal column.

**Stool.**—Stool large, *slow*, coming out with difficulty, with sensation after the stool as if feces were still remaining.

**Chest.**—Pressure on and between the ribs, on inspiring air while sitting bent or on taking a deep inspiration.

**Extremities.**—Pressing asunder in two joints of the right hand.

**Fever.**—Feverish *shuddering* over the whole body from time to time. Coldness of the left foot and leg, also when walking and in the warm room. Decrease of temperature from the feet to the calves. A feeling of coldness pervades the trunk and arms, in bed, followed by an increase of warmth.

**General Symptoms.**—Pressure and bruised feeling in the joints of the feet, toes, shoulders and fingers.

## 172. NATRUM SULPHURICUM.

NATR. SULPH.—Sulphate of soda.—See HARTLAUB AND TRINKS' *Annals*, III.

### SYMPTOMS.

**Mind and Disposition.**—Weeping mood, indulging in sad thoughts. Music, even lively, disposes him to weep.—*Ill-humoured* in the morning, taciturn. Low-spirited and tired of life, despairs of getting better.—She feels *wearied*, is sensitive and vehement, cannot achieve anything.—*Cheerful*, particularly after a diarrhoeic stool.

**Sensorium.**—*Dulness* of the head, the whole day.—*Vertigo* with dulness of the head, on rising from bed. Vertigo with disposition to fall to the right side, and yawning. Vertigo after a meal as if everything were turning with him, with buzzing in the head. Vertigo after a meal, followed by mounting of heat to the head from the abdomen, increasing until the forehead becomes moist.

**Head.**—Headache while reading, with sweat and heat which cease after rising and on walking about. *Heaviness* of the head, with bleeding at the nose afterwards which affords no relief.—*Pressure in the occiput*, particularly on entering a room. Pressure on both sides of the head, in the evening and on the following morning, when the pain extends over the whole side of the face. *Pressure in the right side*, obliging him to hold the head with both hands, or pressure from without inwards in the evening, in bed, and the whole night. Pressure in the forehead, particularly after a meal, or as from a hard body. *Periodical attacks of pressure in the right side of the forehead*.—*Tearing* in the right temple, also extending to the bones of the face or to the vertex, continuing the whole night, with chilliness in the back from below upwards, shaking, chattering of teeth, which is not relieved by the warmth of the stove.—*Stitches* in the left side of the head on exerting the arms.—*Boring* in the occiput. Boring in the forehead as if it would burst. Boring in the right side of the forehead as if the left eye would be closed as by force.—*Gripping pain* in the forehead, discontinuing after bathing the feet in cold water, returning soon after with increased violence. Pain in the forehead *as if it would burst*, immediately after a meal, followed by great drowsiness.—*Beating pain in the head*, abating somewhat in the

afternoon. *Painful beating in the temples*, in walking, with violent pain in the vertex *as if ulcerated*, and *as if it would burst*, also when touching the parts, ceasing at night (during the menses).—*Jerks in the head*, tossing it to the right side, in the forenoon, when sitting. Sensation *as of electric shocks* in the left side of the vertex.—*Feeling of looseness* of the brain and *as if it were falling* to the left temple, in the forenoon, on stooping.

**Scalp.**—Sensitiveness of the scalp, the hair is painful when combing it, in the morning. Tearing in the right side of the occiput, during rest.—*Blotches* on the occiput.

**Eyes.**—Tearing in the lower border of the left orbit. Bursting pain around the eye, in the forenoon. Sticking in the eyes, with sickness of the stomach.—*Pressure in the eyes*, obliging one to rub. Pressure in the evening, when reading at candle-light, with excessive heaviness of the lids. Pressure in the left eye, *as if something had got into the eye*.—*Itching* in one or the other eye and ear, or in the right eye and left ear. Creeping in the left eye, obliging one to rub.—*Burning of the eyes*, evening and morning. *Burning of the right eye*, with discharge of burning water, in the afternoon in the open air, or in the morning with dimness of sight. *Burning and dryness of the eyes*, with redness, or increasing from afternoon till evening. The eyeballs feel hot.—*Nightly agglutination*, with sensitiveness to light.—Photophobia, with burning of the eyes, particularly in the morning.—*Dimness of sight*, from weakness of the eyes. Mistiness and moisture of the eyes, early in the morning. Dimness of sight, as from a leaflet before the eye, going off for a short time only after washing. Dimness of sight, with burning and tearing of the eyes, *as if heat were coming out*.—Small, yellow, *sparkling stars* before the eyes, after blowing the nose.

**Ears.**—Pressure in the right ear, worse in the morning. *Pressure in the ears from within outwards*, *as if the tympanum would be pressed out*.—Stitches in the right ear, or shootings, also causing one to start in the evening.—*Ring-ing in the ears*, particularly in the right ear. Hissing in the left ear. Closing of both ears.

**Nose.**—*Itching of the wings*, inducing rubbing. Itching under the nose as if an eruption would break out.—Tearing from the right side of the nose to the forehead.—*Bleeding* of the nose during the menses, particularly in the afternoon when walking or sitting, and even at night, in bed.—*Coryza*, with obstruction of the nose and want of air through the nose.

**Face.**—Pale face on waking, as after nightly revelry, with ill-humour and disposition to beat everybody.—Tearing in the right side of the face, succeeded by beating on the neck. Tearing in the left malar bone, also at nine o'clock in the evening, or during and after a pain in the neck, or succeeded by griping and raging in the root of a left tooth (generally in the morning and on inspiring cold air).—Frequent *itching* of the face.—The lips burn in the evening, as from pepper. The upper lip is dry, the skin peels off. *Vesicles* on the lower lip.—Pimples on the chin, with burning tension on touching them.

**Jaws and Teeth.**—Small blotches in the skin of the lower jaw. *Great pain and stiffness* of the joint, with difficulty of opening the mouth, and sensation as if the difficulty arose from a bone in front of the joint.—Tearing in the left lower decayed teeth, at night, out of bed. Tearing with stitches in a left posterior molar tooth, only in the day-time.—*Beating toothache*, in the left lower row, from evening till morning, depriving one of sleep *the whole night*. Tumultuous throbbing in a left upper molar tooth, waking one at two o'clock in the night, with increased temperature of the body, heaviness and uneasiness in the head.—*Darting pain* in a left upper molar tooth, coming on in the open air and continuing in the room.—One of the left upper molares feels *loose and elongated*,

with drawing pain, relieved by cold air and smoking.—*The gums* burn like fire. Painless, movable tumour on the left lower gums. *Blister* on the upper gums, suppurating and then drying up.

**Mouth.**—Feeling of numbness and roughness in the mouth, early in the morning. Burning in the mouth as from spice. *Dryness*, with redness of the gums and thirst. Accumulation of saliva after eating.—Burning of the tongue in the afternoon, as if covered with blisters. Slimy coating of the tongue, with slimy taste in the mouth. Burning blisters at the tip of the tongue.—Burning of the palate as if sore and raw, during the menses. Blisters on the palate, with painful sensitiveness, relieved by cold.

**Pharynx and Œsophagus.**—Pain of the left side of the throat, during and between the acts of deglutition, until after breakfast, during the menses. Frequent *constriction* of the throat, when walking.—*Inflammation* and swelling of the tonsils and uvula (worse in the morning,) with difficulty of swallowing.—Painful and impeded deglutition, in the evening, with urging to swallow saliva.—*Dryness of the throat*, extending to the œsophagus.—*Accumulation of a quantity of mucus* in the throat, particularly at night, with hawking up of salt mucus in the morning.

**Appetite and Taste.**—Want of appetite, with frequent yawning and thirst.—Desire for cold drinks for three days. Thirst in the afternoon, with great drowsiness and hard stool. *Great thirst* (after bodily exercise).—*Absence of thirst*, during the whole first period of the proving.—While eating (soup,) darkness of sight, unto falling, with cloudiness of the head.—*After eating*, sweat in the face, with tightness of the chest and running of the right eye. Fluid saliva in the mouth, with ineffectual heaving of the stomach.

**Gastric Symptoms.**—Constant gulping up of *sour water*.—Exhausting hicough, towards evening. Constant hicough after eating bread and butter, in the afternoon.—Waterbrash during an afternoon-walk. Accumulation of a quantity of sour water in the mouth and constant spitting, particularly during the nightly headache.—*Vomiting* of saltish-sour water, preceded by nausea on going down stairs. Vomiting of sour mucus, in the evening, preceded by giddiness. Great languor and burning pain in the head after the vomiting.

**Stomach.**—Feeling of repletion in the stomach, extending to the chest, in the evening in bed, with difficulty of breathing (during the menses). Feeling of fasting in the stomach, with shifting of pinching flatulence in the abdomen. Qualmishness, before eating.—*Boring* in the stomach, as if it would be perforated, after rising from bed in the morning, preceded by nausea, and attended with diarrhœa. Boring as from canine hunger, going off after breakfast.—Trembling and pressure in the pit of the stomach, with want of breath, as if fainting, first when sitting, afterwards when walking.—*Beating* in the stomach, with nausea. Burning and pinching after rising, going off after breakfast.

**Hypochondria.**—Great sensitiveness of the region of the liver, in walking, with painfulness to the touch. *Sticking* in the region of the liver while walking in the open air, with tightness, or during a morning-walk with beating.—*Sticking in the left hypochondrium*, particularly during a walk in the open air, or in the forenoon while sitting.

**Abdomen.**—Colic as previous to diarrhœa. Colic waking one early in the morning, going off after urging to stool.—*Gripping in the abdomen*, before breakfast. Gripping, the whole day, relieved in the afternoon by the emission of flatulence.—*Tearing* around the umbilicus, with flatulence, before breakfast. Painful *digging* deep in the abdomen, in the evening, during the menses, with chilliness and subsequent thirst. *Contractive* pain in the abdomen, extending to the chest, with tightness of breath and subsequent diarrhœa. Pain as if bruised

in the abdomen and small of the back, waking him at night; he is unable to fall asleep again and has to lie on his side to find relief. *Pinching in the abdomen*, with sensation as if the bowels were distended. *Pinching around the umbilicus*, when sitting or writing, with shifting of flatulence (at noon) until emitted. *Pinching in the whole abdomen*, with rumbling, shifting and subsequent diarrhœa, in the afternoon. *Pinching extending to the groin*, succeeded by diarrhœa. —*Sticking and beating in the right side*, during an afternoon-walk. *Burning here and there*, in the evening. —Distention and tightness from the right groin to the stomach, in the evening (while sitting) and morning. *Constant feeling of repletion*, during the diarrhœa, with emission of a quantity of flatulence. *Tightness* and fulness in the abdomen, particularly in the right groin, as if it would burst, with pinching in the abdomen. *Flatulent colic*, also in the evening (above the umbilicus), with pinching, accumulation and *difficult emission of flatulence*, with relief after the emission. *Incarceration of flatulence*, with many pains in the abdomen which are relieved by emission of flatulence. *Incarceration of flatulence in the evening*, with accumulation of saliva in the mouth, inclination to vomit, and eructations of bad taste and smell. *Rumbling in the stomach and abdomen*. *Emission of fetid flatulence* early in the morning or after a meal. —Violent pains in the right groin, waking him at night, with sensation as if a soft body had lodged there. *Sticking in both groins*, with urging to urinate, or in the afternoon, during a walk in the open air, or early in the morning, the stitches striking to the small of the back, as from flatulence, with subsequent diarrhœa. *Sticking in the right groin*, with nausea and inclination to vomit. *Stitch from the left groin to the axilla*, or with contraction and also at night. *Burning in the bends of the hips*, in the evening, going off in bed.

**Stool and Anus.** —*Constipation or hard stool* (after repeated doses), also with a quantity of fetid flatulence instead of stool. *Hard stool with pressure*, sometimes streaked with blood. *Knotty stool*, accompanied and succeeded by smarting at the anus. —*The stool is at first hard, then soft and diarrhœic*. *Diarrhœa after the first dose*, followed by hard stool. *Looseness of the bowels seems to be the primary, retention of stool the secondary effect of the sulphate of soda*. —Half-liquid stools with tenesmus of the anus. —*Diarrhœa*, preceded by pain in the groins and hypogastrium. *Yellow liquid stools*, after rising from bed in the morning. *Yellow liquid stool, after pinching in the abdomen*, the first part of the evacuation being sometimes hard and accompanied with blood and froth. —Constant urging to stool. —*During stool*: emission of a quantity of flatulence. *Burning at the anus* (also after stool). —Itching of the anus.

**Urinary Organs.** —*Urging to urinate* when sitting, with pinching around the umbilicus down to the groin. —*Increase of urine*, also *nightly micturition*, with burning during the emission. *Copious micturition with brick-dust sediment*. —Rare emission of scanty portions of urine (afterwards). —Urine with *yellow-reddish sediment*, in the evening. *White-yellowish sediment*, in the morning. —*Burning during or after micturition*, or with pain in the small of the back on retaining the urine.

**Male Sexual Organs.** —Itching of the glans or penis, obliging one to rub. Itching of the scrotum, with burning after scratching. Itching of the perinæum, and mons veneris. —*Excited sexual instinct*, in the evening. *Erections with sexual desire*, in the morning.

**Female Sexual Organs.** —*Sticking in the pudendum and vagina*, in the afternoon, while sitting. —*Scanty, retarded menses*, with *colic* and costiveness. *Profuse menses*, particularly in the afternoon in walking, or profuse flow for one day, and more fluid, previous to the termination of the menses. *Profuse flow on the second day only*. *Acrid corrosive menses*, flowing profusely the first two

days. The menses continue one day longer than usual, with discharge of lumps of coagulated blood, every forenoon.—*During the menses*: chilliness in the afternoon. Pinching in the abdomen, early in the morning, in bed, with frequent discharge of black blood, in the forenoon while walking. On the third day a white bloody mucus makes its appearance instead of blood.—Leucorrhœa.

**Larynx and Trachea.**—*Dry cough*, particularly after rising from bed in the morning. Dry cough, particularly at night, with soreness of the chest and roughness of the throat, obliging one to sit up and to hold the chest with both hands.—*Loose cough* early in the morning, from tickling in the throat. Frequent loose cough with expectoration, and with stitches in the left side of the chest, attended with shortness of breathing, when coughing while standing.

**Chest.**—Shortness of breath in walking, relieved by rest, afterwards continuing while sitting. *Tightness* of the chest, on waking early. Pressure on the chest as from a heavy load.—*Stitches in the left side of the chest* when sitting; when yawning; after a meal; during an inspiration; when standing; towards evening, while walking fast; in the afternoon, with cough, and want of breath during motion, relieved by rest; after bending towards the left side, with a stitch in the right side on bending to that side; with inclination to cough, which is, however, impossible, on account of the pain.—Stitches in the right chest, in the afternoon when sitting.

**Back.**—*Pain in the small of the back, the whole night, as if ulcerated*, obliging one to lie on the right side. Pain as if bruised in the small of the back, from morning till evening, going off in bed. Sticking in the *œs coccygis*, when sitting.—*Tearing* in the back, along the bones, as if gnawed by dogs. *Itching* in the evening, while taking off one's clothes. Stabbings between the shoulders, in the evening, while sitting.—Violent pain in the *nape of the neck*, extending deep into the occiput, when sitting. Pain as from blows (also in the region of the scapulae), particularly when stretching and yawning, which takes place very frequently. Stitches in the nape of the neck, at night.—*Tearing in the right side of the neck*, also with tension, or with visible throbbing of the arteries.

**Superior Extremities.**—Sticking in the left *axilla*.—Heaviness in the right arm, with tearing in the upper arm. Tearing in the bones of the left arm.—Sticking in the region of the *humerus*, in the evening, going off by rubbing. *Tearing in the right upper arm, also as if in the humerus*, in the afternoon, or when sitting. Pinching and tearing above the left elbow, in the afternoon.—Burning at the elbow. Ulcerative pain in the right elbow, extending to the tendons of the forearm, with pain on contact. Tearing in both elbows, extending down to the fingers, early in bed, with sensation as if the parts had gone to sleep.—*Tearing in the right forearm, also apparently in the bones*, in the afternoon or evening. *Itching pimples on the right arm, with burning after scratching* (also containing clear water and during the menses).—Pain of the flexor-muscles in the hand, as if strained, from the fingers to the elbows, on clenching one's fist or on seizing anything. Tearing between two fingers and on the dorsum of the hand. Sticking in the right hand, also between the metacarpal bones, in the evening. Stinging throbbing on the dorsum of the hand, ceasing during motion. Twitching of the hands and feet, during night sleep, particularly after midnight. Sensation as if the blood were rushing towards the right hand, which feels full and tight, with stiffness of the fingers when knitting. *Loss of strength of the left hand*, which is unable to hold anything heavy. *Trembling of the hands on waking* or also when writing. *Burning and redness on the dorsum of the hand*, as if from nettles, from a ternoon till evening.—Tearing in the index and middle fingers, and in the

thumb, also in the afternoon, when sitting or spinning. Sticking in the tip of the thumb, when knitting or writing. Tingling in the tips of the fingers of the right hand as if gone to sleep. Itching between the fingers of the right hand, with burning after scratching. Watery blister between the left thumb and index-finger. Stinging ulcerative pain under the nail. Stinging under the nail of the left thumb, in the evening.

**Lower Extremities.**—Violent *pain in the hips*, in the morning on rising, and the whole day, particularly on stooping and on making certain motions, most violent on rising from a seat and on moving about in bed, ceasing on stretching the limb and when walking. Stabbing pain in the left hip, after a fall (also in the abdomen and small of the back) only during rest. Lancination and tearing from the os coezygis to the left femur, in the evening. Burning and sore feeling in the bends of the hips, during an evening walk; going off during rest.—The thighs and legs feel *weary and exhausted*.—Pain as from blows, in the anterior portion of the right thigh, when walking. Pain in the muscles of the left thigh as if strained.—Drawing pain in the bend of the right knee, when sitting, going off during motion.—The legs feel weak as if they had been crushed. *Drawing pain* in the legs when standing and walking. Drawing pain in the calves, proceeding from the tendines Achillis, or in the forenoon when standing. Tearing in the right calf, in the evening when spinning, or drawing tearing in both calves with difficulty of pressing the foot to the ground. Breaking and tearing sensation in the right tibia. *Burning heat* of the legs, in the evening before lying down, and in the morning.—The feet are painful and heavy as if made of lead, in the morning on waking. Great languor of the feet at night, with uneasiness, sensation of the right joint as if sprained, in the morning on rising, with inability to press the foot to the floor except after some walking. *Lancinations and tearings in the heels*, causing her to cry out (in the evening while spinning), or in the right heel when walking. Sticking in the left heel, in the afternoon when sitting. Tearing in the right heel, in the afternoon when walking. Ulcerative pain in the right heel, scarcely allowing one to walk. Stitch in the left sole when standing, causing it to twitch. Burning of the left sole, the whole night. Glowing burning on the outer parts of the left foot. Itching of the dorsa of the feet, worse after scratching (in the evening while undressing). Itching of the sole and toes.—*Stitch in the toes*, also when setting the foot down or when sitting. Tearing in the right little toe, and in the lower arm. Twitching of the balls of the toes as if they would be drawn together. The ball of the right big toe goes to sleep, in the morning when sitting. *Itching* on or between the toes, in the evening while undressing, also going off by rubbing.

**Sleep.**—*Drowsiness* in the forenoon, particularly when reading or writing.—Falls asleep late on account of restlessness.—*Symptoms at night, in bed*: violent headache waking him frequently. Frequent waking from a restless sleep, full of heavy, anxious dreams, followed by hawking up of a quantity of mucus. Starting as if in affright, soon after falling asleep. *Sleep full of dreams*. Pleasant dreams about a marriage procession, *flowers*, gardens, beautiful scenery, etc. *Dreams about injuries*, (also with a brawl on that account). She dreams of having had a violent quarrel with her daughter. *Anxious dreams*, that she is throwing boiling grease into the fire, that her toe is to be cut off (with a stabbing sensation in the toe on waking), that priests have discovered a crime which she had committed, that her daughter is crying for help in a large pool of water, that there is danger from rafts on the near river, that her daughter has had an apoplectic fit (with waking in sweat after starting as if in affright), that she is upset in her carriage, that she is falling from a height, that she is making

a dangerous passage across the water, that she is flying through the air and is in danger of falling, that she is engaged in a row.

**Fever.**—*Internal coldness*, with yawning and stretching. Coldness the whole day, from morning (after a walk) until evening, going off in bed, with strong shaking and chill, feeling of heat in the head and pale complexion.—Cold chilliness, like a shuddering, with thirst. *Chilliness, particularly in the evening*, also as if fever would set in, with desire for a warm stove, or in the evening in bed, with coldness the whole night.—*Chilliness, generally in the evening, and going off in bed.* Chilliness after rising, with external coldness. Chilliness in the afternoon, with icy-coldness and goose-flesh, increasing until evening and going off in bed. *Chilliness at night, waking with shaking and chattering of teeth* as from coldness, with anguish and thirst which passes off speedily. Attack of chilliness, with warmth of the forehead and hands.—Frequent flushes of heat, towards evening. Dry heat in the whole body as if sweat would break out, for several afternoons.—Morning sweat, before the menses.

**General Symptoms.**—Jerking in the limbs. *Jerking tearing*, particularly at night and in the evening, even in the face and left lobule. Prickings here and there, with burning.—Great languor and exhaustion, particularly in the afternoon, obliging one to lie down, relieved by walking. Languor and exhaustion of the hands and feet, early in the morning, after the nightly fever. Languor, weariness and prostration as if a severe illness would set in. Painful languor and weariness of the limbs, as after a long journey, in the forenoon.—Languor at nine o'clock in the morning, with dulness of the head. General languor, particularly about the knees, which are scarcely strong enough to support the body.—*Trembling* in the whole body, with spasmodic movements of the muscles, particularly on the left side of the chest, with great and oppressive anxiety and apprehension of misfortune.

**Characteristic Peculiarities.**—The majority of the symptoms set in during rest and disappear during motion. Amelioration in the open air. Cessation of many of the morning symptoms after dinner.

### 173. NICCOLUM.

NICCOL.—Niccolum carbonicum. Carbonate of Nickel.—See HARTLAUB AND TRINKS' Annals, III.

#### SYMPTOMS.

**Mind and Disposition.**—*Oppressive anxiety with whining mood*, or with melancholy mood as if she were threatened with an accident, or in the afternoon, when she feels strangely without being able to tell how.—*Anxiety*, as if sweat would break out at every movement. Tremulous and timorous, with disposition to seek solitude.—*Ill-humour, with want of disposition to talk.* Impatient, vehement, cannot bear contradiction, feels better in the evening. Feels so angry that he would like to quarrel with everybody, contradicts everything he hears.—Constantly cheerful, and of a bland and dispassionate temper.

**Sensorium.**—*Gloominess of the head, early in the morning*, with dulness and as if intoxicated, or as if he had not slept enough. Sense of fulness in the head, with want of disposition to do anything, in the forenoon.—*Vertigo* in the afternoon, worse in the open air and as if he would fall. *Vertigo on rising in the morning*, with staggering, or as if from weakness. Vertigo the whole day, particularly after rising from a stooping position. Vertigo with a whirling sensation in the forehead, as if nausea would come on.

**Head.**—Headache after rising, increasing until noon, with pressure in the vertex and dulness. Headache in a room, after a walk in the open air.—*Pain as if bruised in the whole head*, particularly the occiput. Pain as if the head would burst, on either side. Pain in the forehead as if the brain would fall out, in the morning after stooping.—*Heaviness of the head*, early in the morning, in bed, going off after rising. *Heaviness in the forehead, with sense of reeling*, also from the moment after waking in the morning, relieved in the open air, or from forenoon until afternoon, when standing. Heaviness of the head with sense of fulness and as if the brain were *cut to pieces*, with stupefaction of the head, and pain on stooping as if bruised and sore in the occiput.—*Pressure* in the region of the vertex as from a hand. Sensation in the head as if compressed and in a vice, early in the morning, with stitches in the right side of the head.—*Tearing in the head*, becoming intolerable. Tearing in the head with tearing in the left eye. *Tearing in the right side of the head*, in the evening in sitting, or in the afternoon with sticking. Tearing in the left side of the head and nape of the neck. Tearing in the right temple, in the afternoon when sitting. *Stitches in the head*, here and there, particularly on stooping. Stitches with concussive sensation in the head. Stitches in the sinciput, with drawing from the ears to the head. Stitch, *first in the sinciput* (with great sensitiveness externally), afterwards in the sides and forehead, with sensation as if the frontal bone would burst, and great ill-humour. Stitch in the left side of the head, early in bed. Stitch in the right side, with a bruised feeling in the temple. Pricking in the left temple.—*Boring* at a small spot in the fore part of the head, *from without inwards*. Gnawing boring in the left occiput, in the afternoon. Pain in the sinciput as from a nail.—*Hammering* in the whole head, in the forenoon during motion. Peeking hammering in the right side of the forehead.—*Feeling of warmth* in the head, in the afternoon, particularly in the room. Heat in the head, obliging him to go into the open air, in the afternoon, with sensation as if sweat would break out. Feeling of heat in the forehead, with heaviness, from afternoon till evening. Humming and twitching in the right side of the head, particularly in the ear, at night.

**Eyes.**—Tearing in the inner canthi. Sticking in the left outer canthus. Feeling of coldness in the right outer canthus as from a drop of water, with titillating boring in the ear from without inwards.—Violent *itching* of the eyes, with redness of the lids as if ecchymosed, or inflamed. Smarting in the inner canthus, soon returning after rubbing.—*Burning* of the eyes, as from sand, in the afternoon. Burning, particularly at candle-light. Burning of the eyes on waking, with sensation as if closed by swelling and agglutinated, going off after washing. Burning of the eyes after rising from bed in the morning, with lachrymation. Burning, in the afternoon, during the menses, rendering reading difficult. Burning in the left eye, with tearing from the inner canthus down the nose. Burning of the margins of the lids, with sensation of swelling in the evening, and lachrymation.—*Swelling* of the Meibomian glands, in the evening, with burning of the eyes and lachrymation. Agglutination of the inner canthi, early in the morning.—Painful jerking in the eyes, as if they would be turned about. Twitching in the eyes, particularly in the left, impeding sight. Twitching in the left upper lid, or also in the left outer canthus, inducing lachrymation.—*Weakness of the eyes*, particularly in the evening, with failure of sight and burning on exerting them in the least. *Dim-sightedness*, with red, sensitive eyes and some relief after washing them in cold water. Mistiness of sight, early in the morning, with dim, watery eyes. Distant objects appear larger than they really are, early in the morning.

**Ears.**—Tearing in the *right ear*, with toothache, or tearing and darting, or

stitches in the ear from within outwards. Intensely-painful stitches in the left ear. *Blister* in the left meatus auditorius, of the size of a pea. Tubercles behind the left ear of the size of a pea, with tension on pressure.—Sudden deafness in the evening, with humming and whizzing in the ear. Chirping in the right ear as from crickets.

**Nose.**—Painfulness and tearing in the left corner of the nose, on pressure. *Tearing* or bruised feeling in the root of the nose.—*Eruption* on the nose and lip. *Redness and swelling* of the tip of the nose, with burning and tearing.—*Sneezing* at five o'clock every morning. Frequent violent sneezing in the forenoon.—Dryness of the nose. *Stoppage of the nose*, particularly at night, with want of air. *Stoppage of the nose*, going and coming.—Dry coryza.

**Face.**—*Feeling of swelling* and heaviness of the face, with lachrymation. Swelling of the right side, with sore throat. Swelling of the cheeks, with pain which wakes him at night and is relieved by cold.—*Itching* of the face which cannot be quieted by rubbing. Dry *herpes* on the cheeks, of the size of lentils.—*Twitching of the lips*, resembling a shaking. *Eruption* on the lips. Tubercle on the upper lip, burning when eating. Pimples on the lower lip, near the left corner of the mouth. *Burning pimples on the inner side of the lower lip*. Large sore in the vermilion border of the lower lip.

**Jaws and Teeth.**—*Tearing in the jaws, evening and night*, succeeded by swelling of the gums, worse in the open air and on pressure. Cramp and pain in the articulation of the right jaw, with difficulty of opening the mouth. Pain in the articulation when talking, as if there were a tubercle, with sore throat.—Pain in a lower molar tooth, at six o'clock in the evening and on falling asleep. Pain in a left lower molar tooth, when touching or biting on it.—*Tearing in the right lower teeth, at night*. *Tearing in the left lower teeth, with ulcerative pain*, the whole day.—*Gnawing* in a right lower tooth, very violent every evening until ten o'clock, with sensation as if the tooth were too long and would be lifted out of its socket, relieved in bed. Gnawing in a *right lower molar tooth*, also with boring, or in the evening with secretion of a sour, fetid water on sucking it.—*Feeling of looseness* of a left upper molar tooth.—*Discharge of sour fetid water from every molar tooth*, on sucking them.—*Swelling of the gums*, with febrile symptoms, obliging one to lie down.

**Mouth.**—Constant dryness of the mouth. Accumulation of sweetish saliva.—The anterior part of the palate is painful.—*Fetid smell* from the mouth.

**Pharynx and Oesophagus.**—*Sore throat from evening till morning*, at times when talking and yawning, at others when swallowing. The whole throat is painful as if *ulcerated*, particularly when swallowing, with yawning and chilly shaking.—*Stinging of the throat*, only during deglutition, apparently in the uvula. Stinging in the morning with violent pain during deglutition.—Constrictive sensation in the throat, afternoon and night, impeding respiration. Spasmodic choking and contraction, with stinging during deglutition.—*Inflammation of the throat* with intense pain, threatening suppuration, deglutition almost impeded, violent thirst and vomituration. Inflammation of the right side with swelling of the tonsil and external sensitiveness to contact.—Roughness of the throat, relieved by coughing. Accumulation of a quantity of thick mucus, with stinging.

**Appetite, Taste and Gastric Symptoms.**—Mealy taste in the mouth, on waking early. Bitter taste, also with bitter eructations, or early in the morning in bed, and going off after rising. Disagreeable taste and smell in the mouth.—No appetite for anything.—Painful feeling of hunger, without appetite and without relishing food, he thinks he feels better after eating.—Violent thirst day and night.—*Eructations* tasting like burnt flour. Bitter and sour eructations

with pressure in the stomach, in the forenoon.—*Violent hiccough*, generally in the evening, also in bed.—*Sickness of the stomach* from morning till noon, also with *gulping up of sour water*, in the forenoon. Sickness of the stomach with pain in the stomach as if from weakness, going off after breakfast.

**Stomach.**—*Feeling of emptiness in the stomach*, with pain as from fasting, without hunger. *Feeling of repletion* after a moderate dinner.—*Pressure* in the stomach, early in bed, going off after breakfast, or eructation. Pressure as from a stone with disposition to eructate, after which the pressure increases considerably.—*Pinching* in the stomach after dinner. Stitches in the stomach, striking through to the back, and causing one to start. Cutting in the pit of the stomach, and stabbings as with knives, very painful in any position.—*Constriction* in the stomach, a sort of digging or as from fasting. Pain in the stomach as if *screwed together*, in the forenoon.

**Abdomen.**—*Cutting* in the hypochondria, towards the umbilicus, at night. Stitches in the region of the right ribs. Twitching in the hypochondria on raising the arm, in the evening.—*Constant colic*, also with diarrhœa.—*Pinching* in the abdomen, followed by hard stool, in the afternoon. Pinching as if diarrhœa would ensue, at times in the epigastrium, at others in the hypogastrium. Pinching in the whole abdomen, in the afternoon, succeeded by diarrhœa, consisting of yellow mucus, which comes out with great force without affording any relief. Biting pinching above the umbilicus, waking him at four o'clock in the morning. Pinching around the umbilicus, with urging to stool.—*Cutting in the abdomen, succeeded by soft stool*, with occasional burning at the anus. Cutting deep in the hypogastrium, with more profuse menstrual flow, worse when sitting, relieved by motion.—*Bloated abdomen* in the evening, with grumbling, succeeded by hard stool. Bloatedness of the abdomen with sticking in the left groin which is sensitive externally. *Distention of the whole abdomen, as if it would burst*, with shifting and emission of flatulence. *Fetid flatulence* and diarrhœa.—A good deal of fetid or inodorous flatulence.—*Pinching in the groins* in the evening, with sticking, pressing, urging to stool and emission of inodorous flatulence. Twitching and pinching in the right groin, proceeding from the chest as if in a narrow band, before midnight. *Sticking in the groin, particularly the left*, (also when sitting and relieved by lying on that side). Stabbing in the right groin. Burning stinging above the right groin, externally.

**Stool.**—Constant ineffectual urging. *Constipation*. Hard stool the first days. *The primary effect of Nicolum is to retain and harden the stool*.—Soft stool, towards the latter period of the proving. *Soft, difficult stool*, also with violent pain in the groins, small of the back and sides of the abdomen.—*Diarrhœa* after taking milk, with tenesmus. Diarrhœa with stinging burning and tenesmus.—*During stool*: stinging in the rectum. Violent urging.—*After stool*: itching of the anus. Renewed but unsuccessful urging.

**Urinary and Male Sexual Organs.**—*Seanty and rare emission of urine*, also with burning, (after six, twelve days). *Increased, frequent desire to urinate* (after one, four, five, nine, ten days), also with burning. Nightly micturition, with copious discharge.—*Itching of the scrotum*, which cannot be removed by rubbing. Erections in the forenoon, after dinner or at night.

**Female Sexual Organs.**—*Itching of the pudendum*.—*Menses too feeble and short*. Menses too early by three, five days, also with colic and pain in the small of the back. The menses which had ceased flowing, re-appear after every dose.—*Profuse leucorrhœa*. Watery leucorrhœa, particularly after micturition.

**Larynx and Trachea.**—*Hoarseness* in the evening or morning. Violent hoarseness, he is scarcely able to speak.—*Cough from tickling in the throat*, in the evening (sometimes not commencing till in bed). *Nightly cough*, obliging

him to sit up and to hold his head with both hands. Frequent turns of cough in the day-time, without or with expectoration of mucus.

**Chest.**—*Great shortness of breathing*, when working while sitting, going off in walking.—*Painfulness of the inner chest*, in the afternoon. *Soreness in the chest*, particularly in the afternoon, or *as if cut to pieces* (afternoon and evening) with itching of the part afterwards.—*Heaviness* on the chest, in the afternoon.—*Pressure* on the chest, from afternoon till evening, with sore pain. *Pressure* till whole day, with difficulty of breathing and frequent hacking.—*Stitch* in the chest, particularly on raising the trunk. *Stitch* in the left chest, also striking to the inmost part of the chest and arresting the breathing, or causing one to start, or when walking and worse on drawing breath. *Stitch in the left side*, also on raising the trunk from a stooping posture, or on raising the arm, causing one to start, or when laughing. *Stitch in the right side*, also on raising the arm, or with tension, in the afternoon. *Stitch in the sternum*, from afternoon till evening, or burning stinging.—*Biting itching* of the outer parts of the chest, in the evening, going off after scratching. *Sticking* in the region of one rib, from afternoon till evening, worse when sitting and arresting the breathing. *Burning* of the left side of the chest, also in the afternoon or on raising the arm.

**Back.**—*Pains in the small of the back*, night and morning. *Stitches* in the small of the back, in the afternoon. *Gnawing in the small of the back.*—*In the back*: tension, with pinching in the umbilicus, before dinner. *Stitch* striking from the back to the pit of the stomach, in the afternoon when sitting. *Itching*, going off after rubbing.—*Between the scapulæ*: sticking, also when standing, going off by motion. *Frequent twitching* on the left scapula, in the evening. *Tearing* in the left scapula, as if it would be torn out, waking him from a deep sleep at night, with painfulness of the part to contact even early in the morning.—*Nape of the neck*: stinging and tension during motion. *Pain* as if sprained on raising the head, with cracking on stooping.—*Neck*: itching. *Sensitiveness* of the thyroid body to pressure, with sensation, on swallowing, as if a blister had formed there.

**Upper Extremities.**—*Itching* on the shoulders. *Itching stitches*, like flea-bites, on the shoulders and sternum, in the evening, in bed.—*Tearing in the arms*, at times in the right, at others in the left, worse in sitting, or in the right humerus. *Feeling* in the left arm and leg as if gone to sleep, in the afternoon when sitting.—*Pressure* on the *upper arm* as from a hand at night, waking him, the part remaining sensitive afterwards.—*Tearing* from the left elbow to the hand.—*Tearing* in the right radius down to the wrist-joint, with numbness of the last two fingers.—*Tearing* in the border of the right hand, in the forenoon when writing, succeeded by beating and a tumultuous sensation in the part which goes off by moving the arm. *Pain as from bruises* in the left hand, particularly at night, with sore pain of the border of the hand during motion. *Heaviness* of the hands and feet as if weary, relieved by motion.—*Tearing* in the fingers, also in the thumbs, apparently in the bones, or in the joints of the fingers. *Sticking*, also under a nail, or in the tip (of the right little finger). *Burning* under two nails, as if a panaris would form, in the evening.

**Lower Extremities.**—*Tearing* in the *hips*, also extending to the toes, when sitting, or particularly in the left hip, in the evening, at night and in the morning. *Itching* of both hips, particularly in the evening, with burning after scratching. *Itching herpes* on the hips.—*Tearing* in the right lower limb, in the afternoon when walking, less during rest. The left lower limb goes to sleep, with tingling, early in bed, in a recumbent posture.—*Tearing* in the right thigh, also darting tearing in the left, when sitting, and going off after rising. *Pain as*

from bruises, only when sitting, only in the left lower limb in the evening, and in both in the afternoon. Violent pain as from weariness in both lower limbs, with pressing towards the groins, and diarrhoea, during the menses.—*Tearing in the knee*, in the afternoon, also extending to the thigh when sitting, or with trembling of the knees. Sticking in the outer part of the knee, when standing, also in the evening, or in the right patella in the afternoon. Violently-itching pimples on the right knee.—*Tearing in the legs*, also at night, or in the afternoon when spinning, and obliging one to stop. Heaviness of both lower limbs, with tearing from the knee to the toes. Painful weariness of the calves, when walking, less when sitting.—*Tearing in the internal right malleolus*. Gnawing in the external right malleolus. Stinging tension in the left heel, particularly early, after rising, when pressing the foot to the floor. *Cramp* in the outer side of the left foot, during the menses, when sitting, going off after rising. *Itching of the heel and little toes*.—*Tearing and tingling in the right toes*, at night. Cramp-pain and spasmodic contraction of all the toes of the right foot, early in bed.

**Sleep.**—*Yawning with drowsiness*, also in the afternoon when sitting, with malaise.—*Restless sleep at night and frequent waking*.—*Symptoms at night in bed*: restlessness and heat, with frequent waking, diminished by walking about. Pains in the head, which do not allow one to go to sleep. Pain in the throat, with restless sleep. Waking at ten o'clock with vertigo, nausea and disposition to vomit, obliging one to walk into the open air, which affords relief. Sticking in the left side, worse on stooping, not allowing one to sleep, and obliging one to turn to the other side.—*Constant dreams*, while half awake, confused and fanciful. She dreams that her brother is arriving. She dreams that an acquaintance is approaching, whom she at first mistook for the devil. She dreams that she is quarrelling with her husband, who had returned from a distant journey. Dreams about murder and deeds of violence. Dreams about a tooth falling out. She dreams that one of her relatives has her head cut off, after which she wakes covered with sweat, as from anxiety. She dreams that her upper arm is painful and immovable. She dreams that she is falling, and wakes as if in affright. She dreams that her mother had fallen into the water and had been drowned, after which she wakes trembling and in tears. She dreams about having been hurt in running. Dreams about the death of an acquaintance, with weeping. He dreams that he is going to a funeral.—*On waking in the morning*: heaviness of the head, as if he had not slept enough.

**Fever.**—Frequent shuddering over the nape of the neck, at night. Shuddering the whole day, commencing with yawning. Shuddering on the back, relieved by the warmth of the stove, or on the back, hands and feet.—*Creeping chilliness*, after yawning with drowsiness. Chilliness in the afternoon, going off in the evening. Chilliness with shaking, in the evening, followed by sound sleep, with agglutination of the eyes. *Chilliness with shuddering, in the whole body*, at night, from evening till morning.—*Feverish and sick*, as if a severe illness were approaching. Alternation of short shiverings and heat, commencing early in the morning. Heat mingled with chills, accompanied with thirst and sore throat. At times *chilliness*, at times *heat*, with dread of being uncovered. Heat in the evening, in bed, followed by chilliness. Heat in the afternoon, followed by shuddering in the evening, while hands and feet are warm, the shuddering alternates with heat; during the night he suffers with heat and thirst. Heat with sweat and thirst, followed by chilliness.—During the first days, the prover feels rather warm than cold. Feeling of heat in the whole body, with anxiety, great languor and exhaustion. *Anxious heat*, day and night, *with violent thirst*. Nightly heat, with great thirst and desire to uncover his hands and feet. Heat

all over, as if sweat would break out.—*Sweat* in the afternoon. Sweat after midnight. Sweat all over, in the morning, in bed, with unpleasant feeling of warmth.

**Skin.**—*Itching of the whole body*, particularly of the neck. Itching of the neck, nape of the neck, region of the clavicles and small of the back, with small *tubercles* after scratching.—Biting here and there, in the evening, going off after lying down.—Burning stinging as from bees, here and there, particularly in the palm of the left hand and on the neck.

**General Symptoms.**—*Tearing* in various parts Stinging here and there, going off after lying down, (in the evening in bed?), or particularly on the right side, at times on the head, at others in the region of the clavicles, at times in the back.—Languid and weary, particularly in the lower limbs. Feverish feeling of illness, as if a severe illness would set in.—Trembling of the hands and feet.

**Characteristic Peculiarities.**—In the open air the symptoms appear less than in the room.

## 174. NITRIC ACID.

NITR. AC.—See HAHNEMANN'S Chronic Diseases, IV. *Duration of Action*: several weeks.

COMPARE WITH—Acon., Arn., Aur., Bell., Bry., Calc., Con., Hep. s., Jod., Kali carb., Kali nitr., Lyc., Merc., Mez., Mur. ac., Natr. carb., Natr. mur., Op., Petrol., Phosph., Phosph. ac., Puls., Rhus, Sep., Sulph., Sulph. ac., *Thuja*.—Nitric ac. is frequently suitable after Bell., Calc., Hep. s., Kali, Natr. carb. and mur., Puls., Sulph., *Thuja*.—After Nitric ac. are frequently suitable: Calc., Petrol., Puls., Sulph.

ANTIDOTES.—Of large doses: alkalis, a saturated solution of soap; pure magnesia stirred in water;—of small doses: Calc. carb., Camph., Con., Hep. s., Merc., Mez., Petrol., Phosph., Phosph. ac., Sulph.

### CLINICAL OBSERVATION.

According to Noack and Trinks, this drug has cured the following affections: Rheumatic and arthritic affections.—Hydrargyrosis, when appearing in the form of a scorbutic dyscrasia.—Diseases of the periosteum and bones, especially chronic inflammation of those parts.—Caries.—Neerosis?—Tophi?—Scrophulosis.—Scrophula torpida.—Rachitis.—Hysterismus.—Congestion and orgasm of the blood.—*Hemorrhage from arteries and capillaries*.—*Telangiectasia* in the nape of the neck of a boy of ten years.—*Epilepsy*, the fits being relieved by riding in a carriage, accompanied by attacks of vertigo in a girl of 14 years.—Humid, itch-like eruption with ulcers on the skin, and ramollissement of the bones, having been mismanaged by quicksilver, (in conjunction with Aurum and Acid. phosph.)—Dry and humid herpes.—Scarlatina.—Painless ulcers with gray, inverted edges readily bleeding and emitting an ichorous pus.—Mercurial ulcers.—Chapped skin of frozen limbs.—Syphilitic bubo.—Chancre, with hydrargyrosis.—Secondary syphilis.—Condylomata.—Itching smarting and stinging syphilitic eruptions, resembling psoriasis, in individuals having taken much Mercury.—Syphilis with hydrargyrosis.—Syphilitic ulcer, a ter Mercury.—*Typhus abdominalis*: especially with hemorrhage from the rectum, excessive sensitiveness of the abdomen, with green mucus, acrid diarrhoea and tenesmus,

aphthæ, loose, rattling cough, and threatening paralysis of the lungs, especially after having taken large doses of calomel or chlorine.—Febres lentæ, hecticæ.—Melancholy.—Caries of the skull-bones, in children.—*Ophthalmia* from an abuse of Mercury.—*Ophthalmia* from sudden suppression of syphilitic complaints.—Inflammation of the cellular tissue in the internal canthi of the eyes, terminating in suppuration and afterwards ulceration.—Blepharoptosis.—Ophthalmoblenorrhœa gonorrhœica.—Phlyctenæ of the cornea, passing into the form of flat ulcers.—Obsecration and spots of the cornea.—Photophobia.—Amblyopia.—Myopia.—Diplopia.—Muscæ volitantes.—Photopsia.—Amaurosis.—Glaucoma from abuse of Mercury.—Caries of the zygomatic process.—Purulent otorrhœa.—*Parotitis*.—Ozena serophulosa, mercurialis and syphilitica.—Polypi of the nose.—Mercurial pytalism.—Erysipelas of the face.—Stomacacæ.—Throbbing toothache from the abuse of Mercury, most violent in the evening and at night.—Rheumatic tearing and drawing pain in the teeth and face, most violent at night, now in the upper, then in the lower row of teeth, and in the nerves of the face, with twitching of the facial muscles.—Ulcers in the mouth, on the tongue and gums, with pytalism from abuse of Mercury.—Syphilitic herpes of the tonsils, uvula, root of the tongue, inner side of the lips.—Stomacacæ.—Aphthæ of the month and fauces.—*Chronic inflammation of the palate*, uvula, tonsils and fauces, with burning, or pressing-stinging soreness.—Angina pharyngea et tonsillaris.—Chronic inflammation of the mucous membrane of the fauces, owing to syphilis or hydrargyrosis, with a feeling of soreness and redness of the throat at every change of weather.—*Chronic inflammatory conditions of the liver*.—*Jaundice*.—According to Buchner, nitric acid prevents the formation of pus in the syphilitic bubo.—*Chronic diarrhœa*.—Chronic, colliquative diarrhœa, threatening phthisis intestinalis.—Hemorrhage from the swollen and painful varices of the anus, at every stool.—Ascarides.—Pressure on the bladder.—Diabetes mellitus et insipidus.—Enuresis.—Chronic inflammation of the urethra.—Phymosis.—Balanorrhœa. Removes the bad smell from the flat ulcers accompanying balanorrhœa.—Suppressed menses.—Dangerous metrorrhagia after confinement, and especially in miscarriage.—Leucorrhœa.—Carcinoma of the womb.—Scirrhus and carcinoma of the mammae.—After operations for scirrhus of the mamma.—Pneumonia: in thin, emaciated, rather old individuals with choleric temperament, the first stage to which Aconite is specific, passing quickly into the second which threatens to be fatal, the cough being either dry or else accompanied with copious, green, blood-streaked expectoration, violent stitches mostly on the left side, excessive difficulty of breathing, soft, intermitting pulse, profuse sweat, rapid failing of strength. These are cases which have been pointed out as dangerous, even by older physicians, where the pain vanishes, but the fever increases, whereas the reverse takes place in favourable cases.—Rhagades of the hands.—Ischias.—Chiragra.—Podagra.

#### SYMPTOMS.

**Mind and Disposition.**—Sad mood. Desponding, seems to feel discouraged and to be absorbed in deep thought. \**Sadness, and as if oppressed with grief*. He is unable to banish his sad thoughts.—Home-sickness.—*Weeping mood*, without any cause. Easily moved and inclined to weep. The child weeps when admonished ever so little.—Excessive *melancholy* and anguish. Sad and full of anxiety, in the evening, (the day previous to the menses). She is absorbed in thoughts about former events inducing anxiety; she cannot withdraw her mind from them, she seems as if in a waking dream; she starts from time to time, as in affright.—\**Anxieties*, the whole day. Fits of anguish, with palpitation of the heart, arresting the breathing. Anguish, with stitches above the

heart, and a sort of raving as if delirious, with coldness of the body and inclination to fall. *Anxiety, as if he were engaged in a law-suit or quarrel, exciting uneasiness.* He is assailed by anxious thoughts, without any positive cause for it. He feels quite anxious in the evening, he is unable to sit, and has to walk about. During a thunder-storm he is more anxious than usual. °*Excessive nervousness*, particularly after abuse of mercury. *Tendency to start.* Timid, with tendency to start. Timid, he is easily affected unpleasantly by something.—*Hopelessness, despair.* Boundless despair. She imagines she will soon die, but she is not sick. *Tired of life.* She wishes to die, but she fears death. *Indifferent, joyless.* Taciturn.—*Dissatisfied with herself*, inducing her to weep violently, after which she feels more easy. *Out of humour and desponding.* Out of humour and uneasy, early in the morning, after rising. Discouraged, early in the morning on waking. *Impatient* in the afternoon. Angry at himself.—\**Irritable disposition.* Out of humour, sad, headstrong, full of uneasiness, she knows not where to turn herself. *He is vexed at the least trifle*, and at himself, when not doing a thing to his satisfaction. *Angry mood, which makes him nervous.* Trembling of all the limbs during a quarrel.—*Disposed to be vehement and quarrelsome.* Tendency to be angry and to use insulting expressions. He gets into a passion on account of trifles, and has to laugh at himself the whole day. Fits of rage and despair, with curses and maledictions.—Inveterate ill-will, unmoved by excuses or apologies.—\**Indisposition to work, or to perform any serious business.*—Changeable mood, at times cheerful, at times sad.

**Sensorium.**—*Great weakness of memory*, even while the bodily strength increases.—Diminished power of thinking, not disposed to perform any scientific work. *Her thoughts vanish*, when attempting to think on important business. She has no ideas, comprehends nothing, does not understand what people tell her, as if she did not hear well. Thoughtless, as if without consciousness.—Dulness of the head, she is unable to think or to take notice of things, for a long time. Dulness of the head, which is sometimes like loss of consciousness, especially in the open air. Cloudiness and dizziness of the head. *Vertigo*, when raising the head after stooping. °*Vertigo*, when walking and sitting. °*Vertigo*, obliging him to lie down. *Vertigo* in the evening, immediately after lying down. Violent vertigo, in the evening, she was scarcely able to support herself when rising from a seat. *Vertigo, early in the morning, when rising*, with obscuration of sight, *he had to sit down.* *Vertigo*, as if he would lose his senses. *Vertigo*, at night, when rising, she knew not where she was. *Vertigo* with nausea, early in the morning, followed by eructations. *Vertigo* with pulsations in the head, and pressure in the middle of the brain, in the evening.

**Head.**—*Headache* in the occiput, after a slight effort, especially when thinking. Headache, with nausea. Headache, early in the morning when waking, going off after rising. The head is sensitive to the rolling of carriages and loud footsteps. Headache, as from an intoxication on the day previous, aggravated by stooping, with pain in the eyes, as if smoke had got in. Dull headache and heaviness of the head.—*Heariness and dulness of the head*, with nausea. Heaviness in the temples, with frequent chilliness. He is roused from sleep by a painful heaviness in the head, as if from the vapour of coal. Sensation as if some one were pressing her head violently forwards.—*Feeling of fulness in the head.* Painful feeling of fulness in the head, as if it would burst, several times a day, half an hour each time. Pain, as from fulness of blood, in the head, eyes, and upper part of the nose, when shaking the head or blowing the nose.—Sensation in the head, as from a violent cold, but without any marked secretion of mucus.—Headache, with tension in the eyes, when moving them. *Pain-*

*ful tension in the interior of the head* and in the eyelids. *Headache, as if the head were surrounded with a tight bandage.*—Dull headache, early in the morning, when in bed; after rising, violent pressure in the right temple, with chilliness, qualmishness in the umbilical region, lastly a troublesome colic, as if caused by incarcerated flatulence and frequent eructations.—Pain, as from bruises, in the occiput.—*Pressure* in the upper part of the head, in the temples and eyes, as if pressing on the part with the thumb. Pressure in the forehead, for half an hour, every morning. Pressure in the *sinciput and eyes*, which are then more immovable. Excessive pressure in the head from above downwards, with violent coryza. *Pressure in the head and heaviness of the limbs*, (the first days). Very intense, painful, drawing pressure from the forehead upwards. Sharp, aching pain in both frontal eminences, mingled with stitches. Compressive pain in the forehead, the whole afternoon.—Drawing headache. *Drawing pain in the right temple*, (in a few hours). Drawing in the temporal muscles. Drawing, at times in the right side of the head above the orbit, at times in the left, in the region of the ear. Cramp-like drawing in the head, which feels gloomy and dull. °*Tearing* in the forehead, vertex and sinciput.—*Dartings in the lower part of the left hemisphere of the brain*, from before backwards. Darting in the left hemisphere, towards the temple. *Cutting headache.*—*Stitches in the left temple*, in the evening. Stitches in almost every part of the head. Stitches in both occipital protuberances, extending to the lower jaw, Stitching pain in the upper part of the head, every day, worse in the afternoon, as if her head would be torn to pieces; she had to lie down, the pain prevented her from sleeping at night. Violent stitching pain in the right side of the head and occiput, the pain is also felt when touching the parts. *Stitches in the temples*, particularly the right. Violent stitches in the left side of the occiput, at breakfast, drawing the head backwards and arresting the breathing. Violent, sudden stitches, in the evening, in the right side of the occiput, followed by violent headache in the occiput, both pains disappearing about the time of going to bed. Stitches above the eyes, every morning, for half an hour. Stitches above the left eye. Boring stitches in the vertex, in the evening. Stitching headache in the left temple, the whole afternoon. Stitching, sometimes throbbing headache in the left frontal eminence, with sensation as if the eyelids were drawn together, from four o'clock in the afternoon, worse in the evening, until night; during night the pain rouses him from sleep.—Shocks in the head, when stooping or lying down. Jerks in the head, in the evening.—*Throbbing headache* in the left side of the head, the whole afternoon. *Throbbing pain in the temples*. Beating in the occiput. Beating headache in the right temple, with nausea, early in the morning on waking, for several days. Intolerably painful hammering in the head.—\**Congestion of blood to the head*. When stooping, the head suddenly feels heavy as a hundred-weight. Pain in the head, as from congestion of blood, she was unable to collect her senses, with sensation as of a gauze before her eyes.—*Heat in the head, the whole day*. Humming in the head. Constant groaning sensation in the head.

**Scalp.**—Pain as from subcutaneous ulceration, of the outer parts of the head, on touching them. *Bone-pain* of the whole left side of the head, also in the teeth and the meatus auditorius externus, aching and drawing. Pain, as from bruises, of the whole right side of the head. Tension of the scalp. Painful spots of the hairy scalp, when touching them. Intense painfulness of the hair of the head. Pain of the roots of the hairs, when touching them, at a spot on the vertex, of the size of the hand. Drawing and stinging in the scalp. Drawing in the temporal muscles. Violent sticking in the right side of the head and occiput, painful when touching the parts.—*Tingling* on the right side

of the head, about the ear. Numbness of the head, and sensation as if it had gone to sleep.—Sensation about the head as of burning points or sparks. He frequently feels a *heat* about the head. His head perspires easily. Frequent sweat on the forehead. °Itching of the scalp. Scurfy, humid, itching eruption on the hairy scalp. The tinea on the hairy scalp smells very badly. \**Falling off of the hair*. A number of *boils* about the head, chin, nape of the neck, etc. —°Ulcerated spots on the head, humid and burning.

**Eyes.**—The eyes are weak and sore, as if tired.—Pressure in the eyes, as if pressing on an ulcer. Pressure in the outer canthi, as from sand. Pressure in the eyes as when one looks at the sun; eye-gum forms, and *the eye becomes red and itches*. Pressure in the eyelids, in the evening. Pressure and smarting sensation in the left eye. Periodical pressure on the inner surface of the eyelids, especially the lower, with sensitiveness of the eyes to the light, causing a winking.—Pinching pain in the eyes. Contractive pain in the left eye. Sensation as if the right eye would be compressed. Contractive pain over the left eye, externally.—Drawing pain above the left eye. Violent drawing pain in the eyes.—*Stitches in the eyes*. Stitch in the right eye and left ear, from within outwards, with subsequent inflammation of the eyes; the white of the eyes becomes very red; he was unable to see in the open air. Stitch near the left eyeball, towards the inner canthus, externally.—*Itching* of the inner canthi. Itching and pressure of the eyes. *Smarting sensation* in the eyes. *Burning* in the eyes and left temple. Burning in the eyelids, early in the morning.—Inflammation of the right conjunctiva, °or of the eyes, from abuse of Mere. or from syphilis. *Swelling* of the eyelids. Swelling of the upper eyelid, with an itching pimple on it. °Suppuration of the eyes.—*Dark spots* on the cornea. A small wen near the pimple on the upper eyelid.—Dryness under the upper eyelids. Sensation as if the eyes were full of tears.—Frequent *lachrymation*. Lachrymation and itching of the eyes. Lachrymation in the right eye, in open, mild air. Lachrymation of the eyes, increased by reading, and pain in the eyes.—Acrid *humour* in the eyes. *Stickiness* of the eyes as if from eye-gum. Dry gum in the canthi. *Agglutination* of the right eye, during the night.—*Trembling* of the right eyelid. Continual jerking below the right eye, after dinner. *In the morning it is difficult to open the eyes and to raise the upper eyelids*. °Paralysis of the upper lid. Dilatation of the pupils. °Difficulty of contracting the pupils. *Photophobia*, the eyes are dazzled by the light of day.—*Obscuration* of the eyes, when reading. When looking at a thing carefully, the object seems to him too dark. *The sight becomes dim; objects appear dark; he sees nothing*; he imagines there is an eclipse of the sun, or he is blind. In the open air he suddenly became *as if blind* and deranged; his ideas wandered and he felt like one fainting, for a couple of minutes. At twilight, he is obliged to cease reading sooner than usual. The halo around the candle-light becomes stronger. Mistiness before the eyes, when looking at a thing. Gauze before the right eye.—When reading he sees a green spot by the side of every letter. \**Short-sighted*, objects at a moderate distance appeared indistinct.—The horizontal objects *appear double* when seen at a distance. Gray *spots* before the eyes, at some distance, hindering sight. \**Musæ volitantes*. At candle-light, a cobweb seems to hover before his eyes; this disappears again when closing the eyes firmly or when moving them. *Sparks* before the eyes; obscuration of sight; four times during the day he was unable to recognise anything for an hour.

**Ears.**—Pain in the ears, as if something would burst in the ear. Pain in the left ear, as if it would be distended. Pain, as if the tympanum would be pressed in. *Dragging* pain in the ears, also sticking. Cramp-pain in the ears.

Dartings in the internal meatus auditorius. *Drawing* in the internal meatus auditorius. *Drawing* in the right ear and right cheek. *Tearing*, at times in the right, at times in the left helix.—\**Stitches in the right ear*, -with pressure in the forehead. *Stitches* and *humming* in the right ear, for three days. *Beating* in the region of the tympanum.—*Itching heat* of the ears. *Itching* in the ears. *Feeling of dryness* in the ears, they are swollen. *Redness*, *suppuration* and *violent itching* behind the left ear. *Soreness* behind the left ear. *Pimples* of the size of small peas on the posterior surface of the lobules, with pain when touching them. °*Steatoma* at the lobule.—°*Caries* of the mastoid process.—*Glandular swelling* behind and below the right ear, with *stitching* and *tearing* in the swelling, through the ear, in the evening, and continuing until she gets warm in bed. *Itching* in the swollen parotid gland.—*Feeling of obstruction* in the ear, after previous soreness in that organ. The right ear becomes suddenly closed, as if he were entirely deaf, for a short time. \**Difficulty of hearing* from enlargement of the tonsils, particularly after abuse of Mere. *Dull hearing*. *Echo* in the ears of her own speech.—*Sound* in the ear as if water were in it. *Humming* in the ears and hardness of hearing, for a fortnight. *Humming* in the left ear. *Roaring before the ears*. °*Throbbing* in the ears. °*Creaking* in the ears. Sudden sensation as of fanning the left ear, in the afternoon, for some minutes. A few loud reports in the ear. *Cracking in the ear when chewing during breakfast*.

**Nose.**—*Violent itching in the nose*. Smarting pain in the nose. *Stitches in the nose*, when touching it, as from splinters. *Stitches* in the root of the nose, which is distended, especially when sneezing or coughing.—*Burning* in the nose. *Soreness* in the nose. *Soreness* of the wings of the nose. *Soreness and bleeding* of the inside of the nose, with violent coryza. \**Soreness and scurf in the nose*. Ulcerated nostril; sore nose. *Itching herpes* on the wings of the nose. *Redness* of the tip of the nose, and scurfy blisters on it. °*Fig-like excreescence* in the nose. *Discharge* of blood from the nose when blowing it, in the morning. The nose bleeds, from weeping. \**Violent bleeding of the nose*. *Discharge* of black blood from the nose.—\**Disagreeable smell* in the nose, °on inspiring air, -or in the evening after lying down, for three evenings in succession. °*Fetid smell* from the nose. When eating, small pieces of food get into the posterior nares, with a disagreeable sensation, and are carried down with the mucus. A good deal of *sneezing, every day, without coryza*. Frequent sneezing with obstruction of the nose. *Violent sneezing*, morning and evening, without coryza. *Tingling* in the nose, and sensation as if the nose would bleed. Much sneezing, and copious discharge of mucus. °*Unsuccessful attempt to sneeze*.—\**Obstruction of the nose*. Obstruction of the left half of the nose. Complete obstruction of the nose, early in the morning on waking, water drops out.—°*Dryness* of the nose. Dry coryza, with dryness of the throat and nose, inflamed and swollen wings of the nose. *Violent dry coryza*, in the night. Aerid water runs out of the nose, in the night. *Yellow, fetid discharge* from the nose. *Discharge* of thick, corrosive mucus from the nose. *Coryza with sore feeling of the nostrils*. *Coryza with dry cough and headache*. *Coryza* with waterbrash. *Violent coryza* with swelling of the nose and upper lip, and especially with nightly cough.—*Fluent coryza with obstruction of the nose*. *Violent fluent and dry coryza*, with difficult breathing even through the mouth, and with stinging in the throat during empty deglutition and when swallowing food. *Violent fluent coryza*, with tearing in all the limbs, only one day. *Violent fluent coryza*, with great hoarseness and cough, with stitches in the throat, at every attack. *Violent fluent coryza*, after sneezing and chilliness.

**Face.**—°*Pale face*. *Yellowness*, particularly around the eyes, with red

cheeks. *Sickly yellowness* under the eyes (after rising, with feeling of languor). Deep eyes. Bloatedness around the eyes, on waking early.—*Heat of the face*, in the afternoon. Feeling of great internal heat in the face, especially the eyes; he can scarcely keep them open, the face looking pale. Feeling of heat in the cheeks, no heat is perceptible to the touch.—*The bones of the face are painful*, whether touched or not. *Tension of the skin of the face*, early in the morning. Tension of the skin of the forehead. Violent cramp-pain in the bones of the face, especially the malar bones. Sensation of contraction about the nose, zygomatica and around the eyes. Drawing in the right cheek, towards the nose. *Tearing in the malar bones*, commencing at the angle of the lower jaw. Violent tearing deep in the facial muscles or in the periosteum of the malar bone, waking him after midnight. Violent pain in the malar bones as if they would be torn to pieces. Pain, as from bruises, in the malar bones. Prickings in the face. Twitching, now in one, then in another muscle of the face, especially the masseter muscles. Violent, painful pulsations on the left side of the face. Erysipelatous inflammation and *swelling* of the left cheek, stinging, painful, with nausea and chilliness; followed by heat; the shuddering returned when raising one's self in bed. Swelling of the cheek, with a red, rough spot in the centre, and tearing pain in the teeth. Swelling of the cheek and upper lip.—*Scaly skin* of the whole face. \*Black pores of the face. \**Small pimples in the face, especially on the forehead*. \**Pimples on the hairy border of the temple*. Itching—burning, *red pimples*, with pus in their tips, in different parts of the face, on the forehead, temples, lips, chin, etc. °Pustules with red, broad borders and becoming scurfy. Fine, itching eruption in the region of the *beard*. Itching *herpes* in the whiskers. Herpetie spot close to the mouth, extending towards the chin.—Swelling and itching of the lips. Swelling of the upper lip and upper gums. *Swelling of the lower lip*. °Both lips are chapped. Cutting pains in the upper lip. Stitches in the upper lip, as if from splinters, when touching it. Itching of the upper lip. *Pimples* on the lip, with gnawing itching. Itching eruption on the upper lip. Ulcerated pimples on the lower lip. Ulcerated scurfy corners of the mouth. °Ulcer in the right corner of the mouth.—Pustules on the *chin*. Several pimples on the chin, with a red, hard circumference, at first painful when touched; this painfulness passes off as soon as pus appears in their tips; afterwards they leave an induration with a red circumference. A large *boil* on the side of the chin.—Pain in the *jaws* as if from Merc. Cramp-like pain in the right jaw. Dartings in the right lower jaw, from the region of the ear to the fore part of the face. Continuous stitch in the region of the articulation of the jaw. Great weakness, pain, and want of strength in the lower jaw, in the evening. *Cracking in the joint of the jaw, when masticating* or eating.—*Pain of the submaxillary glands*. Sensation as if the submaxillary glands were swollen. *Swelling of the submaxillary glands*, with pain when touching or moving the neck. Dull pressure in the submaxillary glands and about the neck.

**Teeth.**—*Toothache* in the upper row, not hindering mastication; accompanied with tense swelling of the cheeks. The toothache becomes worse immediately on leaning the head on the cushion.—Contractive darting and gurgling in a hollow tooth. Darting toothache, mostly in hollow teeth, and in the evening. *Drawing pain in the teeth*, extending to the larynx. Drawing and grumbling in the teeth and jaws, at night. Sharp drawing in the right row of teeth, and in the head. Tearing in the teeth.—*Stitching toothache*, with swelling of the cheeks, for two days. Violent stitches in the upper molar teeth, downwards towards the crown. Darting in a tooth, when taking any thing cold or warm into the mouth. Stitches and burning in the teeth, at night. *Boring pains* in

the teeth, when touched by either cold or warm substances. \**Throbbing tooth-ache*, worst in the evening when in bed, hindering sleep for several hours, now in one, then in all the teeth. *Feeling of coldness* in the teeth.—\**Looseness of the teeth, -with pain when chewing.* One of the lower molares is painful when chewing. The anterior and superior teeth, and an inferior hollow molar tooth are painful, as if they were loose and dull, or as if they had been bent forwards and loose, going off in the evening after a warm supper. Sensation as if the teeth were *soft and spongy*; he dares not press them together, lest they should fall out; when sucking at the gums ever so little, blood comes out, and he feels a pleasant sensation through the whole mouth. The teeth feel *elongated*.—The teeth became yellow.—Cutting pain *in the gums* of the upper incisores. Aching pain and soreness of the gums. Itching of the gums. *White, swollen gums. Swelling of the upper gums*, even in the sockets. Swelling of the gums, and the teeth were so loose that she might have taken them out. °Bleeding of the gums.

**Mouth.**—The inner parts of the mouth feel stiff and swollen, in the morning on waking. Sensation as if the parts in the mouth had gone to sleep. Contractive sensation in the mouth. The inner cuticle of the cheeks is apt to get between the teeth, and to be bitten when masticating. *Ulcerated spot of the inner side of the cheek, with stinging pain, as from a splinter.* *Ulcers in the mouth and fauces.* Spreading ulcer on the side of the uvula.—Dry mouth, no thirst, swollen, hot lips. Great dryness in the mouth, with thirst. Scraping and dry sensation in the mouth, as after much smoking.—Her mouth is always full of water. Tough mucus. *Copious flow of saliva.* Ptyalism *without affection of the gums.* Ptyalism and ulcers of the fauces. *Bloody saliva* in the morning.—*Putrid smell from the mouth.* *Cadaverous* smell from the mouth.—*Vesicles* on the tongue and its edge, with burning pain when touched. Small painful vesicles on the sublingual glands. Small painful pimples on the tip of the tongue. The tongue is very sensitive; even mild food causes a sharp smarting sensation. He bites his tongue when chewing. *Soreness of the red portion of the tongue.* Soreness of the tongue, palate, the inner side of the gums, with stinging pain, and ulceration of the corner of the mouth, (for five days). *Lisping.* Coated tongue. *White, dry tongue*, in the morning. Dry tongue, sticking to the palate, early in the morning.

**Pharynx and Œsophagus.**—*Pressure in the throat*, as if the food would not go down. Pressure in the back part of the throat, during deglutition, with sensation as if the pressure were moving downwards on the inner side of the back. Pressure in the throat, as from a tumour, with sore pain.—Sensation as of a *lump* in the throat, during empty deglutition. Sensation as of a nodosity ascending in the Œsophagus. Sore throat when swallowing, as if the throat were swollen, raw and ulcerated.—Sensation as of the food being pressed through the Œsophagus, as if this were narrower. Small crumbs of food press towards the posterior nares and pass through the nose.—*Stinging* in the throat, after long talking. Stinging-burning sore throat. Stitches in the throat in the evening when in bed, apparently in the root of the tongue, between the acts of deglutition. Soreness of the pharynx. Pain in the tonsils, with soreness of the uvula.—Stitches in the tonsils, and burning in the fauces, behind the uvula. Burning in the throat after supper, for half an hour. Swelling of the tonsils. °*Ulcers in the throat*, particularly from abuse of mercury. Heat and *dryness* of the throat. Scraping sensation in the throat, as if speech were impeded. Tickling in the throat. Acidity in the throat, after eating fat.—A good deal of mucus in the back part of the throat.

**Taste and Appetite.**—Acidity in the throat, particularly after eating fat.

*Sour taste in the mouth*, particularly in the evening or morning. \**Bitter taste in the mouth*, particularly after eating, also with white-yellow coated tongue. Bitterness in the throat. \**Sweetish taste in the mouth*, particularly in the morning, early. Pure water tastes saltish.—\**Great thirst, continually*.—°Thirst attending suppuration of the lungs. Pinching in the abdomen after drinking, (during a meal,) or tearing soreness in the pharynx, chest, and stomach.—*Want of appetite*, especially in the morning. Want of appetite; she feels qualmish and somewhat nauseated after eating. Aversion to everything. Feeling of repletion with dulness of the head. *Feels satisfied immediately, in spite of good appetite*.—Aversion to food, *boiled meat*, sweetish things, bread. Brown bread gives her a sour taste and makes her vomit.—Appetite for herring and fat things. °Inclination to eat earth, chalk, lime, etc.—*Violent hunger*, with weariness of life. Canine hunger.—*During a meal*: °Sweat. Sweat on the forehead. Soreness in the chest.—*After a meal*: long after-taste of the food. Eructations and flatulence, or tasting of the ingesta. *Nausea*, particularly in the throat, and going off after motion. Qualmishness in the abdomen, several days in succession. Vomiting, and headache above the eyes and in the parietal bones, as if the head would burst. Eructations, with bitter and sour vomiting. Heartburn with eructations.—°Repletion of the stomach. Distention of the stomach and abdomen. Rumbling in the abdomen. Feeling of coldness and pressure in the stomach. Headache above the eyes, more stitching than aching. Heat and redness of the face. Frequent cough with vomiting, with tingling and irritation in the throat. \**Excessive languor*, -especially in the knees and elbows. Much yawning. She becomes weary and drowsy. Chilliness, paleness, and coated tongue. *Sweat all over*, after breakfast and dinner. Anxiousness. She feels sick; all her limbs tremble and feel weary, she has to lie down.—°Nausea from eating fat. °Milk is indigestible.

**Gastric Symptoms.**—Eructations tasting of the ingesta. *Eructations after and before a meal*. Empty eructations (almost immediately). \**Sour eructations*. Bilious eructations, during a meal. *Regurgitation* of half-digested food, with flat taste in the mouth.—Eructations, accompanied by heartburn, very readily. Burning in the œsophagus, down to the pit of the stomach.—Hiccough, from morning till evening.—\**Nausea*, -as from excessive heat, not as if one would vomit, for many hours. Nausea with anxiety and trembling. Nausea, with anxiety, without inclination to vomit, below the short ribs. Nausea, sick feeling and movement in the whole body, as if one had taken an emetic. Nausea about the stomach, the whole day. Qualmish, unwell, chilly, after taking her usual coffee; she had to lie down.—Waterbrash after drinking rapidly. Frequent attacks of sickness, as if she would faint, with anxiety and sensation as if eructations would ensue, alternating with canine hunger and painful sensation of emptiness in the stomach, making her feel as if she ought to eat something, accompanied by accumulation of water in the mouth; this occurs frequently during the day, the attacks lasting from five to ten minutes.—\*Constant nausea and inclination to vomit, the whole day, many days in succession, with heat from the pit of the stomach, to the pit of the throat; there is no retching, the nausea is not felt while eating or drinking; her appetite is good. Irresistible nausea, resulting in vomiting.—Bitter and sour vomiting, with many eructations after a meal.

**Stomach.**—Pain in the region of the cardiac orifice, on swallowing food. Pain above the stomach, which does not allow him to keep himself erect, relieved by eructations.—*Pressure* in the stomach, increased by pressing on the part with the hand. Pressure in the stomach, *especially previons to a meal*, or after having been without nourishment for an hour; the pressure is removed by eat-

ing; accompanied by empty eructations. Violent pressure above the stomach and the pit of the stomach, when walking in the open air. Pressure in the pit of the stomach, and sudden burning, as if he would vomit blood. Pressure in the stomach, as if sore, in the morning and day-time.—*Cramp* in the stomach, as from cold. Cramp-pain in the pit of the stomach. Cramp-like contractive pain in the stomach. Contractive cramp in the stomach, disagreeable griping and pinching, off and on. Violent, cramp-like pinching in the stomach. Cramp-like drawing pain in the pit of the stomach, with tension extending to the umbilicus, which shortens the breathing. Gripings in the stomach, early in the morning after rising, extending into the chest, followed by short attacks of pinching in the stomach.—\**Stitch* below the pit of the stomach. *Gnawing* in the region of the stomach, before breakfast. *Pulsations* in the pit of the stomach. Rushing of the blood in the pit of the stomach. *Feeling of heat* in the stomach. *Burning* sensation in the stomach. Coldness in the stomach. Painless *movement* on the left side of the pit of the stomach.

**Hypochondria.**—Pressure and tension in the *region of the liver*. *Stitches in the region of the liver*, when attempting to cry out. Jaundice, yellowness of the skin, with costiveness.—Pressure also with tension in the *left hypochondrium*. Pressure in the *left side of the abdomen*. Sensation as if the spleen were swollen. Stitches in the region of the spleen, at every movement.

**Abdomen.**—Aching pain in the abdomen. Pressure in the middle of the abdomen, as from a big lump. Aching pain, and occasionally a stitch in the abdomen, when touching it. Pressure in the umbilical region, with sensation as if it would pass off after stool.—Pain at a small spot in the abdomen, *as if something would get out there*.—*Contraction in the abdomen*, with itching. Contractive pain in the umbilical region. Cramp-like contraction of the abdomen. *Cramp* in the abdomen.—*Drawing pain* in the abdomen, with shuddering. Drawing pain in the abdomen, extending into the thighs. Drawing and griping in the umbilical region, especially when moving or bending the body.—\**Frequent pinching* in the abdomen, —without diarrhoea. Frequent pinching in the abdomen, early in the morning, after good stool.—\**Cutting pain in the abdomen, in the morning when in bed*, —and after rising; afterwards soft stool. Cutting colic with diarrhoea, and inability to get the feet warm. Cutting and tension in the right side of the abdomen.—\**Stitching colic*, —especially when pressing on the abdomen.—*Digging-up colic*, below the umbilicus. Digging-up and pinching in the abdomen, without diarrhoea. Colic as from cold. °Ulcerative pain in the hypogastrium.—*Distention of the abdomen*, in the morning, when waking. Distention of the abdomen, from flatulence, with grumbling in the abdomen, from morning till evening, for many days. Bloating sensation in the umbilical region, with flatulence. Continually-distended abdomen. \**Excessive flatulency*, moving about in the abdomen, causing a disagreeable sensation and finding no outlet. °Incarceration of flatulence, morning and evening. Flatulent colic, almost no flatulence being emitted, even when stool is procured by injections of water. Uneasiness and \**rumbling* in the abdomen, —with diarrhoea, for more than a week. Colicky motions, in the morning, and distention of the abdomen, the flatulence moving about in the abdomen with pain and rumbling, and even soft stools procuring no relief. Violent flatulent colic, early in the morning, after rising. *Rumbling in the abdomen*. Gurgling noise, frequently after a meal.—*Abundant emission of flatulence*, early in the morning, after pinching in the abdomen. Emission of a quantity of fetid flatulence. *Excessive flatulence*. Drawing-writhing pain in the abdomen previous to emission of flatulence.—Excessive sensitiveness of the abdomen. A congenital wart-like *excrescence* on the abdomen, becomes sensi-

tive, sore and scurfy.—°Liability of the abdomen to take cold.—The *region of the hernia* is very much distended. Stitches in the region of the left hernia. Pain in the left inguinal region as if broken and as if hernia would protrude, diminished by walking. °Inguinal hernia of children.—*Swelling of the inguinal glands*. Contractive pain in the inguinal glands. Slight stitch in the bubo, when feeling it or not, with stinging itching in the hard part of the bubo. \**Suppurating swelling of the inguinal glands*, -painful walking; the whole limb feels paralyzed and the muscles put upon the stretch.

**Stool.**—\*Painless constipation, -for several days. \*Costiveness, the abdomen became distended, but the flatulence did not pass. Every other day, hard stool covered with mucus, during the first days, afterwards every day. *Hard, scanty stool*. The stool passes off in *hard lumps*. Stool, resembling sheep's dung, with much pressing and accompanied with mucus. °Dry stool.—°Difficult, irregular stool. *Pressure on the rectum*, as if stool would come on, with scanty discharge. \**Long pressing, when going to stool*, -the stool came out with difficulty, but was not hard. *Constant unsuccessful desire for stool*.—Stool alternately hard and liquid. *Soft stool after pinching in the abdomen*. *Soft stool, twice a day, for several weeks*. Three, four stools a day, with shuddering and qualmishness under the short ribs (the first thirteen days). °*Too frequent stool*. Papescient stool.—Sensation as if diarrhoea would come on, although it did not. Diarrhoea, several stools a day (the first ten days). Diarrhoea, with nausea after dinner. Diarrhoea every other day.—Mucous diarrhoea, sometimes accompanied with colic and violent desire. Undigested food is passed with the stool. Thin, yellowish-white stool. Stool and flatulence, having a putrid smell. Smarting acrid stool. Bloody, *dysenteric stool*, with tenesmus, fever and headache.—*Colic, sometimes drawing*, previous to stool. Pinching in the abdomen, previous to good stool.—Pain, *during stool*, as if something would be torn in the rectum. Stitches, cutting and pressing in the rectum and anus, during stool. *Profuse discharge of blood during stool*. Burning at the anus, during hard stool. Stitches in the anus and cramp-like contraction of the anus, for many hours.—Unsuccessful desire, *after stool*. Burning at the anus, after stool. Stitches and scratching in the rectum and anus, after stool. Nausea, after soft stool. Complete exhaustion, after stool. Excessive irritation, anxiety and general uneasiness after stool. Colic, after frequent, and partly unsuccessful desire for stool.—The *rectum* appears to be inactive and incapable of expelling the faeces. *Pressure in the rectum*. Pinching and *itching of the rectum*. Itching in the rectum as from ascarides. Stitches in the rectum, when coughing. Smarting pain, more in the rectum than anus, immediately after stool, for two hours. Heat in the rectum. Burning and pinching in the rectum. Painful burning in the rectum, the whole day, especially after micturition.—Painful pressure at the *anus*, as if a varix were forming. Varix at the anus, after violent pressure down the back, when standing. Varices and pricking at the anus. Painful varices at the anus. *Swelling and burning of the varices of the anus*. Continual protrusion of those varices. Bleeding of the varices of the anus, during stool. Almost daily contraction of the anus. \**Itching of the anus*, -when walking in the open air and after stool. Soreness of the anus. Smarting of the anus. Humid soreness of the anus and between the nates, when walking. *Humour and itching of the anus*.—Painful pimple on the *perinæum*. Sharp drawing stitches in the perinæum, towards the anus.

**Urinary Organs.**—Painless *suppression of urine*, for several days. °Painful urination. °Pressure on the bladder.—*Great desire to urinate*, with scanty urine. *Nightly desire to urinate*, with cutting pain in the abdomen.—*Thin*

*stream*, as from contraction of the urethra.—Scanty, turbid, badly-smelling urine.—*Copious, easy emission of urine.* Copious, pale-coloured urine. *Enuresis.* °Inability to retain the urine —also in children.—Cold urine.—*Dark urine*, soon becoming turbid white, with increased dryness in the throat after micturition. *Brown urine*, leaving brown spots on the linen, like coffee spots. *Clear urine*; when standing, it becomes filamentous and flocculent, and deposits a bright-red sediment firmly adhering to the chamber. Red sediment in the urine. A quantity of brown-red gravel in the urine. Whitish sediment and ammoniacal odour of the urine. *Urine emitting an intolerably strong smell*, smarting, brownish. Acid smell of the urine, like that of tobacco. \**Fetid*, -sourish urine, like the urine of horses.—Burning in the urethra, during micturition. Stitches in the hypogastrium, above the pudendum, when urinating. *Smarting pain in the urethra*, when urinating. *Sore pain* in the tip of the glans or in the whole urethra, when urinating. Cutting in the urethra.—Violent burning after micturition.—Cramp-like, contractive pain from the kidneys towards the bladder. Pressure in the region of the kidneys.—*The urethra* is painful when touched. Prickings in the orifice of the urethra. Burning sensation in the fore part of the urethra, inducing urination and the idea that the burning will be relieved by urinating, whereas it increases. The orifice of the urethra is dark-red, *swollen*, like a pad. *Ulcer* in the urethra. Yellowish matter comes out of the urethra. Mucus drops out of the urethra between or after the acts of micturition. Discharge of tenacious mucus from the urethra, after micturition. Discharge of bloody mucus from the urethra.

**Male Genital Organs.**—Great *falling off of the hair* of the genital organs. *Itching of the genital organs* as if caused by mosquito-bites.—*Titillation of the penis.* Itching of the penis, especially the glans, under the prepuce. A spot on the penis, which had been rubbed sore, ulcerates and refuses to heal. *Frequent itching of the glans.*—Itching pimples on the glans. \**Red spots on the glans becoming covered with scabs.* Several brown, painful spots on the corona glandis. From ten to twelve small, flesh-coloured excrescences on the corona glandis, decreasing in size in a few days, emitting a fetid humour, and bleeding when touched. °*Sycotic condylomata* on the glans and prepuce. *Deep ulcer* on the glans, with elevated, lead-coloured, extremely sensitive edges. Flat ulcers on the corona glandis, looking clean, but emitting a fetid pus. Balanorrhœa. Smegma behind the corona. Throbbing and pressure about the glans.—Sharp stitches in the *prepuce*. Itching of the prepuce and humid spots on its internal surface. *Inflammation* and swelling of the prepuce, with burning pain; soreness on its internal surface, and small ulcers secreting a very fetid ichor, leaving spots on the linen, like bloody pus. *Considerable swelling and phymosis* of the prepuce, without much redness; on its internal surface and border, and in the orifice of the urethra, *chancre-like*, suppurating ulcers, with flat edges, without inflammation, but with violent lacerations, increasing towards evening, continuing during the night, hindering sleep, and becoming much worse in the morning by violent erections. Small, *itching vesicles* on the prepuce, bursting in a few days, and becoming covered with small, dry scurf. *Pimple*, with burning itching, on the inner surface of the prepuce; rubbing changes it to a flat ulcer, on a level with the skin, and yellow, as if covered with thick pus and painless, only surrounded with a little redness. *Flat, yellow, ulcerated places*, like flat chancres, humid, but painless, on the inner surface of the prepuce, on both sides of the frænulum.—*Violent itching of the scrotum.* Tingling of the scrotum, through the groin. Itching of the scrotum, with sore places.—Drawing pain in the *testicle*. Sense as of painful turning in the left testicle. Contusive pain in the left testicle. Burning pain in the left testicle. *Swelling of the testicle* (right), painful when touched. °*Hang-*

ing down of the scrotum. Tearing in the spermatic cords, the testes being painful to the touch.—\**Deficient sexual desire*. Diminished, and even deficient sexual desire, the first eighteen days, and slow, insufficient erections, becoming so much the more satisfactory afterwards (in a man of fifty-one years).—Sexual desire and erection, without any voluptuous fancies (the first two days). *Frequent desire for an embrace*, after several weeks (secondary effect). Lewd fancies, \**with copious emission of prostatic fluid*. *Discharge of prostatic fluid after difficult stool*.—Erections in the morning, and pain in the urethra. Erections, with burning and stitches in the urethra. *Violent erections in the night, even after a pollution*.—*Spasmodic erections after midnight*, he tosses about restlessly. Violent erections and pollutions. °Too frequent nocturnal emissions.—Feeble voluptuous sensation during an embrace.—When enjoying an embrace too soon after a former, even with sufficient desire, it produces weakness and calls up old complaints. Drawing pain in the small of the back, spinal column, and thigh, after an embrace.

**Female Sexual Organs.**—*Violent itching of the pudendum*, towards evening. Irritation and inflammation of the labia majora and vagina. Itching of the pudendum, when walking, with soreness, or in a child who rubs herself sore in the night. *Stitches in the vagina*, from without inwards, when walking in the open air. Dry burning of the genital organs. Swelling and burning itching of one side of the vagina and the labia minora. Ulcer in the vagina, on a level with the skin, looking as if covered with yellow pus, with burning-itching pain.—The menses *delay three days*. The menses delay seven days, in a young person (until full moon); they are a little too profuse, with headache and colic. *Menses too early*. Menses too early by seven, eight, eleven, and fourteen days, scanty. The menses come on again a few days after the cessation of the period, pale-reddish. *Menses too profuse*. °Suppression of the menses.—The limbs feel bruised one day *previous to the appearance and during the flow of the menses*.—Violent cramp-pain in the hypogastrium *at the appearance of the menses*. Violent pain in the small of the back, at the appearance of the menses, for one hour.—*During the menses*: burning in the eyes, every day. Toothache. Swelling of the gums. Violent pressing in the region of the liver. Pressure in the abdomen and pains in the small of the back. Distention of the abdomen. Violent cramp-pain in the hypogastrium, as if it would burst, with constant eructations; she was not able to remain quiet. Violent pains, first labour-like; afterwards more like a pressing in the hypogastrium extending into the vagina. Violent pressing in the hypogastrium, as if everything were coming out at the pudendum, with pain in the small of the back, through the hips down the thighs. Contraction towards the pudendum. She feels so weak that she loses speech and breath, and has to lie down.—*Soon after the appearance of the menses*, palpitation of the heart, heat and anguish, for half an hour; all the limbs tremble. LEUCORRŒA, consisting of mucus, which can be drawn out flesh-coloured. Leucorrhœa, of greenish mucus, immediately after the menses. Fetid leucorrhœa. Cherry-brown, and fetid leucorrhœa.—Hard knots in the mamma. °Vanishing of the mammae. Soreness in the fold below them.

**Larynx and Trachea.**—Stinging pain in the larynx. Stitches in the larynx when talking a long while. *Sharp, scratching sensation in the larynx*. Scratching in the throat, and irritation inducing cough, when reading aloud. Roughness of the throat only when breathing, with oppression of the chest and fluent coryza. °Roughness of the chest.—*Husky voice*, sometimes. \**Hoarseness*. Hoarseness, she was unable to talk, °or with coryza and cough. Tenacious mucus in the chest. °Tracheal phthisis. ?—*Much cough*. Titillation,

with cough, and soreness in the throat. °Cough only in the day-time. Cough, induced by a contractive sensation in the throat, especially during the night when sleeping. Cough during a deep inspiration. Short and hacking cough in the morning. Cough, with vomituration, *in the evening, when in bed*. Dry, barking cough, especially in the evening.—Violent cough *after midnight*, for one hour. Concussive cough in the night, the breathing being frequently arrested, as in whooping-cough, accompanied by stitches in the chest, sore throat and fever. Coughs more in the night than in the day-time, and in the day-time more when lying.—Short and hacking cough, in paroxysms, from the pit of the stomach, not in the night.—\**Dry cough*, -as after a cold. \**Barking cough*, particularly in the evening.—°Cough with vomiting.—*Mucous discharge*, with cough. \**Yellow*, -bitterish expectoration. °Purulent expectoration.—°*Ulcerative phthisis* (using first Kali).—*Cough, with bloody expectoration*, in the morning, in bed, after a slight rattling in the trachea, followed by sick feeling, chilliness, etc. *Expectoration of black, coagulated blood*, with cough, with discharge of similar blood from the nose.—Symptoms during cough: pain below the stomach. Pressure in the head. Pain in the hypochondria. Sneezing. Stitches in the throat. Pain in the chest. Stitches in the middle of the left chest, almost at every inspiration and when coughing, especially when lying in bed. Soreness in the chest as if it were ulcerated. Stitch in the small of the back. Shock in the knee causing it to give way, with pain in the patella when walking.

**Chest.**—Feeble and slow breathing, with wheezing and rattling, or soreness in the chest.—Want of breath when walking in the open air, with heaviness of the feet. *Want of breath, palpitation of the heart, and anguish, when going up stairs*. *Sudden want of breath and palpitation of the heart, when walking slowly*. \**Shortness of breath*. \**Panting*, °during work.—Sudden oppression of breathing in the morning. Asthma, as from congestion of blood to the chest.—Oppression and anxiety, when walking a little fast, with sweat on the back and chest. Short, anxious breathing. Oppression of the chest, especially when bending backwards.—Pain in the chest, as if sore, at every inspiration. The chest feels crowded. Oppression on the chest. Pressure on the left side of the chest, as if the blood could not circulate through the heart.—*Aching pain* in the right chest, in the morning, after many empty eructations, for half an hour. Aching pain in front, near the ribs, and as if bruised, also felt when drawing breath. Violent pressure on the chest, from the pit of the throat to the pit of the stomach, in the morning, early.—*Cramp-like drawing* in the chest. Cramp-pain in the front part of the chest and in the back, rousing him from sleep. Momentary cramp in the chest.—*Cramp-like contractive pain* in the right upper muscles of the chest, obliging him to bend double. Contractive pain in the right chest, mostly when sitting. Contractive pain in the left chest, above the heart, oppressing the breathing.—*Stitches* and drawing in the region of the sternum. Violent stitch through the lungs, in the forenoon. *Stitches in the right side of the chest and scapula*. Stitches in the right chest, when taking an inspiration, not when coughing. Violent stitch, in the upper part of and within the right ribs, through the abdomen and back. Stitches in and below the left chest, as if from incarcerated flatulence. Violent stitches in the left chest, in the morning, impeding the breathing. Stitches in the side of the chest, with nausea. Stitches and pain, as from subcutaneous ulceration, in both sides of the chest, when stooping, reaching high, and drawing deep breath. Stitches, as if in the outer parts of the chest.—Turning pain in the right side of the chest.—*Heat* in the upper part of the chest, early in the morning, sometimes returning in the day-time. Feeling of heat in the chest. Burning in the chest, when taking the least thing which is salt.—*Congestion of blood* to the upper part of the chest.

Congestion of blood to the heart, with anguish. Orgasm of the blood in the heart. Throbbing in the chest, above the stomach, like palpitation of the heart, especially after a good walk, removed for some hours by drinking wine, but afterwards returning.—*Palpitation of the heart*, more or less strong, especially after exercise, with languor and anguish, as if she would faint. Palpitation of the heart, in paroxysms, with anxiety and subsequent oppression of breathing, for one hour. Momentary violent palpitation of the heart, with diarrhœa. Palpitation of the heart, from some slight emotion.—Tremor of the heart, in paroxysms. Contractive sensation in the precordial region, causing anxiety; this ceases as soon as the heart has made one strong beat.—Pain of the outer parts of the chest, on stooping. Itching little spots, like *freckles*, on the chest. Two small warts on the sternum.

**Back.**—*In the small of the back*: pain, as if stiff. Pain so violent that he has to lie on his face. Pain, almost only during motion; it made walking almost impossible: apparently in the bones. Aching pain. *Drawing pain* towards evening. Painful tension hindering deep breathing. Stitches when coughing. Pulsations.—Pain in the *back*, after taking the least cold. Stiffness of the spinal column. Sensation in the flesh of the back, both during rest and motion, as if it were pinched together. Drawing pain in the back, evening. Tearing stitches in the back and chest, during motion, especially in the night. Violent continuous stitch in the dorsal vertebræ, when standing. Violent burning pain in the back. Burning pain in the right lumbar region, (region of the liver?) at a spot of the size of a hand, making him feel discouraged, sad, and indisposed to to think or do his business. Spasmodic jerks in the muscles of the back, while performing his manual labour. *Violent itching of the back*, and pain after scratching.—*Between the scapulæ*: pain. Pinching as with pinners. *Stitch* between the scapulæ, from time to time, every stitch being followed by an excruciation. Stitches between the scapulæ and in the front part of the chest, arresting the breathing, more when stooping than when sitting. *Nape of the neck*: stiffness. Painful tension of the muscles. Want of power to support the nape of the neck. Cracking of the cervical vertebræ. Itching. Sweat. Drawing in the cervical muscles, as if they supported a heavy weight. *Glandular swelling*—of the right side of the neck; neck and tongue are somewhat stiff. *Sort of goitre* on the right side of the neck. Itching of the neck, when walking in the open air.

**Superior Extremities.**—Violent itching of the axillæ. Painful sensitiveness of the right axillary glands, the whole forenoon. *Glandular nodosity* in the axilla. \*Painful swelling and inflammation of the axillary glands. Fetid, strong-smelling *sweat* of the axilla. The left shoulder is painful as from a blow. \**Pressure on the right shoulder*. *Aching pain on the shoulder*, as if she had carried a heavy burden on it. Stitches in the left shoulder, when touching it, when taking breath or when feeling chilly.—Pain of the left arm-joints. Pressure in the right arm. Violent tension and contraction in the shoulders and arms, the arms are drawn to the body. Drawing in arm and hand, as if they had been sprained. *Drawing pain in both arms*. Drawing in the humerus. Tearing in the arm, especially during motion, disturbing sleep. Hammering pain in the humeri, as if they would be crushed. Pain of the right arm as if bruised. Pain of the right arm as if sprained; she is unable to move it either forwards or backwards. Dull pain as from weariness, and groaning sensation in the muscles of the whole arm. The right arm goes to sleep, at night. Paralytic feeling in the right arm. When shaking the arm, it feels paralytic. Languor of the arms, as after fever. Jerking and drawing in the arms and fingers.—*The upper arm is painful as if bruised*, he cannot lift it, from pain, and the hand becomes cold. Painless jerks in the muscles of the

upper arm, especially the deltoid muscle, the whole day. Trembling in the muscles of the right upper arm. Wens on the arms.—The *elbow-joint* is painful when stretching the arm. Tearing in the elbow-joint, and dartings radiating from that joint towards the hand.—Dull pain and stiches in the *forearm*, extending as far as the dorsum of the hand and fingers. Pain, as from bruises, in the outer parts of the forearm, when moving or touching it. Paralytic, *drawing pain* in the forearm, almost the whole day. Drawing deep in the muscles of the forearm, along the bones. Tearing in the left forearm and hand, with pain when touching it. Feeling of heat in both forearms. Constant trembling of the forearm and hand.—Heat in the left *wrist* and palm of the hand. Aching pain in the right wrist-joint. Pinching aching in the right wrist-joint, during the siesta. Cramp-pain of the hand when seizing something. Painful stiffness of the palm of the left hand when seizing something. Visible twitchings in the hand. *Drawing pain* in the hand, towards evening. Tearing in the left wrist-joint. Tearing around the wrist-joint. *Stiches* in the right hand. Violent stiches in the palm of the left hand. Pain in the wrist-joint, as if bruised. *Very cold hands*, with excessive ill-humour. *The hand goes to sleep*, in the morning when in bed. The hand becomes numb and goes to sleep when laying it on anything. Trembling of the hand. *Sweaty hands*. Hot sweat in the palms of the hands, (with heat and redness of the face). °Rough skin. °Rhegades. °Copper-coloured spots in syphilitico-mercurial patients? *Itching of the hands*, also with chilblains and swelling of the hands, (at the end of April). Large blue *tubercles* and *spots* on both hands, itching, mostly at night. *Eruption* on the hands and between the fingers, with an itching-burning, going off by rubbing.—The fingers are painful when moved, with tension in the metacarpal joints. Frequent *drawing pain* in the extensor tendon of the index-finger towards the fore part. Paralytic drawing pain in the posterior joint of the thumb and in the hand, on falling asleep and on waking in the morning. Stiches in the middle joints of the fingers, he was unable to bend them without suffering pain. Burning pain in the fingers of the left hand. Pain, as from bruises, in the left little finger. Deadness of the fingers, in the cold air. *All the fingers go to sleep*, and feel a tingling. *Swelling of the fingers*, early in the morning on waking. Painful swelling of a finger-joint. °Small, itching *vesicles* on the fourth finger, like incipient herpes. °Herpes between the fingers. Suppurating spreading vesicle at the tip of the thumb.—White spots on the nails.

**Inferior Extremities.**—Soreness of the nates when touched. When riding in a carriage, at night, the nates feel sore. Pain in the region of the right glutei muscles.—Pressure and tension in the right *hip-joint*, when rising from a seat and beginning to walk, as if the head of the femur would be sprained. Drawing pain around the hips. The child limps and can only walk on his toes. *Soreness between the upper part of the lower limbs*, when walking. Ulcer below the right hip-joint, with tensive pain.—Itching of the upper and inner parts of the *lower limbs*. The lower limbs feel heavy, and painful when sitting. *Drawing* with pressure, in both lower limbs, from hip to foot, evening. Drawing pain in the right limb. Tearing in the bones of the lower limbs, causing her to moan. *Pain, as from bruises* in the limbs, as if too weary. *Heaviness of the lower limbs*. Paralytic pain in the left limb, at intervals of a couple of hours. Languor of the limbs when lying, not when walking. Tingling in the lower limbs, from the hips to the toes, day and night. °Uneasiness of the lower limbs, in the evening. Feeling of heat, with lassitude, in the joints of the limbs. Violent burning itching of the right limb, without eruption. \**Coldness and feeling of coldness* in the right limb.—Weakness of the *left thigh*, after a walk, with sensation as if the circulation were arrested. Sticheing pain in the region

of the head of the femur. °Pain of the thighs on rising from a seat. Aching pain above the knee, inferiorly and internally, rendering the limb weaker and stiffer. Cramp-like contraction in the middle of the thigh and below both calves, frequently during the day, a sort of tightness, as if the parts were compressed by a bandage. *Drawing in the muscles of the thigh*, as if they supported a heavy weight. Drawing in the thighs, in the evening, and itching of the skin. *Drawing and tearing in the thigh, beginning at the knee*, when sitting down, abating when touched. Tearing in the thigh, beginning at the knee, when walking. Throbbing and beatings in the thighs, as if ulcerated within; they do not bear the least touch, and are alternately hot and cold. *Pain, as from bruises* in the left thigh, or when stepping forwards. Pain in both thighs, as if broken. Prickling in the thighs. *Itching* of the thighs, she had to scratch them until they bled. Violent itching of the outer side of the thigh, at night when in bed, soon returning after scratching. Dry *herpes* on the outer side of the thigh, painful when touched. *Boil* on the thigh.—*Tension and constriction* of the bend of the knee, the whole afternoon. Pain in the left *patella*, he can scarcely walk. *Painful stiffness* of the bend of the knee, he is obliged almost to limp. Sensation as if the ham-strings were too short. Painful contractive sensation in the knee. Violent drawing in the knees, ending with a dart. Tearing in the knee, extending into the hip, at night, in bed, after walking a good deal. *Stitches in the knee*, when standing. Stitches in the bend of the knee, at night. Stitching pain in the outer part of the knee, when walking. Pain in the knees, as if sprained, especially when going down stairs. Pain, as if sprained or bruised, in the patella, when walking, especially when going down stairs; the pain gradually diminishes when walking on level ground, ceases even for a time; the pain is felt when bending the knee considerably, which then cracks. Giving way of the knees, when walking, he was sometimes unable to stir. *Feeling as if the bends of the knees were swollen*, when walking in the open air. °Weakness of the knees. Cold knees.—Momentary sharp pain in the leg, from the knee down to the tips of the toes, day and night. Cramp-pain in the lower part of the leg, in the muscles and tendons, also when touching the parts. \**Cramp in the calf*, -towards morning. Violent cramp in the calf when stretching the foot, or when drawing up the leg. °Cramp in the calf when walking (after sitting). Drawing in the middle of the calf, both during rest and motion, sometimes changed to a spasmodic, sudden jerking, in frequent attacks for two hours, (immediately). Drawing in the legs, as far as the knee. Paralytic drawing along the bones of the leg. °Jerking in the calves. Paralytic pain in the leg, with excessive heaviness and lassitude, during rest. Great weariness of the lower part of the legs, after a short walk. Feeling of heat in the legs, nevertheless they are cold to the touch.—*The feet* are painful; he cannot bear the pressure of the shoes. Pain in the periosteum of the os calcis. *Drawing in the feet*, as far as the knee, or when walking. Drawing pain from the ball of the foot to the heel, with feeling of weakness. *Tearing in the right foot*, early in the morning. Tearing in the left foot. *Tearing and stitches in the right foot*. Stitches in the malleoli. °Stitches in the heel on stepping. Pain, as from a sprain, in the tarsal joint, in the morning, on rising. Heaviness in the malleoli, extending through the foot, when walking and setting the feet down, as if the malleoli had been very much compressed. *Giving way of the tarsal joint, when walking*. Considerable *swelling of the feet*, after walking in the open air. *Burning* above the malleoli. Burning and itching of the feet. Icy-cold feet and legs, towards noon. Continual coldness of the feet, as far as the calves, in the day-time. Sweat of the left foot. *Copious sweat of the soles*, with subsequent soreness of the toes and balls, with prickling pain, as

if he were walking on pins. *Sweat of the feet*, also cold sweat. °Fetid sweat of the feet. °Restores the suppressed sweat of the feet, (secondary effect).—Painful sensitiveness of the toes, soles, and corns, as if inflamed. Pain in the ball of the little toe, when walking. Violent stitches in the right big toe and sole of the foot, hindering sleep. Pain under the nail of the big toe. Violent burning under the nail of the left big toe, in the evening when in bed. Violent tingling and itching of the big toe, evening. *Redness, inflammation and swelling* of one toe, with burning pain, after the foot had got wet. Redness and heat, with stitches, of the big toe and ball, as if frozen. *Chilblains on the big toes*. *Spreading vesicles* on the toes. A corn, with burning pain, forms on the middle left toe.—The corns become painful. Smarting pain in the corns.

**Sleep.**—Great weariness, in the evening, and nausea, followed by excessive yawning. Frequent yawning. *Drowsiness in the day-time*. Drowsy and weak the whole day. Very drowsy in the afternoon. Giddiness and drowsiness, he came near falling asleep when walking or standing, with drawing pain in the skin of the thighs, on the inner side. Drowsy and chilly in the evening.—He was unable to fall asleep, several nights, his sleep was a mere slumber. Unable to sleep for several nights. He wakes at four o'clock in the morning, and remains wide awake. \**He wakes at two o'clock every night, and is afterwards unable to fall asleep again, without complaining of anything*. Feels in the morning as if he had not slept at all. \**Frequent waking, in the night*. Sleeplessness and restlessness, until four o'clock in the morning; afterwards sleep with anxious dreams.—*Unrefreshing, restless sleep*. Restless sleep, he falls asleep late, wakes frequently and has many frightful dreams.—*Symptoms in the night*: she frequently jumps out of bed, roused from the deepest sleep by an imaginary frightful event, walks about, and finally discovers that it is a mere illusion. Waking in a state of restlessness, with anguish. He wakes once or twice, with headache, and remains awake one or two hours. *Bleeding from the nose at night*. Heavy, oppressed head, when asleep or only half asleep. Drawing and stitching toothache, with some swelling of the gums. Thirst. Violent eructations and spasm of the stomach. Violent pressure at the stomach. He wakes with pain in the stomach. Uneasiness in the abdomen and frequent waking. Pain in the stomach, during sleep, going off when waking. Restlessness and anguish in the abdomen, with heat in the head and hands. Pinching in the abdomen, and restless sleep. Spasms in the abdomen. A good deal of burning in the rectum, in the night when waking, and in the morning. Sleeplessness, owing to cold feet. Icy-coldness of the soles, hindering sleep. Violent stitch in the right chest, in the evening after lying down. Pains, when half asleep, which he does not distinctly recollect on waking. Sleep interrupted by oppressed breathing. He wakes with a very strong palpitation of the heart, and pulsations below the clavicle, without anguish. He wakes with anguish, coughs, and, if he does not drink, has to vomit. Stitchings and pinchings, at times below the chest, at times in the back. Stitches in the region of the heart, heat and thirst. Spasmodic pains in the chest and in the corresponding side of the spine, increased by inspiration. Twitchings in the left lower limb. The legs feel numb and dead; afterwards they experience cramps, especially in the calves, lastly stitches and prickling in the heels. Tearing in the lower limbs. Violent stitches in the right thigh. Weariness of the feet. Congestion of blood to the chest and heart. Oppressed breathing and anxiety, also in the morning. He wakes with a sort of oppressive anxiety. He is full of fear, for a moment after waking. Coldness, which does not allow him to get warm before midnight, with much yawning and little sleep. Anguish resembling palpitation of the heart, with nausea, without inclination to vomit, as if she had done something

wrong; she could not remain in her bed. A number of fancies, in the night. Ravings in the place of sleep, every night. In the evening, when in bed, he saw all sorts of figures, walking, running, disappearing, appearing again, increasing, decreasing, accompanied with chilliness. *Symptoms during sleep*: sweating, with the hands extended above the head, and snoring. The head feels heavy and pressed. Pain in the stomach, going off on waking. \*Pains -which he does not recollect distinctly on waking. Oppressive anxiety, a sort of *nightmare*, shortly after falling asleep, as if some one were lying under him, seizing him around the abdomen, so that he could not get loose. Sort of nightmare with sweat, while tormented by strange, lascivious dreams. Starting when falling asleep. Starting and jerking of the limbs. Starting, during the siesta, while sitting on a chair, as if touched by an electric shock, when lying on his back, he starts up, with a stitch in the right side of the chest from without inwards. Frequent anxious waking from an uneasy sleep. Fanciful dreams about feasting. *Dreams* causing anxiety, with violent starting. Anxious dreams, many nights. Anxious dream, as if he had to die. Anxious dream; on waking, all her pulses beat. *Anxious sleep, with moaning*. Anxious, vivid, sad dreams. *Anxious dreams*, with screams during sleep. Confused dreams, and a sort of coma vigil. \*Lascivious dreams, -also strange dreams with nightmare and sweat. He dreams he is committing a crime. Dreams about dead bodies. Frightful, terrifying dreams. Dream, first agreeable, then horrid. *Vexatious* dreams during an uneasy morning sleep, or the whole night, continuing even during a second sleep after waking. *After waking in the morning*: trembling through the whole body. Internal restlessness, particularly in the arms. \*Difficult anxious waking from a heavy, unrefreshing sleep. Great drowsiness after rising, would like to go to sleep again immediately.

**Fever.**—*Cold skin over the whole body*, at night. Cold hands and feet. Coolness of the body and head.—*Chilliness, in the evening before going to bed and after lying down*, over the whole body, a quarter of an hour. Chilliness of the whole body, with warm feet. *Chilliness, especially in the evening*. Chilliness in the afternoon, without any subsequent heat; he felt a dulness of the head the whole day. Chilliness, in the evening, when moving about in bed. Continual internal chilliness, in the evening, the external body feeling warm although he does not feel the warmth himself, (he goes near the stove,) with headache, as if the head were firmly bandaged.—Shuddering even in a warm room. Shuddering, as if goose-flesh would come on, the hair standing on end. Frequent shuddering, especially in the afternoon.—Violent fever with chilliness, especially in the back; he cannot get warm, and yet feels an internal heat. Chilliness, in the morning in bed, and the whole day, with heat in the face, in the afternoon. Chilliness and shaking, in the evening, afterwards flushes of heat with dryness of the throat. Chilliness, from bed-time till midnight (in August); afterwards dry heat of the lower limbs, head and body. Alternate coldness of the hands and heat of the head, with feverishness. Feverish chilliness, in the afternoon, for one hour, afterwards heat all over, for a quarter of an hour; followed by general sweat for two hours, without thirst either in the cold or hot stage. Quotidian fever, after having taken cold during a long ride in a violent wind, first chilliness for three hours, afterwards heat for six hours, with excessive sweat. \*Afternoon-fever, heat and chilliness. Feverish chilliness, in the afternoon, in the open air, for an hour and a half, afterwards dry heat, while in bed, with delirium in a sort of half-waking state, no sleep; sweat and sleep towards morning. Dry heat, afterwards violent chilliness, in the morning, in bed.—*Feverish heat* with quick pulse. Great heat in the face, in the evening, with icy-cold hands without thirst. Flushes of heat *on the cheeks*,

with thirst, and next evening very drowsy. Heat in the face and coldness of the rest of the body. Heat in the face, in the morning, on waking, and inclination to sweat. Heat and thirst, with little, turbid urine. Internal, dry heat, with thirst and feverish weakness. Heat in the eyes, pain in the small of the back and great anxiousness. Flushes of heat from time to time, or all over, towards evening, with sweat. *Frequent flushes of heat in the day-time*, with moistness of the hands. Flushes of heat and nausea, in the evening, previous to going to bed. Flushes of heat in the cheeks, without thirst. Dry heat over the whole body. Increased, continual warmth in the body, day and night, as from spirituous drinks, with increased inclination to perspire. Constant feeling of heat in the whole body, without thirst; she wants to be without covering day and night, and in a cool room. Heat, in the evening, especially of the feet. Heat in the face, in the evening. Heat of the skin. *Frequent attacks of heat in the face and on the hands*, with a good deal of weakness in the limbs. Great heat and no sleep, in the night. A good deal of *heat in the night*, especially on the thighs. *The blood, especially in the hands*, feels hot in the night. Heat, with thirst and dryness of the throat, in the night, frequently waking her from sleep, the thirst lasted twenty hours.—Unequal pulse; after a regular beat come two small beats, the fourth beat intermitting entirely.—*Sweat*, with cold hands and blue nails. Morning-sweat. Nightly moisture of the skin. *Night sweat*, every other night, profuse. *Night-sweat, every night*, also twenty nights in succession. Night-sweat, during which one wakes, with agreeable ideas. Night-sweat, especially on the feet, or on the chest, or only on the parts on which she is resting. He sweats as soon as he covers himself, (with the feather-bed). Night-sweat, during sleep. \**Fetid sweat*, for several nights. Profuse, fetid sweat, when performing manual labour. Sour, very fetid sweat, like the urine of horses. Nightly vaporous exhalations from the skin.

**Skin.**—°Dryness of the skin.—*Itching* over the whole body, and back. Violent itching in the bends of the knees and elbows, in the region of the olecranon, patella, and dorsum of the foot. The itching parts bleed when scratched. Itching prickings over the whole body, with large blotches after scratching.—Pimples.—*Frequent*, mostly large *boils*, on the scapula, nape of the neck, nates, thighs and legs.—A spot which had become sore by rubbing, becomes ulcerated.—Stinging pain in the ulcer, especially the first day. Shooting stitches in and around the ulcer, but especially burning, as from nettles. The ulcer bleeds violently when dressing it. The bloody ichor of the ulcer corrodes the skin, causing a smarting pain.—Dark freckles. Small warts on the neck. Smarting in a large wen on the upper lip, of eight years' standing, it bleeds when washing it, and is painful to the touch. Itching of the warts. *Stitches and sense as of pecking in the wart*. (For the eruptions and ulcers which have been cured with Nitric acidum, see Clin Obser.) Swelling of the hands and feet.

**General Symptoms.**—Pain in all the limbs, apparently in the bones. Pain in the arthritic nodosities, which had previously been painless. Cramp-like stiffness of the back and whole body. Stiffness of the lower limbs. Tension of the arms and lower limbs. Tension in the head and whole body. Painful rigidity in the left arm and lower limb. General tension of the nerves, with much thirst.—*Drawing in all the limbs*, stretching being very agreeable. Drawing pain in the periosteum of all the bones, as is felt previous to fever and ague. Drawing and tearing in the whole body. Drawing from the foot to the back, during motion. \*Drawing and burning in the limbs. \**Frequent drawing pains in almost every part of the body, -coming and going rapidly*. Aching and drawing pain around the knee-joints, malleoli, etc. \**Tearing in the upper and lower limbs*.—Twitchings in every part of the body. Twitchings and stretch-

ing of the limbs rouse her from the siesta. Twitchings and tearing of the joints. Twitchings of the muscles; also winking of the eyelids — Burning of the joints. °After walking the joints are painful, as if luxated. Great sensitiveness in the joints, early in the morning. Cracking in all the joints during motion. Weariness in all the joints, as if from running.—*Stitches in all the parts of the body*, now here, then there.—*Orgasm of the blood* and languor in all the limbs. The throbbing of the arteries in the upper part of the body is distinctly felt. In warm weather and after short exercise he feels easily heated. *A slight motion causes palpitation of the heart and sweat*, also soon after dinner. \**He takes cold easily*. Inclines to sweat and to take cold. In the evening, when exposed to a cold wind, he easily takes cold in his weak part, which then feels a drawing pain. The whole body is sensitive to the open air. He is sensitive to cold wind, and very chilly, for a long time. Pain in the back from taking cold. °Pinching and cutting in the abdomen from taking cold.—*When walking in the open air*: sweat, followed by headache and nausea. Short, but violent headache. Lancinations in the scapula, he was unable to rest on that part in the night. Violent pressure above the stomach and pit of the stomach. Pain in the left scapula and the region of the kidneys. After a walk, the feet remain cold, with heat in the head.—°Pains when the weather changes.—\**Excessive thinness*. \**Emaciation* of the whole body, especially of the upper arms and thighs.—The body feels weary and worn out, as after a severe illness. *Sick feeling in the whole body*, with weakness of the joints and heat in the head. Feeling of great faintness, the whole day. Frequent subdued trembling through the whole body. Tremor in the evening, and great weariness, as after violent bodily fatigue. Trembling all over. Great weariness and indolence, as if exhausted and bruised, both when sitting and walking. Sensation in all the muscles, as when resting one's-self after violent fatigue.—*Heaviness*. Heaviness of the head, and lower limbs. Feeling of heaviness in the joints, early in the morning, in bed, even when lying perfectly quiet. When walking in the open air, the body feels so heavy that he is scarcely able to drag it along. Indisposition to walk. The joints feel weak and bruised, as after long fatigue.—Exhausted after rising, until ten o'clock. The limbs feel paralyzed. Weakness and trembling of all the joints, \**or all over*. The hands and limbs feel weak and paralyzed, when pressing on them or when placing them in a constrained position, as if the circulation were arrested by a bandage. Weakness of the feet, and despondency. Great weakness, in the afternoon, going off in the evening. Want of energy of both mind and body. *He felt so weak that he had to lie down all the time*. He feels weakest in the evening, especially in the limbs. He feels weak even after slight exercise. Faintish sort of weakness, every other morning, with oppressive anxiety.—Fit of headache, in the afternoon, several days in succession, followed by nausea and anxiety; in the night, he is attacked with vomiting and diarrhoea. Two paroxysms every day, first, drawing in the back, followed by a griping in the sides moving along the lower border of the costal region to the pit of the stomach, where a turning sensation is experienced, the attack terminates with eructations. Fit of headache, in the morning when waking, with nausea and sensation as if the buccal cavity were numb and had gone to sleep.—*Epileptic fit*, beginning with a drawing in the left side of the chest, afterwards convulsive drawing through the arms to and fro, for one minute, when sitting, consciousness remaining almost undisturbed. Epileptic fit, after midnight; sensation in the left side as of a mouse creeping up and down; after this he lost his senses, his arms were jerked, his head and mouth were drawn to and fro, he bit his tongue, and finally became quite stiff and snored.

**Characteristic Peculiarities.**—The majority of the symptoms disappear by riding in a carriage. The symptoms increase towards evening, especially the drawing pain which is felt here and there. Pains, even slight ones, affect him violently, he is almost beside himself.

### NITROUS ACID.

FROM NOACK AND TRINKS.

#### SYMPTOMS,

(Obtained from inhaling the fumes.)

Spasmodic motions. Delirium. Bluish face. Weakness. Dry, sharp heat in the fauces, with irritation in the stomach and chest, with sensation of constriction in the pit of the stomach. Hiccough. Yellow stools after drinking milk. *Violent cough; considerable oppression of the chest, he had to sit down, the face was pale; a slight rattling was constantly heard in the chest; accompanied with frequent, not dry cough, after which an orange-coloured, frothy substance was frequently expectorated.—Hard pulse, with increasing danger of suffocation; inability to talk; death, with full consciousness.*

**Pathological Anatomy.**—In two men: emphysema in the left side of the chest and throat; red face; black lips; nails and sexual organs are blue; on moving the body, blood flowed from the nose and mouth. The right lung was entirely adhering, and filled with black, coagulated blood. The heart, particularly the right ventricle, was full of black, fluid blood. The trachea and the bronchial tubes were violet. The uvula was gangrenous, the stomach full of gas. The walls of the stomach were thickened, and ulcerated in the region of the pylorus. The bowels were of a slight rose-colour, all the blood-vessels were filled to excess with black, coagulated blood. (*Wibmer, Desgranges, etc.*)

### NITRI SPIRITUS DULCIS.

FROM NOACK AND TRINKS.

During the hospital typhus of 1813, Hahnemann recommended that agent for the following symptoms: indolence of the internal sensus communis, a sort of semi-paralysis of the mind; the patient lies quiet without sleeping or talking; he scarcely answers any question, even when urged; he appears to hear without understanding, the few words he utters are uttered with a low tone of voice, and are rational; he does not seem to feel anything, and is motionless without being paralyzed.—Hahnemann suggests that the spirits of nitre should be old enough not to redden the cork. He mixed one drop of the spirits with one ounce of water, and gave this solution within twenty-four hours, in tea-spoonful doses. (*See Hahnemann's lesser writings.*)

The spirit of nitre has cured the following symptoms, resulting from an abuse of common table-salt.

Pale face, with sunken eyes; languor; emaciation; extreme ill-humour, discouragement, disposition to quarrel and to be vehement; want of disposition to talk or work; heat in the mouth; heartburn; sour taste; loss of appetite; constant nausea and accumulation of water in the mouth; contractive sensation in the throat, and as if a plug were in the throat; sour and slimy vomiting, generally two hours after eating, followed by headache; repletion and pressure in the stomach, after eating, with contractive sensation; chilliness over the whole body, after vomiting; a good deal of chilliness in the back; tearing in the back from above downwards; aggravation in the afternoon; irregular and scanty menses; hands covered with warts.

### 175. NUX JUGLANS.

**NUX JUGL.**—*Juglans regia*, European walnut.—See *HYGEA*, XXII., Nos. 1 and 2.

#### ANTIDOTES?

#### CLINICAL OBSERVATIONS.

Of the many pretended cures which have been effected with this drug, the following have been reported by Doctor *Clotar Müller*, as well authenticated:

A man of twenty-one years had been suffering with *febris intermittens quar-*

tana since May, 1834, which had been treated with resolventia, amara, adstringentia, and particularly with China and sulphate of quinine, without the least effect. The paroxysms, which were at times anticipating, at others postponing, almost always set in early in the morning, lasting twelve hours, without any marked sweating stage; the patient was very much exhausted by night-sweats. Towards the end of August the patient became excessively feeble, headache, stupor, dyspnœa, dry cough supervened and the paroxysms came on every day. The patient suffered with thirst, had a strong appetite, the stools were at times hard, at times watery, the region of the liver was puffed up without being painful, the pulse was feeble and soft. After the use of Chelidonium, sal ammoniac and tartarus tartarisatus the fever resumed its quartan type. On the 9th of October the patient took two drachms of an infusion of Juglans with peppermint, after which he had two other slight paroxysms, and remained perfectly well ever after; all the symptoms disappeared.—A somewhat choleric but robust female of twenty-six years, whose catamenia had always been regular, had been affected with fluor albus for nineteen months past, without any syphilitic symptoms. The menses continued regular, but the discharge was at times slimy, at others bloody, sometimes accompanied with a burning sensation and pain in the external pudendum which was somewhat swollen. The remedies which had been used so far, internally and externally, had no effect. The discharge was cured completely and permanently with injections of a decoction of the shell of Nux juglans, (two drachms to six ounces colat.).

*Souberville* of Paris, has cured, with the Juglans, several cases of jaundice, for which many remedies had been tried fruitlessly.

Prof. Negrier, of Angers, recommends it for scrophulosis. Of fifty-six patients affected with goitre, ophthalmia, glandular swellings and swelling of bones, he cured thirty-one completely, relieved eighteen, and four died, two of phthisis tuberculosa, one of encephalitis, and one of compound pneumonia.

#### GENERAL THERAPEUTIC AND PHYSIOLOGICAL REMARKS.

The sphere of activity of Juglans appears on the whole to be rather limited, the digestive organs being particularly and directly affected by this drug. In these it causes derangement and irritation, which simultaneously call forth abnormal symptoms in other organs and systems, especially in the head. Gradually after the continued action of Nux jug., the digestive apparatus (a term to be taken in the broadest sense, because it embraces not only the stomach and intestines, but includes the liver, spleen, kidneys, glands, etc.), undergoes an entire change of action, its functions appear altered, and the product of its activity, the lymph and the blood are changed dyscrasically in their composition; the signs and consequences of this impression are the various exanthematous symptoms and material changes in the organic structures. For this reason these latter symptoms appear late and run a very chronic course, whereas the symptoms of the primæ viæ, which are mostly of a gastric nature, appear early and run a rapid course. But since the impression made by Juglans affects principally or exclusively the reproductive life of the organism, the symptoms caused consist, to a small degree only, of *pains and subjective sensations*, but chiefly of disturbances or alterations of the functions and secretions, and of organic changes of matter. The forms of pain are only itching and burning (skin,) aching (head, stomach, belly,) stitches (belly, chest, back, anus,) drawing (belly, extremities,) tearing (teeth,) and pinching (belly).

The symptoms of general fatigue and lassitude in the body are evidently of no great importance, and dependent only on the gastric affections, and those of the head.

I am of opinion that the symptoms which may be traced to the influence of the time of day, of evacuations of the bowels, or of meals, on the aggravation or alleviation of previously-existing symptoms, do not possess much characteristic value, and should not determine us in our selection of this drug as a remedy. Thus, for instance, an inflation and tension of the abdomen and stomach will, of course, be relieved by the discharge of wind and fæces; affections of the head caused by congestion be aggravated towards evening, whereas they will hardly be perceptible in the morning after a few hours sleep, etc.

Without intending to detract from the importance of the *subjective* symptoms, since they are of characteristic and decided significance in those remedies particularly which exercise their chief influence on the sensitive nervous parts, we cannot but make them very inferior to the *objective* symptoms; these will unquestionably furnish the best criterion for the employment of Juglans.

#### SYMPTOMS.

**Mind and Disposition.**—Indolence of the mind. Disinclination, and incapacity for work. Inattention when reading. Unusual indisposition to speak and argue. Peevish, discontented towards evening.

**Head.**—Vertigo. Excitement as if from intoxication, sensation as if hanging in the air, in the evening after lying down. *Confusion and heaviness* in the head in the forenoon, diminished after dinner. Heaviness in the head, which after dinner becomes an aching pain, but totally disappears at 3, p. m. Sensation in the forehead, the eyes and the nose, as at the commencement of catarrh. Dull headache until dinner-time. Pain in the forehead, particularly on jarring the head and moving the eyes. Pain in the forehead above the eye, particularly on the left side. Pain over the eyes in the forehead like a degree of vertigo. Headache, especially over the left eye. In the evening headache in the forehead. Pressing pain in the head, increased by motion of the latter. Pressing pain over the eyes, increased by motion. Pain and confusion in the head with burning in the eyes. The pain in the forehead aggravated by motion of the eyes. In the region of the left parietal bone, in a space of the size of a dollar a very unusual pain, like megrim, rendered very violent by speaking, but shortly disappearing, in the forenoon. Burning heat in the head whilst the extremities are icy-cold, in the evening in bed.

**Eyes.**—Burning in the eyes. Sensation in the eyes as if a catarrh were coming on.

**Face.**—Little pimples, mainly round the mouth. Painful, red and hard swelling of the left upper lip and cheek, with accumulation of pus in the centre.

**Teeth.**—Dull, tearing pains in hollow teeth, in the evening, aggravated by the warmth of the bed. In the gum of an upper left incisor a painful swelling and abscess without previous toothache; on the hard swelling of the upper lip and cheek was found a sharp distinct circle of the size of a sixpence, rather depressed if compared with the rest of the swelling, dark-red and quite soft; a removal of the tooth caused an internal discharge of the pus and in a few days the swelling had totally disappeared.

**Mouth.**—White-coated tongue, in the morning on waking. Accumulation of saliva in the mouth.

**Appetite.**—Mucous, bitter, disagreeable taste in the morning on waking. Very bitter taste. Good appetite in spite of great fulness in the stomach and abdomen. Extraordinarily strong appetite. Great thirst. Unusual want of thirst at dinner and supper, a kind of comfort in keeping the mouth dry. Wine does not taste well. Aversion to smoking in the evening. *After eating* aggravation of most symptoms, but few improve.

**Stomach.**—Hiccough, particularly after heavy dishes. *Violent, loud, constant eructations*, mostly without taste. Inclination and desire to eructate. *Great fulness and heaviness* in the stomach, relieved by eructations. *Immense fulness, inflation and tension of the stomach*, so that he can hardly endure the clothes, and although having a good appetite, can hardly eat anything. Nausea, with a sensation of burning in the stomach immediately on taking the medicine. Nausea with accumulation of saliva in the mouth. Disposition to vomit. Vomiting of food three hours after the usual evening meal, which wakes him in his sleep, but he soon falls asleep again. *Pressure in the stomach.*

**Abdomen.**—*Great fulness, inflation, tension and weight in the abdomen.* Immense fulness before and after meals. Great inflation which causes a constant desire to go to stool. Hard, tympanitic abdomen. Disagreeable sensation of tension and fulness after a healthy evacuation. *Inflation, modified by eructations, and passage of wind from the bowels.* *Constant flatulence* nearly the whole day. Very frequent flatulence which is discharged mostly in a horizontal position. The flatus are nearly free from smell. Rumbling noise in the belly. Darting pains in the left hypochondriac region, aggravated by a full breath, laughing and stooping, from the morning at eleven till towards six in the evening, repeated for several days. Stitches in the left hypochondrium below the last ribs for several minutes. Darting pains in the left side of the abdomen, perceptible at first only when taking violent exercise, and then spreading over the whole abdomen. Violent stitches in the hypogastric region when stooping. Violent aching pains in the whole abdomen, alleviated by eructations and discharge of wind. Pressing pain in the whole left side of the abdomen, with shifting gripes in the intestines. Dull pain in the left side when walking fast. Drawing in the intestines. Slight sensation of pain as if in the intestines just above the navel. Slight gripes preceding the evacuations. Violent pains in the whole lower region of the abdomen with nausea, pretty constant throughout the day, with short intermissions; the next day these pains grew more violent, pressing and drawing, aggravated by motion, and menstruation sets in too early.

**Stools.**—Solid. Constipation lasting from forty-eight to sixty hours. Hard stools requiring great exertion. Crumbling stool, though not hard. Abundant evacuation, very soft, finally nearly liquid. Frequent desire to evacuate, two or three times a day, but always without much result. Very suddenly great desire to go to stool during dinner. Soft, nearly liquid. *Liquid feces* five times a day preceded by gripes in the belly. *After evacuation*: relief of inflation and weight in the belly.

**Anus.**—Burning pain and pressure in the anus after a large evacuation. Itching in the anus very much aggravated in the evening on lying down in bed, returns periodically every five minutes, with painful stitches in the anus, obliging him to get up.

**Urinary Organs.**—*Exceedingly increased secretion of urine* (nearly twice as much as usual) without perceptible increase of thirst. *Very frequent urination* (in one forenoon eight times) during the day as well as at night. For several successive nights he was waked by the desire to urinate. Frequent inclination to urinate though but little passes at a time, as if owing to a relaxed state of the sphincter vesicæ. Constant pressure to urinate, and sometimes, if not immediately gratified, involuntary evacuation of urine by drops. Diminished secretion of urine, inadequate to the liquids taken into the stomach. Nearly always clear urine without sediment.

**Male Genital Organs.**—Frequent erections, by day and night, eight and ten in one day. Dreams with erections. Emissions of semen two nights in

succession. A small abrasion of the skin on the penis near the prepuce, consequent upon coition, degenerates in a week, notwithstanding cleanliness, into an ulcer several lines broad, half encircling the member between glans and penis, with hard edges and a surface which bleeds easily, suppurating violently, forming a scurf, and taking thirty-seven days to heal.

**Female Sexual Organs.**—Menstruation a fortnight too soon, preceded by violently-pressing and drawing pains in the womb; the loss of blood very abundant in blackish and often large lumps, continuing a week, whereas its normal duration has been three days.

**Respiratory Organs.**—In the nose, eyes and head a sensation as if a cataract were beginning. Increased mucous secretion in the throat, thrown up by hawking. Transient short stitches, as if in both lungs, independently of respiration or motion, frequently in the course of the day. Oppression on the chest before and during exercise. Itching on the sternum, frequently returning and inducing scratching, in the afternoon.

**Trunk.**—Exceedingly severe short stitches, deep in the sacral region, frequently in the course of the forenoon. Eruption on the back, on the shoulders and the neck, of little red pimples, of which several grew larger, containing a thick fluid (a species of acne). Small vesicles in the axillæ, appearing suddenly with burning and itching, slightly exuding, with soreness, redness and abrasion of the skin (eczema rubrum). Great boils on the shoulder and region of the liver, suppurating violently, and painful. Burning and itching in various parts of the body, in the evening in bed, interfering with sleep.

**Upper Extremities.**—Electric starts, recurring simultaneously through both forearms and hands, on the approach of sleep in the forenoon. Drawing, and numb feeling, with sensation of weakness in the right hand, lasting but a short time. Peculiar drawing pain in the upper joint of the thumb of the right hand, more violent when moved, not increased by pressure, seems as if dislocated, felt for several days. The same sensation in the right index-finger. Itching in several fingers of the right hand, in the afternoon. Itching on the arms in the evening in bed. In the bend of the right elbow spots of the size of two inches, which itch violently, and on which is formed a small yellow elevation filled with pus, vanished in a week without bursting. On the biceps muscle of the right arm a red spot, which gradually rises and in about ten days reaches the size of a buckshot, and feels hard to the touch, somewhat like a hardened cutaneous gland or a steatoma, but is, however, totally painless; disappearing in a few weeks. On the right forearm near the bend of the elbow, violent burning and itching on a red spot as large as a dollar, in the centre of which a little knob was formed; next day the red spot had disappeared, the knob had grown considerably and was very painful; although pus had evidently been formed within it, yet it did not continue to increase, but gradually dispersed so that in six days nothing more was to be seen of it. On the biceps of the right arm a large and painful boil with considerable hardening and redness of the circumference, which broke in ten days, discharging a good deal of thick, bloody pus, but healed up very quickly afterwards. An old tetter on the hand commenced to itch and to grow sore.

**Lower Extremities.**—Pain and impediment to walking, about the right patella, shortly before noon. Rheumatic pain inside the knee-joint rendering walking difficult, lasting a minute, forenoon. Drawing and sensation of numbness in the lower part of the thigh and knee, with great weakness in the leg, and giving way of the knees, very much interfering with walking, forenoon. Peculiar drawing in the right large toe, as if it were dislocated, in the evening in bed, next morning after rising this symptom disappears. Pricking and itching

in the skin of the right thigh. Burning and itching on the legs, in the evening in bed. On the left instep redness of the size of a dollar, with little knobs which discharged no fluid, but formed a little hard scab, rendering the whole spot gradually elevated and painful. In a few months these knobs vanished, but the spot remained bluish-red and a little indurated. The same thing was observed on the right instep but in a less degree.

**Sleep.**—Frequent yawning and stretching during the day. During the evenings in bed, excitement as if from intoxication, a sensation as if hanging in the air, with turning and reeling. In the evening uneasy sleep. Cannot fall asleep for some time, is very uneasy and tosses about. Uneasy sleep with fearful dreams. Many and uneasy dreams. He feels earlier disposed than usual for his afternoon nap, but cannot drop asleep. Sudden waking during the afternoon sleep, caused by electrical starts which run simultaneously through both forearms and hands as soon as he begins to fall asleep.

**Fever.**—During the day, alternation of cold and heat in the body, of short duration. In the evening cold extremities and burning face. Sudden flashes of heat, several times in the day. Moderate perspiration, in the evening. Frequent pulse and fuller than usual in the evening. Frequent pulse (108 a minute) with burning hands in the evening.

**Skin.**—Itching on the fingers. Itching on the right hand, then again at one time on the foot, at another on the forehead, the scalp, or the belly, without any peculiar appearance on the skin, in the afternoon. In the evening in bed burning and itching sensation on the skin of the legs, arms and belly, here or there, interfering with the approach of sleep. Frequent pricking and itching on the skin of the right thigh. Violent itching on the arms in bed. Little pimples (*acne pustulosa*) in the face, chiefly about the mouth. Small red pimples on the neck, in the face, on the shoulders and the back, some of which grow larger and contain a thick fluid. Small blisters in the axillæ, appearing suddenly with burning and itching, rendering the shirt stiff and colouring it greenish-yellow, accompanied by soreness, redness and chapping of the skin, aggravated by sweating and violent motion of the arms (*eczema rubrum*). Little knobs with hard scurf on the instep, with redness and thickening of the skin, and violent itching (*lichen*). On the arm a round red spot, in the middle of which a little knob is formed which burns and itches violently. Red spots on the arm with a little pimple in the middle. Large boils on the shoulder, on the arm and on the hip, suppurating violently, accompanied by severe pains; only in one instance leaving behind a hardening which did not disappear for weeks. A small, hard, red, ball-like swelling on the arm (like an indurated gland) which several weeks after disappeared. (An old tetter on the hand commences again to itch and becomes sore.) A small erosion on the penis is transformed into a violently suppurating ulcer, extending round the whole penis, with thick hard edges, the surface bleeding easily, and required five weeks to heal up, whilst scurf was forming. Hard, reddish, very painful swelling on the left cheek, in the midst of which a round, dark-red, soft, depressed spot, proceeding from the gums and discharging itself internally on the extraction of a tooth.

**General Symptoms.**—General lassitude of the body. Feeling of relaxation of the muscles. Debility. Aggravation of several of the symptoms towards evening and night. Aggravation of symptoms after meals, but rarely an alleviation of them. Improvement of symptoms by evacuation of the bowels.

## 176. NUX MOSCHATA.

**NUX MOSCH.**—Nutmeg.—**HELBIG, HERACLID, I.**—*Duration of Action*: from eight days to three weeks.

**COMPARE WITH**—Con., Ign., Mosch., Nux v., Op., Puls., Sep., Sulph.

**ANTIDOTES.**—Camph.,? Carroway.

## CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

The following affections have been cured with Nux Moschata: hysteria. Imbecility.—Nervous vertigo.—Neuralgia capitis: aching, burning, stinging pains above the right eye, with hot face, contracted lips, spasmodic movement of the lower jaw and heaviness of the feet.—Convulsive movements of the head from behind forwards, difficulty of swallowing and talking, violent drawing and dragging pains in the nape of the neck, in the case of a female.—Dyspepsia.—Enormous distention of the abdomen after every meal, with nervous irritation of the intestinal canal.—Chronic cough after a cold.

## SYMPTOMS.

Whining mood, with lachrymation and burning of the eyes.—Indifference.—Hypochondriac mood for several forenoons, with heat in the face and hands, and prostration.—*Fitful mood*: wants to undertake a thing and changes his mind before commencing it. At times serious, at others disposed to laugh.—*Fine spirits*, everything appears to him ludicrous, ludicrous ideas crowd upon his mind all the time. *Excessive disposition to laugh, particularly in the open air.*

**Sensorium.**—\**Weakness of memory.* Is unable to remember certain things, is unable to recollect the things which had been learned a short time previous.—*Absence of mind*, as if intoxicated and deprived of his sense. *Gradual vanishing of thoughts, in reading, with disposition to sleep.* *Dulness of sense, and dizzy vanishing of thoughts.* He staggers while walking, during which his thoughts gradually become fixed on one idea until he starts suddenly from a complete loss of ideas without knowing where he is. He never achieves what he proposes to do, remains standing at one spot in perfect absence of mind, and appears entirely changed to his acquaintances. *Sudden disappearance of ideas while writing, even before the idea is half written down*, with great difficulty of calling back the lost thought, which soon again escapes the memory and is called back with difficulty. Uses different kinds of letters in writing, contrary to his intention, and falls from one subject into another.—*Slowness of ideas*, he has to think of an answer a long time and is frequently unable to say anything. Is unable to comprehend anything in reading and does not know what he is reading. Nutmeg possesses stupifying, narcotic powers. °Imbecility.?—*Delirium and imbecility.* Intoxication resembling madness. Delirium with violent vertigo, strange gestures, improper talk with a loud tone of voice; cannot be quieted or put to sleep by anything. Crazy, idiotic. Remains standing in the street, gesticulates like a crazy person, loses his thoughts completely, and (on waking) thinks everything around him ridiculous, looks stupid and childish, (all these symptoms cease on re-entering the room).—\**Dulness of the forehead*,—as if from vapour. Induces a feeling as from heavy vapours in the head. Continual slowness of the external senses and motor system. °Gloominess of the head.—*Feeling of intoxication* in the head. Intoxication, also with staggering or indolence, or also with heaviness of the head and pain in the forehead and

afterwards in the occiput.—*Reeling*, with great anguish. Reeling sensation in the evening during a walk in the open air, with staggering to the left side. Reeling, with gradual rigidity and insensibility, causing him to fall from his chair; soon after, sleep alternating with delirium, with subsequent dulness and headache.—*Vertigo*: with heaviness of the head and loss of memory. Vertigo and fatal *apoplexy*. Nux mosch. has soporific powers, causes *apoplexy*, reeling and delirium.—°Is useful in all non-inflammatory affections of the brain, paralysis and other nervous affections.??

**Head.**—*Pain in the forehead*, also early in the morning.—*Heaviness of the head*, with oppressive dulness and feeling of swelling in the left half of the head and face, with prickling in those parts as from an electric current. Violent sensation in the forehead *as if it would be pushed out*; the forehead feels to him as large again, with reeling sensation and dizziness as after intoxication.—*Pressure in the head*, on the right side, as if in the bone, partly about the occiput, partly above the ear. Pressure at a small spot above the left frontal eminence. Pressure from the sinciput to the forehead, on stooping. Pressure in the *sinciput*, with feeling of stupefaction, also with closing of the eyelids and yawning. Pressure from behind forwards at a small spot above the left eye. Hot pressure in both sides of the head, particularly in the temples, as if from within outwards. Hard pressure on the sinciput, in the forenoon.—*Compression of the head* from behind and before, on waking from the siesta. Sensation of painful compression or *spasmodic contraction* in the sinciput, with dulness of the mind and disposition to sleep.—*Stitches* in the right temple from within outwards, with stitches and pressure in the left temple.—*Beating* with pressure above the left eye, early in the morning. Beating with pressure at small spots of the head, particularly in the region of the left brow, at night, with restlessness, dry heat, sleeplessness, dryness and stickiness of the lips and tongue, and sensation as if all the vessels were beating.—*Sensation in the head on shaking it as if the brain were striking against the skull*, with heat in the head and pain, *particularly in the temples*, which are sensitive to the touch.—Mounting of warmth to the vertex, with sensation of contraction on the sinciput and pressure from without inwards.

**Eyes.**—*Feeling of fulness* in the eyes, with sensation as if the pupils were contracted. Pressure in the lids as if one would go to sleep. Tension around the right eye, particularly in the lower lid, as if difficult to open, with pressure in the eye and urging to press the lids together, imagining that this will open the eye more widely. Burning of the eyes and profuse lachrymation.—*Sensation of bloatedness* under the right eye.—*Feeling of dryness in the eyes*, with dulness of the head and forehead, disposition to close the eyes as from sleep, and difficulty of reading by candle-light. Feeling of dryness and roughness of the eyes, and difficulty of opening or closing them.—Dryness of the lids with tension.—°Weakness of sight.? ° Amaurosis.?—Illusion of sight: he was unable to distinguish distances; his workshop appeared so far to his eyes that he thought he should never get there; his body felt heavy, his head confused and hot, and he was unable to find words for his thoughts, (in the case of a man who had eaten a whole nut on a slice of bread and butter).

**Ears.**—*Pain in the ear*, in the region of the posterior wall of the fauces (Eustachian tube), as if a rough body had lodged there, during a ride in the carriage, in the evening, previous to the setting in of wind and rain. Pain in the ear as if a dull instrument were pushed to and fro.—*Dragging pain* in the ear, also sticking dragging. *Stitches in the ears*, also particularly in the right ear. Single turns of sharp pressure in the left ear, particularly on moving the lower jaw.

**Nose.**—Gripping and sticking in the nose, inducing rubbing.—*Frequent sneez-*

*ing*, also early in the morning, or with sensation of coryza.—*Dryness* of the nose, immediately after blowing the powder up into the nose.—*Stoppage*, particularly of the left nostril, with tingling, sneezing, necessity to breathe with open mouth, momentary amelioration on moving about or raising one's-self in bed, and complete disappearance of the symptoms after rising. Catarrhal sensation of stoppage in the left nostril, without dryness or actual obstruction, but with a sensation of want of air.

**Face.**—Blue margins around the eyes. °Pale face.? Heat of the cheeks with slight redness.—Violent *pain* in the right malar bone. Pressure in the right cheek, extending to the ear and articulation of the jaw, early in the morning.—°*Fred. ves.?*—Hot stinging about the chin. Painfulness of the skin under the chin, as if pimples would form. Pustules on the chin, with a broad, red border.

**Jaws and Teeth.**—Drawing pain in the flesh of the *right jaw*. Spasmodic contraction with pressure, from both articulations forwards.—*Painfulness of the teeth*, in the evening, more particularly of the left upper and lower molares. *Painfulness of the front-teeth on inhaling cold or damp air*, also on drinking anything warm. Grumbling in the teeth as if toothache would set in.—Pressing and pressure from within outwards in the molar teeth, early in the morning, occasioned by the contact of the open air and returning after washing or taking cold. \**Pressure as if the teeth were grasped, to be pulled out*, particularly in a loose tooth, and sensation as if the pain were occasioned by concussion of the body, °*arising from damp cold evening-air, also with pain in the nape of the neck*, feeling of looseness of the teeth and relief of the pain by warm water.—Painless jerks in a molar tooth, after taking a cold drink, succeeded by redness of the cheek. Jerking drawing in the left upper molares, when talking a good deal and with a strong voice, also when touched by cold air.—°*Tearing in the teeth*, °at night, with inability to close the jaws, which feel paralyzed. °*Sticking and tearing in the teeth of pregnant females*, with tearing in the ears and temples, stitches in the teeth on sucking them with the tongue, and aggravation of the pain by air and contact.—°*Sticking pains in the teeth, relieved by the application of warmth* (several cases). Prickling in the front-teeth.—Dulness of the teeth as if covered with lime, or also with a feeling of softness.—Increased disposition of the gums to bleed.

**Mouth.**—*Great feeling of dryness in the mouth*, particularly at night, with slimy feeling in the mouth, thirst, dryness of the nose, and mealy sensation about the palate. Feeling of dryness in the mouth, with disposition to press the tongue constantly to the palate, and taste in the mouth as after eating salt things. *Feeling of dryness in the mouth and on the tongue*, also extending to the throat, or (in the evening) as after eating herring and with sensation as if the tongue were sticking to the palate. Feeling of dryness with sensation as if the saliva and mucus were quite thick, with sensation on the tongue as after having eaten salt things and disposition to drink without any real thirst.—*Real dryness*, with saliva, which feels like cotton. Dryness in the mouth, throat and on the tongue, with fulness in the stomach and loss of appetite. Dryness of the palate and tongue at night, with stoppage of the nose as from thick mucus, absence of thirst, and feeling of the tongue as if made of leather.—Pressure in the region of the orifices of the salivary ducts on either side of the tongue. Bright-red, *shining* elevations, resembling mucous glands, below the frænum linguæ, somewhat larger than millet-seeds. °*Aphthæ.?*—At night the tongue feels pithy, as if gone to sleep and dry. The tongue is coated with white mucus, with slimy mouth, feeling of dryness in the throat and much thirst. °*Paralysis of the tongue.?*

**Pharynx and Oesophagus.**—Pressure in the region of the velum palati and the left tonsil as from a hard body. The vessels of the velum palati and fauces are injected, with sensation of rawness. Stinging in the throat, obliging him to hawk.—°Kind of *quinsy* in children, with violent fever.?—°Paralysis of the organs of deglutition.?—Seraping in the throat, particularly on swallowing, or with feeling of dryness and seraping. *Feeling of dryness* in the fauces and posterior nares, with urging to empty deglutition.—°*Dryness* of the curtain, palate and lips, with burning as in coryza. Violent dryness, so that one is scarcely able to swallow a piece of apple.

**Appetite and Taste.**—°*Chalk-like and pippy taste* in the mouth and on the tongue, also particularly in the morning, before breakfast.—A good deal of thirst soon after taking the drug.—Little appetite and speedy repletion. Aversion to smoking.—°*Increased appetite*, returning soon after a meal. *Great hunger, he eats a good deal, with bloatedness after eating*, or with hurried eating and inability to be satiated, although the food oppresses the stomach. °Canine hunger.?—°*After a meal*: feeling of languor. °Malaise which disappears after exercise.—°*Weakness of stomach and digestive functions*. The headache is apt to set in after eating, and particularly after breakfast.

**Gastric Symptoms.**—°*Eructations* as from the oil of turpentine. Seraping eructations, after every meal.—°*Heartburn*.?? °Hiccough.??—°*Nausea* in the forenoon, alternating with increase of appetite. °Nausea and vomiting of pregnant females.? °Retching and vomiting.? °Vomiting and loathing.?? °*Seasickness*.?? °*Asiatic cholera*.??

**Stomach.**—°Repletion of the stomach with tightness of breathing. °Distention of the stomach.—°*Pressure at the stomach*, -also with burning rising. °Pressure in the pit of the stomach as from incarcerated flatulence.—°Spasm of the stomach with great weakness of that organ.??—°*Warmth* in the stomach.—°Bloatedness of the stomach, bowels and uterus.

**Hypochondria.**—°Strengthens the liver and spleen.?? °Obstruction of the liver or spleen.? °Relieves swelling of the liver, with appearance of bloody stools. °Feeling of heaviness in the region of the liver. Pressure in the liver (in a female affected with enlargement of the liver) as if stones would press out or cut through, with diarrhoeic stools, preceded by a feeling of ease about the stomach, as if something were rising in the region of that organ and as if the evacuation proceeded from the liver. °Biliary calculi.??—°Swelling of the spleen.??

**Abdomen.**—Colic around the umbilicus, relieved by pressure.—°*Pressure* in the abdomen or nightly pressing from both sides to the pit of the stomach. Uncomfortable feeling of fulness as after eating too much.—°*Jerks in the abdomen*, also below the liver.—°*Contractive sensation* in the epigastric region, on the right side, when walking, as if pressing towards the outer parts. Pinching contraction at a small spot on the right side of and near the umbilicus.—°*Pinching in the abdomen* below the stomach as if colic would set in. *Pinching in the umbilical region*, in bed, at night or in the evening (after the chill). Pinching in the hypogastrium, several mornings after breakfast, going off during rest.—°*Cutting* in the epigastrum, with distention. Cutting, proceeding, like two rays, from the umbilicus backwards and downwards to either side of the abdomen, at night. Cutting, commencing in the left side of the hypogastrium, and proceeding to the right side and downwards. Cutting in the middle of the abdomen, in the evening, with shiftings of flatulence, diarrhoea and pain in the temples.—°Sticking near the umbilicus which is contracted in consequence, painful like a splenic stitch.—°Distention of the abdomen as from flatulence, °depriving one of sleep at night. Distention of the abdomen, towards evening, with writhing

around the umbilicus, which at times rises to the heart, at others proceeds downwards, attended with discharge of ascarides during stool. °Distended abdomen, with restless sleep, or heaviness in the epigastrium.—Feeling of qualmishness in the full, distended abdomen, with pain in the small of the back.—°Flatulence after parturition, with labour-pains.?—Flatulence in the evening, with pinching in the abdomen and discharge of flatulence which affords relief. Flatulence with pressing in the left side from within outwards. Rumbling. Discharge of *fetid* flatulence.

**Stool and Anus.**—*Slow, difficult stool, the first days.* Even the soft stool does not come out without pressing, and is sometimes attended with a sensation as if stool were still remaining, or with sensation of fulness and distention in the abdomen.—*Urging to stool, as if diarrhœa would set in,* however there is either no evacuation or only a *hard, difficult stool* (which is sometimes of a light-yellow colour, and contains undigested food). Empty urging with sensation in the anus as if swollen.—Hard stool with prickings, succeeded and accompanied by painful contraction of the anus and rectum.—Easy papescient evacuation the first day. The stools are looser than usual, also early in the morning, or in children, or attended with pressure towards the pelvis, and with sensation in the rectum as of an acrid fluid and as if more stool would be discharged after the evacuation. *Watery stool, preceded by hard, intermittent stool.*—°*Diarrhœa*, early in the morning, after eating milk. Slimy diarrhœa, as from worms. Chronic diarrhœa in the case of a pregnant female. °Stools look like stirred eggs, with great loss of appetite, in the case of a child. °Diarrhœa with loss of appetite and great drowsiness, in the case of little girls. °Diarrhœa from debility and taking cold.? °*Colliquative*, putrid diarrhœa, particularly in typhoid fevers.? Bloody diarrhœa in putrid fever.? °Various kinds of diarrhœa in young and old people.?? °Lienteria and dysentery.??—Bloody stools, in the case of two women with indurated livers, and also in the case of an infant affected with swelling of the cervical glands.—°Worm-affections of children, *with drowsiness and cutting in the abdomen.*

**Urinary Organs.**—*A good deal of urging* with scanty emission, at night. Painful dysuria.—*Urine diminished, saturated.* Urine smelling of violets or nutmeg.—°Burning and cutting of the urine.? °Stone.?? °Colica renalis.??

**Male Sexual Organs.**—Cramp-pain in the penis from below upwards. Pressure and drawing in the spermatic cord of the testicle which had formerly been contused.—°Spermatorrhœa.??—Want of sexual desire, also with diminution of the thrill during an embrace. *Great laxness of the parts*, feeble or deficient erections, even when there is an inclination for an embrace. °Nutmeg was recommended in former times for deficiency of semen and weakness of the sexual powers.

**Female Sexual Organs.**—*Menses too late* (2, 3 days), preceded by pain in the small of the back as if a piece of wood stretched across the small of the back were pressing from within outwards, accompanied with headache, languor, pressure in the stomach, waterbrash, pain in the liver, and discharge of a thick, dark blood, whereas only mucus had been discharged at the time of the menses. *Menses too early by 4, 5 days*, with pressing in the abdomen and drawing in the limbs.—°Various, non-inflammatory uterine affections.?? °Sterility.?? °Threatening miscarriage.? °*False, deficient, or spasmodic labour-pains.*?? °*Painful bloatedness of the uterus after parturition.*?? °*Difficult labour.*??

**Larynx.**—Hoarse voice. Altered voice, with feeling of dryness in the larynx.—°*Sudden hoarseness*, on walking against the wind. °*Catarrh and roughness of the trachea from taking cold.*—Creeping and titillation in the upper part of the chest, inducing cough, also with soreness in the trachea.—°Cough of preg-

nant females.? °*Dry cough with interruption of breathing*, in the case of a child, after taking cold by standing in the water. °Cough coming on in bed or when getting heated by working, with ereeping from the chest to the throat.—*Expectoration of a quantity of mucus*, in a prover who was affected with a dry cough. Discharge of blood either pure or mixed with mucus, with stitches in the chest. °Older physicians recommend nutmeg for cough, asthma, spitting of blood and consumption.—Painful rawness in the chest when coughing.

**Chest.**—°Difficulty of breathing. °Want of breath after eating. Sudden pain around the chest in the region of the diaphragm, on drawing breath.—\**Oppression of the chest proceeding from the pit of the stomach*. Oppression of the chest with difficulty of breathing, or with rush of blood to the heart. Oppression of the chest *with tightness of the throat, as if she would be choked*, dryness of the mouth, swollen, viscid lips, extreme difficulty of breathing, hardness and obstruction of the abdomen, giddiness and heaviness of the head and loss of memory. Oppression of the chest as if a suffocative cough would set in, with sensation as if lard or grease had lodged in the throat, through which a sufficient quantity of air cannot pass, in the evening, during a walk in the open cool air. Tightness of the chest, with constrictive pain in the muscles, obliging one to draw deep breath, and becoming so violent during motion that he has to sit down.—*Painful feeling of weight on the chest*, impeding the breathing. Oppressive feeling of heaviness, particularly under the sternum, worse in the evening on going to sleep, and at noon on waking from the siesta, and frequently obliging him *to take deep breath and expand the chest*. Spasmodic pressing feeling of heaviness from the pit of the stomach to the back and scapulæ, with urging to take deep breath, sensation as if the chest would be pressed asunder and dry cough which becomes loose in the morning, and seems to proceed from the back, attended with drowsiness, dryness of the nose, and afterwards pains in the back between the scapulæ.—°Spasms in the chest.?—*Feeling of fulness* in the upper and front part of the chest, with paroxysms of aching pain under the sternum on attempting to draw deep breath. *Pressure, from without inwards*, in the right and lower part of the chest, succeeded by rising to the throat and mouth, with accumulation of bitter water and inclination to dry cough.—Dartings in the fore part of the chest, shooting upwards in an oblique direction and arresting the breathing.—*Painfulness of the fore part of the chest, in the evening*, impeding the breathing, sometimes accompanied by pressure in the right side of the chest. Sensation as if the chest had been beaten, particularly on drawing breath and when the flatulent pinching is experienced in the abdomen. Pain as from a blow in the pectoralis major on moving the arm, increased by contact and pressure.—Spasmodic stitches in the region of the heart, early in bed, with colic. °Tremor of the heart.? *Palpitation of the heart*. °Palpitation of the heart with fainting.?

**Back.**—Bruised pain in the small of the back and calves, with languor of the lower limbs. Pain as from blows all over, particularly during rest, also in the evening.—*Pains in the back*, when riding in a carriage. *Pain near the lumbar vertebrae, as from blows with a fist*.—°*Tabes dorsalis*.?—Drawing pain in the nape of the neck, when a damp wind blows on the parts.

**Upper Extremities.**—Paroxysms of drawing in the arms, with frequent boring through the elbows.—Sensation as of flatulence in the muscles of the upper arms. Sticking in the flexor side of the upper arms, also of the shoulder and elbow-joint, apparently in the vessels.—Tearing in the extensor muscles in the region of the left elbow, impeding motion.—The hands are hot and burn. Cold hands as if frozen, with buzzing in the hands on entering a room.—Pain, as if sprained, of the joints of the left little finger, on seizing anything.

**Lower Limbs.**—The lower limbs are painful and languid as after a long journey, with great uneasiness in the limbs, and pain in the dorsum of the feet, as if a hard body had fallen on them.—*Pain in the thighs* as if he had had a fall on them, particularly posteriorly as from riding on horseback, aggravated by contact and walking. Drawing pain in the thighs.—Sensation of constriction in the right *knee*, as if grasped by some one. Pain in the right knee as if sprained, during motion, and particularly on going up-stairs.—Pressure in the fore part of the left leg, in the morning, while standing. Drawing in the *calves*, particularly when standing, less when lying, with trembling and weakness of the lower limbs and hands after rising. Violent cramp in the calves on moving the right lower limb while lying. Throbbing in the left calf as from the bursting of a vessel.—Throbbing and feeling of warmth on the inner border of the foot, at noon, while lying. Digging pressure in the soles, early.—*Buzzing in the toes as after freezing, across the sole to the heel, which is painful as if sprained*, the buzzing remains the same in any position of the foot, and returns on pressing the foot to the ground.

**Sleep.**—*Great drowsiness*, with great inclination to laugh. *Drowsy and dizzy, as if intoxicated*. Drowsiness with agglutination of the eyes, the head being constantly drawn to the left side. Drowsiness with nausea and accumulation of water in the mouth. *Irresistible* drowsiness, particularly after eating. She falls asleep as soon as she sits down, with pain of the whole head and rising to the head as if intoxicated. *Deep sopor*, he lies immovable.—*Dreaminess*, with drowsiness and closing of the eyes. After waking from a sound sleep in the day-time, with pleasant dreams, he falls into an *irresistible absence of consciousness and is absorbed in fancies*, with inability to find his way home (from the theatre), thinking at the same time that the distance is much greater than it is. Vivid dreams disturbing the siesta. Voluptuous dreams during the nightly sleep.—Restless sleep at night.

**Fever.**—*Chilliness and sensitiveness to the cool air*. Chilliness and paleness when remaining in the open (damp, cool) air, disappearing again in a warm room. Shaking chills from the loins, on uncovering himself at stool. Feeling of coldness in the feet, with heat in the hands. Chilliness in the evening, with pain in the small of the back, increasing to a shaking chill in the open cold air, and going off again in a warm room, with dulness in the forehead, slight appetite, slimy tongue, cheerful mood and disposition to joke. Slight chills in the evening, with colic, pain in the small of the back, slight appetite, white-coated tongue, pressure in the region of the velum pendulum palati, pressure on the chest with difficulty of breathing and great drowsiness.—*Intermittent fevers*: °quartan,? °tertian; °compound tertian, with drowsiness, white tongue, rattling, bloody expectoration, slight thirst, even during the heat.—*Agreeable feeling of warmth* in the hands and feet, in the evening. Violent *heat* in the face and hands, with prostration and hypochondriac mood, several forenoons. Increased circulation.—*Malignant fevers*.? °Typhoid fevers with putrid or colliquative diarrhoea.?—*Putrid fever*.?

**Skin.**—*Cool, dry skin, not disposed to perspire*.—Bluish spots on the skin.—°Scorbutic affections.?—°Chilblains.?—°Wounds.?—°Boils.?—°Old ulcers on the legs.?—°Plague.?

**General Symptoms.**—°Rheumatic pains in the limbs, particularly when occasioned by cold. °Arthritic affections, also arthritic nodosities.? °Scorbutic affections.? °Bloody and serous discharges.? °Is said to strengthen the stomach, particularly after sanguineous depletions.—°Spasmodic complaints.? °Eclampsia of infants.? °Spasmodic paroxysms and attacks of weakness of hysteric females.? °Serofula and atrophy.? °Rachitis.? °Tabes dorsalis.?—

*Aching pains at small spots, wandering*, also with digging sensation apparently of the bones, (forehead, eyebrows, upper arms, tibiæ, etc.). *Drawing* in the muscles of the extremities, as after taking cold, more during rest. *Pains in the parts on which he is lying*. °Nutmeg is particularly useful in diseases arising from wet and cold, °in complaints which are relieved by the application of warmth and increased by the cold open air; °in affections accompanied by drowsiness and disposition to faint. °Nutmeg appears to be particularly suitable to persons with a cool, dry skin not disposed to perspire. °Nutmeg is more suitable to children and females than to other persons.—General uneasiness in the muscles, with dizziness. Anxiety in the body, with disposition to tremble. Relaxation of the extremities, particularly the arms, with pressure here and there. Pain in the nape of the neck, bones, and every part of the body, as from taking cold while in profuse perspiration, with pressing in the forehead from behind forward. The lower limbs and small of the back feel bruised and languid.—*Great languor, with particular weakness of the knees, as after a long journey, with drowsiness* and want of disposition to do anything, even to talk. Languor after the least exertion. Feels very ill from taking the drug, the whole first day, with violent clawing in the body, and sensation as if she would faint.—*Convulsions*.

## 177. NUX VOMICA.

NUX V.—*Strychnos nux vom.* Vomica nut.—See HAHNEMANN'S *Mat. Med. Pura*, III. *Duration of Action*: from fifteen to twenty-one days.

COMPARE WITH—*Acon.*, *Alum.*, *Ambr.*, *Am.*, *Am. mur.*, *Ant. crud.*, *Arn.*, *Ars.*, *Arg.*, *Bism.*, *Bor.*, *Calc.*, *Camph.*, *Caps.*, *Carb. a.*, *Carb. v.*, *Caust.*, *Cham.*, *Chin.*, *Cocc.*, *Coff.*, *Colech.*, *Con.*, *Cupr.*, *Cyel.*, *Dig.*, *Dros.*, *Dulc.*, *Ferr.*, *Graph.*, *Guaj.*, *Hyos.*, *Ign.*, *Ipec.*, *Lach.*, *Lauroe.*, *Lye.*, *Magn. p. aret.*, *Magn. p. aust.*, *Magn. mur.*, *Merc.*, *Mur. ac.*, *Natr.*, *Natr. mur.*, *Nux mos.*, *Op.*, *Petrol.*, *Phosph.*, *Plumb.*, *Puls.*, *Paris.*, *Ranunc.*, *Rhod.*, *Rheum.*, *Rhus.*, *Ruta.*, *Sabad.*, *Samb.*, *Sep.*, *Spig.*, *Squill.*, *Stram.*, *Sulph.*, *Tabac.*, *Tartar.*, *Tarax.*, *Thuj.*, *Valer.*, *Viol. od.*—Is frequently suitable after: *Ars.*, *Ipec.*, *Lach.*, *Petrol.*, *Phosph.*, *Sulph.*—After *Nux* are frequently suitable: *Bry.*, *Puls.*, *Sulph.*

ANTIDOTES.—*Of large doses*: Wine, coffee, camphor, opium.—*Of small doses*: Alcohol, Bell., Camph., Cham., Cocc., Coff., Op., Puls., Stram.—*Nux v.* antidotes: *Ambr.*, *Ars.*, *Calc.*, *Cham.*, *Chin.*, *Cocc.*, *Coff.*, *Colech.*, *Cupr.*, *Dig.*, *Graph.*, *Lach.*, *Lye.*, *Mere.*, *Moseh.*, *Opium*, *Petrol.*, *Phosph.*, *Plumb.*, *Puls.*, *Stram.*, *Sulph.*, *Tabac.*, and the poison of orchis morio, (moril.)

### CLINICAL OBSERVATIONS.

According to Noack and Trink, *Nux vomica* has hitherto been successfully employed in the following affections: Affections with intermittent type, particularly periodical affections of the nervous system, neuralgia, neuroses.—Excessive sensitiveness to the open and cool air.—Great liability to take cold, with catarrhal complaints from the least current of air, such as shuddering, chilliness, toothache, colic, etc.—Rheumatic affections, with and without fever; tearing rheumatic pains; drawing-tensive rheumatic pains, with weakness and feeling of numbness in the affected parts, accompanied with cramp-like pains, jactitation of single muscles and limbs.—Febrile rheumatic and catarrhal affections.—Rheu-

matic-catarrhal affections.—Rheumatic affections, particularly of the muscles of the trunk, back, loins, small of the back and chest.—Feverish and non-febrile rheumatisms, distinguished not only by their intensity, but by the excessive sensitiveness to the open air, which accompanies them.—Rheumatic inflammation of the cellular tissue.—Bruised pain in the limbs, in those on which one is lying and in those on which one does not lie, going off by turning to the opposite side, after which the pains re-appear in the painless parts, and thus oblige one to turn frequently from side to side; the pains disappear entirely by rising from bed.—Lancinating pains.—Muscular debility of children, and difficulty of learning to walk.—Precursory symptoms of the gout.—Metastasis of the gout.—Scrofulous and lymphatic affections.?? Rush of blood to the head and chest.—*Irritation in every part of the cerebro-spinal and ganglionic systems of nerves.*—*Hyperæsthesia of the nerves of the senses*: excessive sensitiveness of sight, hearing, smell, taste; external impressions of any kind, even touch, are very disagreeable, and induce a concussion of the whole nervous system, spasms, convulsions, etc., (in many cases).—Tremor of the limbs, also arising from intoxication by metals, mercury, lead, etc.—Tremor of drunkards, of opium eaters.—Spasmodic rigidity and immobility of the limbs.—Clonic and tonic spasms.—St. Vitus' dance, more frequently in boys than girls.—Spasms. Convulsions of all or of single muscles, wandering from one extremity to another, affecting even the muscles of the chest and abdomen, and generally depending upon spinal irritation.—Convulsions of single parts of muscles, spasms of the whole body, sideways and backwards.—Tonic spasms.—*Tonic spasms* as from electric shocks, tonic spasmodic flexion and extension of the whole body, opisthotonos, emprosthotonos and pleurothotonos, occasioned by noise, contact, and strong light, etc., consciousness remaining intact.—Convulsions preceded by headache in the forehead, aching pains in the pit of the stomach, anxiety, vanishing of the senses, partial disturbance of consciousness: extension of the body with a violent jerk; the abdomen, which was somewhat below the level of the rest of the body, was jerked up; the jerks recurred about fifty times in one minute; at every jerk she uttered a moaning sound. Every contact, even if ever so slight, every motion of the bed, excited the convulsions again. The paroxysms were so violent that it was feared the muscles of the limbs and abdomen might tear, (the patient, a girl, was cured by  $\frac{1}{20}$  grain doses of scraped Nux v. every 2 hours. Tetanus.—Trismus of children and full-grown persons.—Catalepsy.??—Epilepsy.—Epilepsy, particularly when the attack is brought on by some emotion.—Epilepsy from irritating substances in the intestinal canal, and from excess of spirituous drinks.—Precursory stage of sanguineous and nervous apoplexy.—Paraplegia.—Hemiplegia occasioned by cerebral apoplexy.—Incipient paralysis of one half of the body.—Apoplexia spinalis.??—Central softening of the spinal marrow, (giving Nux and Agaricus).—Paralysis of the extremities, occasioned by various affections of the spinal marrow.—Paralysis with or without painfulness of the vertebral column.—Paralysis of the upper and lower extremities.—Paralysis arising from poisoning by lead, arsenic or mercury.—Fainting turns from making the least effort, from moral emotions, from violent paroxysms of pain, from a walk in the open air at night, and from rush of blood to the chest and head.—Great languor and weariness of all the limbs.—Complaints after measles, particularly catarrhal cough.—Herpes with burning redness of the cracked parts of the skin.—Boils.—Pseudoerysipelas.—Old ulcers, around which a bright-red swelling forms when the affected parts get cold, with tearing pains in the ulcers.—Chilblains with burning itching, bleeding rhagades and pale-red swelling.—Frozen limbs with a rather bright-red swelling.—Great sensitiveness of the corns.—Drowsiness in the day-time, particularly in the forenoon and

after dinner.—Drowsiness early in the evening.—Sleep setting in before the usual time.—Sleeplessness until after midnight and towards morning.—Sleeplessness from extreme wakefulness and mental excitement.—Sleep with restless tossing about, disturbed by anxiety, palpitation of the heart, frightful dreams, falling asleep again late.—Irresistible, sweet morning-slumber, with difficulty of waking, want of disposition to rise, with greater weariness, greater languor and dulness of the mind, greater confusion, heaviness and dulness of the head than the evening previous.—Stupifying sleep towards morning, with anxious dreams, which cause one to start, and from which it is scarcely possible to wake one, with feeling of languor after waking.—Sleep with frightful dreams.—Remittent fever, with gastric, bilious and pituitous symptoms.—Intermittent fever, particularly when setting in in the afternoon, evening and night.—Quotidian and tertian fevers.—Quotidian and tertian fevers with or without gastric symptoms.—Intermittent fevers, mostly chilliness and partial heat, with or without subsequent sweat.—Intermittent fevers, consisting mostly of heat, preceded, succeeded, or mingled with chills.—Intermittent fevers, an alternation of chills and heat, with constant desire for beer.—*During the fever paroxysms* : pains and languor of the limbs, vertigo and dulness of the head, oppressive headache, aching and spasmodic pains in the stomach, pressure in the pit of the stomach, nausea, bitter eructations, bitter and sour taste, white and yellow coating of the tongue, vomiting of the ingesta, loss of appetite, constipation, or else frequent small evacuations of watery mucus, abdominal spasms, fainting fits, great languor of the body and mind, excessive debility and prostration. *During the heat* : vertigo, headache, chilliness upon uncovering one's-self in the least, or on making the least motion, thirst, nausea, vomiting, buzzing in the ears, pains in the chest, red urine.—Intermittent fever with or without gastric and bilious symptoms.—Intermittent fevers after the abuse of Chin. or Quin., with or without swelling and hardness of the liver.—*Intermittent fever* : sometimes without the usual coldness of the body, or with long-lasting coldness, chattering of teeth, icy-coldness of the hands and feet, blue nails, no thirst, tearing pains in the thighs and legs and in the small of the back, succeeded by continued general heat, with aching pains in the fore part of the head, redness of the face, violent thirst, shuddering and chilliness on moving or uncovering one's-self, lastly sweat. *Pyrexia* : vertigo, heaviness and dulness of the head, tearing, aching and beating pains in the scapula and temples, wan paleness of the face, toothache, clean tongue or else tongue coated with a thick, yellow-brown mucus, loss of taste and appetite, bitter, putrid taste, nausea, bitter vomiting, stitches in the region of the liver and right side of the chest, great sensitiveness and painfulness in the pit of the stomach, distention of the pit of the stomach, oppressive, contractive pain in the stomach, painfulness and distention of the left hypochondrium, swelling of the spleen which does not admit of pressure; when turning to the right side, a heavy body seems to fall to that side; constipation, stinging of the rectum, dry night-cough, emaciation, weakness, anguish, disconsolate mood with violent weeping, excessive sensitiveness of feeling, the patient is beside himself on account of trifles. Many of these symptoms continue even during the paroxysm.—*Quotidian fever* : violent coldness followed by heat with thirst and white-coated tongue.—Quotidian intermittent fever, with loss of appetite.—Compound quotidian fever.—Tertian, quartan and compound quartan fevers, with constipation.—Anomalous intermittent fever with gastric symptoms.—Intermittent fever with jaundice.—Apoplectic intermittent fever (recommended by Hartmann only).—Gastric fevers with predominant affection of the intestinal mucous membrane.—Gastric and bilious fevers.—Typhoid bilious fever.—Mucous fever of cattle.—Typhus versatilis with excessive sensitiveness of all

the senses.—Typhus abdominalis in the second stage, with predominance of gastric and bilious symptoms.—*Melancholy*, with desire to destroy one's-self, great anguish which drives one from place to place (in several cases).—Nervous hypochondria, sometimes attended with a variety of abdominal complaints.—Hypochondria with great nervous irritation.—Hysteria.—Mental derangement after mortification, excessive mental exertion, suppression of hæmorrhoids, and abuse of spirituous drinks.—Delirium tremens.—Loss of consciousness and stupefaction.—Dulness of the mental powers in consequence of an abuse of spirituous drinks.—Vertigo with disposition to fall to the left side.—Nervous vertigo with or without obscuration of sight, buzzing of the ears, reeling and staggering, constant or in short-lasting paroxysms.—Neglected vertigo.—Apoplexy, with loss of consciousness, sopor, paralysis of the extremities, of the organs of deglutition, of the lower jaw and sphincters.—Sanguineous apoplexy.—Daily headache, generally in the forenoon, and most violent after a meal.—Headache excited and aggravated by rough weather and meditation, from abuse of coffee, spirituous drinks, beer, excessive mental exertions, want of open air and bodily exercise, watching, etc.—Idiopathic headache of various kinds.—Intermittent nervous headache.—Headache with spurious vertigo from onanism.—Headache arising from some abdominal disorder.—Headache with spastic urine, the pains being drawing, tearing, beating, compressing the temples, distensive, affecting various parts of the head.—Aching pains above the root of the nose and eyebrows extending to the right, with paleness of face and cold sweat, every morning.—Periodical headache : commencing after rising from bed, every morning, increasing until noon, when the pain is the most violent ; it gradually diminishes after noon, and disappears entirely towards evening ; the pain is oppressive, tearing, the head feels confused ; at times uncomplicated, at others, complicated, with pain in the region of the liver, nausea, disposition to vomit, bitter eructations and vomiting, costiveness, choleric temperament.—Catarrhal headache, increased to an intense degree by continued mental exertions : aching, beating pain in the forehead, above the eyes, in the temples, and on the vertex, as if the head would burst ; the pain is increased by stooping and coughing, it returns every morning, and lasts until afternoon ; the headache came on after previous catarrh and cough.—Headache from congestion of blood to the head : vertigo on walking, and particularly on stooping, confusion and heaviness of the head, oppressive tensive pain in the fore part of the head, particularly above the eyes, heat and redness in the face, tasteless vomiting, night and morning.—Paroxysms of hysteric headache every 10 days or every fortnight, commencing with a dull, oppressive pain over the whole head, particularly the vertex and forehead, with vertigo, confusion of the head, violent pressure above the eyes, sensitiveness of the eyes to the light, increased lachrymation, dimness of sight, obscuration of sight on looking steadily at an object, buzzing of the ears ; followed by paleness and distortion of the countenance, nausea, bitter, sour taste, frequent vomiting of bile, night, morning, and forenoon, asthmatic constriction of the chest, tumultuous palpitation of the heart ; when the paroxysm is at its acme, there is stupor, frequent urging to urinate with scanty emission, the urine is clear as water, chilliness and coldness of the whole body, particularly the hands and feet, without thirst ; when the headache abates, profuse sweats set in, with general debility, as when one is fainting, paralytic weakness, dull pains in the right upper and lower limbs, which go to sleep, the menses are too early and too profuse ; between the paroxysms there is frequent but not very violent pain in the head, constant feeling of chilliness in the head, painfulness of the scalp, sensitiveness of the whole body to cold air ; occasional pressure at the stomach, empty, and sometimes sour eructations in the stomach, dryness of the

mouth and fauces; the paroxysms are excited by emotions, joy, chagrin, fright, and by the neighbourhood of disagreeable persons.—Hemicrania with inclination to vomit.—Nervous headache with cardialgia, also with constipation.—Clavus hystericus.—Headache of hysteric females, at times in the shape of clavus hystericus, at times of frightful pressure in the temples with subsequent vomiting.—Headache and toothache of sensitive females.—Aching-throbbing pains in the head, at every motion and exertion of the head, with drawing pains in the teeth.—Neuralgia capitis.—Chronic headache.—Convulsions of the head.—Congestion of blood to the head, with heat and redness of the face, violent pains in the forehead, vertigo and fainting turn.—Inflammation of the lids and eyeball, of a catarrhal, arthritic, and scrofulous nature.—Painless effusion of blood into the white of the eye.—Hemorrhage from the eye of a child.—Musæ volitantes.—Weakness of sight.—Amaurosis.—Otagia.—Otitis.?—Ringing, roaring, buzzing, cracking in the ears, ringing in the ears with nausea, increased by motion and exertion.—Hardness of hearing arising from a cold.—Excessive sensitiveness of smell, either idiopathic or accompanying other affections.—Tearing pains in the right cheek, with oppressive pain in the head, vertigo, heat of the face, nausea with inclination to vomit, vomiting of sour-bitter mucus.—Prosopalgia of the facial and infraorbital nerves, intermitting, with nightly exacerbations, the pain being tearing.—Rheumatic paralysis and distortion of one half of the face.—Paralysis of the muscles of the face on one side, in consequence of a cold and cerebral apoplexy (in several cases).—Pimples in the face of plethoric individuals and from the excessive use of spirituous drinks.—Toothache, in sound and decayed teeth, from cold, of a rheumatic, arthritic, and *purely nervous* nature.—Sticking, *drawing, tearing, jerking* and digging pains in sound and decayed teeth.—Tearing toothache, with fine or jerking stitches, with or without swelling of the submaxillary glands.—Tearing pains in decayed teeth, renewed by cold air and drinks, relieved by warmth.—Toothache which is tolerable during rest, but is aggravated by meditation or reading.—Toothache in decayed teeth, thence extending to sound teeth and to the adjoining parts, the pains are generally drawing, tearing, without swelling of the cheeks, most violent at night, aggravated by cold and warm substances, and generally by cold air, with great sensitiveness of the teeth to cold air; the pain at times appeared to be rheumatic, at times it seemed to arise from an excessive sensitiveness of the dental nerves.—Tearing in the teeth and jaws, with rheumatic swelling of the cheek, palate and gums.—Very violent pains in the lower jaw, coming on after the extraction of a tooth.—Difficult dentition.—Nervous irritation during the period of dentition.—Offensive, putrid smell from the mouth, generally proceeding from a bad stomach, and accompanying gastric affections.—Dry tongue, coated white, yellow, or lined with mucus, as is the case in gastric, bilious and pituitous affections.—Syphilitic herpes on the tongue.??—Peculiar, chronic pains of the tongue.—Paralysis of the tongue in consequence of cerebral apoplexy, with consequent inability to speak, or, at any rate, with difficult and indistinct speech.—Catarrhal angina.—Angina uvularis and pharyngea.—Spasm of the œsophagus.—*Complete loss of appetite*, with clean or coated tongue, with pure or morbid taste.—*A variety of gastric difficulties after every meal*: fulness and distention of the stomach and abdomen, sensation as if the stomach were overloaded, qualmishness and nausea, loathing, vomiting of the ingesta, oppression of the stomach, chilliness and coldness, heat in the face, drowsiness, hypochondriac mood, etc.—Hiccough.—Stoppage of the eructations as if by spasm.—Vomiting of drunkards.—Sabburral vomiting.—Vomiting, with gastric and bilious symptoms.—Vomiting from derangement of the stomach in consequence of overloading it with food and spirituous drinks.—Vomiting from exces-

sive sensitiveness of the nerves of the stomach.—Spasmodic vomiting.—Nausea and vomiting of pregnant females.—Vomiting of the ingesta.—Vomiting and abdominal pains with arthritic pains in the limbs from drinking wine.—Bilious vomiting with bilious symptoms generally in consequence of chagrin.—Bilious vomiting of drunkards.—Vomiting from incarcerated hernia.—Chronic vomiting of sour and bitter substances.—Chronic vomiting of bitter and sour substances, with aching pains in the stomach, want of appetite, and twitching of the fingers of the right arm.—Vomiting of coagulated, black blood, with colic, vertigo, headache, rushing of blood in the chest, fainting turn.—Mekena, morbus niger Hippocratis.—Indigestion.—Dyspepsia.—Bradypepsia.—Inflammation of the stomach?—Chronic inflammatory conditions of the mucous membrane of the stomach, with great sensitiveness of the region of the stomach to contact.—Gastric affections of scrofulous children.—Increased sensibility of the nerves of the stomach, with atony of the muscular fibre.—Gastro-enterodynia.—Constant pains in the stomach and pit of the stomach.—*Tensive, aching, contractive-crampy and griping-tearing pains in the stomach.*—*Cardialgia.*—Cardialgia with vomiting.—Cardialgia from abuse of coffee, from overloading the stomach, from arthritis and organic defects of the stomach.—Cardialgia of females in middle age: painful griping as if the stomach would be constricted, extending from the back down to the anus which is drawn in; attended with vomiting having a sour taste and smell, obstinate constipation, increased flatulence and emission of flatulence by the mouth; vertigo, dull headache, jaundiced complexion and emaciation.—Cardialgia of drunkards, and from abuse of chamomile and coffee. Chronic spasmodic affections of the stomach.—Gnawing and corrosive feeling in the stomach.—Spasms in the stomach and abdomen with constipation. Incipient scirrhus degeneration of the cardia and pylorus, with atrabilious constitution, hæmorrhoidal disposition, spasmodic pains and slow stool.—Nux v. alleviates the pains in organic affections of the stomach, induration and carcinoma of the ventriculus and pylorus; the pains and the vomiting are particularly quieted by Nux.—Acute hepatitis.—Rheumatic hepatitis?—Venous inflammation of the liver.—Hepatalgia with constipation.—Pains in the liver with jaundice.—Inflammatory conditions of the liver, with distention and aching-burning pains and fever.—Swelling and induration of the liver after intermittent fevers, from abuse of China and mercury.—Jaundice.—Colic from biliary calculi, with extremely violent spasmodic pains, spasmodic vomiting and subsequent jaundice (in many cases).—Abdominal pains with loud eructations.—Enteralgia.—Enterodynia.—Neuralgia cœliaca, in conjunction with Ars.—Gastric affections: distention of the abdomen, constipation with inclination to vomit, slimy and pale tongue, colic, feverish pulse.—Abdominal derangement after apoplectic attacks.—Flatulent colic.—Catarrhal, arthritic rheumatic and hæmorrhoidal colic.—Lead colic.—Flatulent colic: pains as if the bowels were squeezed between stones, with cutting or sticking pressure on the rectum, bladder, neck of the bladder, perinæum, as if the flatulence would press through everywhere, aggravated by motion, relieved by rest.—Colic from mechanical closure of the intestinal canal by fæces.—Abdominal spasms.—Congestion of blood in the abdomen, with heaviness, heat, burning and pulsations in the part.—Congestions and infarctions in the portal system with atrabilious symptoms, acidity in the primæ viæ, excessive accumulation and difficult emission of flatulence, slow evacuations, hæmorrhoidal congestions, derangement of the assimilative functions, and hypochondriac, melancholy mood.—Rheumatalgia of the colon in conjunction with Ars.—Umbilical hernia of infants and full-grown persons, particularly females.—Incarcerated hernia.—*Spasmodic incarceration of hernia.*—Incarceration of hernia in consequence of an abnormal activity of the

bowels.—Crural hernia.—Incarcerated crural hernia.—Vomiting of feces from mechanical closure of the intestinal canal by incarcerated hernia, volvulus, intussusception.—Slow digestion.—The stools consists of lumps of the size of a walnut, and covered with mucus. Constipation with congestion of blood to the head and chest.—Constipation with obstructions in the portal circulation, affections of the liver, deficient and disturbed secretion of bile, excessive acidity, excessive development of gas, hæmorrhoidal complaints.—Constipation as if from inactivity and paralysis of the bowels, particularly of the colon and rectum, where the feces seem to remain lodged, the peristaltic motion of the lower half of the intestinal canal appears to have ceased entirely; the appetite and stomach are in good condition.—Chronic constipation from too weak or perverse peristaltic movement of the bowels with considerable discharge of flatulence by the mouth, nausea, regurgitation of food.—Constipation as if from spasmodic constriction and contraction of the rectum and anus.—Constipation of infants, pregnant females, coffee-drinkers and drunkards.—The feces are too large, hard, form hard impacted lumps, are pressed out with difficulty and with violent pains in the rectum and anus, from which they fall like stones.—Mucous diarrhœa.—Tenesmus with diarrhœa and constipation.—Proctalgia.—Hæmorrhoidal congestions.—Hæmorrhoids from the abuse of spirituous drinks, from a sedentary life, from pressure on the rectum, as is the case with pregnant females.—Inflamed hæmorrhoidal tumours.—Excessive discharge of blood from the rectum and anus after every stool.—Spasmodic stricture of the anus.—Prolapsus of the rectum in children and full-grown persons (in several cases).—Pains from tænia.—Ascarides.—Nephralgia.—Gravel and stone.—Colica nephritica: burning and spasmodic constrictive pains in one or the other renal region, afterwards extending along the course of the ureter, ceasing upon the passage of a stone into the bladder, and frequently accompanied by spasmodic gagging and vomiting, violent spasmodic pains in the abdomen, convulsions, and discharge of urine drop by drop (in the commencement), bloody or as if tinged with the juice of the cuttle-fish (in many cases).—Strangury after drinking stimulating beer.—Ischury.—Dysury from inactivity of the bladder.—Hemorrhage from the bladder; hæmaturia.—Chronic catarrh of the bladder.—Paralysis of the bladder and neck of the bladder, with involuntary discharge of urine.—Nightly involuntary micturition of children.—Discharge of blood and mucus from the urethra.—Gonorrhœa from suppression of hæmorrhoids.—Balanorrhœa.—Choking, spasmodic pains in the spermatic cords, with swelling, hardness and drawing up of the testes.—Inflammatory swelling of the testis.—Inflammatory pains in the testes.—Excessive sexual desire with painful erections.—Obstinate involuntary emissions in robust men.—Metritis.—Congestion of the uterus arising from obstruction of the abdominal circulation and varicose condition of the uterine vessels.—Metrorrhagia in non-pregnant females, in whom a change of life is about to take place, from abdominal plethora.—The menses are too scanty or too early.—Too early and too profuse menses, and the consequences thereof.—Menstrual colic.—Dysmenorrhœa.—Drawing pains in the cervical muscles, towards the occiput, previous to the too early appearance of the menses.—Apprehensive and disconsolate, with qualmishness in the pit of the stomach, after the too early appearance of the menses.—Internal swelling on one side of the vagina, with burning-stinging pains.—Recent prolapsus of the uterus. Prolapsus of the uterus and vagina.—*Pains during pregnancy*: headache and toothache.—Congestions of the head and chest.—Vomiting and abdominal spasms.—Nausea and vomiting, colic, abdominal spasms.—Vomiting of pregnant females (frequently accompanied by clonic spasms) and accompanied by colic in the last period of pregnancy.—Constipation.—Premature labour-pains.—Violent after-

pains with pressing on the rectum.—Premature labour-pains, sometimes a fortnight before the time.—Miscarriage. Miscarriage from constipation.—Phlegmasia alba dolens puerperarum.?—Puerperal fever.?—Puerperal metritis.?—Drawing pains and soreness of the nipples.—Convulsions, ophthalmia, umbilical hernia of new-born infants.—Dry and fluent coryza.—Inflammation of the mucous membrane of the nose, pharynx, bronchia, with dryness or watery discharge.—Excessive sensitiveness of the respiratory organs, the least cold causing a catarrh. Catarrhal inflammation of the mucous membrane of the respiratory organs, larynx, trachea and bronchia.—First stage of the laryngeal and tracheal catarrh, with coryza, hoarseness, roughness, soreness and dry cough.—Catarrhal affections of persons affected with piles, attended with paroxysms of cough induced by a violent titillation in the throat, and little or no secretion of mucus.—Influenza: dry cough with desire to vomit, coryza, headache, loss of appetite.—Influenza with catarrhal and rheumatic symptoms. Bronchitis.?—Cough with vomiting and fever as a sequel of whooping-cough.—Dry cough caused by a titillation or dry feeling in the larynx with or without spasms of the trachea.—Titillating cough causing a distensive headache or bruised pain in the abdomen.—Paroxysms of dry cough with vomiting, immediately after lying down in the evening, attended with sore feeling in the pit of the stomach apparently induced by the exertion of coughing (Hempel).—First stage of whooping-cough.—Parapleuritis.—Sticking pains in the left side of the chest, pleurodynia.—Neuralgia pectoris.—Neurosis of the pneumogastric nerve and its branches.—Incipient phthisis trachealis and pulmonalis.?—Idiopathic spasm of the chest in hysteric and hypochondriac individuals, in consequence of anxious dreams.—Asthmatic complaints.—Asthma humidum nocturnum.—Asthma with nightly suffocative fits.—Congestion of blood to the chest in consequence of a sedentary mode of life, mental exertions, or the use of spirits.—Spasm of the heart.—Angina pectoris, when it is a purely nervous inflammatory affection.—Myelitis, particularly of the lower part of the spinal marrow.—Acute and chronic inflammation of the spinal marrow.—Spinal irritation: aching, tensive and burning pains in single parts of the spinal marrow with painfulness of the vertebræ in the region of these parts on pressure, with paralytic sensation in the upper and lower limbs, alternating with clonic spasms in those limbs.—Neuralgic affections of the spinal marrow and of the sentient and motor nerves emanating from the affected parts.—Spasms of the dorsal muscles from cold.—Sudden attacks of paralysis.—Dolor fixus Paracelsi.—Pains in the small of the back after taking cold by the feet.—Sticking and bruised pains in the small of the back.—Periodical attacks of pains in the small of the back, extending to the shoulder and genital organs, increased by motion and attended with constipation.—Paralysis of the left arm.—Paralysis of the hands of drunkards.—Psoitis.?—Ischias antica et postica.—Ischias with nightly pains as if the thigh would be broken.—Spasms of the lower limbs after taking cold.—Paralysis of the lower limbs, with and without painfulness of the spinal column.—Paralysis of the foot.—Intermittent paroxysms of gonagra with formation of arthritic nodosities, the attacks being attended with vomiting and constipation.—Pseudo-erysipelas of the knee and foot.—Erysipelatous inflammation of the right foot, with typhoid gastric symptoms.?—Cramp of the calves.—Cramp-like contraction of the soles and toes.—Intensely painful, burning-stinging pain with swelling of the heel, aggravated by walking.

#### SYMPTOMS.

**Mind and Disposition.**—\*Sadness, -also without being able to weep. °Melancholy. Inward grief and chagrin. *Taciturn.* Desire for quiet and silence.

Ill-humour, with lowness of spirits.—*\*Anxiety, -with sweat on the forehead, as if occasioned by internal heat. Anxiety in the evening, in bed, with sweat after midnight. Anxiety with restlessness, obliging him to move from one place to another. Anxiety, followed by hurried breathing, accompanied by nausea, which causes a dry cough and vomiting.—Anxiety, as if he had committed some evil deed, or as if he were threatened with some misfortune, (early on waking and in the afternoon). Anxiety, with solicitude and irresoluteness. Oppressive anxiety, in the evening while walking, with sensation as if he were intoxicated. \*Hypochondriac mood, -also with sullen temper, or particularly after a meal, and still more after supper than after dinner. °Solicitous about one's health. °Desire to talk about one's condition, with anxious reflections about it. °Despairs of getting better. \*Apprehends death, and thinks that death is nigh.—\*Excessive sensitiveness to external impressions. \*Noise, talk, strong odors and bright light are intolerable. \*Music and singing affect him a good deal, -even unto tears. Even the least footstep and the slightest shock affect him painfully. —Anxiety, especially in the hours after midnight, originating in a suspicious and apprehensive state of the mind. Great anguish; he has no rest, and prefers death to life. \*Violent palpitation of the heart after midnight, with extreme anguish, and desire to kill himself. He is apprehensive, and inclines to start, the head feeling dizzy and intoxicated. When beholding any disagreeable object, her lower limbs, and then her whole body become affected, and she almost loses her consciousness. \*She is unable to bear her pains without moaning and lamenting, reproaching and quarrelling. Even the least ailments affect her beyond measure. She is anxious, solicitous, and inconsolable, weeps, complains, reproaches, moans, her cheeks being very red and hot, without thirst. She moans piteously, without assigning any cause. He weeps when people do not exactly do as he wishes. She cannot bear the least contradiction, or the calmest persuasion to act differently; this puts her completely out of humour. He is in a doubtful and vexed state of mind, takes everything in bad part, and is apt to quarrel and scold. \*She is very much disposed to quarrel and to feel vexed. She is very much disposed to reproach others with their faults. He quarrels, reproaches, using insulting language from jealousy, mixing it with impure expressions, sometimes he howls or weeps aloud. Quarrelsomeness, even increasing unto violence. He obstinately resists that which is desired by others. He is hasty, looks at everybody who asks him a question, in an angry manner, without answering, as if he had to make an effort not to insult the questioner; he is so irritated that it seems as if he would like to strike any one in the face who asks him a question. He knits his brows and crosses his arms. Taciturn, as if everything were disagreeable to him. Taciturn, and slow train of ideas. She wants to have rest.—He finds time very long (in the first hours). \*No desire to do any kind of work. She becomes weary as soon as she commences any kind of work. He dreads labour, but not exercise. He cannot prevail upon himself to attend to his scientific labours. He is not disposed to exert his mind; the blood rises to his head, until evening. Dread of composing literary articles, in the morning.—He is irresolute and fritters away his time. She would like to accomplish a great deal, but she was afraid it would not succeed. He is awkward; he easily stumbles against something, or upsets things. °Hysterical mood.*

**Sensorium.**—He finds it difficult to keep his ideas together. \*He is incapable of thinking correctly. \*He frequently makes mistakes in speaking. Has great trouble in finding the words, and chooses expressions which are not suitable; he makes mistakes in quoting weight and measure. He easily makes mistakes in reading or writing; he omits even whole syllables and words.—

Early in the morning, after rising, he is scarcely conscious on account of a multitude of ideas crowding upon his mind.—*\*Insanity.* °Delirium and foolish actions. °Disposition to escape from home. °Runs about in the open air, like an insane man. °Gives wrong, absurd answers. °*Mental derangement*, occasioned by mortification, °by excessive study, °by suppression of the hæmorrhoidal flux, °in the case of drunkards. (*delirium tremens*).—°Muttering delirium. °Illusions of the fancy and frightful visions.—°*Loss of consciousness, stupefaction.*—°Weariness of the head from mental exertions.—°*Dulness of the head*, with congestion of blood during motion, and indolence of the body. °*Confusion of the mind, as from nightly revelling.* Gloominess of the head, particularly in the evening, in the open air, (as if he would lose his consciousness), or after a meal, or mounting to the head from behind. *Dull feeling* in the head, particularly in the open air and in the sun, or when holding the head erect, with sensation, on stooping, as if something heavy were falling forwards in the forehead. °*Stupefaction of the head.* °*Intoxication and cloudiness.* °*Ailments from intoxication and nightly revelling.*—°*Chronic vertigo.* °*Vertigo, with obscuration of sight* °and *whizzing of the ears.* °*Vertigo, with loss of consciousness, -also with sensation as if the brain were turning in a circle.* °*Vertigo with balancing sensation in the brain.* °*Vertigo with staggering in walking, as if one would fall,* (sideways or backwards). Vertigo, particularly during a meal, or when eructating, or °*in the evening in bed, as if the bed were turning in a circle.* °*Vertigo when walking.* °*Vertigo when stooping.* Vertigo when sneezing, coughing, and raising one's head from a stooping position, as if sight and hearing would vanish, with danger of falling. Vertigo on raising the head in a recumbent posture, with obscuration of sight. °Vertigo on waking or rising from bed, early. °*Vertigo after a meal,* -particularly when walking, and going off when standing. °*Fainting sort of vertigo.*—°Apoplexy, with loss of consciousness, soporuous condition, and paralysis of the limbs, organs of deglutition, and lower jaw.

**Head.**—°Headache every day. Headache early in morning, as if he had not slept enough, or while the eyes are kept closed on waking, (as if in the centre of the brain). °Headache, excited or aggravated by stormy weather. °*Headache from taking wine or coffee.* °*Headache when coughing or stooping.* °*Headache, excited or aggravated by reflection.* °*Headache from excessive mental exertions.* °*Headache, from pills.* °Headache from leading a sedentary life. °Catarrhal and rheumatic headache. °*Congestive headache.* °*Hemicrania,* -particularly in the afternoon and evening, with languor and weariness, °or as if from pressing a nail into the brain, °and particularly from abuse of coffee, or in hypochondriac patients. °*Headache, with nausea and vomiting,* °also vomiting of sour and bitter substances. °Headache, with heat and redness of the face. °Headache down to the eyes or nose.—°Stupifying headache, early, in bed, going off after rising. °Stupifying pain, particularly in the fore part of the head. Pain in the temples, when exerting the head.—°*Giddiness and heaviness in the head early in the morning, as from intoxication.*—°*Heaviness in the head, early in the morning.* Headache when stooping, as if something heavy were falling into the forehead. Headache after dinner, consisting of heaviness and pressure, especially when moving the eyes. When closing the eyelids, he feels a pain (aching?) in the middle of the brain, as is felt after vomiting.—°*Aching pain in the forehead,* relieved by laying the head on the table, aggravated by the open air, accompanied with weariness of the feet when going up stairs. Aching pain in the forehead, as if he had not slept enough. Aching pain above the left eye, with pain in the bones as if he had knocked them against something; he was not able to open his eye. Aching pain above the orbit of

the right eye, early in the morning, in bed, while lying on the right side, and going off when turning to the opposite side or the back. *Aching pain in the occiput, in the morning immediately after leaving the bed*, also as if the brain were pushed forward. °Tensive aching pain in the forehead, particularly above the eyes. \**Pressure and sticking*, -also particularly above the eyes, °or aggravated in the open air, and by raising the head. \**Distensive sensation in the head*, °with pressure through the forehead and eyes. Distensive headache after the least thinking, in a recumbent posture. Distensive headache in the occiput, as if the skull would be pressed asunder, with heat in the brain, momentarily relieved by compressing the head. Distensive pain throughout the brain, early, in bed, as if the head would burst.—Tensive headache, particularly at night, or in the forehead. Crampy headache. *Drawing in the head*: first in the temples, then in the forehead, lastly in the occiput. Drawing in the right half of the head from below upwards. Drawing in the occiput, as if she felt chilly in that part. Drawing from the forehead to the root of the nose. Pressure from above downwards, deep in the vertex.—\**Tearing in the forehead*. °Tearing in the head, also particularly towards evening.—Headache, early in the morning while in bed, as if his head had been struck with an axe, going off after rising. Headache, *as if the brain were cleft*. Headache, early in the morning while lying on the left side, with pain in the right hemisphere of the brain as if torn; the pain disappears when turning to the right, painful side. Tearing pain in the head, extending to the root of the nose, and the upper jaw, aggravated by walking. Tearing in the vertex, forehead, eyes, with qualmishness and nausea in the region of the chest and the organs of speech. Tearing in the head along the ear from above downward. Tearing headache after a meal, with feeling of heat in the cheeks and a feeling of chilliness over the body, at least in the hands. *Drawing-tearing* and burning pain in the head, early in the morning.—Burning in the brain behind the os frontis.—°Congestion of blood to the head. °Congestion of blood with heat and redness of the face; °also with violent pains in the forehead; °with vertigo; -with fainting.—Groaning and swashing sensation in the brain when walking and running.—Bubbling and shaking sensation in the head, while walking. Single jerks in the head. Drawing-jerking headache, early in the morning.—Single shocks in the head. [Headache early in the morning, a constant pecking (dull-stitching headache) worse when stooping, when he feels as if part of the forehead would fall out.] Violent jerks or dull stitches in the left hemisphere of the brain, from the orbit to the parietal and occipital bones, shortly after a meal.—Single violent stitches in the head. Headache, commencing a few hours before dinner, increasing after dinner; followed by violent stitches in the left temple, with nausea and sour vomiting; these symptoms disappear in the evening after lying down.—Sticking in the forehead, also with pressure.—Intolerable (digging-up) headache, commencing early in the morning when lying in bed, and going off after rising.

**Scalp.**—Headache in the outer parts of the head, as if the hair of the occiput were painful. One portion of the scalp feels bruised; the hair covering that part stands on end, and is painful to the touch. Drawing pain in the outer parts of the head. \**The scalp on the top of the head feels bruised when touched*. Pain, in a rough wind, as if the scalp were sore; nevertheless that portion of the scalp is not painful to the touch. Red, painful pimples or blotches on the hairy scalp and in the face, the tips of which became filled with pus.—(*Itching and gnawing in the hairy scalp and nape of the neck, as when an ulcer is healing, especially in the forenoon.*) Painful, small tumours on the forehead. *Creeping in the forehead* and vertex.

**Eyes.**—Pain of the right eyebrow when touching it. Pain of the skin above

the left brow, as if burnt. Bruised pain in the left eye, with gum in the outer canthus. °Nightly tearing in the eye. Drawing, tearing pain in the eyelids. Twitching of the eyelids.—Closing of the eyelids, as if the upper eyelid were too heavy, accompanied with an effusion of tears. \*Pressure on the upper eyelids, especially early in the morning. °Pressure in the eyes, on opening them and looking at the light.—*Itching* in the anterior part of the eyelids. Itching of the eyelids in the evening, in the direction of the inner canthus. Burning, itching pain of the eyelid. °Burning and twitching of the lids. The margin of the eyelids is painful, as if it had been rubbed sore, especially when touched, and early in the morning. The canthi are painful as if sore. *The inner canthus is painful as if made sore by friction.* \**Suppurating canthi*: the outer canthus is agglutinated early in the morning. A feeling of smarting dryness in the inner canthi, early in the morning, in bed. Smarting in the inner canthi, as from acrid tears. *Smarting in the eyes, especially the outer canthus, as if occasioned by salt, with lachrymation.* Dryness of the right eye. °Nightly agglutination of the eyes. \**Burning in the eyes*, without any inflammation. Tingling burning in the eyes. (Prickings in the eyes.) *Itching of the eyeballs*, relieved by friction. *The eyes are filled with tears, as in lippitudo*, or dry coryza. \**Painless sugillations in the sclerotica*. Painless redness in the left outer canthus, early in the morning. \**Exudation of blood from the eye*. Glistening, staring eyes. Swelling of the eyes, the sclerotica being marked with red bands, and an aching tense pain being experienced in the eye.—Contraction of the pupils (the first hours). Dilatation of the pupils with very slow breathing.—Ophthalmia of various kinds (see Cl. Notes). Photophobia also of scrofulous persons. \**Intolerance of the light of day, early in the morning, with obscuration of sight*. Complete obscuration of sight, for a few hours, like amaurosis. Luminous vibrations out of the line of the visual ray, especially on the left side, in the forenoon (Herz's false vertigo). The objects appear brighter than usual. Black and gray motes before the eyes, with stupefaction of the head. Presbyopia.

**Ears.**—°Pains in the ears, worse on entering the room or at night in bed. °Tearing in or behind the ear, extending to the face. Stitching pressure in the region of the external orifice of the ear.—*Itching* in the inner ear, through the tube of Eustachius, obliging him to swallow frequently, and disturbing his night's rest. Creeping titillation and itching in the inner ear. *Single sharp pushes in the inner ear, also with crampy feeling*, resembling otalgia. Stitches in the ear, early in the morning, in bed, obliging one to cry out. Lancinations in the inner ear from without inward, towards evening. Paroxysms of sticking in the inner ear. When chewing and compressing the jaws, he feels a stitching-drawing pain towards the inner ear, almost like cramp. *Tingling hissing in the ears*. Chirping in the ear, at night, as of a cricket. \**Ringling in the ears*. (Humming and buzzing in the ears, as of bees.) \**Roaring in the ears*, early in the morning when rising. Noise in the ears as of a fulling machine, at night. Hollow sensation in the ears, early in the morning, causing one's own words to re-echo in one's ears, disappearing after dinner.—°Otitis.?—°Inflammatory swelling of the parotid glands.

**Nose.**—Intolerable itching of the nose. The interior of the nares is sensitive to pain. Pain of the borders of the nostrils, as if sore and ulcerated, when moving the nose, especially in the evening. *Ulcerative pain of the anterior corners of the nostrils*, and as if a wound were cut into. °Increased smell.—(Curative effect.) She imagines she smells rotten cheese all around. He has a smell of sulphur in his nose. In the evening he has the smell of a glimmering tallow-candle wick in his nose.—*Sanguineous nasal mucus*. Continued bleed-

ing at the nose. Discharge of coagulated blood from the nose, early in the morning.—Discharge of an acrid humour from the nose. Discharge of nasal mucus, without coryza. (The interior of the nose is dry, although he is able to breathe through it.) *Copious discharge of mucus from both nostrils, although they feel as if obstructed by catarrh.*—\*Stoppage of the nose, also of one nostril only.—\*Fluent coryza in the day-time, and dry coryza at night. Dry coryza early in the morning, with excessive dryness of the mouth. Fluent coryza early in the morning.—Heat in the head, as from catarrh, with redness of the cheek, and discharge of mucus from the nose. Continued heat in the nose and frequent incipient symptoms of catarrh. Real catarrh, with scraping in the throat, tingling and scraping in the nose, and sneezing.—Frequent sneezing. Sneezing early in the morning when in bed, with sudden flow from the nose after rising. Catarrh early in the morning and after dinner.—*Itching of the obstructed nose, as in dry coryza.*—Fetid breath through the nose. \*Dry coryza °with inflammatory condition of the frontal cavities and headache. °Dry coryza of infants. —°Almost a specific for the ordinary catarrh in the inflammatory period which precedes the usual catarrh, particularly when there is a violent oppressive dullness of the head.

**Face.**—*Earthy, yellowish complexion.* °Yellowish appearance around the nose and mouth. \*Pale, wretched look, °also with blue margins around the eyes and with pointed nose. °Sunken cheeks. °Distorted, gloomy features. \*Red, bloated face: °Dark redness of the face. °Alternate redness and paleness. \*Redness and heat of the cheeks, °or of one cheek only, with paleness of the other.—°Swelling on the cheek, particularly pale swelling. Bloatedness around the eyes, mouth and nose, with tightness of the bloated region. \*Swelling and redness of the face.—°Tearing in the malar bones, on one side of the face, with swelling. Twitching in the right side of the face, as if one were pulling a thread across it, in the evening. Twitching in the facial muscles, in the evening, in bed. Tingling in the cheeks, with heat and redness.—*Itching and creeping* in the face, speedily returning after scratching. Formication. Small pustules on the cheeks.—Distortion of the mouth to one side.—Stinging in the lips, early. °Dryness of the lips. Ulcerated corners of the lips. *Painful peeling off of the lips.* Itching pimples above the margin of the upper lip. Sore feeling on the inner surface of the lower lip. Little ulcer on the inner surface of the lower lip, painful when touched. An ulcer on the vermilion border of the lip, covered with scurf, with a burning pain. Ulcerated scurfs on the margin of the lip, causing a stinging pain while forming. Stitching in the upper and lower lips, early in the morning. Rhagades in the middle of the lower lip. Miliary pimples around the lips, containing pus. A hair of the beard above the lip is painful to the touch, as if a splinter were sticking in the flesh.

**Jaws and Teeth.**—Lockjaw, with perfect consciousness. Sensation in the muscles of mastication and jaws, as if lockjaw were coming on, or as if the jaws would be closed, although their motion was quite easy. A blotch in the skin of the lower jaw which is painful only when touched. Itching pimples on the chin, the larger one being surrounded with a red areola.—Herpetic eruption on the lower part of the chin. Drawing-tearing pain in the jaws.—Toothache early in the morning, as if the gums were sore. \*Continuous painful soreness in the teeth, aggravated by fatiguing the head, and by reflection. Constant toothache, \*when walking in the open air, like a quiet feeling of soreness, especially when opening the mouth.—*Darting* pain in the teeth, with sensation as if the gums were swollen. Darting pain in the teeth, pulsative and accompanied with swelling of the gums. Darting pain in the teeth, with jerkings in the ear, also twitching and screwing sensation in the ear, early in the morning, immediately on waking, and in the evening. Dartings in the open air, ending in a stitch.

—*Toothache after dinner* ; at first it is felt like a blow or stitch in the tooth ; this is followed by a humming in the tooth, or a sort of painful roaring, extending as far as the eyes, and aggravated by walking in the open air, continuing from time to time until deep in the night, when it abates by wrapping up the cheek very warm ; when returning it commences with prickings.—*Drawing toothache*, accompanied with stitches in one row, especially when inspiring the open air with an open mouth. *Drawing toothache with stitches in no particular tooth*. Drawing pain in a hollow tooth when rubbing the tongue against it. Drawing pain, now in a lower, then in an upper molar tooth, followed by drawing in the remaining molar teeth in the direction of the front teeth, especially immediately after dinner and supper ; red, hot spots appearing on the cheeks and neck, and the mind being full of despair and disposed to indulge in reproaches. Drawing toothache occasioned by warm drinks and soups.—*\*Tearing toothache* ; at first in a hollow tooth, from which it extends now through the upper, then through the lower jaw, afterwards affecting the facial bones and next the head, occasioning a tearing pain in the temple of the affected side, returning in paroxysms, -appeased for some time by sleep, but *\*brought on again by cold water*, -or by a few crumbs having got into the hollow tooth.—*Boring-gnawing toothache*, neither aggravated nor diminished by contact or mastication, abating on the inspiration of cold air, but increased by the warmth of the room.—*Digging-up toothache* when exerting the head or when reflecting ; afterwards, towards evening, one of the submaxillary glands becomes painful.—*\*Stitching toothache*, -in several teeth of either jaw. Dull-stitching pain in one of the upper incisores.—*°Sticking in a hollow tooth with drawing boring*.—Toothache, as if the tooth were *dislocated*, or had become loose by biting, accompanied with single long stitches, which are only felt when inspiring the open air with the mouth wide open. Loose tooth, with dull pain, increased by mastication, late in the evening and early in the morning before rising. *Looseness of the teeth*. Looseness of a sound tooth, which is only painful when pushing it. *Falling out of sound teeth* which had never been loose before.—*\*Swelling of the gums*. Painful swelling of the gums, with painful pimples on the inner surface of the lip and on the tongue, as in mercurial ptyalism. Swelling of the gums, with pain, with a throbbing sensation in the swelling, as if an ulcer would burst. Swelling of the gums to the size of a finger, with throbbing pain as in an abscess, hindering eating, for five days. Swelling of the gums with drawing pain. *°Putrid, bleeding swelling of the gums*. Ulcer in the region of the cuspidatus, with drawing and burning pain. Swelling of the gums, with toothache, previous to dinner. Swelling of the gums with toothache, commencing with pressure.

**Mouth.**—*°Inflammation of the buccal cavity*. *°Inflammatory swelling, particularly of the velum pendulum palati and of the gums*, with difficulty of swallowing and opening the month. *°Apthæ*. *°Fetid ulcers* in the mouth and fauces. *°Stomacace*.—*°Putrid, cadaverous smell from the mouth*. Bad smell from the mouth, *early after rising*, also with clean tongue and good taste. Bad smelling vapour from the mouth early on waking, when stooping, accompanied with vertigo.—*Dryness of the mouth*, only of the fore part and particularly of the tip of the tongue, or early in the morning as after having taken spirituous drinks the evening previous. Parched condition of the mouth, after midnight, as if the tongue were glued to the mouth, with accumulation of a quantity of mucus in the fauces.—*Accumulation of saliva in the mouth*. Discharge of saliva from the mouth during sleep. *Bloody saliva*. *Spitting of blackish, coagulated blood*, early and in the afternoon, with smell of blood in the nose and discharge of blood from the nose on blowing it.—*Mucus in the mouth and fauces*, early, with yellow gum in the canthi of the eyes. Slimy mouth, the

gums, tongue and palate feeling raw and sore. °Tongue black and cracked, with bright-red edges. °Dry tongue. \**White tongue*. °Brownish tongue. °Tongue coated with yellow or white mucus. Painful vesicles on the tongue. Itching of the left side of the root of the tongue. Pricking in the tip of the tongue, when on the point of falling asleep after dinner.—\**Difficult speech*, °also with heaviness of the tongue. Inability to talk aloud. Sensation, when talking, as if the tongue were growing bigger.—Painful vesicles on the palate, behind the incisores. *Swelling of the velum pendulum palati*, °also with pressure and biting. Painful feeling. Sore throat as from a swelling in the region of the palate, not perceptible while drinking.

**Pharynx and Œsophagus.**—Swelling of the velum pendulum palati, with aching pain, also between the acts of deglutition, and a smarting sensation behind the velum pendulum palati. Swelling of the velum pendulum palati and the uvula, as if thickened by mucus, especially perceptible during deglutition. Sore throat, as if caused by a swelling in the region of the palate, not perceptible while drinking. Sore throat; pressure in the throat, perceptible only when swallowing saliva, not when swallowing food. \**Sore throat, with sensation of swelling in the pharynx*, more during than between the acts of deglutition, also early in bed. Single *stitches* on one side of the throat, between the acts of deglutition, especially perceptible when stooping and going up stairs. Itching pricking in the fauces in the direction of the ears, during deglutition, and when moving the jaws. Pricking in the upper part of the throat in the afternoon. Stitching in the uvula and the submaxillary glands during deglutition, with shuddering in the day-time, sweat in the night and headache. Stitching sore throat, with pressure as from a plug in the throat, more between than during the acts of deglutition.—\**Sore rawness of the fauces*, -only when inspiring cold air and during deglutition. Sore throat during deglutition, as if the throat were raw (without pricking). Burning of the fauces, as if occasioned by heartburn. Burning (boiling) sensation in the pharynx, rising to the top of the throat. Burning in the throat at night; she has to sit down; when lying down she feels worse. *Burning in the œsophagus*, up to the mouth. *Scraping sensation in the throat, and in the region of the orifice of the larynx, as from rancid heartburn*. *Scraping-scratching sensation in the throat, as after heartburn*, or as if the skin had been scraped with a sharp instrument, not during deglutition. °*Sore throat*, particularly after taking cold. °Catarrhal sore throat. \**Swelling of the uvula*, °also inflammatory, with stinging and pressure during and between the acts of deglutition. °Swelling of the tonsils.—°Choking and constrictive sensation of the pharynx.—Hawking up of salt mucus.

**Taste and Appetite.**—Sour taste in the mouth, and sour smell from the same. \**Sour taste in the mouth*, -especially early in the morning. \**Sour taste in the mouth*, immediately after eating, the food having a natural taste. Bread tastes sour to her, no other kind of food does. \**Milk seems to sour upon his stomach*.—Disagreeable taste and smell in the mouth and nose, almost like sulphur. (Disagreeably-sweetish taste and smell.) Bad slimy taste in the mouth, partly herby, partly metallic, early in the morning.—Disgusting, herb-like taste in the fauces, almost like carrot-tops. Beer tastes to her like herbs.—Taste in the mouth as if the stomach were deranged. In the morning the milk tastes as if sour. He wakes in the morning with dry fauces, and experiences a very bad smell from the throat after rising.—\**Putrid taste low down in the pharynx, when hawking up mucus*. \**Putrid taste in the mouth early in the morning*, going off after breakfast. Putrid taste in the mouth early in the morning, as if proceeding from hollow teeth.—\**Putrid or bitter taste in the mouth early in the morning, nevertheless food and drink have a good taste*.

While expectorating he experiences a bitter taste low down in the pharynx. Bitter taste in the mouth, not of the food. Bitter taste while spitting.—Bread tastes smoky to him. \**Food has either little or no taste to him*, particularly milk at breakfast, meat and coffee.—\**Constant want of appetite*, also with constant thirst. *Aversion to food* (immediately). Sour (brown) bread is disagreeable to him. *Aversion to rye-bread*; it causes water to accumulate in his mouth. He eats without an appetite. *Food and drink have a fetid smell*. Loss of appetite after half an hour's walking. \**Aversion to the ordinary food and drink, and the usual tobacco and coffee*.—Thirst in the afternoon and evening. (Desire for milk.) He is thirsty, \**nevertheless water and beer are disagreeable to him*.—Desire for tobacco.—\**Great hunger*, also early in the morning. \**Hunger, nevertheless aversion to food*. Disagreeable sensation in the stomach and abdomen, as if they were empty, accompanied with hunger, an hour before dinner. Periodical canine hunger in the afternoon, especially after drinking pale beer; after taking a little swallow of it, he becomes hungry, and if he lets the hunger pass off without eating, he feels as if replete with food. He is hungry, but even if he eats ever so little, he feels at once full to the mouth. °*Great appetite with vomiting of the ingesta*.—*During a meal*: \**heat in the head*. °*Sweat on the forehead and hairy scalp*. A kind of fainting, with nausea and flush of heat, going off when lying.—*After a meal*: sick feeling, \**and as if he had overloaded his stomach* in spite of his sickness. *Pressure at the stomach*, -with return of the herb-like and metallic taste. Dissatisfied and sad. \**Hypochondriac; the least cause affected him*. *Chilliness and coldness* (after dinner and supper). A good deal of heat, especially in the face; the heat seemed to arise from the abdomen, with sweat over the whole back. *Heat and redness of the cheeks*, \**with dulness of the head*. \**Drowsiness*. *Heat of the cheeks*, accompanied with burning in the interior of the cheeks, the pupils being very dilatable, with photophobia, chilliness and goose-flesh on the arms. Great dryness in the back part of the fauces. \**Sudden qualmishness*; afterwards attack of vertigo and fainting turns; lastly, eructations without taste or smell. *Aversion to the nourishment which one had taken*, particularly on lying down. \**Vomiting*, °*with pressure in the pit of the stomach and burning in the throat*.—\**Tobacco induces nausea and inclination to vomit*. °*Ailments from tobacco*.—Drinks oppress the stomach, even when thirsty. Nausea and inclination to vomit, after drinking, in the evening.

**Gastric Symptoms.**—\**Frequent hiccough*, before dinner. °*Regurgitation of food while eating, with hiccough*.—\**Frequent eructations*, -after eating or drinking. Painful eructation. Ineffectual eructations, with sensation as if the œsophagus were spasmodically contracted. \**Bitter eructations* before breakfast. \**Sour eructations*, also after a meal, or (-after a morning walk), with yawning. °*Putrid eructations*.—After a meal a watery fluid is gulped up. *Gulping up of a bitter-sour fluid at night*.—°*Waterbrash of drunkards*. Discharge of water from the mouth, on stooping.—Heartburn as from old grease.—Nausea when she begins to eat. Nausea an hour before dinner. \**Nausea early in the morning*. Qualmish about the heart early in the morning, with nausea and flow of saliva; shuddering in the afternoon. Nausea early in the morning, pervading different parts of the body as if every part were in a state of fermentation. Qualmish and anxious, nauseated and sick after a meal, as if one had taken a drastic; the sensation proceeded from the pit of the stomach. \**Nausea after a meal*. Nausea in the pit of the stomach *in the afternoon*. Qualmishness after a meal as if one would vomit. °*Chronic morning-sickness, with vomiting*.—Palpitation of the heart, followed by inclination to vomit, although the tongue is clean. Inclination to vomit immediately after a meal. Nausea after a meal

and after drinking, the abdomen becoming distended as if swollen after drinking. Sensation as if one would vomit when hawking up mucus.—°Empty retching, also of drunkards. \**Violent vomiting.* Vomiting of mucus in the forenoon. \**Vomiting of sour-smelling and sour-lasting mucus*, towards evening, with headache, being a sort of tearing (?) around the lower portion of the skull. °Tasteless vomiting. °Nightly vomiting of bile. °Morning-vomiting. °Vomiting after a meal, periodical. °Vomiting with cramp of the calves and feet, lockjaw, cold feet, anguish and trembling. °Vomiting of blood, °also of black blood, or coagulated, with colic, pressure in the forehead and undulating motion in the chest. Gulping up of blood from the stomach. °Vomiting of pregnant females.

**Stomach.**—Aching spasmodic pain from the fauces down to the pit of the stomach, early in the morning. Scraping sensation in the pit of the stomach. Constant pressure in the region of the heart. \**The region of the stomach is very sensitive to pressure.* Sick feeling in the pit of the stomach, towards evening, as if nauseated. *Constant pain* in the stomach. Violent pain in the stomach. \**Pressure in the stomach as from a stone, or pressure in the stomach after eating but little (early in the morning).* Aching pain in the region of the stomach, directly after a meal, as if he had eaten too much. Pressure in the pit of the stomach and abdomen, with distention, after a meal.—°Oppression in the pit of the stomach, with excessive anguish at night. Drinking is immediately followed by a pressure in the pit of the stomach which causes dyspnœa and is accompanied with distention of the abdomen. Pressure below the pit of the stomach, causing eructations. Pressure below the pit of the stomach, especially after walking in the open air. Pressing in the epigastric region early in the morning, followed by cutting in the abdomen with continued nausea. Pressure in the epigastrium as from a stone, increased by walking, diminished by sitting down. °Feeling of fulness in the stomach, and pit of the stomach, particularly after a meal. \**Tension in and across the stomach* (epigastrium) in the afternoon (at three o'clock), —followed by pain in the abdomen, as if every part of it were raw and sore. \**Cramp-like pains in the stomach: °with pressure, -also extending from the pharynx to the pit of the stomach.* \**Contractive-cramping pains* in the stomach. \**Gripping-tearing pains*, -also as from a cathartic, particularly after midnight, and passing into a burning in the pit of the stomach. *Gripping-tearing pains, particularly after a meal, °or before breakfast.* °*Cardialgia* from abuse of coffee or clamonile.—°Painful feeling of contraction in the region of the pylorus, with difficulty of swallowing the food which appears to rise again in the œsophagus. °*Scirrhus and cancer of the stomach.*—°Choking and gnawing in the stomach. \**Tearing in the stomach.* Lancinations in the pit of the stomach, also in the evening, even in bed. °Raw and sore pain in the pit of the stomach. \**Throbbing in the region of the stomach*, also particularly after supper. °Shocks proceeding from the stomach to the pit of the stomach. Sensation as if something were turning about in the stomach.—°*Burning in the region of the pylorus.* \**Burning in the pit of the stomach*, -also as if proceeding from below upwards, or soon after supper, with anxiety, or with a cooling sensation (at night) rising into the œsophagus and pharynx.—°Cardialgia with intense anguish.—°Gastritis?

**Hypochondria.**—\**The clothes around the hypochondria and epigastrium feel tight and cause a pressure.* Sensation in one of the hypochondria, as of an internal swelling. \**Pressure as from incarcerated flatulence under the short ribs.* *Contractive pain in the hypochondria.*—Cramp-pain in the left side, with qualmishness in the pit of the stomach.—°*The region of the liver is sensitive to contact*, and does not admit of lying on it. \*Throbbing in the region of the liver, -also as if there were an abscess. °*Tensive pressure in the*

region of the liver. \**Stitches* in that region, °also aggravated by contact and motion. Creeping chilliness in that region. °*Hepatitis*, also chronic. °*Swelling and induration of the liver*, also after abuse of *China*. \**Jaundice*, -also with aversion to food and fainting turns, which make one feeble and sick.

**Abdomen.**—°*Colic* of pregnant females. °*Colic* after bathing. °*Colic from suppression of the hæmorrhoidal flux*. °*Periodical colic, setting in before breakfast or after a meal*. \**Colic as from a cold*, -also with sensation as if diarrhoea would set in. Colic with heat in the face and feeling of dryness of the lips.—\**Pressure in the epigastrium, as from a stone*, also particularly early in the morning, or after a meal. *Crampy pressure in the side of the abdomen*, or early in the morning with fermenting croaking, succeeded by watery diarrhoea. Tensive pressure in the hypogastrium, on drawing breath, talking or touching the part.—\**Cramp-like pains* -in the left side of the abdomen, with qualmishness, particularly in the pit of the stomach. \**Contractive colic*, -particularly in the hypogastrium, during a walk in the open air, or with griping and digging in the region of the uterus, attended with increased discharge of coagulated pieces of blood. *Griping and clutching* in the epigastrium, going and coming. Griping and digging-up in the abdomen. Griping and pinching around the umbilicus, after eating. Fulling and kneading sensation in the umbilical region, or as if something which is moving down from the upper limbs were forming into a ball. °*Hysterical abdominal spasms*.—Burning in the region of the orifice of the stomach. Burning sensation in the pit of the stomach, coming from below. A sort of cooling burning from the pit of the stomach to the pharynx, especially at night. Burning pain in the pit of the stomach, and lower down, shortly after supper, with anxiety. Sensation of an increase of temperature in the abdomen, early in the morning. Sensation of warmth in the abdomen, which is not disagreeable, accompanied with a sensation as if something were rolling off, and moving about in the abdomen. °Burning in the abdomen.—\**Distention of the abdomen*, after a meal and after drinking. Excitement (orgasm?) in the abdomen from below upward, without any heat being perceptible. \**Pinching in the abdomen* : °with pressure, after a meal, -as if from worms, after taking coffee, going off by bending backwards, coming on again when bending forwards. Drawing pinching in the side, proceeding from the abdominal ribs. *Tearing pinching, towards the chest*. Cutting pinching, with nausea.—\**Cutting in the abdomen, with desire to vomit and eructations*. °Cutting in the umbilical region. Cutting in the abdomen, early in the morning, preceded by pressing in the pit of the stomach, and attended with constant nausea. Continued cutting in the hypogastrium, rising to the epigastrium, where the cutting changes to a griping. *Cutting every morning* in the hypogastrium, with inclination to vomit, disagreeably sweetish taste in the mouth, languor and great drowsiness. Burning cutting in the epigastrium, particularly during motion.—*Drawing pain* in the abdomen, proceeding from the left side, and passing across the umbilicus. *Tearing* in the abdomen, in the afternoon. *Drawing tearing* proceeding from either side toward the point above the pubic bone.—*Prickings in the abdomen*. *Sticking* in the umbilical region. *Stitch* in the side, during motion. *Stitch* in the left side, during a deep inspiration. *Stitch* in the right side, arresting the breathing, and abating on pressing the hand into the part. °*Retarded circulation in the abdomen*, also with heat, burning and pulsations in the abdomen. \**Heaviness in the abdomen*, as from a load.—\**Bruised pain of the bowels*, -also in the loins, early in bed, with nausea. Shaking of the bowels when walking. Sensation as if everything in the abdomen would fall down, obliging him

to walk slowly.—\*Pain in the abdomen as if sore and raw, also at every step. °Enteritis. °Enlargement of the abdomen of children, with glandular swellings and consumption. *Flatulent colic in the epigastrium, in the evening and after lying down.* \*Rising of flatulence in the abdomen, and incarceration of flatulence under the short ribs. Pain in the abdomen as from incarceration of flatulence. Pain as from incarcerated flatulence, deep in the hypogastrium, with pain in the small of the back, early in the morning. *Flatulent colic after stool, as if the intestines were pressed by stones here and there.* A sort of flatulent colic, deep in the hypogastrium: sharp pressure going and coming, as with a cutting or sticking instrument, upon the bladder, the neck of the bladder, the commencement of the urethra, the perinæum, rectum, anus, as if cutting flatulence would press through all those parts; the cutting becomes intolerable when making the least step (he has to walk bent on account of the pain; it passes off speedily when sitting or lying. Distention of the abdomen by flatulence, with pressure. Pressure in the abdomen as if distended, during an inspiration, when talking, and when touching it. *Flatulent distention of the abdomen after a meal, or immediately after drinking.* All the nourishment he takes seems to become converted into flatulence, which ascends and causes anxiety. Flatulent pressure here and there in the abdomen, with anxiety. The flatulence seems to ascend into the chest, to oppress it, and to cause a stitching pressure in various parts of the chest (immediately). Movement of flatulence in the abdomen early in the morning. Sense of croaking in the abdomen, as of toads. *Grumbling and rumbling in the abdomen, early in the morning, when in bed,* accompanied with spasmodic pinching, flatulent colic, heat in the palms of the hands and soles of the feet. Loud rumbling in the abdomen, with sensation as if stool would come on; at the same time she becomes faint, and has to lie down. *Twitchings of the abdominal muscles under the skin.* Creeping sensation in the abdominal muscles; the parts feel numb, pithy and swollen. The abdominal muscles feel bruised when moving or touching the parts. The abdomen is painful when touched. After a good walk a pain is felt at a small spot in the abdomen, when touching that place, or when the clothes press against it; a fine pricking is likewise felt at that place. °Peritonitis.—Pressing towards the genital organs in the abdomen. Contraction in the abdomen and a pressing towards the genital organs, when walking in the open air. *Sensation of weakness in the abdominal ring, as if hernia would set in.* Pain in the abdominal ring, early in the morning when in bed, as if a hernia became incarcerated. *Sensation and indications of inguinal hernia.* Aching pain in the region of the pubic bones.—°Frequent protrusion of inguinal hernia.—°Incarcerated hernia. °Femoral hernia. °Umbilical hernia of infants, particularly from much crying.

**Stool.**—\*Constipation \*with rush of blood to the head. °Constipation with obstructed circulation in the abdomen and affection of the portal system. *Constipation as if from inactivity of the bowels.* °Constipation from sedentary habits. \*Constipation as if from contraction and constriction of the bowels. °Constipation of infants and from abuse of coffee. °Constipation of pregnant females.—\*Ineffectual urging to stool, also frequent and anxious. Ineffectual urging three or four times a day, with pinching, and occasional discharge of soft stool. \*Frequent urging, with tenesmus and pressure in the anus, and cutting around the umbilicus.—°Costiveness. \*Large, hard fæces. \*Difficult stool, -also with burning. *Stool's consisting of hard and soft fæces,* early in the morning and after eating (and drinking), attended with emission of flatulence. The first part of stool is soft, the latter hard. Involuntary thin stool, in the forenoon, with emission of flatulence, followed by hard fæces. Diarrhœa, especially early in the morning and after dinner, dark-coloured. The stool is enveloped with white mucus. Fetid

diarrhœa. Discharges of thin, green mucus.† *Colic, succeeded by discharge of dark-coloured mucus, causing a smarting burning in the anal region.*—\**Frequent small diarrhœic stools, corroding the anus.*—\**Small stools, mostly consisting of mucus and accompanied with urging and tenesmus.* °Putrid diarrhœa. °Watery diarrhœa, after a cold, also with cutting and drawing from the abdomen and small of the back to the thighs. °Dysenteric diarrhœa, with discharge of bloody mucus and fœces, cutting in the umbilical region and tenesmus of the rectum.—°Alternate constipation and diarrhœa.—°Pitch-like, bloody, shaggy stools. Stools lined with blood and mucus, also hard stools. Whitish fœces with blood and mucus. °Undigested stools.—*Previous to stool:* pressing in the rectum. When going to stool, the pressing bears more upon the uterus than the rectum (as if she were in labour). Gripping in the epigastrium, when she goes to stool. Pricking pain in the rectum, as if occasioned by hæmorrhoids.—*At stool:* he feels as if something remained behind, and as if he could not expel a sufficient quantity of fœces, with sensation as if the rectum, not the anus, were constricted. Stool every day, but with a colicky feeling in the abdomen; after stool she feels as if something had remained behind. Pressing on the uterus rather than the rectum. Pricking in the rectum. \**Discharge of blood*, with sensation as if the rectum were contracted or constricted.—*After stool:* biting and soreness in the anus, in the evening. Burning smarting as from piles. \**Ineffectual urging.* Prickings in the rectum as from piles, after hard stool. Discharge of blood from the anus. Lancing and constrictive pain in the rectum and anus, as if occasioned by bad, blind hæmorrhoids, after a meal and after mental labour, or after meditating. Burning and pricking at the rectum, \**with hæmorrhoidal tumours at the anus.* Sharp painful pressure at the rectum after stool and after a meal, especially during mental labour. Pain in the rectum, as if costive, after supper, the pain being relieved from time to time by emission of flatulence. Aching pain in the interior of the anus and rectum, in the evening. Violent, aching pain in the rectum, arresting the breathing, about midnight. Painful contraction in the rectum and anus, early in the morning after rising. *Painful spasmodic stricture of the anus.* Contractive sensation in the rectum, sometimes resembling an urging to stool. \**Contraction and narrowing of the rectum, hindering the expulsion of stool.* Twitching in the anus, between stools. Itching of the anus, and hot stool. Voluptuous, intolerable itching down to the anus. Creeping and titillation in the rectum and anus, as if caused by ascarides. Discharge of ascarides from the rectum. Itching of the margin of the anus, changing to a smarting and sore pain, as if caused by hæmorrhoids. Itching of the anus accompanied with sore pain, as in hæmorrhoids, in the evening, when walking.—Itching of the perinæum, after dinner. Aching pain in the perinæum after dinner.

**Urinary Organs.**—(Stitching pain in the bladder, after dinner, between the acts of micturition, diminished by emission of flatulence.) °Retention of urine. \**Painful, ineffectual desire to urinate.* °Painful desire to urinate, with discharge of the urine drop by drop, attended with burning and tearing. °Strangury. °Nightly urging to urinate, terminating in discharge of blood and burning.—\**Frequent inclination and urging, also in the afternoon.* Painful emission of thick urine. He emits more urine than corresponds to the quantity of drink taken.‡—Watery urine. Discharge of pale urine, followed by dis-

† NOTE BY HAHNEMANN.—Continued copious diarrhœic stools—or diarrhœa properly so-called—are no primary effect of Nux v., as far as I have been able to observe; the diarrhœic stools mentioned in these symptoms are either very small discharges of mucus with the stool and accompanied by pressing, or else, if the discharge was one of loose fœces, it was a curative effect of Nux produced in a patient affected with costiveness and constipation and ineffectual urging for stool.

‡ NOTE BY HAHNEMANN.—Copious emission of urine is a curative effect of Nux v.

charge of a thick, whitish, purulent matter, with violently-burning pain. Painless discharge of tenacious mucus from the bladder, when urinating. °Reddish urine with brick-dust sediment.—°Hemorrhage from the urethra.—Previous to micturition: pain in the neck of the bladder. Burning and pricking pain in the urethra, after dinner. Fine pricking or darting in the urethra. During micturition: *\*burning and tearing pain in the neck of the bladder.* *\*Burning in the urethra.* Burning pain in the anterior part of the urethra. *Itching in the urethra.*—After micturition: pressing in the neck of the bladder. Soreness at the tip of the glans.—Aching pain in the orifice of the urethra, with shuddering between the acts of micturition. Contractive pain from before backward, in the anterior part of the urethra, between the acts of micturition, early in the morning, and when reflecting. Pain of the orifice of the urethra, as if sore, before or after micturition. Itching pricking in the fore part of the urethra.—°Spasmodic stricture of the urethra, with retention or difficult emission of urine. Discharge of mucus from the urethra. °Gonorrhœa.?

**Male Genital Organs.**—Sore pain of the tip of the glans, after micturition. *Itching of the glans*, also early in the morning. Smarting of the glans. Smarting itching of the glans. Corrosive itching of the glans, evening and morning. Burning itching of the posterior part of the glans. Increased secretion of smegma behind the corona glandis. Retraction of the prepuce behind the glans. *Smarting itching of the inner surface of the prepuce* especially towards evening. Soreness of the margin of the prepuce, especially towards evening. *Soreness in the fold between the genital organs and the thigh.* (Glandular swellings in that fold.)—Pinching pain in the right side of the scrotum. *Itching of the scrotum.* Heat in the testicles. Stitches in the testicles.—°*Contractive pain* in the testicles. °*Inflammation and swelling* of both testicles, with hardness and drawing up of the testicles, attended with sticking and spasmodic choking sensation rising into the spermatic cord. °Hydrocele.?—Sexual delight occasioned by the least caress or contact of a female, especially early in the morning when in bed. Itching burning in the region of the neck of the bladder, early in the morning when in bed, inducing a desire for an embrace. Involuntary irritation in the genital organs and desire for an emission, early in the morning after rising from the bed. Nocturnal emission with sexual dreams. Emissions followed by continuous coldness of the feet, not going off by motion. *\*Emissions* -without erection; afterwards languor of the lower limbs.—°*Continued erections* which are painful. *Erection after the sies'a.* *\*Erections many mornings in succession.* Desire for an embrace; during the embrace the penis becomes relaxed. Dry heat of the whole body, directly after an embrace; he cannot bear being covered, and has a dry mouth, without thirst

**Female Sexual Organs.**—°*Contractive uterine spasms*, a gripping and digging, with discharge of clots of coagulated blood. Pressure towards the genital organs, early in the morning, in bed, or during a walk in the open air, with contraction in the hypogastrum. °*Congestion of blood to the uterus.* Metritis, with burning heat, heaviness, sticking and pressure. °Prolapsus of the uterus from straining by lifting, with hardness and swelling of the os tincæ. *\*Internal swelling of the vagina*, resembling a prolapsus, with a burning pain, making contact intolerable. Burning in the pudendum, with desire for an embrace. °Inflammation of the labia. °Varices on the labia.?? Corrosive itching eruption on the pudendum.—°*The menses appear* too early, by three days, also with abdominal spasms. The menses appear too early, do not last so long, and *are more scanty than usual.* The menses which had ceased flowing the day previous, re-appeared for a few hours. The menses re-appeared in a fortnight. The menses appear at full moon. The menses cease for six weeks, and *re-appear at full moon.* During the menses: nausea early

in the morning, with chilliness and fainting turns. Fainting turns after the appearance of the menses, early in the morning after rising, preceded by spasmodic movements in the abdomen, and followed by languor and chilliness on rising from bed. She becomes quite faint after every stool. Debility in the afternoon, with headache, as if the eyes would come out of the head; she was unable to hold her head up, felt chilly so that she shook; an hour after she was attacked with an internal burning heat, with dry lips. Pain in the occiput, as from an ulcer in the brain, and as if there were subcutaneous ulceration; on lying down the pain became worse. Pain in the side of the abdomen, with pressure from within outward. Tearing in the left arm and right thigh, after the siesta. Creeping in the pharynx from below upward, in the evening, after lying down. *\*Leucorrhæa, also fetid, tinging the linen yellow.—In pregnant females: °nausea and vomiting. °Desire to urinate.? °Retention of stool. °Colic and abdominal spasms. °Toothache. °Headache.—Too violent labour-pains or after-pains. °False, spasmodic labour-pains, particularly when accompanied with ineffectual urging to stool. °Precursory symptoms of miscarriage, or disposition to miscarriage. °Metrorrhagia after parturition. °Phlegmasia alba dolens of lying-in females.? °Suppression of the lochia. °Puerperal fever. The nipples are painful to the touch. Pain in both nipples as if milk would be secreted in the breasts. °Soreness of the nipples in lying-in females.? —In infants: °ophthalmia neonatorum. °Dry coryza. °Hernia. °Constipation. °Convulsions.*

**Larynx and Trachea.**—Hawking up of mucus from the larynx, without cough. Catarrh with headache, heat in the face, chilliness and a good deal of mucus in the throat. *\*Dry, painful catarrh in the larynx*—in the evening before going to bed. Catarrhal affection of the chest early in the morning; he is unable to throw off mucus without pain. Roughness of the throat occasioned by a catarrh. Tightness of the chest; he is unable to get anything loose by cough. Dry, painful catarrh, early in the morning, with increased temperature of the hands and feet, requiring those parts to be covered, although they have to be uncovered again after the lapse of an hour, followed by a general exhalation (and disappearance of the catarrh). *Huskiness of the chest*, early in the morning with soreness of that part of the trachea where the mucus is detached, relieved after rising. Tenacious mucus in the upper part of the trachea, early in the morning, after rising; his chest feels tight. *Scraping sensation in the chest inducing hawking. Sensation as if the upper part of the larynx were oppressed and narrowed by mucus*, which he has to hawk up by hawking. °Grippe.—°Nux v. is almost a specific remedy in the first stage of the ordinary bronchial catarrhs, with dry coryza and dry cough.—°Constrictive spasm of the larynx.—°Bronchitis.—Titillation in the region of the velum pendulum palati, exciting a dry cough. Roughness and scraping in the larynx, inducing cough. *Itching titillation in the larynx*, and in the middle of the sternum, inducing cough. *\*Cough when moving the body.* Tickling in the trachea, brought on by an expiration, and occasioning cough. *\*Cough coming on while reading and reflecting.* Cough returning every other day with violence. *\*Cough after a meal.* °Titillating cough, °a light hacking in the day-time, worse in the evening, seldom at night, and *most violent in the morning.* °Cough with roughness, during and after measles and rubeola. °Short hacking, with soreness of the chest.—°*Dry cough from midnight until daybreak.* Violent fits of dry cough in the evening after lying down, and early in the morning. Violent cough early in the morning before rising, with expectoration of coagulated blood and aching pain in the chest. Cough in the night; his chest feels tight. Cough until midnight; after midnight she slept soundly. *\*Dry, fatiguing, continuous*

cough, °also with vomituration and vomiting of mucus *about midnight*, -in a recumbent posture, going off when turning to one side. °Spasmodic cough with retching. °Whooping-cough.—°Cough becoming loose in the open air (curative effect). Cough and expectoration increase during a walk in the open air, followed by faintness. Cough with sweetish expectoration. \**Acrid sensation in the throat*, only while coughing, and causing a pain in the pit of the stomach. Sore stitching when coughing. °Sore and raw feeling in the throat-pit, during cough. \**Cough, occasioning a headache as if the skull would burst.* \**Cough occasioning a pain as if bruised in the epigastrium.* Cough, exciting heat. (Cough occasioning a cracking in the ear.) °Cough inducing vomiting. °Cough with danger of suffocation. °Cough with discharge of blood from the nose and mouth. °Rattling of mucus in the chest.

**Chest.**—*Fetid breath*: through the nose. Fetid breath from the mouth, also on stooping, and attended with vertigo. *Fetid breath after rising in the morning*, or after dinner. Sour-smelling breath.—Oppression of breathing occasioning a hacking (short cough). Shortness of breath; she is unable to inspire a sufficient quantity of air, even when lying, with quick pulse. *Asthmatic, constrictive sensation through the chest, when walking or going up stairs.* Tightness of the chest when going up stairs, as if his clothes were too tight, disappearing after sitting down. When the clothes press tightly against the parts below the ribs, he is unable to breathe in walking, the breathing becomes freer when the clothes are somewhat loosened, but if he takes off his clothes entirely, the breathing becomes again oppressed. The pressure of the clothes above the hips produces an oppressive feeling, they feel too tight. Difficulty of breathing immediately after a meal, from pressure below the umbilicus as from a stone. Arrest of breathing, from a choking sensation in the throat ascending from the pit of the stomach.—Dyspnœa morning and evening. Oppression of the chest, in the evening. °Anxious oppression of the chest at night, before breakfast and after a meal. Dyspnœa and anxiety increase gradually for some hours, the breathing becoming shorter and shorter, and sweat breaking out over the whole body occasionally. Dyspnœa at night, on waking from frightful dreams; she is scarcely able to draw breath, accompanied with humming in the ears, quick pulse and sweat. Dyspnœa, early in the morning in bed, in a recumbent posture; when turning to the right side the dyspnœa disappears, and headache sets in.—°*Suffocative fits after midnight.* °Dry spasmodic asthma of full-grown people. °Asthma Millari.? °Congestive dyspnœa.?—°Spasms of the chest, caused by the vapors of copper and arsenic.?—A somewhat painful weariness in the chest, relieved by bending the trunk backward.—After dinner he is obliged to take slow and deep inspirations. Dilatation of the pupils during slow breathing.—Crampy sensation in the chest at night, in bed; it feels contracted. Pain directly below the umbilicus, as if a stone were lying there, almost arresting his breathing.—Disagreeable feeling in the pit of the stomach, rising to the larynx, producing a suffocative sensation and arresting the breathing.—The breathing is difficult and oppressed, as long as she remains up; it becomes natural when lying in bed.—Pain in the chest, in the open air, as if oppressed by a load. Painful pressure across the chest, arresting the breathing. Pain across the chest, with short breathing. Pain, as if the sternum were oppressed. Pain in the region of the sternum, as if the chest were too short, only in the day-time and during an inspiration.—Aching (and cutting) pain in the chest, directly after a meal. Aching pain in the left side of the chest, when sitting a while, but going off immediately after an eructation.—Pinching-drawing pain, near the sternum. Drawing below the left chest with anxiety; a sort of oppression in the region of the heart, rendering breathing difficult. Drawing pain in the

chest. Drawing pain in the ribs. Drawing and burning tearing in the left chest, early in the morning.—Burning in the chest with anxiety. He feels hot in the chest. °*Congestion of blood to the chest.* Sudden warm rushing of the blood in the chest, causing anxiety. Heat in the chest rising to the mouth, and occasioning restlessness, anxiety and sleeplessness. Warm tension in the chest. Warmth in the chest, internally and externally, with fine stitches in the muscles of the chest.—Prickings in the sternum in the afternoon. (Dartings in the chest.) Stitches in the muscles of the chest, not excited by breathing. A few violent stitches in the region of the heart, early in the morning, an hour after rising. Sticheing pain in the chest, becoming more violent during motion, in the middle of the chest.—*Painful pulsative shocks* in the direction of the heart. Beating in the chest, also in the side of the chest. \**Palpitation of the heart*, -when lying down after dinner. Orgasm of the blood, with palpitation of the heart early in the morning. Frequent, small paroxysms of palpitation of the heart. °Palpitation of the heart, with nausea, inclination to vomit, and heaviness in the chest.—Sensation in the chest, as if something would fall down.—*Bruised pain* from the sternum to the scapulæ, only in day-time, with stitches and shortness of breathing, both during rest and motion. *The whole sternum feels bruised when touched.* Contusive and bruised pain in the side of the chest, below the shoulder, worse during motion and by contact than during rest. Pain in the outer chest, below the axilla, when touching the parts; he dares not press the arm against the chest. °Rheumatic sticking in the muscles, even in the intercostal muscles. °Rheumatism of the muscles of the chest. Tension and pressure in the outer parts of the chest, as if oppressed by a load and as if the side were lame. Chilliness over the chest, with tensive pain.—*Itching sort of stinging* below the nipple.

**Back.**—Nightly pain in the small of the back, hindering turning to the other side while in bed. Beating pain in the small of the back, with eructations and chills. Contractive pain in the small of the back, afterwards extending to the side. The sacral and lumbar regions feel tight and are sore to the touch. A current of air occasions a pain in the small of the back, as if it would break; she had to walk bent. Pain in the small of the back, only in the day-time, as if bruised or too weak, as after confinement. *The small of the back feels bruised*, -worse during motion than rest. Contusive and bruised pain in the small of the back and knees, early in the morning, in bed, mixed with a drawing pain, neither diminished nor increased by rest or motion. Bruised pain in the small of the back, when stooping too low or bending backward considerably, but more when stooping. Bruised pain in the region of the pelvis, when making the least motion. (Chilliness in the afternoon, with violent stitching in the small of the back, afterwards extending into the sides, and oppressing the breathing.) When turning the upper part of the body to one side, he feels a long stitch in the small of the back, arresting the breathing. Dull stitching, resembling a jerk, in the small of the back and the ossa ischii, preventing her from turning from side to side; also during rest she felt a dull pain in the small of the back; she was unable to remain still; the painful jerks permitted her neither to cough nor to sneeze.—*Tearing* in the loins.—*Drawing pain*, commencing in the loins, and ascending the back, accompanied with a paralytic stiffness. °Drawing, extending to the shoulders. Aching pain in the loins, extending towards the spinal marrow, directly after supper, causing anxiety. A somewhat aching pain from the loins to the spinal column (early in the morning), immediately after drinking; afterwards the pressure is felt in the hypochondria, as if flatulence had become incarcerated in that region. Pulling and tearing in the lower part of the back, when walking or sitting, but not when lying. °Rheu-

matic or hæmorrhoidal pains in the loins, small of the back and back.—Drawing pain in the *back*. Drawing in the back, commencing in the nape of the neck (when sitting), attended with a violent pain in the pit of the stomach, being a sort of sudden griping, and obliging her to sit bent. Drawing-tearing pain in the back. \*Tearing in the back, °also particularly in the evening. *Burning-tearing pain in the back*. Contractive, or rather constrictive pain in the back. Stiffness of the back (in a few hours). °Hæmorrhoidal stiffness in the back. Aching pain in the dorsal vertebræ. \**Bruised pain in the back, increasing by contact or pressure*, -as if ecchymozed.—Pain in the *scapulæ*, as if *sprained*. Stitching between the scapulæ, during motion and inspiration. Continued burning-stinging pain between the scapulæ. Drawing and bruised pain between the scapulæ, especially when stooping. Constrictive pain between the scapulæ. Pain between the scapulæ and in the nape of the neck, when moving the head.—Pain in the region of the last cervical vertebræ, as if the *flesh had been severed from the bone by blows*; even the contact of the shirt was painful. Cracking of the cervical vertebræ when moving the head. Pain in the articulations of the cervical vertebræ. \**Drawing pain in the nape of the neck*, and as if oppressed by a load, early in the morning. Stiffness in the right side of the nape of the neck, as if his head had not rested well in the night. *Paroxysms of tearing pain in the nape of the neck, in the evening*. Bruised pain in the nape of the neck, when moving the part, (stooping), or when touching it.—The left side of the cervical muscles is swollen, and is painful when moving the head, as if the tendons were too short.

**Superior Extremities.**—Bruised pain in the shoulder-joint and scapula, when turning the head to the opposite side. *Pain as if bruised in the shoulder-joint*, hindering the raising of the arm. Pain in the shoulder-joint, when lying on the right side, as if the ligaments were torn; the pain disappears when turning to the painful side. Indescribable pain in the shoulder-joint of the side on which he is lying, early in the morning, gradually disappearing after turning to the other side, and accompanied with general slight perspiration. Paralytic pain in the shoulder-joint, the whole arm feeling tired and heavy, both when sitting and walking; after moving it for a while he is unable to hold the arm up. Pain in the shoulder-joint, as if bruised or wearied by labour, when the arms are hanging down while walking in the open air. Drawing pain in the head of the humerus. Rheumatic pain in the right shoulder and the deltoid muscle. Sensation of warmth in the head of the humerus and arm, here and there. Burning painful spot on both the deltoid muscles, which likewise feel hot to the touch.—Itching rash on the *arms*; friction occasions a smarting pain. Sensation as if the arm had gone to sleep, but without prickling, followed by a contractive sensation. Pain in the arm, hindering motion. Indolent feeling in the arms. She feels weary in the morning, after having had a sound sleep; her arms and (lower limbs) ache as if she had slept upon a hard couch (after having sat still for half an hour, she feels strong again). When stretching her arms, her fingers are seized with cramp and prickings. Heaviness and weariness of the arms and feet, in the afternoon.—*Sudden sensation of loss of strength in the arms* (and lower limbs) *early in the morning*. °Paralysis of the arm, with tumult and shocks in the arm, as if the blood would start out of the vessels. \**Drawing pain in the arm* from below upwards, with paralytic stiffness, particularly at night. The arms go to sleep at night.—°Rheumatic laming pain in the upper arm, increased by motion.—Contractive aching pain in the *elbow*. Boring pain in the elbow-joint, after midnight, when lying on the opposite side.—Weariness of the *forearms*. Paralytic aching pain in the middle of the right forearm, externally. The muscles of the inner side of the left forearm are swollen, and are

painful as if burnt. Herpes on the inner side of the right forearm, but without itching, continuing for a fortnight. Drawing pain in the forearm with stitches in the fingers. Paralytic weakness of the forearms and hands, after the siesta. Every morning, or every other morning after rising, the forearm goes to sleep as far as the hand, as if dead, with coldness, but without distention of the veins.—Pain, as if sprained in the right *wrist-joint*, when moving and exerting the hand.—Drawing pain in the *hand*, and afterwards in the elbow-joint, the drawing proceeding from below upwards. Deadness of the hands, *they go to sleep*. Drawing stitching in the outer knuckle of the right hand, in the evening, before going to bed. Cramp-like contraction of the palm of the hand, which cannot be stretched without pain. Pain in the nape of the neck when walking in the open air, the pain afterwards moving to the wrist-joint, a sort of paralytic pain; he had not strength enough to grasp anything firmly; the pain went off in the evening when lying in bed. He had not strength enough in his hand to write. His hands feel easily chilly, and have to be wrapt up. *Cold hands*. Heat in the hands early in the morning; he covers them because an intolerable pain is experienced in them when they become cool. The hands are cool and damp, with coldness of the tip of the nose. *Cool sweat* of the palms of the hands. *Profuse sweat of the palms* of the hands when walking in the open air. (The hands are frequently dark-red, with turgescient veins.) *Pale swelling* of the hands and fingers. • Burning of the dorsum of the hand.—Drawing pain in the fingers up and down. Itching of the finger-joints. \*In a mild season of the year, *the fingers are red and swollen in various places*, and affected with a burning itching, especially when entering a warm room or getting into bed. Pain of the finger-joints, as after violent labour, and as if the tendons were too short. The fingers go to sleep during the night-sweat. Spasmodic contraction of the fingers when yawning. Cramp in the fingers after midnight, when in bed. Darting pain from before backwards, in the direction of the bones of the thumb. Burning in the ball of the thumb, during the siesta. Hot swelling of the thumb, painful to the touch, and converted into an abscess in the region of the joint. When moving the thumb, it cracks easily.

**Lower Extremities.**—Pain in the right glutei muscles, as if the flesh had been severed from the bone by blows. Gnawing-itching pimples on the buttock. Burning in the right hip-joint. Stitching in the hip-joint, as if sprained. Jerking in the hip-joint before dinner.—\**Frequent dartings from the feet to the hips*, -in a recumbent posture, early in the morning, going off when turning to the painless side. Weakness in the right lower limb, when walking in the open air. *Vacillation and unsteadiness of the lower limbs*. The child frequently falls when walking. She feels very tired in the morning, when rising after a sound sleep, her upper and lower limbs ache as if she had been lying on a hard couch, (her strength returns after half an hour's rest). Heaviness and weariness of the lower limbs, in the afternoon, especially when going up stairs, and aching when walking. The limbs are too weak to carry the body; he has to lie down. *Sudden sensation of weakness in the upper and lower limbs*, early in the morning. The lower limbs go to sleep while taking dinner. °*Numbness and paralysis of the lower limbs*. Coldness of the lower limbs, particularly the thighs, even in bed.—Weight in the right *thigh*, hindering the movement of the limb. Jerking sensation in the right side of the thigh, as if one were pulling a string. Frequent jerking and twitching in the flesh of the thigh. Drawing pain from the abdomen through the thighs. Sense as of drawing in the thighs, from above downwards. Paralytic drawing in the muscles of the thigh and calf, painful when walking. Drawing-tearing pain in the thigh, down to the knee, when tired. Paralytic pain in the head of the femur, extending below the knee,

when walking. Painful tension in the thigh, as if too short. *Bruised pain in the posterior muscles of the thigh*, worse when rising from a seat. Pain as after great fatigue, in the flesh of the thigh, with bruised pain when touched. Pain in the muscles as if bruised, in the middle of the thigh, when walking. *Boils on the thigh*, causing a violent stinging pain. Burning pricking from the small of the back through the thigh, when stepping and walking. °*Sticking and drawing* from the knee to the groin, aggravated by contact and motion. Itching of the thighs, when walking. Itching of the left thigh and foot, especially in the evening when getting into bed. Burning-itching *rash* on both thighs during the menses. A gnawing-itching pain in the outer parts of the thigh, and above the knee, in the evening after lying down, not going off by scratching. Sweat of the thighs and calves after midnight.—Tearing and stitching pain a little above and below the *knee*, in the evening. Tottering and giving way of the *knees*. Excessive *weakness* of the knees, occasionally. *Trembling of the knee and one foot*, while the mind is agreeably but ardently employed, mostly in the evening, when standing. Jerking in the bends of the knees after walking in the open air, when standing. *Sensation in the bends of the knees, as if they were too short, when rising from a seat*. *Stiffness and tension in the bend of the knee*, especially after standing. Tensive pain in either patella, as if fatigued from a walk, when going up stairs, worse in the morning. Disagreeable sensation in the knee-joint, when walking, as if the synovial fluid were wanting, and as if the joint would crack. Pain in the knees, as if bruised, during rest and motion, only in the day-time. Painful *swellings* above the knee. \**Arthritic inflammation and swelling of the knee*, also with formation of nodosities. Burning-itching rash on the knee. Itching of the bends of the knees, early in the morning. A sort of small *boil* on the knee, making the whole limb stiff.—Spasmodic drawing in the *legs*. The leg goes to sleep when sitting or standing; a pricking is experienced in the leg, when touching it with the other. Sensation in the leg as if gone to sleep, without tingling, succeeded by a contractive sensation. After sitting, the legs go to sleep when walking or standing. Tearing pain in the left leg, extending down to the toes, in the afternoon. Tearing pain in the ulcer on the leg, when coming in contact with the open air. Inflammatory *redness* around the ulcer on the leg, when walking or performing any other motion. °Bright-red swelling of the leg, with black painful spots. Burning stinging at a small spot of the tibia. Itching of the leg at some distance from the ulcer.—The *calves* and feet go to sleep early in the morning. *Pricking* in the calf when the cold air blows upon it, as if the leg had been to sleep. *Pressure* on the side of the calf. *Cramp-pain* in the calves. Cramp in the calf, in bed, when stretching or bending the leg. *Tensive pain in the calves*. Creeping in the calves, after walking in the open air. Creeping from the feet upwards.—Pain in the *tarsal joints*, only when moving and walking, as if she had performed a fatiguing journey; the tendons are painful, as if too short and rigid. The tarsal joint is liable to be sprained and to give way when walking. Pain in the tarsal-joint early in the morning, when walking, as if sprained; he is not able to step without suffering great pain as high up as the leg. Tearing in the ankle (after the siesta). Drawing and stitching in the outer ankle of the right foot, in the evening, before retiring. Cramp-like contraction of the right foot. *The feet go to sleep*. Heat in the feet, early in the morning, with intolerable pain in them when they become cool. Early in the morning, the foot of the leg affected with an ulcer, is swollen. *Swelling* of the dorsa of the feet. After having been seated in the day-time, and when rising, she is frequently affected with a cramp in the soles of the feet; she is obliged to stretch the foot to find relief, or she runs about the room to get rid of the sen-

sation; at night she is attacked with painful cramp in the soles of the feet, which hinders sleep and comes on as soon as she draws up her feet and bends the legs. *Painful cramp-like contraction of the soles*, when bending the legs, disappearing when stretching the legs. *Burning pain* in the soles. Tearing in the soles, when lying down after dinner, (preceded by a burning in the ball of the thumb). *Stitches* in the soles of the feet. Single stitches in the heel. Dull, numb pain (pithiness) in the heel, as after jumping from a height. (Pain in the heel when stepping, as if it had become sore by walking; worse when stepping on stone.) Pain, as if the shoe were too tight and pinched him, and as if the sole of the foot were sore and weary from walking. On the sides of the foot and toes, and on the top of the toes, he experiences a burning pain, and as if the shoe pinched him, in the evening. Violent pain in the chilblain, in the summer season, as is felt in the most violent cold, a sort of throbbing in the chilblain (immediately).—Pain in the region of the roots of the nails when touching them, or knocking them against something, as if they would come off by ulceration.—*\*Itching burning of the toes, as if frozen*, in a mild season, especially when he enters a warm room or gets into bed.—The big toes go to sleep (immediately). Cramp-like pain in the right big toe (when at rest), going off soon. *Cramp-like contraction of the toes* when yawning, or after midnight, in bed.—The *corns* feel sore like boils.

**Sleep.**—A good deal of yawning, with stretching, also early in the morning, with subsequent spasmodic pain in the limbs, and particularly in the knee (also attended with chilliness and inward trembling), or early in bed, as if proceeding from the abdomen. Constant disposition to sleep and yawn in day-time. Constant yawning, succeeded by great languor. Yawning early in the morning, with lachrymation, or subsequent headache. Yawning with shuddering. Yawning occasioning a cough.—*\*Excessive drowsiness in the day-time*, as if the head felt stupified. Drowsiness when walking in the open air, followed by palpitation of the heart, and great anxiety, with swelling of the veins of the hands, without heat. Disposition to sleep, before dinner (about eleven o'clock). *\*Irresistible drowsiness after a meal*, for several hours. He dreams and talks aloud during the siesta. *\*Great drowsiness, two hours before retiring; he falls asleep as soon as he goes to bed, wakes after midnight*, remains awake a long time, and then sleeps until late in the morning, dreaming of the things of yesterday, and disinclined to rise in the morning.—*\*He falls asleep late in the evening, sleep being hindered by a multitude of ideas interfering with one another*. Sleeplessness until midnight, with a feeling of heat without thirst. *\*He only sleeps from eleven till one o'clock, after which he wakes and has to rise at three o'clock*. Night seems to him very long and tiresome, with comatose slumber and busy dreams. *\*He does not feel sleepy till day-break*.—Symptoms at night in bed: uneasiness, particularly in the arms, which require to be alternately covered and uncovered.—Uneasiness and anxiety in the evening; after lying down, obliging him to draw his limbs up and to extend them again. Uneasiness in the lower limbs, before midnight, a pleasurable, almost voluptuous, but intolerable sensation in these limbs, hindering sleep, rousing him when on the point of going to sleep, and obliging him to draw the limbs up and then to extend them again. Light sleep at night, with frequent waking. Timely waking with oppressive anxiety. Frequent waking, with difficulty of going to sleep again, which is then disturbed with dreams.—During sleep: *\*starting* at night, and in the day-time when waking. *\*Violent starting on going to sleep*. He wakes with a start by the least noise.—Start and jerk through the whole body, during the siesta, affecting him like an electric shock, as if he would fall down. (During the evening slumber he jumps out of bed delirious.) *\*Anxious, moaning bab-*

bling, early in the morning during sleep, succeeded by emission of flatulence. He lies on his back, with his arms above his head, and with his head bent backward or lying. Snuffling, whistling expirations through the nose. Snoring inspirations, before midnight. Anxious delirious fancies, in the evening when in bed, as if some one would get into his bed, as if there were not room enough in his bed, as if his bed had been sold, etc. *Frightful visions in a dream.*—Sad visions, at night, in a half-waking state, for instance, of the heads of deceased acquaintances without their bodies, etc. °Soporose condition with heavy deep sleep (in apoplexy). She cannot sleep at night, and when she does go to sleep, she has fearful dreams which wake her; she remains awake for hours, and after going to sleep again, she again has frightful dreams, and after waking knows what she has been dreaming about.—\**Delirious, frightful visions at night.* Horrid dreams (of wild beasts). Dreams about sick or mutilated men.—Wakes from horrid dreams. Dreams about vermin. He dreams that all his teeth are falling out. He dreams that he is very much pressed to accomplish a certain business. He has disagreeable dreams about things which had taken place or had been talked about the day previous.—Anxious dreams, and weeping during sleep. Dreams, accompanied with intense reflection, and in a state of half-waking. He dreams of cruel mutilations and lacerations which leave him indifferent. °Lewd dreams. Dreams full of care. *Early in the morning in bed:* Anxious orgasm of the blood, with discouragement. *Irresistible, sweet morning slumber.* Difficult waking. *Feels more weary than the evening previous.* Great inclination to lie down again after rising. He does not feel very well; he fears to rise, as if he had performed a fatiguing journey on foot, this feeling goes off after rising. After rising: diarrhoeic stool, followed by languor, yawning, drowsiness, chilliness, dulness of the head, and lastly, refreshing sleep.

**Fever.**—Convulsive stretching. A good deal of yawning and stretching in the afternoon.—Frequent stretching, which makes her feel comfortable. Early in the morning excessive stretching of the limbs, and yawning, cramp-pain in the limbs after the stretching, especially in the knees. Stretching, early in the morning when in bed, the arms being stretched upward; the stretching seems to proceed from the abdomen. Long paroxysm of incessant yawning, leaving great weakness behind. *While yawning early in the morning, the eyes are filled with water.*—Yawning, early in the morning, immediately after rising from bed. Headache early in the morning, immediately after yawning. Yawning causing a cough. The stretching and yawning are followed by spasmodic pains in the limbs, with chilliness and internal trembling. Shuddering while yawning. Sleep after the shuddering, then again shuddering, with coldness of the toes. \**Coldness—at night, not even yielding to the warmth of the bed.* Sudden coldness of the arms and hands, or of the legs and feet, in the afternoon, not even disappearing in bed. *Great coldness, not yielding to the warmth of the stove or of the bed.* \**Coldness of the whole body, with blue skin,* particularly on the hands, and *blue nails.* Great coldness of the limbs. The temperature of the skin is diminished all over. *Coldness of the lower part of the body, with heat of the face.* *Coldness of the feet,* particularly early in the morning, or with dry heat of the face.—\**Chilliness—in the evening* in bed, and at night on waking, as if she could not get warm. \**Chilliness with dread of the open air, and great liability to take cold.* Chilliness over the back and arms, in the evening, in bed. Chilliness in the evening when in bed, also when waking she feels as if she could not get warm in bed. Violent chilliness in bed, at night; sweat breaks out towards morning, preceded by creeping in the skin. Excessive chills, early in the morning, in bed, without any coldness being perceptible to the touch, for

half an hour; followed by cramp-like contraction of the toes and soles of the feet. Feeling of chilliness in the back and limbs, early in the morning, the skin being painful as if frozen, and the limbs feeling somewhat as if gone to sleep, as they do in cold weather. Chilliness for several days in succession, early in the morning after rising. \**Shuddering and chilliness after drinking.* Chilliness in the back, and heaviness in the lower limbs, after a chagrin.—Chilliness on making the least motion. \*Shuddering and chilliness for one hour (with pain in the back), when touched by the least fresh air. The whole body feels more and more chilly. Violent chilliness, with chattering of teeth. Thrill of chilliness over the face. Sensation of chilliness about the head, from time to time. Chilliness of the feet, as if cold water were poured over them, with trembling. \**Desire for beer during the chilliness.* °Chilliness when uncovering one's-self, even during the hot stage. Feeling of chilliness, the whole body feeling extremely hot to others, with redness of the cheeks and coldness of the hands, feet, and hairy scalp.—Chilliness with hot cheeks. \**Chilliness with heat in the head and redness of the cheeks,* °or with redness of only one cheek. °*Chilliness with rush of blood to the head.* °Chilliness with headache. *Nightly chilliness preceded by violent drawing through the thighs and legs,* obliging one to contract and extend the limbs constantly. °Chilliness with sticking in the side and abdomen, pains in the back and small of the back, *drawing in the limbs,* stretching, spasmodic yawning and urging to lie down.—*Shuddering* while yawning, with horripilations. Shuddering of the whole body, on making the least motion. Shuddering during the siesta, with drawing in the limbs as if arising from a pain in the small of the back. Shuddering with feeling of heat in the face. Shuddering *with desire for beer,* particularly in the evening, with redness of the face and coldness of the limbs. Frequent shuddering in the evening, with redness of the cheeks, heat of the hands and coldness of the feet.—(For the fevers which have been cured by Nux v., and for the symptoms during the apyrexia in intermittent fevers, (see Clin. Observ.).—*Afternoon or evening fever:* the heat is followed by chilliness and coldness. External or internal heat, accompanied with chilliness and great weariness, requiring one to lie down, or at least to put on warm clothes, especially in the afternoon. Chilliness at six o'clock in the morning, occasionally mingled with general heat and drops of sweat on the forehead; the chilliness returns in the evening. In the evening the cheeks are red and the hands hot, with cold feet and recurring attacks of shuddering. The face feels hot to him, with shuddering of the rest of the body. Heat of the face, with coldness of the lower limbs. Heat in the interior of the head, the outer parts feeling chilly. Hot cheeks, with internal chilliness. Redness of the cheeks, with heat in the head and chilliness of the rest of the body. Redness of the face, in the evening, with shuddering and coldness of the limbs, and desire for beer. Fever towards six o'clock in the evening; chilliness mingled with paroxysms of heat, returning next day. At night, he feels chilly externally and hot internally, the mouth feeling dry, accompanied with aversion to drink. *Fever in the afternoon;* chilliness for four hours and coldness with blue nails; followed by general heat and burning in the hands, with desire for water, then for beer, without any subsequent sweat. Chilliness in the evening before lying down; but when in bed, the head and face feel hot. Chilliness and one hour's sleep, in the evening after lying down, followed by heat, accompanied with headache, humming in the ears and nausea. Trembling and chilliness in the evening after lying down, followed by slight heat in the face. Unusual warmth early in the morning, with desire for water. Paroxysms of heat over the whole body, without redness of the cheeks, with drops of sweat on the forehead, and anxiety, febrile heat, rather internally; sensation as if smoke were issuing

from her throat; she drank a good deal. Early in the morning, while yet in bed, he is attacked with an intolerable feeling of heat, either over the whole body, or particularly in the cheeks, hands and feet, especially in the palms of the hands and soles of the feet; he is exceedingly eager to lay those parts on cool places, but cannot leave them there on account of the whole body feeling sick when those parts become cool, or on account of being attacked with momentary pinching or cutting in the abdomen. In the evening, after lying down, he feels a heat in the face and in the palms of the hands, and the feet are likewise hot. —External heat with a red cheek, and sensation of anxious, intolerable internal heat (in spite of which he covers himself with great care); the mouth is filled with saliva; nevertheless the lips are dry, and there is no thirst; or rather, he desires to drink, but declines drinking when the drink is offered; he does not like it; sleeplessness accompanies the heat; he lays his arms under his head; after the heat he has a desire for beer. At night he has heat without thirst, and almost without sweat. Anxiety at night; while sleeping, he had cast the bed-cover off. Violent thirst.—Dry heat about midnight, while in bed, without thirst.—Heat with a full, frequent pulse, accompanied with a desire to go to bed, and with thirst. Internal heat with a full pulse; the heat increases from hour to hour, without thirst; afterwards sleeplessness. Early in the morning, while walking in the open air, the face and the whole body feel hot. When walking, the flushes of heat are more frequent than at other times. Flushes of heat during motion. *Flushes of heat, and heat of the cheeks when making the least motion or exertion.* The face feels hot to him, without any heat being perceptible to others. Red cheeks early in the morning after waking. Heat about the head, in the evening. *Flushes of heat in the face* —towards evening. Heat in the face, early in the morning after rising, with costiveness and shifting of flatulence in the abdomen. Red, hot cheeks, without thirst. Heat in the face in the evening, when in bed, and uneasy sleep before midnight. *Sensation of burning, internal heat through the whole body.* (For the symptoms during the hot stage, see Clin. Observ.).—\*Full pulse, during the hot stage. °Pulse hard, full and frequent. Pulse small and quick, or intermittent. Collapse of pulse, with full consciousness.—Sweat for two days. (Sweat breaks out easily when lying in bed or walking fast.) Sweat when moving about in the room. (Sweat in the room, going off in the open air.) Viscid sweat on the forehead, when walking in the open air.—Sweat on the affected side of the face, during an attack of hemicrania. Frequent attacks of sweat, followed by dry heat. Copious sweat during and after great anxiety. Anxiety causing sweat, at least on the forehead. Internal heat, occasioned by anxiety, followed by sweat on the forehead. Profuse sweat. Fetid sweat the whole night, or on one side. Very fetid sweats. Cold sweat. Cold sweat, during which all the symptoms abate. Sweat one side of the head, hairy scalp and face.—Night-sweat: At three o'clock in the morning, he is attacked with sweat under the nose, on the forehead (on the hairy scalp), on the nape of the neck, on the neck, in the pit of the stomach and between the thighs, with a feeling of heat and anxiety, and dryness of the tip of the tongue, the anterior parts of the palate and the lips, without any desire for drink. *Sweat after midnight.* Sweat during sleep, from two o'clock in the morning; when waking, he is only covered with a slight moisture. Sour night-sweat.—Morning-sweat: sweat of the upper parts of the body, early in the morning, both when awake and asleep, followed by drawing pain in the left side. Profuse, general sweat (except the head and face), in the morning, after waking. Slight, general sweat (except the face), at night and in the morning, having the smell of musty straw kept in a close room.—During the morning-sweat, all the parts on which he lies, are

painful. Inclination to vomit during the morning-sweat. Colic during the morning-sweat, when uncovering himself ever so little, as if occasioned by a cold. Great heat and sweat under the bed-cover; he shudders when raising the cover ever so little. Chilliness after the sweat, and then again sweat. General sweat early in the morning on waking, with heat of the hands and of the interior of the face, without thirst.—Violent desire for small beer after the morning-sweat.

**Skin.**—(The skin of the whole body becomes sensitive, as if sore; when touching any part of the skin it feels as if gone to sleep.) (Smarting) *itching* in various parts, especially in the extremest parts of the body, the limbs and joints, in the evening after lying down. *Burning itching over the whole body*, also in the evening, in bed. *Burning itching* of the upper arms, thighs, abdomen, and back, early in the morning when dressing, in the evening when undressing, even at night. *Burning stinging* in various parts of the body. *Burning prickings* here and there, terminating in burning. *Burning prickings* in various parts of the skin, resembling flea bites, in the evening after lying down. *Burning-itching pricking* in various parts of the body.—*Itching or itching-burning eruptions.*—*Rash.* °Blue spots on the body, as if ecchymozed.—°*Boils.*—°*Chilblains with burning itching*, °or also with bleeding rhagades, and pale-red swelling.—Cicatrices of former wounds are painful again.—°*Ulcers* with raised, pale-red edges.—°*Chlorosis?* °*Jaundice*, -with aversion to food and fainting fits.—°*Miliaria alba*, catarrhal cough, etc., after measles. Single stitches in the affected part from time to time. Single long stitches in various parts of the body, characterized by a sore pain. *Dartings in various parts, concussing the whole body; they seem to dart through the whole body.* Dartings in the limbs in the evening when in bed.

**General Symptoms.**—*Chronic ailments from the abuse of coffee, wine, or other spirituous or narcotic substances.* °Complaints arising from a cold, chagrin, anger, mental exertions (particularly when the patient leads a sedentary life), from a sedentary life generally or from watching.—°Is principally suitable to lively, sanguine or choleric temperaments, also to individuals of a malicious, artful character, with pale, livid colour, or bright-red, highly-coloured face; °also to venous constitutions disposed to hæmorrhoids, hypochondria, melancholy and hysteria. °Nux seems to be more suitable to the male than the female sex, and seems to be more useful to females when the menses are too early and too profuse.—°*Periodical and intermittent ailments.* °*Rheumatic affections*, particularly of the large muscles of the back, loins, chest and small of the back. °Precursory symptoms of arthritis, and arthritic metastases. °Scrofulous and lymphatic affections. °*Scrofulous atrophy of infants.* °*Congestion of blood*, particularly to the head, chest and abdomen. °Muscular debility of infants with difficulty of learning to walk.—°*Stitches here and there*, also with sore pain, or darting stitches striking through the whole body. °Sticking and tearing in the joints, worse when the weather changes, or during changeable weather. °*Drawing and tearing in the limbs*, particularly at night, or with feeling of numbness of the affected parts. Pains which appear so intolerable that he would like to die. Twitchings under the skin. Tearing and heaviness in all the limbs, with stiffness in the muscles and joints, convulsive trembling, (*Lond. Med. Repos.*).—°*Pain in all the joints, also as if bruised*, and particularly during motion, also after midnight. °*Sick feeling in all the limbs.* °*Bruised pain of the limbs*, early in bed, either on the side on which he is lying or on that on which he is not lying, going off by turning to the unaffected side, in which case the pain appears in the latter side; this obliges him to turn frequently from side to side, until the pain disappears entirely after rising. Bruised feeling of the joints and long bones, early in bed, with incarceration of flatulence in the hypo-

gastrium and the region of the pubic bones. The longer he lies in bed, the more painful are his limbs and particularly the joints (early in bed).—Violent pain in the muscles, at every movement (*Land. Med. Repos.*).—Tensive pain in the limbs, early in bed, with sagging of the nose. *Painful contractive sensation* through the whole body, also with weariness of the lower limbs, scarcely allowing him to drag them along. Sensation of spasmodic drawing to and fro in the muscles of the limbs, back and scapulae, as if something were moving about in them.—Almost every part of the body is insensible and goes to sleep. *Paralysis*, particularly of the lower limbs. *Trembling of the lower limbs*, also with fluttering of the heart. Tremulousness through the whole body, early. *Trembling of drunksards*.—*Stiffness of the limbs* also with jactitation, or with tension, particularly around the knees. Diminished mobility of the joints.—*Convulsions and spasms*: the body being drawn to one side, with ineffectual efforts to keep himself erect, succeeded by vomiting and involuntary discharge of urine and faeces, with full consciousness. *Epileptic spasms*, with cries, bending the head backwards, vomiting, profuse sweat, thirst and rattling, the paroxysms set in again after the least emotion. Frequent attacks of episthymus. *St. Vitus' dance*, particularly of boys, less of girls, frequently accompanied with sensation of numbness and as if gone to sleep in the affected parts after the paroxysms. Weakness and transitory convulsions, after which she trembled violently, (*Ollier*). Paroxysms of convulsions, excited by external stimuli that strike the senses, or by contact, as if by an electric shock, (*Voigt*). Violent convulsions with distortion of the features and general debility. Convulsive attacks from time to time, lasting two minutes and attended with stiffness of the muscles.—Closing of the jaws and extension of the trunk, the pulse being affected very little, with excessive sensitiveness of hearing and sight; the least contact or noise occasioned tetanic convulsions. The pulse, during the convulsions, was frequent and agitated, and a general sweat broke out, (*Cloquet*). Extremely painful muscular contractions, continuing from three to four minutes, after the lapse of which period they are interrupted by a violent spasm: the body was considerably drawn backwards, the beats of the heart were feeble, pulse small and scarcely perceptible, (20); in consequence of a spasm of the muscles of mastication, the patient bit everything which was held near his mouth, (*Hecker's Ann.*, 17, 193).—Tightness in the temples and nape of the neck, soon spreading over all the muscles of the trunk and limbs; on drawing breath, the patients are unable to expand the chest: this stiffness is not constant, increasing only momentarily and suddenly passing from a lesser to a higher degree: these spasmodic contractions are frequently preceded by violent chills and shudderings, after which the patients experience, along the track of the nerves in the limbs, formications and painful sensations resembling the passage of electric sparks: the spasms which set in after the chills are the more violent, the more the precursory symptoms were intense; the muscles of the pharynx, œsophagus, the erectus penis, etc., are liable to similar spasms, (*Trousseau, traité de Mat. Méd.*). Violent convulsions during which the whole body became so rigid, that, in spite of every exertion, the thighs could not be bent in the least, and the patient could not be placed upon a chair, (*Ollier*). Painful tetanic convulsions, leaving the limbs so stiff that walking is impossible, (*Trousseau and Pidoux's Mat. Méd.*). Continual tetanic convulsions in the paralyzed limbs, alternating with violent concussions, (*Sundelin*). Tetanic spasms, affecting even the muscles of the chest and occasioning a gradually-increasing dyspnoea, (*Sundelin*). Tetanus, alternating with asphyxia and paralytic relaxation of the parts, (*Voigt*). Frightful spasm of the whole body, every three or six minutes, a real tetanic spasm with bending of the body backwards, drawing in

of the muscles of the chest, loss of consciousness, stiffness of the limbs, hardness of the muscles as if made of wood, distortion of the eyes, cherry-redness of the face, (*Mosl's Memorabilia*). Sudden falling without loss of consciousness, with pale complexion, indifferent expression of countenance, anguish, rapid alternation of laughing and crying, widely-opened eyes, contraction of the pupils, unequal, superficial breathing, irregular, small pulse, cool skin, with the forearms half bent whilst the hands and fingers were convulsively moved, with immobility and stiffness of the lower limbs, and continued hardness and tetanic contraction of the muscles of those limbs, (*v. Basedow*, in *Hufeland's Journal*, 67, I.). Spasmodic attacks from merely touching the parts with the hand, (*Levič's Annals of Medicine*). Violent convulsions with subsequent stiffness and stupefaction of all the senses, (*Leutter*). Tetanus, (*Thom. Mellor*). Alternate opisthotonos and trismus, (*Leonhard*). Frightful convulsions, particularly opisthotonos, returning and abating several times in one minute, with full consciousness, (*Consbuch*, in *Hufeland's Journal*, IV., 442). Frequent attacks of tetanus, (*Lond. Med. Repos.*). Tetanic convulsions and death, (*Orfila and Grimaud*). Tetanic spasms from the least contact, with intermissions of some minutes, and death during the eighth paroxysm, (*Adelmann*). Violent convulsions lasting from one to two minutes: all the muscles became stiff in one moment, the jaws were drawn close together; the convulsions were excited by the least contact or noise, the pulse was frequent and irritated, the patient (a female) was drenched in sweat, (*Bouillaud*). Spasms of the spine and limbs, with distorted look, interrupting the speech which was uttered with anxiety and by fits and starts, (*Levič*). Asphyctic condition: she never breathed again, (*Ollier*). Death: tetanic stiffness, during which respiration ceases, whilst the beats of the heart and the peristaltic motion of the bowels still continue for a time, (*Voigt*). The muscular weakness and the general nervousness increase unto trembling and convulsive motions, (*Sachs*). Trembling of the whole body alternating with sudden starting up and staggering for a short time about the room, (*Leonhard*).—*Paroxysms of illness*: 1. After midnight, commencing with tingling in the hands and feet, followed by a burning rising towards the pit of the stomach and thence to the throat, attended with heat of the face, nausea and oppressive anxiety, dulness of the head and ringing in the ears. 2. In the evening, rising to the pit of the stomach, with anxiety and nausea, attended with trembling and necessity to lay the head on the table. 3. Soon after dinner, commencing with heat in the face, followed by rising of nausea from the pit of the stomach, attended with general sickness, trembling through the whole body and languor, which obliges him to lie down. 4. During a walk in the open air, the head becomes affected, with vanishing of thought, necessity to stand still, rush of blood to the heart, contraction of the trachea, scintillations before the eyes, and loss of sense so that she did not know where she was. 5. Early in the morning, in the open air, the eyes suddenly stare, with loss of sense and sensibility as in fainting.—°*Fainting fits* after making the least exertion. Fainting while sitting, in the evening. °*Fainting after a walk in the open air*. °*Fainting at night*. °*Fainting from congestion of the head and chest*.—°*Great weariness*, even after the least motion. °*Languor in all the limbs*, -particularly after going up stairs. °*Great inclination to be sitting or lying*. °*Great inclination to lie down again, particularly early and in the forenoon*. °*Laziness, and dread of motion*. °*Heaviness in the upper and lower limbs*, so that they can scarcely be raised.—Great weakness in the afternoon, with loss of appetite. Excessive weakness, not allowing him to stand on his feet, or with tottering of the feet and necessity to sit down. °*Sudden failing of strength*. Sudden paralytic weakness, even

when sitting, but most violent during motion.—*°Great nervous weakness, with excessive irritation of all the organs of sense, particularly hearing and sight.—\*Excessive sensitiveness to the open air. The least exposure to the open air occasions shuddering and chilliness with pain in the back, or a catarrh and sticking toothache. \*Great liability to take cold, even a slight current of air occasions a disagreeable sensation in the skin, colic, etc.—Symptoms after a walk in the open air: great sadness or weariness. Great languor and weariness, particularly early in the morning, and evening. \*Emaciation, -also excessive. °Atrophy and emaciation of children, particularly scrofulous children.*

**Characteristic Peculiarities.**—*\*Many of the symptoms are aggravated or excited by coffee, wine, smoking, watching and mental exertions, also by windy weather. \*Many of the symptoms appear early in the morning (in bed or after rising), also after dinner. In the evening (8 or 9 o'clock) the pains are increased to an intolerable degree. °Nux is particularly suitable, if the symptoms are worst early in the morning, particularly if the patient wake at 3 o'clock in the morning, and then, overwhelmed with ideas, fall again into a heavy sleep full of dreams, from which the patient wakes more weary than he was on lying down. \*The pains which come on by keeping one's-self confined in a room, are relieved by a walk in the open air, and vice versa. Some of the pains are relieved by lying down.*

#### PATHOLOGICAL ANATOMY.

Death by Nux v. or Strychnine generally takes place in consequence of asphyctic spasm. The bodies frequently remain stiff and rigid a long time after death; the lungs and heart are in most cases sound and without blood, likewise the large vessels; frequently, however, these organs are filled with dark blood. The heart loses its irritability soon after death. The pharynx and œsophagus do not show any symptoms of change; only the stomach and bowels are red and inflamed, if death should have taken place in consequence of large doses of the poison, or after the poison has acted a long time; the other abdominal organs are in a natural condition. The head and the vertebral canal are filled with venous blood, all the membranes of the brain and spinal marrow are turgid with dark blood; the venous sinuses between the cervical and dorsal, and between the dorsal and lumbar vertebræ, and the cauda equina are swelled with blood; parts of the spinal marrow are *softened* and even *papescent*. The cerebrum and cerebellum are likewise filled with blood, imparting in many cases an entirely blue tinge to the *cortical substance* and the *pons Varolii*. The blood itself is thick, dark, tar-like, and deposits neither serum nor crassamentum. *Devermon* and *Magendie* pretend to have discovered a particular contraction of the spleen.—Large doses occasion an effusion of serum in the brain and spinal canal, inflammation and ulceration of the stomach and bowels.

### 178. OLEANDER.

OLEAND.—*Nerium oleander*; Laurel-rose.—HANNEMANN'S Mat. Med., III. COMPARE WITH—*Agn.*, *Chin.*, *Cin.*, *Cocc.*, *Ign.*, *Nux v.*, *Puls.*, *Sabad.*, *Sulph.* ANTIDOTES.—*Camph.*, *Cocc.*,? *Nux v.*?

#### CLINICAL OBSERVATIONS.

Noack and Trinks state that this drug has been found useful in the following affections: *painless paralysis*. Eruptions on the hairy scalp, at times scaly, at

times humid, with burning itching of the hairy scalp. *Tinea capitis sicca et favosa*.—*Lienteria*.

#### SYMPTOMS.†

**Mind and Disposition.**—Dulness of sense, out of humour, *not disposed to do anything*. Want of confidence in himself, and sad mood on that account.—Reserved, out of humour. He does not bear contradiction.—He is irritable; he becomes vehement, but immediately repents of his vehemence.

**Sensorium.**—(When walking in the open air) he is attacked with vertigo, he stood firmly, but the things around him, trees and men, seemed to be moving amongst one another, as in a confused dance; and the sight became obscured, with scintillations before his eyes, resembling the dazzling of snow. When standing erect, and attempting to look down, he becomes giddy, and his eyes see double. On rising from bed, he was so giddy that he was scarcely able to walk across the room. Vertigo in the forehead, and staggering of the lower limbs, as if too weak. The vertigo does not leave him, even when walking in the open air.—Loss of consciousness.—The whole head feels obtuse. \**Dulness of the mind; he is unable to think*.—While reading long sentences he has often a difficulty to comprehend their meaning. He has to read a phrase three or four times before he succeeds in comprehending the meaning; his own ideas constantly intrude upon his mind, drawing his attention away from that which he is reading. While studying, he thinks of something else than the object before him; he thinks of the future, adorning it with beautiful images. When reading a book he comprehends that which he is reading least when he imagines that he will not understand it; in that case his ideas become confused, and incapacitate him for reading; he understands that which he is reading more easily, when he does not at all think of intending to understand it; in this case he is not interrupted by strange ideas. He is unable to recollect the names with which he is well acquainted.

**Head.**—*Heaviness of the head*. He is unable to keep his head erect, owing to a feeling of great heaviness in the same; he is obliged to cease reading and to lie down; while lying down he feels well, but as soon as he rises he feels the heaviness and dulness in the head, and also the nausea, with the other disagreeable sensations. Pain in the head, as if a hundred-weight were drawing it forward. Sensation of tightness round the head, which occasions a feeling of stupefaction rather than pain.—Crampy pain in the right temple.—*Aching pain in the brain*.—Stupifying pressure in the right side of the head, as if a dull instrument were slowly pressed into it. Dull pressing together in the forehead. *Aching pain in the forehead with pressure from within outward*. Pressure in the upper bones of the skull, with sensation as if they were sore. *Pain in the forehead as if it would split*. Painful pressure in the left frontal eminence, from within outward, going off by pressing on it with the hands. Uncasiness, with pressure, in the whole forehead. Aching in the left temple, moving up and down, going off in the open air.—*Slight drawing in the left temple*.—Slow painful *beating* in the forehead, like the beating of the pulse. Pain, like a shock on the left temple.—A sudden stupifying pain in the fore part of the forehead, as if occasioned by a heavy blow.—*Boring pain in the whole brain*.—Deeply-penetrating sharp stitches in the right side of the vertex, in slow succession.

**Scalp.**—Gnawing itching over the whole hairy scalp, going and coming the whole day, also at night. Violent itching in the hairy scalp, smarting after scratching the parts, as if they had been scratched open. °*Scurfy eruption on*

† Some of these symptoms have been observed on three females, each of whom swallowed half a tumblerful of the tincture.

the hairy scalp. °Sealy or humid scald-head, with nightly itching and burning after scratching. Itching pimples on the hairy scalp.—*\*The epidermis of the hairy scalp peels off.*—Contractive burning pain in the outer and left side of the vertex.—Sharp aching pain in the outer and left side of the occiput. Dull pressure at a small spot of the occiput. Pressure on the right side of the head, as if pressed in. Pressure in the right frontal eminence.—A few shocks are experienced at a small spot on the forehead, like blows with a hammer.—Tensive stitch in the occipital bone.

**Eyes.**—Sore pain in the right eyebrow, when touching it, towards the temple. Dull pressure in the upper margin of the orbit, alternately increasing and decreasing. Dilatation of the pupils, followed by contraction. When looking to one side without turning his head, his sight became obscured.—Sensation as if his sight became obscured.—*Lachrymation* while reading.—Tension in the left eyelids when reading. Pressure in the left eye, from above downward, and in the left malar bone. Tensive pain in one of the canthi, in the evening, as if the eye were pressed violently upward; he had difficulty in turning the eye the other way. Burning tension in both lids of the right eye, even during motion.—The eyes feel sore as if she had fatigued them by reading. Smarting in the left eye. Pressure in the eyes as from a hard body. Burning in the region of the lower eyelid, and itching all around. Burning in the right upper eyelid.—*Itching* in the right eyeball. Stinging and itching of the left upper eyelid.—The eyelids close involuntarily, as if he were drowsy.—Stinging itching near the left eye, in the region of the root of the nose and the malar bone.—Red swelling below the eyes, as if an eruption would break out.

**Ears.**—*Cramp-like drawing in the outer ear and underneath*, as if pulled out, increasing gradually and then diminishing again. Heat, now at the left, then at the right upper ear, extending over that side of the head and thence over the whole face. Burning at the left meatus, externally. Sensation in the left temple and the outer meatus auditorius, as is felt when yawning.—Sharp aching pain in the interior of the ear. Pain below the ear and over the mastoid process, as if a nail were pushed into the head, with stupefaction. Constant buzzing in the left ear. Stinging in the left ear.—Shrill, stupifying ringing in the left ear. °*Humid, fetid spots behind the ears, with red, rough, herpetic spots in front.*

**Nose.**—*Numb feeling* like a painless pressure on the dorsum of the nose.—Smarting itching in the root of the nose, in the direction of the left eye, as if the room were filled with smoke. Stinging around the nose, the whole afternoon.—Stupifying dull pressure between the root of the nose and the left orbit.

**Face.**—Wild looks after rising from bed in the morning; he looks pale, the eyes are surrounded with blue margins, and the cheeks are sunken. Pale complexion the whole day. Burning itching of the forehead, the left cheek and the tip of the chin, after which small blotches make their appearance, having an elevated hard edge, and painless both with or without contact.—Itching gnawing on the right cheek.—Sensation in the left cheek, as if *a cold wind were blowing upon it*; when touching the part with the hand, that feeling disappears, and the hand feels hot to him and warmer than the other cheek. Redness of the cheeks without heat. His cheeks feel hot to him and to others, with dryness of the palate and throat.—Stupifying compression in both malar bones, as if they were seized with pincers. Dull, numb, painless pressure in the region of the left malar bone, near the ear. Violent pressure in the right cheek, near the angle of the lower jaw. Aching pain in the facial bones of the right side of the face, continuing while moving the lower jaw. Dull aching pain in the right upper jaw, below the malar bone. Pressure on the malar bone, stupifying rather than painful, extending deep into the head and the root of the nose; a tensive stupify-

ing troublesome sensation. Violent aching pain in the temples, at a spot more or less elevated, during mastication.—Painless sensation as if the upper lip were swollen. Burning pain in the right lower lip, continuing during and after motion. Burning pricking above the left corner of the mouth. The lips are brown, especially the lower lip, the complexion being scarcely altered. Convulsive twitching of the left corner of the mouth in the direction of the ear. Sudden swelling around the left corner of the mouth.—*Suppurating pimple* on the right and left sides of the chin.

**Teeth.**—Constant toothache at night, tearing and drawing in the left first molar tooth, and sometimes in the hollow tooth by the side of the former; this toothache seized him immediately on leaving the bed, and returned on getting into bed again, accompanied with an anguish as if he would die; moreover frequent micturition, disposition to vomit and heat in the left cheek (the first night).—*Simple drawing* in the lower right molar teeth. Sharp drawing ache affecting the second left molar tooth.—*Cutting-aching pain* during mastication. The molar teeth are sensitive during mastication, as if decayed.—Strange feeling in the mouth, as if all the teeth were loose, the gums of both jaws being bluish white.

**Mouth.**—White-coated tongue with a feeling of dryness in the mouth, and with dry lips.—The papillæ are erect, giving the tongue, which has a dirty-white colour, a rough appearance.—Burning prickings on the left side of the tongue. Fine stitches in the tongue.—The power of speech is almost entirely lost, the breathing being natural. She attempted to answer when addressed, but was only able to utter sounds, but no intelligible words.—A sort of burning in the œsophagus, down to the stomach.

**Appetite.**—Flat *taste* in the mouth, between meals, as if he had deranged his stomach. *Everything tastes flat.*—No appetite for food or tobacco. He has no appetite, but is somewhat hungry; he eats very little; eating gives him more discomfort than pleasure. He relished his meal, but was satiated immediately.—*Great hunger and appetite.* No appetite, but canine hunger, he swallowed quantities and greedily. Canine hunger, the hands trembling when eating, and the whole body being weak (after a quick walk of half an hour). *His hands tremble from an excessive desire to eat the food before him. He swallows his dinner in a great hurry*, as if he had canine hunger; while swallowing it his head feels giddy as if he would lose his senses, the sight of the right eye especially seems to be obscured.—Great thirst for cold water.

**Gastric Symptoms.**—Frequent, violent, and *empty eructations* at dinner. Eructations having a putrid smell, several times. Gulping-up of particles of food during an eructation.—Aversion to cheese, of which he was generally very fond. Aversion to everything as if it would make him vomit, or give him a diarrhœa.—Disposition to vomit from the stomach, and accumulation of water in the mouth; when swallowing this water, the inclination to vomit disappears momentarily; accompanied with a flat taste in the mouth. The inclination to vomit increases by stooping, and is momentarily relieved by an eructation. The inclination to vomit is succeeded by great hunger.—Nausea, also in the mouth, as if he would vomit.—Nausea, as if in the mouth; the retching was frequently accompanied by a sort of waterbrash for two hours; at the same time the cervical muscles felt spasmodically and painfully contracted, as if he were threatened with strangulation, likewise the abdomen and abdominal muscles; in the commencement he succeeded only by a great effort to bring up mucus; afterwards, however, he brought up a portion of the liquid food which he had taken, which tasted sour; for two hours. He had to vomit after eating a little bread; he threw up a quantity of water

with the few crumbs of bread he had taken. He relishes his dinner, but is soon obliged to stop eating, as he feels qualmish in consequence of it.—Excessive vomiting, followed by thirst. Vomiting of a yellowish-green water of bitter taste. General sick feeling with inclination to vomit.

**Stomach.**—*Sensation of emptiness* in the region of the pit of the stomach, with a feeling of fulness in the abdomen. Intermittent throbbing on the left side over the pit of the stomach. \**Sensation in the pit of the stomach, as if he felt every beat of the heart through the whole chest*, he does not feel this beating when touching the parts with the fingers, nor does the heart beat more powerfully than usual. Painful pressure below the short ribs of the left side, and below the region of the stomach, at a small spot, during an expiration, disappearing at every inspiration, increasing by pressure and continuing for about half an hour.

**Abdomen.**—Great emptiness of the epigastrium. Long-extending stitch-like pain as if winding out of the abdomen, on the right side of the umbilicus. A sort of darting-aching pain above the left haunch-bone, in the side of the abdomen. Dull stiches or *shocks*, on the left side below the umbilicus. Shooting darting shocks directly above the root of the penis, causing him to start. Itching stinging in the left side of the abdomen, directly above the short ribs. Pinching pricking in the abdomen, while walking. Pricking pain below the umbilicus. Intermittent pricking in the abdomen, sometimes accompanied with indications of diarrhœa.—*Pinching* in the bowels.—His bowels feel as if weakened by purgatives, and as if he would be attacked with diarrhœa.—*Feeling of coldness on the right side of the abdomen*, as if a cold breath were blowing upon it. *Feeling of coldness in the right side* of the abdomen.—*Gnawing*, internally, below the umbilicus. Gnawing pain, directly above the umbilicus, on the left side. Painful sensitiveness around the umbilicus, with an uncomfortable feeling in the whole abdomen, and an uneasiness around the umbilicus, which is now manifested as a pressure, now as a gnawing.—Grumbling and rumbling in the region of the umbilicus, with a feeling of emptiness in the abdomen; shortly after, he emits flatulence. Grumbling in the epigastrium and hypogastrium. *Emission of a quantity of fetid flatulence, having the odour of putrid eggs*.

**Stool.**—Ineffectual urging to stool.—No stool the first day.—Hard and difficult stool. The first portion of the fœces is diarrhœic, the latter solid, he is obliged to make an effort. Stool after twenty-four hours, the first portion being hard and in lumps, the latter thin.—Stool thin and yellow, preceded by rumbling in the abdomen.—The food which he had taken at supper last evening, passes off undigested, and almost without effort; he imagined he merely emitted flatulence.—Scanty, thin, watery stool.—*Burning at the anus between the stools, also before and after stool*.

**Urinary Organs.**—Frequent desire to urinate, with scanty emission. \**Frequent emission of copious urine*, particularly after drinking coffee.—°Brownish, burning urine, with whitish sediment.

**Larynx.**—Fine stitch in the thyroid cartilage. Tenacious mucus in the trachea, early in the morning when rising. Titillation in the larynx occasioned by the inspiration of air, and causing a short cough, which concusses the whole body.

**Chest.**—Sudden feeling of coldness in the left chest.—*The chest feels empty*, as if all its contents had been taken out. *He feels as if the chest were too narrow, he is obliged to take a long and deep breath*. \**Oppression of the chest when lying*; a quarter of an hour after lying down he throws up mucus, water and small fragments of bread which he had swallowed. Sensation as if the chest were oppressed by something heavy, when walking, standing or lying, oc-

occasioning a deep and anxious inspiration. Violent palpitation of the heart, with sensation as if the chest had become wider; the chest expands much while breathing, without anxiety. Anxiety about the heart, without any anxious thoughts, with trembling of the whole body, for several hours. Palpitation of the heart with anxiety. *Dull drawing pain above the heart, more violent when stooping, and continuing during an expiration.*—Tingling pricking in the sternum. *Dull, continuous stitch in the sternum.* Dull stitches on the right side of the sternum, in the region of one of the false ribs; when pressing on that part, a simple pain is experienced in it. Tensive pricking in the sternum, more violent when stooping. Dull stitches in the chest while walking, more violent during an inspiration. *Dull stitch in the chest, continuing during an inspiration and expiration.* Stitches in the diaphragm, in a recumbent posture, during an inspiration and expiration, ceasing when raising one's-self. Fine stitches in the left chest. Stabbings in the left chest as with a knife. Pinching stitch in the left chest, through the false ribs. Dull stitches in the left side of the chest when walking. Tensive stitch in the middle of the chest. Dull pressure, going and coming, in the upper part of the sternum. A few intermittent, dull shocks, in the region of the left ribs. Intermittent gnawing in the region of one of the left ribs, opposite the pit of the stomach. A beating, like dull shocks, in the outer part of the chest, below the axilla. Dull pain in the sternum.—Digging-up aching in the costal cartilages of the right side, with intermittent pressure at a small place, increased by pressing on the part.—The outer parts of the chest ache, as if they had been pressed upon very hard. Jerking in the muscles of the right side of the chest. Sudden feeling of coldness in the left chest.

**Back.**—Pain as if strained in the right side of the back, or as if a hand had been thrust in violently.—Tensive pricking in the dorsal spine, when walking or standing. Burning stitch in the back below the left scapula, when sitting, going off during motion. Sudden, fine stitches in the right half of the back, deep in the interior, causing him almost to start. Itching in the region of the right scapula.—Sharp aching pain on the left side of the neck, near the apple of Adam. Pain as if a dull point were pressing upon the œsophagus on the right side; the muscles of the neck are likewise painful when touched. Pressure in the anterior cervical muscles, with a sensation as of pushing from below upwards, obliging him to loosen his cravat, a sort of suffocative, strangulating sensation. Violent and full, although slow pulsations of the carotids, which are felt without contact.—Dull tearing pain in the left side of the nape of the neck and in the left scapula, alternating with tearing in the temple and in the left second molar tooth.

**Upper Limbs.**—Dull pressure on the right shoulder. When raising the arms very high, or when laying them under his head, the shoulder-joint feels painful, as if sprained.—*Continuous stitch* in the left axilla, shortened by friction.—*Pinching pain* in the outer and upper parts of the left upper arm. Cramp-like drawing in the left humerus, near the elbow, going and coming.—Jerking in the muscles of the left arm. Jerking sensation in the right upper arm.—Itching, somewhat continuous stitch in the left upper arm. Itching sensation above the bend of the elbow.—Itching in the tip of the right elbow.—Dull pressure on the forearm, as if occasioned by a hard blow. Intermittent pressure at a small spot on the outer side of the left forearm. Dull stitches or shocks in the outer parts of the left forearm, near the wrist-joint. Drawing in the right forearm, above the wrist-joint. Dull pressure, going and coming, in the outer parts of the forearm, directly below the elbow. Burning stitch in the left forearm.—Pulsative pain in the inner side of the right forearm, near the wrist-joint. The veins of the hand are swollen, without the hand feeling hot.

Intermittent, dull pressure in the palm of the hand. The hand trembles while writing (before a meal).—Cramp-pain (cramp-like drawing) in the *fingers*. Drawing in the posterior finger-joints. Burning prickings in the tip of the left index-finger. Burning stitch in the anterior joint of the right index-finger, causing the finger to tremble. Cramp-like, jerking tearing in the posterior joint of the left middle finger. Fine stinging and itching in the posterior joint of the middle finger. Sudden swelling of the ring-finger, with burning pain; he was unable to bend it. Fine pricking in the finger. Itching of the right thumb, obliging him to scratch; this causes the itching to disappear at first, but then it returns and becomes a gnawing. Tensive burning in the tip of the left thumb. Pain in the anterior joint of the thumb, as if he had received a violent blow upon it, causing the thumb to tremble.

**Lower Limbs.**—Itching on the glutei muscles, obliging him to scratch. Itching vesicles on the glutei muscles. Contractive pain, when walking, as if sprained, in the glutei muscles of one limb.—Dull stitches in the region of the haunch-bones; pressure on the parts causes a simple pain. Buzzing sensation in the lower limbs, from above downwards.—*Weakness in the thighs and legs*, and a sensation in the feet, especially in the soles of the feet, as if they had gone to sleep, when walking.—Drawing stitch in the right *thigh*, not perceptible when standing or ascending an elevation. Pricking pain in the muscles of the inner side of the left thigh. Feeling of heat in the side of the thigh, soon after a feeling of coldness farther down. (Burning tension in the right thigh.) Buzzing in the lower limbs from above downwards. Pain in the front part of the thigh, when walking fast, as when one presses upon a bruised spot. Gurgling sensation in the right thigh. Stunning pressure in the outer side of the left thigh, as if the part had been bandaged firmly, and as if the circulation had been arrested in this manner. Itching stitch in the posterior muscles of the thigh, with burning after scratching. Dull stitching pressure in the outer part of the right thigh. Intermittent pressure in the upper and outer part of the right thigh, increased by pressing on the part. Painless jerking in the lower surface of the left thigh, as if a muscle were moved. Simple pressure in the outer part of the thigh, directly above the knee. Spot in the right thigh, directly over the knee, with burning and stinging pain.—Cramp-like drawing in the right *knee*, when bending it.—Buzzing sensation in the legs, when sitting, as is felt after a journey. His legs ache when sitting; he is now obliged to draw his legs up, then to stretch them, to obtain relief. Feeling of painful weakness in the legs, as from a long journey. Undulating drawing in the bones of the legs. Pulsative pain in the bend of the knee, while the leg is drawn up.—Jerking sensation in the right *calf*. Painful cramp in the right calf when sitting. Tearing in the left calf when walking. After having been seated for a while with his feet drawn up, he feels a paralytic weakness in them when walking.—Painful pressure directly above the left tarsal joint, at long intervals, when standing. Itching, somewhat continuous stitch in the right tarsal joint, towards the front part, continuing even during motion. Simple pressure in the dorsum of the foot. Itching stitch in the internal ankle of the right foot, going off by scratching. Fine pricking and itching of the left *heel*.—*Buzzing sensation in the feet and legs*, particularly the soles. *Constant coldness of the feet*. *Paralysis of the feet and legs*. Dull stitches in the fifth *toe* of the left foot, during motion and rest. Pain in the left toe and ball, as if pressed strongly. Burning in the tip of the right big toe, when sitting. Painful throbbing above the ball of the left big toe. Tensive stitches in the tip of the left big toe. Intermittent, dull pressure at a small spot on the sole of the right foot, as if he

had been beaten in that part. Itching-stinging sensation in the sole of the right foot during rest.

**Sleep.**—He stretches his arms and the upper part of the body. Stretching of the limbs produces a feeling of comfort. Frequent yawning, every yawning being accompanied with a shuddering over the whole body, causing all the muscles to shake, afterwards to tremble (immediately). She seemed to slumber, but had her consciousness and was able to move.—Sleeplessness.—*Voluptuous dreams, with emission of semen* (second and third nights). *Restless dreams.*—On waking, while yet lying in bed, he experiences a sensation of qualmishness in the pit of the stomach, as if he would vomit, accompanied with difficulty of breathing, which decreases on raising the body.

**Fever.**—He shudders suddenly as if attacked with a violent chill, or as if horror-struck. He shudders while yawning. *Feverish shuddering all over, without thirst or heat, during rest and motion.*—Chill all over with cold hands and warm cheeks, without thirst, during rest and motion. Feeling of heat and chilliness of the whole body, without thirst; he felt warmer to others than usual.—Flushes of heat, especially when attending to anything with more than his usual eagerness (also when sitting); he feels likewise very warm when walking fast; in the face he experiences fine prickings from the heat. While reading, a heat seems to press out of his body.—The *pulse* varies; it is alternately frequent, rare, full, soft, small, and faint. The pulse is slower early in the morning after rising. Frequent and full pulse in the evening.

**Skin.**—The skin of the body is very *sensitive* all over; it becomes sore, raw, and painful merely by the friction of the clothes; for example, the skin of the neck becomes so from the rubbing of the cravat, that of the thighs from the rubbing of large trousers when walking. Swelling. *Gnawing-itching* over the whole body, while undressing. °Itch-like eruptions. °Herpes. °Scurfy pimples. °Tension through the whole body. °Painless paralysis. °Numbness and insensibility of the whole body.—Sick feeling and weakness in the abdomen and chest. Weak, lazy, indisposed to work. *Faint-hearted* and sinking. Sensation of weakness, as if he would breathe his last at every moment. He was so weak that some one had to take him home; he had to lie down, and slumbered until evening; afterwards he slept well all night.—Weariness from a short walk, and the soles of the feet are painful. All his limbs feel weak and weary; the knees are very weak. \**Fainting fits*, °going off after sweating. The arms are drawn to the chest, and the lower limbs to the abdomen, the chin is pressed upon the chest.—The symptoms are much more violent on the second day than the first.

**General Symptoms.**—Violent pressure in several parts of the body, gradually increasing and decreasing, from without inwards. Cramp-pain in several parts of the limbs, for instance, in the ball of the thumb, feet, etc. Crampy pressure in several parts of the body and limbs, in the fingers and toes, as if the bones of those parts would be crushed.

#### PATHOLOGICAL ANATOMY.

*In animals:* In an animal which was opened immediately after death, the heart ceased to contract. The blood of the heart, dark in the aorta, was fluid, the lungs were rose-coloured, the parenchyma somewhat dark, and the erepitation diminished. The ventricles of the brain contained a small quantity of reddish liquid, the superficial cerebral vessels were turgid with blood, (Orfila).

## 179. OLEUM ANIMALE.

OL. AN.—Oleum animale æthereum; Oleum animale Dippelii.—See HARTLAUB and TRINKS' Mat. Med., II.

COMPARE WITH—Anac., Arn., Cocc., Ign., Nux v., Op., Phosph., Rhus, Zinc.

ANTIDOTES.—Camph., Nux v., Op.

## CLINICAL OBSERVATIONS.

There are no cures on record performed by this powerful agent. Hartmann mentions that it has been of service to him in the treatment of asthmatic complaints. Jahr proposes it for rheumatic and arthritic affections, hypochondriac and hysteric paroxysms, hysteric spasms and convulsions, paralytic conditions, muscular debility.

## SYMPTOMS.

**Mind and Disposition.**—*Sadness.* Sad thoughts crowd upon one's mind, making one sad. *Sadness* and *lowness* of spirits after dinner; she talks in a low tone of voice. *Taciturn* and thoughtful as if overwhelmed with grief. Not disposed to do or enjoy anything. Seems to be absorbed in reverie all the time without knowing what she is thinking of.—Anxiety, and warmth about the chest.—*Ill-humour* and peevishness, in some cases preceded by cheerfulness for some days.—Great cheerfulness, with lightness of motion and general well being, in the afternoon.

**Sensorium.**—*Frequent vanishing of thought.* Absorbed in thought. Great absence of mind, also with indisposition to perform any mental labour. Frequent attacks of loss of sense, with vanishing of hearing and sight.—*Dulness* of the head as after a cold, with dulness of the ears and rheumatic drawing in the cheeks. Stupifying dulness of the head, early in the morning, with tearing and drawing in the head. Oppressive dulness and heaviness of the head. Painful dulness of the right sinciput, in the afternoon. Painful dizziness, early in the morning, in bed. Numb and paralytic sensation in the left side of the head.—Painful sensation as of reeling. Giddiness and reeling sensation in the open air, when stooping.

**Head.**—*Pressure in the forehead*, also going off by rubbing. Pressure in the temples, also with tension in the evening in bed, or after a meal with yawning (in the right temple). Pressure on the vertex, shifting to the occiput, or with drawing and tearing in the temples. Pressure in the left occiput, also during motion, and obliging one to bend the head forward all the time, the whole afternoon. Pressure in the forehead from without inwards, or in the right temple. Pressure with tearing in the left sinciput.—*Pressing* at one spot in the occiput. Pressing, particularly in the forehead, also on waking, or on making the least mental exertion, or attended with sad, taciturn mood.—*Drawing* in the left temple, with a feeling of coldness.—*Tearing* in the left forehead. Tearing in the temples, while in the open air, going off in the room. Burning tearing in the left side of the head, and in the region of the occipital protuberance, in the afternoon.—*Sticking* in the forehead, above the eye, or on the vertex, in the afternoon. Dull sticking in the left forehead, twice. Violent sticking in the left side of the vertex, with languor of the hands and feet, from evening till morning, banishing sleep (during the menses). Darting in the occiput from without inwards. Fine stinging in the left frontal protuberance, as from an electric spark, in the evening.—*Boring* in the left frontal protuber-

ance, going off by rubbing. Boring at a small spot in the left occiput.—*Gnawing* in the occiput, in the evening.—*Slow pulsative beating* in the right side of the head. *Hammering* in the left side, on entering the room, going off after sitting down, or also while sitting (with itching of the outer parts).—Sensation, upon entering a room, as if the *blood were rushing* to the occiput.—*Heat in the head*, with moist forehead, in the afternoon. Heat in the head with sensation as if a hot vapour were ascending in it. Sudden heat in the head, in the evening, with sweat about the sinciput, forehead and hands. Heat in the forehead with perceptible warmth on the outside. Warmth about the head and hands, with sweat.

**Scalp.**—Tension about the occiput. Tearing in different parts of the hairy scalp, followed by tension with sore pain as if the skin had been cut. Tearing and sticking in the right side of the head and about the occiput, after dinner. *Burning at small spots*, also particularly at the right parietal bone, going off by rubbing, or stinging burning on the forehead.—*Itching of various parts of the hairy scalp, going off by scratching*, (also in the evening) or on the forehead and temples.—*Vesicles* on the occiput, with sore pain when touched.

**Eyes.**—\**Pressure in the eyes*—with cutting and lachrymation. °Pressure as from a grain of sand, particularly in the wind, with photophobia.—*Drawing* through the eyeballs. *Sticking* in the left eyeball, also in the outer canthus, or tearing sticking after a meal. Boring and sticking above the right eye, as if the bone would be pierced.—*Itching, going off by rubbing*, in the left eye, in the evening, or in the right inner canthus in the afternoon, or on the left lower lid in the evening, or above the eyes. Burning itching in the right eye. Biting itching in the right or left eye, also after dinner.—*Smarting as from salt*, in the left eye, in the afternoon, or particularly in the inner canthus. Stinging smarting in both eyes, as from electric sparks.—*Burning in the eyes*, in the open air, or on waking, or at candle-light. Burning in the right eye, with lachrymation or dim-sightedness. Burning in the right outer canthus, in the evening.—*Inflammation* of the inner surface of the lids.—*Dryness* between the eyeball and the lids.—Lachrymation and dimness of the eyes, with burning of the canthi and smarting of the lids. Increased secretion of mucus from the Meibomian glands, with frequent agglutination of the lids, at night.—*Quivering of the lids*, also spasmodic. Frequent twitching of the left upper lid, or above the brow, succeeded by a sensation as if the skin were hanging down, in the evening, hindering sight.—During the whole period of proving the power of sight is diminished. *Dim-sightedness*, also with drowsiness. The sight at a distance is less distinct. *Mistiness of sight*, particularly in the afternoon when writing, with shining points before the eyes, or particularly before the right eye after dinner, with lachrymation. Dark clouds before one's eyes while looking at an object.

**Ears.**—*Sticking in the ears*. Boring in the ears, with sensation as if something had lodged in the ears, with dryness of the throat. Tearing in the ears. Shoeks in the right ear, with rushing of heat out of the ear. Burning in the left ear, from within outwards, in the evening.—*Itching* in the ears. *Itching of the conchæ*, going off by rubbing, or also with burning and succeeded by heat. Itching in front of the right ear, or below the lobule, removed by rubbing. Tickling of the ears. Biting behind the ears. Roughness in the left ear, as from a feather lodging in the ear.—The sounds are perceived as if through a loud noise. Singing in the left ear, in the afternoon.—*Humming* in the ears, increased by loud noise.

**Nose.**—Tearing in the left nostril from below upwards. Tickling in the nose. Creeping in the left nostril, in the evening. Prickling as from pungent vapour high up in the nose. Itching burning of the tip. *Itching in the nostrils*.

*Pimples* in the right nostril with burning when pressing on them. Pimples on the septum with burning and oozing.—Sneezing, with violent irritation in the right nostril. Sneezing with sore pain or pressing asunder in the chest.—Dryness in the nose.—Coryza with sneezing, early in the morning. Coryza with want of breath through the nose. Dry coryza.—Increased discharge of mucus from the nose. The mucus in the nose thickens rapidly, causing pain and tension.

**Face.**—*Pale, earthy complexion.* Redness of the cheeks, even when the skin is cold.—*Drawing in the face*, particularly in the mastoid process, in the evening, or in the malar bones as if they would be raised by force. *Cramp-like tensive drawing* in single parts of the face, or particularly in the left half, in the evening, in bed. *Cramp-pain in the left cheek.* *Feeling of lameness* in the right half of the face, also *cramp-like* feeling of lameness in the left. Tearing in the right malar bones.—*Itching, going off by rubbing*, on the left cheek, on the chin, upper lip and in the corner of the mouth, also, in the evening, on the right lower jaw and left frontal protuberance. Smarting itching in the left cheek. Stinging in the right cheek like flea-bites, or, in the evening, under the left lower jaw. Tingling in the face, here and there. *Burning in the face*, also *every morning*, particularly about the chin with peeling off of the epidermis, or on the right malar bone, or also on the *left cheek* (also in the evening).—*Itching* pimples and vesicles on the cheeks.—Chapped lips. *Itching of the lips*, also during the morning-slumber, rousing him.

**Jaws and Teeth.**—Creeping and quivering in the lower jaw. *Cramp in the lower jaw.* Cracking in the articulation of the left lower jaw when opening the mouth. Sensation as if the opening of the mouth were impeded by something in the articulation of the jaw, early in the morning. Swelling of the right lower jaw, with tension, and with drawing in the skin as far as the ear.—Tearing in the teeth, proceeding from the ear. Quivering and tearing in a decayed stump, from afternoon till evening, with throbbing as in an abscess, and with sensation as if icy-cold air were rushing out of the points of the stump. Drawing in single upper teeth. Stinging in the right upper molar tooth, after dinner, and going off by pressure.

**Mouth.**—Sensation as if one's breath were fetid. *Dryness in the mouth and throat*, also early on waking. Accumulation of a quantity of snow-white saliva. Greasy feeling in the mouth and palate.—Sudden dryness on the back part of the tongue. *Biting* on the back part of the tongue, as from tobacco. Itching burning of the tip of the tongue.—Prickling of the palate, in the afternoon.

**Pharynx and Œsophagus.**—Choking and constriction of the throat, particularly morning and evening. Inflammation of the throat.—Burning in the throat, also *coming up from the œsophagus* (in the evening), or as if from spirituous drinks or pepper.—*Dryness of the throat, particularly perceptible during empty deglutition*, also early in the morning, with sensation as if cold air were getting into the pharynx, inducing a constant urging to swallow. Parched feeling of the throat. Dryness with sour taste in the mouth.—*Sensation as if a foreign body had lodged in the throat, obliging one to swallow*, also with roughness, or dryness and subsequent painful hawking up of thick, brown pieces like glue, after which the dryness passes off (early in the morning).—*Roughness in the throat*, also with scraping and dryness. *Scraping, as if from acrid vapour, inducing a hacking.*—A good deal of tenacious mucus in the throat, which can scarcely be detached. Hawking up of mucus after a meal. Discharge of pieces of hard mucus, early, after long hawking.

**Appetite and Taste.**—Sour taste in the mouth.—Greasy taste, also about the palate. Flat taste, with viscid mucus in the mouth.—*Diminished appetite.*

*Appetite for bread*, nothing else, particularly in the evening. *Aversion to meat*, which, like everything else, except bread, seems to have the offensive taste and smell of the drug. *Aversion to soup*, even finally to bread.—*Desire for soft-boiled eggs*.—*Thirst* in the evening, or also the whole day.

**Gastric Symptoms.**—Ineffectual urging to eructate. *Frequent empty eructations*, also at table. Nauseating eructations, in the evening. Eructations tasting of the meat which had been eaten, after the meal. Eructations tasting like urine. Burning eructations. Eructations preceded by grumbling and shifting of flatulence in the stomach.—*Gulping up* of tasteless water.—Violent hiccough, in the evening.—*Loathing*, with eructations tasting like urine. Loathing with *inclination to vomit*, also after a meal, or accompanied with ptialism. Loathing *with nausea*, also at table, or going off after drinking coffee.—*Nausea* at table. Nausea with sensitiveness of the stomach. Nausea with contractive pain of the bowels, extending to the stomach, with dry cough and sticking in the sternum. Nausea with pressure in the chest as after swallowing too large a morsel of food, and with a choking rising in the throat like heartburn.—*Inclination to vomit*, in the stomach, also rising to the throat, after dinner. Constant inclination to vomit, the whole afternoon, also in the open air, with paleness of face. *Sudden urging to vomit*, as if the stomach would turn, going off after eructation.

**Stomach.**—Pain in the stomach, also at a small spot. Painfulness of the stomach when pressing on it. *Bruised pain about the stomach*, also after a meal, with pain or pressure.—*Distention* of the stomach and abdomen, with frequent eructations and emission of flatulence. Sensation as if the stomach were *full of water* up to the throat.—Sensation in the stomach *as when fasting*. Early in the morning, the stomach and abdomen feel as if entirely empty.—*Pressure* in the stomach with disposition to eructate, in the afternoon. Pressure proceeding from the stomach upwards, attended with burning, in the open air. Frequent pressure in the stomach, after which a fetid vapour rises into the mouth, at times with, at others without eructations. *Pressure in the pit of the stomach*, also after drinking cold water, or going off by pressing on the part. Pressure in the stomach and œsophagus, going off by eructations.—*Contractive and constrictive sensation* in the stomach. Sensation as if something were turning about in the stomach, with urging to vomit. Sensation as if something were turning upward out of the stomach, after dinner.—*Stinging in the stomach*, also with rising of warmth.—*Feeling of coldness* in the stomach, also as of ice. Feeling of warmth or heat in the stomach and from the region of the stomach to the chest, as if fire were in the stomach, and as if sweat would break out in that region, in the afternoon. *Burning and heat*, from the stomach to the chest, or attended with general malaise.—Grumbling in the stomach, until relieved by eructation. *Gurgling*, from the stomach to the chest, as from a liquid, or as in cardialgia.

**Hypochondria.**—Crampy sensation in the region of one rib in the *right hypochondrium*, in the evening. Dull stitches in the region of the liver, during a walk in the open air. Continuous sticking in the region of the right lower false ribs, near the spine, with sensitiveness of that part to pressure. Ulcerative pains afterwards shifting to the left side. *Pressure with sticking in the region of the liver and spleen*.—Pressure in the left hypochondrium. Tearing in the region of the ribs, early in the morning. Sticking, worse when expanding the belly.

**Abdomen.**—Crampy pain at small spots in the abdomen.—*Pinching in the abdomen*, with grumbling. Pinching after warm food or drink. Pinching above the umbilicus, in the evening.—*Sudden lancination from the right to the left*

*side of the abdomen*, above the umbilicus. Violent cutting from the umbilicus to the pit of the stomach, after dinner, with acrid eructations. Cutting colic a few minutes before stool, or in the evening before retiring, relieved by emission of flatulence. Cutting motion from the abdomen to the chest. Cutting pains in the whole abdomen, at four in the morning, followed by liquid stool (watery diarrhoea and tenesmus, relieved by *Cham.*), without the pains being relieved; this relief is obtained after two evacuations within ten minutes.—Penetrating and painful stitch deep in the right side of the abdomen, opposite the umbilicus, causing one to start. Darting in the left lumbar region.—*Cutting digging* in the epigastrium, an hour after every meal (eating or drinking), or in the hypogastrium, relieved by sitting bent, aggravated by eating, drinking, walking or standing. Pinching sticking in the epigastrium, particularly when sitting, and with eructations.—*Distention of the abdomen*, early in the morning, emission of flatulence giving but slight relief. Distention of the abdomen after breakfast. Distention, with painfulness of the bowels, as in obstinate costiveness, during every motion of the trunk. Distention of the abdomen after supper, with rumbling, pinching, and emission of flatulence, which affords relief. Great fullness of the abdomen, in the evening, with feeling as if bloated. *Incarceration of flatulence*, here and there, after supper, with pinching. Oppressive feeling of flatulence, here and there in the abdomen, early in the morning, also in the loins and small of the back. *Constant flatulence* with distention.—*Shifting of flatulence* in the abdomen, with rumbling. *Gurgling* as if diarrhoea would set in, after dinner. *Fetid flatulence, particularly in the evening*, also preceded by pinching.—*Itching above the umbilicus*, or on the right side of the abdomen. *Burning* on the right lower ribs, or else at a small spot below the umbilicus, early in the morning.—*Burning in the left groin*. Pinching in the right *inguinal region*. *Drawing from the groin into the testicles*.

**Stool.**—*Difficult stool, after long urging*, also when the stool is natural or papescent. *Hard, scanty, rare stools, with much pressing and preceded by a good deal of ineffectual urging*. Constipation with ineffectual urging.—*Soft stools, several a day*. *Papescent stools, even preceded by anxious pressing*. *Diarrhæic stools, in the evening*.—*After stool*: burning at the anus, or pressing. Early in the morning, the bowels feel bruised. *Previous, during and after stool*: shifting of flatulence in the abdomen.—*In the anus*: burning. Stinging. Tingling. Itching, in the afternoon.—*In the rectum*: burning and stinging.

**Urinary Organs.**—Pressing on the bladder. *A good deal of urging to urinate*, with discharge of only a few drops.—*Thin stream*.—Diminished secretion of urine, particularly at night, when the urine is dark. During the first twelve hours the urine is *light-coloured and scanty*.—Increased urine, also with burning and itching. *Copious, clear, pale urine, also depositing a cloud*.—*Watery, pale urine*. Greenish urine. Bright-yellow urine, depositing a small cloud. Dense, floeculent sediment in urine which is less pale, after dinner.—Itching in the urethra. *Burning during micturition*.

**Male Sexual Organs.**—Itching of the penis. Lancinating pain in the penis. Burning stinging about the root of the penis, in the afternoon. Painful drawing in the fore part of the penis.—Drawing pain in the right *testicle*. Swelling at times of one, at times of another testicle, with pain on contact. Both testicles are drawn up and painful. The scrotum hangs down relaxed.—Pressing in the prostate gland—*Erections* even without amorous desires, in the forenoon. *Nocturnal erections and emissions*.

**Female Sexual Organs.**—*Menses* too early by four days, with pinching when they first appear, and scanty flow. *Menses* too early by nine days, preceded and accompanied by colic, and sticking in the left side of the head and

vertex in the evening.—Scanty menses, *black blood* and languor of the hands and feet.—Before the menses: cutting in the abdomen and small of the back.—*Leucorrhœa*, consisting of thin white mucus.—Sticking and tearing in the mammae.

**Larynx.**—Cramp-like contraction in the trachea, disturbing the night's rest. Sensation as if the larynx would be closed by outward pressure, early in bed, when lying on one's back with the head bent forward upon the chest, arresting the breathing, and not relieved until the position is changed.—*Hoarseness*, with inability to talk loud. *Roughness* in the throat inducing a hacking, also early in the morning. *Cough with irritation*, also early in the morning, or cough from titillation in the left side of the throat. *Frequent dry hacking*, also early in the morning or evening.

**Chest.**—Oppression of the chest, on ascending an elevation, from accumulation of flatulence in the abdomen, relieved by emission of flatulence, in the afternoon. Painful *contraction* in the middle of the chest.—Pressure on the chest, penetrating through the chest to the shoulders. Pressure at the lower part of the sternum.—The whole chest feels painful as if bruised.—Violent stitch in the upper part of the right chest, near the sternum, as with a red-hot needle, the burning at that spot continuing a long time after. Three fine stitches near the back behind the left mamma. Stinging near the right nipple. Long stitch below the left mamma. Darting in the mamma, when standing, from behind forward. A few dull stitches around the lower part of the left mamma, going off by rubbing, but returning, attended with fine tearing in the ring and middle fingers of the right hand. Pain, almost like sticking, below and behind the left mamma, going off after rubbing, and succeeded by warmth of the whole body. Crampy sticking in the left chest. Violent darting in the chest, near the right axilla. Cutting through the chest, in the evening.—*Rushes of blood* to the chest, with dry heat of the face. Anxiety in the chest, with shuddering, in the forenoon. Mounting of heat from the abdomen into the chest, with sensation as if the senses would vanish. *Burning* in the chest or on the xiphoid cartilage.—Pressure or crushing sensation about the *heart*.—Sticking tearing on the chest in the forenoon. Pressure on the sternum, low down. Sticking about the clavicle, also early in the morning, or with a dragging sensation.

**Back.**—*Pain in the small of the back*, worse when sitting. Pressure in the small of the back, with sticking in the left shoulder on moving the hand to the back. Pain as if sprained, particularly on stooping. Beating and pressure in the sacrum.—Pressure from both sides of the *back* forwards.—Burning tearing in the left scapula, early in the morning. *Sticking* at the lower extremity of the left scapula, continuing a long time. A few pointed and painful stitches from the left scapula to the axilla. Darting between the shoulders, rather on the left side, coming on again on moving the arm backwards, after dinner.—Tensive pressure in the nape of the neck, in the afternoon, not allowing one to turn the head and obliging one to bend it forward. *Drawing and stiffness* on the right side, aggravated by motion. *Rheumatic pains, also in the scapula and axilla*, particularly early in bed and going off after motion. Cracking of the vertebrae, on raising the head. Pleasant feeling in the nape of the neck, as if a warm breath were rising along the part.—Tearing from the right side of the neck to the malar bone, with tearing in the upper molares. Itching burning on the right side.

**Upper Limbs.**—Rheumatic pain in the left shoulder.—Tearing in the upper arm, also particularly in the right, with yawning.—Dull pain in the *elbow*, early in the morning, particularly during motion. *Tearing* in the internal tuberosity of the left, and the external tuberosity of the right humerus. Violent painful

tearing from the trochlea of the right humerus to the wrist-joint and the little finger, where the pain is most violent, with sensitiveness of the part to pressure.—Tearing along the anterior surface of the right forearm, towards the wrist-joint, in the forenoon. Slight tearing from the middle of the inner surface of the forearm to the middle of the wrist-joint, going off by rubbing. Sticking in the right forearm, extending to the radius. Burning in the outer surface of the right, or in the inner surface of the left forearm, near the wrist-joint, going off by rubbing, in the afternoon. Bruised pain on the outer surface of the left forearm, in the middle, in the evening.—Intensely-painful drawing in the *hands*. Tearing from the right wrist-joint, or from above the right wrist-joint to the ball of the thumb, going off by rubbing. Several fine tearings from the styloid process of the right ulna forwards, in the open air. Two fine stitches near the styloid process of the ulna in the right wrist-joint, after dinner. Sticking in the right hand between the metacarpal bones of the thumb and index-finger. Darting between and behind the right thumb and index-finger, apparently in the bone, frequently going and coming. Tearing (burning tearing) along the internal border of the right hand in the direction of the little finger, as if the flesh would be torn from the bone, going off by rubbing, which causes a burning, but returning and finally ceasing spontaneously. Stinging titillation in the palm of the right hand. Crampy sensation across the dorsum of the left hand when letting the arm hang down, during an evening walk.—Numbness of single fingers. Tearing in all the fingers in the direction of the dorsum of the hand, on washing the hands in cold water, going off when drying them. Tearing in the posterior portion of the ball of the left thumb, early in the morning. Fine tearing from the posterior to the middle joint of the right index-finger. Tearing and twitching in the right little finger, apparently in the marrow. Violent jerking tearing in the bones of the right middle finger. Drawing and digging in the right thumb, as if it would ulcerate. Pointed stitch in the posterior part of the ball of the right thumb. Prickling titillation in the anterior portion of the ball of the left thumb (in the afternoon), or in the anterior joint of the right index and middle fingers on waking. Itching burning of the right side of the metacarpal joint of the right index-finger, afterwards on the back part of the ball of the thumb, in the afternoon. Ulcerative pain of the right little finger, under either side of the nail, when pressing on the part or not, continuing the whole day, attended with headache on waking (going off after rising).

**Lower Limbs.**—Dull sticking in the left buttock, in the afternoon.—Tearing in the right hip, posteriorly (in the afternoon), or in the left hip (going off by rubbing). Intensely-painful drawing in the left trochanter.—Drawing pain in the right thigh, increased by motion. Bruised pain in the thighs, arms and back as after making great exertions. Considerable formication in the left thigh, with feeling of great debility, on sitting down after standing. Crampy or *tensive sensation* at a small spot on the inner surface of the thigh near the knee, particularly in walking. Tearing in the thighs, above the knee. Slight tearing on the inner surface of the lower extremity of the right thigh, in the afternoon. Beating pain on the inner side of the thigh, in the forenoon. Twitching on the posterior surface of the thigh, after dinner.—Dull twitching in a large bundle of flesh in the bend of the knee, early on waking. Tension in the bend of the knee, as if the muscles were too short. Painful stiffness in the knees, in walking. Tearing in the knee, with ulcerative pain, both the tearing and the pain going off after rubbing, the former first. Tearing in the inner surface of the knee. Tearing-drawing pain in the knees, shoulder, upper arm and side of the chest. Sticking in the knee.—Deep-seated formication from the knee down the leg, even in the toes, as if the legs would go to sleep, going off by rubbing.

Pain below both knees as from gnawing, frequently during the day, particularly early. Tearing in the outer side of the right leg, from below the knee down to the toes, or in the whole left leg from the knee downwards, the pain being most violent in the knee, with tremor of the legs. Tearing drawing in the anterior surface of the legs, particularly along the border of the tibiae, attended with great heaviness of the feet, which hinders walking. Pain below the calf, a sort of tension as after long walking, during walking only, several days in succession. Painful weariness in the calves, as after a fatiguing journey, in the afternoon. Painful tearing along the inner border of the tibia down to the middle. Jerking tearing at the lower extremity of the tibia, on the inner surface, in the afternoon.—Sticking in the foot, near the heel. Sensation as if the blood were violently rushing to the foot, in the evening. Cramp-like drawing from the hollow of the sole to the dorsum of the foot. Sudden painful tearing in the outer border and in the hollow of the foot. Burning tearing above the outer border of the foot, in the afternoon. Tearing along the inner border of the foot, early. Extremely-violent pointed stitch in the middle of the outer border of the foot. Intermittent tearing in the tarsal joint, resembling slow pulsations and attended with slight pressure, continuing for a long time, during rest and motion, after dinner. Violent tearing in the outer malleolus, in the evening. Burning in the inner malleolus. Pain at the malleoli as from violently knocking them against something. Sticking in the sole of the foot. Tingling at one spot in the middle of the sole, in the evening. Cramp in the toes. Tearing in the big toe which is painful as if ulcerated, in the afternoon. Ulcerative pain of the big toe, particularly near the nail, on pressure, several days.

**Sleep.**—Frequent yawning without drowsiness. *Yawning and stretching with drowsiness*, going off in the open air. *Great drowsiness*, even during work, with yawning the whole day, and lowness of spirits. *Sudden drowsiness after dinner*, going off in the open air.—*Falls asleep late, sleeps restlessly and wakes early*, without being able to fall asleep again. Restless sleep with erections, and waking several times, contrary to his habit.—Starting during the evening-slumber as if in affright, while sitting. The least noise disturbs his sleep.—Dreams. Pleasant dreams about a beautiful region of country. Anxious dreams about murder. Dreams about dead persons.

**Fever.**—Coldness after a long walk, in the evening before retiring, going off in bed. Coldness after a walk in the open air of one hour and a half, remaining for a long time, attended with sad mood, early in the morning. During the whole forenoon he feels rather cold, without being chilly. Coldness of the hands, followed by warmth and creeping in the palms of the hands. Coldness of the whole left lower limb. *Coldness of the feet*, particularly the right foot, with warmth of the face and hands. Icy-cold feeling of single toes. Icy-cold creeping along the back from below upwards.—*Chilliness over the whole body*, early after rising. Chilliness of the body with transitory feeling of heat on single parts (ear, arm, thigh,) frequently. Chilliness in the warm room, with *cold hands, heat and redness of the face*, after dinner. Chilliness, particularly of the lower part of the body, after a short walk. Chilliness of the whole left lower limb.—Shuddering, from the vertex to the chest, continuing, however, on the vertex. Shuddering over the hairy scalp. Shuddering on entering a warm room, even near the warm stove, going off gradually. Shuddering in a room, in the evening, without any subsequent heat or thirst.—Frequent chills. Chill over the whole body, with goose-flesh, from 7 1-2 until 9 in the evening, not in bed.—Thirst before the chilliness.—Alternation of chills, with chattering of the teeth, and heat, in the evening, without thirst and sweat.—Increased warmth in the whole body, except the head, on entering the room after a walk

in the open air. Great warmth of the whole body, particularly over the back, with some moisture on the forehead or sweat in the face, after dinner, passing off soon. Warmth in the whole body, proceeding from the abdomen, with anxiety, and sweat in the region of the stomach and chest, for ten minutes, after eating soup. *Dry, prickling heat, particularly in the face*, feeling of heat in the whole body without any external heat, at 6 o'clock in the evening, for half an hour. Flush of heat with sweat about the head, neck, chest and hands, succeeded soon after by a sensation about the head as if cold air were blowing on it, frequently during the day. Frequent feeling of heat about the head as if proceeding from both temples, with subsequent sweat about the head and hands, and cool skin in the afternoon.—He sweats easily during a meal. Transitory sweat about the head and hands, without heat, from time to time. Sweat early in bed, with brightness of spirits and lightness of the body. Perspiration, saliva, urine and fæces smell like the medicine.—Pulse 55, 60 to 65, pretty small or rather full.

**Skin.**—*Itching* of the whole body, generally passing off by scratching or rubbing, returning partially, and afterwards disappearing spontaneously, or changing to a burning and heat (particularly in the region of the temple and of a portion of the border of the concha). *Itching here and there, resembling flea-bites*, in the cheek in front of the ear (early in the morning), under the lower jaw (in the evening), in the left side of the chest (in the afternoon). *Titillating itching* in the small toe, in the afternoon. Tickling in the inner surface of the concha, on the external ear, in the nape of the neck, under the heel, going off by rubbing or scratching. *Biting and biting itching* behind the ear, in the cheek, in the elbow, on the inner surface of the knee, at a small spot in the middle of the sole of the foot, on the big toe, going off by rubbing. Burning biting on the fore part of the scrotum, in the afternoon. *Burning itching* on the anterior surface of the upper arm (after dinner), or on the side of the nape of the neck, in the evening. Itching on the anterior surface of the forearm, not easily removed by scratching, which brings on a red vesicle containing water, and remaining red for a long time, in the evening. Itching on the back of the hand, with a few vesicles after scratching, resembling itch-vesicles.—Small pimple at the nostril, burning when pressing on it, in the afternoon, going off on the fourth day. Pimple on the cheek. Itching pimple in the bend of the elbow. Vesicles on the cheek with itching sensation. Two vesicles with sore pain under the skin of the occiput, the pain getting worse by contact. Chafing of the bend of the hip, as in the case of infants.

**General Symptoms.**—*Cramp-like drawing in different parts.*—*Feeling of stiffness*, particularly in the lower limbs, when walking. *Lameness* of the left arm and lower limb. Unsteadiness of the body and shuffling gait.—*Weariness*, with heaviness in the whole body. Weariness of the lower limbs, with burning of the soles, worse in the afternoon when sitting, than when walking.—*Languor*, with indolence and constant inclination to sit, after dinner. Languor with pulsations in the extremities, in the afternoon, after a short walk.—Great feeling of sickness in the whole body, with sadness and drowsiness. General malaise and prostration after a meal. *Great languor and weariness*, with trembling of the arms.—*Weakness of the whole body*, with tremulousness and lachrymation in the forenoon. *Weakness of the lower limbs*, with trembling of the knees when standing. Weakness of the knees, with stitches in the knees and unsteadiness when standing. Trembling of the feet, after dinner, owing to weakness, relieved by sitting.—*Fainting turn*.

## 180. OLEUM JECORIS MORRHUÆ.

OL. JEC.—Oleum jecinoris or Jecoris aselli, Cod-liver oil.

This remedy is recommended for the following affections: serofulous and rachitic ailments; inflammation of the eyes and lids of serofulous subjects; photophobia; *tubercles in the lungs and abdomen*; herpes; *crusta lactea*; nodosities in the mammae; rheumatic and arthritic affections; phlegmasia alba dolens, etc.

## SYMPTOMS.

This drug has not yet been proved; the following pathogenetic effects have been sent to us by Dr. Neidhard, of Philadelphia.

**Eyes.**—°The sight improves every day. °She sees clearer and better (in a lady who had very weak eyes).

**Nose.**—Profuse discharge from the nose (the sixth day after taking the drug, commencing after breakfast).

**Urine.**—Very brown and thick, with a strong smell of the oil.

**Sexual Organs.**—The testicles become very small and the serotum hangs down very loosely. Diminution of irritability of the genital system.

**Stools.**—Several loose evacuations daily. Every morning, during the evacuation of the bowels, an abundant secretion of thick mucus from the urethra, with burning pain.

**Extremities.**—Pains in the bones of the left arm (in a girl of 17 years).—Rheumatic pains in the knees and arms (*after taking two table-spoonfuls*). Pain in the knee, particularly around the patella, increased on pressure, and sensation of heat on touching.

**Sleep.**—Very vivid dreams (after the fifth dose, in one who seldom dreams).

**Skin.**—Redness of the skin over the whole body, at night, in bed, with much itching, disappearing in the morning (*after taking two table-spoonfuls*). The ulcers (serofulous) begin to discharge a large quantity of mucus.

## 181. ONISCUS ASELLUS.

ONIS. AS.—Wood-louse, Milliped.—ARCHIV. IV., 1.

## SYMPTOMS.†

Dull heaviness of the head. Painful pressure above the eyebrows near the edge of the nose, first on the right, then on the left side.—Boring pain behind the right ear, in the region of the mastoid process, with stronger beating of the arteries.—Pale, sunken, troubled countenance (w.).—Spasm in the back part of the palate, as if it would close.—Thirst.—Nausea, followed by constant pressure at the cardiac orifice. Incessant vomiting.—Violent colic with distention of the abdomen, (w.).—Sudden urging to stool, with thin stool, (w.).—Painful urging to stool and urine, with retention of both, (w.). Burning cutting in the urethra, with unceasing tossing about, (w.).—Burning pain at the anus.—Erections and indisposition to work.—Hawking up of mucus streaked with blood.

† The symptoms marked (w.) are from three of those lice taken in a glass of brandy previous to a paroxysm of fever.

## 182. OPHIOTOXICON.

**OPHIOTOX.**—Poison of serpents.—See HERING'S Treatise on the Poison of Serpents.—The following symptoms include those from the *Naja tripudians*, marked (N.), and from Brazil snakes, marked (B.).

## SYMPTOMS.

**Mind and Disposition.**—Intolerable, oppressive anxiety. *Anguish*, with dread of death, or with thirst. *Restlessness*, the dog runs away as if rabid. Nervous irritation, with crying on hearing the least noise. The pains are intolerable.

**Sensorium.**—Imbecility.—Sudden *stupefaction* and death. Stupefaction with loss of sense, irregular motions of the limbs, cold, clammy sweat, and small, slow, almost imperceptible pulse. *Stupefaction with loss of sight and death soon after.* Stupefaction alternating with erics. Stupefaction with foam at the mouth. Loss of consciousness.—Intoxication.

**Head.**—Aching pains in the frontal cavities and eyes.—*Heaviness* and fulness of the head.—Congestion of blood to the head, with violent acute fever.—*Swelling of the head.* Falling off of the hair, while recovering from the effects of the bite.

**Eyes.**—Redness of the conjunctiva, with excessive drowsiness, heavy, languid appearance around the eyes. Protruded eyes. *Dim eyes, without lustre.*—°The fat of serpents is said to be good for pellicles on the eye.—*Obscuration of sight and loss of sensibility. Failure of sight. Blindness.* Twenty-one years after the bite he became blind, when the spots which had remained from the bite disappeared.

**Ears.**—Insensibility of hearing and sight. Hemorrhage from the ears.

**Nose.**—*Bleeding from the nose*, and from every orifice of the body. Bleeding from the nose with vertigo.—Discharge of a quantity of liquid from the nose, after the bite (in the case of a horse).

**Face.**—Cadaverous features. Expression of anxiety in the face, with stupefaction. Distortion and twitchings of the facial muscles. Paleness of the face, coldness and death. *Bloatedness of the face*, with prostration and heavy breathing. Feeling of tension around the eyes, mouth and nose, with bloatedness and formication of those parts. The face is red and swollen.—Swelling of the lips. Spasmodic movement of the lower lip, in the case of a horse.—*Lockjaw*, with loss of consciousness and intermittent breathing, (N.).

**Mouth.**—Inflammation of the inner mouth. Hemorrhage from the mouth. *Foam at the mouth*, (N.). *Constant urging to discharge a frothy mucus from the mouth*, with stupefaction, insensibility and difficult breathing. *Violent pyalism.* Accumulation of mucus in the mouth as soon as he introduces anything into his mouth, attended with suffocative fits.—Thick, white coating of the tongue. Tongue coated yellow, black, or trembling, in dying patients. Spasmodic stretching of the tongue, with difficulty of drawing it back, (N.).—*Loss of speech*, (also N.). The voice is becoming extinct.

**Pharynx and Œsophagus.**—Paralysis of the Œsophagus, in animals, (N.). Difficulty of swallowing, also with spasms of the back, (N.). *Violent spasm of the Œsophagus*, preventing deglutition.—*Hydrophobia*, (B.). °A dog that was thrown into convulsions by water, swelled about the head after the bite, and was again attacked with convulsions, after which the hydrophobia disappeared.

**Appetite and Gastric Symptoms.**—Raging thirst, with death after drink-

ing. Violent thirst and sudden death.—Hiccough.—*Nausea*, also with fainting, (N.). Nausea and bilious vomiting. Nausea and diarrhœa. Nausea with coldness of the whole body. *Vomiting immediately after the bite. Spasmodic bilious vomiting*, also with great bitterness. Vomiting with paralysis. Vomiting with insensibility and stupefaction. Vomiting with swelling.

**Stomach and Abdomen.**—*Pains in the stomach*, with anguish and vomiting. Pains in the stomach with hemorrhage, diarrhœa, difficulty of breathing and paralysis.—*Excessive colic in the umbilical region*.

**Stool and Urine.**—*Evacuation soon after the bite.* Bilious diarrhœa. Colic with hemorrhage from the anus, bladder, ears, mouth and nose.—*Difficulty of urinating*, (the urine had to be drawn off with the catheter). Paralysis of the bladder (chronic effect). Burning, coloured urine. Urine with brick-dust sediment.

**Larynx and Chest.**—Offensive breath. *Difficulty of breathing, with vomiting and diarrhœa.* *Suffocative fits in a child*, whenever anything was put into his mouth, attended with accumulation of mucus. The breathing is particularly painful when lying on one side, in the case of a dog, (N.). Constant gasping for breath, with languor, (N.). Difficult, slow breathing, with slow circulation, in the case of a dog, (N.). Spasmodic breathing, with dim eyes and other unfavourable symptoms, afterwards profuse sweat. *Painful breathing* (N.), also with stupefaction and anguish. *Oppression of the chest*.—Pain in the chest, (chronic effect).—Beats of the heart small and trembling. °Affections of the heart.? °*Dropsy of the pericardium.*? °*Enlargement of the heart.*?

**Back.**—Spasms of the dorsal muscles.—Paralysis of the lower limbs (in a dog). °Bandaging the leg with the skin of a serpent is said to remove cramp of the calf. *Suckling* of the bitten limb. Hard, blue-red swelling from the tip of the toe to the knee, with pain about the malleolus. Swelling of the legs with holes. *Icy-cold feet*.

**Sleep.**—*Great inclination to sleep*, even while recovering. *Lethargy* with loss of consciousness. *Lethargy*, with swelling and gangrene of the part, vomiting, convulsions and pain about the heart.—*Moaning and thirst during sleep*.

**Fever.**—Coldness of the skin, with feeble pulse, or with loss of sensibility. *Coldness of the limbs*.—Pulse small and irregular. Pulse quick and scarcely perceptible. Pulse collapsing, with consciousness. Pulse quick and feverish. Pulse animated and hard, with insensibility and swelling of the arm.—*Violent fever and great heat* with malaise, headache, nausea and inflammation of the wound. Violent, acute fever, with delirium, attended with swelling.—*Cold sweats*, also very copious, local or general. *Sweats that afford relief*.

**Skin, etc.**—*Itch-like eruptions*, also in animals, with falling out of the hair.—*Yellow colour of the skin.* Jaundice. Petechiæ in persons who are on the point of dying. *The spot where the bite has been inflicted, turns red and blue*, with swelling. Erysipelas. Inflamed, erysipelatous swelling, a long time after the bite. Small vesicles, or spreading blisters, round the wound. Blisters, also black blisters, on the skin. Blisters as from heat, with burning of the skin.—Pale, hard swelling. Swelling of the glands and lymphatic vessels, in the neighbourhood of the wound. Swelling of the whole body, particularly the abdomen. Swelling with lethargy and death. °The bezoary of the snake is a popular remedy for dropsy. Large tumors and swellings on the body, particularly in the joints.—*Ulcers*, particularly around the bite. *Thin pellicles* over the bitten spot, the cicatrices being somewhat swollen and readily bleeding. Small elevation on the spot where the bite had been inflicted, paler than the sound skin, with pain and rigidity of the adjoining parts. The parts around the bite become quickly putrid—*Gangrene of the bitten spot*, with an ulcer of large

circumference. Purple-redness, blueness and blackness of the bitten arm, accompanied with violent vomiting, and excited, hard pulse. A hard, pale swelling of the bitten limb becomes reddish, then gangrenous, with fainting fits, vomiting and convulsions until death.—*In the wound*: stinging, also in the whole limb, or *violent sticking, with bleeding*.—*The blood rushes out of the wound like a jet*. The blood is at first red, then black and badly-coloured. Venous blood is discharged from the closed wound. Discharge of purulent blood and lymphatic fluid, in the case of a pigeon, with increasing languor until death, (N.). A bloody froth presses out of every orifice of the body. *Symptoms of decomposition of the blood, in both men and animals, in every case*.

**General Symptoms.**—*Paralysis of the bitten limb or of other limbs*. Chronic paralysis, also particularly of the lower limbs. Apoplexy. °The flesh of serpents is a popular remedy for paralysis in Brazil.—Cachectic condition, lasting a long time after the bite.—*Languor* and difficulty of motion, followed by death without spasms, (N.). Chronic debility. Irresistible weariness, (B.). *Physical and mental prostration, immediately after the bite* (in every case).—*Fainting turns*, (also N.), preceded by nausea and accompanied by vomiting, vertigo, obscuration of sight, loss of sensibility, difficulty of swallowing, and loss of all the senses. Fainting, with spasms of the back, (N.).—*Loss of sensibility, as if dead*, also with lockjaw, (N.). Loss of sight and hearing, with inability to swallow, (N.). Sensation is restored sooner than speech, (N.). The patient is lying insensible, with coldness and relaxation of the limbs *which remain in whatever position they are placed*, with deadly paleness of the face, closing of the eyes, slow, difficult breathing, small, tremulous beating of the heart, loss of sight and hearing, and death soon after with convulsions in the face. *Insensibility and prostration, with vomiting, (cured by Arsenic)*. *Rigidity of the body*, like that of a corpse, with loss of muscular power and vanishing of the senses and pulse.—*Trembling of the whole body*. *Trembling of the head and forefeet of animals*. Trembling of the muscles of the bitten limb (in a dog, N.).—°The bile of serpents is a popular remedy for epilepsy. Spasms of the dorsal muscles, with coldness of the skin, nausea, vertigo, feeble pulse, insensibility, fainting and difficulty of swallowing, (N.). *Distortion of the limbs and subsultus tendinum*. *Spasms of the head and œsophagus*, in animals, (also N.). *Complete rigidity*, with entire consciousness.—*Symptoms of the dying*: rapid languor, lowness of spirits and anxiety. Irregular and spasmodic beats of the heart, with nausea. Swelling and blueness of the wound, without inflammation, with or without pain. Pulse quick, full and soft. Vertigo with headache and vomiting, diarrhœa in some cases, also bilious diarrhœa. The urine changes to a brownish-yellow and becomes turbid. Copious, cold sweats, either local or general. Increasing anguish, with desire for open air and fresh water. Tongue coated yellow and trembling. Swelling of the bitten limb, with a blue margin around the wound, which keeps spreading. The face becomes livid, with a faint, sunken look. The limbs are trembling and quivering. Collapse of pulse and loss of consciousness. The tongue becomes black, with hemorrhage from the nose, mouth, ears, arms, etc., and swelling of the abdomen and body.—*Persons restored from a bite, drag on a sickly life*, or die with slow typhoid fevers. Many remain weak for a long time, cachectic, livid, lose their hair. Paralysis lasting for years, with vertigo, pain in the chest and ulcers. Some die of dropsy even after years.—When the poison is applied to the eye, tongue and interior of the ear, it occasions violent paroxysms and death, (N.); when applied to the skin, the poison of serpents has no effect, and, if taken in the mouth and stomach, it is hurtful only when taken in a large quantity. *The poison of serpents generally occasions*: local swelling with discharge first of blood, then of an oily substance and

lastly of pus and slaver. Black blisters at the place where the bite has been inflicted. Frightful pains moving to and fro. Difficulty of breathing, with great heat, fever and burning, coloured urine. Headstrongness and imbecility. Vertigo and bleeding at the nose. Cold sweats, entire prostration of strength and apoplexy.—*Symptoms of single serpents*: *Cerastes* causes a hard swelling, black and green pus, vanishing of senses, convulsions and death. *Hæmorrhoids*: hæmorrhage from every part of the body, with pains in the stomach, diarrhœa, difficulty of breathing and paralysis. *Amphisbæna*: difficult parturition. *Ptiæ*: lethargy and death. *Natrix*: a gaping wound with black, fetid pus, blindness and voluptuous (exquisite) pain without swelling, green colour of the skin and quick death. *Cenchris*: lethargy and death. *Cæcilia*: inflamed wound like fire. *Dipsas*: excessive thirst. *Dryinus*: emaciation, great swelling and horrid smell. *Tyrus vipera*: painfulness of the whole body, discharge of oily blood and brown ichor.

#### PATHOLOGICAL ANATOMY.

Bloody, watery, serous fluid in the ventricles. Portions of the cerebral substance and the spinal marrow are papescent and soft.—The liver is swollen, dark-blue, with gangrene of some parts.—Gangrened spot in the intestines. Watery bloody fluid in the abdominal cavity.—*The lungs, vena cava and pulmonary artery are filled with non-decomposed blood*, also with reddish froth in the trachea. Watery bloody fluid in the cavity of the thorax. Gangrenous spots on the lungs which are turgid with blood.

### 183. OPIUM.

OP.—*Papaver somniferum*.—HAHNEMANN'S *Mat. Med. Pur.*, IV.—*Duration of Action*: from a few hours to months.

COMPARE WITH—*Acon.*, *Bell.*, *Bry.*, *Camph.*, *Cann.*, *Chin.*, *Cham.*, *Cic.*, *Coff.*, *Colch.*, *Con. m.*, *Croc.*, *Dig.*, *Hep. s.*, *Hyos.*, *Ipec.*, *Lach.*, *Lact.*, *Menyan.*, *Merc.*, *Mosch.*, *Nitr. ac.*, *Nux v.*, *Phosph.*, *Phosph. ac.*, *Plumb.*, *Puls.*, *Ruta.*, *Stram.*, *Tart.*, *Verat.*

ANTIDOTES.—Of large doses: very strong coffee, also by injection, (Hahnemann).—Coffee with lemon-juice or vinegar, (Carminati, Murray).—Vegetable acids, according to Orfila, increase the effects of Opium as long as it has not been removed from the stomach.—Camphor, Ether, Ammonium, Natrum (Ackerley).—Cold effusions of the body, (Kopeland, Johnes).—Emetics, (Sprague).—*Ipecacuanha*.—*Asa foetida*, (Monro).—Warm baths.—Of small doses: *Bell.*, *Camph.*, *Coff.*, *Hyos.*, *Ipec.*, *Mere.*, *Nux v.*, *Strychnine*, *Plumb.*, *Stram.*, *Vinum*.—Opium antidotes, *Lach.*, *Merc.*, *Nux v.*, *Strychnine*, *Plumb.*, *Stram.*

#### CLINICAL OBSERVATIONS, FROM NOACK AND TRINKS.

Opium does not manifest its narcotic effects immediately except when administered in large doses; in this case it overwhelms the cerebral life and paralyzes the vitality of the whole cerebro-spinal system of nerves. Among the recorded physiological effects of Opium there are many alternate and secondary effects. These apparently opposite effects are so many curative indications of which the physician may avail himself for the treatment of similar morbid conditions. The Opium stupor, for instance, is just as important a therapeutic indication as the exalted state of the fancy which the Opium is capable of exciting, the Opium-

sopor as important as the Opium-insomnia, the retention of stool as important as the diarrhoea, the spasms as important as the paralysis occasioned by Opium, and even the painlessness and insensibility mentioned by Hahnemann, appear to be one of the frequent alternate effects of Opium, from which we may infer that Opium is capable of exciting pains. Although this is denied by Hahnemann, yet it is now a fact established beyond all doubt; nervous pains of the most obstinate kind, neuralgic affections of the nerves of sensation and of the splanchnic nerves, have been cured by the sole use of Opium, and sometimes by Stramonium and Conium, although these two latter remedies are likewise supposed to be incapable of exciting pain. We refer to the treatise of Dr. George Schmid, who, next to Hahnemann, has furnished the best treatise on the physiological effects of Opium.

Opium has been successfully employed in the following affections: *ailments consequent on fright and fear*: trembling, diarrhoea, retching, etc.—*Ailments from taking cold suddenly while the body is very much heated*.—Excessive sensitiveness of the nervous system to external impressions.—Painlessness while affected with the pains.—Neuralgia of the brain and of single nervous trunks.—Starting of the body after severe surgical operations.—Clonic spasms of children and full-grown people.—Tetanic convulsions with sopor in consequence of a concussion of the spinal marrow.—Convulsions without consciousness, with spasmodic intermittent breathing which is sometimes sobbing and rattling, with deadly paleness of the face and body and feeble pulse.—Epileptic spasms.—*Lethargy*.—Sopor with dark-red, bloated face, the eyes half-opened, the lower jaw hanging down and complete loss of consciousness, in lying-in females.—Sopor conditions in typhoid fevers. Coma in fevers.—Sleeplessness from excessive wakefulness.—Intermittent fevers, with sleep and convulsions during the hot stage.—*Soporosis intermitteat fever*.—Febris pernicioaa Werlhofii, which becomes fatal after the second and third attacks.—Typhus.—Fever with sopor, thirst, and on waking, vertigo, heaviness and dulness of the head. Typhus stupidus with loss of consciousness, sopor.—*Typhus cerebrealis*.—Somnambulism.—Timid mania.—*Delirium tremens potatorum*.—Vertigo, particularly after fright.—Apoplexia cerebrealis sanguinea.—Apoplexia cerebrealis nervosa.—Acute hydrocephalus during the comatose stage.—Hemicrania and megrim.—Cerebral affections from a stroke of the sun.—Obscuration of the crystalline lens. Cataracta.—Colica saturnina.—Neuralgia coeliaca.—Vomiting of faeces and urine.—Obstinate constipation.—*Suppression of the menses*.—Excessive menstrual spasms.—Prevents miscarriage when threatening to set in in consequence of fright and chagrin.—Too feeble labour-pains.—*Helampsia parturientium*.—Fatiguing, tight cough, constantly followed by yawning.—Convulsions of a parturient woman, with subsequent coma somnolentum.—Whooping-cough with yawning and constipation. Dry cough from a constant titillation in the larynx and trachea.—Suffocative condition during an attack of pneumonia in the case of a child. Neurocarditis, with great excitement, trembling and double-beating of the heart, anguish and oppression.—Valuable palliative in organic affections of the heart.

#### SYMPTOMS.

**Mind and Disposition.**—*Sadness*, generally preceded by ecstasy. Lowness of spirits. Melancholy. Sullen mood. Lamentations and howling.—Despondency, also with peevish mood and ill-humour.—Distrust.—*Anxiety*. *Excessive anguish*. Anguish about the heart and restlessness.—\**Fearfulness and tendency to start*.—Discouragement.—*Taciturnity*.—Pain makes him angry, even unto tears.—Alternation of sullen and solicitous mood and cheerfulness.—

*Great tranquillity of mind, internal contentment, forgetfulness of all his complaints and pain, delightful feeling of bliss with sweet fancies, as if he were in heaven.* Ecstasy, also followed by sadness. *Cheerfulness, contentment, exalted feeling of strength, in most cases.* *Courage, perseverance, boldness.* *Contempt of death.*—The opium-eaters, who are generally sad and stupid, become cheerful after eating opium; they revel, sing amorous songs, laugh, and indulge in all sorts of ludicrous gestures; this pleasant exaltation of the mind lasts about an hour, at the termination of which they become angry and raving, finally relapse into a state of sadness, and then fall asleep.—*Inconstancy*, opium-eaters frequently promise what they refuse to do soon after. The least trifle prostrates all power of volition.—No sense of propriety, and refined feelings.—*Daring boldness.* Cruelty. Rage and frenzy, with distortion of the mouth.

**Sensorium.**—*Loss of mind.* \**Stupefaction of the senses*, also with faint looks and excessive debility. *Stupidity and loss of sense.* *Insensible, stupid, not conscious of himself.* \**Complete loss of consciousness and sensation*, with relaxation of all the muscles. Does not know his own relatives, nor any of the objects with which he is very familiar.—*Imbecility, dulness of the mental faculties and senses.* *Stupid indifference to pain and pleasure.* Dulness of sense, with half-closed eyes filled with tears, and short, anxious breathing, with heaving of the chest. Slow consciousness. *Constantly stupid, as if drowsy and intoxicated.* Does not comprehend anything clearly, does not comprehend that which he is reading. Complete extinction of sensibility.—*Weakness of memory.* *Complete loss of memory*, also for a long time. Unsteadiness of the ideas.—*Morbid exaltation of the mind.* Ideas crowd upon him, with merry mood. Disposed to serious, important business, or to *elevated, profound meditations*, (particularly at night, with sleeplessness). *Has to spend the whole night in the deepest meditations*, without being able, after a short morning-slumber, to recollect them.—\**Delirium.* \**Visions.* \**Frightful fancies*, also of mice, scorpions, etc., with disposition to escape. Delirious talk about ghosts, devils, and masks assembling, according to her statement, around her bed, for the purpose of torturing her. Delirious talk about former events, with her eyes open, which seems to be afterwards like a dream. During her delirium she points to masked people who, she pretends, are approaching her, at times bursting out into loud laughter, at times starting as if in affright at men engaged in fencing, with dread of being stabbed, and getting angry if one supposes him mad, although he reproaches himself with his madness in his delirium. Confused talking, with anxious heat and feeling as if intoxicated, retracting afterwards what she had been saying, and at times starting as if in affright, at times angrily and furiously grasping the hands of those around her. *Furious delirium.*—Confusion of intellect. Her mirth and bliss increase until she becomes irrational. She acts absurdly.—\**Mania.* Furious mania, with distortion of the mouth. °*Mania*, with strange fancies. °*Mania*, with erroneous notions, the patient imagines he is in some strange house. Violent mania, with red face, glistening eyes, and increased lightness of the body. Mania, with swelling of the head and face, protruded, inflamed eyes, and red-blue, thick lips; at the same time he rolls over the floor with threats, and does not know his own relatives. °*Delirium tremens.*—*Dulness of the head*, as from vapour in the brain. Dulness as when waking from a violent intoxication. Stupifying dulness, as if a board were pressing against the forehead, with vertigo, obliging him to lie down, and subsequent trembling. *Cloudiness of the head*, also with weakness of the intellect and illusion of the senses, for instance, that his eyes are four times as large as they really are, and his body like that of a giant. *Gloomy feeling* in the head as after watching in the

night, with a feeling of heat in the eyes and disposition to close them, without drowsiness.—\**Intoxication*, -particularly from large doses. Intoxication, with staggering to and fro as in giddiness.—\**Violent intoxication, with stupefaction*.—Vertigo on stooping. Vertigo with stupefaction. °*Vertigo after fright*. Vertigo obliging one to lie down. *Vertigo as if everything were turning round with one*, also with sensation as if he were flying or hovering in the air. Vertigo with anxiety and delirium.—°*Apoplexy, with vertigo*, buzzing in the ears, *loss of consciousness, red, bloated, hot face*, red, half-closed eyes, dilated, insensible pupils, foam at the mouth, convulsive movements of the limbs, and *slow, snoring breathing*; the paroxysm is preceded by sleeplessness, or sleep with anxious dreams, rush of blood and heat in the whole body; after the paroxysm a nervous irritation, with laughing and delirium.

**Head.**—Painful headache, °increased by moving the eyeballs, -also particularly in the occiput. Headache on one side of the forehead, *with pressure from within outward*, increased by external pressure.—Tearing and beating in the forehead, with sour eructations, sour vomiting; she had to lie down, after which she began to perspire.—Sort of pressure in the forehead, as far as the eyes and nose.—Sensation of tightness in the head.—Pain in the head as if all the contents *were torn*, with sensation as if every part in the body were turning wrong side up, with a feeling of anger and uncomfortableness.—*Heaviness of the head* for several days; the occiput feels heavy as lead, the head falling backward constantly. *He is unable to keep his head erect; it totters to and fro*. \**Congestion of blood to the head*. \*Throbbing of the arteries of the head. Twitchings in the temporal muscles.

**Eyes.**—Sensation as if the eyes were too large for the orbits.—*Swelling of the lower lids*.—The lids tremble, and cover only one half of the eyes. The lids hang down as if paralyzed.—Glistening, sparkling eyes.—\**Staring and glistening eyes*. Glassy, protruded, immovable eyes, which do not see anything, like those of a dying man. \**The pupils are insensible to the light*. Dilated pupils (the first hour). The pupils dilate easily.—Contracted pupils. \*The eye is *only half-closed*, and the pupils are *dilated* without possessing any irritability.—Open eyes with the pupils turned upward. He stares at those who are present with watery eyes, but he does not know what is taking place, and he is unable to recognize those persons.—Scintillations before the eyes. Dim-sightedness, as if he were looking through a gauze. His eyes see black, he is giddy. Although he has his full understanding, yet he complains that his eyes are obscured, and that he is getting blind.

**Ears.**—Dull roaring in the ears, after dinner. \**Humming in the ears* (very soon,) °also previous to apoplexy. Ringing in the ears.

**Nose.**—Stoppage of the nose in a warm room, like dry coryza, with thickening of the nasal mucus.—Dryness of the nose, owing to suppression of the secretion of mucus.

**Face.**—Sunken, pale face. Frequent alternation of redness and paleness of the face. Pale face and nausea, with sensation of drowsiness and diminution of all the secretions, frequently even of the exhalations from the skin. Pale face and forehead, and glassy eyes. Clay-coloured, pale face and dim eyes filled with tears; he slumbers with his eyes half open, does not heed anything, gives vague answers, passes stool involuntarily, settles towards the feet, and has a short, anxious respiration. \**Bluish, clay-coloured face*.—He looks as if he had not slept enough, or as if he had been revelling the whole night, with sunken, winking eyes. \**All the muscles of his face are relaxed, which gives the countenance a stupid expression*; the lower lip inclines to drop, the nostrils are widely open, and it is only with great difficulty that he can raise

the upper eyelid. Disfigured countenance, taciturnity, staring eyes.—Red spots on both cheeks. *\*Bloated face*, -also with hot and dry skin, white tongue, hoarseness, oppressed breathing, spitting of blood. *\*Dark-red face*. *\*The face is entirely red*. *\*Red, bloated, swollen face*. *\*The face is cherry-brown*. *\*The veins of the face are distended*. *\*The face is red and puffed*, -and the veins of the head are distended. *\*The face and eyes are red*. The face is uncommonly red, and the lips are swollen. *\*The face is not only red, but looks inflamed*. *\*The face is entirely red, and the eyes look wild, red, and protrude from their sockets*. *\*Spasmodic movements of the facial muscles*. Convulsive trembling of the facial muscles, lips and tongue. *\*Distortion of the mouth*.—The lower lip is painful when touched.

**Jaws and Teeth.**—*\*Lockjaw*. Violent pains in the lower jaw (after seven days). Force had to be used in opening her mouth, and pouring a few table-spoonfuls of soup down her throat.—Pain of the upper jaw. *\*Hanging down of the lower jaw*. Looseness of the teeth. Fine, corrosive pain in the nerves of the tooth.

**Mouth.**—*Ulcers* in the mouth, on the palate and tongue. When chewing it, it burns one's mouth and tongue, and inflames the throat. White tongue. Black tongue. Ptyalism. Profuse ptyalism. Ptyalism as if occasioned by Merc.—Suppresses the secretions from the salivary glands, the Schneiderian membrane and glands of the larynx. Inspissates the saliva, the nasal mucus, the mucus of the trachea, and makes the tongue dry. Dryness of the tongue, palate and fauces, without inclination to drink. Feeling of dryness of the anterior part of the tongue, without thirst, early in the morning. Dryness in the mouth, without desire for drink, with chilliness over the abdomen. Dryness in the back part of the throat. Dryness in the throat and on the tongue. The mouth is so dry that he is scarcely able to utter a word.—Distention and strangulation in the throat, with difficulty of swallowing and blue-red face, in daily paroxysms.—Inability to swallow. Paralysis of the tongue. Speech becomes feeble when he begins to talk; he has to make an effort in talking loud. He is unable to talk, although his mouth is open.

**Pharynx.**—Bitter mouth. Flat, almost no taste. Sour taste.

**Appetite.**—Loss of appetite. Takes away the appetite immediately (when taken in a somewhat large quantity).—Want of appetite either for solid or liquid food. Aversion to all things. *Excessive aversion to food*, with extreme debility. Extreme aversion to meat, with coated tongue. He asks for food, but as soon as he has swallowed a morsel, he does not care for the remainder.—Increase of appetite.—*Canine hunger* in frequent paroxysms, sometimes accompanied with a flat taste in the mouth. Canine hunger, with puffiness and oppression of the stomach after a meal. Excessive hunger with great debility. Canine hunger with aversion to food.—Violent desire for small beer.

**Gastric Symptoms.**—Eructations. Nausea. Continual hiccough with short intermissions.—Inclination to vomit. Frequent nausea and vomiting.—Violent retching. Vomiting. Inclination to vomit, during exercise. Vomiting after a meal.—Disposition to vomit; hæmatemesis. Pain in the stomach and convulsive motions, during which she vomits. Continual vomiting. Green vomiting. The stomach is insensible to emetics. Weakens the stomach. Retards digestion and diminishes the appetite. Slow digestion. Disturbs digestion, occasions a feeling of heaviness, and compression in the stomach, and an indescribable trouble in the pit of the stomach. °Vomiting of fæces and urine in miserere or incarcerated hernia. °Sour vomiting with stupor (Hempel).

**Stomach.**—*Repletion* of the stomach. Oppression of the stomach. Violent pressure at the stomach (immediately). Weakness of the stomach. Oppression

of the stomach as from a stone. Violent pressure in the region of the stomach, immediately after dinner, diminishing during a walk. Painful distention of the stomach. Troublesome pressure across the stomach, after dinner, as if he had eaten too much, or as if the food had been too hard; this pressure is relieved by walking in the open air.—Violent pain in the stomach.—Sudden pressure at the stomach and compression of the diaphragm.—*Constrictive pain* in the stomach, intolerable and causing a deadly anguish. Painful distention of the pit of the stomach.

**Abdomen.**—The hypochondria feel tight and are very painful when touched. Pain in the right hypochondrium.—Pain in the abdomen, as if one had taken a cathartic. Colic, as from a cold. Simple pain in the abdomen, as if bruised. Oppression of the abdomen, and a pressing puffiness of the abdomen, as if it would burst; the pressure decreased by moving the body, but it returned when sitting.—Sensation as if the abdomen were oppressed by a weight in the umbilical region, with anxiety, with a feeling of flying internal heat and stupefaction of the head.—Beating in the abdomen.—Aching and tensive pain in the abdomen.—*Stitches* in the left side of the abdomen, also between inspirations. Colic, before and after stool. Oppression and heaviness in the abdomen, as from a stone.—*Drawing colic*.—Pain in the abdomen, as if the intestines were cut to pieces. Distention of the abdomen, especially in the umbilical region. Sensation of distention of the abdomen and especially the stomach. Accumulation of flatulence in the stomach and intestines. Distended abdomen. The abdomen is distended and painful. *Constant formation* and emission of flatus. °Hard distention of the abdomen, with painfulness of the abdomen. °*Tympanitis*.—°*Incarcerated hernia*, with vomiting of fæces and urine.

**Stool.**—*Sluggishness of the peristaltic motion, retention of stool. Paralysis of the intestines.* \**Costiveness.* Retention of stool and urine.—Constipation for ten days, terminating in death. °Constipation, from torpor of the intestinal canal, after chronic diarrhœa, abuse of cathartics, long confinement in bed, want of exercise. °Frequent constipation of strong plethoric persons, pregnant females and infants. \**Hard stool*, preceded by pinching pain in the abdomen, and flatulence. Sensation at stool, as if the passage into the rectum were closed. Hard stool for six days, he has to make an effort every time he goes to stool. \**Costiveness for six, eight weeks*, with loss of appetite, *nothing but small, hard balls being passed.* Costiveness for several months.—Opium sometimes causes diarrhœa (secondary effect). *Papescent stool.* Increase of stool. Watery diarrhœa.† Discharge of a *black substance* by the rectum. *Liquid, frothy stools*, with itching, burning in the region of the anus, and violent tenesmus. Fetid diarrhœa. °*Involuntary stools.*—Excessive, labour-like pains in the uterus, obliging her to bend double, with anxious, but almost ineffectual desire for stool. Excessive pain in the rectum, with distensive pressure.

**Urinary Organs.**—\*Suppression of urine. Retention of urine with dry mouth, and increased thirst. \*Weakens the contractile power of the urinary bladder. Opium sometimes suppresses, *sometimes excites the urine.* When making an effort to urinate, he feels as if the passage into the urethra were closed. Spontaneous interruption of the stream when urinating. He is not able to emit urine, except after great efforts. Lemon-coloured urine, with a good deal of sediment. *Dark-coloured urine.* Dark urine and dry tongue. The urine is dark-red, and deposits a sediment.—Hæmaturia.—Scanty, red urine, without clouds.—The urine has a brick-dust sediment.

**Male Genital Organs.**—Erections during sleep, and impotence after waking.

† Whenever she uses Opium for her toothache.

Excessive erection. Excitation of the sexual instinct, erection, emission, and lascivious dreams.—*Excitation of the sexual desire, erection for twenty-four hours, lascivious dreams, emission.* Nightly amorous fancies, emissions.—In some the sexual desire is excited, in others diminished. Slow sexual desire.—Opium is supposed by some to diminish the sexual powers. Impotency.

**Female Sexual Organs.**—Increased menstrual discharge.—Opium left the menstrual functions undisturbed, even in a case where it had been used for thirty years every day, in doses of four grains and more, causing very painful, spasmodic paroxysms.—Excessive labour-pains in the uterus, contracting the abdomen and obliging her to bend double, with anxious, ineffectual urging to stool. Violent movements of the fœtus.—Suppression of labour-pains.—° *False spasmodic labour-pains.*

**Larynx.**—*Hoarseness*, with dry mouth and white tongue. Excessive hoarseness. Hoarseness as if occasioned by mucus in the trachea. Faint voice.—When swallowing liquids she coughed.—The cough is worse after a meal.—*Hollow*, dry cough (immediately after taking the drug), it passes off again very speedily. Paroxysms of a violent dry cough, followed by yawning and a sudden loud cry.—His face becomes suddenly blue, and he wants to cough, but the breathing is arrested; after this he falls into a deep sleep, his body being covered with a cold sweat. Cough during deglutition. He coughs up a frothy mucus. Spitting of blood. Expectoration of a thick, sanguineous mucus. Suppression of the sanguineous expectoration and stool.

**Chest.**—Quick respiration. Quick, oppressed, anxious respiration. Accelerated, difficult respiration. The breathing becomes shorter and shorter. Difficult, oppressed respiration, especially at night. At times single, deep inspirations; at times the breathing is suppressed for minutes. The inspirations are slow, long and sighing. Short, \**snoring breathing*. Short attacks of anxiety, with short, oppressed breathing and trembling of the arms and hands.—Difficult respiration and anxiety. Anxiety, with contraction and tightness of the chest. Constriction of the chest, as if it were rigid, with difficult respiration.—Asthma, as if he would be attacked with pleurisy, accompanied with tension in the region of the scapula. Spasmodic asthma.—Oppressed and *difficult respiration*, and anxiety about the heart. Panting, loud breathing. Excessively-difficult and anxious breathing, with open mouth. The breathing was at times snoring and loud, at times difficult and feeble. Loud, painful, rattling respiration. Moaning, slow respiration. Moaning, suppressed breathing. The breathing is imperceptible; sometimes accompanied with a little noise. *Irregular*, suffocative breathing. The breathing stops for a few minutes, after which it returns with a sigh. The breathing was arrested; for five minutes he was like one dead; after this the inspirations became short and sudden, as if hiccough were about to set in. Intermittions of breathing, increasing until death.—Excessive aching pain in the right side of the chest, also between the acts of inspiration, with stitches in that side during an inspiration. Drawing tearing pain in the side of the chest. Contractive crampy pain in the sternum and back, which is felt during motion. He feels hot in the chest. Burning in the heart, as from red-hot coal. Tension in the infracostal region; it is very painful to the touch. Tensive pain below the short ribs, along the attachment of the diaphragm, during an inspiration.

**Back and Upper Limbs.**—Drawing tearing in the back.—Single twitchings in the arms. *Convulsive movements* to and fro in one or the other arm. Paroxysmal trembling in the left arm. Paralysis of the arm. Trembling of the hands. Tingling sensation in the fingers, increasing when seizing anything. Itching of the arms and shoulders. Disagreeable creeping in hands and feet, passing over into a frightful rolling.—° *Distended veins of the hands.*

**Lower Extremities.**—The lower limb is almost insensible. Violent itching of the lower limbs, in the evening. Weakness of the lower limbs.—Sensation as if the blood-vessels were alternately traversed by sudden torrents of fire and by icy-cold water.—He raises his foot convulsively up and down, with a sudden, loud cry. Numbness of the foot. The foot feels stiff, and is so sensitive that he can neither step on it, nor use it in walking. *Swelling* of the foot. Heaviness of the feet after a meal.

**Sleep.**—Yawning for many hours, with pain in the articulations of the jaws, as if they would break. *\*Drowsiness. Great inclination to sleep.* Falls asleep suddenly. *Coma vigil.* Unintelligible talk during the sopor. A sort of sopor, the eyelids being half open, the eyeballs turned upwards below the upper eyelid, the mouth more or less open, and the breathing snoring. Drowsiness, sopor, stupor. Produces a *morbid slumber* in place of a sound sleep. *Continuous sopor* in the night, with increase of thirst, clean tongue with dark-red edges, and dry, parched lips. The stupor was so intense that it was impossible to get an answer from him. *\*Sound sleep, with rattling breathing, as after an apoplectic fit.* Almost constant slumbering, the eyelids being half closed, accompanied with constant grasping at flocks, and moving of the hands over the bed-cover. Stupor, without consciousness, and rattling in the chest. Sleep with consciousness. *\*He hears everything that is said, but is unable to rouse himself; he wakes after the lapse of two hours. \*By shaking the patient and talking to her, it was impossible to wake her.* When awake she complained, and wished to die soon. Sopor and insensibility, with natural warmth, and a natural pulse and respiration. Unconquerable sleep, during which he feels pain, and opens his eyes when pinched. Irresistible sleep (immediately after taking two or more grains), which was, however, disturbed with dreams, and at the termination of which he felt nauseated instead of refreshed. Unrefreshing sleep with general sweat. Sweet, pleasant slumber, from which he is suddenly waked by frightful jerks in his limbs. Restless, sleepless nights. *\*He is very drowsy; nevertheless he is unable to fall asleep; the pulse being slow.* The soporific power of opium is very much diminished by great pain or great grief. Sleepless nights with delirium. Sleeplessness, full of imperfect images, and full of fancies which were altogether distinct from the surrounding objects, as in crazy persons. Between the waking and the sleeping states he had dreams and fancies about dragons, skeletons, and horrid ghosts, and masks. Restless nights, *sopor alternating with waking*,† delirium, hot skin, stupor; he is lying coiled up in a heap.—Weariness after a sleep produced by opium. He feels faint-hearted on waking. Inclination to vomit on waking. On waking from his opium-sleep he feels faint, his head feels heavy and the throat dry. Erection during sleep, and impotence after waking. Stuttering on waking from his opium-sleep. Difficulty of moving the tongue after waking. The head feels gloomy after waking. He starts in his sleep; on waking he is like one drunk and half crazy. Intoxication and vertigo after the sleep. He feels still more exhausted after waking, owing to restless dreams in the night. A man who had not had any dreams for a long time past, dreamed after taking opium. The whole night he was haunted by a multitude of visions and fancies. Opium-sleep is always disturbed with dreams and gesticulations.—During sleep: frightful jerks in the limbs. Starting. *\*Redness of face. \*Snoring*—during an expiration, while asleep. *Moaning while asleep.* Lamenting cries during sleep. Restless sleep, full of moaning and groaning. Anxious sleep, full of dreams. Anxious sleep, disturbed

† This sleeplessness is an alternate effect of opium, and therefore a curative indication. Wakefulness, from nervous irritation or pain, can only be treated enantiopathically with opium.

with the saddest dreams; he seems to be in constant delirium in his sopor. Suffocative fit during sleep (night-mare). Sleep full of terrible fancies and fearful dreams. Sleep full of fright; when closing his eyes, he feels as if he had lost his understanding.—Merry dreams. His dreams are at times pleasant, at times sad, at times anxious and terrible. Vivid, vexatious dreams, he does not succeed in anything. Frightful dreams.

**Fever.**—Coldness of the extremities. General coldness with stupefaction. He complains of feeling chilly. Inclination to shudder. Diminution of animal heat.—Chilliness in the back, with suppressed, scarcely-perceptible pulse. °Intermittent fever with soporous condition, snoring, convulsive movements of the limbs, constipation and suppression of urine, and warm sweat. Fever: first chilliness, afterwards flushes of heat in the face (with white tongue and sweat before midnight). Fever: first chills, afterwards heat with sleep, during which he sweats a good deal. (Fever: he falls asleep during the chilly stage; no thirst during the chilliness; thirst during the hot stage, accompanied with a profuse, general sweat.) Chilliness as soon as she gets into bed in the evening; as soon as she falls asleep she begins to perspire, especially about the head. (Fever: trembling chilliness with thirst, afterwards increased heat of the whole body, with inclination to uncover herself, with strong, full pulse, dryness of the fauces without thirst, and vividness of ideas and memory.) Increased heat. Alternation of moderate warmth and coldness. Great redness of the face with burning heat of the body, for eight hours; afterwards convulsive beating with the right arm and foot, with loud cries, heavy breathing and coldness of the face and hands, which are covered with drops of sweat (shortly before taking the drug). Burning heat in the face, and a sensation of heat, especially in the eyes, without thirst, for six evenings in succession. Heat with thirst. Increases the heat of the whole body, and occasions dryness of the mouth, and thirst. The skin is sometimes dry and hot, sometimes a slight sweat breaks out. Heat of the body, with great anxiety. Restlessness, oppression, confusion of ideas and scintillations, during which a burning, disagreeable heat ascends to the head, and afterwards spreads over the whole body. *Acute fever*, with delirium after a short sleep, and lasting twelve hours; after the fever he became very weak, and was attacked with fits of nausea, the pulse being weak; in three hours the delirium recurred, lasting forty-eight hours, with a strong, full pulse; after this he slept for eight hours. The pulse sank from one hundred and eight to seventy-two beats; accompanied with chilliness and shuddering, diminished cheerfulness, great debility, and increase of appetite. Diminishes the beats of the pulse and the inspirations. The pulse decreases by fourteen beats (the first four hours); after the lapse of ten hours the pulse increases by thirty beats. The pulse diminishes one half. The heart beats four times more slowly. *Slow pulse*, the respiration being slow, heavy and snoring. The pulse is stronger. The pulse is at first slow and full, afterwards weak. *Slow pulse*, with moaning, slow breathing, red, puffed face, and profuse sweat, with convulsions. Full, equal, slow pulse, with deep, snoring breathing. Faint, suppressed, slow, small pulse. Strong, quick pulse, which finally becomes weak and intermittent. Quick and unusually-weak pulse, with quick, oppressed, anxious respiration (after several hours). Quick pulse with headache. Quick, violent, rather hard pulse, with a dark-red face. Congestion of blood to the brain. Violent, quick, hard pulse, with heavy, impeded respiration. Accelerated circulation, with sensation of heat. The blood-vessels are distended with blood. Drops of sweat about the head, afterwards over the whole body, and sleep. Increased exhalation from the skin. Sweat all over. *Early in the morning during sleep, a sweat breaks out over the whole body, and he shows a disposition to uncover*

himself. Cold sweat on the forehead. Sweat, especially on the upper parts of the body, the lower parts being hot and dry.—Profuse sweat (for twelve hours). Violent sweat, during a pretty quiet sleep. Profuse sweat, causing an itching of the skin, and bringing out an eruption, all the senses, taste, sight, smell, becoming in the meanwhile insensible. Sweat and red rash, with itching. General sweat over the hot body with great thirst, full, strong pulse, vivid eyes and bright mind.—°Febris helodes.

**Skin.**—*Pale, bluish colour of the skin*, especially that of the genital organs. Blue spots on the body, here and there. The whole body is red.—Burning pain and sometimes itching of the skin. Burning and itching of the skin, and rising of the epidermis in pustules. Stinging itching in the skin here and there. Itching, especially of the upper parts of the body, commencing at the chest and extending over the face, especially the nose. Troublesome itching. Redness and itching of the skin. Itching of the whole body; after scratching, *red blotches make their appearance*, itching a good deal, but soon disappearing again. *Violent itching of the skin is said to be a constant symptom in poisoning by Morphine*, attended with small, round, colourless elevations of the skin. Cutaneous eruptions, and sometimes itching. Sweat is frequently followed by cutaneous eruptions and a smarting itching in the skin. Small, red, itching spots on the skin here and there. Itching and creeping in all the limbs.

**General Symptoms.**—°*Opium seems to be useful only in recent cases.* °*Affections from abuse of liquor.* °*Ailments of old people.* °*Bad effects from fright and fear, or also from sudden joy.* °*Apparent death.*?—°*Diminished sensibility*, succeeded by diminution of irritability. *Numbness and insensibility of the limbs*, with coldness of the limbs. °*General insensibility of the nervous system, and deficiency of reaction after taking certain medicines.* °*Painlessness during the complaints.* Frightful pains penetrating to the very marrow of the bones (secondary effect?).—°*Uneasiness in the limbs*, she is unable to remain for one minute in one place. Buzzing sensation through the whole body.—°*Trembling of the limbs: convulsive, spasmodic.* Trembling of the limbs with distortion of every muscle. Trembling *as after fright*, with jerks of the body and quivering of the limbs, attended with a general external coldness.—°*Convulsions and spasmodic motions* with foam at the mouth. °*Convulsions* with cries. °*Convulsions* with sleep after the paroxysm. °*Convulsions in the evening or towards midnight*, with drowsiness, clenched fists, and involuntary motions of the hands and head.—°*Tetanic spasm* with rigidity of the back or the whole body. Tetanic spasm with bending of the back or head backwards. *Rigidity of the whole body.* The trunk is curved in the form of an arch, owing to the violent tremor in the limbs which causes a sensation in the nerves as if they would be pulled to pieces.—°*Epileptic convulsions* with tetanus, and violent delirium. °*Epileptic convulsions* particularly at night or towards morning, with *suffocative paroxysms*, loss of mobility and sensation, with violent movements of the limbs. °*Sleep after every epileptic fit.*—Great indolence, also with relaxation. Irresistible *weariness*, or pleasant weariness as if from intoxication. Great disposition to lean against something and to rest with the feet carelessly stretched out and the head leaning on one's hand. Great malaise of body and soul. *Disposition to lie down.* Heaviness of the limbs. *Languor*, also with aversion to everything around him, with drowsiness, dizzy stupefaction, sadness and loss of memory.—°*Failing of strength.*—Great *prostration* with sinking of the animal spirits.—°*Weakness*, with languor and inability to perform any kind of work. Excessive debility. *Prostration of strength, also with inability to move*, and want of tonicity of the solids.—°*Fainting turns* with vertigo whenever he attempts to rise from bed, with sudden return of animation on lying down

again. Fainting turn every quarter of an hour, with closing of the eyes, dropping of the head, weak breathing and loss of consciousness, the pulse being unaltered; succeeded by spasmodic convulsions of the body, after which the paroxysm ends with moaning, and finally with anxiety (from a compound of opium and sal ammoniac).—*Difficulty of moving the muscles. Diminished strength and irritability of the voluntary muscles*,—also with heaviness of the head and great debility. Diminished power of the involuntary muscles, with increased power of the voluntary motions (this is, according to Hahnemann, the true primary effect of opium). *Relaxation of the muscles and limbs*. Slow gait. *Tottering gait*. \*The limbs remain immovable in whatever position they are placed.—Nausea, and incipient paralysis of the lower limbs. \*Apoplexy.—Grows old prematurely.—Emaciation of the body.—The open air is intolerable to him, with disposition to take cold.—*Paroxysms*: 1. The child lay immovable and apparently insensible, breathing with long inspirations, with pale complexion, extreme mobility and dropping of the lower jaw, dilatation and insensibility of the pupils, small, slow pulse, marble-coldness of the skin of the lower limbs, relaxation of the muscles and difficulty of swallowing.† 2. The face is alternately pale and red, the breathing is at times stertorous, at times heavy and feeble, stupified sleep from which the patient can be roused by shaking him, pale, colourless face, diminished temperature of the skin, large, full, slow, regular pulse, imperceptible breathing. 3. Disfigured, pale, sunken face, distortion of the eyes, warm hands, natural pulse, obstinate constipation, apparent paralysis of the bowels, gangrene of the rectum which had protruded previously, lameness and stiffness of the whole body, death in ten days. 4. Drowsiness, stupefaction, loss of speech, snoring, deep sleep, from which the patient cannot be roused, large pulse six hours after the commencement of the attack, rattling breathing, spasmodic clenching of the jaws, distention of the abdomen, intermittent pulse, death in twelve hours.—Insanity, stupor, death in fifteen hours.—*Decomposition of the blood*, derangement of the digestive organs, deep sleep and death.—Hemorrhage from a vein which had been opened some time ago.—Dropsical condition of the body.

**Characteristic Peculiarities.**—°Renewal and aggravation of the pains when becoming heated.—Opium is said to act more powerfully when administered by the rectum in the form of an injection, than by the mouth.

#### PATHOLOGICAL ANATOMY.

*In men*: The body is stiff, the head, and particularly the face, is very much bloated, the whole posterior portion of the body, and the lips and nails are very blue. The eyes are sunken, half open, the tongue is tightly squeezed between the teeth, the fingers are contracted, the scrotum is very nearly gangrened. On opening the abdomen an excessively volatile cadaverous smell filled the whole room. The stomach and bowels are very much distended with air. The larger intestines scarcely contained any excrements; here and there they exhibited ash-coloured spots. The stomach was very much bloated, the vessels of the stomach very much distended and filled with blood; the cardiac portion and the fundus of the stomach were somewhat inflamed. It contained a soup-plateful of a brown liquid of a pungent and volatile odour. The inner surface of the stomach was considerably inflamed at the entrance and extremity of the stomach, and the blood-vessels were very much distended. The liver exhibited in some parts brown spots, the large edge of the liver was entirely blue. The gall-bladder was filled with a large quantity of fetid bile.—The spleen is crumb-

† In the case of a child of four years, from eating a few heads of unripe poppies.

ling.—All the veins were turgid with a fluid black blood and were distended to double their natural size.—The diaphragm was somewhat inflamed in the region of the foramen of the œsophagus.—The lungs were somewhat inflamed, turgid with air and a black, frothy blood.—Two ounces of fluid in the pericardium.—The heart, which was very large, and the ventricles, particularly the right, contained a quantity of black, coagulated blood, the auricles were empty and relaxed.—The veins of the neck were turgid with a decomposed black blood.—The sinuses of the head and all the cerebral vessels were distended with blood; the two ventricles contained a tea-spoonful of a bright-red fluid, the plexus choroidei were very much distended, (*Pyl*, in the case of a man who had taken sixty grains of opium. *Colin* found extravasated blood in the brain, and the cerebral vessels very much distended).—*Leroux* found the pia mater injected and thicker than usual; at the base of the brain he discovered about a tea-spoonful of a bright-red fluid, the choroid vessels very much distended.—*Jourd* found several clots of coagulated blood in the substance of the brain.—According to *Christison* actual inflammation never takes place after poisoning with opium.—*Lassus* asserts that he has seen the stomach inflamed, but without suppuration.

The following post-mortem appearances were discovered in the case of an infant of seven weeks, that was killed by taking ten grains of Dover's powder, (see *Lond. Med. Gaz.*, 1844, March,):

Calm features, white and swollen gums and tongue.—The fingers of both hands are firmly clenched.—Traces of putrefaction on the abdomen.—The liver distended with blood; the mucous membrane of the stomach was very much injected; the colon had a peculiar white colour and was very much distended with gas.—The distended bladder contained a very large quantity of urine. The lungs were filled with blood, with infiltration of a greenish serum in the upper lobes; the pericardium, the vessels of which were very much injected, contained three ounces of a fluid, the right auricle was empty; the ventricles contained solid fibrinous coagula, the left ventricle contained a thin, fluid, light-red blood, the sinuses of the dura mater were filled with dark coagula. The surface of the brain was covered by a net-work of distended vessels, containing a light-red blood. Slight extravasation of blood on the surface of the posterior lobes, the substance of the brain was soft, so that it was scarcely possible to distinguish the medullary and cortical substances from one another. All the internal vessels of the brain were turgid with blood. Extravasation of serum at the base of the brain and in the ventricles.

### A. MORPHIUM ACETICUM.

MORPH. ACET.—Acetate of morphia.—Translated by A. C. BECKER, M.D., from the *NEW ARCHIV.*, III.

**Sensorium.**—Vertigo with disposition to sleep, (*Chevallier*).—Confusion and dull headache, (*Wibmer*).—Weight in the region of the forehead, (*Allinio*).—Heavy, stunned state of the head immediately on rising from his bed, (*Wibmer*).—Coma, from which, four hours after, he awoke for a few moments with full consciousness, (*Orfila*).—Coma, dilated pupil, rumbling in the belly, pulse 79, (*Crispo*).—Dulness of the mental faculties, (*Chevallier*).—Inability to do any mental labour, (*Chevallier*).—He is seized with an unaccountable uneasiness, (*the translator*).—Great excitement without sleepiness, (*the translator*).

**Head.**—Uneasiness, headache, and pains in the region of the navel, (*Allinio*).—Violent pulsation of the carotids with heat in the head, which spreads over

the whole body excepting the extremities, which remained cold, (*Orfila*).—Great heat in the head, (*Orfila*).—Violent burning in the occiput, which attacked also the abdomen, (*Orfila*).—Violent headache with red face, red and injected conjunctiva, strong, violent pulse, even temperature of the skin, with disagreeable itching, (*Chevallier*).—Headache more on the right than on the left side with some dilatation of the pupil, (*Chevallier*).—Tension in the head with acceleration of the pulse, (*Charvet*).—Heaviness of the head, with a feeling of tension in it, which seemed to press asunder both parietal bones; this feeling interfered with thinking and writing, (*Wibmer*).—Intolerable pain in the right side of the head, uneasiness, the face, usually pale, became red, drops of perspiration stood on the forehead, the expression of the countenance silly and melancholy, itching of the skin, (*Beraud*).—Throbbing headache with red turgid face, (*Allinio*).—Headache increased by reading and thinking, (*Wibmer*).—Violent pain in the forehead, burning heat of the skin, debility, pulse 80, (*Allinio*).—Violent pain in the region of the forehead, cold perspiration on the back, (*Allinio*).—Pain in the right side of the head with dilated pupils, (*Beraud*).—Pain in back of the head, and pressure over the eyes, (*Beraud*).

**Face and Eyes.**—Face red, bloated, the skin of the eyelids swollen, lips blue, throbbing headache in the fore part of the head, (*Allinio*).—Increase of warmth in the face with distensive headache, (*Wibmer*).—A circumscribed red spot on the cheeks, stupid countenance, glaring eyes, cold sweat over the body, heaviness of the head, inclination to sleep, (*Crispo*).—The face, usually pale, becomes red, subsequently becomes livid and covered with sweat, (*Beraud*).—Countenance animated, lips livid, great thirst and nausea, (*Allinio*).—Face red, lips pale, the eyes seemed to be starting from their sockets, the tip of the tongue red, gums scarlet and painful, (*Allinio*).—Contraction of the pupil, (*Bally*).—Dilatation of the pupil, (*Beraud*).—Pupil dilated, even when looking at the sun, (*Beraud*).—Conjunctiva of the eye, red, as if injected, the eyes sparkling, dull pain in the forehead, especially on the right side, (*Berandi*).—Conjunctiva of the eye as if injected, (*Berandi*).—The eyes were congested and the face bloated, (*Berandi*).—A feeling of fulness in the orbits, (*Charvet*).—The eyes looked as if ready to start from their sockets, pupils dilated, face red, (*Allinio*).—Aching pain above the eyes, (*Berandi*).—Pricking in the eyes which seem to be covered with a veil, (*Orfila*).—Impaired vision, (*Bally*).—Wild expression of countenance, (*Chevallier*).—Looks silly, the eyes glaring, (*Allinio*).—Noise in the ears, (*Charvet*).—Lips red, as if injected, (*Allinio* and *Crispo*).—Lips pale, (*Allinio* and *Crispo*).—Lips blue, (*Allinio*).

**Mouth and Pharynx.**—Gums scarlet, somewhat painful, tongue red at the edges, violet in the middle, (*Chevallier*).—Tongue equally red, whilst there is nausea, dryness and a stinging sensation in the fauces, (*Chevallier*).—The edges and the tip of the tongue red, (*Rabuni*).—In twenty minutes after the dose the tongue appeared red and the pupil dilated, (*Allinio*).—The tip and the edges of the tongue red, violet in the middle, painful sensation in the stomach, navel and bladder, with a feverish pulse, (*Berandi*).—Heavy, pale tongue, (*Berandi*).—Tongue dry, (*Orfila*).—Burning in the fauces, (*Crispo*).—Irritation of the fauces with burning thirst and colicky pain in the stomach, (*Chevallier*).—Dryness and contraction of the fauces.

**Taste and Appetite.**—Taste bitter, acrid, (immediately), (*Allinio*).—Taste bitterish, (immediately), (*Wibmer*).—Taste bitter, with irritation in the fauces (immediately), appetite slight, (*Allinio*).—Impaired appetite with weight in the head and constipation, (*Charvet*).—He dined without much appetite; during the dinner the heaviness and giddiness of the head increased, obliging him to lie down. Burning thirst and dry tongue, (*Orfila*).—Burning thirst, (*Chevallier*).

**Gastric Symptoms.**—Nausea with painful sensation in the head. Great nausea with red tongue and dryness in the throat. Nausea, sleepiness, then copious general sweat, (*Crispo*).—Nausea, difficult breathing, heavy, pale tongue, pulse 66, (*Berandi*).—Constant nausea and pain in the region of the navel, on rising after having been lying down. Nausea, disposition to vomit, weakness in the joints, (*Berandi*).—Nausea and disposition to vomit after eating, (*Allinio*).—Nausea, eructations and strong inclination to vomit, with great sleepiness, (*Wibmer*).—Nausea and inclination to vomit disturbed his sleep, (*Charvet*).—Repeated nausea and attempts to vomit (first day), (*Charvet*).—Nausea with increased temperature of the face, the head becomes heavy, hot, and there appeared a disposition to vomit; some time after, (in consequence of the nausea) general weakness of all the limbs, decreased temperature of the face, the face became paler than it usually was, pulse 66, (*Wibmer*).—Nausea with aching pain in the head and disposition to sleep, (*Wibmer*).—Nausea, (*Crispo*).—Inclination to vomit with strong irritation of the fauces and violent headache, (*Chevallier*).—In the evening nausea and vomiting of the food he had taken at dinner, (*Wibmer*).—Vomiting with slight pains in the region of the navel, intermittent, small, contracted pulse. Vomiting and increase of urine after taking milk. Obstinate vomiting without thirst, without loss of appetite or a red tongue, (*Bally*).—Vomiting of green matter, (*Berandi*).

**Stomach and Abdomen.**—Violent pain in the epigastrium, (*Bally*).—Colicky pains in the stomach, with burning thirst, irritation of the fauces, headache and dilated pupil, (*Chevallier*).—Violent burning in the præcordia whence emanates an itching sensation like the creeping of ants, passing along the linea alba to the left and right popliteal spaces, (*Orfila*).—A feeling of pressure in the epigastrium with sleepiness, (*Wibmer*).—Pain in the præcordia, inclination to sleep, and somewhat difficult breathing, (*Allinio*).—Violent pain in the præcordium, nausea, disposition to vomit, (*Allinio*).—Painful sensation in the præcordia down to the bladder (immediately), (*Berandi*).—The pain in the præcordia was aggravated by taking food, (*Berandi*).—Swelling of the abdomen with heat over the whole body, cold extremities, burning thirst, dry tongue, without nausea or vomiting and without impaired consciousness, (*Orfila*).

**Stools.**—Constipation with heaviness in the head, (*Charvet*).—The constipation lasted a whole month, (*translator*).—Constipation with occasional natural motions, (*Bally*).—Bowels moved on the second day only in the afternoon, but sluggishly, with painful tenesmus and discharge of a small quantity of feces, (*Wibmer*).—Watery diarrhœa, pain in epigastrium, (*Crispo*).—Diarrhœa with pain in the stomach, navel and bladder in the evening and next morning, (*Berandi*).—Watery diarrhœa on the following morning, (*Allinio*).—Two painful evacuations, (*Allinio*).—Diarrhœa continuing the following day, (*Berandi*).

**Urine.**—Pain in the region of the bladder, (*Allinio*).—Pain in the bladder, (*Crispo*).—Urine retained, (*translator*).—Ineffectual efforts to urinate, though feeling a desire for it, (*Charvet*).—Urine clear and bright, (*Chevallier*).—Urine muddy and slimy, (*Chevallier*).—In the evening passed some turbid urine, (*Wibmer*).—Pain in the urinary and genital organs, especially in the right spermatic cord, (*Allinio*).

**Chest.**—Anxious breathing with smarting pain in the chest, strong, full pulse, (*Chevallier*).—Dyspnœa with smarting pain, full, accelerated pulse, drowsiness. Inspiration accompanied by sharp pain in the abdomen and along the spine, (*Chevallier*).—Accelerated pulse, 80, regular, equal beats, (*Charvet*).—Accelerated pulse, (*Bally*).—Pulse slow, full, intermitting, (*Chevallier*).—Pulse rather hard, small, 72, (*Wibmer*).—Pulse rose in half an hour from 63 to 108, (*Rabuni*).—Pulse rises from 68 to 78, accompanied by violent headache, and weight in the forehead, (*Allinio*).

**Extremities.**—Slight trembling and want of steadiness in the hand when writing, (*Wibmer*).—An itching sensation in the upper extremities, very much like the creeping of ants; both upper and lower extremities are painful, as if crushed, (*Orfila*).—Slight twitches in the arms, head and particularly the face, during an agreeable slumber full of dreams, during which he retained a clear perception of his condition. Subsultus of the tendons, (*Bally*).—Violent shaking of the whole body, (*Bally*).—Convulsive shakes with vertigo and slight loss of consciousness, (*Bally*).—Slight rigidity or heaviness of the limbs when rising from a chair, (*Wibmer*).—Weakness in the limbs, the sacrum, the neck, the joints, pulse 68, irregular, the conjunctiva injected; face red, bloated, lips pale, the functions of the brain unimpaired. Heat over the whole body, with cold extremities, violent pulsation in the carotids, coma, (*Orfila*).—Violent perspiration with a free, full pulse, some loss of consciousness and slight spasms. Sweat so profuse that in the course of one night he had to change his linen nineteen times, (*translator*).—Profuse sweat over the whole body, pupils largely dilated, pulse 94, (*Allinio*).—Profuse general sweat, (*Berandi*).—Smarting on the skin without sweat, sometimes accompanied by small, round elevations. In some places appeared an eruption of reddish blotches, arm and thigh covered with reddish blotches, (*Chevallier*).

**Sleep.**—Dozing five and a half hours without interruption, during which he dreamed of a great number of things, but heard nearly all the time what was passing around him, and retained a clear consciousness of his condition, (*Charvet*).—Uneasy starting sleep from which he woke with a feeling of general weakness, headache and sunken eyes, (*Chevallier*).—Uneasy sleep with frequent starting, after sleep stiffness, pain in the arms, and here and there eruption of red blotches, (*Chevallier*).—Quiet sleep for five hours, from which he woke with pain in the right side of the head, weak limbs, and pain along the spine, (*Chevallier*).—Long, tolerably quiet sleep; after waking headache, faintness, nausea, anxiety and general debility, (*Chevallier*).—Drowsiness and a short nap, during which he thought his limbs were itching, (*Wibmer*). During his sleep he experienced occasional twitches of some muscles in the face and extremities, (*Wibmer*).—Several hours of sound sleep, from which he woke with a dull pain in the forehead, soon followed by an evacuation of the bowels, (*Allinio*). Sound night's sleep, (*Crispo*).—Sleep uneasy, disturbed for three hours in succession; on waking, pain in the præcordia and bladder, he passed clear urine in moderate quantity with a strong desire, (*Berandi*).—Night uneasy, skin dry and itching, (*Berandi*).—Heavy sleep with red cheeks, (*Berandi*).—Uneasy sleep; the face moist with perspiration, pulse 88. After waking, pain in the forehead, præcordia and bladder, faintness and pains in the joints, (*Allinio*).

**Skin.**—Violent itching over the whole body, (*Wibmer*).—Itching of the skin, (*Allinio*).—Eruption over the whole body, (*Crispo*).

**General Symptoms.**—Two fainting fits with dilated pupils, pale tongue, mouth sticky and bitter, (*Allinio*).—Loss of consciousness, very difficult breathing, livid countenance, head drawn backwards, some mucus in the mouth, the upper parts of the body covered with viscous mucus, the lower extremities cold, pulse small, intermitting, the patient experiences violent convulsive shocks.

**Characteristic Peculiarities.**—Motion and erect position aggravate many of the symptoms, and cause nausea and headache. All the symptoms disappeared after taking exercise, (*Chevallier*).—Lying down eases the symptoms. Reading and reflection increase the headache. Taking vinegar seems to aggravate the nausea and headache, (*Wibmer*).

## B. MORPHIUM PURUM.

The following pathogenetic effects of this substance are derived from

PFISTER's Schweizer. Zeitschrift, II., n. 2.

WIBMER's Medicines and Poisons.

RONANDER in Hecker's til. Ann., 1834.

SEITZNER in Buchner's tox., p. 202.

HEGMANUS in Cooper's Med. Gaz., 1837, No. 27.

CHARVET.

## SYMPTOMS.

**Mind and Disposition.**—Violent restlessness, (o.).—Violent nervous irritation, (ch.).—Loss of consciousness, (ch.).—Stupor, (ch.).—Inability to perform any labour, (ch.).—Weakness of memory, (o.).—Indescribable anguish, (u.).—Apoplexy, loss of sense and consciousness, loss of mobility with laborious snoring, rattling breathing, and bluish, puffed face, (pf.).—On the following morning he was lying in his bed without consciousness, with the left side of his face on the pillow, which was drenched with the saliva that had run out of his mouth, (pf.).

**Head.**—*Vertigo*, (sch., b., m., pf.).—Dulness of the head, (sch. and pf.).—Heaviness in the head, (ch.).—Congestion of blood to the head, (b.).—Irritation of the brain, (b.).—Tightness in the head, (ch.).—Transitory *headache*, (o., s., ch.).—Violent headache on the right side, disappearing in half an hour, but leaving some pain in the frontal protuberances, (ch.).—The head is drawn backward, (ch.).

**Eyes.**—Fulness in the orbits, (ch.).—Considerable *contraction* of the pupils, (sc., u., o., ch.).—In some cases the pupils dilate, (o., ch.).—The sight is disturbed, (ch.).—Obscuration of sight, (m.).—Weakness of sight, which does not allow one to read, (m.).

**Ears.**—Ringing in the ears, (ch.).—Humming in the ears, (ch.).—Violent roaring in the ears, (m.).

**Face.**—The countenance is somewhat altered, (ch.).—Bluish face, (ch.).—Cadaverous face, (ch.).—The face is slightly reddened, (u.).

**Mouth.**—The edges of the tongue are red, the middle blue, (ch.).—Mucus in the mouth, (ch.).—Ptyalism, (b.).

**Appetite.**—Disagreeable taste, (ch.).—Bitterness in the mouth, (b.).—Loss of appetite, (ch.).

**Stomach.**—*Turns of nausea* and disposition to vomit, waking him from his slumber, (ch.).—Constant retching, (u.).—Continual vomiting, (b.).—Uninterrupted vomiting for three days, (o.).

**Abdomen.**—More or less pain in the epigastric region and in the intestinal canal, with constipation which is frequently followed by sudden diarrhoea, (o.).—Slight pain in the umbilical region, (ch.).—Colicky pains, (b.).—Suppression of stool and urine, (pf.).

**Stool.**—Constipation which is sometimes followed by diarrhoea, (b., m.).—Constipation for a whole month, (ch.).—Violent diarrhoea, (b.).

**Urinary Organs.**—Ineffectual urging to urinate, which only takes place once in twenty-four hours, (ch.).—*Difficulty of emitting the urine and occasional suppression of urine, only in men*, (o., b., ch.).—After making great efforts, he passes a little urine, after which the urine stops, and flows again in a little while, until the bladder is empty, (b.).—Diminished and concentrated urine, (b.).

**Chest.**—The breathing is not much affected, (o.).—Short breathing, (u.).—

**Difficult breathing,** (CH.).—The inspirations are rare and rattling, (CH.).—Violent beating of the heart and carotids; the beats of the carotids and radial arteries were very hard, (PF.)

**Sleep.**—Disposition to sleep, (CH.).—Slumber for five and a half hours, (CH.).—Sweet, quiet sleep, (B.).—Sopor, (B.).—Restless night, (CH.).—Restless sleep, which is frequently disturbed with *frightful dreams*, (CH., M.).—Dreams about a multitude of things, (CH.).—Anxious dreams, (O.).—Headache after waking, margins around the eyes, particularly the right eye, slimy mouth and general feeling of weariness and exhaustion, (CH.).

**Fever.**—Sweat with full pulse, (CH.).—Profuse sweat with retention of urine, (CH.).—Cold sweat over the whole body, (H.).—Small, irregular pulse, (H.).—The pulse is slow and small, and sometimes accelerated, (CH.).—Pulse small, intermitting, (CH.).—Pulse slow, large, intermitting, (CH.).—Imperceptible pulse, (CH.).—Fever, with intermittent, small, and contracted pulse, (CH.).

**Skin.**—Warm skin.—Itching of the skin, (B.), and cutaneous eruptions, (M.). Itching of the arms, head and particularly of the face, (CH.).—Itching, particularly of the face, neck, loins and genitals, (SCH.).—Conical blotches, which are either red, or of the usual colour of the skin, and can be much more easily felt than seen, (SCH.).

**General Symptoms.**—Convulsive twitchings, (CH.).—Convulsions and convulsive motions, the head being drawn backwards, (M.).—Feeling of electric action, suddenly perceived in the various parts of the trunk and limbs, (SCH.).—Electric motions in various parts of the body, inducing startings, and rousing the patient from sleep, (M.).—Violent spasmodic concussions, (CH.).—Subsultus tendinum, (O.).—Restlessness and sleeplessness, (CH.).—Diminished sensibility, (B.).—The upper parts of the body are covered with viscid sweat, the lower limbs are cold, (CH.).—The body is blue and warm, (CH.).—Troublesome trembling, (SCH.).—Illusion of the senses, (SCH.).—Muscular debility, (B.).—Excessive exhaustion, (H.).—Death by sanguineous apoplexy, (CH.).

### C. MORPHIUM MURIATICUM.

See HUFELAND'S Journal, 1840, Nov., p. 77, communication by William Gregory.—TROUSSEAU'S Mat. Med.

#### SYMPTOMS.

Violent, long-lasting excitement, as if intoxicated, (G.).—Unpleasant languor, with loathing and vomiting, after several hours, and after the other symptoms had disappeared, (G.).—Somnolence.—Vertigo.—Headache.—Warmth in the head and face, (G.).—Rushing of the blood in the head, afterwards in the whole body, (G.).—Accelerated pulse, (G.).—Itching of the skin, (T.).—Eruptions of various kinds, (T.).—Thirst, (T.).—Loathing, (T.).—Vomiting, (T.).—Constipation, (T.).

### D. MORPHIUM SULPHURICUM.

FORGATE in Americ. Journ. of Med. Science, and in FRORIER'S Notices, 1842, No. 447,

#### SYMPTOMS.

Languor, (F.).—Apathy, (F.).—Rheumatic and arthritic complaints (from

the external application).—Prickling sensation in the skin, (F.).—Violent loathing with effort to vomit, (F.).—Sensation of thickening and numbness of the posterior cervical muscles, gradually extending to the flexor muscles of the extremities, (T.).—Full, slow pulse, (F.).

## E. CODEIN.

See GREGORY in Dublin Journ. of Med. and Chem., 1834, May.—KUNKEL.

## SYMPTOMS.

Disagreeable lowness of spirits with nausea, followed by a disposition to sleep, (G.).—*Excitement, as after taking spirituous drinks*, not disagreeable, and accompanied by violent itching, which commences at the head and thence spreads over the whole body, (G.).—*Itching over the whole body*.—*Convulsions of the limbs* and of the cervical muscles, (K.).—*Accelerated pulse*, (H.).—*Heat of the head and face*, (G.).—Loathing and vomiting, (G.).

## F. NARCOTIN.

See WILMER'S Medicines and Poisons.—BARBIER'S Mat. Med.

## SYMPTOMS.

Slight disposition to sleep, (N.).—Sleep, followed by general stupefaction and headache.—Sleep, followed by violent headache, languor, discolouration of the skin and lips, coldness of the whole body, sopor, vertigo, illusion of the senses, heaviness of the head, and contraction of the pupils, (V.).—Dulness of the head, (W.).—Slight pain in the forehead, (W.).—Irregularity of the pulse, (W.).

## G. NARCOTINUM ACETICUM.

## SYMPTOMS.

Extreme excitement and violent headache, (*Magendie*).—Convulsions, (N.). Intermittent fever with variable type, (*Roats*).—The pulse increases from 86 to 95, (CH.).

## H. NARCOTINUM MURIATICUM.

Sudden starting on hearing the least noise.—Vertigo.—Glistening eyes.—Obscuration of sight.—Excitation of the sexual organs, in the case of two females.—Frequent erections, (Bailly, in *Revue Médicale*, 1825).

## 184. OXALIC ACID.

AC. OX.—See TRANSACTIONS OF THE AMER. INST. OF HOM., I.

ANTIDOTES.—(When taken in large doses.) As the vomiting in such cases is speedy and continual, emetics are unnecessary, and will often fail of their

effect; besides during the time lost before their operation, the acid would in general have acted long enough to prove fatal. Vomiting may be promoted by tickling the throat. Mr. Thompson found, that large quantities of chalk, given after the dangerous symptoms had begun, speedily removed them, and restored the animals to health. The results of his experiments have been applied to poisoning in man, and in one of the cases of recovery the antidote was used with advantage. Its effect is evidently owing to the insolubility of the oxalate of lime. Magnesia has also been advantageously given. The reporter observes that the first dose was followed by instantaneous relief from the burning pain in the stomach. According to Dr. Christison it is the best of all chemical antidotes, and preferable to carbonate of lime, which occasions considerable inconvenience on account of the sudden extrication of a large quantity of carbonic acid gas. Yet chalk will be oftener employed, since it is more frequently at hand, and there is no room for delay in the selection of remedies. In the two cases of recovery recorded, small doses of opium were administered after the use of chalk and magnesia, and the vomiting soon became less violent. One of them took brandy with advantage, and the other experienced much relief from friction and hot fomentations. Drs. Christison and Coindet also recommend ammonia and ether, as worthy of trial. The stomach-pump may be used, but on account of the rapidity with which this poison acts, it is not advisable to lose time by its application, until after the antidote has been administered.

#### GENERAL VIEW OF THE ACTION OF OXALIC ACID ON ANIMALS.

In giving a general view of the action of Oxalic acid Drs. Christison and Coindet assert, that the symptoms differ according to the quantity given, and to the degree in which it has been diluted. They likewise differ somewhat according to the tissue to which it has been applied—and further, they vary in different species of animals. They are seen most characteristically when the acid has been so given as not to prove fatal for an hour or more.

If, with this view, a small quantity be injected into the stomach, intestines or peritoneum of a dog, he is soon seized with violent efforts to vomit. But the *first unequivocal sign* of its action is generally a *slight permanent stiffness of the hind legs*, drooping of the head, weakness, and *increased frequency of the pulse*, and a very peculiar, dull, sorrowful look. About the same time there appears a slight sudden check in inspiration, from the respiratory muscles contracting before the chest is fully expanded. Gradually several of these come together, so as to constitute paroxysms of short, hurried breathing, with intervals of ease. Meanwhile *the stiffness of the hind legs increases*; they become likewise *insensible*, and often the spasm gives place to paralysis; he jerks the head occasionally backwards, *walks with a peculiar, stiff gait*, and assumes very odd postures, from inability to regulate the motions of the limbs. As the poisoning advances, the motions of the chest during the paroxysms become more and more confined by spasm of the muscles; and at last there is a period towards the close of each paroxysm, when the spasm is so great as completely to suspend the respiration. This is commonly accompanied with more or less extension of the head, tail and extremities, sometimes amounting to *violent opisthotonos*. In the intervals, the breathing continues hurried, and the heart beats very feebly and rapidly. In one case only we observed it prodigiously strong, so that it might be heard a few feet from the animal. The insensibility hitherto limited to the hind legs, now extends to the trunk and fore legs, and lastly the head. As the insensibility increases, the breathing diminishes in frequency, the spasmodic paroxysms become more and more obscure and then cease altogether. For some

time, however, they may be slightly renewed, by striking the back and limbs; but at last the animal falls into a state of deep pure coma, with complete relaxation of the whole body. The heart now can scarcely be felt; the breathing is slow, regular and short, and becomes gradually more obscure, till finally life is extinguished without a struggle.

Several striking variations are produced by differences in the dose. Thus, if it be augmented, the fits of spasm come on early and with great violence, the intervals are marked by remissions only, and the animal expires in a paroxysm, before the stage of insensibility begins. The action then resembles considerably that of the vegetable alkalies, brucia and strychnia, but differs from it in being also exerted, as we shall soon see, upon the heart. Death may be produced in this manner, in three, five or ten minutes.

If, on the other hand, the dose be much diminished, there may be stiffness of the hind legs, much dulness, drooping of the whole body, and a sort of somnolency, without insensibility, or even without spasmodic paroxysms, and then the animal will commonly recover. In such cases, notwithstanding the local irritating power of the acid, inflammation is not apt to ensue. The diluted state is in part the cause of this.

Similar modifications arise *from the degree to which the acid is diluted; dilution having nearly the same effect as increase of quantity.*<sup>†</sup>

The symptoms likewise vary somewhat, according to the tissue to which it is applied. Thus no vomiting precedes the spasmodic symptoms, if the poison has been injected into the pleura or cellular tissue. Moreover we have always found the paroxysms of spasm to be most remarkable, when it was applied to the serous tissues. Death ensues quickest when the acid is introduced directly into the veins.

Lastly, they vary in different species of animals. Thus cats are more rapidly killed by it than rabbits inferior in size, and frequently the spasmodic paroxysms are not distinct. In rabbits the *opisthotonos* is always remarkably violent. When a drachm in twelve parts of water is introduced into the stomach, the trunk and extremities during the paroxysms are extended with such suddenness and force, that the whole body is often raised nearly two feet into the air.

The order of the symptoms and appearances after death, seems to indicate, that the *primary action of the poison is on the spinal marrow and brain, and the heart and lungs are affected secondarily, through the injury done to the nervous system.*

Thus the first symptom observed is spasmodic contraction, or sometimes paralysis of the hind legs; next, the trunk is similarly affected; as is shown by the spasm of the muscles of respiration; and then the animal becomes insensible, which marks the commencement of an affection of the brain. The functions of the heart and lungs begin to suffer as soon as the insensibility begins, the pulsations of the heart becoming feeble and hurried, and the impeded respiration bringing on symptoms of incomplete asphyxia.

These two functions are variously affected in different circumstances. When the dose has been small, the heart suffers less; the signs of an injury of the brain are fully developed, and end in pure coma,—in consequence of which the animal dies slowly, asphyxiated. This is shown not only by the symptoms, but likewise by the heart contracting after death, and by the arterial system being filled with black blood. But when the dose has been greater, the heart's action

<sup>†</sup> This remarkable observation is literally transcribed from Christison's and Coindet's interesting Memoir.

is destroyed at once through a sudden impression conveyed from the origin of the nerves, before the symptoms either of coma or of asphyxia can be developed; for then the heart does not contract after death, and the blood in its aortal cavities is florid. It is a curious confirmation of this secondary action on the heart, that precisely the same appearances are found when the nervous system has been powerfully irritated, not through absorption, but by sympathy with extensive injury of the stomach. In that case, too, the heart loses its contractility as soon as the animal expires, and its aortal cavities contain florid blood.—(*Christison and Coindet.*)

The experiments of Rave and Klosterman, as well as those of Pommer, completely confirm the above observations of Drs. Christison and Coindet. The experiments of Pommer, who used a still smaller quantity of the poison in his injections than Drs. Christison and Coindet, fully establish the fact, that in proportion to the diminution of the quantity and its dilution, if injected into a vein, the more rapidly death ensues. It is true, we have no data of the weight of the animals which he used in his experiments. The injection of the poison into the jugular, instead of the femoral vein, as was done by Christison and Coindet, might also hasten death. But in whatever light we may view the experiments, there is no reason to doubt the truth of this proposition.

It is unnecessary for me to dwell here on the strong confirmation which the doctrines of the Homœopathic school may draw from the facts here proclaimed. But let those, who are in the habit of smiling at these doctrines, carefully examine and sift them. They will at least not be able to accuse Drs. Christison and Pommer of partiality.

#### THERAPEUTIC OBSERVATIONS.

Only few decided observations may be ventured upon the curative powers of Oxalic acid. Most of the provers have taken it but once, and on the female organism it has not been tried at all, if I except one observation. Further experiments will be necessary to enlighten us about the whole range of its action on the healthy human body.

The observation of Drs. Christison and Coindet, that Oxalic acid acts primarily on the brain, and secondarily on the heart and lungs, seems also to be corroborated by the experiments upon the healthy human economy.

All provers seem to have felt its action first in the head, and afterwards in the heart and lungs. It has a most decided action on the vertex and forehead, and seems to produce in its secondary effect great exhilaration of spirits, with other peculiar effects upon the mind.

Its action on the abdomen in the region of the navel with colic and difficult emission of flatulency, is very decided. I have cured a chronic inflammation of the abdomen, in the region of the navel, in the case of a child, æt. 5, with a few small doses of Oxalic acid, where several other remedies had proved ineffectual.

*Jaeggy* speaks highly of it as an antiphlogistic, in small fractional doses in most inflammations of the abdominal viscera, hepatitis and psoriasis excepted.

Its effect on the urinary organs and testicles, is also prominent, although the experiments are too few in number to admit of the establishment of more direct indications for its choice in any particular case.

I have prescribed it with benefit in a case of chronic soreness and heaviness in the testicles, accompanied with a bruised sensation in the os sacrum, and general weakness of the genitals. There were also many symptoms indicating *tabes dorsalis*.

It will probably prove serviceable in laryngitis, diseases of the chest and heart,

rheumatic affections of the joints, and also lameness of the lower extremities. A palpitation of the heart, occurring at night after lying down in bed, and depending on a rheumatic affection of the heart, was entirely cured by Oxalic acid.

The assertion of *Valli*, that in oxalic acid we should probably find a remedy that would prolong life, seems to be merely theoretical. His theory is, that oxalic acid would have the effect of retaining the animal lime in a fluid form, and in a condition to be carried off, thereby preventing its becoming compact, and the brittleness of the solids, depending thereon, as well as the obstruction of the vessels. This theory, based entirely upon chemical laws, seems to lose complete sight of its powerful dynamical effect.

I have repeatedly prescribed the *2d* and *3d* triturations, to persons of different ages, with a view to the above effect, but without any visible operation. Whether by giving larger doses a different result might have been obtained, I am not prepared to say.

The following are the pathogenetic effects of the *1st* and *2d* triturations of oxalic acid. Those of Dr. Christison, are taken from cases of poisoning.

#### SYMPTOMS.

**Mind and Disposition.**—In the morning, power of meditation very difficult and slow; is hardly able to answer questions proposed to him. Sensation of fulness in the face, and excitement, *with disinclination to conversation*. Seems in its primary action to diminish the power of concentrating his ideas, and afterwards to increase it.—Greater presence of mind, the relations of the world seem to be clearer to him. The pains from oxalic acid, as soon as *he thinks about them*, return, particularly the hiccough and the pain in the knee, etc. Philoprogenitiveness, (?) greater love of his children, in one in whom this feeling was always predominating; a decidedly expressed, and clearly distinguishable symptom, it being not traceable to any other cause. He feels more composed than usual, *and very much exhilarated*. Great cheerfulness of the mind, quicker in thought and action. The whole forenoon unusual vivacity, *and power of concentration*, which is still more decided in the afternoon. Great increase of animation through the day, with playfulness and mirthfulness, which has not of late years been natural to him. Nervous and vascular excitement, as from alcohol, constituting a feeling of hilarity, and the pulse one-third more frequent than usual, and tense.

**Head.**—Giddiness the whole day. On lying down vertigo, like a swimming, towards the left side. Emptiness in the head, sensation of faintness, as if all the blood had left the brain, with anxiety. Sensation in the upper part of the body, and particularly the head, as if the blood were coursing from below upwards, and from within outwards. Pain pressing inwardly between the vertex and occiput, at a spot not larger than a dollar, on the middle line. Pain along the base of the occipital bone, returning several times, during the first two days. In the morning after rest slight aching in the occiput, and erections. Slight compression in the head, with a sensation as from a screw behind each ear. Soon after taking it, *pain on the vertex*. Heaviness in the forehead and vertex. Continual dull pain in the forehead and vertex. Flushes of heat and perspiration in the morning, with sharp pains in the forehead and vertex. Sharp pains in the forehead and vertex, with a feeling of lightness; the pain is most acute over the left eye, and in the left temple. Dull pains, with occasional sharp pains in the forehead. Dull headache. Fulness in the forehead above the eyes. *Removes immediately a dulness in the forehead*, to which he was frequently subject in the morning. Painful pressure in the right temple, (confined to a small spot), the pain is also jerking, sliding; soon after, the same sensation in the hollow of the

left knee. Pain in the left temple, extending as far as the lower jaw. Jerking in the left temple.

**Eyes.**—Pressure in the upper part of the eyes during walking. Pain in both orbits, but worse in the left one. Linear objects appear larger and more distant than they really are.

**Ears.**—In the afternoon occasionally a pain in the depth of the ear, as if in the Eustachian tube, near the throat; worse on the right side. A kind of slight blowing noise in the left ear.

**Nose.**—Watery running from the nose, with sneezing. Pain in the nose. Sneezing with chilliness.

**Face, Jaws.**—Sensation of fulness in the face. An internal sensation of heat, particularly in the face. Some heat at first in the face, and afterwards in the left leg. The face is redder than usual. Drawing pain with rigidity near the angle of the lower jaw, first in the left, then in the right side, but longer in the left.

**Teeth.**—Dull aching pains of the molar teeth of both upper jaws, worse in the right jaw. (Lasted nearly all day, but passed away towards evening.) Dull pain in the first molar tooth of the right upper jaw, which is very distressing. Bleeding of the gums on rubbing them.

**Mouth.**—Inflammation of the tongue and mouth, if the acid has had time to develop its operation, (*Christison*). The tongue was red, swollen, tense and tender, the day after the acid was swallowed, (*Christison*). Tongue dry, sore and excoriated, worse towards the point, continued all day and evening. The tongue felt rather more cool than hot. In rinsing the mouth, a *sour taste* in it.

**Pharynx.**—Soreness of the fauces on swallowing, for two hours in the morning. °The chronic sore throat, to which he is subject, feels much better. Expectoration of thick yellowish mucus from the throat. Augments in the first hour the secretion of mucus from the throat.

**Stomach, Appetite.**—*Eruptions of tasteless wind after every meal.* Eructations of wind, tasting of the food he has eaten. *Eructations and discharge of flatulence by the anus.* Hiccough, which continues for some time.—Vomiting, (*Christison*, only from very large doses). Slight sickness of the stomach. Qualmishness of the stomach with sickness. A sensation of grasping in the stomach, very transient.—Slight gnawing, burning in the stomach and eructations. *Burning pain in the stomach*, and generally also in the throat, (*Christison*; immediately, in every case†).—*Pressure* in the stomach. He wakes at night with a most *violent pressive pain*, like a heavy weight in the pit of the stomach; it comes and goes at intervals of fifteen minutes, but diminishes in force at each renewal; it lasts altogether about two hours; discharge of flatulency relieves the pain. Severe pain in the stomach, (*Christison*, from seven drachms). Excruciating pain in the stomach. The slightest touch of the stomach caused the most violent pains. Excessive sensibility of the stomach, with disposition to costiveness, (in a patient who recovered, but who remained for a long time subject to those symptoms). °His natural weakness of the stomach is much diminished. In the evening after tea, pyrosis, with much

† Oxalic acid is one of the poisons, of whose operation distinct evidence may sometimes (though certainly not always) be found in the symptoms. If a person immediately after swallowing a solution of a crystalline salt, which tasted purely and strongly acid, is attacked with burning in the throat, then with burning in the stomach, vomiting, particularly of bloody matter, imperceptible pulse and excessive languor, and dies in half an hour, or still more in twenty, fifteen, or ten minutes, I do not know any fallacy which can interfere with the conclusion, that oxalic acid was the cause of death. No parallel disease begins so abruptly and terminates so soon; and no other crystalline poison has the same effect.—*Christison on Poisons.*

emission of flatulency, and pressing downwards. *Every evening pyrosis.*—Great increase of appetite.—Loss of appetite.—No thirst, and rather a repugnance to water. Unusual thirst at 3 o'clock, a. m.—Violent thirst.—A sensation in the fauces, as if from acidity in the stomach.

**Abdomen.**—Slight colic pain in and around the umbilicus, just before the afternoon evacuation. Pain like a cramp a little to the left of the umbilicus, and several minutes after, colic pain in the right iliac region; eructations of tasteless winds several times. Distressed feeling around the navel, and through the whole abdomen, with a sensation of great weakness in the latter. Dull aching pain in the abdomen, worse round the umbilicus. Colic-like pains in and around the navel, every day. Dull aching pain in the right side of the abdomen, the whole afternoon, at a small spot. *Pain round the navel like colic*, repeatedly, but always after the symptoms in the head. Flatulent colic, as if he had eaten unripe fruit, on waking at night, below the navel, which is increased by movement after getting up; the pain diminishes during rest and returns periodically; in the morning after breakfast, on walking about, the same pain returns, gets better about 9 o'clock, and disappears entirely at 12 o'clock. Sensation of soreness on touching, all around the navel. Sensation of soreness in the abdomen. Pain in the abdomen, (*Christison*, first felt six hours after swallowing half an ounce of oxalic acid, diluted in water). Sharp and constant pain in the left iliac region. For half an hour after retiring, a continued pain in the left hypochondrium. A sticking pain in the left hypochondrium. Pain between hypochondrium and navel, on the left side, like a development of flatulency. On sitting down after a walk, violent effort to discharge flatulency, (as from a small spot on the left iliac region,) sensation as if the part would burst. Distressed feeling and great weakness in the whole abdomen, with flatulent colic. Great flatulency the whole day, with expulsion of wind downwards; swelling of the abdomen with dull colic-like pains *at intervals*, in and around the umbilicus, but worse in the right iliac region, with itching at the anus, and crawling sensation as if from worms, which was relieved by rubbing the parts for several minutes, and returned several times during the night. Colic pain around the umbilicus, and in the right iliac region, coming on by paroxysms. Pain in the region of the navel, with painful pressing down towards the anus and flatulency. Pain in the region of the navel, with emission of flatulency in the night. Difficult discharge of flatulency. The whole evening rumbling in the bowels with pressing downwards.

**Stool.**—*Pain in the descending colon*, followed by a free evacuation of mushy stool in the evening, one hour after taking it. 6 o'clock, a. m., was suddenly seized with a distressing feeling in the whole abdomen, followed in several minutes by twisting in and around the umbilicus, with a discharge in a few minutes of a small quantity of hard faeces of a dark brown colour; in half an hour again violent pain and bearing down, followed by a loose evacuation, of a muddy-brown colour, accompanied by colic pains in the navel; below the navel he felt a bearing down, and griping pains in the anus; the latter were so severe, as to produce severe nervous pains through the head, with heat in this organ; after retiring to bed the same pains returned again in five minutes, followed by a copious evacuation of consistent, dark, muddy-brown faeces; on going to bed the pains invariably returned, whilst sitting or reclining; is better during motion, (had to take *Merc. sol. 2d*, to be relieved of the pain). Violent symptoms of irritation in the alimentary canal, (*Christison*, from two drachms). Severe pain in the bowels, and frequent inclination to stool, (*Christison*, in a patient, who lived thirteen hours after swallowing the poison). In the anus a dull slow stitch, often returning. In the evening a slight pinching from flatulency near

the anus. On rising, a violent tenesmus in the upper part of the rectum, a prolonged, very painful urging from above downwards. On sitting down to stool in the morning, pressing cutting pain from the right side of the rectum above, towards the anus. Evacuation pappy, light-brown. In the afternoon again, passage from the bowels, pappy, thick and short; during the passage violent stitches in the fleshy part of the left thumb, like little quick cuts of a knife. After the passage, a heavy rumbling in the right side of the abdomen, (cæcum,) and noise from flatulency. Twice passage of the bowels during the day. Constant involuntary discharge of fluid fæces, occasionally mixed with blood, (*Christison*). Constipation, (*Christison*, in two persons who recovered). During yawning, a pressing stitch above the right hip, which takes away his breath. During hiccough a sticking pressure above the right hip. In the evening slight pain in the region of the right kidney.

**Urine, Genitals.**—Disposition to pass water every two hours, and in large quantities. Inclination to pass water every hour, and in large quantities each time; slight burning in passing the urine, which is clear, and of a straw colour. Profuse flow of light-coloured urine frequently during the evening. Copious discharge of urine, at 5 o'clock in the morning. Urging to pass water, with copious discharge; the water is of a lighter colour than usual. Desire to urinate; the urine is of a lighter colour. Discharges less urine than usual.—*Great increase of sexual desire* during night and morning, with voluptuous dreams every night, for three nights. After walking out, pain in the testicles and spermatic chord, more in the latter, and worse in the right side. On lying down, erections, without any cause, and afterwards the pains in the testicles, mentioned above. Sensation of contusion in both testicles. During walking in the evening, a pretty severe pain and heaviness in both testicles, shooting along the spermatic chords; worse on the right side. Jerking in the testicles and spermatic chord.

**Larynx and Chest.**—On walking in the open air tickling in the larynx, with a sensation of sticking, he coughs several times, the larynx feels swelled. A natural secretion of mucus from the throat is diminished. Expectoration of hard mucus in lumps, and watery running from the nose, with sneezing. Expectoration of thick yellow mucus from the throat. Hawking up of thick yellowish-white phlegm with a black lump in the centre, of the size of a pea. The chronic sore throat, to which he is subject, is much better. During speaking, a sensation of mucus in the larynx, hoarseness; he has to expectorate more than usual. Augments, the first hour, the secretion of mucus from the throat. Slight cough, from tickling in the larynx and trachea; also sensation of soreness in the larynx. Difficulty of breathing, with constrictive pain in the larynx, and wheezing; oppression of the whole chest towards the right side. Sharp shooting pain in the left lung and heart, extending down to the epigastrium, lasting for some seconds. In the afternoon, stitches several times in the left lung. Stitches in the left breast, more during walking. Sharp, lancinating pain in the left lung, coming on so suddenly, that it deprived him of breath for several seconds, and then gradually subsided. In the forenoon, during repose, and also afterwards, during walking, a pain in the heart, extending from behind and below towards the anterior part; the pain in the heart is very violent, like electric flashes coming from within. Immediately after lying down in bed at night, palpitation of the heart, for half an hour, three nights consecutively.

**Loins and Back.**—After rising from a recumbent position, a pain in the region of the loins towards the right, between the last rib and hip. Weakness in the loins and hips, extending to the lower extremities. Pain, shooting down from the loins to the limbs, the patient seeking constant relief in a change

of posture, (*Christison*, in a patient, who died in thirteen hours). The pain in the sacrum, habitual to him in the morning, is gone; instead of it a bruised sensation in the back from the loins to the shoulders. *Acute pain in the back*, gradually extending down to the thighs, occasioning ere long great torture, and continuing almost to the moment of death, (*Christison*, the first symptom in a patient who had swallowed half an ounce of Ox. ac.). *Numbness and weakness in the back and limbs*, (*Christison*). Sense of numbness and tingling or pricking in the back and thighs, (*Christison*, from two scruples, in 24 hours). Sensation of numbness in the sacrum. Creeping of cold, particularly from the lower part of the spine upwards.

**Extremities.**—Sharp, shooting pain in the right shoulder-joint, coming on suddenly, and lasting about fifteen minutes. After lying down in bed, a twitch in the left deltoid muscle, and in a few minutes one in the right. During the forenoon increased sprain-like pain in the right wrist, which he has had for some time. The pain in the right wrist worse; it jars and cracks. *The right wrist painful, as if it were strained or dislocated*; on taking hold of anything, he has to let it fall again. During writing, a violent jerking pain in the ulnar region, near the right metacarpus. Sensation of slight numbness in the left arm. Sensation as if the hands were dead, (*Christison*). Tensive pain in the fleshy part of the left thumb, with heat, numbness, and a sensation of swelling, lasting about half an hour. Lividity of the nails and fingers. Sticking pain in the right hip-joint. Aching pain in the right ankle-joint, with a feeling of swelling of this part and the whole right foot. Sharp, shooting pain on the instep of the right foot, lasting for half an hour, at intervals. The same pain the next day, lasting five minutes. Sharp pain in the right ankle-joint, several days after the first pain. *A very violent contracting pain in the external tendon of the left knee*. Jerking, sliding pain in the hollow of the left knee. Uneasiness in limbs and feet, which he is hardly able to keep quiet for a few minutes at a time. Slight lameness and stiffness in the lower extremities. Lividity, coldness, and almost complete loss of the power of motion in the legs, which symptoms were not entirely removed for fifteen days, (*Christison*, from two drachms).

**Sleep.**—Slept very little through the night, and when he did, had constant unpleasant dreams with starting and then waking with fright. He raised himself in bed in alarm, looking round the room, but on recollecting where he was, he lay down again, repeating the same action in an hour. Being awakened by a noise in the night, he could not go to sleep again for two hours. Continual and vivid dreams, always of a frightful nature; he wakes often and dreams constantly. Sleep very restless, but without dreams. Has had dreams which he cannot remember. Very profound and long sleep; on rising from bed quite stupid, he lies down again and sleeps one hour longer. Very violent yawning. Great sleepiness in the morning. After dinner, sleepiness, and profound sleep while in a sitting position. He is more inclined to sleep at night than usual. Dreams of rapidly-sliding walking, he glides on his way, every step without difficulty; dreams also that water is poured upon him. Dreams of an agreeable and lascivious nature, and of a character of reality.

**Fever.**—Creeping of cold, particularly from the lower part of the spine upwards. In the evening, after tea, sneezing, with chilliness. *An internal sensation of heat, particularly in the face*, for several hours during the forenoon. Some heat at first in the face, and afterwards in the left leg, as from external warmth. General sensation of heat. Exhausting fever with dyspepsia and singultus, (*Christison*, in a patient, who seemed at first to be doing well, but was carried off afterwards with the above fever in twenty-three days). *Flushes*

of heat and perspiration all over the body. Clammy perspiration, (*Christison*). His hands, feet and face were cold and covered with a cold perspiration. He perspires less than usual. Pulse more frequent and harder than usual. Pulse increased in frequency, from 100 to 108. The pulse is more frequent than usual, and tense. The pulse in every case became imperceptible, and even in those who recovered, it could not be felt for several hours; this state of the pulse was accompanied with deadly coldness, clammy sweats, sometimes lividity of the nails and fingers, (*Christison*; contrary to this general fact, observes Dr. C., he once remarked in a dog the pulsation of the heart so strong, as to be audible at the distance of several yards). Extreme feebleness of the pulse, (*Christison*, from two scruples, after twenty-four hours). Pulse small, tremulous, intermittent. General excitement in the evening.

**Skin.**—During shaving, the skin is more sensitive. The face is redder than usual. Red points on the glans penis, without itching or any other sensation. In the evening after walking, during sitting, a violent itching on a small spot of the neck, the right side of the hairy scalp, and on the left side of the trunk, etc. Itching on the neck. Smarting soreness around the neck, as if chafed by the collar. On a spot on the right index-finger, where a cut from a penknife had healed four days previously, a very painful pustule appears. An eruption or mottled appearance of the skin, in circular patches, not unlike the roundish red marks on the arms of stout, healthy children, but of a deeper tint, (*Christison*).

**General Symptoms.**—Extreme lassitude of the body. Pain, but chiefly great lassitude and weakness of the limbs, and next morning numbness and weakness there as well as in the back, at first so severe that she could hardly walk up stairs; she recovered entirely in a few days, (*Christison*, in the case of a girl who had swallowed by mistake about two drachms). A feeling, as after a debauch the previous night; dull headache, with a graving, tensive pain and soreness in the eyes, and superciliary regions, lassitude, disinclination to occupation, reading, etc., and inclination to stretch, with occasional yawning; relief by walking in the cool open air. Tremor of the limbs.—A very singular case in his motions.—A peculiar general numbness, approaching to palsy, (*Christison*). Loss of consciousness for eight hours, (*Christison*, from two drachms). Nervous symptoms appear mostly in these patients, who have taken the diluted acid, (*Christison*). Convulsions either at the time of death or before it, (*Christison*). Convulsions, with two or three deep inspirations before death, (*Christison*). °Some, who are generally much affected by cold weather, appear better able to bear it.

**Characteristic Peculiarities.**—All the pains from oxalic acid, seem to occupy only a small spot, half an inch to an inch in length, viz: in the costal tube, right wrist, right hypochondrium, region of navel, knee, etc. They seem to be excited and aggravated by movement, as the pains in the bowels, testicles, kidney, back, etc. From time to time he has these peculiar jerking pains, like short stitches, confined to a small spot, and lasting only a few seconds. Oxalic acid has a decided action on the joints, ankle, knees, hips, wrist, shoulders. The symptoms from oxalic acid occasionally intermit for some hours or a day, and then return in a diminished degree.

#### PATHOLOGICAL ANATOMY.

1. *In Animals.*—When an animal is examined immediately after death, no appearance of note is found in the brain, peritoneal sac or intestine. Unless death has been very rapid, the lungs are almost always studded on their surface with bright scarlet spots, and sometimes we have seen even the whole parenchyma of a uniform and beautiful scarlet colour. At the same time there never

was any effusion, either in the air-cells, or into their cellular tissue. In cases of poisoning that prove fatal before the stage of insensibility comes on, the heart, two or three minutes after death, is found neither contracting nor contractile; its pulmonary cavities are distended, and the blood is dark in those cavities and florid in the aorta. This fact is conformable with what we have observed in the same animals, first, at the time of death, viz: the contractions of the heart are almost imperceptible, even before the breathing ceases, and never continue after it. In the slowest cases, in which coma prevails for some time before death, the heart, though very feeble in its contractions towards the close, beats a little after the breathing has ceased, and then the blood is found equally dark in both vascular systems.

There is likewise an intermediate variety of poisoning wherein the stage of insensibility is short, and the heart scarcely survives the stoppage of respiration; and in such cases, the blood in the aortal cavities is darker than natural, but still considerably more florid than that of the veins and pulmonary cavities, (*Christison and Coindet*).

*Rave and Klosterman*, after washing off the internal coat of the stomach, saw many dark brown spots, extending from the cardiac orifice, where they were most numerous, along the great curvature to within half an inch of the pyloric orifice. The spots formed longitudinal streaks which always occupied the back part of the folds of the internal tunica. The interstices between these folds were either unchanged, or only coloured light yellow. The corroded cuticle was easily detached. The spots themselves, carefully scraped off, showed many small blood vessels. One and a half inch round the pyloric orifice, the internal cuticle was coloured yellow; the nearer the pylorus, the more the colouring decreased. In the duodenum and other intestines no changes were visible.

The bladder was distended with urine, and the kidneys, on making an incision, discharged large quantities of urine. In other cases the internal coat of the small intestines was reddened. In other respects the appearances were the same as those observed by Drs. *Christison* and *Coindet*.

2. *In Mm.*—The examinations of dead bodies are both very deficient, and exceedingly discordant. The authors, generally, were neither sufficiently precise in their phraseology, nor minute in their descriptions. A reddish froth sometimes issues from the mouth and nose. In one case there was a good deal of general emphysema, ten hours after death.

The brain has been rarely examined. In one case the cerebral organs were turgid; in another case there was some effusion under the arachnoid, appearances probably independent of disease.

In the three best-described cases, the appearance of throat and stomach, etc., was the following.

1st. The mucous coat of the throat and gullet looked as if it had been scalded, and that of the gullet could be easily scraped off. The stomach contained a pint of thick fluid. This is usually dark, like coffee grounds, as it contains a good deal of blood. The inner coat of the stomach was pulpy, in many parts black, in others red. The inner membrane of the intestines was similarly, but less violently affected. The outer coat of both stomach and intestines was inflamed. The lining membrane of the windpipe was also very red, (*Hebb*).

2d. The inside of the gullet was pale, as if boiled, strongly corrugated, and brittle, and covering a ramification of vessels filled with consolidated blood. The stomach presented externally numerous vessels in the same state, and its villous coat was pale, soft, and brittle, but here and there injected with vessels. The duodenum, and part of the jejunum, were red; the other intestines natural; the liver, spleen and kidneys congested. The stomach contained a brownish jelly,

in which gelatine was detected, as well as oxalic acid. The blood was fluid everywhere, except in the vessels of the gullet and stomach.

3d. The whole villous coat of the stomach was either softened or removed, as well as the inner membrane of the gullet, so that the muscular coat was exposed; and this coat presented a dark gangrenous-like appearance, being much thickened and highly injected.

These are the most common signs of its action, but cases have occurred where no such signs of violent irritation have been observed. In the case of a girl, who died about thirty minutes after swallowing an ounce of the acid, no morbid appearance whatsoever was to be seen, in any part of the alimentary canal. In the case of another girl, where death took place in twenty minutes, there was no appearance but contraction of the rugæ of the gullet and stomach, one spot of extravasation on the latter, and doubtful softening of the villous coat, (Christison on Poisons).

Dr. John Mollan, in the case of poisoning related by him in the Dublin Hospital Reports, says, "one circumstance deserves notice from its infrequency, namely, the discovery of air in the right cavities of the heart. I am not aware that anything similar has been observed in cases of sudden death, produced by any deleterious substance, and I am at a loss to account for its production."

In one case communicated in October, 1844, by Dr. H. Letheby, in the London Lancet, the tissue of the stomach was so softened and disorganized, that it could scarcely be handled without tearing. At the cardiac end it was reduced to a soft, pulpy, gelatinous substance, and had numerous perforations in consequence. The contents which had been saved in a glass amounted to about six ounces in quantity; they had a very dark colour resembling porter. On being tested they were found to contain about three drachms of oxalic acid.

## 185. PÆONIA.

PÆON.—Pcony.—See PRACT. COMMUN. FOR HOM. PHYS., 1827, p. 61, and HOM. GAZ., XXVIII., No. 12.

### SYMPTOMS, FROM NOACK AND TRINKS.

**Sensorium and Head.**—Vertigo, gloominess and heaviness of the head. The vertigo continues after the nausea had been relieved by a glass of water. Vertigo during every motion, with constant reeling in the head. Vertigo, particularly on walking in the room, with staggering to and fro. Reeling sensation in the head, with staggering of the limbs. Dulness, heaviness, vertigo and feeling of heat in the head.—Pressing pain in the left side of the head, after dinner. Boring pain in the right temporal region, from without inwards.—Darting tearing from the right temporal region to the interior of the head.—Gnawing headache.—Sticking with pressure in the left side of the head, above the eyebrows.—Continuous aching pains in the occiput and nape of the neck.—Rushes of blood to the head, and feeling of sweat.

**Ears.**—Intensely-painful darting through the right ear, from within outwards, in the forenoon.—Painful jerking in the cartilage of the ear. Pinching behind the ear.

**Eyes.**—Periodical itching of the right upper eyelid. Intensely-painful sticking in the right upper eyelid, toward the inner canthus, not going off by rubbing.—Burning of the eyelids and eyes. Burning, itching and feeling of dryness in the eyes. Dry, smarting eyes which it is difficult to open.

**Face.**—Burning heat in the face.

**Nose.**—Tingling in the tip of the nose. Stoppage and dryness of the nose, early in bed and in the evening.

**Jaws and Teeth.**—Violent pressure from the articulation of the jaw through the inner ear, occasioned by stretching the jaw and increased by closing the jaws tightly.

**Mouth.**—Tingling in the upper lip.

**Pharynx and Œsophagus.**—Heat in the throat. Burning sensation in the pharynx and œsophagus, from below upwards. Sensation in the throat as if something acrid and burning were creeping along in it from below upwards. Accumulation of tenacious mucus in the throat, inducing hawking, with scanty expectoration. The heat in the throat and fauces increases by hawking, in the afternoon.

**Stomach and Abdomen.**—Pressure in the pit of the stomach, as from great anxiety. Drawing creeping below the umbilicus, going off by rubbing.

**Stool.**—Papescent diarrhœa, with feeling of qualmishness in the abdomen, burning in the anus after stool, returning in six hours, afterwards internal chilliness and increased feeling of illness.—Painful ulcer at the anus, with exudation of a fetid moisture.

**Chest.**—Throbbing through the right chest, and extending posteriorly up to the nape of the neck, where the throbbing terminates in intermittent pinching.—Cutting pressure in the left side of the chest. Pressing on both sides of the sternum, while eating. Dull stitches in the chest from before backwards, as if through the heart.

**Back and Extremities.**—Pinching, at times in the back, at others in the abdominal muscles, and sticking in many parts of the back, going off by rubbing. Fine boring pain on the left scapula, going off by motion. Sharp stitches in the axillæ. Tension of the muscles on bending the arms, as from pressure. Sticking pinching in the left wrist-joint behind the thumb. Severe cramp in the wrist-joint. Crawling in the left forearm, as from something alive. Transitory creeping in the fingers and sides.—Painful weariness in the left tarsal joints, during rest. Severe cramp in the right knee-joint while sitting. Single sharp pushes on the inner side of the left knee, from within outwards. Itching of the calf, going off by rubbing. Burning itching of the toes, which are bloated and as if contracted, with pain as if a sharp knife were drawn through them, at intervals.

**Sleep.**—Restless sleep with fancies and dreams.

**Skin.**—Burning smarting on the head, chest and limbs, accompanied with itching of the skin, obliging one to rub (during a cool north-east wind).—Prickling, itching and stinging of the skin, in the open air. Prickling in the skin, first on the chest, then on the axillæ, on the shoulders, arms, and down the side of the back.—Heat and burning smarting on the chest, back and shoulders.

**General Symptoms.**—Languor, weariness during a walk, heaviness in the chest and in the limbs, in the open air. Languor and heaviness of the limbs, less after eating. Great languor and prostration in the evening.—Nausca, hissing in the head, vanishing of the senses. Fainting turn on entering the room, after returning from a short walk up-hill.

ANTIDOTES.—Camph.,? Coff.

## SYMPTOMS.

**Mind and Disposition.**—Great disposition to treat others with malice and contempt.—Loquacious vivacity. *Foolish* manners, with shallow and absurd talk about one thing and another, jumping with a good deal of self-complacency from one object to another, merely for the sake of talking.—Indisposition to mental labour.

**Sensorium.**—*Dulness* of the head. Stupid feeling in the head, going off in the open air. Sense of intoxication.—*Vertigo* after loud reading, or when sitting.

**Head.**—*Headache* when smoking. Headache *aggravated by thinking*. Headache which is worse in the evening and *attended with dulness of the whole sinciput*, and a sensation as if the skin of the forehead were contracted and *the bone scraped sore*, with heat in the eyelids, surrounded with red margins; at the same time a violent pain is experienced in the eye, as if a thread from the eye to the centre of the head were put upon the stretch.—*Heaviness of the head*, which inclines forwards.—*Pressure* in the occiput. Contractive pressure in the forehead. Pressure in the *temples*, particularly the right, where it goes off by pressing on the part. Slight pressure in the left temple. Constant pressure deep in the right frontal protuberance. Pressure in the whole head from within outwards, during a walk, accompanied with a feeling of intoxication, and preceded by a painful dulness which is aggravated by reading and looking at a thing steadily.—*Feeling of distention*, as if the head would swell up and the temples and eyes were pressed out. *Tightness*, as if the cerebral membranes and the brain were put upon the stretch, with tightness around the eyebrows, as if the skin in that region were thicker and could not be drawn into wrinkles. *Sticking*, in the middle of the head and in the temples, with subsequent pressure on the forehead on stooping. Sticking in the left side of the vertex. Sticking in the right side of the head. Sticking in the left temple.—*Gnawing*, first in the left frontal bone with sticking, afterwards in the left lower jaw.—*Stupifying throbbing* in the left frontal region. *Bubbling* in the head, at night on waking, with internal restlessness which prevents him from falling asleep again. Throbbing, undulating sensation in the head, when going up stairs.

**Scalp.**—Tension in the skin of the forehead and occiput, as if the skin were adhering fast to the skull and immovable. Drawing in the occipital muscles. Sticking with pressure in the right frontal protuberance. Sticking in the vertex. Stupifying sticking in the left frontal eminence. *Pain of the hairy scalp* when touching it. *Sore pain at a small spot of the skin on the forehead*, as after a hard shock, coming on at night.—*Itching* of the hairy scalp, with burning after scratching. Small *scabs* on the hairy scalp. Pimples on the forehead, with aching pain on touching them.—*Falling out* of the hair, with painfulness of the hair on the vertex.

**Eyes.**—*Sensation as if the eyeballs were too large, or swollen, and the orbits too narrow*, with unsteadiness of sight as if the objects were in motion. *Pressure* in the upper margin of the orbit, apparently in the bone. Pressure from above downward on the left upper lid. Tearing with pressure in the right eye-

ball. Darting through the eye, with mistiness of sight, tingling in the region of the upper lashes of the right eye. *Burning of the eyes, also with lachrymation, or smarting, or particularly in the internal canthus.* Feeling of coldness in the right eye.—Dry pimples above the left brow, with itching gnawing, which is made worse by scratching and changes to a sticking as from a splinter.—*A quantity of gum in the eyes, also particularly early in the morning, or in the canthi during the day, and then accompanied with burning, particularly when touching the parts.* Lachrymation, after rising in the morning.—*Quivering of the upper lid.*—*Dilatation of the pupils.*—Unsteadiness of sight, as after crying. The eyes swim.

**Ears.**—Sudden pain in the meatus auditorius, *as if distended by a wedge,* particularly in the right, in the evening, during a walk in the open air. *Tearing in the ears, also with dragging, or as if the ear would be torn out of the head.* Sensation as if a burning heat were rushing out of the ears.— *ringing in the left ear, also with dragging.* Hardness of hearing, as if the ears were obstructed by a thick fog.

**Nose.**—Feeling of fulness in the upper part of the nose.—Violent epistaxis.—Putrid *smell of milk and bread.*—Frequent sneezing.—*Stoppage of the nose, early after rising.*—*Alternation of dry and fluent coryza.* Discharge of red, and greenish nasal mucus, in blowing the nose.

**Face.**—Pale face. Feeling of heat in the face.—Hot *sticking in the left malar bone, painful when touched.* Tensive pain below the left eye. Cramp in the left sterno-cleido-mastoids. Scraping pressure under the malar bones. Pressure and tension in the left cheek.—*Red, itching spots of the size of a millet-seed, on the cheeks and lower jaws, with pain when rubbing and scratching them.*—The *lips are covered with eruption.* Pastule on the upper lip with red areola. Stitches in the upper lip, as if under the skin. Herpes around the mouth, with chapped, big upper lip. Vesicles on the inner surface of the lower lip.—Itching pimple on the *chin, with pain when scratching it.*

**Jaws and Teeth.**—Violent itching, gnawing and burning on the lower jaw, in the evening before going to bed, with bloody pimples of the size of a millet-seed, which had been scratched open during the night.—Drawing, particularly in *decayed teeth, worst in the forenoon, relieved by walking, and changed to a darting pain by cold things.* Beating and drawing in the teeth. Titillating pain, worse in the afternoon, worst at night, aggravated by warm and cold things. Pain as if all the teeth were perforated, with sensation as if the air were passing through them, which produces a feeling of coolness, accompanied with a sensation as if the gums were shrivelled and burnt.—Sensation in the gums as if loose. Cuttings in the gums every morning.

**Mouth.**—*Dryness of the mouth, on waking, as if parched.* Sudden feeling of dryness on the back part of the palate, with scraping and accumulation of water in the mouth, as from hunger. Frequent discharge of watery saliva. White frothy mucus in the corners of the mouth, early in the morning.—*Dry tongue.* The tongue is brown at the root, early after rising. The tongue is rough and coated white, as if covered with millet-seed. Sensation as if the tongue were too large and too broad.—Pain about the *palate as if excoriated.* Dryness and titillating burning about the palate. Pain in the curtain, small pieces of which fall off on the day following. Tight, almost painless swelling by the side of the posterior molar tooth, of the size of a pigeon egg.

**Pharynx and Œsophagus.**—*Pressure in the throat as from a ball, during and between the acts of deglutition, also when stooping, or particularly in the evening, as if the throat would burst.* Pressure in the right tonsil. *Scraping*

in the throat, also with stinging, and particularly in the evening. Seraping with burning. Stitches in the fauces.—*Phlegm* in the fauces.

**Appetite, Taste and Gastric Symptoms.**—Flat, slimy taste in the mouth. *Bitter* taste, with dryness and roughness of the tongue.—Aversion to smoking.—*Hunger*, soon after a good meal.—After a slight dinner: suffusion of warmth over the back, with sweat, followed by shuddering on the back, during which the sweat abates, with dry, burning heat and redness of the face.—Frequent empty eructations in the forenoon, with pressure rising to the chest. Gulpings. Nauseating eructations.—*Hiccough* after every meal.—Rising of tasteless water from the stomach, early in the morning.—*Nausea* with sour taste. Qualmishness in the stomach. Nausea rising from the abdomen to the chest, after breakfast, with burning resembling heartburn.

**Stomach.**—Distention of the region of the stomach as if by flatulence, with sensitiveness to the touch. Pressure in the stomach, relieved by eructations. Pinching in the stomach, relieved by eructations. Burning from the stomach to the abdomen.—Grumbling from the stomach to the throat.

**Abdomen.**—Sticking in the hypochondria.—*Painful pressure* as from something hard, at a small spot on the left side above the umbilicus.—Pinching above the umbilicus, relieved by walking. Cutting in the abdomen, with rumbling. Drawing cutting, in the evening, in bed, from the chest through the diaphragm and abdomen to the small pelvis, with superficial breathing and abatement of the pain in a recumbent posture.—Distention of the abdomen after a meal. Rumbling in the abdomen.—Cramp-like tearing in the muscles up to the pit of the stomach, worse when sitting bent than when walking. Red, curved streak above the umbilicus, with aching pain in the centre of the streak.—Cutting in the left groin when walking.

**Stool and Anus.**—Hard, difficult stool.—Frequent stools every day, also with insufficient, papeseent evacuations. Slimy diarrhoeic stools. *Fetid diarrhoea*.

**Urinary Organs.**—Frequent urging to urinate, with burning while emitting it.—Fiery-red urine with a flocculent cloud in the middle, after standing, and afterwards with reddish sediment and opalescent. The urine becomes turbid and opalescent. Acid, burning urine.—Burning during micturition. Tenesmus after micturition.—Burning in the tip of the urethra when sitting. Stitches in the fore part of the urethra. Drawing in the fore part of the urethra.

**Sexual Organs.**—Increased sexual desire, with violent erection.—The menses are three days too early.

**Larynx.**—Burning in the larynx. Roughness in the trachea, with a deep bass voice.—*Hoarseness* on waking in the morning, with dryness of the trachea as if parched. Paroxysms of hoarseness, every quarter or half-hour, so violent that he is unable to utter a loud word.—*A good deal of mucus in the larynx and trachea, obliging one to hawk all the time*, also after rising, afterwards accompanied with a green, tenacious expectoration. Constant hawking, with expectoration of tenacious, white, insipid mucus, and sensation as if a large quantity of mucus had been accumulating in the larynx. A quantity of mucus in the chest, which is never expectorated. A lump of mucus is detached from the larynx for several days, without hawking.—*Constant hacking* without expectoration. The cough commences as soon as he turns to the left side.

**Chest.**—Dull painful pressure in the right side. *Sticking* in the right side of the chest, thence shifting to the clavicle, a molar tooth, and lastly to the calf. Alternation of sticking and cutting in the middle of the chest, on the right side of the xiphoid cartilage. Sticking between the last two ribs of the right side,

close to the spinal column, and worse during an inspiration. Stitches through the lungs.—Pinching in the lungs and heart, with sensation, when stooping, as if a stone were lying on the back.—*Palpitation of the heart*, in the evening, also during rest.—Corrosive gnawing on the sternum. Sticking with pressure on the left nipple, during an inspiration, with painful throbbing at a small spot below the nipple, with stinging during contact.

**Back.**—Tearing in the os coccygis, when sitting. Pulsative stitches in the os coccygis.—*Stitches* through the back, on either side of the back and nape of the neck. Sticking below the left scapula, or between the scapulæ, apparently in the bones.—Sensation as if the nape of the neck were oppressed by a great load. Paralytic pain on the left side of the nape of the neck, when inclining the head to that side. Tearing in the cervical and posterior cervical muscles. Tension in those muscles, drawing the head forward. Sensation as if the neck were stiff and swollen, on turning it.

**Upper Limbs.**—Tearing in the shoulders, extending to the fingers. Burning on the left shoulder, apparently in the bone.—Heaviness in the arms, particularly in the right, even during rest.—Drawing in the *upper arm*.—Violent tearing in the forearms, in any position. Pain in the right forearm, as when one gets tired by writing, particularly on letting the arm hang down.—Cramp-pain in the left wrist-joint. Tingling in the left hand, as if gone to sleep. Stinging in the palm of the left hand. Tearing in the palm of the right hand. Drawing in the metacarpal bones. Pimple on the dorsum of the hand, with pain after scratching. *Lameness* of the finger-joints, afterwards affecting the arm and other joints. *Sensation as if gone to sleep*, frequently. Alternate heat and coldness of the fingers, with paleness and as if dead. Sensation in the tips as if ecchymozed or subcutaneously ulcerated. *Drawing or tearing*, particularly in the thumb and index-finger. *Sticking* in the index-finger, also bubbling sticking, and apparently in the bone.

**Lower Limbs.**—Tearing in the hip-joints. Painful drawing in the right hip-joint, as if the limb would be pulled backwards, on pressing the left foot to the ground in walking. Stitch in the hip. Stitch in the buttock.—Laming drawing in the right limb.—Drawing in the thigh. Tearing in the right thigh, down to the heel, when sitting. Gnawing in the back part of the thigh.—Tearing in the left knee. Tension about the right knee, only when bending it when walking. Cramp-pain around the right patella. Drawing along the right hamstrings, when standing.—Drawing in the tibia, low down, in bed. Tearing in the calves.—Paralytic pain in the sole of the left foot, in pressing the foot to the ground. Paralytic pain in the tarsal joint, as if the ligaments were relaxed. *Drawing or tearing* about the malleoli or heels. Tearing in the sole. Numb pain about the inner malleolus. Pinching in the dorsum of the foot. Stinging in the dorsum of the right foot. Sticking in the region of the internal malleolus of the left foot. Stitch across the balls of the toes. *Formication* in the heel, for a long time.—Drawing burning under the toes, particularly in the evening. Stinging, tearing or darting in the right big toe, when sitting.

**Sleep.**—*Yawning* with drowsiness.—*Drowsiness* after dinner.—*Restless sleep* at night.—Dreams, with emission. On waking at night he imagines he is at a strange, solitary place.

**Fever.**—*Coldness*, in the evening on lying down. Coldness of the right half of the body. *Internal coldness*, as if all the parts were contracted by cold, and were trembling. Cold feet, at night. Cold spots, here and there, as if touched with a cold finger.—Chilliness of the chest, abdomen and lower limbs, with goose-flesh and yawning, and icy-cold feet. Chilliness of the lower limbs, with sensation of contraction of the skin.—Violent *chilliness* in the evening and fore-

noon, with sensation of internal trembling. Creeping shiverings.—*Increased warmth of the body.* Frequent warmth, with anxiety or sweat, particularly on the trunk, with increased, full pulse. *Heat* from the nape of the neck down the back, in the evening. Heat and sweat about the head, with nausea, after breakfast.—The pulse is diminished a few beats.—*Sweat early on waking*, also with *biting itching* inducing scratching.

**Skin.**—*Itching* here and there. Tingling under the skin, without itching.—Soreness of the skin, when touching it.—Panarititia.

**General Symptoms.**—*Stitches* in all the limbs, particularly in the evening. *Cramp-like dragging in the joints.* Sensation, during every motion, as if the joints were broken. Sensation on turning the joints, as if swollen and sprained. Painfulness of single tendons, on touching them.—*Malaise*, obliging one to lie down. *Heaviness in all the limbs*, also particularly in the evening, with internal coldness.—*Weariness*, as after a long walk. Languor of the feet, and tremulousness in walking.

## 187. PETROLEUM.

PETROL.—Oleum Petræ, Naphtha Petræ.—See HAHNEMANN'S Chronic Diseases, Vol. V.

COMPARE WITH—Acon., Calc., Cann., Cham., Dig., Ign., Lyc., Magn. p. austr., Nitr. ac., Nux v., Phosph., Puls., Sep., Spig., Sil., Sulph., Verat.—Is frequently suitable after Nitr. ac. and Phosph.

ANTIDOTES.—Acon., Nux v.

### CLINICAL OBSERVATIONS.

According to Noack and Trinks Petroleum has been employed with success in the following diseases:

Ailments from riding in a carriage: nausea and weakness through the whole body as if one would fall down, with urging to stool, cold sweat about the head, neck and chest, pale face and blue rings around the eyes, etc.—Drawing pains about the head, in the forehead, temples and molar teeth.—Arthritis.—Cracking of the joints.—*The limbs are disposed to go to sleep.*—*Rushes of blood.*—Dread of the open air.—Epilepsy.—Lepra americana. Urticaria.—Itching of the scrotum. Itching herpes on the scrotum and perinæum.—Unhealthy skin, disposed to ulcerate.—Rhagades of the hands.—Stinging and proud flesh in the ulcers.—*Vivid dreams.* Sensation as if one had not slept enough, in the morning.—Nightly heat.—Intermittent fever, in the evening: chilliness followed by heat in the face and cold feet.—Night-sweats.—Anxiety. Tendency to start. Great irresoluteness.—Melancholy with heaviness, heat, pains in the head, violent pains in the small of the back and back, spasmodic eructations, profuse sweat at night and in the morning, slimy stools, cutting in the abdomen, emaciation, restless sleep, in the case of a plethoric corpulent man of fifty years.—Weakness of thoughts. Weakness of memory.—*Chronic vertigo.* Vertigo, as if staggering to and fro. Dulness of the head. Headache from chagrin.—Aching-stinging pains in the head. Sticking-boring headache with pustulous eruption, in the case of a lying-in female. Beating in the occiput. Tinea capitis favosa. Falling out of the hair. Incipient serofulous ophthalmia with pain above the root of the nose, swelling of, and purulent discharge from, the nose.—Long-sightedness.—Short-sightedness.—Dryness and troublesome feeling of dryness of the inner ear.

Hardness of hearing, particularly serviceable after first using nitric acid. Paralytic deafness. Ringing, roaring whizzing in the ears.—Yellowness of the face.—Pharyngitis: violent stinging and burning pains in the back part of the throat and below the larynx, whenever eating anything. Inflammation of the tongue with very fetid pyalism. Swelling of the submaxillary glands.—Inflammations of the fauces of a dry and slimy nature.—White coating of the tongue.—Fetid smell from the mouth.—Induration of the tonsils.—Flat and putrid taste in the mouth.—Aversion to warm, boiled food, and meat.—Canine hunger. Loud eructations. Water-brash. Sea-sickness. Loss of appetite. Distention and painfulness of the stomach when touching it. Cardialgia. Morbus niger Hippocratis. Colic. Confused and unpleasant feeling in the abdomen. Inguinal hernia.—Unusually hard and knotty stool. Frequent stools every day. Diarrhœa. Chronic diarrhœa. Mucous diarrhœa. Hæmorrhoidal complaints. Involuntary dripping of the urine. Nocturnal diuresis. Weakness of the neck of the bladder and dripping of the urine after micturition. Strictures of the urethra. Secondary gonorrhœa (cured by means of repeated large doses by *Trinks*, also by *Schran* who gave the pure oil).—Herpes of the scrotum.—Frequent nocturnal emissions. Weakness and nervous irritation after an embrace. Discharge of prostatic fluid. Leucorrhœa.—Stoppage of the nose. Coryza. *Hoarseness*. Cough in the evening and when lying down. Dry night-cough. Suffocative night-cough without expectoration. Stitch in the left side of the chest. Palpitation of the heart.—Pain in the small of the back which prevents standing. Pain in the back.—Herpes in the nape of the neck. Bloody rhagades of the hands and fingers, in winter. Arthritic stiffness of the finger-joints. Tearing in the hands. Brown spots on the wrist. Herpes on the knee. Stitches in the knee. Swelling of the feet. Cold feet. Inveterate ulcers on the toes, arising from blisters occasioned by congelation, with high edges, moist, red, flat base.—Corns. Painful chilblains.—Congelation of the hands and feet.—Ailments of a part from being frozen.—Chronic affection of the hip-joint with suppurating and hectic fever.

#### SYMPTOMS.

**Mind and Disposition.**—\**Sadness and despondency*, accompanied with a sick feeling as of weakness about the heart. °Disposition to weep. \**Desponding in the morning*, taciturn, accompanied with dim-sightedness. \**Anxiousness*—when surrounded with the noise of many men. Restlessness, he is unable to remain quiet. °Anxious for the future.—*Nervous*, inclining to start, weeping about trifles. \**Violent starting* brought on by trivial causes.—\**Excessive irresoluteness*. Absence of volition. He finds it difficult to cease talking about the same thing. No desire to work; even those things which were generally pleasant to him, give him no pleasure.—*Hypochondriac mood*; want of attention to conversation, etc., when walking in the open air. Dissatisfied with everything. Disposed to be hypochondriac, a febrile condition, continuing a fortnight. Irritable; everything made him feel gloomy; he was unable to calm himself in regard to many things which were generally indifferent to him.—*Out of humour and indolent*. *Is vexed at everything*, even the least trifle, does not want to answer. Disposed to be very angry every morning. Ill-humoured, angry in the morning on waking.—\**Out of humour and angry*; *he inclines to become vehement*. Whining and disposed to be quarrelsome and fault-finding, (in a few hours). Quarrelsome and vehement. The child becomes vehement and unmanageable. Furiously mad and angry.—Excessively wild, with internal trembling, followed by sadness and discouragement.

**Sensorium.**—During the whole day *he is only half conscious*, as if he were

only half alive. \**His thinking power is weakened.* \*Weakness of memory. *Forgetful and not disposed to think.* Dulness of the head with pain. Dulness of the head in the morning, muddled state of the head, heaviness, heat. The head feels as if wrapt up in fog. Dizziness, commencing at dinner. Gloominess in the head and uncomfortableness.—Frequent vertigo, when walking. °Vertigo, like violent balancing to and fro. \*Vertigo and nausea, from stooping. Vertigo when stooping and rising from a seat. Vertigo, as if in the occiput, as if she would fall forwards, especially when raising the eyeballs. Vertigo and nausea, in the evening, in bed, especially when the head lies low. Vertigo, obliging him to stoop, with pale face and nausea, more violent when standing than when sitting, going off when lying, attended with slow pulse, eructations and yawning, want of appetite and pressure in the abdomen. Vertigo, when rising from a recumbent posture, with heat in the face when lying.

**Head.**—*Indications of headache, every morning.* Headache in the morning, until after breakfast. Headache in the evening, after walking in the open air. °Headache from chagrin. Headache, in the right side of the head, she was unable to open her eyes, to keep her head erect; had to lie down. °Headache in the forehead, increased to stupefaction by mental exertions. Dull headache, from morning, with drawing towards the forehead until evening, accompanied with violent chilliness until noon. \**Heaviness of the head, in the morning,*—with sensation of fulness and heat in that part, especially when stooping and sewing. The occiput feels heavy as lead.—*Pressure* in the head, teeth, and antra Highmoriana. *Pressure in the occiput.* Pressure in the forehead, with single stitches above the eye. Pressure with stitching in the occiput, in the morning. Violent pressure on the head, when stooping. Strong pressure on the vertex, with dizziness. Pressure and pushing in the head.—*Pressing* sensation about the head, with a sort of qualmishness.—*Tension* in the head. *Tensive and pulling sensation in the dura mater*, also every day, with dulness of the head. Sensation as if the brain were pressed together.—Constrictive, drawing headache. *Contractive, constrictive headache.* Sensation as if the interior of the head were screwed together. *Cramp-like*, intensely-painful drawing and pressing in the left temple. *Cramp-like*, transitory drawing in the temples.—*Pinching headache.* *Pinching in the occiput.* Pinching drawing from below upwards towards the left temple.—*Drawing* headache, preceded by a drawing pain in the right arm. Drawing in the forehead, with stitches above the eyes. Drawing, with pressure, in the right temple, perceptible during sleep.—\**Stitches in the head*,—accompanied with pressure in the head, and nausea. Stitches in the left half of the occiput, in the afternoon. Stitching pain in the forehead, in the morning on waking, soon spreading over the occiput. Stitches and heat in the head. Dull, darting stitches from the vertex to the interior of the head, followed by continued pressure in that part. *Excessive dartings* in the head, when stooping or walking; she had to stand still after walking a few steps. Beating stitches over the eye, in one side of the head.—\**Throbbing* in the head. Throbbing in the occiput the whole day. Pulsations in the occiput when lying on it. Strong, pulsative undulations, especially in the forehead, as if the head would burst, better during motion.—Sensation as if the blood were rushing to the head, during every quick motion; this caused a darting through the brain.—*Boring* in the head.—Disagreeable feeling in the head, as if full of living things, whirling and turning in the head, with aversion to work. Trembling, balancing and roaring in the head, but without any feeling of heat.

**Scalp.**—The outer parts of the head feel numb, as if made of wood. *Ulcerative pain on both sides of the head.* Pain of the integuments of the head as if bruised. Pain of the vertex, as if bruised, or soft.—*Soft tumors* on the

hairy scalp, excessively painful when touched. *Itching of the hairy scalp*, with sore pain after scratching.—\**Pimples* on the head and in the nape of the neck. °*Scurf* on the hairy scalp.—Falling out of the hair for three days.—Profuse *sweat* about the head, in the evening after lying down. Sensation about the head, as if a cold breeze were blowing on it.

**Eyes.**—*Great pressure in the eyes*, especially in the evening at candle-light. Great pressure in the eyes, as from a grain of sand. *Cutting* in the eyes, when exerting them in reading. *Stitching* and beating in the eyebrows. Stitches in the eyes and lachrymation. Stitches from the outer to the inner canthus. Stitches in the eyes, also when pressing on them.—*Beating* pain in the right eye.—*Itching* of the eyelids. Itching and dryness of the lower eyelids. *Itching and stinging* of the eyes, also with burning. Smarting in the eyes, as from smoke. Smarting and heat in the eyes. *Burning in the eyes*, with pressure; and obscuration of sight, when exerting the eyes. Burning and pressure in the inner canthus.—*Inflammatory swelling* in the inner canthus, resembling an incipient fistula lachrymalis, of the size of a pigeon's egg; accompanied with dryness of the right side of the nose for several days. *Pimples* on the eyelids.—*Lachrymation* in the open air, which was not cold. Frequent lachrymation, even in the room. A quantity of water oozes from both canthi.—*Weak eyes*. The eyes are easily tired.—*Jerking* in the eyes. Tremor and twitchings of the eyelids. Winking of the eyelids. The eyes frequently feel as if they would become distorted. In the morning he is unable to open his eyelids, and his sight is dim and as if through a gauze. *Great dimness of sight*. Great dilatation of the pupils for many days; he is unable to distinguish letters with the left eye at the usual distance; when seen at a greater distance, they become more distinct, but at the same time smaller.—Painful sensitiveness of the eyes to the light of day; he is obliged to keep them covered.—\**Long-sightedness*, °he is unable to read fine print without spectacles.—*Double-sight in both eyes*. Frequent obscuration of sight, with diplopia.—*Black spots* before the eyes, hindering reading. Something occasionally *hovers and vibrates* before her eyes; nevertheless when looking at things steadily, they appear bright and distinct. Objects appear to move before the eyes. Vibrations and black figures before the eyes. Scintillations before the eyes.

**Ears.**—*Pressure* in the ears, with heat. Cramp-pain in the right ear. Cramp-like drawing in the right ear. Painful drawing and jerking in the outer right ear. Painful drawing and tearing, as if the muscles were strained, from the mastoid process to the clavicle, on both sides of the neck, every five minutes. Darting pain in the left ear. Tearing in the right ear. Cutting in the left ear. Titillation and stitching in the ear, followed by stiffness in the articulation of the jaw, as if it would crack when moved.—*Itching* in the left ear, and discharge of *sanguineous pus*. The meatus is closed *from swelling*. *Pimple* on the right ear, bursting in the evening. *Eruptions* on the outer ear, for thirty days. *Redness, rawness, soreness and humour behind the ears*.—°Dryness and troublesome feeling of dryness in the inner ear.—Diminished hearing. Loss of hearing of the right ear, which had become affected with a pain previously felt in the left eye. During an eructation the ears felt somewhat closed, hindering hearing momentarily. °*Hard hearing*. °Paralytic deafness.—Singing in the ears. \**Roaring* and pain in the ears. *Whizzing before the ears, diminishing hearing*. Sensation, as of the rushing of water before the left ear, in the evening, with occasional cracking in the ear, for three evenings. Cracking in the ear from time to time. Gurgling sensation in the ears

**Nose.**—Tensive pain in the root of the nose, from one eyebrow to the other, with ulcerative pain when touching the part.—*Itching* of the tip of the nose.—

*Burning* on and near the nose, (in a few hours.)—*Pimple* on the nose.—*Pustule in the nose*. Pustule on the lower part of the septum, with red areolæ. Pustules on the right wing of the nose, painful when touched.—°Swelling of the nose, with purulent discharge and pain over the root.—*Ulcerated nostrils*. Scurf in the fold of the left wing of the nose, painful when touched. Discharge of bloody mucus from the nose, when blowing it.—*Bleeding of the nose*, (in a few hours).—Sneezing, with drowsiness in the evening. Catarrhal sensation in the throat, with titillation inducing one to cough. Feeling of obstruction in the posterior nares.—°Dryness and troublesome feeling of dryness in the nose.—°Catarrh with hoarseness. Dry coryza and ulcerated nostrils. Profuse coryza. Cessation of the discharge of mucus from the nose; he is obliged to blow it out with force in little lumps.

**Face.**—°Yellow face. Continual paleness of the face.—*Heat in the face*, and redness of the cheeks. Sensation of heat in the face. *Heat in the face and head*. Burning heat on the forehead and in the face, with itching. A good deal of itching in the face and eyes (immediately).—*Itching* in the face, here and there, (from the vapour). *Pimples* in the face. Pimples around the eyes. Pimples in the face, with white tips.—Eruption on the lips. *Pimple in the corner of the mouth*, stinging and painful. Scurfy pimple over the upper lip, with stinging pain except when touched. Chapped lips. *Boil* on the lower lip.—Pustule on the *chin*, painful when touched.

**Jaws and Teeth.**—Drawing and tension in the jaw, below the ear. Liability of the articulation of the right jaw to be sprained, in the morning, in bed, very painful. Swellings on both lower jaws, painful when stooping and pressing on them. \**Swelling of the submaxillary glands*.—Toothache, with swelling of the cheeks; she cannot lie still in the night on account of pain, has to sit up in bed. *Toothache, when cold air enters the teeth*.—Aching pain in the right molar teeth. *Drawing pain* in the upper foreteeth, with feeling of coldness. *Tearing* in a hollow tooth, from evening till midnight, the gums feeling sore. *Cutting and contractive pain* in the teeth. *Stitch* in the hollow foretooth. *Cutting toothache*, in both jaws, most violent in the night, she was unable to remain in bed. Paroxysms of stitch-like pain in the teeth, every evening until midnight. Pain in the teeth, as if ulcerated, with throbbing pressure in the right jaw, extending as far as the ear and the posterior cervical muscles.—*Boring toothache*.—*Numb feeling* of the teeth, and pain when pressing them together. All the lower and some of the upper teeth feel raised and are affected with an ulcerative pain. Both the cuspidati feel *elongated*, in the morning.—The teeth are always covered with sordes.—*The gums* feel sore when chewing. The gums between the lower foreteeth look inflamed, with stinging and burning pain. *Suctling of the gums*, with stitching pain when touched. *Vesicle* on the gums. Pustule on the gums covering the hollow tooth, resembling a fistula dentalis. Black, hollow vesicle on the gums of one of the lower molar teeth, sensitive to water and cold air; the tooth is painful when opening the mouth.

**Mouth.**—*Ulcers* on the inner side of the cheek.—Dryness of the mouth in the morning. The tongue is dotted with yellowish spots. \**White-coated tongue*. Coated tongue, remaining coated in spite of scraping. The tongue and right side of the palate in the region of the cervical muscles feel so raw and painful, that he is unable to eat or to move anything hard about in the mouth; acid and saltish things cause a smarting sensation as if the tongue were sore. *Fetid odour from the mouth*; even the saliva smelt badly. Smell from the mouth, sometimes like garlick, sometimes putrid.

**Pharynx.**—The throat feels swollen.—When swallowing, some parts of the swallowed substance press towards the posterior nares.—*Stinging pain* in the

*throat when swallowing*, as if the swallowing were impeded by a fish-bone. Violent titillation in the throat, extending into the ear, when swallowing. Tingling in the pharynx and nose, as from snuff. Scratching and scraping in the throat. Rawness in the throat when swallowing. Raw feeling in the pharynx, extending as far as the stomach. Sore pain in the throat, with dryness of the mouth.—*Dryness* of the mouth and throat in the morning, so violent that it arrests the breathing. Great dryness in the throat, causing a good deal of cough. Dryness in the throat, with eructations and loss of strength. *Accumulation of mucus* in the throat. *Continual hawking up of mucus*, in the morning, with headache.

**Taste and Appetite.**—*Slimy taste in the mouth*, with white tongue. Slimy mouth, for twenty days. Slimy mouth, without appetite. Sourish slimy taste in the mouth. *Sour taste in the mouth*. Bitter-sour taste in the mouth, early in the morning. *Bitterness in the mouth*, after breakfast, with scraping in the throat, and eructations.—*\*Flat taste in the mouth*, and saliva as from deranged stomach. *\*Putrid taste in the mouth*. Rancid taste in the pharynx.—Much thirst the whole day. *Much thirst for beer*, a whole week.—No appetite, no thirst. °Aversion to warm, boiled food or meat. Canine hunger, causing nausea and waking her at night. Ravenous appetite at dinner.—Inclines to nibble.

**Gastric Symptoms.**—His stomach is deranged by little food, especially sour-kraut, brown cabbage, etc.; it gives him a diarrhœa day and night. Smoking occasions cloudiness, (intoxication). A little wine makes him feel slightly tipsy.—*After a slight meal he feels giddy and his head swims*. Congestion of blood to the head after a meal. Short flush of heat on the left side of the head after a meal, with continual redness of the cheeks. Feeling of heat and sweat after a meal, mostly about the head. Accumulation of saliva in the mouth, after every meal, she is obliged to spit a good deal. *\*Repletion after a moderate dinner, with pressure in the pit of the stomach*. Painful, cramp-like spasm in the chest, arresting the breathing, immediately after a meal; stooping relieved the spasm, but the arrest of breath returned on raising the head. Uncomfortableness after supper. Flatness and restlessness after supper. °The previously-existing weakness disappears after a meal. Toothache after breakfast.—*Acid eructations* at dinner. Sour eructations with dim sight. *Sour eructations*, setting the teeth on edge. Gulping-up of a sour fluid after breakfast. Repeated hot, acid risings and gulplings. Scraping eructations even after a slight meal. Tasteless eructations, the whole day. Eructations, with oppression in the abdomen. Eructations in the morning, tasting of rotten eggs.—*Heartburn, towards morning*, and eructations.—*Hiccough*, in the evening, followed by much sneezing. Violent hiccough, sometimes at three different periods of the day, for several days.—°Waterbrash. Nausea with eructations. Nausea every morning. *Nauseated and qualmish the whole day*. Nausea, frequently arresting the breathing. Nausea the whole day, with loss of appetite, with sourish taste in the mouth, and white and dry tongue. Violent nausea, with cold sweat and stitches in the right side of the abdomen. Nausea in the morning, with *accumulation of water in the mouth*. Sudden nausea when walking, with accumulation of water in the mouth, sudden heat in the face and vertigo; for a quarter of an hour. Momentary attacks of nausea, morning or evening, with inclination to vomit. °Sickness at the stomach when riding in a carriage. °Sea-sickness. °Vomiting of pregnant females. °Green, bitter vomiting.

**Stomach.**—*Qualmish feeling* in the stomach. *Empty feeling* in the stomach, with dulness of the head. Great feeling of emptiness in the stomach, as after long fasting. Relaxation of the stomach.—*Intolerable heaviness* in the stomach, relieved by walking.—Pain in the stomach, early in the morning.—Op-

pression of the stomach before breakfast, going off by eating. Pressure in the stomach with diarrhœa, in the afternoon, preceded by colic. Pressure in the pit of the stomach, two mornings in succession, before breakfast, with nausea.—Distention of the stomach, in the afternoon. °Feeling of fulness in the pit of the stomach.—Stomach and abdomen are frequently painful, feeling at times as if they were contracted, at times as if distended.—Crampy sensation in the pit of the stomach. *Sudden gripings* in the stomach, as if occasioned by a cold, with anxiety in the evening for a quarter of an hour.—Violent pain in the pit of the stomach, as if something would be torn off in that part. Cutting around the stomach, with inclination to stool. Stitches in the pit of the stomach, in the afternoon. Stitches in the region of the stomach, when making the least bodily exertion. °The pit of the stomach is swollen and painful when touched.

**Hypochondria.**—Pressure in the region of the liver. Stitches in the right side of the abdomen, with nausea.—Pressure in the left hypochondrium.—Stitches in both hypochondria, going off without emission of flatulence.

**Abdomen.**—Colic, a sort of painful pressure. He is roused from his sleep by pressure and pinching in the abdomen, as if occasioned by a cold. °Colic towards morning, with diarrhœa.—*Puffiness* of the abdomen, especially after a meal, with pressure below the pit of the stomach. Distended abdomen, from flatulence or a little drink. Painful tension over the whole abdomen, with pain in the lower part of the left side of the abdomen, as if something would break through, or as from an internal wound, in paroxysms of two, three hours. Tension and spasms in the abdomen.—*Gripings* in both sides of the abdomen, from below upwards, with heaviness of the lower limbs and great drowsiness. Gripping and pinching in the parts round the upper half of the umbilicus, in frequent paroxysms.—*Pinching* in the abdomen, for several evenings. Pinching in the abdomen, every ten minutes; she has to bend double at every paroxysm. Pinching and grumbling in the abdomen, in the evening. Pinching in the abdomen, and diarrhœa the whole day.—*Cutting* in the epigastrium with nausea and diarrhœa, at four o'clock in the morning. Cutting colic, late in the evening; she had to bend double. Cutting in the abdomen as if occasioned by a cold; afterwards diarrhœa with bearing down. *Cutting in the abdomen*, immediately, and again after the lapse of seventy-two hours, in the morning when waking, and several times during the day. Cutting in the abdomen, for two days, followed by discharge of fœces, and then bloody stools. Violent cutting in the abdomen, for two days, with gripping in the abdomen; afterwards eructations, vomiting of clear water, diarrhœa and headache, (in a few hours). Cutting colic in the morning, followed by diarrhœa having a very fetid, camphor-like smell; the diarrhœa is succeeded by ineffectual urging. Drawing cutting in the abdomen, with eructations and emission of flatulence. °Feeling of coldness in the abdomen.—Disagreeable itching in the abdomen.—Accumulation and movement of flatulence in the abdomen, (immediately). *Grumbling in the abdomen*, in the evening. °Rumbling with feeling of emptiness in the abdomen. Emission of a quantity of fetid flatulence, for many days. Fetid flatulence preceding the liquid stool. Sensation in the abdomen as if diarrhœa would come on, without stool.—*Going to sleep and tingling* of the abdominal muscles extending as far as the thighs, when sitting; she had to rise and walk about. Pimples on the abdomen, burning when touched. Pressure in the right abdominal ring. Stitches in the right groin, after a nightly emission. Cramp-pain in both groins, like a sort of pressure, when walking or lying, mostly when sitting. Pain in the groin as if inguinal hernia would press through, at every turn of cough.

**Stool.**—Stool is expelled with great exertions, as if the rectum lacked power to expel it. No stool for two days, but much bearing down; the rectum ap-

peared too weak to expel the fæces. Difficult stools, with sore pain in the anus. °Hard, knotty stool.—Frequent desire for stool, with slight diarrhœa, followed by much pressing, as if a good deal of stool were yet to be expelled.—Inclination to diarrhœa and two soft stools. Diarrhœa with colic. Diarrhœa, after deranging the stomach, especially in stormy weather. °Yellowish, watery stools. Diarrhœa, followed by excessive weakness. Mucus with the stool. Profuse mucous diarrhœa, (in a few hours). \**Diarrhœa, consisting of bloody mucus.*—Soft stool, with tenesmus. Soft, difficult stool, as if from inactivity of the bowels.—The stool becomes harder, (secondary effect). °Diarrhœa of pregnant females.—*Ascarides* are passed with the stool.—°*Tænia*. Canine hunger, *after stool*, but speedily satisfied. Flatulent distention after stool. Qualmishness and weak feeling, after a second good stool. Weak and dizzy after stool, vanishing of sight; he had to close his eyes to recover himself.—Pressure about the anus. Painful pressure in the rectum, two days before the menses; she had to bend double; when raising the body, she felt stitches in the rectum, which increased when walking. Itching of the anus when going to sleep. Burning pain in the region of the anus. Burning and stitching in the anus and rectum. Fistula recti. Scurf on the border of the anus, titillating and smarting.—Itching herpes on the perinæum.

**Urinary Organs.**—Pressure on the bladder; he had a desire to urinate at least ten times in the afternoon, and it was some time before the urine made its appearance. Frequent desire to urinate; the urine passes off in a double stream, with burning pain, and with tearing in the glans. Frequent desire to urinate; only a little urine being emitted.—*Frequent micturition, little at a time.* He passes twice as much urine as corresponded to the quantity of liquid he had drunk. Involuntary micturition. °Constant dripping of the urine. °Nocturnal enuresis.—Urine with white sediment. Dark-yellow urine, with a quantity of red sediment. The urine deposits a red sediment, the surface being covered with a *shining pellicle*. Urine turbid, and red as blood. Dark-brown flocks in the urine, after standing some time. Brown urine, having a fetid and sour smell. The urine has a strong ammoniacal odour. The urine has a fetid smell, it deposits a reddish sediment, adhering to the vessel.—Burning urine. Burning in the neck of the bladder when urinating. Cutting in the neck of the bladder, both at the commencement and termination of micturition.—A few drops of urine flow out *after micturition*.—Violent contraction in the region of the bladder, on both sides of the mons veneris, especially during the emission of urine, which was frequently arrested during that contraction.—\**Burning pain in the urethra*, -towards evening. Throbbings in the urethra, as during the emission of semen. Mucous discharge from the urethra. Stitch in the urethra during micturition. °Contraction of the urethra.

**Male Genital Organs.**—Tearing in the *glans*, (immediately). Itching of the glans, passing into a stitching. Smooth, red spot on the glans, without sensation. Reddish eruption on the glans, with itching.—Cramp-pain in the left *testicle*, (spermatic cord,) the scrotum contracting during that pain. Itching pulling in the right half of the scrotum. \**Itching and moisture of the scrotum*. Redness and humid soreness of one side of the scrotum. °Herpes between the scrotum and thigh.—Diminished desire for an embrace, and less sexual excitement in the imagination, (the first days).—°Restores erection and power for a few months. Violent desire for an embrace, in the morning, in the interior of the genital organs. °Discharge of prostatic fluid. Emission of semen while dallying with a female.—Retarded emission of semen during an embrace. °Weakness and nervous irritation after an embrace.—Two emissions the first night. Emissions, followed by anxious heat in the morning.

**Female Genital Organs.**—Soreness near the female organs of generation. Itching in the female urethra, during micturition, preceded by violent desire to urinate.—Aversion to an embrace in a female, (the first four weeks).—Burning in the genital organs, with some discharge of blood, (in a few hours).—The menses appear slightly, after having been suppressed for a long time. *Premature menses.* Premature and scanty menses. Menses delaying ten days, until full moon. The menstrual blood causes an itching of the genital organs.—During the menses: heat in the soles of the feet, and in the hands. Singing and roaring in the ears. Painful tearing in the thigh. Spots on the legs, which are painful to the touch. Languor and bruised feeling in the body.—*Leucorrhœa*, like albumen. Profuse leucorrhœa every day, for several days, °also with lascivious dreams.—Itching and mealy covering of the nipples.

**Larynx.**—\**Hoarseness*, in the afternoon. Severe hoarseness, for several days.—*Cough from dryness in the throat.* Cough with scraping in the throat. Cough deep out of the chest. Cough, when smoking. °Dry cough with stinging under the sternum. Evening-cough, fatiguing the chest, occasioned by an irritation in the lower part of the trachea. °Cough in the evening, immediately after lying down in bed. Night-cough. Cough only in the night after going to sleep, which is then very severe. Dry suffocative cough, she cannot cough deep enough.—Violent cough, with profuse expectoration, for eight days. Inclination to vomit *when coughing*.

**Chest.**—The breathing is laboured, especially when going up stairs, when beginning to walk, and during animated talking. When the child fell or knocked himself against anything, his breathing stopped immediately. *Wheezing in the trachea*, during an inspiration, *in the evening when in bed.* Rattling in the trachea and dry cough, in the evening when in bed, previous to falling asleep.—Asthma and suffocative huskiness as if from constriction of the trachea, with titillation, inducing dry cough. Asthma in the evening, for some hours.—*Oppression of the chest* in the night, and restless sleep. Oppression of the chest, with difficulty of breathing, more when sitting than when walking.—The chest is very sensitive to cold air; after having been exposed to cold air, her chest feels very much oppressed next day.—*Pressure and tightness of the chest*, in the afternoon. *Pressure on the sternum*, in the morning. Pressure on the upper part of the sternum, at night, going off by eructations. Pressure on the chest, as if the parts in front were held together with the hand. Pressure and digging-up in the chest. Intense drawing pain, with pressure in the region of the left short ribs, in the outer parts of the left chest, and in the right hypochondrium. *Stitching in the right, \*afterwards in the left side of the chest*, just below the arm. Lancinating pain, in front, from the right to the left side of the chest, when bending the trunk to the left side. \**Stitching in the chest*, -and contractive pain in the head, when coughing. Violent pleuritic stitches.—Violent stitch as far as the heart, arresting the breathing. Feeling of coldness in the chest in the region of the heart. Occasional momentary palpitation of the heart. A sort of palpitation extending as far as the umbilicus, in the evening when sitting.—Violent pain, more tearing than stitching, in the outer chest, under the arm, preventing sleep the whole night. °Herpes on the chest.

**Back.**—Pain of the os coccygis when sitting. Violent, but short pains in the *small of the back*, when rising from a seat, °preventing one from standing. Cutting pain in the small of the back, in the morning after rising, and in the evening, before falling asleep, only during motion and when stooping, not when sitting erect. Paroxysms of pain in the small of the back, during several motions. Pain as from a sprain in the small of the back, in the morning when in bed, also when sitting. Great uneasiness and stiffness in the small of the back

and os coccygis, in the evening. Weakness in the small of the back, after a walk.—Pain in the *back*, so violent that he is unable to stir. Pain in the spine during an easy drive, as from concussion. Pressure on the shoulders and in the back. Pressure, heaviness and weariness in the back, in the morning. Cramp in the back extending as far as the ribs, accompanied with drops of sweat in the face and on the arms, for three quarters of an hour; afterwards copious diarrhœa consisting of mucus. Rigidity of the back. *Drawing* in the back, going off by bending the back backwards. Frequent drawing in the trunk, as occurs when yawning. Pain as if sprained and oppression between the scapulæ, reaching into the chest. Tearing in the back, between the scapulæ; she is unable to stir. *Sudden pain* in the back, during every act of deglutition, sometimes also during an imperfect eructation; sometimes without deglutition, when in a state of rest; *every attack of pain is followed by oppressed breathing*. Sweat on the back and the chest, during rest, in the day-time. The skin on the left side of the back is painful as if excoriated.—Aching pain in the nape of the neck, increased by the slightest motion. Weight in the nape of the neck. Pain in the nape of the neck. Painful drawing in the nape of the neck, extending to the occiput. °Herpes on the nape of the neck. °Glandular swellings and eruption.—The right side of the neck feels stiff.

**Upper Extremities.**—Copious sweat in the axilla. Tumour in the axilla, more tearing than stitching, and threatening suppuration. Pain of the *shoulder-joint*, when raising the arm. Tension and *drawing* in the shoulder. Drawing pain in the left shoulder, as far as the elbow. Frequent twitching in the right shoulder. Pain in the shoulder-joint as if sprained, when raising the arm.—Sudden, cramp-like pressure in various parts of the arm; Twitchings in the muscles of the arms. Involuntary stretching of the arm, early in the morning when in bed. Drawing pain in the right arm, afterwards in the head. Stitches in the whole right arm, from below upwards and from above downwards, especially when bending the arm, but also when holding it still. The left arm *goes to sleep*, for several days. Arms and hands go to sleep when lying on them in the night. *Great weakness in the arms*. Tremor in the interior of the arms. Erysipelatous inflammation of the arms, with burning pain. Yellow spots on the right arm.—Violent cramp in the *upper arm* when holding a little thing with the hand, renewed by the least motion; the deltoid muscle becomes hard; next day the spot is painful as if bruised. Sharp pressure on the upper arm, commencing in the shape of a twitching. Tearing in the right upper arm.—Lameness around the elbow-joint, for two days. Itching in the bend of the elbow.—Boil on the *forearm*, stinging when touched.—Pain of the *wrist-joint* as if sprained. Drawing pain in the right hand and index-finger. °Tearing in the hands. Stitching in the right hand extending into the fingers, in the morning, when in bed. Her hands feel *chilly* all the time. *Burning of the palms* of the hands. Heat of the hands, then sweat of the palms of the hands. Sweaty hands. °Brown spots on the wrist-joints. The skin of the hands is brittle and rough. \**Chapped hands, covered with rhagades*, particularly in the winter. Itching of the palm of the hand.—*Momentary drawing* in the fingers. Drawing in the tips of the fingers. Ripping-up pain in the posterior joint of the right thumb. *Sticking pain* in the fore-joint of the right index-finger, as from a splinter, with itching in the outer parts. Shootings in the ball of the right thumb. Pain in the posterior joint of the thumb, as if sprained. *Rigidity*, first of one finger, then of the others, extending upwards through the whole arm, accompanied with inclination to faint; this subsided by walking out into the open air, except the palpitation of the heart and the heaviness of the arm. °Arthritic stiffness of the joints. Itching of the joints of the fingers. \**Rough*

*chapped tips of the fingers, -with stitching and cutting pains.* °Chilblains.—Pain of the finger-nails, as if bruised, when touching them.—Pecking sensation in the wart on the finger, in the evening when in bed; when touching it, it feels sore. Burning pain in the wart, as if it would ulcerate, in the evening when in bed.

**Lower Extremities.**—Pressure in the *hip* when sitting. Transitory drawing pain in the left hip-joint. Pain in the hip, near the os sacrum, as if sprained, during motion. *Redness and humid soreness* of the upper and inner surface of the lower limb. Small, itching pimples in the fold between the scrotum and thigh. Violent stitching in a painless, soft tumour of many years' standing, on the upper and inner surface of the right thigh. Itching of a red herpetic spot, on the upper and inner side of the thigh.—Heaviness of the *lower limbs*. Feeling of coldness in the right lower limb, in the night. Pain and stiffness in the lower limbs. Drawing pain in the left lower limb. Uneasiness in the lower limbs, he has to move them to and fro all the time.—Stiffness and heaviness of the *thighs* when walking. Pain in the left thigh when walking, preventing her from sitting. Tensive pressure on the posterior surface of the thigh, above the bend of the knee. Cramp in the thighs the whole day. Sudden darting pain in the left thigh. Large inflamed pimple above the knee. Large *boil* on the thigh.—Tension in the *knee*, when making the first step, after rising from a seat. Cramp-pain in the knee-joint. Cramp in the left knee, when walking. Rigidity and burning in the bends of the knees. *Stiffness* of the knees, legs and tarsal joints. Pulling pain with itching of the knee-joints. Tearing in the left knee, in the evening; she was unable to stretch it. \**Stitches in the knees*. Stitching in the right knee-joint, as if occasioned by a sprain, in the evening when walking or lying, not when sitting. Pain in the knees and tibiae, as if bruised. Contusive pain in the region of the patella. Constant paralytic, prickling sensation, when walking or sitting, from above the knee down to the foot. Weakness in the right knee when walking, going off by continuing to walk. Painful weakness in the knees, in the morning when rising. Cracking in the knee, as if one of the semi-lunar cartilages had become dislocated, and pain during motion. Large *red spot* on the left knee, aching afterwards. Frequently a *cold spot* on the knee, from which a cold current pervades the whole limb. °Herpes on the knee. The legs, and especially the tarsal joint, feel as if squeezed into an iron band. The tibiae are painful when walking. *Cramp in the calves, thighs and feet*, the whole day. Cramp-like drawing in the right tibia. Jerking of the right leg, commencing at the knee, painful, and felt only when walking. Tearing, stitching and pressure at a place on the leg, which had previously been ulcerated. *Blotches* on both calves, itching a good deal.—Aching pain in the foot and weakness below the outer malleolus. Pressure in the right heel. Tension in the foot when walking. *Cramp in the sole of the foot at night*. Stiff foot; when moving it, cramp in the sole. Momentary *drawing* in the foot, when walking. Violent drawing and twitching in the feet. Tearing in the heel, in the morning on waking. Cracking in the tarsal joint when moving the foot. Stitches in the heel, as from a splinter. Throbbing in the soles of the feet, worse during rest. Feeling in the feet as if swollen. \**Swelling of the foot* for several days. Swelling and heat of the fore part of the sole of the foot, two evenings in succession, for one hour, accompanied with burning. °Cold feet. Burning itching of the outer malleolus. *Blisters* on the heel. °Herpes on the malleolus. Sweaty soles. *Profuse sweat of the feet*.—In the evening the toes are drawn inwards by a cramp. Pressure in the ball of the big toe, as if it had been frozen or as if tightly surrounded with an iron band. Tearing drawing in the ball of the right big toe. Prickings in the toes. Pain, as if sprained, in the

posterior joints of the toes, when stepping. Eruption between the toes. °Ulcers on the toes, (see Clin. Obs.). *Stitches in the corns.* *Burning pain in the corns.*

**Sleep.**—*Drowsiness*, and weariness of the limbs. She feels so weak that she falls asleep on her chair. Drowsiness in day-time. Drowsiness in the evening, when sitting still, for several evenings. Constant somnolence.—He *remains awake* for a long while, in the evening when in bed; he tosses from side to side all the time. He tosses from side to side, while in bed, in the night, sleeping only fifteen minutes at a time.—The night's rest is interrupted by emission of semen and urgent desire to urinate. Urinates a good deal during the night. Heaviness of the lower limbs and weariness of the back in the night. Cramp in the calves at night. Cramp in the tendo Achillis in the night. Cold feet, in the night, preventing sleep. She feels excessively hot during the night, under the bed-cover; she has to uncover herself from time to time. Anxious heat in the night, with itching; he is beside himself and knows not what to do with himself. Sweat on the back at night, waking him at four o'clock; afterwards dry, internal heat with uncomfortable feeling, hindering sleep. \**Nightly slumber full of fancies.* No sleep, mere fancies concerning one and the same disagreeable object, with night-sweat.—He imagines some one is lying by his side.—Sniffling during sleep. He raises himself in his bed and leaves it.—Sleep full of dreams. Vexatious dreams. Confused dreams. Vivid dreams which he is unable to recollect. *Restless sleep* and *anxious dreams.* Vivid, horrid dreams, every night. *Frightful dreams of robbers* every night. Frightful dreams every night, every dream continuing the whole night; in the morning she feels very faint. He dreams he had committed rape and murder; the same dream in the siesta, and that he murders the same individual. Starting from frightful dreams in the night. Starting in the night, causing the limbs to shake. She started when asleep, had palpitation of the heart, trembling, vomiting and violent diarrhoea.

**Fever.**—Cold in the bed, in the evening, she cannot get warm; followed by night-sweat. Cold feet every evening.—°Frequent slight chills through the whole body, followed by violent itching of the skin. Chilliness in the evening, followed by flushes of heat in the face. Chills, every evening. Excessive chilliness from morning till noon, with dull headache and drawing towards the forehead, without thirst, for half an hour; in the afternoon heat in the face, especially the eyes, with thirst, for half an hour. Violent, internal chills, at ten o'clock in the evening, for a quarter of an hour, for several evenings. Chilliness through the whole body; he is obliged to lie down. Chilliness every afternoon, for two hours, with cold hands and dryness in the mouth. Feverish coldness, at six o'clock in the evening, with blue nails.—Fever and chilliness, with excessive languor and a painful feeling in the whole body. Chills, at seven o'clock in the evening, lasting one hour, followed by sweat in the face and over the whole body, except the lower limbs, which were quite cold. Fever, with full pulse, and burning skin, but without pain. °Chilliness every evening, followed by heat in the face and cold feet. Heat in the head, with cold, moist hands. Heat before midnight, with burning pain in the mouth; chilliness after midnight. Internal heat, with heat and dryness of the trachea, accompanied with uncomfortableness, irritation, exhaustion. Heat and chilliness at the same time, (almost like chills,) both internally, in the evening; accompanied with weeping mood. Heat over the whole body, in the morning when waking. Heat for several evenings from five to six o'clock.—*Feeling of heat* over the whole body, after thirty-six hours.—Flushes of heat over the whole body. Flushes of heat, six or eight times a day, followed by sweat all over. Flushes of heat in the face, burning hands, dry

tongue and agitated breath, every evening from five to six o'clock.—He sweats easily. The legs sweat beyond the knees; also the lower arms, especially the wrist-joints. Profuse night-sweat, also after twenty-four hours.

**Skin.**—*Painful sensitiveness of the skin of the whole body*; the pressure of the clothes is painful.—Itching of the skin with chills. Itching of the whole body, in the morning when yet half asleep. Itching stinging over the whole body, with great anxiousness, at seven o'clock in the evening. (For the eruptions cured with Petrol., see Cl. Obs.) Stitches in various parts of the body. Everything on which she is sitting or lying, feels hard. *Unhealthy skin, even small wounds ulcerate and spread.* Stitching in the ulcer.

**General Symptoms.**—°Serofulous and rachitic affections. A slight vexation does much harm: the taste in the mouth becomes bitter, the appetite disappears, a short walk exhausts her strength, diarrhoea, orgasm of the blood, eructation and nausea, restless sleep, next morning trembling through the whole body, diarrhoea and internal wretchedness, her tears trickling down all the while. Agitation of the blood, brought on by slight motion. Violent orgasm of the blood in the evening, and bitter taste. Strong pulse, especially when walking and going up stairs. Strong pulse, when walking, with pale face and difficult speech. After riding, stepping out of the carriage and going up and down in the open air, she was attacked with sudden violent nausea and became so weak that she fell down, with urging to stool, cold sweat on the head, neck and chest, with pale face and blue margins around the eyes; after stool she had a violent chilliness and next evening some heat.—Pain as if sprained, in arms, chest and back, in the forenoon. Stiff arms and legs, in the morning after rising.—Trembling tension through the whole body, with apprehensiveness and discouragement.—\**Cracking of the joints* °also with stiffness. Weakness in the joints. Pain of the limbs, as if bruised, in the evening; he knows not what to do with them.—Arthritic pain in the hip, knee, and tarsal joints, in the night.—*Paralytic drawing*, with pressure, in the left tibia and lower arm, on the extensor surface. Drawing with pressure on the bones, here and there, not diminished by walking in the open air. Jerking, with sharp pressure on various parts. Cramp-like drawing and pressure in the limbs.—Burning in the throat, stomach and the right side of the abdomen.—\**The arms and legs go to sleep easily.* *Heaviness in the feet* and the whole body. Heaviness in all the limbs, with laziness.—Visible emaciation, with good appetite.—Trembling in the morning when rising. *Excessive weariness in the morning* when in bed, the limbs feel bruised. The whole body feels weary and relaxed, in the morning, when rising. *Uneasiness* in the limbs; restlessness. Jerking in the limbs, in the day-time, also during sleep, at night and after dinner.—*Painful weariness in the shoulders*, the spine and loins. Weakness of the body and heaviness in the lower limbs. Feeling of uncomfatableness all over the body, as if threatened by severe illness, with tremor and great weakness. *Great weakness, without any apparent cause.* Painful weariness of the limbs. Faint feeling, in the morning, after a walk; when again in his room, he felt unwell, the face became flushed and a gauze seemed to be before his eyes, with compressive sensation in the temples; he was near fainting, but when he roused himself, the symptoms went off in three minutes. Sudden, almost momentary loss of strength, even unto swooning, with pale face, and sudden nausea for a quarter of an hour. °Great weakness after every exertion, with failure of sight, trembling of the body, buzzing in the ears and nausea. °Fainting turns, with rush of blood, heat, pressure in the pit of the stomach and palpitation of the heart. *Liability to take cold*, a cold makes her feel faint. A cold brings on headache, lachrymation, inflammation of the throat, cough and coryza. \**Dread of the open air.* During an evening walk

the air appeared to him chilly, (in July). The open air is unpleasant to him during a walk. A sort of nervous weakness in the whole body *after a short walk*. Burning over the whole body during a walk. A sort of swoon at the approach of a storm.

## 188. PETROSELINUM.

PETROSEL.—Parsley.—See STAFF'S ARCHIV., XVIII., 3, etc.

### CLINICAL OBSERVATIONS.

By Hahnemann's recommendation, Petrosel. has been successfully employed by several homœopathic physicians for acute and chronic gonorrhœa.—Chronic gonorrhœa and tingling in the urethra.—Swellings with diminished secretion of urine.

### SYMPTOMS.

Sleep late and full of anxious dreams.—Shrill singing in the ears.—Burning at the anus.—Clayish, whitish stool.—Chronic diarrhœa.—Secretion of a milky moisture in the urethra.—Agglutination of the orifice of the urethra by mucus (albuminous yellow discharge from the urethra).—Slight burning when urinating, drawing and stinging in the fossa navicularis, which changes to a cutting biting during micturition.—(Tingling, rather than burning, during micturition, from the perinæum through the whole urethra.)—Creeping in the isthmus of the urethra, early in the morning.—Tingling in the urethra, followed by pressure, in the region of Cowper's glands, early in the morning, abating when sitting and standing.—Slight drawing and pressure immediately behind the fossa navicularis.—Drawing, afterwards itching, in the fossa navicularis.—Frequent voluptuous titillation in the fossa navicularis.—Titillating stitch behind the fossa navicularis, inducing a desire to urinate, almost every half-hour.—(Priapism without the penis becoming curved.)—Profuse emission towards morning.—Bubbling sensation in the muscles of the back and arms.

## 189. PHELLANDRIUM AQUATICUM.

PHEL.—Five-leaved water-hemlock.—See HARTLAUB and TRINKS' Mat. Med., II.

COMPARE WITH—*Bry.*, *Puls.*, *Sep.*, *Stram.*, *Sulph.*

ANTIDOTES.?

### CLINICAL OBSERVATIONS.

Hartmann recommends Phel. for affections of the chest. Gross has employed it for intolerable pains in the region of the lactiferous tubes during and between the acts of nursing.

### SYMPTOMS.

**Mind and Disposition.**—Insolence. Vexed mood.—Cheerful mood and great lightness of body, with agreeable warmth.—Great exuberance of spirits, in the evening. *Sad* and apprehensive mood, the whole forenoon. Delights in

dwelling on sad thoughts. Thoughtful. Oppressive anxiety and ill-humour, with tightness about the chest, and uninterrupted application to business after dinner.

**Head.**—*Vertigo* and heaviness of the head, with disposition to fall forward, backward, and sideways, particularly to the side to which one turns, in the room, no less when sitting than during motion, aggravated during a walk in the open air, and relieved by lying. Vertigo aggravated by walking, and attended with a sensation as if something were standing out on the forehead, over which he is unable to see.—*Cloudiness and intoxication of the head*, in the open air, going off in the room. *Dizziness and confusion* of the head, as after intoxication, in the afternoon or the whole forenoon.—Oppressive dulness of the occiput, continuing a long time.—*The head feels large, full and heavy*, and as if it would be drawn backwards by a weight in the nape of the neck. Violent, painful, long-continued heaviness on the vertex, as if a hard body were lying on it.—*Pressure* in the right temple, or (with feeling of warmth) on the left frontal region. Troublesome pressure in the occiput, going and coming.—Constrictive pain in both sides of the head, with dull headache. Digging-up pressure on the sinciput, rather on the left side. Intermittent digging-up in the left frontal region. Slight digging-up in the left occipital protuberance.—Contractive sensation from the vertex to the anterior part of the head. Almost burning, contractive sensation in the occiput or on the sinciput, rather anteriorly and on the left side.—Stinging burning in the left temple, in the evening.—Sticking in the frontal region, continuing for a long time. Stinging in front of the left temple, passing off soon. A few pointed stitches in the right occiput. Sudden stitch in the vertex, so painful that the head is drawn backwards. Painful beating and stinging on the vertex, continuing a long time, in the afternoon.—*Painful tearing* in the occiput, in the forehead, or, when shaking the head, high up in the right side of the head, or along that side from above downwards. A few tearings and a stitch on the right side of the vertex, after dinner. Tearing with pressure towards the right frontal region, when standing, after dinner.—Sounding in the brain, as if from striking a piece of silver, early in the morning, waking one, and gradually going off after waking.—Dull headache, particularly in the anterior part of the head. Headache with sweat from the sinciput to the forehead, followed soon after by coolness about the head, after dinner. Headache with dizziness in the left frontal region, with increased warmth of the head and hand, but without sweat.—Feeling of warmth in the head, with coldness of the forehead, going off in the open air. Increased warmth in the head, with stupid feeling. Sensation of heat in the head, more on the left side, with paleness of the face and increased warmth of the hands, with desire for milk, after dinner. Intensely-painful, transitory heat in the temples, particularly the left temple, afterwards in the remainder of the head, with sweat on the head and hands, and moderate temperature of the skin. Undulating heat from the occiput to the vertex, and a subdued stitch on the left side of the vertex, after dinner.—Movement to and fro in the forehead, almost as if the head were moving to and fro.—The dull headache, and, in general, the majority of the head symptoms disappear at dinner.—The headache seems to abate in the open air.

**Eyes.**—Intermittent pressure around both eyes.—Frequent tearing in the margin of the right supra-orbital bone, or in the right lower eyelid near the outer canthus, after dinner.—Burning of the eyelids, early in the morning. Tension and burning at a very small spot of the left lower eyelid.—Biting or biting-burning in the left upper eyelid, almost as from horse-radish or mezereum.—*Itching* and biting itching in the left lower eyelid, going off after rubbing.—Frequent twitching in the left eyelids.—The eyelids close with heaviness and drowsiness.

Itching and itching-stinging biting in the inner canthus, going off by rubbing.—Increased secretion of tears in both eyes, with biting. Watery but not agglutinated eyes, early in the morning. Lachrymation in the room and open air.—Frequent corrosive biting in the left eye.—Itching, and sometimes stinging itching in the eyes, going off by rubbing. Dryness and burning or stinging in the eyes, in the room and open air.—Dimness of sight, during and between the attacks of vertigo.

**Ears.**—Painful itching tearing behind the left ear, frequently recurring. Fine tearing in the right outer meatus. Frequent painful tearings deep in the left ear, extending to the lower jaw.—Itching biting in the right inner ear, penetrating still more deeply by boring with the finger into the ear.—Titillating itching in the inner and outer right ear, going off by boring with the finger into the ear, after dinner.—Singing and ringing on the right ear, early in the morning.

**Nose.**—Itching in the right nostril, low down, going off after rubbing.—Red, burning nostrils, swollen (the upper lip being likewise swollen), attended with coryza and hoarseness.—A number of vesicles on the right nostril, itching at first, afterwards running into each other and smarting when scratched open.—Complete loss of smell for three hours.—Sneezing after dinner. Stoppage of the nose, obliging one to sit up in bed at night to breathe more freely, with fluent coryza on the morning following. Stoppage of the nose and coryza, with husky voice. Fluent coryza and hoarseness.

**Face.**—Pale face, without feeling cold, after dinner.—Tension at a small spot on the left cheek, going off by rubbing.—Sensation as if the left cheek were seized violently and were pulled to and fro for a time (a sort of violent twitching), in the open air.—Burning on the cheeks, with redness of the face, without any increase of warmth being perceptible to others.—Fine stich resembling a flea-bite, between the chin and the lower lip, somewhat towards the right side, after dinner.

**Jaws and Teeth.**—Tearing at a small spot of the left lower jaw.—Tearing in the gums over a molar tooth in the right upper row, passing off soon.—Biting sensation, almost like burning, in the inner gums of the anterior inferior cuspidati.—Redness and swelling of the gums of the lower left cuspidati, with ulcerative pain on pressing upon them.—A few tearings in the last lower molar tooth of the right side, in the cool air, going off in the room, in the evening. Fine tearings in the socket of a left lower molar tooth, in the evening. Fleeting tearing in the right upper sockets. Itching tearing in the stump of an upper and an opposite lower molar tooth of the right side, during dinner.—Pricking and tearing in the last molar tooth of the left side, increased by contact with the tongue, in the afternoon.

**Mouth.**—Burning pricking or biting at the tip of the tongue, as from vesicles, passing off soon. Red vesicles burning like fire on the right border of the tongue, towards the tip. Great dryness in the mouth and throat, rendering deglutition difficult, at night.—Frothy saliva in the mouth and constant flow of saliva, after dinner.

**Pharynx and Esophagus.**—Sensation on the left side of the neck below the jaw, as if a red-hot iron were moved along close to that part.—Tearing in the left side of the neck below the jaw, afterwards in the left side of the head, thence passing to the parts behind the ear and to the lower jaw, where the tearing changes to a gnawing. Dryness in the throat, at night, with thirst for beer, and particularly for milk on the following morning, going off after breakfast and returning again in the night following.—Roughness in the throat, obliging one to hawk, frequently going and coming. Roughness in the throat with hoarseness

and shortness of breath, continuing a long time.—Burning sensation down the œsophagus.—Sore throat: stinging in the throat during and between the acts of deglutition, going off when eating bread, returning immediately after in the afternoon. Sore throat with pressure and stinging during and between the acts of empty deglutition, not after eating, from afternoon till evening. Stinging in the throat, more during than between the acts of deglutition.—Drink is apt to get into the wrong channel, in the evening.

**Appetite.**—Slimy taste, or (after drinking water) sweet taste in the mouth. Beer tastes bitter. Cheesy taste on the tongue.—*Loathing* after having eaten veal at supper, obliging him to spit frequently. Aversion to water in spite of being thirsty, the whole forenoon and after a meal.—*Want of hunger*, sensation as if the stomach were full all the time, loathing of food, although he eats the usual quantity.—*Appetite for acid things*, with thirst, early in the morning.—Great thirst for milk and beer, aversion to water, going off, for a time, after eating soup, early in the morning.

**Stomach.**—Disposition to eructate, and ineffectual eructations with pressure in the stomach. Eructations smelling almost like bed-bugs.—Sensation as if an acrid, rough vapour were ascending from the stomach, with disposition to eructate, without any eructations taking place.—Sensation as if the stomach were full of water which wants to rise, succeeded by a sensation as if a large round body were turning about in the stomach and were then falling; lastly, grumbling in the stomach.—Sensation of qualmishness and emptiness in the stomach, with constant painless shifting of flatulence in the bowels.—*Nausea, loathing and inclination to vomit in the stomach*, continuing a long time.—Nausea and inclination to vomit, afterwards pressure in the stomach, going off by empty eructations.—Pinching and cutting in the region of the stomach.—Long-continued burning in the stomach.—Indescribable disagreeable feeling in the stomach.

**Abdomen.**—The abdomen feels bloated.—Dull sticking above the pit of the stomach, independent of breathing. Sticking in the region of one of the costal cartilages on the left side of the pit of the stomach, during various movements of the trunk, but not during rest, in the evening. Violent dull stitches in succession in the region of the last false ribs of the right side.—Long-lasting and frequently-intermitting pain in the epigastrium, in the afternoon.—Short cooling movements to and fro in the epigastrium.—Sudden burning or biting in the right epigastrium, internally.—Pressure in the epigastrium and around the umbilicus, in the afternoon.—Contractive pain in the right side of the epigastrium, extending in a straight line to the left side, where the pain terminates in a sticking, while eating, disappearing after rising from a seat and when walking.—Pinching in the epigastrium and urging to stool, only flatulence being passed, after dinner.—Sudden painful pinching and contraction, particularly around the umbilicus, with very soft stool, disappearing soon.—Biting at a small spot, on the right side of the umbilicus.—Short pinching in the right side of the abdomen, several times.—Frequent-intermitting pinching in the abdomen. Pinching and cutting in the abdomen, as previous to diarrhœa, early in the morning (intermitting for some time after hard stool, but returning in half an hour), gradually abating in violence after a liquid stool with tenesmus.—Painful cutting in the middle of the hypogastrium, ceasing after a soft stool.—Burning from the abdomen to the stomach, followed by eructations tasting of the ingesta.—Long-continuing feeling of coldness in the abdomen, after stool.—Qualmish feeling in the abdomen, with frequent emission of flatulence and liquid stool without tenesmus, the whole day.—Icy-coldness and movement of cooling flatulence in the bowels, as after spirituous drinks, constantly increasing for a quarter of an hour.

—Dull stitch in the right groin on drawing breath, with violent stitch in the bend of the right hip on inclining to this side, after dinner.—Rumbling in the abdomen.—Pressing of the flatulence towards the ribs and small of the back.

**Stool.**—Liquid stool with subsequent tenesmus and soreness at the anus.—Shining stool of ordinary consistence, with burning at the anus after stool. Stool with flatulence and pinching in the abdomen, and succeeded by tenesmus of the anus.—*Very hard stool* with *pressing* and violent pains at the anus. Copious, hard stool with some drawing at the anus.—Itching at the anus, with burning after rubbing.

**Urinary Organs.**—*Urging to urinate with scanty emission* and violent burning after micturition. *Pale and watery, almost greenish urine.*

**Genital Organs.**—Itching of the prepuce.—Cessation of the menses which had just commenced flowing.—Premature menses. *Appearance of the menses with:* languor, yawning, violent pain as if bruised on the inner surface of both thighs, very painful when sitting, standing, walking and lying, somewhat relieved by bending the body to the left side, and going off in the afternoon. The menses last four days, and flow only morning and evening, more profusely than usual.

**Larynx.**—Hoarseness. °Cessation of the habitual expectoration of mucus in the morning. Cough with mucus and hawking at night. *Dry suffocative cough* and short breathing.

**Chest.**—Oppression of the chest in walking. Oppression of the right side when breathing, in a space of the size of a hand.—Sticking in the middle of the chest on drawing breath, after dinner. Sticking deep in the left chest. Pointed stitches below the left mamma. Dull stitch in the groin on drawing deep breath. Dull stitches from the last true rib to the xiphoid cartilage, with painful sensation in the stomach, as if screwed together. Pointed stitches in the region of the *heart*, with drawing, not increased by movement and breathing.—The beating of the heart is felt in front of the chest.—The lower part of the sternum and the pit of the stomach are sensitive on pressure. Pointed stitch in the upper part of the sternum, somewhat to the right. Dull stitch in the left side of the chest, below the shoulder. Dull stitches in the mamma. Violent stitch through the right mamma near the sternum, through to the back between the shoulders and then striking downward into the right side of the os sacrum, which is very painful on drawing breath, after dinner. Painful tearing stitch through the left mamma. Smarting stinging of the right nipple before going to bed.—Burning high up on the sternum and in the middle of the left scapula, when standing.

**Back.**—Painful stitches in the os sacrum, in the afternoon.—Sudden violent biting of the right side of the sacrum, causing one to start.—Bruised pain in the small of the back when sitting, relieved by walking.—Sticking in the *back*, here and there, in the groin, etc., when moving the trunk while sitting. Twitching between the shoulders on the cervical vertebrae. Pointed stitches between the shoulders, after dinner. Stitch in the lower end of the left scapula, from without inward. Dragging or contractive sensation at the lower extremity of the left scapula.

**Upper Limbs.**—Tearing in the right shoulder. Tearing in the left shoulder from behind forward.—Itching and twitching in the middle of the inner surface of the right upper arm.—*Tearing* in the inner surface of the right upper arm, as far as the shoulder, or in the right ulna, and from the elbow-joint to the middle of the forearm. Fine tearing in the left ulna above the wrist-joint.—Fine tearing between the second and third joints of the left middle finger towards the dorsum of the hand. Intermittent, quivering tearing in the upper

joint of the right thumb, or in the posterior joint of the thumb from behind forward towards the tip, in the afternoon.

**Lower Limbs.**—Long dull stitch in the right hip near the os sacrum.—Painful tearing down the anterior surface of the right thigh.—Drawing pain in the bend of the left knee, from above downwards.—Sensation in the knees as if blood would accumulate there, almost like burning, when sitting or standing, not when walking, in the afternoon. Burning or pricking sensation on the anterior surface of both calves and from the right calf to the heel, almost as after a fatiguing walk, when standing, sitting and walking. Tearing in the right calf from above downwards. Groaning sensation in the left calf, as after a long walk.—Tearing in the posterior part of the left heel.—Slight tearing in the external border of the right foot, near the small toe. Fine tearing along the sole of the foot, early in the morning. Fine flashing tearing in the sole of the left foot, towards the toes, in the evening.

**Sleep.**—*Frequent yawning* without drowsiness, after dinner.—*Excessive drowsiness* during work. He wakes frequently before midnight and then sleeps long in the morning, or wakes after midnight and soon falls asleep again, or wakes towards morning with sensation as if the limbs would go to sleep. Waking after midnight with anxiety, nausea, loathing which rises from the abdomen to the stomach, and is succeeded by two diarrhœic stools, with pressing, tenesmus and subsequent soreness at the anus.—*Dreams.* Pleasant dreams about gardens, company, pleasures. Dream about a row or about the lightning striking somewhere.

**Fever.**—Diminished temperature of the body.—Coldness and chilliness with frequent shaking, in the evening, continuing after lying down until midnight, without the skin feeling cold to the hand. Chilliness with shaking, in the evening, not going off near the warm stove, but going off in bed. Chilliness with shaking of the whole body, goose-flesh on the arms and cutting pains in the region of the stomach, from six to ten o'clock in the evening. Shuddering as if cold water were poured over him. Shuddering from four in the afternoon until ten in the evening, when the patient falls asleep, the shuddering subsides neither near the warm stove nor in bed.—Thirst with the shuddering, from four o'clock in the afternoon until night.—Agreeable warmth in the whole body.—Heat and redness in the face, going off in the open air.—Mounting of warmth, with sweat on the forehead, when standing, after breakfast. Warmth (feeling of heat) and sweat, on the hairy scalp, head and nape of the neck, with ordinary temperature of the skin, and feeling of warmth on the hands without sweat; the heat seems to proceed from the left side of the occiput, where the burning continues some time longer and where a groaning sensation is experienced similar to that in the calves, in the afternoon.—Pulse 64, diminishing to 60. Pulse 73 or 80, pretty full and hard, with general warmth of the skin.

**Skin.**—Tension of the skin of the left side of the face, with increase of warmth.—The pimples on the upper lip which had existed previously to taking the drug, commence to burn.—Wart-like pimple on the right side of the neck, without sensation.—Small blue spots like petechiæ, between the mammae and on the neck, without sensation, going off on the day following without desquamation.

**General Symptoms.**—Phellandrium is said to irritate the mucous membranes and to increase the action of the skin and urinary organs.—Indolence with languor and no interest in anything. Weariness which scarcely allows him to stir a foot, the whole forenoon. Languor, first in the feet, afterwards in the whole body. Feeling of weakness, particularly in the knees, during rest and

motion, after dinner.—Sensation in the whole body as if all the vessels were trembling, when sitting or standing, after dinner. Sensation above the right eyebrow as if a fly were crawling about there.

**Characteristic Peculiarities.**—The majority of the symptoms seem to come on when sitting, standing and even lying, and to abate and disappear in the open air.

## 190. PHOSPHORUS.

PHOSPH.—See HAHNEMANN'S Chron. Diseases, V.

COMPARE WITH—Acon., Agar., Alum., Ambr., Am. carb. and mur., Ars., Bell., Bry., Calc. carb., Carb. v., Chin., Coff., Graph., Iod., Ipec., Kali, Kreos., Lyc., Magn., Merc., Nux v., Op., Petrol., Plumb., Puls., Rhus tox., Sep., Sil., Sulph., Verat.—Is frequently suitable after Calc. carb., Chin., Kali, Kreos., Lyc., Nux v., Rhus tox., Sil., Sulph.—Afterwards are frequently suitable: Petrol., Rhus, Sulph.

ANTIDOTES.—Of large doses: Emetics, and, if the Phosphorus had been very much divided, Magnesia with water, (Orfila). Of small doses: Camphor, Nux v., Coff., Vinum.

### CLINICAL OBSERVATIONS FROM NOACK AND TRINKS.

According to Noack and Trinks, Phosphorus is indispensable in acute affections, in the course of which the cerebro-spinal system of nerves becomes very much depressed and finally threatened with paralysis. Such dangerous conditions are frequently attendant on pleurisy, pneumonia, typhus abdominalis, acute exanthemata, and are, as by miracle, removed by the use of Phosphorus. In chronic diseases characterized by great debility and an impoverished vitality, for which Phosphorus is indicated as the specific remedy, it is expedient, according to Hahnemann's advice, either to mesmerize the patient previous to the exhibition of Phosphorus, or else to give him a few doses of China, particularly when the debility arises from an excessive loss of the animal fluids. The best remedy to diminish the excessive sensibility of the nervous system previous to the exhibition of Phosphorus, is Nux vomica. Phosphorus is not absolutely contra-indicated by weakness of the genital organs and absence of sexual desires; there are cases with these symptoms, where Phosphorus is necessary. The great curative powers of Phosphorus in nervous apoplexy and its immediate consequences, particularly in the case of old people, ought likewise to be remembered.

*Phosphorus* has been employed with success in the following affections: Morbid conditions characterized by nervous irritation.—Rheumatism.—Tearing in the limbs.—Arthritis.—Onanism and its consequences.—Straining.—Pulsations in the whole body.—*Debility from old age.*—Tonic spasms arising from the uterine system. Tetanic spasms. Tetanus and trismus with violent delirium. Sanguineous variola with hemorrhage from the lungs.—Angina scarlatinae maligna, with sopor, delirium, difficulty of swallowing.—*Herpes resembling hepatic spots*, most frequently on the neck, chest, back, inner surface of the arms, rarely on the abdomen and lower extremities; the herpes arises from an altered condition of the epidermis, looks faint, feels rough, can be pressed together into small folds, itches in the evening and in the warmth, and falls off in large scales.—Brown spots on the body.—*Chilblains.*—Yellow spots on the abdomen and chest. Violet-coloured spots on the hands and feet, and blisters with burning pain, arising from hydrargyrosis.—*Telangiectasia* (giving Phos-

phorus in alternation with Sulphur).—Fungus hæmatodes.—Leuco-phlegmatic tumour.—Lymphatic abscesses with fistulous ulcers, callous edges, discharging a fetid, badly-coloured pus, and attended with hectic fever.—Chlorosis.—*Erosiones* and other affections of the glands, skin and abdomen. Caries serophulosa. Caries serophulosa with hectic fever, (other remedies being likewise used).—Drowsiness in the day-time.—Dangerous coma vigil after scarlet-fever.—Morning-drowsiness.—*Falling asleep late*.—Sleep disturbed with dreams.—Frightful dreams.—Chilliness in the evening, in bed.—Flushes of heat.—*Typhus abdominalis*, which set in with great violence, attended with rapid failing of strength, nightly delirium, dry tongue. Typhus abdominalis with violent diarrhœa. *Typhus abdominalis*: Phosphorus seems to arrest or even to prevent the ulcerative process in the intestines; it is likewise indicated in the stage of convalescence, when the voice is feeble and there is a sensation in the pit of the stomach as if the parts there would dissolve and fall down. *Typhus abdominalis* with dry tongue, nose and lips, pale or ash-coloured complexion; painless diarrhœa with much rumbling; when the action of the lungs is very much depressed and the breathing rattling, Phosphorus accelerates death. *Typhus abdominalis*, second and third stages, with congestion of the lungs, oppression of breathing, oppressive anxiety, expectoration of bloody mucus, or fetid, easy and sudden expectoration; also with pleuritic stitches and rattling in the trachea. *Typhus abdominalis*, with sensitiveness and rumbling in the cœcal region and diarrhœa, although the pneumonic symptoms are most marked. *Typhus putridus*: sopor with open mouth, dry, black lips and tongue.—Morning-sweat.—Want of cheerfulness.—Hypochondria.—Hysteria.—Fearfulness when alone.—Anxiety for the future.—Irritability and anxiety.—Fearfulness.—Tendency to start.—Irritability and ill-humour.—*Dread of labour*.—*Somnambulism*.—*Nervous vertigo*. Nervous apoplexy and hemiplegia.—Disposition to paralysis.—Paralytic condition of the brain after nervous apoplexy.—Paralysis of one side.—Stupifying headache.—Morning-headache.—Nervous headache.—Congestion of blood to the head.—Sticking on one side of the head, externally.—Itching of the hairy scalp.—*Tinea capitis sicca*.—Falling out of the hair.—Falling out of the hair, after scarlatina.—Burning and smarting in the outer canthus of the eye.—Lachrymation, in the wind.—Pressure as from a grain of sand.—Inveterate catarrh of the eyes: inflammation of both eyes and lids, the edges of the lids feel corroded, constant lachrymation with biting and burning, copious secretion of thin purulent gum, itching and burning of the eyes, agglutination in the morning, indistinct sight.—Arthritic ophthalmia.—Chronic inflammation of the eyelids with nightly agglutination and lachrymation in the day-time.—Congestion of blood to the eyes with burning and photopsia.—Difficulty of opening the eyelids.—Painful and excessive sensitiveness of the optic nerves.—Dimness of sight.—*Short-sightedness*. Amblyopia amaurotica.—Blindness in the day-time, everything looking like a gray covering.—Darkness of vision at candle-light.—Amaurosis (using Phosphorus and Graphites).—*Musæ volitantes*. Cataract. Glaucoma. Beating and throbbing in the ears.—Whizzing in the ears.—Difficulty of understanding human speech.—Hardness of hearing after typhus.—Affections of hearing consequent upon typhoid and inflammatory diseases.—Serofulous ozæna. Chronic inflammation and swelling of the outer and inner nose, with obstruction of the nose, vertigo, dulness of the head, and loud talking during sleep.—Polypus of the nose. Discharge of blood from the nose in blowing it. Bleeding from the nose.—Loss of smell. Bad smell from the nose.—Swelling of the face and burning of the hands and feet. Burning and redness of the cheeks. Prosopalgia Fothergillii.—Painless ulcer on the inner surface of the lower lip, with indented, rather hard edges and tallowy base.—Tearing in the

upper and lower jaws, at night when lying.—Toothache as from subcutaneous ulceration, early in the morning when chewing. Sticking toothache.—Soreness of the inner mouth. Slimy mouth. Roughness of the inner. White-coated tongue.—Tongue coated white, or covered with white mucus, also parched, cracked or covered with black crusts (particularly in typhus abdominalis).—Acute and chronic inflammation of the soft palate.—Dryness of the throat day and night. Scraping and burning in the throat. Smarting and burning in the throat.—Dysphagia. Hawking up of mucus from the fauces early in the morning. Slimy taste in the mouth. Cheesy taste in the mouth. Loss of taste.—Hunger after a meal. Canine hunger.—*Eructations*. Spasmodic eructations. Sour eructations.—Sort of rumination.—Panting for refreshing things.—Morning-sickness with hunger. Nausea after eating. Qualmishness in the abdomen after breakfast. Constant water-brash. Melæna. Chronic vomiting.—Indolence and drowsiness after a meal.—Pain in the stomach.—Sort of contraction of the cardiac orifice: the food which has just been swallowed, regurgitates into the mouth.—Painfulness of the pit of the stomach when touching it. Digging-up in the pit of the stomach. Repletion in the stomach. Gastralgia. Violent pressure in the stomach. Cardialgia: constrictive, turning pains in the pit of the stomach, with vomiting of a sourish fluid towards evening and at night, attended with sour eructations. Cardialgia: contractive pains with sour eructations and chronic diarrhœa. Gnawing pains at the stomach. Violent pressure from the stomach to the back. Nervous cardialgia. Colic early in the morning, in bed.—Want of tonicity in the abdomen.—*Neuralgia cæliaca*: violent contractive pain in the pit of the stomach after every meal, shooting towards the left hypochondrium, pit of the stomach and left shoulder; the attack ends in violent eructations and contraction in the chest and sternum. Pressing in the side of the abdomen.—*Inflammation of the ascending vena cava*: intense burning pains in the region of the stomach, spleen and along the back, etc.—Bloatedness after dinner.—Incarcerated flatulence.—Rumbling in the abdomen.—Phthisis intestinalis: purulent evacuations with sensitiveness of the abdomen, fever and colliquative sweats.—*Flatulent colic* deep in the abdomen, aggravated when lying. Tympanitis.—Habitual and rheumatic diarrhœa. Watery diarrhœa.—Hernia inguinalis.—Violent urging previous to stool. Tearing in the abdomen with a good deal of urging. Excessive dryness of the fæces. Green diarrhœa accompanying measles. Choleric. Chronic looseness of the bowels. *Chronic diarrhœa* of children which is probably occasioned by a degeneration of the mucous membrane. Chronic diarrhœa with weakness of the rectum. Colliquative diarrhœa of phthisical individuals, even with involuntary discharge of fæces.—Itching at the anus.—Chronic painless diarrhœa, slowly undermining health.—Discharge of blood with stool.—Varices of the rectum and anus.—Typhoid dysentery: copious, involuntary evacuations with excessive debility, sopor, delirium.—Discharge of mucus from the anus, which is constantly open.—Tænia.—Lithiasis?—Paralysis of the bladder.—Involuntary discharge of urine and fæces.—Tension in the urethra. Smarting as from excoriation in the urethra, during micturition. Burning sort of quivering in the urethra between the acts of micturition. Burning and stinging in the urethra. Cutting in the urethra before and after micturition.—Constant desire for an embrace. Frequent erections and nocturnal emissions. Phosphorus promotes conception and makes it certain. Feeble and too rapid emission of semen during an embrace. Amenorrhœa in persons with a rigid fibre. The catamenia delay four or five days, but are then too copious. Menstrual spasms. Delaying menses with amenorrhœa. Metrorrhagia in consequence of difficult labour. Amenorrhœa with chlorosis. The menses are too scanty and too watery. Stitches from the vagina to the

uterus. Leucorrhœa. Erysipelatous inflammation of the mamma with threatening suppuration, or the suppuration having already set in. Prevents the suppuration of the mamma. Inflammation, induration and suppuration of the mamma with phthisical complaints. Erysipelatous or phlegmonous inflammation of the mamma soon after parturition.—Fermentation during the menses.—Inflammation of the breasts, commencing with the formation of hard nodosities which suppurate, in consequence of which the inflammation is either prevented or accelerated, and the abscess is cured and the remaining nodosities are dispersed. Stony nodosities with violent pains in the breasts. Suppuration of the breast with inflammatory redness and hardness.—Galactorrhœa from enlarged breasts for four years, the breasts being full of nodosities consisting of hardened milk.—Dry coryza. Dryness of the nose. Roughness of the throat. *Inflammatory affections of the larynx, croup.* Aphonia. Expectoration of mucus from the larynx. Catarrh. Influenza. Titillation inducing cough. Tickling in the chest. Incipient phthisis of the larynx. Last stage of croup, with rattling breathing in the upper part of the chest and trachea.—Cough with hoarseness and attacks of suffocative asthma. Cough excited by laughing. Dry and frequently spasmodic nightly cough, with pain and stitches in the lower part of the chest, oppression of the chest, fulness in the right side of the chest. Cough unto vomiting. Cough with rawness and hoarseness in the chest. Congestions of the chest, manifesting themselves by shooting stitches proceeding from the inmost parts of the chest here and there, especially anteriorly, with feeling of soreness in the region of the diaphragm, excited by laughing, talking and walking, and occasioning oppression of breathing.—Nightly cough with stitches in the larynx.—Hemorrhage from the lungs of phthisical young persons, with great irritation of the bronchial mucous membranes and dry irritating cough.—Pituitous phthisis.—Bloody cough, with tuberculous lungs.—Chronic affections of the chest. Phthisical conditions. Suffocative attacks. Difficult respiration. Purulent phthisis. Loud, panting breathing. Incipient pulmonary phthisis. Oppression of the chest. Spasms of the chest. Stitches in the left side of the chest, with sticking when touched. Chronic stitches in the side of the chest.—Sore burning pain in the chest. Pain below the left breast when lying on it. Pleuritis with tuberculosis of the lungs. Pneumonia in every stage, according to Fleischmann. Pneumonia of tuberculous lungs. Pneumonia with tuberculosis of the lungs or with bronchitis.—Typhoid *peripneumonia*.—Typhoid pneumonia: great prostration, faint eyes, feeble, dry hacking cough, particularly at night, difficulty of expectorating, owing to debility, burning, darting, rattling in the chest, danger of paralysis of the lungs setting in, complication with bronchitis, delaying crises in consequence of debility. *Pneumonia* with great exhaustion of strength, subsultus tendinum and furibund delirium. Long-neglected pneumonia. *Pneumonia*: stage of hepatization in pure and asthenic pneumonia, when the hepatizing process manifests itself by the well known physical symptoms and by the livid, pointed countenance, cold sweats, small, quick and rather full pulse, frequent cough with frothy, brown and sometimes gelatinous sputa.—Paralysis of the lungs.—Palpitation of the heart in sitting.—Threatening paralysis of the heart.—Chronic pains of the back and weakness of the lower limbs.—Pain in the back as if broken. Stiffness of the nape of the neck.—Large neck.—Pain of the arm in lifting it. Tearing stitches in the arms and scapulæ. Heat of the hands. Trembling of the hands. Sort of ischias with swelling and suppuration in one groin (psoriasis). Lameness of the small of the back after heavy labour. Profuse sweats, diarrhœa and hectic fever (in conjunction with Silica). Nightly tearing pains in the feet of pregnant females. Jerks and twichings in the feet day and night before going to sleep. Drawing

pain in the knees. Quivering in the calves. Bony tumour on the tibiæ. Coldness of the feet at night. Swelling of the feet. Pain of the soles as from subcutaneous ulceration. Numbness of the tips of the fingers and toes.—*Chilblains*, which become inflamed and burst, exhibiting a soft, white, humid surface of the size of a two-shilling piece, containing a small opening with watery, fetid secretion; the pains were moderate and stinging.

*External application of Phosphorus*: For obstinate chronic inflammation of glandular organs, of the parotids, submaxillary and sublingual glands and mam-mæ, particularly in cachectic, debilitated individuals affected with exhausting and colliquative sweats and diarrhœa (one grain in one ounce of olive oil).—Also in recent burns and panaritia.

## SYMPTOMS.

**Mind and Disposition.**—\**Great lowness of spirits.* Gloomy, taciturn, reflecting, lazy, out of humour, not disposed to anything. Aggrieved, disconsolate, weeping.—*Sadness* about twilight, some evenings in succession. The world appeared horrid to him, he felt relieved by weeping; shortly after complete dulness and indifference. Weeps in the morning on waking from a saddening dream, for a quarter of an hour. Easily moved, especially liable to fearfulness, (the whole time of proving).—*Anguish.* Anxiety and heat in the head, with hot, red hands, recurring frequently, and visibly relieved by standing. Anxiety with oppression. Occasional anguish in the evening, as if he would die. Apprehensive of misfortune. Anxious about her illness. °Anxious for the future. Internal uneasiness. *Anxiousness* and uneasiness, with much sweat on the forehead and heat in the head. Uneasy during a thunder-storm. Fearfulness with horror, as if a horrid mask were looking out of every corner. \**Anxious and irritable when alone.* Fits of anguish, apparently under the left mamma; they torment her so much that her whole body trembles, accompanied with occasional bitter eructations and palpitation of the heart. Loathing of life.—Excessive sensibility of all the senses, especially hearing and smell. \**Inclines to start.*—*Discontented* and irresolute. Ill-humoured, the general health being excellent. Discouraged about his health. Peevish; everything, especially men and noise are repulsive to him. Very much out of humour, cannot forget that which put him out of humour. Is greatly vexed at the least trifle before dinner; afterwards feeling of heat, followed by pressure at the stomach; then nausea with much heat in the face and total loss of appetite. Is easily put out of humour, with cold hands, heat in the face and palpitation of the heart. Capricious, susceptible. *Great irritability.* Hypochondriac. When thinking of disagreeable things, he is attacked with a sort of apprehensiveness, which is most felt in the pit of the stomach. When thinking of a thing very intensely she is attacked with a heat as if hot water were poured over her. An unpleasant occurrence gives her anguish, mixed with fear and chagrin, and disposes her to weep. Irritable, every little remark offends her and makes her feel low-spirited. When she gets angry, she becomes exceedingly *vehement*.—Obstinate.—Hatred of men.—Tenderness, (secondary effect).—Increase of *cheerfulness* in the first days. °*Increase of the sensus communis.* Good-humoured, especially in the afternoon. Cheerfulness. Freedom of mind, good spirits, with pleasant warmth in the whole body, particularly on the hands, which are quite red from a congestion of blood, his senses are much brighter.—*Spasmodic laughing* and weeping. She laughs against her own inclination, being very sad.—In the evening her *fancy is so vivid*, that she shudders even when merely thinking of repulsive things.—*Absence of shame*; she undresses herself, and wants to go naked, as if crazy. *Great indifference* to everything. Her otherwise beloved child is indif-

ferent to her. \**Indisposed to work*, the head feeling free. Absence of mind, in the morning, although disposed to work.

**Sensorium.**—Forgetful and dizzy. Forgetful and stupid, he does something quite different from what he intends. Slowness of thought, emptiness of the mind. Great flow of ideas, which she finds it difficult to arrange. *Fanciful delirium* when slumbering or waking, as if she were on a distant island, had a great deal of business, were a noble lady, etc. °*Somnambulism*. *Clairvoyance*. General slight dulness of the head. Dulness of the head after a meal. Violent dulness of the head, and vertigo, obliging one to lie down.—*Painful dizziness, eight mornings in succession*. So dizzy in the morning after waking, that she has to be assisted out of bed. Dizziness, with violent headache, chills and shuddering, without thirst, heat in the head occasionally, shuddering and uncomfortableness of the whole body.—Stupid feeling for many days. Dulness and heaviness in the forehead, the head inclines to fall forward; less in the open air, and when knitting the brow, returning in the room and increased by stooping. Gloomy, uncomfortable feeling, in the morning after rising.—In the morning, when rising, he is unable to collect his senses, *his head feels giddy, heavy and painful, as if it had been lying too low during the night*. Stupid sensation, when waking in the night. Inability to conceive an idea, with headache. Painful stupefaction of the head, in the morning when waking, going off after rising.—*Weakness in the head*; when reflecting upon something, his head aches. She was unable to bear the sound of the piano. Laughing, stepping a little too firmly, or stretching the limbs, causes a throbbing and beating in the head, which is especially violent after sitting a long time. Slight stupefaction and pain between the eyes, in the forehead, going off after dinner, returning an hour after, and continuing until evening.—Vertigo, when rising from her seat, with obscuration of sight. Vertigo, followed by nausea and an oppressive pain in the centre of the brain, with stupefaction and sensation as if he would fall forwards, in the morning and after dinner; afterwards nausea in the afternoon, heartburn, red face, and sensation as if something had lodged in her throat; with sadness and weeping without any cause; gauze before her eyes in the evening, and itching of the eyelids. Giddy feeling in the afternoon, *as if the chair on which he was sitting were rising*, and as if he were looking down; afterwards hypochondriac mood, with drowsiness and languor, until nine o'clock in the evening. Vertigo, unto falling, in the morning after rising. Vertigo in the morning, resembling a heavy pressure from above downwards in the fore part of the head, with a fainting sort of nausea, and obscuration of sight when stooping, with much sneezing, until evening; less in the open air. Vertigo in the forenoon; when walking, everything turned with her; she staggered. Vertigo in the evening, in bed; she had to sit up; after this she had four diarrhoeic stools with violent chills, followed by great heat and sweat over the whole body. Vertigo, as if turning about; when he recovered himself, he found himself with his arms stretched, as if he had endeavoured to lay hold of something. Short, but violent vertigo, in the evening, for ten seconds. Violent vertigo, in the evening, when walking; everything turned with her; the vertigo ceased when standing and returned when walking. *Violent vertigo about noon, she threatened to fall from her chair*. Frequent vertigo about noon, before or after a meal. She staggered when walking, looking at people as if she were intoxicated. Vertigo when closing her eyes, as if she were turning round all the time. Vertigo when stooping, with chilliness and nausea from time to time. Vertigo; when turning about once, *she knew not where she was*; the same fit occurred in the forenoon after stooping. Vertigo with headache and excessive secretion of saliva. °Vertigo with vanishing of ideas. °*Chronic vertigo*. °Various kinds of vertigo.

**Head.**—*Headache* when lying, with nausea; a sort of vertigo when the headache passed off. Violent headache from stooping, (in the open air). Headache over the left eye, with flying spots before the face. Headache when thinking, in the evening. Headache when feeling the slightest vexation. Headache in the morning at the commencement of a walk, and recurring during other motions. Headache in the forehead over the eyes, every morning, rousing her from sleep, gradually going off after rising, twenty-one days in succession. Headache, commencing immediately after lying down, two evenings in succession. Headache, in the night, after evening nausea. Violent, dull headache with nausea, eructations, and waterbrash.—*Dull pain* in the left half of the head. \**Dull, stupefying headache*, (on the vertex). Dull headache, as after a nightly revelry. Violent feeling of *numbness and dizziness*, with oppressive pain in the head, inability and disinclination to work, especially to perform intellectual labour, accompanied with drowsiness; after lying still for a while in a sort of half slumber, that feeling disappears almost entirely, but recurs shortly after rising and moving about, with sensation as if these parts of the head were loose; some parts of the head feeling sore when touched, for several days. Headache, with a confused feeling as is felt at the approach of a catarrh.—In the morning the head feels heavy, weak and confused.—*Heaviness* of the head; he sees through a gauze.—*Fulness* of the head, with obstruction of the ears without diminution of hearing, except when swallowing. Fulness in the brain, not as if filled with blood, and without hindering thinking.—Pain as if the *brain were bruised* or dashed to pieces, from afternoon till bed-time; going off while asleep.—Oppressive headache, here and there, increasing to a pain as if the brain were dashed to pieces on the surface. Pressure, moving to and fro in the head. Oppressive pain in the forehead, extending to the eyes, as if they would be pressed out. Oppressive and pinching headache. *Oppressive headache*, in the forehead over the eyes, two days in succession, from morning till night, with digging-up in the upper parts of the head. Oppressive headache, or a muddled feeling, with jerkings in the head, or tearing every morning; increased during motion after rising. Oppressive headache on one side, going off when walking in the open air, (immediately). Oppressive headache, here and there, on the surface of the brain. Oppressive headache, alternately in the temples and the upper part of the head, with a feeling of fulness in the brain, but not as if there were too much blood. Pressure from the right half of the sinciput to the parts above the eye.—Headache above the eyes, pressing from within outwards, as if the forehead would fall out, more externally. *Pain as if the head would burst*, so violent that she cried out, from six o'clock in the morning until bed-time.—*Constrictive* headache every other day.—*Drawing* with pressure in both temples. Drawing aching pain alternately on either side of the head. Drawing pain at a small spot on the right side of the head, in the evening. Drawing headache, in the morning, passing, towards noon, into a sort of vertigo, with luminous vibrations before the eyes, going off after dinner, recurring at two o'clock, with rapid circulation of the blood, cheerfulness and mental excitement, with inability to perform any kind of work. Cramp-like drawing under the vertex, with stitches in the temples.—*Tearing* in the forehead. Tearing in the temples. Tearing in the upper and right side of the head, as if she were pulled by a hair, when sitting. Slight tearing in the head, especially over the right eye. Violent tearing in the right side of the head, from below upwards, in the evening, when sitting. Frequent twitching in the upper part of the left temple, followed by drawing towards the side of the forehead, after dinner. Periodical twitching-beating pain in the root of the nose, for eight days in succession, every day at nine o'clock in the morning, also extending to the eyes and nose, most violent about noon when she

vomited. *Digging-up sensation* in the head from time to time, with dulness the whole day, extending more towards the right side and nose, both during motion and rest, and diminished only in the open air.—Pain in the sinciput, periodically mingled with stitches, especially in the left side, more in the afternoon and evening. Stitches in the forehead, vertex, sides of the head, in the left sinciput, in the temples, occasionally burning, sometimes with a sensation as if pulled by the hair, or as if the head would burst, sometimes after dinner or in the morning, mostly when sitting, and sometimes going off by friction. Stitches in the left half of the head. Tearing stitches in different parts of the head. Stitches in the right temple, in the evening. Single stitches in the head, *in the evening*. Stitches in the temples, in the evening, with pain in the whole head. *Stitches in the right side of the head*, for several days. Stitches in the occiput. Prickings in the vertex. Stitching and pressure in the occiput, afterwards violent beating in the forehead.—*Beating in the vertex*, also in the left side of the head, especially at the back part. Beating pain in the temples, frequently lasting half an hour. Pulsations in the head, in the morning when waking. Throbbing in the head, when lying. Throbbing pain in and on the upper part of the head, especially when chewing, and painful to the touch. Beating and gnawing in the region of the right parietal bone, apparently in the bone itself, in the evening. Pulsative pain in the right side of the head, deep in the brain, in the evening. Hammering and stitching sensation in the vertex, coming from the front part.—*Shootings* from the side of the head towards the root of the nose and the ball of the right thumb. *Jerks* in the sinciput, as if pieces of lead were shaken in the brain. Shocks in the head, especially during a difficult expulsion of fæces.—*\*Congestion of blood to the head*. Slight rush of blood to the head, towards evening. Intolerable rush of blood to the head. Rush of blood to the head, with burning heat and redness of the face, when sitting.—*Humming* and roaring in the head, almost the whole day. Violent roaring in the head, mostly when sitting.—*Tickling* in the head. Transitory titillating headache, in the forehead.—*A good deal of heat and feeling of heat* in the head, especially in the forehead and face, (likewise on the hands,) sometimes accompanied with throbbing in the head sometimes arising from the back and going off in the open air. Heat in the head and then in the whole body. Feeling of heat in the head, and sensation as if a foreign body were moving about in it.—*Burning pain in the region of the forehead*, sometimes with nausea. *Coldness* of the left side of the head, with pain deep in the ear. Frequent alternation of coolness and heat of the head and body. Sensation, when remaining in the open air, as if the brain would become congealed.—*Her head feels easier in the open air*. Her headache, except a sort of confused feeling in the head and obstruction of the ears, disappears almost entirely after dinner; it returns in the warm room.

**Scalp.**—Sensitiveness and twitching on the vertex, as if pulled by the hair. Boring and beating in the right side of the scalp, when sitting. Burning pain about the head; it felt hot, without the temperature of the rest of the body being increased, accompanied with loss of appetite, and the prover is obliged to lie down. °Stinging on the side of the head. Tearing-drawing pain on both sides of the head, with painfulness of the hair when touched; the pain commences in the evening and increases during the night. Pain in the vertex, as if ecchymozed.—Liability of the head to take cold.—Pressure on several parts of the head, as if *nodosities* were under the skin. Shining, *painless*, uninfamed *tumour* on the forehead, with violent headache over the eyes. °*Exostosis* on the hairy scalp.—Pressure on the hairy scalp, in the face and on the neck.—*Violent itching* of the hairy scalp. \**A number of scales on the hairy scalp*, itching oc-

asionally. *Itching blotches on the hairy scalp*, painful like boils when touched. °Dry scales. Smarting of the eruption on the head, although itching but little. —\**Great falling out of the hair*, (the first days). The roots of the hairs seem to be dry. A spot over the ear becomes bald.—Sensation as if the skin on the forehead were too tight, with anxiety for many days. Cramp-like contractive pain on the head, afternoon and evening. Cold cramp-pain on the whole left side of the head.

**Eyes.**—Tickling of the periosteum around the eyes. Digging-up pain in the eyes.—*Pressure* in the upper eyelids. Pressure and heaviness of the eyes, as if one would go to sleep. Pressure in the eyes, with dimness. Dull aching in the orbit. Pressure in the eyes, as from sand. Pressure and stitching in the eyes, they are dim and dull. Pain of the eyeballs, as if pressed upon, the pain is increased by seeing. Pressure and burning in the eyes, for two days.—Tension in the eyes.—Stitch and tearing in the right eyeball, in the afternoon when sitting. Stinging and dryness in the eyes. Stitches in the left eye, and a sty on the lower lid. Stitching behind the eyes. Fine stinging in the inner canthi, worse in the open air, in the morning.—Frequent *itching* of the eyelids, in the day. Itching of the eyes. Sensation in the right outer canthus as if something acrid, salt or smarting were in it, without redness. Smarting and dryness of the eyes, when reading.—\**Determination of blood* to the eyes, he feels the eyeballs, but the feeling is not unpleasant.—Burning of the eyeball for half a minute. Burning pain in and around the eye. Burning of the upper eyelids. Heat and burning of the eyes, frequently during the day, for four or five minutes.—\**Inflammation of the eyes*, °with heat in the eyes, and pressure as from a grain of sand; -with burning and itching in the eyes. Inflammation of the eyes with stitches. Inflammation of the right eye, the left being weak. \**Inflammation and redness* of the eye, -with itching and painful pressure. *Redness of the eyes*, with itching and smarting, and copious discharge of a burning and smarting fluid. Redness of the conjunctiva, with sensation as if something had got into the eye, obliging him to wipe and rub constantly. Redness, inflammation, swelling, and agglutination of the right eye, with burning pain, for two days. Yellowness of the white of the eye. °*Scrofulous ophthalmia*.—°*Arthritic ophthalmia*.?—*Swelling of the right upper eyelid*, with itching and pressure. A kind of puffiness of the right upper lid. Swelling of the left eyelid, with pain of the bone of the orbit when touching it. *Tumour* on the border of the orbit.—*Dryness of the eyes*, also in the morning when waking. Feeling of dryness in the eyes.—*Lachrymation*, in the morning, when at one's work, and dimness. *Lachrymation in the open air*, °and in the wind. Violent lachrymation, even at night. Lachrymation, smarting, and mucus in the right eye, in the evening. Watery and dim eyes when reading. The eyes run so much that the eyelids are glued to the eyes.—\**Agglutination of the eyelids in the morning when waking*, and difficulty of opening them. Agglutination of the inner canthi, in the morning. Agglutination of the eyelids, in the morning, with burning and stinging in the eyes and seeing through a gauze. Agglutination of the eyelids in the morning, \**with secretion of gum during the day*. °Difficulty of opening the lids. *Winking of the eyelids and of the external canthus of the left eye*, recurring frequently. °Photophobia of scrofulous persons. The eyes are dazzled by the light of day. *Pain of the eyes by candle-light*, particularly when reading (in the day-time).—Weak, languid, drowsy eyes. Weak eyes, especially in the morning on waking; the weakness disappears somewhat after rising. Vanishing of sight when reading. Inclination to look only with one eye.—*Short-sightedness*; the outlines of distant things seem effaced. She is obliged to hold things close to her eyes when desirous of seeing them distinctly; things

at a distance appear as if in a smoke or through a gauze; even when holding things near to her she is unable to look at them steadily for a long time; she sees better when dilating the pupils while shading the eye with her hand.—Early at day-break he sees more distinctly than in the day-time. He sees everything *through a gauze*, with some loss of consciousness. °*Blackness before his eyes*. °Darkness at candle-light. The eyes are very dark, he sees little. \**Frequent attacks of sudden blindness in the day-time, and sensation as if a gray cover were hanging over the eyes*. *Sensation as of a black gauze before the right eye*. °Cataract. °Glaucoma. °Amaurosis.—*Dark bodies and spots before the eyes*. \**Black, passing spots before the eyes*. Large, black spots hovering before the eyes after a meal. Tremulous vibrations of things when looking at them early in the morning when waking; their outlines seemed to be confused. Luminous vibrations before the eyes, and whizzing in the head. Sparks before the eyes, in the dark. Green halo around the light of a candle, in the evening.

**Ears.**—*Dragging pain in the ears*. Pressure in both ears, or in front of the ears, (in a warm room, going off in the cold). Intense *drawing pain* in both ears. Dull drawing pain in the lobule. *Tearing* in and under the right ear, when sitting, going off by friction. Fearful tearing and sticking in the ear and head, as if the head would fly to pieces. Jerking in the left ear. Violent darting from the left ear to the lobule, when sitting. Severe stitches deep in both ears. Stitching in the right lobule. Frequent, intensely-painful prickings in the right meatus auditorius externus. Pain in the right lobule, as if squeezing it with the hand, so sensitive that she could not bear it to be touched by a handkerchief, going off in the evening. *Violent itching of the ear*. Pulsations in the ear, after a quick walk. *Throbbing in the ear*. Violent stitching beating on the posterior surface of the lobule.—*Heat and redness* of the ear. Moisture in the ear. Feeling of dryness in the ear, with and without whizzing.—*Pimples* in the ear, with stitching. *Vesicles* on the concha, with a burning pain. Vesicles behind the ears.—Troublesome tension in the parotid gland, especially when stooping; it is painful to the touch. Occasional burning in the parotid gland.—*Strong echo* in the ears in the morning. One's own and other people's words resound strongly in one's ears, like an echo. Every tone which is uttered distinctly by somebody, is re-echoed unchanged. A sort of groaning in the head, when talking aloud, he dared not speak in a loud tone.—The right ear *feels obstructed* occasionally. Sudden darting in the left ear, afterwards roaring; followed at times by hard hearing, at times by the discharge of a yellow fluid, for several weeks; after pressing on the ears, she hears better for a moment.—\**Loud whizzing before the ears*.—*Humming in the ears*, as if a gauze were stretched across. Ringing in the left ear. °Constant buzzing in the ears. Continual singing before the ears, worse when lying.—\**Hard hearing*, with sensation as of a foreign body being in the ears. °Does not hear speech well. °Congestive deafness. °Affections of the hearing after typhoid and inflammatory diseases.

**Nose.**—Severe pain in the nose, in the forenoon. Feeling of fulness in the nose. Feeling of pressure in the nose, as in catarrh. Itching and tickling in and about the nose. Sore pain of both nostrils, also when feeling them. Vesicles in the right nostril, burning when feeling them.—*Dark redness* of one of the wings of the nose, with smarting pain when touching the part. *Inflammation* of the interior of the nose, with feeling of dryness and slow bleeding of the nose. *Swelling* of the nose during catarrh. °Scrofulous swelling of the nose. Ulcerated nostrils. Itching and *pimples* on the nose. Painful pimple in the right wing of the nose. Vesicles in and around the nose; it looks inflamed. *Freckles* on the nose, in the morning, after having spent part of the night in performing some bodily exercise which made him feel very warm. *Clots* in the nose.

Dry, hard crusts in the nose. Frequent *coagula* in the nose, without itching or obstruction. °Polypus of the nose.—Itching of the nose; it bleeds when rubbing it. Blood with the nasal mucus. Violent *bleeding of the nose*. Bleeding of the nose, especially when going to stool. \*Frequent discharge of blood from the nose, -particularly early in the morning, with yellow mucus from the nose.—Acute smell, especially for offensive things or *during headache*. °Loss of smell. °Fetid smell from the nose.—Frequent sneezing. Sneezing, with violent pain in the throat, as if something would tear. Sneezing with rumbling in the left groin. Spasmodic sneezing, with violent sensation in the head, contortion of the limbs, and constriction of the chest. Coryza and feeling of fulness in the nose, particularly high in the left nostril, with loose mucus.—\**Obstruction of the nose*, every morning.—*Feeling of dryness in the nose*, with sensation as if the walls would adhere to each other.—\**Discharge of mucus from the nose*, without coryza. Discharge of water from the nose in the open air, no mucus. Sensation as if drops of water were flowing out of the nose. \**Green-yellow discharge from the nose*. \*Discharge of *yellow mucus* from the nose, also early in the morning, and with discharge of blood. Feeling of obstruction in the nose, with dulness of the head, as if a cold were approaching.—*Dry coryza*. She blows her nose all the time. *Coryza*, with heat in the head.—*Fluent coryza*, of one nostril, the other being obstructed. Violent fluent coryza, with great dulness of the head, want of appetite and general sick feeling. Coryza with inflammation of the throat and great dulness of the head. Frequent alternation of fluent and dry coryza.

**Face.**—\**Pale face*. Sudden, striking paleness of the face, with chilliness, colic, and headache. \**Pale, sickly complexion*. Sunken eyes, with blue margins. Sunken, livid countenance, *with deep, hollow eyes and blue margins around*. \**Hippocratic countenance*.—Excessive, almost blue redness of the cheeks, without feeling hot, in the morning. °Circumscribed redness of the face. Red and hot face, with some sweat on the forehead, and dulness of the head. Great heat in the face after washing, with red spots. Flush of warmth on the upper part of the face, with increased redness and cloudiness of sight. Glowing heat for two hours, every evening, on either cheek, without thirst.—*Burning in the face*, around the nose and upper lip, as if from acrid humour. °Burning and redness of the cheeks. Sweat in the face, with nausea; the face feeling cold, in the afternoon. *Rush of blood* to the face, with feeling of distention in the open air, going off in the room. Puffiness of the face on the side on which he has been lying.—\**Puffiness and swelling around the eyes*. Painless swelling of the cheek and gums.—\**Pimples* on the face and on the wing of the nose. Violent *itching of the face*. Frequent *pustules and scurf* on the face, after the slightest excoarations. Rough, red, marbled and somewhat elevated eruption on the face. Single red *pimples*. *Miliary eruptions* on the forehead and chin. \**Tension of the skin* of the face, °also on one side only. The skin on the face *peels off*. Burning smarting of the skin, as after staying in the cold open air.—*Twitchings* of the malar muscles.—Aching of the *malar and parietal bones*, and of the teeth, especially when chewing warm food, and when entering a warm room coming out of the cold air. Pressure from without inwards above the orbit of the left eye, after dinner. Tension in the malar bones, as if violently pressed towards each other, going off by friction.—\**Increasing tearing* in the facial bones and temples, as if every part would be torn out, until evening. \**Tearing in the jaws*, in the evening, when lying, -ceasing when eating and moving the jaws. Tearing in the lower border of the orbit, as if the flesh would be torn off. Violent tearing below the right ear.—Twitching in the left malar bones going off after friction.—Violent *stitch* from the middle of the left lower jaw, through

the cheek and eye, coming out at the forehead. Stitch in the left cheek. °Sticking in the malar bones. °Pain on one side when opening the mouth.— °The pains in the face come on again after the least cold, when talking, eating, or by contact.—\**Dry lips, the whole day.* Blue lips. Burning stitches in the margin of the upper lip, when sitting. Both lips burn like fire. Burning pain in the vermilion border of the lower lip, with white vesicles on the inner side, burning and painful. *Rhagades in the middle of the lower lip.* Itching of the upper lip, with pain after friction. The upper lip is swollen every morning. *Eruption* on the vermilion border of both lips, sometimes with stitches. Pustule in the corner of the mouth. Painful vesicles on the internal surface of the lower lip, of the size of peas, and filled with lymph. *Herpes* in the left corner of the mouth, with cutting and stitching. Herpes over the upper lip. Rough skin around both lips. Ulcerated corner of the mouth. Pimple in the right corner of the mouth. Painful ulcer on the inner surface of the lower lip.

**Jaws and Teeth.**—Pressure, drawing and tearing in the lower jaw, towards the chin. Closing of the jaws. Involuntary *grinding* of the teeth, as from a cramp, somewhat painful. Jerkings in the lower jaw, almost like toothache. Violent drawing in the lower jaw. Glandular swellings in the region of the articulation of the lower jaw.—\**Toothache* -with swelling of the cheeks. Violent toothache, three evenings in succession, in bed. Violent toothache on the left side; two days after, painful swelling of the neck, with five large, white vesicles in the mouth. Toothache, only at night when in bed, going off by rising. °Toothache from the least cold, with pyalism. Toothache in a hollow tooth, excited and increased by the warmth of the bed. Toothache when walking in the open air. Toothache, (tearing?) in the upper incisores, excited by cold air, warm food and contact. Violent pain in the left molares, when blowing the nose violently, ending with chattering of teeth and subsequent redness of the cheeks.—Pressure on the left upper and lower teeth, from behind forwards.—*Drawing toothache*, with cold hands and feet. Drawing pain in the anterior incisores. Drawing and digging-up sensation in the teeth. *Drawing in one of the lower molares*, also succeeded by darting from the right upper jaw to the ear, early in the morning.—Darting tearing in the roots of the upper and right molares. Darting in decayed teeth, when opening the mouth, with great sensitiveness of the teeth when touched by the tongue, excited again by food getting into the teeth.—*Tearing* in the teeth, every day, evening or morning, especially in the open air, or when entering the room, coming out of the air. Tearing from the upper molares to the malar bones. Tearing in an empty socket, going off by pressing upon it. Tearing in the upper and right molares, abating when pressing on them.—Violent *stitching pain* in the upper foreteeth, with swelling of the upper lip.—*Gnawing* in a lower left molar tooth. Continual boring in a right molar tooth. Violent gnawing and boring in a tooth, morning and evening, when lying in bed.—Beating, jerking, and stitching in the teeth when exposed to the least air, not in the room or when covering the cheek. °Sticking in the teeth, every night until two o'clock.—*Sore pain* in the teeth. Pain as from subcutaneous ulceration, when pressing the teeth together.—When biting upon the teeth, they feel smooth as if greased with soap or fat in the morning. Bleeding *ulcer* on the gums over a hollow molar tooth. A tooth becomes *hollow*. *Dull* teeth. The teeth are *loose*, this prevents her from chewing. All the lower foreteeth are loose, they can be taken out. Sudden *bleeding* of the upper molar teeth, without any apparent cause.—Soreness of the gums. *Painful sensitiveness of the gums*, hindering eating, with two small ulcers on the gums. Itching and beating in the gums. Burning and soreness of the inner gums on the upper foreteeth.—Painful sore swelling of the gums. *Inflammation* of the

gums. The gums over the carious teeth are swollen. Swelling and itching of the gums. Ulcer on the gums after toothache. Ulcer on the gums, with swelling of the upper lip. Bleeding of the gums at the slightest touch. *The gums bleed easily*, and stand off from the teeth.

**Mouth.**—Blood gets into the mouth. Painful *blotch* on the inner side of the cheek. Pain of the *frenulum linguæ* and the palate, hindering eating and talking. Painful sensitiveness of the mouth, gums and palate. °Soreness of the inner mouth. Roughness of the mouth and sore feeling in different places. Painful *vesicles* in the mouth, with sore throat when swallowing, and with thirst. —Swelling of the root of the *tongue*. Fine stinging in the tip of the tongue. Prickling sensation of the *frenum linguæ*. Sensation in the tip of the tongue as if rough and burnt. \**Dry tongue*. \**White mucus on the tongue*, with slimy mouth. *Furred tongue*. A number of small, red, bleeding tips on the anterior surface of the tongue. Two small, clear *vesicles* on the tip of the tongue, burning when touching them. Burning, white-coated tongue in the night.—Prickling itching of the back part of the fauces, as in catarrh. Intolerable tickling in the palate. Burning in the upper part of the palate. Blisters on the palate, bursting and suppurating. Sensation in the palate as if the skin would become detached, it became shrivelled and painful. Stitch in the upper part of the palate, immediately after dinner.

**Pharynx and Œsophagus.**—Rawsness and soreness in the back part of the throat, with dark redness.—Sore throat as if the uvula were swollen. Pain in the throat when sneezing and gaping.—Pressure in the throat, in the morning. Sticking with pressure in the pit of the throat.—Pressure in the upper part of the throat, in the direction of the stomach.—*Scraping* in the throat, afternoon and evening.—Stinging sore throat, when swallowing.—*Burning* in the pharynx °also with scraping or smarting as if excoriated.—Painful irritation of the tongue and œsophagus, as if a pin were thrust down.—Dragging sensation in the upper part of the œsophagus. Troublesome, painful *deglutition*, towards noon. Sensation of tightness about the throat.—*Swelling of the tonsils*, particularly of the left, impeding deglutition and the motion of the head.—*Dryness in the pharynx and fauces*, °day and night. Accumulation of mucus in the throat. \**Hawking up of mucus, in the morning*. °He throws off much less mucus in the morning than usual. He hawks up a gray saltish expectoration. Discharge of sour mucus.

**Taste and Appetite.**—Bad, viscid taste in the mouth, in the morning when rising. °Slimy taste, or taste as of bad cheese. Saltish-sweet, sourish taste, with sensation in the mouth as of much mucus accumulating in it. *Sweet* taste in the throat, occasioning accumulation of saliva.—*Bitter taste in the mouth*, the whole day. Breakfast tastes bitter. Acrib bitterness in the fauces, with roughness.—Sour taste in the mouth, she has to spit a good deal. Acidity in the throat and scratching in the gullet. *Sour taste in the mouth, after drinking milk*. Acidity after a meal. Increase of acidity after every meal, and pulsative headache in the forehead. Everything, even the most innocent, turns sour with her.—Doughy taste of bread.—°Loss of taste.—She does not relish food, but she would like to drink all the time. Loss of appetite in the morning, with white tongue, and repletion in the pit of the stomach, the food having a good taste. Aversion to boiled milk. Diminished sense of taste; food has its natural taste, but less of it; spirituous drinks taste like water.—No appetite, no thirst.—Thirst after getting up in the morning. Much thirst for water. °Panting for refreshing things.—No hunger, the whole day; but when eating, she eats with an appetite. °Hunger after a meal. \**Canine hunger*, -also in the night,

followed by languor with heat and sweat, afterwards chilliness with external coldness and chattering of teeth.

**Gastric Symptoms.**—Sour eructations after taking milk. °Water-brash after acid things. °Nausea and palpitation of the heart from smoking.—The pains commence at dinner or supper, and continue during the meal.—Uncomfortable feeling of repletion after a meal, he never had it before. When scarcely satisfying his appetite in the evening, he feels an uncomfortableness in the pit of the stomach; his sleep is restless, and he has no appetite next morning. Qualmishness in the region of the stomach, after dinner, almost every day, as if he would vomit. After a meal the saliva tastes of the ingesta. Repletion as high as the throat, this took away her appetite. Empty eructations after a meal. Hiccough after a meal. Repletion in the abdomen, after eating with appetite. Headache after dinner, every day. After dinner her head feels so confused that she is scarcely able to collect her senses. Heat in the face, after dinner. A sort of vertigo after supper, the objects appeared partially obscured and invisible, the sight being impeded by zigzag vibrations of light, and rings before the eyes; his head seemed to turn, and he knew not whether he was sitting on his chair. Drowsiness while eating, or after a meal. \**Irresistible sleep* after dinner. °Indolence. Pain in the stomach an hour after dinner, going off shortly. Pressure in the stomach after a meal. A few hours after dinner she feels qualmish as if nauseated, she is obliged to sit down. °Qualmishness in the abdomen, after breakfast. Violent pulsations below the pit of the stomach, shortly after a meal. Oppression of the chest and shortness of breathing, after a meal. Shocks of the heart, for two hours, after dinner, obliging her to cough frequently, and causing flushes of the face. Oppressed breathing after the least meal. Oppression of the chest after dinner, with anxiety. Anxious pressure in the abdomen, after every meal, with distention. Tension and pressure in the region of the stomach, after a meal, with distention of the abdomen. °Oppressive anxiety and heat. Anguish and agitation of the blood, after a slight meal. °Burning in the hands. Scratching sensation in the mouth and great weariness after a meal; walking exhausted him a good deal, he felt chilly and out of humour. Great weakness in the whole body after a meal, and especially in the affected part. Vesicles on the tongue, an hour after a meal. Colic, with tension, after dinner and supper, with rumbling in the abdomen. Violent pressing on the rectum after a meal.—*Great weakness of digestion.*—\**Frequent eructations*; the stomach feels as if it were distended with air. Constant eructations, with fermentation in the abdomen. Frequent eructations tasting of urine. Eructations tasting of oranges. \**During an eructation, pain in the upper orifice* of the stomach, as if something would tear off. Ineffectual eructations, with pressure in the chest. *Empty eructations.* Frequent ineffectual eructations, *with sensation as if the hypochondria were filled with air*, which could not be sufficiently expelled. When eating something, he has empty eructations, afterwards tasting of the ingesta, as if he did not digest. Eructations with burning. *Frequent eructations and yawning.* Eructations with accumulation of water and contraction in the mouth, increasing unto retching, accompanied with expulsion of mucus, followed by eructations and yawning. Bitter eructations. Violent eructations causing a pain in the chest. °Spasmodic eructations. *Violent eructations tasting of the ingesta*, with rumbling in the abdomen. \**Sour eructations after every meal.* Sour eructations in the evening. Eructations with the smell and taste of phosphorus, and blue fumes from the mouth. Eructations tasting of phosphorus, with yawning, burning and roughness in the throat, expectoration of mucus and

dulness of the head. Eructations tasting of olive-oil, and rising through the nose, from which a white vapour is seen to issue. Gulping up of bitter, rancid water. \**Sour regurgitation of food*, with eructations having a repulsive taste, sometimes after a meal, for several days. *Gulping up of bile*, when stopping.—Rising of water from the stomach into the fauces.—*Heartburn*, morning and afternoon. Heartburn, after eating a little fat.—Frequent hiccough during the day, also before a meal. Hiccough after a meal, so violent that the pit of the stomach feels sore and aching.—Loathing, also with shaking, for two days.—Nausea, with expectoration of much mucus, without cough. *Qualmishness in the stomach*, in the forenoon. Nausea in the stomach, with vertigo, oppression in the pit of the stomach, and eructations tasting of phosphorus. *Constant nausea*. Nausea almost the whole day. Nausea with great thirst, also with loss of appetite and necessity to lie down. Nausea, noon and afternoon, going off after drinking. Nausea, in the evening when in bed, causing her to talk in a faint tone of voice. Nausea the whole day, and vomiting in the evening. Nausea, late in the evening, unto fainting and vomiting. Nausea and inclination to vomit, unto fainting, either in the forenoon or evening. °Nausea with hunger, early in the morning.—Nausea and inclination to vomit, in the morning, until breakfast. Nausea unto vomiting, and frequent inclination to faint, with dull pressure in the pit of the stomach, making every external covering intolerable.—\**Water-brash* °after acids. Water-brash after a meal, with eructations, nausea and flow of water from the mouth.—*Vomiting*, several times. Ineffectual urging to vomit, while suffering the most horrible tortures; nothing relieved him except drinking cold water. Empty vomiting. Violent vomiting. Vomiting, accompanied with excessive weakness, small, quick pulse, and pains in the abdomen; death. Continual vomiting; internal spasms, absence of mind, paralysis of the arm, death. Vomiting and nausea when riding in a carriage. \**Vomiting of the ingesta*, -in the evening. Vomiting of mucus, with taste of olive-oil, in the night. \**Vomiting of bile several times*. \**Vomiting of bile for eighteen hours*; twenty-four hours after, nausea unto vomiting, and loss of appetite, with natural taste in the mouth. *Sour, bilious vomiting*, towards evening, preceded by vertigo with nausea; at the same time the hands and then the feet became icy-cold and completely numb; cold sweat on the forehead; after several attacks of vomiting during the space of two hours, he had two natural stools; nausea and coldness disappeared only after lying down. \**Sour vomiting*. Green, blackish vomiting. °*Hæmatemesis*. °Vomiting with diarrhœa. °*Asiatic cholera*.

**Stomach.**—Pains in the stomach, with nausea and desire to vomit. Qualmishness in the pit of the stomach, and soon after shuddering.—\**The region of the stomach is painful to the touch*. The stomach feels empty and fasting. \**Painfulness of the stomach when walking*. °Painfulness of the pit of the stomach to the touch.—Deranged, weak stomach, for a long time. Weak digestion. He digests with difficulty those things which he used to eat without any trouble. Distensive pain in the stomach, until evening. *Violent pain in the stomach*, gradually extending over the whole abdomen, with vomiting, first of greenish, then of blackish substances.—\**Pressure at a small spot* in the stomach, and at the same time in the right temple. Pressure in the region of the cardiac orifice, especially when swallowing bread, which appears to remain lodged there. *Continual pressure in the pit of the stomach*, even before breakfast, but most when sitting. Pressure over the pit of the stomach, as from a large body, with coldness, (immediately). Pressure in the stomach, in the morning when in bed, and in the evening. \**Pressure in the stomach after a meal*, as if it contained a load. Excessive pressure in and above the pit of the stomach, afterwards in the

whole sternum and in the region of the ribs, arresting the breathing, when walking and sitting.—*\*Repletion in the stomach* with pressure and shifting of flatulence. Puffiness of the stomach and abdomen with inclination to eructate, the eructations affording no relief. Feeling of heaviness in the stomach.—Sensation, when sitting, as if the stomach were held together from side to side. *Cramp-feeling* in the stomach, pit of the stomach and chest, resembling a chilly tremulousness. *\*Cramp in the stomach*, also in the evening, on lying down. Pain in the stomach, as if *pressed together*, in the morning when in bed, after sweating. Tensive *contraction* of the stomach, with sourish eructations. Contractive *pinching* in the stomach. Contraction and gnawing in the stomach. *\*Gripping in the region of the stomach*, in paroxysms, lasting some minutes, also with arrest of breathing, and at night with writhing pain.—*Drawing* and stretching in the stomach, when riding in a carriage. Drawing pain in the pit of the stomach, extending into the chest. *Cutting* in the region of the stomach. Stitches over the stomach and through the abdomen, which then became enlarged. *Stitching in the pit of the stomach*, arresting the breathing, going off by eructations, every evening.—*Rumbling* in the stomach, or sensation as if bubbles burst in the stomach.—*Feeling of coldness* in the stomach, sometimes alternating with heat. Violent, burning heat in the stomach, sometimes issuing from the mouth like gas. *\*Burning in the stomach*, also extending to the throat and bowels. Violent burning in the stomach, with violent thirst, anguish and convulsions of the face, cold limbs, clear, running eyes, pale lips, weak pulse, vanishing of strength, death. Burning and cutting or burning and oppressive weight in the region of the stomach.—*°Burning* in the pit of the stomach.—*\*Inflammation of the stomach*. Inflammation and gangrene of the stomach and intestinal canal, with violent burning and cutting.—*°The pains in the stomach* come on again after eating, in the evening and at night.—*°Sort of contraction of the pit of the stomach*, with regurgitation of the food almost as soon as swallowed.

**Hypochondria.**—Pinching in the *hypochondria*, at a small spot, particularly in the right, going off by rubbing. Drawing cutting during a walk. Pressing from incarcerated flatulence, with oppression of the chest.—Violent pain in the left hypochondrium, he was not able to stoop, or to lie on the right side. Anxiousness below the left side of the chest, with bitter eructations every day. Stitches below the left chest, with much anxiety. Violent pinching in the left hypochondrium, towards the epigastrium; afterwards sensation in that place as if something living were moving about there, when sitting or standing.—Sensitiveness of the *region of the liver*; when touching it, one experiences a dull pressure in it, especially when lying on the right side. *Stitches* in the region of the liver, also from without inwards, sometimes accompanied with burning of the skin, which passes off by rubbing, or with sensation as if she were held fast in that region.

**Abdomen.**—Drawing aching pain in the *epigastrium*, and as if the place were sore. Tension in the epigastrium, at every movement of the trunk. Pinching and cutting in the epigastrium, when walking.—*\*Colic, in the morning*. Colic in cool weather. *Violent pain in the whole abdomen*.—*Pressure* in the abdomen, towards the small of the back, as if caused by flatulence, with scanty emission thereof. *Pressure in the hypogastrium, in the forenoon*, and also after supper, (the first days). Pressure in the lower part of the abdomen, as if he would evacuate the bowels. Spasmodic pressure, deep in the abdomen, near the genital organs, in the morning when in bed. Pressure in the abdomen, every morning when waking, as if upon the bladder. Occasionally a very painful, contractive pressure in the whole abdomen, of short duration.—*Contractive sensation* in the left side of the abdomen. Occasional contractive pain in the intes-

tines. Burning contractive pain in the abdomen, as if the menses would make their appearance at night, (the menses had stopped a few days previous,) excessively painful.—Spasmodic griping and contraction, apparently in the uterus, in the evening, when stooping and afterwards.—*Pinching* in the abdomen, with discharge of a brown fluid, followed by some burning and cessation of the colic. Violent *cutting* in the abdomen, followed by discharge of liquid stool, jerking out suddenly. Cutting after a meal, during a walk. Cutting from the left side of the hypogastrium across the umbilicus, with pain on pressure, as if the part were swollen. Cutting before bed-time.—Fine *stinging* in the left side of the abdomen below the false ribs. Stitching colic, with pale complexion, chilliness and headache, at noon. Occasional transverse stitches in the abdomen. Jerking and stitching in the hypogastrium, in the morning. Stitch from the hypogastrium to the perinæum.—Tearing in the abdomen with urging to stool.—Occasionally a sudden pinching in the hypogastrium, followed by emission of flatulence. Pain, as if something in the abdomen had burst. Pain above the right hip, in the abdomen, as if something were swollen and injured; pain as if bruised when touching the part. *Sore or inflammatory pain* in the abdomen, extending to the genital organs, especially painful when touching the parts, as if the bowels were sore, with weakness. Sore and stitching pain in the abdomen, relieved by lying on the abdomen.—Cramp-colic, first in the right side, afterwards towards the back, (also in the right testicle,) and upwards towards the region of the stomach, with sweat, loud moaning and distortion of the muscles of the face. Colic, as if diarrhœa would come on, short but recurring frequently; afterwards great soreness above the ilium, when pressing from without. Colic, followed by sour-smelling diarrhœic stool, leaving some tenesmus and burning, accompanied with erection.—*Feeling of coldness, and coldness in the abdomen.* Heat in the abdomen and face, in the morning. \**Burning* -and pressure in the abdomen, followed by soft stool.—*Feeling of emptiness* in the abdomen, after emission of much flatulence. Great feeling of weakness in the abdomen and back, she had to lie down. \**Relaxed feeling* in the abdomen.—Sensitiveness of the abdomen below the umbilicus.—Distention of the abdomen, and sensation as if distended, sometimes with pressure, sometimes relieved by motion, sometimes with difficulty of drawing a deep breath, or with pain as if bruised in the small of the back and abdomen, when touching the parts. Distention, relieved by taking coffee. Bloated, extremely-sensitive abdomen. *Oppressive fulness* of the abdomen, towards the stomach, especially after midnight. Sensation as if flatulence were rising from the abdomen into the throat; this rising ceased as soon as eructations set in. \**Incarceration of flatulence*, -with coldness of the body and heat in the face. Distention of the abdomen from flatulence, notwithstanding the emission of much flatulence. *Full, distended abdomen* when eating but little. Colic, extending from the region of the inguinal hernia to the stomach. Flatulent colic, especially in the sides of the abdomen, as if the flatulence were incarcerated here and there; it passes off with great exertion in the space of twelve hours in the shape of short, broken flatus. Oppressive incarceration of flatulence in the abdomen, when sitting or lying, almost imperceptible when walking; sensation as if the abdomen were being drawn inwards, causing an unpleasant feeling.—\*Pressing in the abdomen, sometimes towards the small of the back, °or in the sides. \*Rumbling, -as if diarrhœa would set in, or painful, after eating. \*Rumbling, -with emission of flatulence.—Ineffectual urging to emit flatulence. Emission of a *quantity of flatulence*. Emission of flatulence, shortly after, stool in small pieces, with prickling in the rectum, leaving the parts sensitive a long while after.—Itching of the umbilicus, which cannot be removed by scratching. \**Large yellow spots* on the abdomen, on the side of the umbilicus. Two *boils*

on the abdomen.—Aching in the left *groin*. Great pain in the region of the inguinal hernia, even without touching it, during the menses. Swelling of the inguinal glands. Tumour in the groin, with burning pain. Painful pressure towards both inguinal rings. during an attack of flatulent colic, as if inguinal hernia would set in. Protrusion of the inguinal hernia, during soft stool; it is painful as if incarcerated, when stooping, touching it, or when walking, or even when lying on that side of the abdomen; it cannot be reduced with the hand. Rumbling in the region of the inguinal hernia.

**Stool.**—*No stool, during the first days.* Constipation for six days; with pressure in the pit of the stomach after a meal, distention of the abdomen, and incarceration of flatulence.—*Difficult expulsion of feces.*—Stool with violent pressing, only a little piece being passed at the time. Violent pressing, the stool not being hard. Scanty stool, followed by discharge of blood from the anus *Costiveness the first four days.* Hard stool in small lumps. Hard stool covered with mucus. Hard stool, with cutting in the anus. °*Paralysis of the intestinal canal.*—Scanty stool, followed by discharge of blood from the anus.—°The stool is too dry.—°*Several good stools a day*, only a little each time. Pinching in the abdomen, after which stool with contraction of the rectum; in two hours another evacuation, without pinching, preceded by copious emission of flatulence, and followed by contraction of the anus.—°*Soft stool*, -with pressing and cutting, in the larger intestines. The stool feels hot when passing. °*Papescent stool* -at an unusual period (the first days). Diarrhoea with tenesmus of the rectum, for sixteen days, relieved by coffee. *Half-liquid stool.* Diarrhoea, preceded by shifting of flatulence and pinching around the umbilicus, accompanied or succeeded by burning at the anus, or passing out with force. °*Chronic diarrhoea.* Diarrhoea, with expulsion of ascarides °Slimy, °bloody, °watery, °exhausting diarrhoea of phthisicky persons. °Typhoid diarrhoea. °Alternate diarrhoea and constipation of old people. —*Green stool* (of a baby whose nurse had taken phosphorus). Green, rather loose stools. Green and black stools. Gray stool. The loose stool is mixed with lumps of white mucus. Shining stools. °Undigested stool. °Involuntary stool.—Heat in the body previous to stool. Stool is preceded by violent chilliness. Colic previous to the hard stool. Stool is preceded by violent contractive pain, with stitches in the rectum. Sore pressure at the anus, before and during the hard stool. °Violent urging before stool.—Tingling and itching in the rectum during the soft stool. *Erosive pain in the rectum during the rather loose stool.* Darting pain, during stool, from the os coccygis through the spine, as far as the vertex, the head being drawn backwards by it. Protrusion of varices during stool, with burning pain when touching them, or when sitting and walking, (after some hours). °*Blood with the stool* for two mornings.—Soreness of the rectum *after stool.* Sharp scraping and burning at the anus, frequently, after stool, with burning desire to urinate, without much urine being passed. Tenesmus after stool. Frightful tenesmus of the rectum, some time after stool. Pain above the anus after making a slight effort at stool, six days in succession. *Violent burning at the anus and rectum, after a soft stool, and great weakness.* Great relaxation in the abdomen, after loose stool. Giddy and near fainting after the second stool. Sour vomiting, or retching after stool, several mornings in succession. Shortly after stool, a white, corrosive mucus is discharged from the anus.—Tearing in the rectum. *Prickings in the rectum, between the evacuations.* Burning at the rectum. Tearings in the rectum and the genital organs, so violent that one comes near falling down. Continued cramp-like pushing around the rectum. Severe, troublesome cramp in the rectum, in the morning when in bed. Sensation in the rectum in the evening, as if the passage of the

fæces were prevented by something obstructing the rectum, the stool not being hard. The rectum feels contracted; during the passage of the fæces, which are not hard, an acrid sore pain is felt in the rectum, continuing for several hours and extending into the abdomen.—Prickling at the *anus*, when walking. *Sticking at the anus*. Violent pain at the anus, as if the abdomen would be torn asunder, with cutting and movement of flatulence in the abdomen, and constant unsuccessful desire for stool; heat in the hands, and anxiety; the pain was relieved by applying warm cloths. Cutting in the anus and rectum, especially in the evening. *Gnawing and itching of the anus*. Tickling of the anus after a walk in the open air.—Sore pain of the *varices*, for many days, when sitting or lying, with violent pressure and stitches in the varices when rising. *Hemorrhage from the anus or rectum*, (also during emission of flatulence). °Mucous discharge from the anus, which is constantly open.—°*Tenia*. °*Ascarides* with stool.

**Urinary Organs.**—Great desire to evacuate the bladder and bowels. Sudden desire to urinate in the morning.—He was unable to retain his urine, owing to a violent desire to urinate. Frequent emission of the ordinary quantity of urine, five emissions in two hours, in the morning after rising, for some days. Frequent micturition, little at a time.—Profuse micturition. Increased emission of dark brown urine, smelling of garlic and sulphur.—Frequent micturition in the night. *Involuntary emission of urine*, frequently. Some drops of urine pass off when coughing.—Difficult emission of the urine, as if the passage were impeded. The urine stops every moment, and refuses to pass off; accompanied with puffiness. The emission of urine is impeded by a dull pain in the hypogastrium, in the morning, when in bed, preventing a complete emission of urine; after short intervals he felt again a desire to emit urine; in this case it came off drop by drop and in small quantity.—Want of desire to urinate; even when the bladder was full, she felt no desire to urinate, but she was able to do so, whenever she pleased.—The *urine* has a strong ammoniacal odour, becomes turbid and deposits a white-yellowish sediment. Acrid, offensively-smelling urine, like violet root. A good deal of *watery, colourless urine*, when the pain is felt. Pale, clear urine. White, strongly-smelling urine. Brown urine, with sediment of red sand. Red urine, smelling of sulphur, depositing a quantity of thick, yellow mucus. The urine is gold-yellow, and deposits a whitish sediment. *Urine, with a sediment of white flocculi*. \**The urine deposits a brick-dust sediment*. Greasy pellicle on the urine of various colours. Yellow sediment. The pale urine deposits a white crust on the sides of the vessel.—Cutting micturition with discharge of blood.—When urinating after an evacuation by the rectum, some drops of mucus come out of the urethra, with pain in the perinæum. Smarting and burning.—After micturition, languor in the morning. After micturition, stitching pain in the fore part of the urethra. Stitch from the neck of the bladder along the penis. *Burning in the urethra, with desire to urinate*, in the evening. Smarting pain in the glans, at the end of micturition and afterwards. Burning in the urethra. Stitch in the urethra and anus. °Jerking in the urethra. °Stretching. Quick drawing to and fro in the urethra, as far as the bladder with contractive sensation. Tension over the bladder.

**Male Genital Organs.**—Stitch in the glans, in the region of the frænum.—*Ulcer on the prepuce*, healing rapidly.—Pain in the scrotum for several days. Violent drawing in the testicles. Drawing-stretching pains in the *spermatic cords*. *Swelling of the spermatic cord*, painful as well as the testicle, (the stool being loose).—*Unusual irritation of the genital organs*, rather interiorly.—\**Irresistible desire for an embrace*.—*Erection*, without sexual fan-

eies, in the evening. Powerful erections in an old man for the first seven days, then none at all for twenty-two days, and again very violent from the 29th to the 43d day. Erections day and night.—*Aversion to an embrace*. Impotence. °Feeble and too rapid discharge of semen during an embrace.—*Emissions*, soon after an embrace. Nervous weakness in the loins soon after an embrace. Nocturnal emissions without dreams. Discharge of prostatic fluid, during hard stools.

**Female Sexual Organs.**—A few blotches, stinging and burning, on the margin of the labia, for a fortnight. \**Stitches through the pelvis*, -from the vagina to the uterus. Dull, tearing pain in the pudendum, as if ulcerated, during and after a walk in the open air.—*Aversion to an embrace* (secondary effect?). *Menses too late*. *Delay of the menses is a secondary effect of Phosph.*—\**Menses too early and scanty*. Appearance of the menses which had been suppressed for many months. °Menses too early, too profuse and too long, also with pains in the small of the back and abdomen. Discharge of blood from the uterus between the menstrual periods. After a suspension of eighteen months, (in a female of fifty-one years,) the menses appear again for five days with violence, having a bad smell. °Discharge of blood in pregnant females. Previous to the appearance of the menses: bleeding of the ulcer. °Leucorrhœa, urging to urinate and weeping. Before and after the menses: swelling of the gums and swollen cheeks.—During the menses: toothache, commencing at dinner. Colic. Chilliness, with cold hands and feet. Prickling itching of the varices. Stinging itching of the whole body. Dulness of the head, and she feels so relaxed that she falls asleep while reading. \*Violent pain in the back, -as if bruised. She feels very sick especially in the evening, has pain in the back as if bruised or torn, drawing in the whole body, palpitation of the heart with anxiety, pinching across the stomach with contractive pain, feels tired and faint unto falling, and so nauseated that she has to lie down. Stinging pain in the forehead, her eyes close. °Cutting in the abdomen, with pain in the back and vomiting. Fever two days in succession; the first afternoon the fever begins with chilliness, followed by heat and headache, without thirst; on the second day, at noon, chilliness for one hour, followed by spasmodic shaking of the whole body, with chattering of teeth, then heat, especially in the head, and headache. Violent nausea, when sitting up in bed, sour vomiting, oppression of the chest, cold sweat on the forehead, and vertigo when walking. Cramp-like contraction of the lower limbs. °Fermentation in the abdomen. °Bloody expectoration. °Bruised feeling of the limbs. °Palpitation of the heart.—*After the menses*: Great weakness, with blue margins around the eyes, and anxiety.—Milky leucorrhœa. Slimy leucorrhœa, during a morning walk. Acrid, excoriating leucorrhœa. °Smarting leucorrhœa, drawing blisters. Reddish leucorrhœa (in an old female). Viscid leucorrhœa, in place of the menses. Profuse leucorrhœa.—*Stitches in the mamma*. °Hard, painful nodosities. \*Erysipelas, with swelling, accompanied with burning, stinging, and suppuration. °Abscesses also, with fistulous ulcers.

**Larynx and Trachea.**—Irritation low down in the trachea, with oppression high up in the chest. °Painfulness of the larynx, impeding speech. °Sensitiveness of the larynx, with burning.—\**Roughness of the larynx and trachea*, with hacking. Roughness of the chest. Feeling of dryness in the chest.—\**Hoarseness* -in the morning. °Chronic hoarseness. The larynx seems furred, he is unable to utter a loud word. °Aphonia. \**Violent catarrh with hoarseness*. °Catarrh with cough, fever, and dread of death. Catarrhal mucus in the chest, in the morning. °Mucous expectoration from the larynx. Constant hawking up of cool mucus, in the morning.—°*Croup*, with disposition to relapses.—\*Cough

from titillation in the throat, °waking him at night. Cough from scraping in the throat, in the afternoon, in the open air. Cough from irritation in the larynx, in the afternoon. °Cough from tickling in the chest. °Cough from laughing. °Cough with rawness and hoarseness in the chest. °Night-cough with stitches in the throat. Cough, with stitching pain in the hypochondria. Cough, with stitching pain below the pit of the stomach; she has to hold her chest. Sharp pressure in the pit of the stomach, at every turn of cough. Sourish vomiting during the cough. Pain in the stomach when coughing. Pinching in the throat, exciting cough. Cough from cold air, affecting his chest. Cough when eating, loose, rattling, as in old people. Cough, with soreness of the throat, after dinner. Cough in the open air, causing pain in the chest and abdomen. Cough, especially when drinking. Violent, dry cough, when reading in the evening. Violent, dry cough, when sitting or lying, not at all during motion. °Cough with chilliness all over.—Dry and hacking cough the whole day, and preventing sleep.—Violent dry cough, with oppressive headache. Dry, troublesome cough, wakes her from sleep fourteen nights in succession. Dry cough, with headache as if the head would burst, with coryza. °Cough for several hours a day, with pain in the stomach and abdomen. Hollow, mostly dry cough, with pressure in the pit of the stomach, hindering sleep the whole night. °Inveterate cough, as if from tubercles, or from chronic inflammation of the lungs.—*Hollow cough*, mostly in the morning, and also at night, with pressure in the pit of the stomach.—*Loose cough*, without expectoration, with pain and sore feeling in the chest. Violent paroxysm of loose cough, about midnight, for one hour, relieved by sitting up, with sore feeling in the throat next morning. *Panting cough*, with slight oppression of the chest, and some expectoration. *Fatiguing cough*, with expectoration of tenacious mucus.—Cough with white, tenacious expectoration. Cough in the morning with translucent expectoration, and sensation in the middle of the sternum, as if something had been torn loose.—Continual cough with discharge of mucus and tensive pain in the chest. Cough day and night, with expectoration of much mucus; in a few days violent stitches supervened in the chest. *Muco-sanguineous expectoration*, when coughing, or with fatiguing hacking, before and during the menses. Discharge of purulent flocculi, with erosive burning behind the sternum. °Greenish expectoration. °Cough, with saltish, purulent expectoration, particularly morning and evening. °Suppuration of the lungs. °Mucous phthisis.—Sensation in the throat when coughing as if it would tear away a piece of flesh with it.

**Chest.**—Short breathing after coughing. °Loud and panting breathing. Anxious breathing when thinking, or from fulness of the abdomen.—*Arrest of breathing during a quick walk*. \*Difficulty of breathing, in the evening when in bed, or from tightness of the pit of the stomach. Panting breathing when ascending a hill. Loud, rattling breathing.—Anguish in the chest in the evening. Anxiety in the chest, with throbbing in the right side of the chest.—Frequent oppression of the chest, with nausea. Oppression of the chest, worse when sitting; relieved by eructations. Sensation as if the chest were oppressed by a load. Oppression in the lower part of the chest, with shortness of breathing in the evening. Oppression above the xiphoid cartilage, with tightness of breathing in the evening, when stooping, relieved by raising the trunk. Oppression early in the morning, with palpitation of the heart, and nausea, for one hour. Oppression early in the morning, in bed. Oppression at night, and after a walk in the open air, preventing a complete yawning. Oppression with chilliness and violent headache, so that he is scarcely conscious. Pressing oppression. Oppression as if the hot blood were pressing upwards in the throat, early in the morning.—*Tightness* of the chest, as if bound by a band. *Tension and tight-*

*ness in the chest, with dryness.* Tightness in the chest, without asthma. Oppressive, tight feeling in the chest. Sensation across the chest, as if the clothes were too tight.—*Contraction* of the lungs. Contraction of the chest, with pressure or crampy feeling in the epigastrium. Contractive pressing in the upper part of the left chest. Constrictive, crampy sensation, high up in the chest. Crampy contraction of the whole chest. Cramp in the chest after taking a drive in the evening. Constrictive cramp in the chest, several evenings in succession.—Pain in the chest, especially during an inspiration.—*Pressure* on the lower part of the chest.—Pressure on the upper part of the chest from above downwards, followed by empty eructations.—*Stitches and stitching in various parts of the chest*, when sitting, sometimes with burning. Cutting from the middle of the sternum to the right scapula, worse during an inspiration, less during motion. Stitches in the left side of the chest when taking an inspiration. Severe stitches in both sides of the chest, during motion and rest. \**Stitches in the left side*, under the ribs for five days. Stitching in the right side of the chest when breathing, °also with stinging when touched. °Chronic stitches in the side. Shootings in the upper part of the chest. *Rush of blood to the chest.* Rush of blood to the chest, at every emotion of the mind, with cramp-like contraction between the scapulae. Rush of blood to the heart, and palpitation of the heart, very violent after dinner.—\**Palpitation of the heart*—with anxiety, morning and evening. Palpitation of the heart, frequently only 2 or 3 beats. Palpitation of the heart, in the morning, in bed, and in the evening after lying down. °Palpitation in the day-time, when sitting. A few strong beats of the heart when moving the left arm, when sitting up in bed, stretching the limbs, etc., going off again when at rest. Burning rising from the stomach into the chest, with anxiety; and with sweat on the forehead and chest when sitting. °Sore burning in the chest. *Itching in the chest*, (trachea) and in the pit of the throat, with dry cough which does not alleviate the itching.—*Weakness* of the chest, for several days, with sensation as if a pain would appear there. Bruised pain in the upper part of the chest, when stooping, moving, or when touching the part.—Stitches in the outer chest. Pain as if bruised, behind the right chest, and under the axilla, when pressing on the part. Violent soreness of the pectoralis major. Stitch in the right clavicle, near the shoulder. Soreness of the clavicle, whether touched or not. Pain in the fleshy part of the right chest, as if the glands were violently pressed upon. Stitches in the mamma. Pain in the right side of the chest, as if the skin were raised with a pin. Beating, as with a finger, on the right side of the chest, when sitting. °Pain below the left chest, when lying on it. *Warmth* on the chest. Burning at the lower end of the sternum, as far as the left clavicle, after dinner. Burning pinching, below the right outer chest, with mounting of heat to the head. °Yellow spots on the chest.

**Back.**—Pain of the *os coccygis*, as if ulcerated. Pain in the *os coccygis*, hindering motion; afterwards painful stiffness in the nape of the neck. Pain in the *small of the back* when rising after stooping, and when standing, less when walking. Pain in the small of the back after sitting a long time. Pain above the *os sacrum* and the adjoining parts of the *ossa ilia*, especially when stooping, while sitting and after dinner, with great languor. Paralytic weakness of the small of the back. Weakness of the small of the back, as if gone to sleep, when sitting and when rising from a seat. Burning in the small of the back, especially when the menses are delaying—Violent pain in the *back*, when sitting too long. °Pain as if the back were broken. Heaviness and weariness of the back, when lying. Periodically-returning, intolerable pains in the back, hindering walking. Unceasing stitching in the spinal column, the whole day, at dif-

ferent hours. Violent stitch in the muscles of the back, above the left hip. Stitches in the lumbar vertebræ, from without inwards, extorting screams. Pressure close below the scapulæ.—Pain in the left scapula as if a plug had lodged there. Sensation as if some one seized her on both scapulæ, when lifting and carrying something with both hands. Tearing in the scapulæ. Stitches in and under the scapulæ. *Stitching pain in the right scapula.* Darting pain in the left scapula. Beating and tearing in the right scapula.—Sensation as of a heavy load in the *nape of the neck*. Pressure in the nape of the neck. *\*Stiffness of the nape of the neck.* Occiput and nape of the neck are painful and quite stiff.—Stiff neck. The anterior cervical muscles are painful to the touch, or when moved. Stitches in a tumour on the neck. Hard lump on the neck under the chin, of the size of a hazel-nut, painful when touched. Jerkings in the cervical muscles. Stitching pinching in the outer parts of the neck when walking in the open air. Stitching in the front part of the neck towards the right ear, and thence tearing extending to the vertex. °Swelling of the posterior cervical and the cervical glands.

**Upper Extremities.**—Violently-itching pimples in the axilla, burning when scratched. *\*Swelling of the axillary glands,* -with burning pain in the skin of the arms. Violent itching in the right axilla, and a glandular lump of the size of a pea.—Pressure and drawing in the *shoulders*. The shoulder is painful when touched or moved. The shoulder-joints are painful when walking in the open air. *Tearing in the left shoulder, especially at night.* Stitches in the right shoulder. Dull painful stitch in the left shoulder. Boring in the right shoulder. *Rheumatic pain in the right shoulder,* extending to the first ribs, for one hour, also in the morning on waking. Pain as if sprained in the right shoulder, especially when raising the arm. Stitches in the axillæ, through the shoulders. Dull stitches in both axillæ, broad and spreading out. Cracking in the shoulder-joints. °Pain of the arm on lifting it. Heaviness in the shoulders and arms. Drawing rigidity in the muscles of the arm, from the shoulders down to the lower arm. Drawing pain in the whole arm, increasing in the evening. Tearing in the left arm and hand. °Tearing sticking in both arms and scapulae. The left arm goes to sleep, with numbness of the fingers (without coldness) and contraction of the same, especially in the morning; after which the arm becomes quite languid. *The arm on which his head leans, goes to sleep.* Itching of the arms. *Weakness of the arms,* she was unable to move them in the least. Weakness of the joints of the arms, with distention of the veins of the hands. Paralytic, sore pain in the arm, with tremor in the hand when holding anything. Pain in the right arm, as if sprained. Pain, numbness and weakness of the right arm, especially around the elbow-joint, in the evening when lying, going off by changing the position of the arm, but returning soon after, and so on in frequent repetition. °Itching of the arms. °Scaly herpes on the arms. Tearing on the outer surface of the right *upper arm*; friction causes it to shift to the lower arm, where the muscles twitch visibly. Pain in right upper arm as if bruised. Pain in the left humerus as if bruised, moving up and down, when sitting. Rheumatic pain in the right upper arm, after a slight cold. Tearing in the upper arm. Great *weariness* of the upper arm. Burning of the skin of both upper arms.—Painful pressure in the periosteum of the humerus and the radius, resembling bone-pain.—Pain of the *elbow-joint* as if broken. Tearing and drawing in the right elbow-joint. Tearing in the inner side of the forearm, as if the bone would be torn out, going off by friction. Tearing and boring from the elbow to the shoulder. Tearing and stitching in the right elbow. Stitches in the elbow-joint after a fright, afterwards in an excoiated spot on the foot. Gnawing pain in the elbow, extending towards the shoulder. Shock and

jerking in the tuberosities of both arms. Red tips, with corrosive itching on a place of the size of the hand, in the bend of the right elbow.—Violent tearing on the inner side of the left *forearm*, as if the skin would be torn off. Tearing in the forearms, especially around the wrist-joints.—Tearing in the *wrist-joint*, with paralytic weakness, in the evening. Pain as if sprained in the wrist-joint.—Intensely-painful stitches in the wrist-joint, during rest. Tearing in the *metacarpal bones*. Tearing in the hand, especially the knuckles, generally at night, in bed. Darting in the knuckles and thumb. Drawing in the hands and fingers, after moistening them with tepid water. Creeping of the hands in the open air, when yawning. Heaviness and tremor of the hands, when letting the arms hang, *with redness and distended veins*, with sensation as if much blood were pressing into the veins. *Determination of blood to the hands* and head, as if coming from the stomach, the veins on the backs of the hands being distended. Cold hands. \**Tremor of the hands*. One hand occasionally feels paralyzed, for several hours. *Both hands had gone to sleep*, in the morning on waking. *Itching of the hands*. The skin on the hands was rough and dry. Warts form on the hands. Vesicles as from heat, on the backs of both hands, with itching, worst at night. Burning feeling in the hands, without any external heat. Burning feeling in the palms of the hands. Sudden swelling of the hand and fingers. Swelling of the wrist-joint, with throbbing in the same as in an ulcer, and tearing extending into the fingers, even when at rest, and much worse when moving the stiff wrist-joint, (after a cold?).—Pain in the thumb, as if sprained, when seizing something. Swelling of the posterior joint of the thumb, painful when touching it, with tensive pain during motion. Pain, as if sprained, in the finger-joints. °*The tips of the fingers feel numb and insensible. The fingers of one hand feel numb and insensible*,—those of the other as if they had gone to sleep. The middle finger of the right hand becomes quite numb, dead, bloodless and cold, in moderately-cold air. *Jerking of single fingers*. Paralytic jerking in the right thumb when writing, he is unable to hold his pen. *Periodical contraction of the fingers, like cramp*. Heaviness in the tips of the fingers. Cramp-like drawing and tearing in the little finger. Tearing in the right little finger. *Paralysis of the fingers*; they are sensible, but can scarcely be moved. Tension in the fingers of the left hand. Tension in the fourth and fifth fingers of both hands, as if sprained. Painful swelling of a finger, especially painful when knocking it against something. Chronic paratritium, which refuses to heal. Cracked skin of the finger-joints, as if by cold.

**Lower Extremities.**—*Pain of the nates as from subcutaneous ulceration*, when sitting too long. Pulsation in the nates. Twitchings in the nates. Visible, but painful twitching in one of the buttocks and in the thigh.—*Pain in the left hip-joint*. Painful paralytic feeling in the left hip, in the evening, making it almost impossible for him to step on that foot; no pain when sitting or lying. Sensation in the region of the right hip *as if held fast*, no pain when sitting. Violent pain in the bend of the left hip.—Pain in the hips *as if sprained*.—*Stitching* in the left hip, going off by friction. Violent stitch in the right hip, towards the chest.—Itching of the hips.—Great weakness in the *lower limbs*, she inclines to fall. The left limb goes to sleep, without any apparent cause. Severe paralytic sensation in the right limb, at night. Weariness in the limbs, early. The limbs are painful in the morning, as after a long walk. Tension in the left limb and painful stiffness with pressure. Cramp-like contractive sensation in both limbs and feet, in paroxysms. Violent aching in the left ischium, when sitting too long. *Great restlessness in the limbs*, with icy-cold hands, especially in the evening.—Violent drawing to and fro in the *thigh*, during the siesta. Drawing pain in the thighs, relieved by walking. Momentary, tear-

ing pain in the left thigh, commencing at the knee. Paroxysms of tearing pain in the posterior side of the thigh, extending to the knee, during and after a walk in the open air, every four minutes, with soreness of the spot when touching it. Burning of the thigh, increased by contact. Pain as from bruises in the middle of the thigh, hindering walking, the spot is painful to the touch. *Itching* of the thigh and the region of the patella. Violent itching of a small spot on the thigh, with smarting after scratching. Large *pimples* on the posterior sides of the thighs, painful to the touch. *Soreness* of the inner sides of the thighs. *Herpes* above the knees and below the patella.—Continual coldness in the *knees*, at night, in bed. Trembling in the knees. Cramp-like drawing in the knee when walking. Tearing in the knees, in the open air, several evenings.—Violent tearing along the inner side of the calf, as if the flesh would be torn loose, going off by friction; after dinner. \**Drawing pain from the knees to the feet*. Drawing from the knee to the foot, in the evening, every drawing being followed by a paroxysm of sudden pain. Tearing in the bend of the right knee, at night. Rigidity of the hamstrings when walking, as if too short. Arthritic tension in the knees, as if sprained; they feel hot to the hands. Paralytic feeling in the left knee. Pain as if sprained in the left knee. Dull pain around the left knee-joint. Nightly stitching in the knees, in paroxysms. Stitch in the inner surface of the right knee, at every step; pain as if bruised over the knee, when sitting or when raising the thigh; the pain disappears on rising. Tearing from the knee to the dorsum of the foot, the fore part of the left foot having gone to sleep, going off by friction. °*Arthritic stiffness of the knees*, with paralytic weakness of the legs. Suddenly-forming, red, inflamed, smarting and painful *tumor* between the calf and bend of the knee.—Tension in the right calf when walking. *Cramp in the calf*. Cramp in the calf, and the leg is jerked upwards when stretching it while walking. °*Twitching in the calves*. The leg from the calf to the foot has gone to sleep, as if the circulation had been stopped by tying the leg up below the knee. Violent *itching* of the calves and tibiae. Pain of the *tibiae* when walking. Pain in *tibiae* as if bruised. *Pain, as if bruised, in the periosteum of the tibiae*, painful when touched. Tearing along the left tibia, on waking. Tearing stitches in the tibiae. A number of small spots like *freckles* on the lower part of the tibiae. A number of small, *blue-red spots* on the legs, like petechiae.—*Pain in the left tarsal joint*, extending upwards to the calf, also as if sprained. The tarsal joint is liable to be sprained, or to give way in walking. Violent tearing and stitching in the feet, hindering sleep at night. Paralytic feeling in the feet. Paralytic drawing pain in the ankles, extending to the knees. °*Twitching of the feet*, in the day-time, and in the evening before going to sleep. Jerks in the feet, with tingling cramp in the soles. Jerks and shootings in the feet. The feet feel weak and as if gone to sleep, with great restlessness. Tearing in the inner border of the left sole. Tearing in the left ankle, at night. Violent itching of the soles and toes, in the evening. Formication in the feet and toes. Creeping under the toes, Tingling in the feet, at night. \**Icy-cold feet*, even when in bed, (in June). Sweaty feet. Heaviness of the feet, as if swollen. Swelling of the tendons of the right ankle. \**Swelling of the feet*, in the evening. *Spots on the feet*. Increase of vesicles and ulcers on the feet. Stitches in the swelling on the foot. Stitching pain in the right ankle, the parts being swollen, very painful when stepping. Pain of the soles, as from long walking, they are red. °*Ulcerative pain in the soles*. Troublesome feeling of dryness in the soles. Cramp in the soles and toes. Tearing stitching in both soles.—Beating pain in the *heels*, at night, she is obliged to rub them warm, to alleviate the pain. Creeping in both heels. Tension in both heels, in the morning, in bed. Blister on the heel,

bursting, emitting a fluid, and very painful when walking. The heels and toes which had been frozen previously, become very painful, especially when walking with shoes.—Itching under the toes and feet. Violent stitches in the ball of the big toe, with inflammation. Chilblains in March. *Stitches in the left big toe*, mostly during motion and in the evening. Tearing in the toes when sitting, going off by friction. *Pain of the big toe as if frozen*. Jerking in the left big toe, when sitting. Violent stitch in the right big toe.—Pains in the corns, piercing bone and marrow. Violent stitching pressure in the corns, as if boring into them with a knife. Stitching in the corns when walking. Old corns on the little toe become painful, the toe swells.

**Sleep.**—*Frequent yawning*, with chilliness in the evening.—*Drowsiness* after dinner. Drowsiness after a walk in the open air. Drowsiness with reeling, without being able to sleep. °Morning drowsiness. °Stupifying slumber in the day-time. Sleeps long in the morning.—\**Sleeplessness* and restlessness. Light sleep. She was unable to fall asleep, owing to a feeling as if the eyes did not close, but had to be kept closed with the hands, and were turning round in the head. *After waking in the evening and at night, he has great difficulty of falling asleep again*. Is unable to fall asleep. Can only rest on the right side. Lying on the left side causes anxiety. A general sick feeling prevents sleep until two o'clock. Restless sleep, with dreams, and anxiety while awake. Restless sleep, with lascivious dreams and emissions, after which he woke and then slept but little afterwards. Wakes in the evening with violent vertigo and nausea.—*Symptoms at night, in bed*: Dull pain in the haunch-bones as if he had been lying on too hard a couch; he had to alter his position constantly; went off in the morning. Wakes as if from pressure on the bladder. Violent drawing in the right upper and lower limb. Sensation as of having deranged one's stomach. Intolerable itching of the hands. Intense pricking itching of the backs of the hands, preventing him from sleeping; scratching does no good. Eructations as of rotten eggs. Great thirst. Pressure at the stomach and nausea. Pain in the lower limbs as if bruised, or as if from excessive weariness. The external ear is painful. Violent stitches through the ear and teeth. Frequent boring in the tooth. Violent palpitations of the heart (5 nights). He wakes with colic at one o'clock. He wakes every night after midnight, in a state of discouragement. Pressure in the abdomen. *Spasm of the chest, he is near suffocating*. He wakes with a sensation as if the larynx and trachea had become much narrower, he feels suffocating. Inclination to vomit and continual eructation tasting of the ingesta. He is roused from sleep by obstruction of the nose and difficulty of breathing. A kind of vertigo with turning to the other side, as if all the blood were rushing to the head. Vertigo as if the bed were turning in a circle. On waking, he feels stupified, intoxicated, giddy. Drowsy, a sort of giddiness, without being able to sleep. As soon as he falls asleep, he has anxious dreams, and then wakes again. She is so uneasy in the evening that she cannot fall asleep; she feels the same uneasiness on waking. Great anxiety and restlessness as soon as she goes to bed in the evening. Anxiety without heat, as if he had committed murder, with constant tossing about. Illusion when falling asleep, as if somebody were seizing him by the throat, with an intention of throttling him. She wakes towards morning with a start. She wakes with anxiety every morning. *Frequent waking in the night, with chilliness*.—Heat and dryness of mouth, she has to drink a good deal for some nights. *Frequent waking in the night, from feeling too hot, without sweat*. Dry heat without thirst, with pain of the parts on which she had lain. Waking from anxious dreams in the night, after which chilliness and tremor of the whole body, especially in the abdomen, violent orgasm of the blood

and oppression of the chest, hindering breathing, and scarcely permitting him to breathe. Uneasy a long time previous to falling asleep; after which she wakes with oppression of the chest, as from a load, aggravating the breathing. *Symptoms during sleep*: Saliva flows out of the mouth, even in the day-time, when sitting. *Starting*, towards morning, or when falling asleep. Great disposition to sleep on a chair, with the head bent forward. Lies on his back, with the left hand under the occiput. Turning from side to side. Crying out and talking. Tossing about and moaning, the whole night, with anxious dreams. Anguish during a state of sopor with absence of consciousness, still weeping, wringing of the hands, as if in despair, lamentations, tossing about, short breathing; she seizes those around her slyly or lays hold of them with vehemence.—Confused dreams. Vexed dreams. Sleep full of dreams. *\*Restless at night and dreaming* constantly. Heavy anxious dreams towards morning. *Vivid dreams about affairs which he could not manage*. Anxious dreams. Dreams full of care about something which she had to attend to, and on account of which she gets up continually. Anxious dreams about biting animals, she cries out and wakes. Dreams that she is stung by an insect behind the ears. Dreams that some one pinches her back, chest, etc., and that he tickles her soles. Dream about robbers. *Dream about fire*, with screams and kicking about. Dream about a hemorrhage. Sad dreams. *\*Frightful dreams*. Funny dreams. Dreams about historical events, every night. Dreams about dead persons and quarrels.—Symptoms early in the morning, in bed: stupifying, long sleep. Languid and indolent. Stretching of the limbs and expanding the chest.
